

# **Medical Dictionary by Specialty**

A Comprehensive Reference of Medical Terminology

Chaman Singh Verma

September 3, 2026

---

## Preface

This dictionary is a concise reference to medical terms, diseases, investigations, treatments, anatomy, physiology, and related clinical concepts. It is intended to help students, healthcare professionals, educators, and general readers understand unfamiliar medical language.

The entries are arranged alphabetically from A to Z, with each letter presented in its own chapter. This arrangement allows a reader to locate a known term quickly while maintaining a consistent structure throughout the book. Related terms, recognized common names, and alternative names are included when they improve clarity or aid searching.

Definitions are written in simple, formal language and are intended to be clear, accurate, and useful for reference. Medical terminology changes as scientific knowledge and clinical guidance develop; therefore, important information should be checked against current textbooks, primary research, professional guidance, and local clinical protocols.

This book is an educational reference, not a substitute for professional medical advice, diagnosis, or treatment. Readers should seek advice from a qualified healthcare professional when making decisions about health.

*Chaman Singh Verma*

## Medical Disclaimer

**Educational and Reference Purpose Only:** This publication, *Medical Dictionary by Specialty*, is prepared and compiled strictly for educational, academic, historical, and reference purposes. It is intended for medical students, healthcare professionals, educators, and researchers.

**No Medical Advice:** The information contained herein does not constitute professional medical advice, clinical diagnosis, treatment protocols, or formal therapeutic recommendations. It should not be used as a substitute for the professional judgment of qualified physicians, surgeons, or certified healthcare providers.

**Clinical Practice Guidelines:** Healthcare practitioners must always consult primary evidence-based medical literature, institutional protocols, manufacturer prescribing information, and national clinical guidelines (such as WHO, CDC, NICE, or national medical councils) when making diagnostic or therapeutic decisions for individual patients.

**Limitation of Liability:** Neither the author nor the publishers accept any legal responsibility or liability for any errors, omissions, or clinical outcomes resulting from the use or application of any information presented in this work.

## A

### 5-Alpha Reductase Inhibitor

A medicine that blocks conversion of testosterone to dihydrotestosterone. It is used mainly to treat benign prostatic hyperplasia and androgen-related hair loss.

### Adaptive Design

A clinical-study design that permits planned changes in response to accumulating data while preserving validity.

### ADME

Absorption, distribution, metabolism, and excretion: the processes governing a substance's movement through the body.

#### Synonyms:

Pharmacokinetics

### Administration Procedure

A procedure used to deliver a medicine, fluid, vaccine, or other intervention to a patient.

### Adnexal Dysplasia

Abnormal precancerous or developmental cellular changes in tissue beside the uterus, such as the ovary or tube.

### ADP-Ribosylation

Addition of an ADP-ribose group to a protein or other molecule, altering its activity or interactions.

### Adrenomedullin

A peptide hormone that promotes blood-vessel dilation and helps regulate circulation and fluid balance.

### Adsorption

Attachment of molecules to the surface of a solid or liquid rather than absorption into its interior.

### Aerobiosis

A state or process requiring the presence of oxygen.

### Aerosol

A suspension of fine solid particles or liquid droplets in a gas.

### Affinity Chromatography

A laboratory separation method that isolates a molecule through its specific binding to an immobilized partner.

### Agammaglobulinemia

A severe deficiency or absence of immunoglobulins, causing recurrent infections.

### Ainhum

A rare disorder causing a constricting groove around a toe that may eventually lead to autoamputation.

#### Synonyms:

Dactylolysis spontanea

### Alarmin

A molecule released by damaged or stressed cells that activates innate immune responses.

### Alcoholic Hepatitis

Inflammation and liver injury caused by heavy alcohol use.

---

### **Alcoholic Intoxication**

Impaired judgment, coordination, or consciousness caused by acute alcohol exposure.

#### **Synonyms:**

Alcohol intoxication

### **Alcoholism**

A chronic disorder characterized by impaired control over alcohol use and continued use despite harm.

#### **Synonyms:**

Alcohol use disorder

### **Alexithymia**

Difficulty identifying, describing, or distinguishing one's emotional experiences.

### **Alkaptonuria**

An inherited disorder of tyrosine metabolism causing homogentisic-acid accumulation and darkening of urine or tissues.

### **Anorectal Infection**

Infection involving the anus, rectum, or surrounding tissues.

### **Aortopulmonary Window**

A congenital opening between the ascending aorta and pulmonary artery.

### **Aponeurosis**

A broad, flat sheet of connective tissue that attaches muscle to bone or other tissues.

### **Apoptotic Body**

A membrane-bound fragment of a cell undergoing programmed cell death.

### **Arterial Embolization**

Intentional blockage of an artery, often to control bleeding or reduce blood supply to a tumor.

### **Arterial Injury**

Damage to an artery that may cause bleeding, narrowing, clotting, or impaired blood flow.

### **Arterial Stenosis**

Abnormal narrowing of an artery.

### **Arterial Thrombosis**

Formation of a blood clot within an artery.

### **Arteritis**

Inflammation of an artery.

### **Artery Occlusion**

Complete or near-complete blockage of an artery.

### **Arthropod Vector**

An arthropod, such as a mosquito or tick, that transmits an infectious agent between hosts.

#### **Synonyms:**

Disease vector

### **Arthus Reaction**

A localized immune-complex reaction causing inflammation at the site of antigen exposure.

#### **Synonyms:**

AI

### **Artificial Saliva**

A product used to moisten the mouth and relieve symptoms of dry mouth.

#### **Synonyms:**

Saliva substitute

### **Assay**

A laboratory procedure used to detect or measure a substance, activity, or biological response.

### **Asthenozoospermia**

Reduced sperm motility, which may contribute to difficulty conceiving.

#### **Synonyms:**

Asthenospermia

### **Asymptomatic Infections**

Infections present without noticeable symptoms.

#### **Synonyms:**

Subclinical infections

---

### Atopic Rhinitis

Allergic inflammation of the nasal lining causing sneezing, itching, congestion, or discharge.

**Synonyms:**

Allergic rhinitis

### Atrial Ablation

A procedure that destroys selected heart tissue to prevent or control an atrial arrhythmia.

**Synonyms:**

Cardiac ablation

### Atrophoderma Maculatum

A rare skin condition causing localized, depressed patches of altered pigmentation and tissue thinning.

### Atypia Morphology

Abnormal cellular appearance or architecture that may be benign, reactive, precancerous, or cancerous depending on context.

**Synonyms:**

Cytologic atypia

### Augmentation Mammoplasty

Surgery to increase breast size or alter breast shape, commonly using implants or fat transfer.

**Synonyms:**

Breast augmentation

### Avoidance Behavior

Deliberate behavior intended to prevent contact with a feared, distressing, or threatening situation.

### Axis Vertebra

The second cervical vertebra, which supports rotation of the first cervical vertebra and head.

**Synonyms:**

C2; axis

### Axolemma

The cell membrane surrounding an axon.

### Adherens Junction

A cell-to-cell connection that uses cadherin proteins

to link neighboring cells through actin filaments.

### Adipocyte

A cell specialized to store and release fat.

**Synonyms:**

Fat cell

### Adipogenesis

The formation and maturation of fat cells.

### Adipokine

A signaling molecule released by adipose tissue that influences metabolism or inflammation.

### Adjustment Disorders

Emotional or behavioral symptoms occurring in response to an identifiable stressor and causing significant distress or impairment.

**Synonyms:**

Adjustment disorder

### Adnexal Mass

A growth or enlargement involving structures beside the uterus, such as an ovary or fallopian tube.

### Adnexitis

Inflammation of an adnexal structure, usually the fallopian tube or ovary.

**Synonyms:**

Salpingo-oophoritis

### Adoptive Immunotherapy

Treatment in which immune cells are collected, modified or activated, and returned to the patient.

### Adrenal Cancer

Cancer arising in the adrenal gland.

**Synonyms:**

Adrenocortical cancer

### Adrenal Medulla

The inner part of the adrenal gland that produces epinephrine and norepinephrine.

---

### **Adrenergic Agent**

A substance that affects receptors responsive to adrenaline-like neurotransmitters.

### **Adrenergic Agonist**

A substance that activates adrenergic receptors.

#### **Synonyms:**

Sympathomimetic

### **Adrenergic Antagonists**

Substances that block the effects of adrenaline-like signaling at adrenergic receptors.

#### **Synonyms:**

Adrenergic blockers

### **Adrenergic Receptor**

A cell receptor activated by epinephrine or norepinephrine.

### **Adrenoleukodystrophy**

An inherited disorder causing abnormal buildup of very-long-chain fatty acids and progressive nervous-system or adrenal damage.

#### **Synonyms:**

ALD

### **Adult Rickets**

Defective bone mineralization in adulthood, usually called osteomalacia.

#### **Synonyms:**

Osteomalacia

### **Adventitia**

The outer connective-tissue layer of a blood vessel or hollow organ.

#### **Synonyms:**

Tunica adventitia

### **Adverse Reaction**

An unintended, harmful response to a medicine, treatment, or other exposure.

#### **Synonyms:**

Adverse drug reaction

### **Aerobic Exercise**

Physical activity that uses sustained oxygen-dependent energy production, such as walking or cycling.

#### **Synonyms:**

Cardio exercise

### **Afferent Pathway**

A sensory nerve route carrying information from the body toward the brain or spinal cord.

#### **Synonyms:**

Sensory pathway

### **Afibrinogenemia**

A rare inherited or acquired absence of fibrinogen, causing impaired blood clotting.

### **African Trypanosomiasis**

A parasitic infection transmitted by tsetse flies and affecting the blood and nervous system.

#### **Synonyms:**

African sleeping sickness

### **Agglutination Test**

A laboratory test in which particles visibly clump when a specific antibody or antigen is present.

### **Agglutinin**

An antibody or other substance that causes cells or particles to clump together.

### **AIDS Vaccine**

A vaccine designed to prevent HIV infection or reduce its effects; no generally effective licensed vaccine currently exists.

### **Air Sac**

A cavity or thin-walled space that contains air, such as a pulmonary alveolus or bird air sac.

#### **Synonyms:**

Air space

### **Air Trapping**

Retention of air in the lungs because it cannot be

---

fully exhaled, often from airway obstruction.

### **Alanine**

An amino acid used in protein synthesis and glucose metabolism.

### **Albumin Clearance**

The removal rate of albumin from blood or another body compartment, used in selected physiologic studies.

### **Alveolar Macrophage**

An immune cell in the lung air sacs that removes particles, microbes, and cellular debris.

#### **Synonyms:**

Dust cell

### **Alzheimer's**

A progressive neurodegenerative disease causing memory loss and decline in thinking and daily function.

#### **Synonyms:**

Alzheimer disease

### **Ambulance**

A vehicle equipped to transport and provide emergency medical care to ill or injured people.

### **Amebic Colitis**

Inflammation of the colon caused by infection with *Entamoeba histolytica*.

#### **Synonyms:**

Amoebic colitis

### **Amnioscope**

An instrument used to inspect amniotic fluid and the membranes through the cervix.

### **Amyloid Protein**

A normally soluble protein that has misfolded into insoluble fibrils and may accumulate in tissues.

#### **Synonyms:**

Amyloid

### **Anaerobic**

Able to live, grow, or function without oxygen.

### **Anaerobic Bacteria**

Bacteria that grow without oxygen; some are harmed by oxygen.

### **Anal Carcinoma**

Cancer arising in the anus or anal canal.

#### **Synonyms:**

Anal cancer

### **Anal Mucositis**

Inflammation and ulceration of the anal mucous membrane, often after radiation or chemotherapy.

### **Anal Necrosis**

Death of tissue in or around the anus.

### **Anal Pain**

Pain felt in or around the anus.

#### **Synonyms:**

Proctalgia

### **Angiogenesis Inhibitor**

A treatment or substance that prevents or slows formation of new blood vessels.

#### **Synonyms:**

Antiangiogenic agent

### **Antinuclear Autoantibody**

An autoantibody directed against components of a cell nucleus.

#### **Synonyms:**

ANA

### **Antisepsis**

Use of chemical methods to reduce or eliminate harmful microorganisms on living tissue.

### **Antiserum**

Blood serum containing antibodies against a particular antigen or toxin.

---

### **Antisocial Personality**

A persistent pattern of disregard for other people's rights, social rules, and responsibilities.

#### **Synonyms:**

Antisocial personality disorder

### **Antitoxin**

An antibody or preparation that neutralizes a toxin.

### **Alpha-Fetoprotein**

A protein produced mainly by the fetal liver; maternal or blood levels can help assess certain fetal and adult conditions.

#### **Synonyms:**

AFP; alpha fetoprotein (alternate spelling).

### **Alpha-Globulin**

A group of blood proteins that includes transport and acute-phase proteins.

### **Alpha-Synuclein**

A neuronal protein that can accumulate abnormally in disorders such as Parkinson disease and Lewy-body dementia.

### **Alpha-Thalassemia**

An inherited disorder in which reduced alpha-globin production impairs hemoglobin formation.

### **Amniotic Band**

A strand of amniotic tissue that can entangle or constrict developing fetal body parts.

#### **Synonyms:**

Amniotic band sequence

### **Aortic Body**

A small group of chemoreceptor cells near the aortic arch that helps sense blood oxygen and carbon dioxide.

### **Aortic Injury**

Damage to the aorta, often caused by severe trauma or a medical procedure.

### **Aortic Rupture**

A life-threatening tear through the wall of the aorta causing internal bleeding.

### **Anaplastic Astrocytoma**

A high-grade astrocytic brain tumor with rapid growth and infiltrative behavior.

### **Anaplastic Ependymoma**

An aggressive, high-grade tumor arising from cells lining the brain's ventricles or spinal canal.

### **Anatomical Conduit**

A natural or surgically created passage that carries fluid, air, tissue, or another structure.

### **Anatomical Orifice**

A natural opening into or through a body structure.

#### **Synonyms:**

Body opening

### **Anatomist**

A specialist who studies the structure of the body.

### **Androgen Excess**

Abnormally high androgen activity or concentration, which can cause acne, excess hair, or menstrual changes.

#### **Synonyms:**

Hyperandrogenism

### **Androgen Insufficiency**

Inadequate androgen production or activity for a person's physiologic needs.

#### **Synonyms:**

Androgen deficiency

### **Androgen Receptor**

A cellular protein that binds testosterone or related hormones and mediates their effects.

### **Androgen Suppression**

Reduction of androgen production or action, used in selected hormone-sensitive conditions.

---

**Synonyms:**

Androgen deprivation

**Anesthesiologist**

A physician who provides anesthesia and manages pain and vital functions during procedures.

**Anesthesiology**

The medical specialty concerned with anesthesia, perioperative care, and pain management.

**Anesthetic**

A medicine or technique that causes loss of sensation, with or without loss of consciousness.

**Angiocardiology**

Imaging of the heart and major vessels after injection of contrast material.

**Angiofibroma**

A benign tumor composed of blood vessels and fibrous tissue.

**Angioid Streak**

Breaks in a tissue layer beneath the retina that appear as irregular dark lines.

**Ankle**

The joint connecting the lower leg to the foot.

**Ankyloglossia**

An abnormally short or tight lingual frenulum that restricts tongue movement.

**Synonyms:**

Tongue-tie

**Ankyrin**

A structural protein that links membrane proteins to the cell's internal cytoskeleton.

**Anomia**

Difficulty retrieving or naming familiar words.

**Anorectal Fistula**

An abnormal channel connecting the anus or rectum with nearby skin or another organ.

**Synonyms:**

Anal fistula

**Antigen Receptor**

A receptor on an immune cell that specifically recognizes an antigen.

**Antiplatelet Agent**

A medicine that reduces platelet clumping and lowers the risk of arterial clots.

**Synonyms:**

Antiplatelet medicine

**Aortic Disease**

Any disorder affecting the aorta, including aneurysm, dissection, narrowing, or inflammation.

**Arthroscope**

A small illuminated instrument used to view the inside of a joint.

**Articular Ligament**

A band of connective tissue that stabilizes a joint by connecting bone to bone.

**Synonyms:**

Joint ligament

**Artificial Heart**

A mechanical device that replaces or supports the pumping function of the heart.

**Artificial Skin**

A biological or synthetic material used to cover wounds and support skin regeneration.

**Synonyms:**

Skin substitute

**Ascitic Fluid**

Excess fluid collected in the abdominal cavity.

**Synonyms:**

Ascites

---

### **Asphyxia Neonatorum**

Failure of a newborn to establish adequate breathing at or shortly after birth.

#### **Synonyms:**

Birth asphyxia

### **Aspirate (Substance)**

Material withdrawn from a body cavity, lesion, or airway by suction.

#### **Synonyms:**

Aspirated material

### **Assisted Circulation**

Mechanical or procedural support used to maintain blood flow when the heart cannot pump adequately.

#### **Synonyms:**

Mechanical circulatory support

### **Association Cortex**

Cerebral cortex involved in integrating information and supporting memory, language, judgment, and complex behavior.

### **Astringent**

A substance that contracts tissue and reduces secretions or minor bleeding.

### **Astrocyte**

A star-shaped glial cell that supports neurons, maintains the blood-brain barrier, and regulates the nervous-system environment.

### **Asymptomatic**

Having a disease or abnormality without noticeable symptoms.

### **Ataxia Telangiectasia**

An inherited disorder causing progressive coordination problems, visible small blood vessels, and immune deficiency.

#### **Synonyms:**

A-T

### **Atrial Arrhythmia**

An abnormal heart rhythm originating in the atria.

### **Atrial Standstill**

Absence of normal electrical and mechanical activity in the atria.

### **Atrial Thrombosis**

Formation of a blood clot within an atrium of the heart.

### **Atrioventricular Bundle**

Conducting fibers that carry electrical impulses from the atrioventricular node to the ventricles.

#### **Synonyms:**

Bundle of His

### **Attenuated Vaccine**

A vaccine made with a weakened microorganism that retains the ability to stimulate immunity.

#### **Synonyms:**

Live attenuated vaccine

### **Atypical Lymphocyte**

A lymphocyte with an unusual appearance, often reflecting immune activation or infection.

### **Audiology**

The science and clinical evaluation of hearing, balance, and related disorders.

### **Auditory Area**

A region of the cerebral cortex that processes sound information.

#### **Synonyms:**

Auditory cortex

### **Auditory Fatigue**

Temporary reduction in hearing sensitivity or listening performance after prolonged or intense sound exposure.

### **Auditory Ossicle**

One of the three small middle-ear bones that trans-

---

mit sound vibrations.

**Synonyms:**

Ear ossicle

**Auditory Pathway**

The neural route carrying sound information from the inner ear to the auditory cortex.

**Auditory Threshold**

The quietest sound intensity a person can detect at a specified frequency.

**Synonyms:**

Hearing threshold

**Autism**

A neurodevelopmental condition involving persistent differences in social communication and restricted or repetitive patterns of behavior.

**Synonyms:**

Autism spectrum disorder

**Autoantigen**

A normal body molecule mistakenly targeted by the immune system in an autoimmune disease.

**Autonomic Disorder**

Dysfunction of the autonomic nervous system, which regulates involuntary cardiovascular, gastrointestinal, sudomotor, urinary, sexual, and pupillary functions. It may be primary or secondary to conditions such as diabetes, neurodegenerative disease, autoimmune neuropathy, infection, or medication effects, and may cause orthostatic hypotension, abnormal heart-rate responses, sweating abnormalities, gastrointestinal dysmotility, bladder dysfunction, or sexual dysfunction. Evaluation and treatment depend on the underlying cause and the organs affected.

**Autonomic Ganglion**

A cluster of nerve-cell bodies in the autonomic nervous system that relays signals to organs.

**Autoradiography**

An imaging technique that uses radioactive labels

to show the location of substances in tissue.

**Autosome**

Any chromosome other than a sex chromosome.

**Synonyms:**

Non-sex chromosome

**Awareness**

Conscious recognition of oneself, surroundings, thoughts, or sensations.

**Synonyms:**

Consciousness

**Axon Fasciculation**

Bundling of developing axons into organized nerve tracts.

**Axon Guidance**

The developmental process directing growing axons toward their correct targets.

**Axon Hillock**

The region of a neuron where action potentials are usually initiated.

**Axonal Transport**

Movement of proteins, organelles, and other materials along an axon.

**Axoneme**

The internal microtubule-based structure of a cilium or flagellum.

**Addictive Behavior**

Repeated substance use or rewarding behavior that becomes difficult to control despite harmful consequences.

**AIDS-Associated Nephropathy**

Kidney injury associated with advanced HIV infection.

**Synonyms:**

HIV-associated nephropathy

---

### **Akinetic Mutism**

A state of profound lack of movement and speech despite wakefulness and preserved basic alertness.

### **Allergic Reaction**

An immune response to an otherwise harmless substance, ranging from mild symptoms to anaphylaxis.

#### **Synonyms:**

Allergy

### **Amnioinfusion**

Infusion of sterile fluid into the amniotic sac, often to reduce umbilical-cord compression during labor.

### **Amyloid Neuropathy**

Peripheral nerve damage caused by deposition of abnormal amyloid protein.

### **Angiogenesis Inhibition**

Suppression of new blood-vessel formation, a strategy used in some cancer treatments.

#### **Synonyms:**

Antiangiogenic therapy

### **Ankle Fracture**

A break in one or more bones forming the ankle joint.

### **Anterior Chamber**

The fluid-filled space between the cornea and iris of the eye.

### **Anti-Anxiety Agents**

Medicines or other treatments used to reduce clinically significant anxiety.

#### **Synonyms:**

Anxiolytics

### **Antibody Therapy**

Treatment using antibodies to block, activate, or target a specific molecule or cell.

#### **Synonyms:**

Immunotherapy

### **Anticonvulsant**

A medicine used to prevent or control seizures; some are also used for nerve pain or mood disorders.

#### **Synonyms:**

Antiseizure medicine

### **Antigen Presentation**

Display of antigen fragments on cell surfaces for recognition by T cells.

### **Antihypertensive Agent**

A medicine or treatment that lowers elevated blood pressure.

#### **Synonyms:**

Blood-pressure medicine

### **Antipsychotic Agent**

A medicine used to treat psychosis and, in some cases, bipolar disorder or severe behavioral symptoms.

#### **Synonyms:**

Antipsychotic

### **Apathy**

Reduced motivation, emotional responsiveness, or interest in activities.

### **Appetite**

The desire or drive to eat.

### **Arthropathy**

Any disease or disorder affecting a joint.

#### **Synonyms:**

Joint disease

### **Artificial Insemination**

Placement of sperm into the reproductive tract by a medical procedure to assist conception.

#### **Synonyms:**

Intrauterine insemination

### **Aseptic Meningitis**

Inflammation of the meninges without evidence of typical bacterial meningitis, often caused by viruses

---

or medicines.

### **Autoimmune Thyroiditis**

Immune-mediated inflammation and damage of the thyroid gland.

#### **Synonyms:**

Hashimoto thyroiditis

### **Axial Skeleton**

The bones of the head, neck, and trunk, including the skull, spine, ribs, and sternum.

### **Axillary Lymphadenectomy**

Surgical removal of lymph nodes from the armpit.

#### **Synonyms:**

Axillary node dissection

### **Abandoned Lead**

A disconnected or no-longer-used wire from an implanted cardiac or other electrical device that remains in the body.

#### **Synonyms:**

Retained device lead

### **Abdominal Fluid**

Fluid within the abdominal cavity; excessive accumulation is called ascites.

#### **Synonyms:**

Peritoneal fluid

### **Abdominal Neoplasm**

An abnormal tissue growth arising in an abdominal organ or structure; it may be benign or malignant.

#### **Synonyms:**

Abdominal tumor

### **Abdominoperineal Resection**

Surgery removing the rectum and anus, usually with a permanent colostomy.

#### **Synonyms:**

APR

### **Ablepharon**

A congenital absence or severe underdevelopment

of an eyelid.

### **Abnormal**

Not typical of healthy structure, function, or measurement.

### **Abnormal Color**

A color change in skin, mucosa, secretions, or another tissue that differs from the expected appearance.

#### **Synonyms:**

Discoloration

### **Abnormal Fissure**

An unusual crack, groove, or cleft in a tissue or organ.

### **Abnormal Virilization**

Development of masculinizing physical features in a person whose expected sex development does not include them, often from excess androgens.

#### **Synonyms:**

Virilization

### **Abnormality**

A structural, functional, or developmental difference from the usual state.

#### **Synonyms:**

Anomaly

### **Abomasum**

The fourth and glandular compartment of the stomach in ruminant animals.

#### **Synonyms:**

True stomach

### **Abrin**

A highly toxic plant protein from rosary pea seeds that inhibits cellular protein synthesis.

### **Absence Epilepsy**

A generalized epilepsy characterized by brief episodes of impaired awareness, often with staring and subtle movements.

---

**Synonyms:**

Absence seizures

**Absent Reflex**

Failure of an expected tendon or neurologic reflex to occur when stimulated.

**Acalculous Cholecystitis**

Inflammation of the gallbladder specifically without gallstones, usually acute and occurring in critically ill, injured, postoperative, fasting, or shocked patients. Bile stasis and gallbladder ischemia contribute to the disease, which may progress rapidly to gangrene or perforation. Fever, right-upper-quadrant pain, leukocytosis, or unexplained sepsis may occur; ultrasound is commonly used for evaluation.

**Acanthocyte**

An abnormally shaped red blood cell with irregular thorn-like projections.

**Synonyms:**

Spur cell

**Acantholysis**

Loss of attachment between epidermal cells, causing cells to separate.

**Acanthoma**

A benign growth composed of thickened squamous epidermal cells.

**Acatalasia**

A rare inherited deficiency of catalase, an enzyme that breaks down hydrogen peroxide.

**Synonyms:**

Catalase deficiency

**Accelerated Growth**

Growth occurring faster than expected for a person's age, tissue, or developmental stage.

**Accelerometry**

Measurement of movement or acceleration, often used to assess activity, gait, or sleep.

**Accessory Nerve**

The eleventh cranial nerve (CN XI), a primarily motor nerve whose spinal component supplies the sternocleidomastoid and trapezius muscles. It enables head rotation and shoulder elevation; injury may cause weak head rotation, impaired shoulder shrug, and shoulder droop.

**Synonyms:**

Cranial nerve XI; spinal accessory nerve

**Accidental Death**

Death resulting from an unintentional injury or event.

**Synonyms:**

Unintentional death

**Accidental Fall**

An unintentional descent to a lower level or the ground.

**Synonyms:**

Fall injury

**Acephalostomia**

A congenital anomaly involving absence of the head and mouth.

**Achondrogenesis**

A group of severe inherited disorders in which cartilage and bone development are profoundly impaired.

**Achromatopsia**

An inherited disorder causing absent or greatly reduced color vision, often with light sensitivity and poor visual acuity.

**Synonyms:**

Complete color blindness

**Acid Phosphatase**

An enzyme that works best in acidic conditions and is found in several tissues, including prostate and blood cells.

**Synonyms:**

ACP

---

### Acinar Cell

A secretory cell arranged in a cluster, such as a pancreatic cell that releases digestive enzymes.

### Acne Keloid

A chronic inflammatory condition causing firm scar-like bumps around hair follicles, usually on the back of the neck.

#### Synonyms:

Acne keloidalis nuchae

### Acquired Feminization

Development of typically female secondary sexual characteristics after birth in a person not expected to develop them, often from hormonal change.

### Acquisition Duration

The time required to obtain or record a measurement, image, or physiologic signal.

### Acrodermatitis

Inflammation affecting the skin of the hands, feet, or other distal body regions.

### Acro-Osteolysis

Resorption or destruction of the ends of the fingers or toes.

### Acrosin

An enzyme in sperm that helps it penetrate the egg's surrounding layers.

### Acrosome

A cap-like structure on the head of a sperm cell containing enzymes needed for fertilization.

### Acrosome Reaction

Release of acrosomal enzymes that enables a sperm cell to penetrate the egg's outer layers.

### Actigraphy

Monitoring of movement over time to estimate sleep-wake patterns and activity.

#### Synonyms:

Actigraphic monitoring

### Actin Myofilament

A thin muscle filament made mainly of actin that interacts with myosin during contraction.

#### Synonyms:

Thin filament

### Actin-Binding Protein

A protein that regulates, anchors, or cross-links actin filaments.

### Acting Out

Expressing emotional conflict or distress through behavior rather than words.

### Acute Disease

A condition that begins suddenly and generally lasts a limited time.

#### Synonyms:

Acute illness

### Acute Onset Pain

Pain that begins suddenly, often over seconds, minutes, or hours.

#### Synonyms:

Sudden-onset pain

### A-A Gradient

The difference between alveolar and arterial oxygen partial pressure. It helps assess gas exchange; an increased value suggests ventilation-perfusion mismatch, shunt, or impaired diffusion.

### A1C

A measure of glycated hemoglobin that estimates average blood glucose over the previous two to three months. It is used to diagnose and monitor diabetes, but some anemias and hemoglobin disorders can affect the result.

### AAA Repair

Surgical or endovascular treatment of an abdominal aortic aneurysm to prevent rupture or treat a rupture.

---

## Abasia

Inability to walk despite preserved strength and the ability to move the legs in other circumstances. It usually reflects a neurologic or functional gait disorder rather than paralysis.

## ABCDE Assessment

A systematic emergency assessment of airway, breathing, circulation, disability, and exposure. Life-threatening abnormalities are treated as they are identified, with repeated reassessment.

## ABCDE Rule For Melanoma

A screening mnemonic for suspicious pigmented lesions: asymmetry, border irregularity, color variation, diameter greater than about 6 mm, and evolution. It does not diagnose melanoma; suspicious lesions require clinical assessment.

## Abdomen

The body region between the diaphragm and pelvis. It contains most digestive organs, the kidneys, spleen, pancreas, and major blood vessels and is described clinically by four quadrants or nine regions.

## Abdominal Abscess

A localized collection of pus within the abdomen, usually caused by bacterial infection, inflammation, surgery, or organ perforation. It may cause fever and abdominal pain and often requires antibiotics and drainage.

## Abdominal Aorta

The portion of the aorta below the diaphragm that extends to its bifurcation into the common iliac arteries. It supplies the abdominal organs, pelvic organs, and lower limbs through its branches.

## Abdominal Aortic Aneurysm

A localized enlargement of the abdominal aorta, usually defined as an aortic diameter of at least 3 cm or more than 50 percent above normal. Enlargement can progress to rupture.

**Synonyms:**

AAA (Abdominal Aortic Aneurysm)

## Abdominal Aortic Aneurysm Screening

Ultrasound examination used to detect an abdominal aortic aneurysm before symptoms occur. Screening recommendations depend on age, sex, smoking history, and clinical risk; follow-up intervals depend on aneurysm size.

## Abdominal Aortic Ultrasound

Ultrasound imaging of the abdominal aorta used to detect or monitor an abdominal aortic aneurysm.

## Abdominal Bloating

A sensation of fullness or visible enlargement of the abdomen, commonly caused by intestinal gas, constipation, food intolerance, or functional gastrointestinal disorders. Persistent or severe bloating may require evaluation for organic disease.

## Abdominal Bruit

An abnormal blowing or whooshing sound heard over the abdomen with a stethoscope, usually caused by turbulent blood flow through a narrowed or enlarged artery. It may occur with renal-artery stenosis or an abdominal aortic aneurysm. Further assessment depends on symptoms and vascular risk factors.

## Abdominal Cavity

The cavity between the diaphragm and pelvis containing the stomach, liver, gallbladder, spleen, pancreas, kidneys, and intestines.

## Abdominal Circumference

The circumference of the fetal abdomen measured at a standardized level that includes the stomach, portal sinus, and spine. It is used with other ultrasound measurements to estimate fetal size and assess growth.

## Abdominal Colic

Cramping abdominal pain caused by contractions or obstruction of a hollow organ, such as the intestine, ureter, or bile duct. Pain often comes in waves and

---

may be accompanied by nausea, vomiting, sweating, or altered bowel or urinary function. Severe or persistent pain requires prompt medical assessment.

### **Abdominal Compartment Syndrome**

Condition defined by sustained intra-abdominal pressure greater than twenty millimeters of mercury associated with new organ dysfunction. Causes include massive ascites, bowel distension from obstruction or ileus, hemorrhage, and post-surgical conditions particularly after large abdominal wall hernia repairs.

### **Abdominal CT**

Computed tomography of the abdomen used to evaluate selected causes of abdominal pain, trauma, bowel obstruction, inflammation, bleeding, and masses. The protocol and use of contrast depend on the suspected condition and the patient's clinical status.

### **Abdominal Distention**

Visible or subjective enlargement, tightness, or fullness of the abdomen caused by gas, fluid, stool, pregnancy, organ enlargement, mass, or bowel obstruction. Acute distention with pain, vomiting, obstipation, fever, haemodynamic instability, or peritoneal signs requires urgent evaluation.

### **Abdominal Girth**

The circumference of the abdomen measured at a standardized level. It is used to monitor abdominal distention, fetal growth, obesity, ascites, and changes in intra-abdominal volume.

### **Abdominal Mass**

A palpable or imaging-detected abnormal collection, enlargement, or lesion within the abdomen. Causes include distended bowel or bladder, organ enlargement, hernia, inflammatory collection, benign tumour, and malignancy; assessment depends on location, mobility, tenderness, systemic features, and appropriate imaging.

### **Abdominal Pain**

Discomfort within the abdomen classified as visceral

(dull, midline, poorly localized), parietal (sharp, well localized, worsened by movement), or referred from a distant source.

### **Abdominal Pregnancy**

An ectopic pregnancy implanted in the peritoneal cavity rather than the uterus, fallopian tubes, or ovaries. It is rare and can cause severe internal bleeding. Diagnosis requires specialist imaging and management.

### **Abdominal Radiography**

Plain projectional X-ray imaging of the abdomen, sometimes obtained in supine, erect, or decubitus positions.

### **Abdominal Reflex**

Contraction of the abdominal muscles after stimulation of the abdominal skin. An absent or asymmetric reflex may indicate neurologic disease, although it can be absent normally in some people.

### **Abdominal Rigidity**

Involuntary tensing of the abdominal wall, usually caused by irritation of the peritoneum. It may occur with peritonitis, perforation, severe infection, or intra-abdominal bleeding and requires clinical assessment.

### **Abdominal Swelling**

Visible or felt enlargement of the abdomen caused by gas, constipation, pregnancy, fluid accumulation, organ enlargement, mass, or abdominal-wall changes. Persistent, progressive, painful, or sudden swelling—especially with vomiting, fever, bleeding, or inability to pass stool or gas—requires medical evaluation.

### **Abdominal Wall**

The layered muscular, fascial, and skin-covered boundary surrounding the abdominal cavity. It supports and protects abdominal organs and helps with posture, breathing, coughing, and straining. Weakness or defects may produce abdominal or incisional hernias; trauma, infection, and tumors may also affect the wall.

---

## Abdominal Wall Hernia

Protrusion of abdominal tissue through a weak area or opening in the abdominal wall. Common types include inguinal, umbilical, femoral, and incisional hernias. A painful, firm, or non-reducible bulge with vomiting or abdominal distension may indicate incarceration or strangulation and requires urgent assessment.

## Abdominal X-Ray

A plain radiograph of the abdomen used to assess selected causes of pain, obstruction, perforation, foreign bodies, or urinary stones. It has limited sensitivity for many abdominal disorders.

## Abducens Nerve

The sixth cranial nerve, a motor nerve that supplies the lateral rectus muscle and abducts the eye. Lesion of the nerve causes failure of lateral gaze and horizontal diplopia.

## Abduction

Movement of a limb or other body part away from the median plane of the body.

## Abetalipoproteinemia

A rare inherited disorder in which the body cannot produce normal apolipoprotein-B-containing lipoproteins. It causes fat malabsorption, deficiencies of fat-soluble vitamins, abnormal red cells, and possible neurologic or retinal disease.

## Abfraction

Loss of tooth structure near the gum line, possibly related to mechanical stress. It may cause tooth sensitivity and may require dental treatment.

## ABI

The ankle-brachial index, calculated by dividing ankle systolic blood pressure by arm systolic blood pressure. A low value suggests peripheral arterial disease.

## Abnormal Uterine Bleeding

Uterine bleeding that is abnormal in frequency, reg-

ularity, duration, or volume, occurring outside of normal menstruation or in women who are not pregnant.

## ABO Blood Group

A blood classification based on whether red blood cells carry A antigen, B antigen, both, or neither. The four groups are A, B, AB, and O.

## ABO Blood Typing

A laboratory test that determines a person's ABO and Rh blood groups. It is performed before transfusion, transplantation, and some obstetric procedures.

## ABO Incompatibility

An immune reaction caused by transfusion or pregnancy involving incompatible A, B, or O blood-group antigens. It can cause acute hemolysis, transfusion reactions, or hemolytic disease of the newborn. See also Hemolytic Disease of the Newborn.

## Abortion

The deliberate termination of a pregnancy by medication or a procedure. The method and clinical definition of viability vary by jurisdiction and circumstance.

## Abrasion

Superficial loss of tissue caused by friction or scraping. In dentistry, it commonly refers to mechanical loss of tooth structure from external forces.

## Abruptio Placentae

Premature separation of the placenta from the uterine wall before delivery. It can cause vaginal bleeding, abdominal pain, uterine tenderness, fetal distress, and maternal shock and requires urgent obstetric assessment.

## Abscess

A localized collection of pus within a tissue, organ, or cavity, typically caused by bacterial infection. Abscesses form when bacteria (most commonly *Staphylococcus aureus* including MRSA) invade tis-

---

sue, triggering an intense inflammatory response with neutrophil accumulation and tissue necrosis.

### **Abscessed Tooth**

A collection of pus caused by bacterial infection of the tooth or surrounding tissues, usually arising from untreated dental decay, a cracked tooth, or periodontal disease. Pain, facial swelling, fever, and sensitivity may occur. Dental treatment and drainage are usually required; swelling that affects swallowing or breathing is an emergency.

### **Absence Seizure**

A brief generalized seizure causing sudden impaired awareness and behavioral arrest, usually followed by rapid recovery. Electroencephalography commonly shows generalized three-hertz spike-and-wave activity.

#### **Synonyms:**

Petit Mal Seizure Seizure, Absence Seizure, Petit Mal

### **Absent Breath Sounds**

Lack of audible air movement over part or all of a lung. Causes include pneumothorax, pleural effusion, or airway obstruction; sudden onset requires urgent assessment.

### **Absolute Neutrophil Count**

The number of circulating neutrophils calculated from the white-cell count and differential. A low ANC indicates neutropenia; severe neutropenia greatly increases the risk of serious infection.

### **Absorption**

The process by which a drug enters the bloodstream from its site of administration, such as the digestive tract, skin, or muscle.

### **Abusive Head Trauma**

Injury to an infant or young child caused by inflicted blunt impact, violent shaking, or both. Findings may include subdural hemorrhage, retinal hemorrhage, encephalopathy, fractures, or other injuries; diagnosis requires careful multidisciplinary assessment because no single finding is diagnostic.

#### **Synonyms:**

Shaken Baby Syndrome (Abusive Head Trauma)

### **Acalculia**

An acquired inability to perform previously learned numerical operations or understand numerical relationships, commonly associated with dominant parietal or other cortical dysfunction.

### **Acanthamoeba Keratitis**

A rare but potentially sight-threatening infection of the cornea caused by the free-living amoeba *Acanthamoeba*. It is strongly associated with contaminated contact-lens water or poor lens hygiene and may cause severe eye pain, redness, photophobia, blurred vision, and a ring-shaped corneal infiltrate. Prompt ophthalmic assessment and prolonged anti-amoebic treatment are required.

### **Acanthocytes (Spur Cells)**

Abnormal red blood cells with irregular, spiky, thorn-like membrane projections of varying length and width. Caused by alterations in membrane lipid composition (increased cholesterol-to-phospholipid ratio).

#### **Synonyms:**

Spur Cells

### **Acanthosis Nigricans**

Hyperpigmented, velvety, thickened plaques typically in skin flexures (neck, axillae, groin) and often associated with insulin resistance, obesity, type 2 diabetes mellitus, and metabolic syndrome.

### **Acapnia**

An abnormally low partial pressure of carbon dioxide in arterial blood, usually caused by excessive alveolar ventilation. It may accompany respiratory alkalosis, light-headedness, or paresthesias.

### **Acardia**

Absence or severe malformation of the fetal heart, usually occurring in the setting of a rare twin perfusion sequence. The affected fetus cannot sustain independent circulation.

---

### Acariasis

Infestation or disease caused by mites or ticks. Clinical manifestations vary with the organism and may include dermatitis, pruritus, tissue invasion, or transmission of an associated pathogen.

### Access Needle (Interventional)

A needle used to enter a vessel, cavity, or tissue under clinical or image guidance for sampling, drainage, infusion, or placement of another device.

#### Synonyms:

Interventional

### ACE Inhibitor

A drug that inhibits angiotensin-converting enzyme, reducing formation of angiotensin II and degradation of bradykinin.

### Acetabular Labrum

A fibrocartilaginous rim attached to the margin of the acetabulum that deepens the hip socket, helps maintain a fluid seal, and contributes to hip-joint stability.

### Acetabular Notch

The indentation in the inferior margin of the acetabulum, bridged by the transverse ligament of the acetabulum and forming a passage for structures entering the hip joint.

### Acetabuloplasty

A surgical procedure that reshapes or augments the acetabular rim or socket to improve coverage of the femoral head in selected structural hip disorders.

### Acetabulum

The cup-shaped socket of the hip formed by the fused ilium, ischium, and pubis. It articulates with the femoral head and is deepened by the acetabular labrum.

### Acetaminophen (Paracetamol) Toxicity

Liver injury caused by an excessive dose of acetaminophen. Its toxic metabolite depletes glutathione and causes hepatic necrosis. N-

acetylcysteine is the antidote and should be given promptly when toxicity is suspected.

#### Synonyms:

Paracetamol

### Acetyl-CoA Carboxylase

An enzyme that converts acetyl-CoA to malonyl-CoA, the first committed step in fatty-acid synthesis. Its activity is regulated by cellular energy status and hormones.

### Acetyl-Coenzyme A

A central metabolic intermediate consisting of an acetyl group linked to coenzyme A by a high-energy thioester bond. It enters the citric acid cycle and provides carbon for fatty-acid, cholesterol, and ketone-body synthesis.

### Acetylcholine

A major neurotransmitter in both the central and peripheral nervous systems. In the peripheral nervous system, it is released at the neuromuscular junction (nicotinic receptors) to excite skeletal muscle, at all autonomic ganglia (nicotinic receptors), and at parasympathetic postganglionic terminals (muscarinic receptors).

### Achalasia

A disorder in which the lower esophageal sphincter fails to relax normally and esophageal peristalsis is impaired, causing difficulty swallowing and regurgitation.

#### Synonyms:

Cardiospasm (Achalasia)

### Achenbach's Syndrome

A benign condition of recurrent, painful, spontaneous hematoma formation in the pulp of a finger or thumb, typically affecting middle-aged women. It presents with sudden onset of throbbing pain and blue-black discoloration of the fingertip, resolving spontaneously over one to two weeks without treatment.

---

## Achilles Tendinopathy

Pain and structural disorder of the Achilles tendon, usually caused by repeated loading. It causes posterior heel pain and stiffness and is managed with activity modification, rehabilitation, and treatment of contributing factors.

## Achilles Tendon (Calcaneal Tendon)

The thickest and strongest tendon in the human body, connecting the gastrocnemius and soleus (triceps surae) muscles to the calcaneus (heel bone). It plays a crucial role in plantarflexion of the foot, enabling walking, running, and jumping.

### Synonyms:

Calcaneal Tendon

## Achilles Tendon Rupture

A partial or complete tear of the Achilles tendon, usually caused by sudden force. It causes posterior ankle pain, weakness in plantar flexion, and difficulty walking or standing on tiptoe.

## Achilles Tendonitis

A commonly used term for pain and inflammation or degeneration of the Achilles tendon. It may affect the tendon at its heel insertion or its mid-portion and is often related to repetitive loading.

## Achlorhydria

Absence of hydrochloric acid in gastric secretions. It may result from autoimmune gastritis, long-term acid suppression, or loss of acid-producing stomach cells.

## Achondroplasia

Autosomal dominant skeletal dysplasia (FGFR3 gene). Most common form of dwarfism. Features: short limbs, macrocephaly, frontal bossing, trident hand, spinal stenosis. Homozygous form lethal. Normal intelligence.

### Synonyms:

Dwarfism (Achondroplasia)

## Acid

A substance that donates hydrogen ions or ac-

cepts an electron pair. In water, an acid increases hydrogen-ion concentration and lowers pH.

## Acid Base Balance

The physiological regulation of hydrogen ion concentration in body fluids, maintaining arterial pH between 7.35 and 7.45.

## Acid Reflux

Backward flow of stomach contents into the esophagus, which may cause heartburn, regurgitation, or irritation.

## Acid-Base Analysis

Evaluation of blood pH, bicarbonate, and carbon dioxide to identify metabolic or respiratory disturbances, including those caused by poisoning.

## Acid-Base Disorder

Disturbance of the body's acid-base balance, classified by primary disturbance and compensation. Respiratory acidosis: hypoventilation, high PaCO<sub>2</sub>, low pH. Respiratory alkalosis: hyperventilation, low PaCO<sub>2</sub>, high pH.

## Acid-Fast Bacillus Smear

Microscopic examination of a specimen, often sputum, for acid-fast organisms using a special stain. A positive result supports mycobacterial infection but does not by itself identify the species or establish drug susceptibility; culture or molecular testing is also required.

## Acidosis

An acid-base disturbance in which the concentration of hydrogen ions increases, tending to lower arterial blood pH below 7.35.

## Acinetobacter Baumannii Resistance

*Acinetobacter baumannii* is a gram-negative coccobacillus that has emerged as a significant cause of healthcare-associated infections, particularly in intensive care units. The organism has intrinsic and acquired resistance mechanisms, including beta-lactamases, efflux pumps, and porin mutations.

---

## ACL Injuries

Sprains or tears of the anterior cruciate ligament of the knee, usually caused by twisting, sudden deceleration, or contact trauma. They may cause instability, swelling, and difficulty pivoting; examination and imaging guide management.

## ACL Reconstruction

Surgical reconstruction of the anterior cruciate ligament (ACL) following rupture, one of the most common knee ligament injuries. The ACL is a primary restraint to anterior tibial translation and rotatory instability, and its rupture frequently occurs during non-contact pivoting sports activities (skiing, soccer, basketball).

## Acne

A chronic inflammatory disorder of hair follicles and sebaceous glands. It causes comedones, papules, pustules, or nodules, most often on the face, chest, and back.

### Synonyms:

Pimples Pimples (Acne)

## Acne Rosacea Subtypes

Rosacea may present predominantly with facial flushing and persistent redness, papules and pustules, skin thickening, or eye involvement. A person may have more than one pattern.

## Acne Vulgaris

The common form of acne caused by follicular plugging, increased sebum production, microbial activity, and inflammation. It usually affects the face, trunk, and upper arms.

## Acoustic Nerve

The acoustic nerve, more properly called the auditory or vestibulocochlear nerve (cranial nerve VIII), carries hearing and balance information from the inner ear to the brainstem.

## Acoustic Neuroma

A benign, slow-growing tumor of the vestibular portion of the vestibulocochlear nerve. It may cause

hearing loss, tinnitus, or balance problems.

## Acoustic Neuroma (Vestibular Schwannoma)

A usually benign, slow-growing tumor of Schwann cells involving the vestibular portion of cranial nerve VIII. It may cause unilateral sensorineural hearing loss, tinnitus, imbalance, or facial sensory symptoms; MRI of the internal auditory canals is the preferred diagnostic study.

### Synonyms:

Vestibular Schwannoma Neuroma, Acoustic

## Acoustic Trauma

Acute damage to the auditory system from a brief, intense sound such as an explosion or firearm. It may cause tinnitus, temporary or permanent sensorineural hearing loss, and tympanic or ossicular injury; urgent audiologic assessment is indicated when hearing loss is sudden.

## Acoustic Reflex

An involuntary contraction of the stapedius muscle in response to a loud sound. It can be measured with immittance testing and helps assess the middle-ear muscles, auditory pathways, and facial nerve.

### Synonyms:

Stapedial reflex; stapedius reflex; middle-ear muscle reflex.

## Acquisition Time

The time during which a medical imaging system collects data. The required time depends on the imaging method, body region, protocol, and patient movement.

## Acral Lentiginous Melanoma

A subtype of melanoma arising on acral skin (palms, soles, or under nails), appearing as a dark, irregularly pigmented patch or plaque. It is more common in people with darker skin tones and often presents at a later stage due to less frequent surveillance of these sites. Prognosis depends on thickness and stage at diagnosis.

---

## Acrodermatitis Enteropathica

A zinc-deficiency disorder causing periorificial and acral dermatitis, alopecia, diarrhoea, poor wound healing, and increased susceptibility to infection. It may be inherited from impaired intestinal zinc absorption or acquired through malnutrition, malabsorption, or prolonged parenteral nutrition.

## Acromegaly

Chronic growth hormone (GH) excess in adulthood, typically from a pituitary somatotroph adenoma.

## Acromegaly Complications

Long-term growth-hormone excess may cause diabetes, hypertension, heart disease, sleep apnea, joint disease, nerve compression, visual problems, and other organ complications.

## Acromioclavicular Joint

A plane synovial joint between the acromion of the scapula and the lateral end of the clavicle. It permits gliding movements and is stabilized primarily by the acromioclavicular and coracoclavicular ligaments.

## Acromioclavicular Joint Injuries

Sprains or dislocations of the joint between the acromion and clavicle, usually caused by a fall or direct shoulder impact. Severity ranges from ligament sprain to complete displacement and is assessed clinically and with imaging.

## Acromion

Bony process forming the shoulder's highest point, extending laterally from the scapular spine. Articulates with the clavicle at the acromioclavicular joint and arches over the glenohumeral joint. Attachment for deltoid and trapezius. The subacromial space contains the supraspinatus tendon and subacromial bursa.

## ACTH Stimulation Test

A dynamic test of adrenal cortisol reserve using synthetic adrenocorticotrophic hormone, usually cosyntropin. An inadequate cortisol rise supports adrenal insufficiency, although interpretation depends on timing, assay, recent glucocorticoid exposure, and

whether disease is acute or chronic.

## Actinic Granuloma

A benign granulomatous skin condition arising on sun-damaged skin, presenting as annular or ring-shaped plaques with central atrophy and an elevated, erythematous border. It is thought to represent a foreign-body reaction to degenerated elastic tissue from chronic ultraviolet exposure.

## Actinic Keratosis

A rough, scaly skin lesion caused by chronic ultraviolet exposure, usually on sun-exposed skin. It can progress to squamous-cell carcinoma, so persistent, thickened, or changing lesions require clinical assessment.

### Synonyms:

Keratosis, Actinic Solar Keratosis Solar Keratosis (Actinic Keratosis)

## Actinic Keratosis Management

Actinic keratosis management requires field-directed and lesion-directed therapy. Lesion-directed: cryotherapy (liquid nitrogen, 5 to 10 second freeze-thaw cycle), curettage, electrodesiccation.

## Actinic Purpura

Bruising caused by fragile, sun-damaged skin and connective tissue, usually on the backs of the hands and forearms in older adults. The purple patches may appear after minor trauma and are generally harmless, although medicines such as anticoagulants can worsen them. New, widespread, or unexplained bruising warrants assessment.

## Actinomycetoma

A chronic, progressive granulomatous infection of the skin and subcutaneous tissue caused by aerobic actinomycetes, characterized by swelling, draining sinuses, and dark granules in the discharge. It primarily affects the feet and is endemic in tropical regions. Diagnosis is by culture and histopathology.

## Actinomycosis

A chronic infection caused by branching, gram-positive anaerobic bacteria of the genus *Actino-*

---

myces, which normally colonize the mouth, gastrointestinal tract, and genital tract. It can form infiltrative masses and draining sinuses containing sulfur granules.

### **Action Potential**

A rapid, all-or-nothing depolarization of the cell membrane that propagates along excitable membranes (neurons, muscle, some endocrine cells).

### **Activated Charcoal**

A porous form of carbon that adsorbs some substances in the gastrointestinal tract and can reduce their absorption after selected poisonings. It is not effective for every toxin and can cause aspiration or other complications.

### **Activated Partial Thromboplastin Time**

A blood test that measures clotting through the intrinsic and common coagulation pathways. It may be prolonged by unfractionated heparin, clotting-factor deficiencies, inhibitors, or some liver and systemic disorders.

### **Active Caries**

Tooth decay that is continuing to progress. The affected surface is often soft, rough, or chalky and requires dental assessment and management.

### **Active Management Of Third Stage**

A set of measures used after birth to reduce postpartum hemorrhage, usually including a uterotonic medicine, controlled cord traction when appropriate, and assessment of uterine tone and bleeding.

### **Active Phase Of Labor**

The part of the first stage of labor in which the cervix dilates progressively, generally beginning at about 6 cm and continuing to full dilation. Progress varies between individuals.

### **Active Site**

The specific three-dimensional region of an enzyme where substrate binding and catalysis occur. Formed by amino acid residues that may be dis-

tant in primary sequence but brought together by protein folding.

### **Active Surveillance**

Close, structured monitoring of a cancer or precancerous condition without immediate treatment. It includes scheduled examinations, laboratory tests, imaging, or biopsies, with treatment started if evidence of progression develops.

### **Active Transport**

Movement of substances across cell membranes against their concentration gradient, requiring energy input, typically from ATP hydrolysis.

### **Activities Of Daily Living**

Routine tasks required for personal care and independent living, including basic activities and more complex instrumental activities. Performance is assessed to describe functional status and support care planning.

### **Acute**

Beginning suddenly or developing over a short period. The term may describe symptoms, illnesses, or complications.

#### **Synonyms:**

Bronchitis (Acute)

### **Acute Agitation**

A state of heightened motor activity, emotional tension, irritability, and impaired behavioral control that may threaten the patient or others. Management begins with de-escalation and assessment for delirium, intoxication, withdrawal, medical illness, and psychosis.

### **Acute Alcohol Intoxication**

Neurobehavioral and physiologic impairment caused by recent ethanol exposure. Severity varies with concentration, tolerance, co-ingestants, and comorbidity; dangerous effects include respiratory depression, aspiration, hypoglycemia, hypothermia, trauma, and coma.

---

### **Acute Angle-Closure Glaucoma**

An ophthalmic emergency in which sudden closure of the anterior-chamber angle causes a rapid rise in intraocular pressure. Severe eye pain, blurred vision, halos, headache, nausea, vomiting, and a red eye may occur; urgent ophthalmic treatment is required to protect vision.

### **Acute Aortic Syndrome**

A spectrum of life-threatening conditions involving the thoracic aorta, including aortic dissection, intramural hematoma (IMH), and penetrating aortic ulcer (PAU). See acute aortic syndromes.

### **Acute Bacterial Rhinosinusitis**

Bacterial infection of the paranasal sinuses suspected when symptoms persist without improvement for at least 10 days, become substantially worse after initial improvement, or are severe with high fever and purulent discharge. Treatment decisions depend on severity, complications, resistance risk, and local guidance.

### **Acute Blood Loss**

Rapid loss of circulating blood volume that can cause hypovolemic shock, tissue hypoxia, tachycardia, hypotension, and acute anemia.

### **Acute Bronchitis**

Acute inflammation of the tracheobronchial tree, usually caused by a viral respiratory infection and characterized by cough, with or without sputum production, lasting up to several weeks.

### **Acute Caries**

Tooth decay that progresses rapidly, often producing a soft lesion or cavity. Risk is increased by factors such as frequent sugar exposure, reduced saliva, or poor oral hygiene.

### **Acute Cholecystitis**

Acute inflammation of the gallbladder, most often caused by persistent cystic-duct obstruction by a gallstone. It commonly causes sustained right-upper-quadrant pain, fever, nausea, and a positive Murphy sign; ultrasound and timely antimicrobial

and surgical assessment are standard.

### **Acute Acalculous Cholecystitis**

Acute gallbladder inflammation without gallstones, usually occurring in critically ill, injured, postoperative, or fasting patients. Ischaemia, bile stasis, and infection may contribute; it can progress rapidly to necrosis or perforation and requires urgent assessment.

### **Acute Necrotizing Ulcerative Gingivitis (ANUG)**

A painful, rapidly developing infection of the gums characterized by punched-out gingival papillae, ulceration, spontaneous bleeding, gray necrotic tissue, and foul breath. It is associated with anaerobic oral bacteria and risk factors such as poor oral hygiene, smoking, stress, malnutrition, or immunosuppression; urgent dental evaluation, cleaning, and treatment are needed.

### **Acute Coronary Syndrome**

A clinical spectrum caused by acute myocardial ischemia from plaque disruption, thrombosis, or less commonly coronary spasm. It includes unstable angina, NSTEMI, and STEMI and requires rapid assessment with symptoms, serial ECGs, and cardiac troponin testing.

### **Acute Cough**

A cough lasting less than three weeks. Common causes include viral respiratory infection, acute bronchitis, and pneumonia.

### **Acute Dacryocystitis**

Acute infection and inflammation of the lacrimal sac, most commonly caused by obstruction of the nasolacrimal duct leading to stasis and secondary bacterial infection. It presents with painful swelling, redness, and tenderness at the medial canthus with purulent discharge.

### **Acute Diarrhea**

Passage of loose or watery stools, usually three or more times daily, lasting less than two weeks. Infection, food-related illness, medicines, and other

---

intestinal disorders can cause it. Oral rehydration is important; blood in stool, severe dehydration, persistent vomiting, or severe pain requires prompt assessment.

### **Acute Disseminated Encephalomyelitis**

An acute, immune-mediated demyelinating disorder, usually occurring days to weeks after an infection and less often after vaccination. It commonly causes encephalopathy with multifocal neurologic deficits, ataxia, or seizures, particularly in children.

### **Acute Esophageal Necrosis**

Ischemic necrosis of the esophageal mucosa, most commonly caused by low-flow states such as shock, sepsis, or thromboembolism, presenting with hematemesis and chest pain. Endoscopy shows circumferential black necrotic mucosa, typically in the distal esophagus.

### **Acute Exacerbation Of Asthma**

A progressive increase in dyspnea, cough, wheezing, or chest tightness with reduced expiratory airflow compared with the patient's baseline. Severe attacks may cause exhaustion, silent chest, hypercapnia, respiratory failure, and need for urgent treatment.

### **Acute Fatty Liver Of Pregnancy**

A rare, potentially life-threatening complication of late pregnancy involving liver dysfunction and microvesicular fat accumulation. It may cause nausea, abdominal pain, jaundice, low glucose, coagulopathy, or organ failure.

### **Acute Flaccid Myelitis**

A rare but serious inflammatory disorder of the spinal cord, usually affecting the gray matter and causing sudden flaccid limb weakness, reduced reflexes, and sometimes cranial-nerve or respiratory involvement. MRI and cerebrospinal-fluid studies support the diagnosis; urgent neurologic and respiratory monitoring is required.

### **Acute Generalized Exanthematous Pustulosis**

An acute drug reaction characterised by dozens to

thousands of small, sterile, nonfollicular pustules arising on an erythematous base, often with fever and neutrophilia. It usually begins rapidly after exposure to an antibiotic or other medication and resolves after withdrawal of the trigger.

### **Acute Glomerulonephritis**

Acute inflammation of the renal glomeruli causing hematuria, proteinuria, reduced glomerular filtration, edema, and often hypertension.

### **Acute Hepatitis**

Acute inflammation and injury of hepatocytes, usually developing over days to months and characterized by elevated aminotransferases, with or without jaundice, nausea, right-upper-quadrant discomfort, or constitutional symptoms.

### **Acute HIV Syndrome**

The acute retroviral syndrome occurring 2-6 weeks after primary HIV infection, corresponding to high-level viremia and immune activation. Presents with fever (most common), lymphadenopathy, pharyngitis, rash (maculopapular, trunk/face), myalgia, arthralgia, headache, nausea, diarrhea, and oral ulcers.

### **Acute Hypercapnic Respiratory Failure**

Inability to eliminate carbon dioxide, producing elevated arterial PaCO<sub>2</sub> and often respiratory acidemia. Causes include COPD exacerbation, severe asthma, neuromuscular weakness, central respiratory depression, and chest-wall restriction.

### **Acute Hypoxemic Respiratory Failure**

Inability of the respiratory system to maintain adequate arterial oxygenation, usually manifested by low arterial oxygen or oxygen saturation despite appropriate inspired oxygen. Causes include pneumonia, pulmonary edema, ARDS, atelectasis, and pulmonary embolism.

### **Acute Inflammation**

A rapid, predominantly non-specific immune response to tissue injury or infection that typically lasts hours to days and involves vascular and cellu-

---

lar reactions. The cardinal signs are redness, heat, swelling, pain, and loss of function, resulting from increased blood flow, vascular permeability, and cellular infiltration.

### **Acute Interstitial Nephritis**

Inflammatory infiltrate in the renal interstitium and tubules most commonly caused by drug reactions including NSAIDs, antibiotics particularly penicillins and cephalosporins, proton pump inhibitors, and diuretics. Also caused by infections and autoimmune diseases.

### **Acute Ischemic Stroke**

Sudden neurologic dysfunction caused by focal cerebral, spinal, or retinal ischemia. Emergency evaluation distinguishes hemorrhage from ischemia and determines eligibility for reperfusion therapy while supporting airway, glucose, temperature, and blood pressure management.

### **Acute Kidney Injury**

A sudden decline in kidney function over hours or days, causing reduced filtration and possible fluid, electrolyte, or acid-base disturbances. Causes include reduced blood flow, direct kidney injury, and urinary obstruction.

#### **Synonyms:**

AKI

### **Acute Kidney Injury Staging**

A standardized classification based on changes in serum creatinine and urine output. KDIGO stages 1 through 3 quantify the severity of abrupt kidney-function decline and support prognosis, monitoring, and treatment decisions.

### **Acute Leukemia**

A leukemia characterized by a rapid onset, clonal proliferation of immature blast cells (>20% of bone marrow cells), and rapid progression without treatment. Subtypes: acute lymphoblastic leukemia (ALL, B-cell or T-cell, most common childhood cancer, peak age 2-5) and acute myeloid leukemia (AML, more common in adults, median age 65-70).

### **Acute Limb Ischemia**

Sudden reduction in arterial blood flow to a limb that threatens tissue viability, usually caused by embolism, thrombosis, or graft occlusion. The six classic findings are pain, pallor, pulselessness, paresthesia, paralysis, and poikilothermia; urgent vascular assessment and revascularization are required.

### **Acute Limb Ischemia Six Ps**

The classic findings of acute arterial perfusion loss: pain, pallor, pulselessness, paresthesia, paralysis, and poikilothermia. Motor or sensory deficit indicates threatened limb and requires urgent vascular assessment and revascularization planning.

### **Acute Liver Failure**

Rapid deterioration of liver function in a previously healthy individual without prior liver disease. Causes include acetaminophen toxicity, viral hepatitis, drug reactions, autoimmune hepatitis, and Wilson disease. Features include coagulopathy, encephalopathy, and multiorgan failure. Presents with jaundice, confusion, and bleeding.

#### **Synonyms:**

Liver Failure, Acute

### **Acute Lymphangitis**

Acute inflammation of lymphatic vessels, typically resulting from streptococcal or staphylococcal infection spreading from a distal wound. It presents with red, tender streaks extending proximally from the site of infection, along with fever, malaise, and regional lymphadenopathy. Treatment requires systemic antibiotics.

### **Acute Lymphoblastic Leukemia**

A clonal malignancy of lymphoid progenitor cells, most common in children (peak age 2-5 years) but also occurring in adults with a worse prognosis with increasing age.

### **Acute Lymphocytic Leukemia**

A malignant proliferation of immature lymphoid precursors in the bone marrow and blood, commonly presenting with cytopenias, fever, bone pain, or lymphadenopathy.

---

**Synonyms:**

Leukemia, Acute Lymphocytic

**Acute Megakaryoblastic Leukemia**

A rare subtype of acute myeloid leukemia characterized by the proliferation of megakaryoblasts in the bone marrow and peripheral blood.

**Acute Mesenteric Ischemia**

Occlusion or reduced flow in the mesenteric arteries causing bowel ischemia, most commonly from embolism or atherosclerosis. Presents with severe abdominal pain disproportionate to physical findings. Delayed treatment leads to bowel necrosis, perforation, and high mortality.

**Acute Mountain Sickness**

A mild altitude illness caused by rapid ascent, usually producing headache with nausea, fatigue, dizziness, or sleep disturbance. Prevention and treatment include gradual acclimatization, descent when symptoms worsen, oxygen, and appropriate medical therapy.

**Acute Myeloid Leukemia**

A clonal hematologic malignancy characterized by proliferation of immature myeloid blasts that suppress normal hematopoiesis. Diagnosis requires the appropriate blast burden or defining genetic abnormality, and presentation commonly includes anemia, infection, and bleeding from marrow failure.

**Acute Obstructive Uropathy**

Sudden impairment of urinary flow caused by obstruction of the urinary tract, potentially producing hydronephrosis, pain, infection, and acute kidney injury.

**Acute Otitis Media**

Infection of the middle ear space with acute onset of symptoms and signs of middle ear inflammation. Diagnosis requires middle ear effusion plus acute symptoms (ear pain, fever, irritability) or signs (bulging tympanic membrane, erythema). Most common pathogen: *Streptococcus pneumoniae*.

**Acute Pancreatitis**

Sudden inflammation of the pancreas, most often caused by gallstones or alcohol. It causes upper-abdominal pain and may cause vomiting or systemic complications; severity ranges from mild to life-threatening.

**Acute Promyelocytic Leukemia**

A distinct subtype of acute myeloid leukemia (AML) characterized by the t(15;17)(q24;q21) translocation, which fuses the promyelocytic leukemia (PML) gene on chromosome 15 with the retinoic acid receptor alpha (RARA) gene on chromosome 17.

**Acute Rehabilitation**

Multidisciplinary rehabilitation provided during or soon after hospitalization for conditions such as stroke, spinal-cord injury, traumatic brain injury, or major trauma. Treatment is tailored to functional needs.

**Acute Respiratory Distress Syndrome**

A severe inflammatory lung injury causing acute hypoxemic respiratory failure and diffuse lung opacities not fully explained by heart failure. Common triggers include sepsis, pneumonia, aspiration, trauma, and pancreatitis.

**Acute Sinusitis**

Acute inflammation of the mucosa of one or more paranasal sinuses, usually following a viral upper-respiratory infection. It causes nasal obstruction, purulent or discoloured discharge, facial pressure or pain, and reduced smell; persistent, severe, or worsening symptoms may indicate acute bacterial rhinosinusitis or a complication.

**Synonyms:**

Sinusitis, Acute

**Acute Stress Disorder**

A trauma-related mental-health condition beginning after exposure to actual or threatened death, serious injury, or sexual violence and lasting from three days to one month. Symptoms may include intrusive memories, avoidance, negative mood, dissociation, and increased arousal; professional assessment and

---

support are recommended.

### **Acute Tubular Necrosis**

Most common cause of intrinsic AKI resulting from ischemic or nephrotoxic injury to tubular epithelial cells. Ischemic ATN develops from prolonged prerenal states. Nephrotoxic ATN results from direct injury by aminoglycosides, amphotericin B, cisplatin, contrast, and myoglobin.

### **Acute Viral Illness**

A short-duration illness caused by a virus. Symptoms depend on the affected organ system and may include fever, fatigue, cough, vomiting, diarrhea, or rash.

### **Acute-On-Chronic Liver Failure**

Acute deterioration of pre-existing chronic liver disease associated with organ failure and high short-term mortality. It is commonly precipitated by infection, alcohol-related hepatitis, bleeding, or other acute insults and requires urgent multidisciplinary management.

### **Adam's Apple**

The common name for the laryngeal prominence, the visible projection at the front of the neck formed by the angle where the two laminae of the thyroid cartilage meet.

### **Adaptive Equipment**

Devices that help individuals with disabilities perform daily activities independently. Examples: reachers, dressing sticks, button hooks, ergonomic utensils, grab bars, shower chairs, wheelchairs, walkers, canes. Selection based on individual needs and goals. Occupational therapy assessment recommended.

### **Adaptive Immunity**

Antigen-specific immunity mediated principally by B and T lymphocytes. It develops after antigen exposure, generates immunologic memory, and includes humoral responses from B-cell antibodies and cellular responses from T cells.

### **Addiction**

A chronic, relapsing brain disorder characterized by compulsive substance use or behavior despite harmful consequences. It involves changes in brain reward, motivation, and memory circuits, leading to impaired control over the behavior. Treatment often combines medication, behavioral therapy, and social support.

### **Addison Disease**

Primary adrenal insufficiency resulting from destruction or dysfunction of the adrenal cortex, leading to deficiency of cortisol, aldosterone, and adrenal androgens.

### **Addisonian Crisis**

Life-threatening emergency resulting from acute cortisol deficiency in patients with adrenal insufficiency. Precipitated by infection, trauma, surgery, or abrupt discontinuation of chronic glucocorticoid therapy.

### **Adduction**

Movement of a body part toward the body's midline.

### **Adductor Muscles**

A group of muscles on the medial thigh that adduct (pull toward the midline) the hip: adductor longus, adductor brevis, adductor magnus, gracilis, and pectineus. Innervated by the obturator nerve (L2-L4); adductor magnus also receives tibial nerve (sciatic). Adductor longus is a common site of athletic injury ('groin strain').

### **Adenocarcinoma**

A malignant tumor arising from glandular epithelial tissue, forming gland-like structures. The most common type of carcinoma, occurring in organs such as the colon, breast, lung, pancreas, and prostate.

### **Adenocarcinoma Of The Colon**

A malignant gland-forming epithelial tumor of the colon, commonly presenting with altered bowel habits, occult bleeding, anemia, or an obstructing mass.

---

## Adenoid Cystic Carcinoma

A rare malignant tumor of glandular tissue, most commonly of the salivary glands, characterized by slow growth, perineural spread, and late recurrence.

## Adenoidectomy

The surgical removal of the pharyngeal tonsils (adenoids), which are lymphoid tissue structures located in the nasopharynx, and it is commonly performed in children for obstructive sleep apnea, chronic nasal obstruction, recurrent otitis media, and chronic rhinosinusitis that is refractory to medical management.

## Adenoids

Lymphoid tissue in the posterior wall and roof of the nasopharynx, part of Waldeyer ring of pharyngeal lymphoid tissue. Enlarged adenoids (adenoidal hypertrophy) in children cause nasal obstruction, mouth breathing, snoring, obstructive sleep apnea, serous otitis media (eustachian tube obstruction), and facial changes ('adenoid facies').

## Adenoma

A benign tumour arising from glandular or gland-like epithelial tissue. Some adenomas, particularly certain colorectal adenomas, can develop dysplasia and progress to carcinoma.

## Adenoma-Carcinoma Sequence

Established model of stepwise colorectal carcinogenesis progressing from normal epithelium through adenomas to carcinoma over ten to fifteen years.

## Adenomatous Polyp

A benign gland-forming polyp, most commonly in the colon, that may contain dysplasia and can progress through the adenoma–carcinoma sequence. Tubular, villous, and tubulovillous types are recognized.

## Adenomyosis

A condition in which endometrial glands and stroma are present within the myometrium (uterine muscle). Most common in multiparous women in their 40s and 50s. Presents with heavy menstrual bleeding

(menorrhagia), severe dysmenorrhea, chronic pelvic pain, and uterine enlargement.

## Adenovirus

A non-enveloped DNA virus that causes respiratory infections, conjunctivitis, gastroenteritis, and cystitis. Adenoviruses are highly stable in the environment and can cause outbreaks in closed populations. The virus has over 50 serotypes with different tissue tropisms. Diagnosis is made by PCR, antigen detection, or viral culture.

## Adenovirus Infection

Infection with an adenovirus, commonly causing sore throat, cough, fever, conjunctivitis, diarrhea, or vomiting. Most infections are self-limited, but severe respiratory or disseminated disease can occur in infants and people with weakened immunity. Treatment is usually supportive, with medical assessment for breathing difficulty, dehydration, or severe illness.

## Adenovirus Vaccine

A vaccine used primarily to prevent adenovirus types 4 and 7 among selected military personnel. It is an oral, live vaccine and is not part of routine vaccination for the general public. Vaccine use and eligibility depend on current public-health recommendations.

## ADHD

Attention-deficit/hyperactivity disorder is a neurodevelopmental disorder involving persistent inattention and/or hyperactivity and impulsivity that impair functioning. Symptoms begin in childhood, occur in more than one setting, and are classified as predominantly inattentive, predominantly hyperactive-impulsive, or combined presentation.

## Adherence

The extent to which a person follows an agreed treatment plan, including prescribed medicines and other care. Adherence may be affected by cost, adverse effects, treatment complexity, health beliefs, or difficulty accessing care.

---

### **Adherence (Geriatric)**

Adherence to an agreed treatment plan in an older adult, including medicine use, appointments, and recommended self-care. Cognitive impairment, polypharmacy, adverse effects, cost, and support needs may affect adherence.

#### **Synonyms:**

Geriatric

### **Adhesive Capsulitis**

A condition causing progressive shoulder pain and stiffness due to inflammation and fibrosis of the glenohumeral joint capsule. See Frozen Shoulder.

### **Adhesive Tape**

A material used to secure dressings, devices, or tubing to the skin. It is available in paper, cloth, plastic, and other forms.

### **Adie Tonic Pupil**

Uncommon cause of anisocoria, a benign parasympathetic denervation of the iris sphincter and ciliary muscle, typically unilateral in young women, idiopathic or associated with diabetes, herpes zoster, or autoimmune neuropathy.

### **Adipocere (Grave Wax)**

Waxy, grayish-white substance formed postmortem in warm, moist, anaerobic environments (water, damp soil) by the hydrolysis and hydrogenation of body fat into free fatty acids; retards putrefaction and preserves anatomical details for months to years.

#### **Synonyms:**

Grave Wax

### **Adiponectin**

A hormone produced mainly by adipose tissue that influences fatty-acid metabolism, insulin sensitivity, and inflammatory responses.

### **Adipose Tissue**

A specialized connective tissue composed mainly of adipocytes that store energy as triglycerides. It provides thermal insulation, cushioning for organs,

and endocrine regulation through hormones and signaling molecules such as leptin and adiponectin.

### **Adjustment Disorder**

Emotional or behavioral symptoms in response to an identifiable stressor occurring within three months of the onset of the stressor. The symptoms are disproportionate to the severity of the stressor and cause significant distress or impairment. It resolves within six months of the termination of the stressor.

### **Adjustment Disorder With Anxiety**

An emotional or behavioral response to an identifiable stressor that causes distress or impairment but does not meet criteria for another mental disorder.

### **Adjuvant Therapy**

Additional treatment after primary treatment to reduce recurrence risk. Examples: chemotherapy after surgery.

### **ADL Training**

Training for activities of daily living: dressing, bathing, grooming, feeding, toileting. Adaptive techniques, equipment.

### **Administered Activity**

The measured amount of radioactive material given to a patient for imaging or therapy, usually expressed in becquerels. It should be prescribed and recorded with the radionuclide, radiopharmaceutical, route, date, and time of administration.

### **Adolescent Health**

The health and wellbeing of young people (10-19 years), addressing the physical, psychological, and social transitions of puberty and adolescence.

### **Adolescent Confidentiality And Consent**

The principles governing private healthcare discussions with adolescents and their ability to participate in medical decisions. The exact rules for confidentiality, consent, and parental involvement depend on age, capacity, local law, and safeguarding concerns.

---

## Adoptive Cell Therapy

A personalized cellular immunotherapy in which a patient's own lymphocytes are expanded or engineered ex vivo and reinfused to attack the tumor; examples include tumor-infiltrating lymphocyte (TIL) therapy and chimeric antigen receptor (CAR) T-cell therapy.

## ADP (Adenosine Diphosphate)

A nucleotide composed of adenine, ribose, and two phosphate groups. Formed by hydrolysis of ATP ( $\text{ATP} \rightarrow \text{ADP} + \text{P}_i$ ,  $\Delta G^\circ = -30.5 \text{ kJ/mol}$ ). Serves as the immediate precursor for ATP synthesis via oxidative phosphorylation (mitochondrial ATP synthase), substrate-level phosphorylation (glycolysis, TCA cycle), and photophosphorylation.

### Synonyms:

Adenosine Diphosphate

## Adrenal Cortex Physiology

The adrenal cortex produces steroid hormones in three zones: the zona glomerulosa produces mineralocorticoids, mainly aldosterone; the zona fasciculata produces glucocorticoids, mainly cortisol; and the zona reticularis produces adrenal androgens. Secretion is regulated by the renin-angiotensin system, plasma potassium, and the hypothalamic-pituitary-adrenal axis.

## Adrenal Cortical Carcinoma

A rare malignant tumor arising from the adrenal cortex. It may be functional, producing excess adrenal hormones, or nonfunctional.

## Adrenal Crisis

An acute, life-threatening manifestation of severe adrenal insufficiency. Causes: primary (Addison disease), secondary (pituitary failure), or tertiary (exogenous corticosteroid withdrawal). Precipitants: systemic infection, trauma, surgery, or abrupt steroid cessation.

## Adrenal Gland

Paired endocrine glands atop each kidney (suprarenal), composed of cortex and medulla. Cortex (three zones): zona glomerulosa (aldos-

terone, mineralocorticoids), zona fasciculata (cortisol, glucocorticoids), zona reticularis (androgens). Medulla: chromaffin cells secrete epinephrine and norepinephrine (catecholamines).

## Adrenal Hemorrhage

Bleeding into the adrenal gland most commonly occurring in critically ill patients with sepsis, coagulopathy, or anticoagulation therapy. Bilateral adrenal hemorrhage may cause acute adrenal insufficiency with circulatory collapse. Waterhouse-Friderichsen syndrome: adrenal hemorrhage associated with meningococcal sepsis.

## Adrenal Hyperplasia

Enlargement or overgrowth of adrenal tissue that may increase production of adrenal hormones. Causes include congenital adrenal hyperplasia, chronic stimulation by ACTH, and some adrenal tumors. Symptoms depend on the hormone affected and may include abnormal genital development, early puberty, excess body hair, high blood pressure, or electrolyte disturbances.

## Adrenal Insufficiency

Deficient production of cortisol by the adrenal cortex classified as primary adrenal insufficiency or Addison disease from adrenal gland destruction, secondary from pituitary ACTH deficiency, and tertiary from chronic exogenous glucocorticoid suppression of the hypothalamic-pituitary-adrenal axis.

## Adrenal Medulla Physiology

The adrenal medulla produces catecholamines primarily epinephrine and norepinephrine in response to sympathetic nervous system activation. Epinephrine accounts for approximately eighty percent and norepinephrine approximately twenty percent of catecholamine output.

## Adrenal Myelolipoma

A usually benign adrenal tumor composed of mature fat and blood-forming tissue. It is often found incidentally on imaging and causes no symptoms, but larger lesions may produce mass effect or bleeding. Management depends on size, symptoms, growth,

---

and diagnostic certainty.

### **Adrenal Tumors**

Tumors arising in the adrenal cortex or medulla may be benign or malignant and may or may not produce hormones. Evaluation uses clinical assessment, hormone testing when indicated, and imaging to assess size and appearance; treatment depends on the diagnosis, hormone secretion, symptoms, growth, and risk of malignancy.

### **Adrenal Venous Sampling**

Interventional radiology procedure for lateralizing aldosterone secretion in primary hyperaldosteronism. Catheterization of both adrenal veins allows measurement of aldosterone and cortisol levels to calculate selectivity index confirming successful cannulation and lateralization ratio.

### **Adrenalectomy**

Surgical removal of one or both adrenal glands, performed for selected adrenal tumors, severe hormone excess, or other localized disease. Removal of one gland may leave adequate hormone production; bilateral removal causes permanent adrenal insufficiency and requires lifelong hormone replacement and emergency-steroid planning.

### **Adrenocortical Carcinoma**

A rare malignant tumor of the adrenal cortex that may secrete cortisol, androgens, or aldosterone or be non-functional. Often large at diagnosis; treatment is en bloc resection, with mitotane for advanced disease.

### **Adrenocorticotrophic Hormone**

ACTH (corticotropin): a peptide hormone from the anterior pituitary (cleaved from POMC) that stimulates the adrenal cortex to produce cortisol (zona fasciculata) and adrenal androgens; regulated by hypothalamic CRH and cortisol negative feedback (circadian).

### **Adult Spinal Deformity**

Abnormal curvature or alignment of the spine in an adult, including scoliosis, kyphosis, or loss of

normal sagittal balance. It may cause back pain, nerve compression, difficulty walking, or functional disability.

### **Adult Still's Disease**

A systemic inflammatory disorder characterized by recurrent high fevers, arthritis or joint pain, a transient salmon-colored rash, sore throat, and possible involvement of other organs.

### **Adult-Onset Still Disease**

A systemic inflammatory disorder beginning in adulthood, characterized by high-spiking fevers, arthritis or joint pain, a transient salmon-pink rash, sore throat, and possible liver, spleen, heart, or blood-clotting complications.

### **Advance Care Planning**

A process of discussing and documenting a person's healthcare values and preferences for possible future illness, including designation of a surrogate decision-maker when appropriate.

### **Advance Directive**

Legal document expressing healthcare wishes. Components: living will (treatment preferences), durable power of attorney for healthcare (surrogate decision-maker). Should be reviewed periodically, discussed with surrogate and healthcare team.

### **Advanced Cancer**

Cancer that has grown beyond its original site. It may be locally advanced when it has invaded nearby tissues or metastatic when it has spread to distant organs.

### **Advanced Cardiovascular Life Support**

A standardized set of advanced resuscitation measures for cardiac arrest and other life-threatening cardiovascular emergencies. It includes high-quality CPR, defibrillation when indicated, airway management, medicines, and treatment of reversible causes.

### **Advanced Maternal Age**

Maternal age of 35 years or older at the estimated

---

time of delivery. It is associated with increased risks of some chromosomal conditions and pregnancy complications.

### **Adverse Drug Event**

Harm related to the use of a medication, including harm caused by an adverse drug reaction, medication error, overdose, or inappropriate use.

### **Adverse Drug Reaction**

An adverse drug reaction is any noxious or unintended response to a drug that occurs at doses used for prophylaxis, diagnosis, or therapy.

### **Adverse Event**

Any untoward medical occurrence during or after a treatment or intervention, whether or not it is considered causally related to that treatment. Severity, seriousness, expectedness, and relatedness are assessed separately.

### **Aerobe**

A microorganism that requires molecular oxygen for growth or uses oxygen efficiently for energy production. Obligate aerobes are unable to grow without oxygen, whereas facultative organisms can grow with or without it.

### **Aerobic**

Requiring or involving molecular oxygen. In microbiology, aerobic organisms use oxygen for growth or energy production, either obligatorily or as one option among several; in physiology, aerobic metabolism uses oxidative phosphorylation in mitochondria to generate ATP from nutrients.

### **Aerophagy**

Excessive swallowing of air, also called aerophagia, which can lead to frequent belching, abdominal bloating, distension, and discomfort.

#### **Synonyms:**

aerophagia, which can lead to frequent.

### **Aesthetic Dentistry**

Dental care intended to improve the appearance of

the teeth, gums, or smile. Procedures may include tooth-colored restorations, veneers, whitening, or selected crowns.

### **Affective Flattening**

Markedly reduced outward expression of emotion, including limited facial expression, voice modulation, and gestures. It may occur in schizophrenia and other psychiatric or neurologic conditions.

### **AFP (Alpha-Fetoprotein)**

A protein produced mainly by the fetal liver. Maternal blood AFP is used in prenatal screening, and serum AFP may help evaluate selected liver and germ-cell tumors. Results are not diagnostic by themselves.

#### **Synonyms:**

Alpha-Fetoprotein

### **Afterload**

The resistance against which the ventricles must eject blood during systole. Left ventricular afterload is primarily determined by systemic vascular resistance (SVR); right ventricular afterload is determined by pulmonary vascular resistance (PVR). Afterload is estimated by blood pressure or calculated as wall stress.

### **Agar**

A gelatinous polysaccharide from red algae used to solidify culture media. Melting near 85°C and solidifying at 35–40°C, it remains solid at incubation temperatures and is largely undegraded by bacteria, enabling isolation of pure colonies on media such as blood, MacConkey, and Sabouraud agars.

### **Age-Related Macular Degeneration**

A degenerative disorder of the macula that can impair central vision in older adults. The dry form involves retinal and pigment-cell changes and may progress gradually; the neovascular form involves abnormal blood-vessel growth and may cause more rapid vision loss. Risk is influenced by age, smoking, family history, and other factors.

---

### Age-Standardized Rate

A rate adjusted to a specified standard population age distribution so that populations with different age structures can be compared more fairly. It is commonly used for mortality, cancer, and disease-incidence comparisons.

### Ageism

Stereotyping, prejudice, or discrimination directed at people because of their age, which can impair access to appropriate medical care.

### Agensis Of The Corpus Callosum

Complete or partial absence of the corpus callosum, the major commissural fiber bundle connecting the cerebral hemispheres. May be isolated or associated with other CNS anomalies (Dandy-Walker, Chiari, heterotopias) and genetic syndromes (Aicardi, Andermann, acrocallosal syndromes).

### Ageusia

Complete loss of the sense of taste. Causes include viral infections, oral or nasal disease, head injury, damage to the facial or glossopharyngeal nerves, medications, chemotherapy, zinc deficiency, and neurologic disorders.

### Agglutination

The visible clumping of cells or particles caused by antibodies or other binding molecules linking antigens on their surfaces. It is used in blood-grouping and crossmatching, infectious-disease serology, and some laboratory identification tests.

### Aggregation, Platelet

The process by which activated platelets adhere to one another to form a primary platelet plug at a site of vascular injury. Platelet agonists such as ADP, thromboxane A<sub>2</sub>, and thrombin activate glycoprotein IIb/IIIa, which binds fibrinogen and links adjacent platelets.

### Aggression

Verbal or physical behavior intended to threaten, harm, or dominate another person or object. It may occur with mania, psychosis, personality dis-

orders, dementia, delirium, substance intoxication or withdrawal, traumatic brain injury, or severe frustration.

### Aggressive Cancer

A cancer that grows, invades, or spreads rapidly and may require prompt diagnosis and treatment. Aggressiveness depends on tumour biology, grade, stage, and response to therapy.

### Agility

The ability to move or change direction quickly while maintaining control and balance.

### Aging

Biological process of growing older, involving cumulative changes at molecular, cellular, tissue, organ levels.

### Agitation

A state of excessive motor activity, emotional excitement, and restlessness. In psychiatric settings, it may be a symptom of mania, psychosis, delirium, substance intoxication, or withdrawal.

### Agnathia

A rare congenital absence or severe underdevelopment of the mandible, maxilla, or both. It is usually part of a craniofacial developmental disorder and may cause profound facial deformity, airway obstruction, feeding difficulty, and impaired dentition.

### Agnosia

A higher-order neurological deficit characterized by the inability to recognize or process sensory stimuli (visual, auditory, tactile) despite intact primary sensory organs and pathways. Caused by focal lesions in specific cortical association areas (parietal, temporal, or occipital lobes).

### Agonist

A substance that binds to a receptor and activates it, producing a biological response. A full agonist can produce the receptor's maximum response, whereas a partial agonist produces a lower maximum re-

---

sponse even when it occupies all available receptors.

### **Agonist-Antagonist**

A drug that has mixed pharmacological activity, acting as an agonist at one receptor type and an antagonist at another, or as a partial agonist at a single receptor.

### **Agoraphobia**

Anxiety disorder characterized by fear and avoidance of situations where escape might be difficult or help unavailable during a panic-like episode. Common feared situations include public transportation, open spaces, enclosed spaces, standing in line, being in crowds, and being outside the home alone.

### **Agranulocytosis**

A severe reduction or near-absence of circulating neutrophils, usually defined as an absolute neutrophil count below  $0.5 \times 10^9/L$ . It may be caused by medications, chemotherapy, autoimmune disease, infections, or bone-marrow disorders and presents with fever, sore throat, oral ulcers, or recurrent serious infections.

### **Agraphesthesia**

Inability to recognize numbers or letters traced on the skin, indicating a lesion of the contralateral parietal lobe (somatosensory association cortex, post-central gyrus). Tested with a blunt object on the palm or fingertip while the patient's eyes are closed.

### **Agraphia**

An acquired inability to write or express language in written form despite adequate education and motor ability. It may result from dominant-parietal or language-network lesions, especially stroke, traumatic brain injury, dementia, or brain tumors, and may occur with aphasia, alexia, or acalculia.

### **Aicardi-Goutieres Syndrome**

Rare autosomal recessive inflammatory disorder mimicking congenital viral infection. Characterized by cerebral calcifications, white matter disease, cerebral atrophy, and cerebrospinal fluid lymphocytosis. Presents with severe neurodevelopmental

impairment, seizures, and spasticity.

### **AIDS**

Acquired immunodeficiency syndrome: the advanced stage of HIV infection, defined by CD4 count  $<200$  cells/ $\mu L$  or the presence of AIDS-defining illnesses.

#### **Synonyms:**

Acquired Immunodeficiency Syndrome (AIDS)

### **Air Abrasion**

Minimally invasive caries removal using abrasive particles. Alternative to drilling for small lesions.

### **Air Bronchogram**

A radiographic sign showing air-filled bronchi visible against opacified lung parenchyma, indicating that the airways remain patent while the surrounding alveoli are filled with fluid, pus, or cells.

### **Air Contaminants**

Solid, liquid, or gaseous substances in air that may harm health, such as particulate matter, fumes, gases, allergens, or microorganisms. Effects depend on the contaminant, concentration, and duration of exposure.

### **Air Embolism**

Entry of gas into the venous or arterial circulation, where it can obstruct blood flow and injure tissues. It may occur during medical procedures, trauma, or rapid changes in environmental pressure. Symptoms and treatment depend on the amount and location of gas and require urgent clinical assessment when significant embolism is suspected.

### **Air Polishing**

Removal of stains using air-abrasive device. Glycine or erythritol powder.

### **Air Quality**

The condition of air as determined by the concentration of pollutants such as particulate matter, ozone, nitrogen dioxide, and sulfur dioxide.

---

## Airborne Disease

An infection that can spread through small suspended particles or aerosols under suitable conditions. Transmission depends on the organism, environment, ventilation, and duration of exposure.

## Airborne Precautions

Infection control measures used for pathogens transmitted through airborne droplet nuclei. Precautions include negative pressure rooms, N95 respirators, and restricted access. Airborne precautions are used for tuberculosis, measles, varicella, and disseminated herpes zoster.

## Airway Clearance Techniques

Physical or mechanical methods used to mobilize and remove airway secretions. Examples include directed coughing, breathing exercises, postural drainage, positive expiratory pressure, and high-frequency chest-wall oscillation. Selection depends on the disease, secretion burden, strength, and ability to cooperate.

## Airway Management

Airway management encompasses techniques and devices used to maintain ventilation and oxygenation in patients with compromised airways.

## Airway Obstruction

Partial or complete blockage of airflow through the upper or lower respiratory tract. It may result from a foreign body, secretions, swelling, trauma, tumor, or loss of airway muscle tone and can cause stridor, wheeze, hypoxaemia, respiratory distress, or arrest.

## Airway Resistance

The opposition to airflow through the conducting airways, determined largely by airway radius and flow pattern. Bronchoconstriction, mucus, edema, and reduced elastic traction increase resistance; because resistance varies strongly with radius, small changes can markedly affect work of breathing.

## Akathisia

Subjective feeling of inner restlessness accompanied by a compulsive need to move, most commonly an

extrapyramidal side effect of antipsychotic drugs (typical and atypical neuroleptics), also seen with dopamine antagonists (metoclopramide), selective serotonin reuptake inhibitor withdrawal, and in Parkinson disease.

## Akinesia

Impairment or absence of voluntary movement, classically a hypokinetic feature of basal ganglia disorders such as Parkinson disease and related parkinsonian syndromes.

## Alagille Syndrome

An inherited disorder of Notch signaling that commonly affects the liver, heart, skeleton, eyes, and characteristic facial features. It is usually caused by a pathogenic variant in *JAG1* or, less often, *NOTCH2*.

## ALARA Principle

Radiation-protection principle requiring exposure to be kept as low as reasonably achievable while obtaining the necessary diagnostic or therapeutic information. Justification, optimization, collimation, shielding, time reduction, and increased distance support ALARA.

## Albinism (Oculocutaneous Albinism)

A group of inherited disorders that reduce melanin production in the skin, hair, and eyes. It may cause light pigmentation, reduced visual acuity, nystagmus, and increased sensitivity to sunlight; the severity depends on the genetic subtype.

### Synonyms:

Oculocutaneous Albinism

## Albright's Hereditary Osteodystrophy

A group of inherited features associated with abnormalities of *GNAS* signaling, including short metacarpal bones, a round facial appearance, short stature, and subcutaneous ossification. Some associated disorders also cause resistance to parathyroid hormone or other hormones.

## Alanine Aminotransferase (ALT)

An enzyme found mainly in liver cells that is released

---

into the blood when hepatocytes are injured. Serum ALT is widely used to screen for and monitor liver disease and is interpreted together with aspartate aminotransferase, alkaline phosphatase, bilirubin, and the clinical context.

**Synonyms:**

ALT

**Albumin**

The main protein in blood plasma, produced by the liver. It helps maintain oncotic pressure and transports various substances, including hormones, fatty acids, and medications.

**Albumin-To-Creatinine Ratio**

The urinary albumin concentration standardized to urinary creatinine concentration, usually measured in a spot urine sample. Persistent albuminuria is a marker of kidney damage and is categorized as A1 (<30 mg/g), A2 (30–300 mg/g), or A3 (>300 mg/g) in commonly used CKD classification.

**Albuminuria**

Abnormally increased excretion of albumin in the urine, indicating disruption of the glomerular filtration barrier or another form of kidney disease. It is commonly detected with a urine albumin-to-creatinine ratio and classified as moderately or severely increased according to the quantity and persistence of excretion.

**Alcohol**

Ethanol, a psychoactive substance that can impair judgment and coordination and cause intoxication or dependence.

**Alcohol Dependency**

A chronic relapsing disorder characterized by compulsive ethanol use, loss of control over intake, and negative emotional state during withdrawal, leading to tolerance, dependence, and organ damage over time.

**Alcohol Intoxication**

Acute impairment caused by ethanol, which may produce disinhibition, impaired coordination,

slurred speech, vomiting, reduced consciousness, or respiratory depression. Severe intoxication can be life-threatening and requires assessment of breathing, circulation, glucose, trauma, and other substances.

**Alcohol Swab**

A single-use pad containing alcohol for cleaning intact skin before selected procedures. It should be used according to the product instructions and allowed to dry.

**Alcohol Use**

Consumption of alcoholic beverages. Health effects depend on amount, frequency, pattern, and individual risk.

**Alcohol Use Disorder**

A problematic pattern of alcohol use leading to significant impairment or distress. Severity is classified as mild (2–3 criteria), moderate (4–5 criteria), or severe (6 or more criteria).

**Alcohol Withdrawal**

A syndrome that may occur after abrupt cessation or substantial reduction of prolonged heavy alcohol use. Symptoms can include tremor, anxiety, sweating, nausea, hallucinations, seizures, or delirium; onset and severity vary, and severe withdrawal requires urgent medical care.

**Alcoholic Cardiomyopathy**

Dilated cardiomyopathy caused by chronic excessive alcohol consumption, one of the most common reversible causes of dilated cardiomyopathy. Direct toxic effect of ethanol and its metabolite acetaldehyde on cardiomyocytes. Presentation is identical to other dilated cardiomyopathies.

**Alcoholic Ketoacidosis**

A high-anion-gap metabolic acidosis caused by prolonged heavy alcohol use, poor nutritional intake, and vomiting. It typically presents with abdominal pain, nausea, vomiting, dehydration, and tachypnea, often with a normal or low blood glucose concentration.

---

## Alcoholic Neuropathy

A length-dependent peripheral neuropathy associated with chronic excessive alcohol use and nutritional deficiency, especially thiamine deficiency. It causes burning pain, numbness, paraesthesia, and weakness, most prominently in the feet and lower legs.

## Aldosterone

A mineralocorticoid hormone produced by the zona glomerulosa of the adrenal cortex, the final effector of the renin-angiotensin-aldosterone system (RAAS).

## Alexia

An acquired inability to comprehend written language despite intact vision and otherwise preserved language function, usually caused by stroke or other lesions affecting the dominant-hemisphere reading networks. When reading is impaired but writing remains possible, the pattern is called alexia without agraphia.

## Algor Mortis

Post-mortem cooling of the body following death until it reaches ambient environmental temperature. Serves as one of the physical estimators of the post-mortem interval (time since death).

## Aliasing Artifact

An ultrasound display artifact in which blood flow exceeds the selected velocity scale and appears to reverse direction. It can be reduced by increasing the scale or changing the imaging settings.

## Alkaline Phosphatase

A group of enzymes that catalyze the hydrolysis of phosphate esters at alkaline pH, found in high concentrations in the liver, bone, placenta, and intestinal mucosa. Elevated serum levels occur in obstructive liver disease, bone disorders including Paget disease and fractures, pregnancy, and certain malignancies.

## Alkalosis

A metabolic (elevated bicarbonate) or respiratory

(low PaCO<sub>2</sub>) disturbance that raises arterial pH above 7.45. Metabolic alkalosis: vomiting/NG suction (HCl loss), diuretics, mineralocorticoid excess, hypokalemia, and alkali ingestion—compensated by hypoventilation; chloride-responsive vs. chloride-resistant distinguishes causes.

## Allele

Alternative form of a gene at a particular locus. Individuals inherit two alleles for each gene (one from each parent). Alleles can be dominant, recessive, or codominant.

## Allergen

A substance capable of causing an allergic immune response in a susceptible person. Common allergens include proteins in foods, pollens, medicines, animal dander, insect venom, and natural rubber.

## Allergen Immunotherapy

Treatment that gives gradually increasing doses of a specific allergen by injection or under the tongue to reduce allergic sensitivity. It may be used for selected allergic rhinitis, conjunctivitis, asthma, or insect-venom allergy.

## Allergic Bronchopulmonary Aspergillosis

A hypersensitivity reaction to *Aspergillus fumigatus* in asthma or CF patients. Causes central bronchiectasis, elevated total IgE, and eosinophilia. Treatment includes corticosteroids and itraconazole.

## Allergic Conjunctivitis

An inflammatory condition of the conjunctiva mediated by IgE-dependent mast cell degranulation in response to environmental allergens, characterized by bilateral ocular itching, tearing, conjunctival injection, and eyelid edema.

## Allergic Dermatitis

An inflammatory skin reaction caused by an immune response to an external allergen, most commonly allergic contact dermatitis. It is a delayed, T-cell-mediated hypersensitivity reaction that typically develops after prior sensitization.

---

## Allergic Reactions

Immune reactions to substances that are usually harmless, such as foods, medicines, pollens, or insect venom. They may be immediate or delayed and can range from localized symptoms to anaphylaxis.

## Allergic Rhinitis

An IgE-mediated inflammatory response of the nasal mucosa to inhaled allergens, causing sneezing, nasal congestion, clear rhinorrhea, nasal itching, and often conjunctival symptoms. Management may include allergen avoidance, intranasal corticosteroids, antihistamines, and allergen immunotherapy when indicated.

## Allergic Rhinitis (Hay Fever)

Allergies occur when the immune system overreacts to harmless environmental substances such as pollen, dust mites, mold, or pet dander. Hay fever (allergic rhinitis) specifically involves nasal symptoms like sneezing, congestion, and itchy eyes triggered by airborne allergens.

**Synonyms:**  
Hay Fever

## Allergies

Immune reactions to normally harmless substances such as foods, pollens, medicines, insect venom, or animal dander. Reactions range from localized rhinitis or dermatitis to life-threatening anaphylaxis.

## Allergy Testing

Identification of IgE-mediated allergic sensitization. Skin prick test (SPT): allergen extract applied to skin via lancet, read after 15 min (wheal >3mm = positive). Intradermal test: more sensitive, used when SPT negative but suspicion remains.

## Allodynia

Pain caused by a stimulus that is normally not painful, such as light touch or gentle pressure. It may occur with neuropathic, nociplastic, or other pain conditions.

## Allograft

Tissue transplanted between genetically different individuals of the same species. Allografts may provoke immune rejection and require appropriate donor screening, processing, and, in some settings, immunosuppression.

## Allosteric Regulation

The regulation of enzyme activity by the binding of an effector molecule at a site other than the active site (allosteric site), causing a conformational change that alters the enzyme's activity. Allosteric enzymes typically have multiple subunits with cooperative binding kinetics (sigmoidal rather than hyperbolic velocity curves).

## Alogia

Poverty of speech or poverty of content of speech, a negative symptom of schizophrenia. It manifests as brief, empty replies to questions, reduced spontaneous speech, and lack of elaboration. It reflects dysfunction in the mesocortical dopamine pathway and is less responsive to antipsychotic medications than positive symptoms.

## Alopecia

The general medical term for loss of hair from the scalp or body, rather than a single specific disease. Causes include disorders of the hair follicle, immune disease, hormones, medicines, systemic illness, or physical injury. Androgenetic alopecia (male- or female-pattern hair loss) is common and is associated with genetic susceptibility and androgen, particularly dihydrotestosterone (DHT), effects. Alopecia areata is an autoimmune, usually non-scarring, patchy hair-loss disorder that may progress to alopecia totalis (entire scalp) or universalis (whole body).

## Alopecia Areata

A common, autoimmune, non-scarring hair loss disorder affecting approximately 1 to 2 percent of the population worldwide, with a lifetime risk of 2 percent, occurring equally across sexes and ethnicities, with peak onset between 15 and 29 years.

**Synonyms:**  
AA (Alopecia Areata) Patchy Hair Loss (Alopecia

---

Areata)

### Alpha-1 Antitrypsin Deficiency

An autosomal codominant genetic disorder caused by mutations in the SERPINA1 gene. It predisposes to early-onset panlobular emphysema (lower lobes), liver disease, and panniculitis. PiZZ genotype is most severe. Treatment includes AAT augmentation therapy and smoking avoidance.

### Alpha-Agonists

Medicines that stimulate alpha-adrenergic receptors. Depending on the receptor and tissue, they can constrict blood vessels, alter autonomic activity, or reduce aqueous-humor production in the eye. Their uses and adverse effects depend on the specific medicine and route.

### Alpha-Glucosidase Inhibitors

Oral glucose-lowering medications including acarbose, miglitol, and voglibose that delay carbohydrate digestion and glucose absorption in the small intestine by inhibiting brush border alpha-glucoside enzymes. Reduce postprandial glucose excursions without affecting fasting glucose significantly.

### Alpha-Ketoglutarate

A five-carbon intermediate of the citric acid cycle formed from isocitrate and converted to succinyl-CoA. It also serves as a carbon skeleton for amino acid metabolism and participates in oxidative deamination and cellular signaling.

### Alport Syndrome

Hereditary nephritis caused by mutations in type four collagen genes leading to progressive sensorineural hearing loss, ocular anomalies, and renal failure. X-linked form from COL4A5 mutations is the most common. Autosomal recessive and dominant forms exist.

### ALS

Amyotrophic lateral sclerosis (motor neuron disease; Lou Gehrig disease) is the progressive neurodegenerative disease characterized by degeneration of upper and lower motor neurons controlling voluntary

movement. It causes progressive weakness, muscle wasting, fasciculations, spasticity, dysarthria, or dysphagia; sensation is usually relatively preserved, but respiratory muscles may eventually be affected.

### Altitude Illness

Acute mountain sickness (AMS): headache + 1 symptom (nausea, fatigue, dizziness, insomnia) at >2500m. HACE: AMS + ataxia/altered mental status (cerebral edema). HAPE: dyspnea at rest, cough, frothy sputum, crackles, hypoxemia (noncardiogenic pulmonary edema).

### Aluminum Phosphide

A highly toxic fumigant that releases phosphine gas when exposed to moisture or stomach acid. Poisoning can cause severe cardiovascular, respiratory, gastrointestinal, and metabolic effects and requires immediate emergency treatment and supportive intensive care.

### Alvarado Score

Clinical scoring system for acute appendicitis. Components (MANTRELS): Migration of pain (1), Anorexia (1), Nausea/vomiting (1), Tenderness in RLQ (2), Rebound pain (1), Elevated temperature (1), Leukocytosis (2), Left shift (1).

### Alveolar Bone

Bone surrounding and supporting tooth roots. Resorbs with tooth loss. Maintained by function. Bone grafting may be needed for implants.

### Alveolar Gas Equation

$PAO_2 = (FiO_2 \times (P_{atm} - PH_2O)) - (PaCO_2 / R)$ .  
 $P_{atm} = 760 \text{ mmHg}$ ,  $PH_2O = 47 \text{ mmHg}$ ,  $R = 0.8$ .  
Allows calculation of A-a gradient.

### Alveolar Ventilation

The volume of fresh air reaching the alveoli per minute, representing the portion of minute ventilation that participates in gas exchange. Calculated as (tidal volume - dead space volume) x respiratory rate. Normal alveolar ventilation is approximately 4-5 L/min.

---

### Alveolar Ventilation Equation

The relationship between alveolar ventilation and arterial carbon-dioxide tension, approximately  $\text{PaCO}_2 = 0.863$  times carbon-dioxide production divided by alveolar ventilation. It explains why reduced effective ventilation causes hypercapnia.

### Alveolus

The terminal air sac (200-300 microns) where gas exchange occurs. Approximately 300-500 million per lung, providing 70 m<sup>2</sup> surface area. Wall: type I pneumocytes (95% surface, thin for diffusion), type II pneumocytes (5%, secrete pulmonary surfactant reducing surface tension), alveolar macrophages (dust cells, phagocytosis).

### Alzheimer Disease

A progressive neurodegenerative disorder characterized pathologically by amyloid-beta plaques, tau neurofibrillary pathology, and neuronal loss. It most commonly presents with insidious impairment of episodic memory followed by broader cognitive and functional decline.

### Amalgam

Restorative material composed of mercury alloyed with silver, tin, copper, and other metals. Properties: strong, durable, cost-effective. Concerns: mercury toxicity debates, aesthetic limitations. Placement: requires cavity preparation, condensation, carving. Removal: sectioning, cooling to prevent mercury vapor.

### Amaurosis Fugax

Transient monocular vision loss lasting seconds to minutes, classically described as a curtain descending over the field, caused by retinal or optic nerve ischemia.

### Ambiguous Genitalia

External genital anatomy that does not have typical male or female features, usually because of a difference in sex development. Evaluation includes examination, chromosome and hormone testing, pelvic or abdominal imaging, and assessment for congenital adrenal hyperplasia.

### Ambulatory Blood Pressure Monitoring

Measurement of blood pressure at regular intervals, usually over twenty-four hours, with a portable cuff worn during normal activities and sleep. It detects white-coat and masked hypertension, evaluates nighttime blood-pressure patterns, and helps confirm hypertension diagnosed in the clinic.

### Amblyopia

A developmental reduction in vision caused by abnormal visual input during early childhood, without a sufficient structural explanation. It commonly results from misalignment, unequal focusing power, or obstruction of vision in one eye.

### Ambu Bag

A self-inflating manual resuscitation bag used with a mask or airway device to provide positive-pressure ventilation.

### Amebiasis

Infection with the protozoan parasite *Entamoeba histolytica*, acquired mainly by ingestion of faecally contaminated food or water. It may be asymptomatic or cause amoebic colitis with abdominal pain, diarrhoea, or dysentery, and can spread through the portal circulation to produce a liver abscess.

### Amebic Liver Abscess

A focal collection of necrotic material in the liver caused by *Entamoeba histolytica*, usually following intestinal infection. It commonly causes fever, right-upper-quadrant pain, and tender hepatomegaly; diagnosis is supported by imaging and serology.

### Amelanotic Melanoma

A variant of melanoma that lacks significant melanin production, presenting as a pink, red, or flesh-coloured papule or nodule rather than a typical dark lesion. Its paucity of pigment can delay diagnosis, making it a diagnostic challenge. Histopathology with immunohistochemical markers confirms the diagnosis.

---

## Amelia

A rare congenital anomaly characterized by complete absence of one or more limbs. It may occur alone or as part of a genetic or developmental syndrome. Prenatal imaging can identify the anomaly and help assess associated abnormalities.

## Ameloblastoma

Locally aggressive odontogenic tumor. Multicystic radiolucency in posterior mandible. High recurrence rate. Treatment: surgical resection with margins.

## Amelogenesis

The formation and maturation of tooth enamel by ameloblasts during tooth development.

## Amelogenesis Imperfecta

A group of inherited disorders in which enamel formation is abnormal, causing enamel that may be thin, poorly mineralized, weak, or easily worn on most or all teeth.

## Amenorrhea

Absence of menstruation. Primary amenorrhea: no menarche by age 15 with normal secondary sexual development, or by age 13 without. Secondary amenorrhea: absence of menses for three cycles or six months in women with prior menstruation.

## Amino Acid

An organic molecule containing an amino group, a carboxyl group, a hydrogen atom, and a variable side chain attached to a central carbon. Amino acids are the building blocks of proteins; cells use some also in energy metabolism and other biochemical pathways.

## Amino Acid Catabolism

The breakdown of amino acids after protein digestion, with the amino group removed and the carbon skeleton metabolized for energy or gluconeogenesis/ketogenesis. Transamination: amino groups are transferred to alpha-ketoglutarate, forming glutamate, by aminotransferases requiring pyridoxal phosphate (PLP, vitamin B6) as a cofactor.

## Aminoglycoside Nephrotoxicity

Kidney damage caused by aminoglycoside antibiotics, characterized by acute tubular necrosis. Nephrotoxicity is caused by accumulation of aminoglycosides in the proximal tubular cells. The risk is increased with prolonged therapy, high doses, concurrent nephrotoxic drugs, and renal impairment.

## Aminoglycoside Ototoxicity

Damage to the inner ear caused by aminoglycoside antibiotics, resulting in hearing loss and vestibular dysfunction. Ototoxicity is caused by accumulation of aminoglycosides in the inner ear, damaging hair cells. The risk is increased with prolonged therapy, high doses, concurrent ototoxic drugs, and renal impairment.

## Aminoglycosides

A class of bactericidal antibiotics that bind irreversibly to the 30S ribosomal subunit, causing misreading of messenger RNA and inhibiting protein synthesis. They include gentamicin, tobramycin, amikacin, and streptomycin.

## Amiodarone-Induced Skin Discoloration

A slate-grey to bluish hyperpigmentation of sun-exposed skin caused by long-term amiodarone therapy, due to deposition of the drug and its metabolites in dermal macrophages. It is dose-related, more pronounced in photodistributed areas, and may be partially reversible upon drug cessation.

## Amiodarone-Induced Thyroid Dysfunction

Thyroid abnormalities occurring in approximately fifteen to twenty percent of patients on amiodarone due to the high iodine content of the molecule. Type one results from iodine-induced increased thyroid hormone synthesis in patients with underlying thyroid disease. Type two results from destructive thyroiditis.

## Amiodarone-Induced Vortex Keratopathy

Whorl-like corneal epithelial deposits caused by amiodarone accumulation, appearing as golden-brown verticillata on slit-lamp examination, usually

---

asymptomatic but reversible upon drug discontinuation.

### **Ammonia**

A nitrogen-containing waste product produced during protein metabolism and normally converted to urea by the liver. Elevated blood ammonia may occur with liver failure, urea-cycle disorders, some medicines, or other metabolic conditions.

### **Amnesia**

Loss or impairment of memory that is greater than ordinary forgetting. It may affect the ability to form new memories (anterograde amnesia), recall past events (retrograde amnesia), or both.

### **Amniocentesis**

A procedure in which a needle is used to obtain amniotic fluid for genetic, chromosomal, infectious, or other prenatal testing. It is usually performed after the first trimester when clinically indicated; risks and benefits depend on the reason for testing and gestational age.

### **Amnion**

The innermost fetal membrane, lining the amniotic cavity and containing the amniotic fluid. A thin, avascular membrane composed of a single layer of cuboidal epithelium overlying a basement membrane and connective tissue. The amnion produces and resorbs amniotic fluid. It fuses with the chorion by 12-14 weeks.

### **Amniotic Band Syndrome**

A spectrum of congenital anomalies caused by strands of a ruptured amniotic membrane that constrict or entangle developing fetal parts. Effects range from ring-like limb constrictions, swelling, or loss of digits to facial and body-wall disruptions; severity varies widely, and management depends on the structures involved.

### **Amniotic Fluid**

The clear to pale-yellow fluid surrounding the fetus within the amniotic sac. Early in pregnancy it is derived largely from maternal plasma; later, fetal

urine and lung fluid are major sources, and the fetus continuously swallows and recycles it.

### **Amniotic Fluid Embolism**

A rare obstetric emergency involving sudden respiratory or cardiovascular collapse and often severe coagulopathy during labor, delivery, or shortly afterward. It requires immediate supportive and multidisciplinary treatment.

### **Amniotic Fluid Index**

An ultrasound estimate of amniotic-fluid volume obtained by dividing the uterus into four quadrants, measuring the deepest unobstructed vertical pocket in each quadrant, and adding the measurements. Interpretation uses gestational-age and practice-specific thresholds to identify unusually low or high fluid volume.

### **Amoebiasis**

Infection caused by the protozoan parasite *Entamoeba histolytica*, transmitted via the fecal-oral route (contaminated food or water).

### **Amoxicillin Rash In Infectious Mononucleosis**

A maculopapular, non-allergic rash that develops in up to 90 percent of patients with Epstein-Barr virus infectious mononucleosis who receive amoxicillin or ampicillin. The rash is often widespread and pruritic, and its presence does not indicate true penicillin allergy.

### **AMP (Adenosine Monophosphate)**

A nucleotide composed of adenine, ribose, and a single phosphate group. Formed by hydrolysis of ADP ( $\text{ADP} \rightarrow \text{AMP} + \text{Pi}$ ) or directly from ATP via adenylate kinase ( $2 \text{ADP} \rightleftharpoons \text{ATP} + \text{AMP}$ ).

#### **Synonyms:**

Adenosine Monophosphate

### **AMPK**

AMP-activated protein kinase. Energy sensor. Activated by AMP. Inhibits anabolism, stimulates catabolism.

---

## Amputation

Surgical removal of a limb or part of a limb. The level may involve a digit, foot, lower leg, thigh, or hip, or a corresponding part of the upper limb. The level is selected according to tissue viability, function, and potential for rehabilitation.

## Amputation Stump

The remaining part of a limb after amputation. It must be monitored for wound healing, infection, poor circulation, neuroma pain, phantom-limb pain, and skin problems caused by prosthetic use. Care includes hygiene, compression or shaping when advised, progressive strengthening, and professional prosthetic and rehabilitation assessment.

## AMR (Antimicrobial Resistance)

The ability of a microorganism to survive or grow despite an antimicrobial medicine that would normally inhibit or kill it.

### Synonyms:

Antimicrobial Resistance

## Amygdala

Almond-shaped nucleus cluster in the anterior medial temporal lobe, part of the limbic system, primarily processing emotions (especially fear/anxiety). Receives thalamic/cortical sensory input; projects to hypothalamus, brainstem, and cortex for autonomic/behavioral fear responses.

## Amylase

An enzyme that breaks down starch and is produced mainly by the salivary glands and pancreas. Blood levels may rise in several conditions, including some pancreatic disorders.

## Amylase And Lipase

Digestive enzymes measured in blood when pancreatic disease is suspected. Lipase is generally more specific for pancreatic injury and remains elevated longer than amylase, but neither test alone diagnoses acute pancreatitis; results must be interpreted with symptoms and imaging.

## Amylin Analogues

Medicines that mimic amylin, a hormone released with insulin by pancreatic beta cells. Pramlintide slows gastric emptying, reduces post-meal glucagon secretion, and may be used with insulin in selected patients with diabetes.

## Amyloid PET

A positron-emission tomography scan using a tracer that binds to amyloid deposits in the brain. It can support evaluation of selected cognitive disorders but is interpreted with clinical assessment and other tests.

## Amyloid Purpura

Purpuric discoloration of the eyelids and periorbital skin (raccoon eyes) caused by cutaneous amyloid deposition, which weakens vessel walls and leads to extravasation of erythrocytes. It may be a sign of systemic amyloidosis, particularly AL amyloidosis, and warrants further workup including serum free light chains and tissue biopsy.

## Amyloidosis

A group of disorders characterized by the extracellular deposition of misfolded proteins that polymerize into insoluble fibrils with a distinctive beta-pleated sheet configuration. These fibrils bind Congo red dye and show characteristic apple-green birefringence under polarized light microscopy.

### Synonyms:

Amyloid Disease (Amyloidosis)

## Amyotrophic Lateral Sclerosis

Progressive neurodegenerative disorder affecting both upper and lower motor neurons, causing weakness, atrophy, fasciculations, and eventually respiratory failure. Most cases are sporadic (90 percent); 10 percent are familial. Average age of onset 55-60 years.

## Anabolism

The set of metabolic pathways that construct complex molecules from simpler precursors, requiring energy input (ATP, reducing equivalents NADPH). Examples: protein synthesis from amino acids, glyco-

---

gen synthesis (glycogenesis), fatty acid synthesis (lipogenesis), cholesterol synthesis, nucleotide synthesis, gluconeogenesis.

### **Anaemia**

A condition in which the number of red blood cells or the hemoglobin concentration is below the normal range, reducing the oxygen-carrying capacity of the blood.

### **Anabolic Steroids**

Synthetic derivatives of testosterone used in selected medical conditions and misused for muscle building or performance enhancement. Nonmedical use can cause acne, infertility, testicular shrinkage, breast enlargement, mood disturbance, and cardiovascular disease, and sudden cessation may produce symptoms of hormone deficiency.

### **Anaerobe**

A microorganism that grows without molecular oxygen. Obligate anaerobes may be injured or killed by oxygen, while aerotolerant anaerobes tolerate oxygen but do not use it for energy production.

### **Anal Abscess**

Collection of pus in the perianal or ischiorectal space usually from infected anal glands. Presents with throbbing anal pain, swelling, fever, and difficulty sitting. Diagnosed clinically with tenderness and fluctuance. Treatment is incision and drainage under local anesthesia. Antibiotics are not routinely required for simple abscesses.

### **Anal Canal**

The terminal 3-4 cm of the gastrointestinal tract, extending from the anorectal junction (puborectalis/pectinate line) to the anal verge. Above the pectinate line: lined by columnar epithelium, innervated by autonomic nerves, draining to portal system, supplied by superior rectal artery.

### **Anal Cancer**

Malignant tumor of the anal canal or margin, most commonly squamous cell carcinoma associated with high-risk human papillomavirus infection. Presents

with bleeding, pain, or a mass; primary treatment is chemoradiation, with surgery reserved for residual or recurrent disease.

### **Anal Fissure**

Linear tear in the distal anal mucosa usually posterior in the midline. Presents with painful defecation and bright red blood on wiping or in the toilet. Associated with constipation, hard stools, and chronic diarrhea. The internal anal sphincter spasm perpetuates the fissure by reducing blood flow to the posterior midline.

#### **Synonyms:**

Anal Ulcer (Anal Fissure)

### **Anal Fistula**

Abnormal tract connecting the anal canal to the perianal skin usually following a drained abscess. Presents with recurrent drainage, pain, and pruritus. Parks classification categorizes fistulae by relationship to the sphincter muscles. Diagnosed by examination under anesthesia and MRI.

### **Anal Intercourse**

The insertion of the penis into the anus and rectum for sexual pleasure. The anal canal is rich in nerve endings, making it a sensitive erogenous zone. The rectum lacks natural lubrication, so artificial lubricants are essential to prevent mucosal trauma.

### **Anal Itching**

Pruritus around the anus. Common causes include irritation, moisture, dermatitis, hemorrhoids, infections, and occasionally pinworms or other disease. Gentle cleansing, keeping the area dry, and avoiding irritants may help; persistent, severe, bleeding, or painful symptoms require medical evaluation.

#### **Synonyms:**

Itching Anal (Anal Itching) Pruritis Ani Rectal Itching

### **Analgesic**

A drug that relieves pain without producing loss of consciousness.

---

## **Analgesic Nephropathy**

Chronic tubulointerstitial renal injury associated with prolonged or excessive use of analgesic medicines. It may cause impaired urinary concentration, sterile pyuria, haematuria, papillary necrosis, hypertension, and progressive chronic kidney disease.

## **Analysis Of Urine**

Laboratory examination of urine for cells, blood, protein, glucose, microorganisms, and other substances.

## **Analytic Sensitivity**

The smallest amount or concentration of an analyte that a laboratory method can reliably detect. It concerns measurement performance and differs from clinical sensitivity, which describes detection of disease in affected patients.

## **Anaphylactic Shock**

A severe, potentially life-threatening systemic hypersensitivity reaction characterized by rapid onset of multisystem involvement, primarily affecting the skin, respiratory tract, cardiovascular system, and gastrointestinal tract. See Anaphylaxis.

## **Anaphylaxis**

A severe, potentially life-threatening systemic hypersensitivity reaction characterized by rapid onset of multisystem involvement, primarily affecting the skin, respiratory tract, cardiovascular system, and gastrointestinal tract.

## **Anaphylaxis During Anesthesia**

A life-threatening systemic hypersensitivity reaction that may cause sudden hypotension, bronchospasm, cardiovascular collapse, and sometimes urticaria or flushing. Common perioperative triggers include neuromuscular-blocking agents, antibiotics, chlorhexidine, and latex.

## **Anaplasia**

A lack of differentiation, describing cells that have reverted to a more primitive, embryonic phenotype with loss of the specialized structural and functional

characteristics of their tissue of origin.

## **Aplasia**

Complete failure of development of an organ, tissue, or cell line, resulting in absence or severe deficiency of the expected structure. It may arise from congenital developmental abnormalities, inherited disorders, injury to a precursor cell population, or severe marrow suppression. Examples include aplastic anemia, renal aplasia, and aplasia of selected hematopoietic or lymphoid cell lines. Clinical effects depend on the affected structure and may range from an incidental anatomic finding to life-threatening organ failure.

## **Anaplastic Thyroid Cancer**

A rare, rapidly growing, and highly aggressive thyroid cancer that often presents as a large fixed neck mass with dysphagia or airway compromise. Prognosis is poor; management is usually palliative.

## **Anastomosis (Vascular)**

A surgical or natural connection between blood vessels that permits blood to flow from one vessel to another.

### **Synonyms:**

Vascular

## **Anastomotic Leak**

Breakdown of a surgical anastomosis in the gastrointestinal tract causing spillage of luminal contents into the peritoneal cavity. Presents with fever, tachycardia, abdominal pain, leukocytosis, and peritonitis. Diagnosed by CT with oral or rectal contrast showing extraluminal contrast or fluid collection.

## **Anatomical Axis**

An imaginary straight line around which a body part moves or rotates.

## **Anatomical Planes**

Hypothetical flat surfaces that pass through the body in anatomical position, used to slice the body for anatomical descriptions or medical imaging.

---

## Anatomical Position

The standard reference position of the body used to describe anatomy, defined as standing erect, facing forward, with arms at the sides and palms facing forward.

## Anatomical Snuffbox

Triangular depression on the dorsal wrist, bounded by extensor pollicis longus medially and extensor pollicis brevis/abductor pollicis longus laterally. Floor contains the scaphoid, trapezium, and radial artery. Tenderness after a fall on an outstretched hand suggests scaphoid fracture. The radial artery pulse is palpable here.

## Anatomy

Study of body structure. Regions: head, neck, thorax, abdomen, pelvis, extremities. Systems: skeletal, muscular, nervous, circulatory, respiratory, digestive, urinary, reproductive, endocrine, immune.

## Anomalous Anatomy

A structural variation or congenital abnormality in the expected arrangement, number, origin, or course of an organ, vessel, duct, or other body structure. It may be incidental or clinically important during diagnosis, surgery, or interventional procedures.

## Anatomy Survey (Level II Ultrasound)

A comprehensive fetal ultrasound performed at 18–22 weeks to evaluate fetal anatomy and screen for structural anomalies.

### Synonyms:

Level II ultrasound; anatomy scan.

## Anemia In Pregnancy

Anemia occurring during pregnancy, commonly because of iron deficiency or the normal plasma-volume expansion of pregnancy. Assessment considers hemoglobin, mean corpuscular volume, iron status, folate, vitamin B12, bleeding, and other causes.

### Synonyms:

Gestational anemia; pregnancy-associated anemia.

## Apgar Score

A structured assessment of a newborn's appearance, pulse, grimace, activity, and respiration, usually recorded at 1 and 5 minutes after birth. It describes immediate adaptation after delivery and helps guide resuscitation; it is not a standalone diagnosis or long-term prognostic test.

### Synonyms:

Apgar assessment; newborn Apgar score.

## ANCA-Associated Vasculitis

A group of small-vessel vasculitides associated with antineutrophil cytoplasmic antibodies. Includes granulomatosis with polyangiitis (c-ANCA/PR3), microscopic polyangiitis (p-ANCA/MPO), and eosinophilic granulomatosis with polyangiitis (p-ANCA/MPO with asthma/eosinophilia).

## Ancillary Test (Pathology)

A test performed in addition to routine morphology to refine a pathologic diagnosis. Examples include IHC, flow cytometry, cytogenetics, molecular testing, special stains, and electron microscopy.

### Synonyms:

Pathology

## Ancylostoma (Hookworm)

Nematode infestation by *Ancylostoma duodenale* (Old World) or *Necator americanus* (New World), common in tropical and subtropical regions where sanitation is poor.

### Synonyms:

Hookworm

## Androgen Deficiency

Hypogonadism in males: reduced testosterone production causing symptoms and signs. Causes: primary (testicular—Klinefelter, mumps orchitis, chemotherapy, trauma) and secondary (pituitary/hypothalamic—prolactinoma, iron overload, pituitary lesions, opioids, obesity, aging).

## Androgen Insensitivity Syndrome

A difference of sex development in which the cells of a genetically male fetus cannot respond to andro-

---

gens because of a defect in the androgen receptor. Affected individuals have typical female external genitalia and breast development but no uterus, and testes that may lie in the groin or abdomen; diagnosis and care require specialist endocrine and genetic assessment.

### **Androgenetic Alopecia**

The most common cause of hair loss, caused by progressive miniaturization of genetically susceptible hair follicles under androgen influence. Male pattern commonly affects the frontal hairline and vertex; female pattern commonly causes diffuse crown thinning with relative preservation of the frontal hairline.

### **Andropause**

Age-related testosterone decline in men. Symptoms: fatigue, decreased libido, depression. Treatment controversial.

### **Anejaculation**

Absence of ejaculation. Causes: neurological, surgical, pharmacological, psychological.

### **Anemia**

A reduction in the oxygen-carrying capacity of the blood, defined by a hemoglobin concentration below the normal range for age and sex: less than 13.5 g/dL in adult males, less than 12.0 g/dL in adult females.

#### **Synonyms:**

Blood Low Red Cell Count (Anemia)

### **Anemia (Cancer)**

Anemia occurring in a person with cancer, caused by the cancer itself, bleeding, inflammation, nutritional deficiency, or treatment. Evaluation identifies the cause; management may include treating the underlying problem, iron or other replacement, transfusion, or selected medicines.

#### **Synonyms:**

Cancer

### **Anemia Of Chronic Disease**

Anemia of inflammation. Normocytic or microcytic. Low iron, low TIBC, normal/high ferritin.

### **Anencephaly**

A fatal neural tube defect where the cerebral hemispheres and cranial vault fail to develop due to failed closure of the rostral neuropore during the fourth week of gestation. The brainstem and spinal cord are present, and reflex movements may occur, but there is no cognitive function.

### **Anergy**

State of T-lymphocyte non-responsiveness to nominal antigen despite prior sensitization, reflecting functional inactivation rather than cell death.

### **Anesthesia**

The use of medications to prevent sensation, particularly pain, during medical procedures or surgery.

### **Anesthesia For Coagulopathy**

Coagulopathy can increase bleeding risk during an operation or invasive procedure. Anesthetic planning considers the cause, bleeding history, platelet count, coagulation tests, fibrinogen, the procedure, and available correction or replacement therapies.

### **Anesthesia For Epilepsy**

Patients with epilepsy generally require continuation of antiseizure medication perioperatively because missed doses increase seizure risk. Propofol and benzodiazepines are anticonvulsant; high concentrations of some volatile agents may produce epileptiform activity.

### **Anesthesia For Hemophilia**

Hemophilia A results from factor VIII deficiency and hemophilia B from factor IX deficiency. Perioperative care is coordinated with hematology and uses factor replacement or, in selected mild hemophilia A cases, desmopressin.

### **Anesthesia For Neurosurgery**

Neuroanesthesia aims to maintain cerebral perfusion

---

pressure (CPP = mean arterial pressure minus intracranial pressure), optimize brain relaxation, and minimize secondary brain injury. Induction agents (propofol, etomidate) reduce cerebral metabolic rate and intracranial pressure.

### **Anesthesia For Pheochromocytoma**

Anesthetic care for pheochromocytoma requires control of catecholamine effects before surgery, careful management of blood pressure and heart rate, and preparation for rapid hemodynamic changes.

### **Anesthesia For Porphyria**

Anesthetic care in acute porphyria requires avoidance of medicines known to precipitate attacks and attention to nutrition, pain, and metabolic stability. The specific drug plan should be checked against a current porphyria-safety reference.

### **Anesthesia Gas Analyzers**

Anesthesia gas analyzers measure delivered and exhaled concentrations of oxygen, carbon dioxide, and volatile anesthetic agents. The oxygen analyzer measures inspired oxygen concentration; pulse oximetry measures peripheral hemoglobin oxygen saturation.

### **Anesthesia Informatics**

Anesthesia informatics integrates electronic health records, decision support systems, and data analytics into clinical practice. Automated documentation reduces charting time. Clinical decision support alerts for drug interactions and dosing errors. Big data analytics identify patterns in anesthesia outcomes.

### **Anesthesia Machine**

The anesthesia machine delivers precise mixtures of oxygen, air, and volatile anesthetics to the patient.

### **Anesthesia Monitoring**

Continuous assessment of vital functions during anesthesia, typically including oxygenation, ventilation, circulation, temperature, and depth of anesthesia as clinically indicated.

### **Anesthesia Pharmacogenomics**

Anesthesia pharmacogenomics studies genetic variations affecting drug response. Pseudocholinesterase deficiency causes prolonged succinylcholine paralysis. CYP2D6 polymorphisms affect codeine metabolism to morphine. Malignant hyperthermia susceptibility is linked to RYR1 gene mutations.

### **Aneuploidy**

The presence of an abnormal number of chromosomes in a cell, with either extra or missing copies of whole chromosomes, such as trisomy 21. It results from errors in cell division and is a major cause of miscarriage, congenital syndromes, and chromosomal disorders identified by prenatal testing.

### **Aneurysm**

A localized weakening and enlargement of a blood vessel. Aneurysms may occur in arteries or, rarely, veins and may rupture, dissect, or form emboli depending on their location and cause.

### **Aneurysm Clip**

Surgical clip occluding aneurysm neck. Materials: titanium, stainless steel. Indications: intracranial aneurysm. Placed via craniotomy. Complications: clip migration, vessel occlusion, rebleeding.

### **Aneurysm Coils**

Flexible coils, often made of platinum, placed inside an aneurysm to promote clotting and reduce blood flow into the aneurysm.

### **Aneurysm Repair**

Surgical or catheter-based treatment that excludes or replaces a weakened, dilated section of a blood vessel when the risk of rupture or other complications justifies intervention.

### **Angelman Syndrome**

A genetic disorder caused by loss of function of the UBE3A gene on chromosome 15 (maternal deletion or paternal uniparental disomy). Features: severe intellectual disability, absent speech, seizures, ataxia, and frequent laughter. Characteristic happy demeanor with hand-flapping movements.

---

## Angina Pectoris

Chest discomfort caused by myocardial ischemia without infarction. Stable angina occurs predictably with exertion and resolves with rest. Unstable angina occurs at rest or with minimal exertion and is an acute coronary syndrome. Prinzmetal (variant) angina occurs at rest due to coronary vasospasm.

## Angiodysplasia

Dilated, fragile blood vessels in the gastrointestinal mucosa or submucosa, often occurring in the right colon of older adults. They may cause intermittent or recurrent gastrointestinal bleeding and anemia.

## Angioedema

Rapid swelling of the deep dermis/subcutaneous and submucosal tissues (lips, eyelids, tongue, throat, hands, GI tract) due to mast cell mediator release (histamine—allergic/idiopathic, urticaria associated) or bradykinin-mediated (hereditary angioedema—C1 esterase inhibitor deficiency; ACE-inhibitor-induced).

## Angiogenesis

Formation of new blood vessels. Tumors induce angiogenesis for growth. Targeted by anti-angiogenic drugs (bevacizumab).

## Angiography

Invasive imaging of blood vessels by injecting contrast material under fluoroscopy. Coronary angiography (cardiac catheterization): assesses coronary artery stenosis, guides PCI. Cerebral angiography: evaluates aneurysms, AVMs, and vasculitis. Peripheral angiography: evaluates PAD and guides intervention.

## Angiomyolipoma

A benign renal tumor composed of blood vessels, smooth muscle, and fat; it is associated with tuberous sclerosis and may cause retroperitoneal hemorrhage.

## Angioplasty

A procedure that widens a narrowed blood vessel, usually with a balloon and sometimes a stent. It is

used most often for coronary or peripheral arterial disease.

## Angioplasty Balloon (Vascular)

An inflatable catheter balloon used to widen a narrowed blood vessel or expand a stent.

### Synonyms:

Vascular

## Angiosarcoma

A rare, aggressive malignant tumor of blood vessel or lymphatic endothelial cells. Common sites include skin, breast, liver, and bone. Treatment typically involves wide surgical excision with chemotherapy and radiation.

## Angiotensin Converting-Enzyme Inhibitor

A class of antihypertensive medications that block the conversion of angiotensin I to angiotensin II by inhibiting the angiotensin-converting enzyme, thereby reducing vasoconstriction and aldosterone secretion. Used to treat hypertension, heart failure, and diabetic nephropathy.

## Angiotensin Receptor Blockers

A class of cardiovascular drugs that selectively block the angiotensin II type 1 receptor, preventing the binding of angiotensin II and its effects including vasoconstriction, aldosterone secretion, and sympathetic activation.

## Anhedonia

The inability to experience pleasure from activities that were previously enjoyable. It is a core symptom of major depressive disorder and a negative symptom of schizophrenia. It is mediated by dysfunction in the brain's reward circuitry, particularly the mesolimbic dopamine system.

## Anhidrosis

Absent or greatly reduced sweating. It may result from nerve damage, skin disease, dehydration, medications, or inherited conditions. Inability to sweat can cause dangerous overheating, especially during exercise or hot weather.

---

## Animal-Assisted Therapy

A structured intervention in which trained animals are incorporated into care to support defined therapeutic goals. It may be used to support engagement, mood, communication, or activity when appropriate safeguards are in place.

## Anion Gap

A calculated estimate of unmeasured serum anions, commonly sodium minus chloride and bicarbonate. An increased anion gap supports the presence of unmeasured acids in metabolic acidosis, but interpretation must account for albumin concentration and laboratory method.

## Anisocoria

Unequal pupil size. It may be physiologic or caused by disorders of the eye, autonomic nerves, or brain; sudden anisocoria with headache, eye pain, or neurologic symptoms requires urgent assessment.

## Anisocytosis

Increased variation in red blood cell size on a peripheral blood film (e.g., macrocytes with microcytes together), not a diagnosis in itself. Derived from the Greek "anisokytosis" (unequal cells). Quantified by an elevated red cell distribution width (RDW).

## Ankle Arthroplasty

Surgical replacement of the ankle joint with a prosthesis, usually for severe symptomatic ankle arthritis. Suitability depends on deformity, bone quality, infection risk, activity level, and the condition of the surrounding joints.

## Ankle Dislocation

Complete displacement of the ankle joint surfaces, usually resulting from a high-energy injury and often accompanied by a fracture, ligament damage, or neurovascular compromise. It causes severe pain, deformity, and inability to bear weight. The joint requires urgent reduction, imaging, and immobilization, with surgical management when instability or associated fractures demand it.

### Synonyms:

Dislocated Ankle (Ankle Dislocation)

## Ankle Fractures

Ankle fractures: Weber classification (fibular fracture relative to syndesmosis): A (below syndesmosis, stable), B (at syndesmosis, variable stability), C (above syndesmosis, unstable). Lauge-Hansen: supination-external rotation (SER, most common), supination-adduction, pronation-external rotation, pronation-abduction.

## Ankle Joint

Uniaxial hinge synovial joint between distal tibia, lateral malleolus, and superior talus, allowing dorsiflexion/plantarflexion. Medial (deltoid) ligament resists eversion; lateral complex resists inversion. The ankle mortise provides bony stability.

## Ankle Pain

Pain in or around the ankle, commonly caused by sprain, fracture, tendinitis, arthritis, bursitis, or infection. Inability to bear weight, deformity, marked swelling, or fever requires prompt assessment.

## Ankle Sprain

An injury to the ligaments surrounding the ankle joint, most commonly involving the lateral ligament complex (anterior talofibular ligament [ATFL, most commonly injured], calcaneofibular ligament [CFL], and posterior talofibular ligament [PTFL]) from an inversion mechanism.

## Ankle Swelling

Enlargement around the ankle caused by injury, inflammation, infection, venous disease, lymphatic problems, or fluid retention. One-sided sudden swelling with pain, warmth, or shortness of breath may indicate a blood clot or infection and requires urgent assessment; swelling after trauma may require evaluation for fracture.

## Ankle-Brachial Index

The ratio of ankle systolic blood pressure to brachial systolic blood pressure. A low result supports peripheral arterial disease, while a very high result may indicate noncompressible arteries.

---

### Ankyloglossia (Tongue-Tie)

Short or thick lingual frenulum restricting tongue movement. May cause breastfeeding difficulties, speech problems, oral hygiene issues. Treatment: frenotomy (simple release) or frenuloplasty.

#### Synonyms:

Tongue-Tie

### Ankylosing Spondylitis

A chronic, progressive inflammatory disease primarily affecting the axial skeleton (sacroiliac joints and spine), characterized by inflammation at entheses (where tendons, ligaments, and joint capsules insert into bone), leading to new bone formation, syndesmophyte development, and eventual vertebral fusion (bamboo spine).

#### Synonyms:

Arthritis Ankylosing Spondylitis (Ankylosing Spondylitis)

### Ankylosis

Abnormal stiffness or fusion of a joint. In dentistry, it may refer to fusion of a tooth root to the surrounding bone.

### Annihilation

Positron-electron annihilation producing two 511 keV photons in opposite directions.

### Annular Pancreas

A congenital anomaly where a ring of pancreatic tissue completely or partially encircles the second portion of the duodenum, causing duodenal obstruction. It results from failure of the ventral pancreatic bud to completely rotate around the duodenum during embryogenesis.

### Anodontia

Complete absence of teeth. Rare, associated with ectodermal dysplasia.

### Anophthalmia

Congenital absence of the eye due to failure of optic vesicle development, often associated with syndromes (e.g., SOX2 mutations). Diagnosis by ab-

sence of globe on imaging or clinical examination; management requires early socket expansion and prosthetic fitting for orbital and facial development.

### Anorectal Abscess

A localized collection of pus in the tissues around the anus or rectum, usually caused by infection of an anal gland. It commonly causes severe anal pain, swelling, fever, and difficulty sitting. Prompt incision and drainage is the standard treatment.

### Anorectal Malformation

A congenital abnormality in which the anus or rectum does not develop normally or does not connect appropriately to the perineum. Types vary in anatomy and severity and usually require specialist surgical assessment.

### Anorectal Manometry

Measurement of pressures in the anal canal and rectum to assess sphincter function and rectal sensation. A pressure-sensing catheter is inserted into the rectum and slowly withdrawn through the anal canal. Measures resting and squeeze pressures reflecting internal and external sphincter function respectively.

### Anorexia

Loss of appetite, distinct from anorexia nervosa (the eating disorder).

### Anorexia Nervosa

An eating disorder characterized by restriction of energy intake, intense fear of weight gain, and distorted body image. Highest mortality of any psychiatric disorder. Features: emaciation, lanugo, bradycardia, hypotension, amenorrhea, and electrolyte abnormalities. Diagnosis by DSM-5 criteria.

#### Synonyms:

Eating Disorders, Anorexia

### Anorgasmia

Persistent or recurrent delay in, or absence of, orgasm following a normal sexual excitement phase.

---

## Anoscopy

Examination of the anal canal with a short lighted instrument called an anoscope. It is used to evaluate rectal bleeding, hemorrhoids, fissures, fistulas, and other anorectal disorders.

## Anosmia

Complete loss of the sense of smell. Causes include post-viral olfactory dysfunction, chronic rhinosinusitis with polyps, head trauma, neurodegenerative disease, congenital disorders such as Kallmann syndrome, medications, and toxic exposure.

## Anosognosia

Denial or unawareness of one's own neurologic deficit, classically hemiplegia following a nondominant (right) parietal lobe lesion. Associated with right middle cerebral artery strokes and sometimes with neglect of the left side of space.

## Anovulation

Failure to release an egg from the ovary during the menstrual cycle. It may cause irregular or absent periods, infertility, or abnormal bleeding and can result from hormonal disorders, excessive exercise, low body weight, stress, or polycystic ovary syndrome.

## Anoxia

Complete absence of oxygen supply to tissues, distinguished from hypoxia (reduced oxygen). Anoxia causes rapid cell death, particularly in highly aerobic tissues (brain, heart, kidneys).

## Antacids

Medications that neutralise gastric acid, providing rapid symptomatic relief in dyspepsia, gastroesophageal reflux, and peptic ulcer disease. Commonly contain aluminium hydroxide, magnesium hydroxide, calcium carbonate, or sodium bicarbonate.

## Antecubital Fossa

Triangular depression on the anterior elbow, bounded laterally by brachioradialis, medially by pronator teres, and superiorly by a line connecting the epicondyles. Floor formed by brachialis and

supinator. Contains biceps tendon, brachial artery, and median nerve. Primary site for venipuncture and blood pressure measurement.

## Antemortem Injury

Injury inflicted upon a body prior to death, characterized microscopically and macroscopically by physiological tissue responses including hemorrhage, blood clotting, inflammatory cell infiltration, tissue edema, and active healing reactions (differentiating it from postmortem artifact).

## Antenatal

The period before birth, also called prenatal. The medical supervision and screening provided to pregnant women to monitor the health of the mother and fetus, detect complications early, and provide health education.

**Synonyms:**  
prenatal.

## Antepartum Fetal Surveillance

The monitoring of fetal well-being in the third trimester for high-risk pregnancies. Methods: fetal kick counts (daily maternal counting of fetal movements), non-stress test (NST), biophysical profile (BPP, AFI, fetal tone, movement, breathing), and Doppler (umbilical artery, MCA).

## Antepartum Hemorrhage

Bleeding from the genital tract after the threshold of fetal viability and before birth. Important causes include placenta previa, placental abruption, vasa previa, and local cervical or vaginal lesions; maternal stabilization and fetal assessment are priorities.

## Anterior

Relating to the front of the body or positioned closer to the front.

## Anterior Chamber Angle

The anterior chamber angle is the anatomical region where the cornea and iris meet, and it contains the trabecular meshwork, the primary drainage structure for aqueous humor from the eye.

---

### **Anterior Cruciate Ligament Injury**

Tear of the ACL, a common sports injury (non-contact deceleration, pivoting, or hyperextension). Presents with a pop, immediate swelling (hemarthrosis), and giving way of the knee. Positive Lachman test (most sensitive), anterior drawer test, and pivot shift test.

### **Anterior Cruciate Ligament Tear**

ACL tear: common knee injury, often non-contact pivoting sports. Symptoms: popping sound, swelling, instability, inability to continue play. Diagnosis: Lachman test, anterior drawer, MRI. Treatment: surgical reconstruction (autograft/allograft), rehabilitation.

### **Anterior Pituitary**

The glandular portion of the pituitary that secretes ACTH, TSH, growth hormone, prolactin, FSH, and LH in response to hypothalamic releasing hormones. Its hormones regulate adrenal, thyroid, growth, lactation, and reproductive function.

### **Anterior Tibial Artery**

Arises from the popliteal artery, passes through the anterior intermuscular septum to the anterior compartment, continuing to the ankle as the dorsalis pedis artery. Supplies anterior leg and dorsal foot muscles. Palpable anterior to the lateral malleolus as the dorsalis pedis pulse.

### **Anterior Uveitis**

Anterior uveitis, also known as iritis or iridocyclitis when the ciliary body is involved, is inflammation of the anterior segment of the eye involving the iris and/or ciliary body, and it is the most common form of uveitis.

#### **Synonyms:**

iritis or iridocyclitis when the ciliary body is.

### **Anterior/Posterior Drawer Test**

A clinical test of knee stability. Anterior displacement assesses the anterior cruciate ligament, and posterior displacement assesses the posterior cruciate ligament.

### **Anthrax**

A serious infectious disease caused by the gram-positive bacterium *Bacillus anthracis*, which forms highly resistant spores that can persist in the environment for decades, and it is primarily a zoonotic disease of herbivores (cattle, sheep, goats) that can be transmitted to humans through contact with infected animals or their products.

### **Anthropometry**

Body measurements: weight, height, BMI, waist, hip, skinfold thickness. Assessment of nutritional status and body composition.

### **Anti-CCP**

An autoantibody against citrullinated proteins. It supports the diagnosis of rheumatoid arthritis and may be associated with a more erosive disease course, but it must be interpreted with the clinical findings.

### **Anti-CCP Antibody**

A blood antibody directed against citrullinated proteins. It can support assessment of rheumatoid arthritis and may be detectable before joint symptoms, but a positive or negative result is not diagnostic by itself.

### **Anti-Citrullinated Peptide Antibody**

An autoantibody against citrullinated proteins that may support a diagnosis of rheumatoid arthritis. Its significance depends on the clinical context.

### **Anti-DsDNA Antibody**

An autoantibody directed against double-stranded DNA. It supports the diagnosis of systemic lupus erythematosus and may be associated with disease activity, particularly kidney involvement; results are interpreted with other findings.

### **Anti-GBM Disease**

Autoimmune disease with antibodies against alpha-3 chain of type IV collagen in glomerular and alveolar basement membranes. Presents with crescentic GN and pulmonary hemorrhage (Goodpasture syndrome). Linear IgG deposits on immunofluorescence. Treatment requires emergent plasmapheresis,

---

cyclophosphamide, and corticosteroids.

### **Anti-IgE Therapy**

Omalizumab is a monoclonal antibody that binds free IgE, preventing it from binding to mast cells and basophils. It reduces allergic inflammation and is approved for moderate-to-severe persistent allergic asthma. It reduces exacerbations and the need for oral corticosteroids. It is administered by subcutaneous injection every 2–4 weeks.

### **Anti-IL4 Receptor Therapy**

Dupilumab is a monoclonal antibody blocking the IL-4 receptor alpha subunit, inhibiting both IL-4 and IL-13 signaling. It is approved for moderate-to-severe asthma with eosinophilic phenotype or oral corticosteroid dependence. It reduces exacerbations and improves lung function.

### **Anti-IL5 Therapy**

Treatment with monoclonal antibodies that block interleukin-5 signaling or its receptor, thereby reducing eosinophil production or survival. It is used for selected eosinophilic diseases, including some forms of severe asthma.

### **Anti-Inflammatory**

A medicine or other treatment that reduces inflammation.

### **Anti-MDA5 Dermatomyositis**

A clinically distinct subtype of dermatomyositis associated with anti-melanoma differentiation-associated gene 5 antibodies, characterised by skin-predominant disease, mechanic's hands, and a high risk of rapidly progressive interstitial lung disease.

### **Anti-Mullerian Hormone**

A hormone produced by granulosa cells of ovarian follicles. It is measured in selected fertility and reproductive evaluations, but it does not by itself determine fertility.

### **Anti-Reflux Surgery**

An operation intended to reduce reflux of stomach

contents into the esophagus, usually by reinforcing the gastroesophageal junction. It may be considered for selected patients with gastroesophageal reflux disease or a hiatal hernia.

### **Antianginal**

A class of medications used to prevent or relieve angina pectoris (chest pain from myocardial ischemia).

### **Antiarrhythmic**

A drug used to treat or prevent abnormal cardiac rhythms. Drug classes act mainly on sodium channels, sympathetic stimulation, potassium channels, or calcium channels; selection depends on the rhythm and the patient's clinical condition.

### **Antibiogram**

A periodic summary of antimicrobial susceptibility patterns of bacterial isolates from a hospital or laboratory. Guides empiric antibiotic therapy by showing local resistance patterns (e.g., % of *E. coli* susceptible to TMP-SMX). Updates annually.

### **Antibiotic**

A substance that kills or slows the growth of bacteria.

### **Antibiotic Cycling**

A strategy in which the preferred antibiotic for a particular clinical use is changed at planned intervals. It is intended to limit selection of resistant organisms, although its benefit depends on local conditions and implementation.

### **Antibiotic De-Escalation**

The process of narrowing antimicrobial spectrum based on microbiological results and clinical response. De-escalation aims to reduce selective pressure for resistance while maintaining therapeutic efficacy.

### **Antibiotic Mixing**

A strategy in which different antibiotics are assigned concurrently to different patients with the same

---

indication. It is intended to reduce uniform selection pressure for resistance in a patient population.

### **Antibiotic Resistance**

Bacteria resisting antibiotic effects. Mechanisms: enzymatic degradation, target modification, efflux pumps, membrane permeability. Driven by antibiotic overuse.

#### **Synonyms:**

Resistance Antibiotic (Antibiotic Resistance)

### **Antibiotic Resistance Genes**

Genes that encode mechanisms conferring resistance to antibiotics. These genes can be located on chromosomes, plasmids, or transposons. Major resistance genes include *mecA* (methicillin resistance in *S. aureus*), *vanA/vanB* (vancomycin resistance in *Enterococcus*), and *blaKPC* (carbapenem resistance).

### **Antibiotic Stewardship**

Coordinated efforts to use antibiotics appropriately by selecting the right medicine, dose, route, and duration while reducing unnecessary treatment and resistance.

### **Antibodies**

Immunoglobulin proteins produced by B cells that bind to specific antigens. There are five classes: IgG (most abundant), IgM (first produced), IgA (mucosal immunity), IgE (allergic responses), and IgD. Antibodies neutralise pathogens, opsonise for phagocytosis, activate complement, and mediate antibody-dependent cellular cytotoxicity.

### **Anticholinergic Burden**

The cumulative effect of taking multiple medications with anticholinergic properties. It can cause dry mouth, constipation, urinary retention, blurred vision, confusion, and delirium, especially in elderly patients. Many psychiatric medications (TCAs, first-generation antipsychotics, some antihistamines) have anticholinergic effects.

### **Anticholinergic Cognitive Burden Scale**

A medication-review tool that estimates the total

anticholinergic load of a patient's medicines. It supports risk assessment and deprescribing but does not replace individualized clinical judgment.

### **Anticoagulant Monitoring**

Laboratory assessment used to measure the effect or safety of an anticoagulant. The appropriate test depends on the drug and may include aPTT, anti-Xa activity, INR, or measurements of kidney function and blood counts.

### **Anticoagulation**

Treatment that reduces blood clot formation by inhibiting the coagulation system. It is used for conditions such as venous thromboembolism and selected cardiac or vascular disorders.

### **Anticodon**

A three-nucleotide sequence at one end of transfer RNA that base-pairs with a complementary messenger RNA codon during translation, ensuring the correct amino acid is incorporated into the growing polypeptide.

### **Anticonvulsant Mood Stabilizers**

Antiepileptic drugs used as mood stabilizers in bipolar disorder. Valproate (divalproex) is effective for acute mania and rapid cycling. Carbamazepine is effective for acute mania but has numerous drug interactions via CYP3A4 induction. Lamotrigine is effective for bipolar depression prevention but not acute mania.

### **Anticonvulsants**

Medications used to prevent or control seizures in epilepsy and other seizure disorders.

### **Antidiabetic**

A class of medications used to manage diabetes mellitus by lowering blood glucose levels through various mechanisms.

### **Antidiarrheal**

A drug that reduces the frequency or volume of diarrhea. Some antidiarrheals should be avoided

---

when there is bloody diarrhea, high fever, suspected invasive infection, or ileus.

### **Antidiuretic Hormone**

A hypothalamic hormone released from the posterior pituitary in response to increased plasma osmolality or reduced effective circulating volume. It increases collecting-duct water permeability through V2 receptors and promotes vasoconstriction through V1 receptors.

### **Antidiuretic Hormone Physiology**

Antidiuretic hormone also known as vasopressin is synthesized in the supraoptic and paraventricular nuclei of the hypothalamus and stored in the posterior pituitary. Released in response to increased serum osmolality detected by hypothalamic osmoreceptors and decreased blood volume detected by baroreceptors.

#### **Synonyms:**

vasopressin is synthesized in the supraoptic and

### **Antidiuretic Hormone Resistance**

Impaired renal response to vasopressin, causing excessive production of dilute urine and polydipsia. Causes include lithium, hypercalcemia, hypokalemia, chronic kidney disease, and inherited defects of the vasopressin receptor or aquaporin pathway.

### **Antidote**

Substance that counteracts poison toxicity. Specific: naloxone (opioids), flumazenil (benzodiazepines), N-acetylcysteine (acetaminophen), digoxin immune Fab (digoxin), chelators (EDTA, deferoxamine, dimercaprol), atropine + pralidoxime (organophosphates), methylene blue (methemoglobinemia), cyanide antidote kit (nitrite + thiosulfate).

### **Antiemetic**

A medication that prevents or treats nausea and vomiting.

### **Antiepileptic Drugs**

Medications used to prevent and control seizures by modulating neuronal excitability through various

mechanisms. They can be classified by their primary mechanism of action.

### **Antifungal**

A drug used to treat fungal infections.

### **Antifungal Drug Classes**

Major classes of antifungal agents include polyenes (amphotericin B), azoles (fluconazole, voriconazole), echinocandins (caspofungin, micafungin), and allylamines (terbinafine). Polyenes bind to ergosterol in fungal cell membranes. Azoles inhibit ergosterol synthesis. Echinocandins inhibit cell wall synthesis.

### **Antifungal Prophylaxis**

The use of antifungal agents to prevent invasive fungal infections in high-risk patients. Common indications include prolonged neutropenia, hematopoietic stem cell transplantation, and advanced HIV infection. Fluconazole, posaconazole, and micafungin are used for prophylaxis.

### **Antifungal Resistance**

The ability of fungi to withstand the effects of antifungal agents. Resistance can be intrinsic or acquired. Azole resistance occurs through efflux pumps and target mutations. Echinocandin resistance occurs through FKS gene mutations. Amphotericin B resistance is rare.

### **Antigen**

A molecule or molecular structure specifically recognized by an antibody, B-cell receptor, or T-cell receptor. An immunogen is an antigen capable of inducing an immune response; antigenicity and immunogenicity are related but not synonymous properties.

### **Antigen Detection Test**

A diagnostic assay that identifies a pathogen-derived antigen in a clinical specimen using a specific antibody or related binding reagent. It is generally rapid but may be less sensitive than nucleic-acid amplification, especially when organism burden is low.

---

## Antigen-Presenting Cell

Specialized immune cells that process protein antigens and display peptide fragments bound to Major Histocompatibility Complex (MHC) molecules on their surface for recognition by T-cell receptors. Professional APCs: dendritic cells (most potent for naive T cells), macrophages, and B cells.

## Antigenic Drift

The gradual accumulation of point mutations in viral surface antigens (hemagglutinin, neuraminidase) during replication, allowing influenza viruses to evade pre-existing antibodies and cause recurrent seasonal epidemics. Drift is continuous and selected by host immunity; it is why the seasonal vaccine is updated annually.

## Antigenic Shift

A major, abrupt change in the antigenic structure of a virus (especially influenza A) resulting from genetic reassortment between different strains (e.g., human and avian viruses) infecting the same cell.

## Antigenic Variation

The process by which pathogens change their surface proteins to evade immune recognition. Antigenic drift: gradual changes in surface proteins. Antigenic shift: major changes through reassortment of genome segments. Influenza virus demonstrates both mechanisms. Trypanosomes and Plasmodium also use antigenic variation.

## Antigout

A class of medications used to treat gout by reducing uric acid levels or controlling acute inflammation.

## Antihistamine

A drug that blocks histamine receptors. H1 antihistamines treat allergic rhinitis, urticaria, pruritus, and (older sedating agents) insomnia and motion sickness. First-generation (diphenhydramine, chlorpheniramine): CNS-penetrant—sedating, anticholinergic (dry mouth, urinary retention, confusion in elderly).

## Antihypertensive

A medicine used to lower blood pressure. Classes include ACE inhibitors, angiotensin-receptor blockers, calcium-channel blockers, thiazide-type diuretics, beta-blockers, and other agents. Selection depends on blood pressure, kidney function, cardiovascular disease, pregnancy, and other clinical factors.

## Antihypertensives In Pregnancy

Medications used to treat hypertension in pregnancy.

## Antimicrobial

A general term for antibiotics and other drugs that fight microscopic organisms in the body, such as bacteria, viruses, fungi, and parasites.

## Antimicrobial Adverse Effects

Side effects associated with antimicrobial agents. Beta-lactams can cause allergic reactions. Fluoroquinolones can cause tendon rupture and QT prolongation. Aminoglycosides can cause nephrotoxicity and ototoxicity. Azole antifungals can cause hepatotoxicity.

## Antimicrobial Desensitization

A procedure that administers gradually increasing doses of an antimicrobial to temporarily induce tolerance in a person with a documented or strongly suspected immediate allergy. It may be considered when that antimicrobial is clinically necessary and suitable alternatives are not available.

## Antimicrobial Dosing Optimization

Strategies to ensure antimicrobial agents achieve therapeutic concentrations at the site of infection. Optimization includes appropriate drug selection, dosing interval, route of administration, and duration of therapy. Extended or continuous infusion of beta-lactams may improve outcomes. Weight-based dosing is important for many agents.

## Antimicrobial Drug Interactions

Interactions between antimicrobial agents and other medications. Fluoroquinolones chelate divalent cations. Macrolides inhibit CYP3A4. Rifampin is

---

a potent enzyme inducer. Azole antifungals inhibit CYP3A4.

### **Antimicrobial Hypersensitivity Reactions**

Immune-mediated reactions to antimicrobial agents that may range from a mild rash to life-threatening anaphylaxis. The reaction depends on the drug, the patient, and the type of immune response.

### **Antimicrobial Pharmacodynamics**

The relationship between antimicrobial drug concentrations and their effect on microorganisms. Time-dependent antibiotics (beta-lactams) are most effective when concentrations remain above the MIC. Concentration-dependent antibiotics (aminoglycosides) are most effective with high peak concentrations.

### **Antimicrobial Pharmacokinetics**

The absorption, distribution, metabolism, and elimination of antimicrobial agents. Pharmacokinetics varies by drug class, patient factors, and disease state. Renal impairment affects elimination of many antibiotics. Hepatic impairment affects metabolism of many antifungals.

### **Antimicrobial Resistance**

Microorganisms becoming resistant to antibiotics. Major global health threat. Prevention: appropriate antibiotic use, infection control.

### **Antimicrobial Resistance Mechanisms**

Biological processes that allow microorganisms to survive antimicrobial exposure, including drug inactivation, modification of the drug target, reduced permeability, and active drug efflux.

### **Antimicrobial Resistance Surveillance**

The systematic monitoring of antimicrobial resistance patterns in clinical isolates. Surveillance programmes track resistance rates over time and guide empiric therapy. National and international networks share resistance data.

### **Antimicrobial Stewardship**

Coordinated actions that promote appropriate antimicrobial selection, dose, route, and duration to improve patient outcomes and limit resistance, adverse effects, and unnecessary cost.

### **Antimicrobial Susceptibility Testing**

Laboratory methods used to estimate how susceptible a microorganism is to antimicrobial agents. Methods include disk diffusion, broth microdilution, and automated systems. Results are interpreted using standardized breakpoints and can help guide antimicrobial therapy.

### **Antineoplastic**

A medicine or other treatment that inhibits the growth or survival of abnormal cells, especially cancer cells.

### **Antinuclear Antibody**

ANA: autoantibodies against nuclear components (DNA, histones, ribonucleoproteins, etc.), detected by immunofluorescence (HEp-2 cells), reported with pattern (homogeneous, speckled, nucleolar, centromere) and titer.

#### **Synonyms:**

Antinuclear Antibodies

### **Antioxidant**

A substance that limits oxidation by reacting with oxidizing molecules or free radicals.

### **Antiparasitic**

A drug used to treat infections caused by parasites (protozoa and helminths). Antiprotozoals: metronidazole (Giardia, amebiasis, trichomoniasis), tinidazole, chloroquine and artemisinin combinations (malaria), pyrimethamine (toxoplasmosis), pentamidine, and nifurtimox (Chagas).

### **Antiparkinson**

A class of medications used to manage Parkinson disease symptoms by restoring dopaminergic activity or modulating other neurotransmitter systems.

---

### Antiparkinsonian

A drug used to treat Parkinson disease and drug-induced parkinsonism.

### Antiphospholipid Antibodies

Include lupus anticoagulant (prolongs phospholipid-dependent coagulation tests), anticardiolipin antibodies (IgG/IgM), and anti-beta-2-glycoprotein I antibodies. Detected on  $\geq 2$  occasions 12 weeks apart. Clinical criteria: vascular thrombosis or pregnancy morbidity. Can be transient (infection, drugs) or persistent.

### Antiphospholipid Antibody

An autoantibody directed against phospholipid-binding proteins. Persistent antibodies may be associated with thrombosis or pregnancy complications, particularly in antiphospholipid syndrome.

### Antiphospholipid Syndrome

A systemic autoimmune thrombophilia characterized by arterial and venous thrombosis, pregnancy morbidity, and persistent antiphospholipid antibody positivity.

#### Synonyms:

APS (Antiphospholipid Syndrome)

### Antiplatelet Therapy

Treatment with medicines that reduce platelet activation or aggregation, such as aspirin or clopidogrel, when clinically indicated to reduce arterial clotting.

### Antipruritic

A medication that relieves itching (pruritus).

### Antipsychotic

A drug used to treat psychotic disorders (schizophrenia, schizoaffective disorder, psychosis in bipolar/manic states and delirium). Typical (first-generation): haloperidol, chlorpromazine—D2 blockade, high EPS/tardive dyskinesia risk, hyperprolactinemia.

### Antipsychotic-Induced Parkinsonism

Drug-induced bradykinesia, rigidity, tremor, or pos-

tural instability caused by dopamine-receptor blockade, usually from antipsychotic treatment. Management involves reviewing the medication, dose, alternatives, and symptomatic treatment when appropriate.

### Antipyretic

A drug that reduces fever by lowering the hypothalamic set point, typically by inhibiting prostaglandin synthesis in the preoptic hypothalamus. Acetaminophen and NSAIDs (ibuprofen, aspirin) are the principal antipyretics.

### Antiretroviral Therapy

Treatment of HIV infection with combinations of antiretroviral agents. ART targets multiple steps in the viral life cycle including entry, reverse transcription, integration, and maturation. Combination ART suppresses viral replication and restores immune function. ART is lifelong therapy.

### Antiseptic

Substances used on wounds to prevent or treat infection; they kill or slow the growth of disease-causing organisms, such as bacteria, on the surface of the body.

### Antisocial Personality Disorder

A pattern of disregard for and violation of the rights of others occurring since age 15 years. At least three of seven criteria: failure to conform to social norms, deceitfulness, impulsivity, irritability and aggressiveness, reckless disregard for safety, consistent irresponsibility, and lack of remorse.

#### Synonyms:

Disorder Antisocial Personality (Antisocial Personality Disorder) Personality Disorder, Antisocial Personality Disorder Antisocial (Antisocial Personality Disorder)

### Antispasmodic

A medication that reduces smooth muscle spasm, primarily in the gastrointestinal tract. Anticholinergic agents: hyoscyamine, dicyclomine, atropine — block muscarinic M3 receptors on GI smooth muscle, reducing contractions and peristalsis, used for

---

irritable bowel syndrome and functional dyspepsia.

**Synonyms:**

Antispasmodics

**Antispasmodics**

Alternate index label; see *Antispasmodic*.

**Antistreptolysin O Titer**

A blood test that measures antibodies against streptolysin O, a toxin produced by group A streptococci. Rising or elevated titers support recent streptococcal infection and help evaluate suspected rheumatic fever or poststreptococcal glomerulonephritis, although a single value does not prove active infection.

**Antisynthetase Syndrome**

An autoimmune disorder associated with antibodies against aminoacyl-tRNA synthetases, especially anti-Jo-1. It may cause interstitial lung disease, inflammatory muscle disease, arthritis, fever, Raynaud phenomenon, or mechanic's hands.

**Antithrombin**

Natural anticoagulant. Inhibits thrombin, factor Xa. Deficiency causes thrombosis.

**Antithrombin Deficiency**

A rare (1 in 2,000-5,000), strongly thrombophilic inherited disorder (autosomal dominant). Antithrombin (previously antithrombin III) is a serine protease inhibitor that inactivates thrombin and factors Xa, IXa, XIa, and XIIa. Heterozygous: 10-50 fold increased VTE risk, more severe than factor V Leiden.

**Antithrombin III Deficiency**

An inherited or acquired thrombophilia caused by reduced antithrombin activity, leading to increased risk of venous thromboembolism.

**Antithyroid**

A medicine or treatment that reduces thyroid-hormone production or activity. Examples include thioamides, radioactive iodine, and medicines that reduce the effects of thyroid hormone; the choice

depends on the cause and clinical situation.

**Antitubercular Agents**

Antimicrobial drugs used to treat *Mycobacterium tuberculosis* infections.

**Antitussive**

A medication that suppresses the cough reflex, used for dry, non-productive cough.

**Antiviral**

A class of drugs that inhibit viral replication, used to treat viral infections.

**Antiviral Drug Classes**

Major classes of antiviral agents include nucleoside analogues (acyclovir, tenofovir), protease inhibitors (ritonavir, atazanavir), reverse transcriptase inhibitors (efavirenz, sofosbuvir), and neuraminidase inhibitors (oseltamivir). Each class targets a specific step in the viral replication cycle.

**Antrochoanal Polyp**

A benign, single nasal polyp originating from the maxillary sinus mucosa and extending through the accessory ostium into the choana and nasopharynx. It is most common in children and young adults, presenting with unilateral nasal obstruction and rhinorrhea. Treatment is endoscopic surgical removal.

**Anuria**

Near absence of urine production, often defined in adults as less than about 100 milliliters in 24 hours.

**Anus**

The terminal opening of the gastrointestinal tract through which feces are expelled. It is surrounded by the internal smooth-muscle sphincter and external skeletal-muscle sphincter.

**Anxiety**

A normal emotional response to perceived danger, but anxiety disorders involve excessive, persistent worry that interferes with daily life. Symptoms can include restlessness, rapid heart rate, muscle

---

tension, and avoidance behaviors.

### **Anxiety Disorder**

A group of psychiatric conditions characterized by excessive fear, anxiety, and related behavioral disturbances. Includes generalized anxiety disorder (GAD), panic disorder, social anxiety disorder, specific phobias, and agoraphobia.

### **Anxiolytic**

A medicine or other treatment that reduces anxiety. Choice depends on the anxiety disorder, urgency, coexisting conditions, adverse effects, and patient preference; psychological therapies and, when appropriate, antidepressant medicines are commonly used for persistent anxiety.

### **Aorta**

Largest artery, from the left ventricle distributing oxygenated blood systemically. Approximately 30 cm long, 2.5 cm diameter. Four segments: ascending aorta, aortic arch (brachiocephalic trunk, left common carotid, left subclavian), descending thoracic aorta, descending abdominal aorta (bifurcating into common iliacs at L4).

### **Aortic Aneurysm**

A permanent, localized enlargement of the aorta caused by weakening of its wall. It may occur in the thoracic or abdominal aorta and can enlarge, dissect, or rupture; management depends on its site, size, growth, symptoms, and the patient's risk.

### **Aortic Aneurysm Rupture**

Full-thickness failure of an aortic aneurysm with bleeding into a body cavity or surrounding tissue. Ruptured aneurysm commonly causes sudden pain, shock, and collapse and requires immediate resuscitation and operative or endovascular repair.

### **Aortic Aneurysm Screening**

Evaluation of selected people for an aortic aneurysm before symptoms develop. Screening may use abdominal ultrasonography or other imaging according to the person's risk.

### **Aortic Arch**

Curves from second right sternocostal joint superiorly and left, then posteriorly and inferiorly to T4. From right to left: brachiocephalic trunk, left common carotid, left subclavian. Related to left recurrent laryngeal nerve (hooking under it), trachea, esophagus, left phrenic nerve. Arch aneurysms may cause hoarseness and SVC syndrome.

### **Aortic Coarctation**

Congenital narrowing of the aorta, usually near the insertion of the ductus arteriosus. It causes higher blood pressure and stronger pulses in the arms than in the legs, with a radio-femoral delay; severe neonatal disease may present with shock when the ductus closes.

### **Aortic Dissection**

A tear in the inner layer of the aorta that allows blood to enter the wall and form a false channel. Stanford type A involves the ascending aorta; type B does not. Treatment depends on the type, symptoms, complications, and overall clinical condition.

#### **Synonyms:**

Dissecting Aneurysm Dissection Aorta (Aortic Dissection)

### **Aortic Embolism**

Obstruction of a systemic artery by material originating in the aorta, such as thrombus or atheromatous debris, causing distal ischemia.

### **Aortic Graft Infection**

Infection involving a prosthetic or endovascular aortic graft, potentially causing sepsis, pseudoaneurysm, hemorrhage, or aortoenteric fistula. Management usually requires prolonged antimicrobial treatment and individualized surgical or endovascular source control.

### **Aortic Regurgitation**

Incomplete closure of the aortic valve allowing blood to flow backward from the aorta to the left ventricle during diastole. Causes include bicuspid aortic valve, endocarditis, aortic root dilation, hypertension, and connective tissue disorders. Murmur: early

---

diastolic decrescendo murmur at the left sternal border.

### **Aortic Regurgitation Murmur**

Early diastolic decrescendo murmur heard best at the left sternal border with the patient sitting up and leaning forward in end-expiration. Wide pulse pressure, water-hammer pulses (Corrigan pulse), de Musset sign (head bobbing with each pulse), and Duroziez sign (femoral bruit with compression).

### **Aortic Stenosis**

Narrowing of the aortic valve opening, obstructing left ventricular outflow. It is the most common valvular disease in developed countries, usually caused by calcific degeneration. Symptoms include angina, syncope, and heart failure (SAD triad).

### **Aortic Stenosis Grading**

Severity grading: mild (valve area  $>1.5$  cm<sup>2</sup>, mean gradient  $<20$  mmHg), moderate (valve area 1.0-1.5 cm<sup>2</sup>, mean gradient 20-40 mmHg), severe (valve area  $<1.0$  cm<sup>2</sup>, mean gradient  $>40$  mmHg). Very severe (valve area  $<0.6$  cm<sup>2</sup>, mean gradient  $>60$  mmHg) indicates critical stenosis. Grading guides timing of intervention.

### **Aortic Valve**

A semilunar valve between the left ventricle and aorta, normally composed of right, left, and non-coronary cusps. It opens during systole and closes during diastole to direct blood flow. Each cusp forms a sinus of Valsalva from which coronary arteries originate. Opens during systole; closes during diastole.

### **Aortic Valve Disease**

Abnormal narrowing, leakage, or structural change of the valve between the left ventricle and aorta. It may cause chest pain, breathlessness, fatigue, fainting, or no symptoms initially. Evaluation commonly includes examination and echocardiography; severe disease may require specialist treatment.

### **Aortography**

Contrast imaging of aorta. Evaluates aneurysm, dis-

section, occlusion. Largely replaced by CTA/MRA.

### **APACHE II Score**

Severity scoring system for critically ill patients incorporating physiological variables, age, and chronic health status to generate scores from zero to seventy-one. Higher scores indicate greater severity and higher mortality. In acute pancreatitis, scores of eight or greater indicate severe disease.

### **APC Tumor Suppressor**

The adenomatous polyposis coli protein is a large multidomain tumor suppressor that functions as a critical negative regulator of the canonical Wnt signaling pathway.

### **Apert Syndrome**

An autosomal dominant craniosynostosis syndrome caused by FGFR2 mutations (most commonly Ser252Trp or Pro253Arg).

### **Aphasia**

Impairment of language comprehension or production resulting from brain damage, most commonly from stroke affecting the left hemisphere (dominant) language areas.

### **Apheresis**

A procedure that removes a selected blood component, such as plasma, platelets, or abnormal cells, and returns the remaining components to the patient or donor.

### **Aphonia**

Complete loss of the ability to phonate, distinct from dysphonia in which voice is present but abnormal. Causes are organic (bilateral vocal cord paralysis, severe laryngitis, laryngeal trauma, structural lesions) or psychogenic (conversion disorder, muscle tension dysphonia). Whispered speech and cough are usually preserved.

### **Aphthous Stomatitis**

Recurrent painful ulcers of the oral mucosa with a shallow base and erythematous border, commonly

---

known as canker sores.

### **Aphthous Ulcer**

A recurrent, painful ulcer of the oral mucosa. See Canker Sore.

### **Apicoectomy**

Surgical removal of root tip and periapical lesion. Indication: failed root canal therapy.

### **Aplastic Anemia**

A bone marrow failure syndrome characterized by pancytopenia (anemia, leukopenia, thrombocytopenia) and a hypocellular bone marrow with replacement by fat cells, resulting from immune-mediated destruction of hematopoietic stem cells.

### **Apnea**

Temporary cessation of breathing. Clinically important apnea may cause low oxygen, carbon-dioxide retention, or bradycardia.

### **Apnea Of Prematurity**

Recurrent pauses in breathing in a premature infant, sometimes accompanied by bradycardia or oxygen desaturation. It may be central, obstructive, or mixed. Management includes monitoring and, when needed, respiratory stimulation or support.

### **Apnea-Hypopnea Index**

Number of apneas plus hypopneas per hour of sleep. Apnea = airflow cessation > 10 seconds. Hypopnea = partial obstruction with desaturation or arousal. AHI < 5 normal, 5–14 mild, 15–29 moderate, ≥ 30 severe.

### **Apneustic Breathing**

A breathing pattern characterized by a prolonged inspiratory pause, seen in brainstem lesions (particularly the pons). It indicates damage to the apneustic center and is a poor prognostic sign in neurological injury. It may require mechanical ventilation.

### **Apnoea**

Temporary cessation of breathing, defined as com-

plete cessation of airflow for at least 10 seconds. Obstructive apnea: airway collapse despite respiratory effort (common in obstructive sleep apnea).

### **Apoenzyme**

The protein component of an enzyme without its required cofactor or coenzyme. Inactive or minimally active until the cofactor binds. The complete, catalytically active complex of apoenzyme + cofactor is called the holoenzyme.

### **Apoptosis**

Programmed cell death. Dysregulated in cancer (avoiding death). Pro-apoptotic genes: BAX, P53. Anti-apoptotic: BCL-2.

### **Apoptosis Extrinsic Pathway**

The extrinsic pathway of apoptosis is triggered by extracellular ligands binding to death receptors belonging to the tumor necrosis factor receptor superfamily, including Fas (CD95), TNFR1, and TRAIL receptors DR4 and DR5.

### **Apoptosis Intrinsic Pathway**

The intrinsic, or mitochondrial, pathway of apoptosis is initiated by intracellular stress signals including DNA damage, growth factor withdrawal, endoplasmic reticulum stress, and hypoxia.

### **Apparent Mineralocorticoid Excess**

Rare autosomal recessive disorder caused by deficiency of 11-beta-hydroxysteroid dehydrogenase type 2 normally converting cortisol to cortisone in the collecting duct. Cortisol activates mineralocorticoid receptors causing severe hypertension, hypokalemia, metabolic alkalosis, and low renin with low aldosterone.

### **Appendectomy**

Surgical removal of the appendix, the most common emergency surgical procedure performed worldwide. Appendectomy is indicated for acute appendicitis, the most common surgical emergency with a lifetime risk of 7-8 percent and peak incidence between 10 and 30 years.

---

## Appendiceal Tumors

Neoplasms arising in the appendix, including neuroendocrine tumors, mucinous neoplasms, and adenocarcinoma. Some are found incidentally, whereas others cause pain, obstruction, or abdominal distention. Evaluation and treatment depend on the tumor type, size, spread, and pathologic features.

## Appendicitis

Inflammation of the vermiform appendix, often caused by obstruction of its lumen. It may cause abdominal pain that moves to the right lower quadrant, nausea, loss of appetite, and fever; diagnosis and treatment depend on clinical assessment, laboratory tests, imaging, and complications.

### Synonyms:

Pain Lower Right Abdomen (Appendicitis)

## Appendix

A blind-ended tubular diverticulum of the cecum, typically 6-10 cm long, rich in lymphoid tissue. Its position is variable (retrocecal, pelvic, or retroileal); the base usually projects near McBurney's point, one-third of the distance from the anterior superior iliac spine to the umbilicus.

## Appetite Regulation

Complex control by hormones (leptin, ghrelin, insulin, CCK), neural signals, psychological factors. Leptin signals satiety, ghrelin signals hunger.

## Applied Behavior Analysis

A behavioral intervention based on learning principles that uses observation, measurement, and reinforcement to increase useful behaviors and reduce behaviors that interfere with functioning. It may be used in autism care and other settings, with goals individualized to the person.

## Apraxia

Inability to perform learned, skilled motor movements despite intact motor function, sensation, coordination, and comprehension.

## Aquagenic Keratoderma

Transient, painful whitish thickening and wrinkling of the palms and soles occurring within minutes of water immersion, accompanied by a prickling or burning sensation. It is often associated with cystic fibrosis or other sweat gland disorders but can also be idiopathic or drug-induced. Symptoms resolve shortly after drying the skin.

## Aquatic Therapy

Exercise or rehabilitation performed in water, using buoyancy and resistance to support movement and conditioning.

## Aqueous Humor

A clear, watery fluid that fills the anterior and posterior chambers of the eye, maintaining intraocular pressure and providing nutrients and oxygen to the avascular cornea and lens while removing metabolic waste products.

## Arachnoid Cyst

A congenital, benign, cerebrospinal fluid-filled cyst within the arachnoid membrane, most commonly found in the middle cranial fossa. Most are asymptomatic and discovered incidentally on imaging, but large cysts may cause headache, seizures, or focal neurological deficits.

## Arachnoid Mater

The middle of the three meninges, a delicate avascular membrane lying between the dura mater and pia mater. The subarachnoid space between arachnoid and pia contains cerebrospinal fluid (CSF) and major vessels. Arachnoid granulations (villi) project into the dural venous sinuses and mediate CSF resorption.

## ARB-Neprilysin Inhibitor

Sacubitril/valsartan combines an ARB with a neprilysin inhibitor, increasing natriuretic peptide levels while blocking the renin-angiotensin system. The PARADIGM-HF trial demonstrated superior reduction in cardiovascular death and heart failure hospitalization compared to enalapril.

---

## Arbovirus

A virus transmitted by mosquitoes or other member of the arthropod phylum.

## ARBs

Block angiotensin II AT1 receptors providing renoprotection similar to ACE inhibitors. Alternative for ACE inhibitor cough. Do not combine ACE inhibitor and ARB due to increased adverse effects without benefit. Similar renoprotective effects to ACE inhibitors.

## Arcus Senilis (Corneal Arcus)

A white, gray, or bluish opaque ring in the peripheral corneal stroma separated from the limbus by a clear zone (lucid interval of Vogt). Caused by lipid (cholesterol) deposition in the peripheral cornea. Common and benign in elderly individuals (>60 years).

### Synonyms:

Corneal Arcus

## ARDS

Acute respiratory distress syndrome is a severe inflammatory lung injury causing acute oxygenation failure and bilateral lung opacities that are not fully explained by heart failure or fluid overload. Common causes include sepsis, pneumonia, trauma, and aspiration.

## Area Under The Concentration-Time Curve

The integral of a drug's plasma concentration over time. AUC estimates total systemic exposure and is used to compare bioavailability, guide dosing for selected medicines, and characterize pharmacokinetic interactions.

## Argininosuccinic Aciduria

Autosomal recessive urea cycle disorder caused by deficiency of argininosuccinate lyase (ASL gene, 7cen-q11.2). Biochemical hallmark: accumulation of argininosuccinic acid in blood, urine, and CSF with hyperammonemia, low citrulline, and elevated argininosuccinic acid.

## Argyll Robertson Pupil

A small, irregular pupil that constricts during near focusing but responds poorly or not at all to light. It is classically associated with neurosyphilis but can have other causes; the finding requires clinical evaluation.

## Armpit Lump

A lump or swelling in the axilla, commonly caused by an enlarged lymph node, skin infection, cyst, or benign growth. Persistent, hard, fixed, enlarging, or unexplained lumps require medical assessment.

## Arnold-Chiari Malformation

Herniation of cerebellar tonsils through the foramen magnum into the upper cervical spinal canal. Type II (myelomeningocele-associated) is the most common form in pediatrics. Associated with hydrocephalus, syringomyelia, and spinal cord dysfunction. Symptoms include headache, neck pain, and lower cranial nerve palsies.

## Aromatase Excess Syndrome

Rare autosomal dominant condition caused by mutations in the CYP19A1 gene leading to overexpression of aromatase enzyme and excessive estrogen production. Presents in males with gynecomastia, advanced bone age, and accelerated linear growth with early epiphyseal closure. In females with precocious puberty, macroclitoris, and virilization.

## Aromatase Inhibitor

A class of medications that inhibit aromatase, the enzyme that converts androgens (androstenedione, testosterone) to estrogens (estrone, estradiol) in peripheral tissues (adipose, breast, muscle, bone). Used primarily in hormone receptor-positive breast cancer in postmenopausal women.

## Arrector Pili Muscle

A small band of involuntary smooth muscle attached to a hair follicle and the superficial dermis. Sympathetic stimulation causes it to contract, pulling the hair upright and producing temporary piloerection, commonly called goosebumps. Contraction also compresses nearby sebaceous glands and may

---

help release sebum onto the skin.

**Synonyms:**  
goosebumps.

### **Arrested Caries**

A carious lesion that is no longer progressing, often because the surface has become hard, smooth, and cleansable. Arrested lesions may be monitored and remineralized; treatment depends on activity, cavitation, cleansability, and patient risk.

### **Arrhythmia**

Any abnormality of cardiac rate, rhythm, or site of impulse origin, arising through enhanced automaticity, reentry, or triggered activity. Classified by rate as tachyarrhythmia or bradyarrhythmia and by site as supraventricular or ventricular. Diagnosis rests on the 12-lead ECG and ambulatory monitoring when intermittent.

### **Arrhythmogenic Right Ventricular Cardiomyopathy**

A genetic cardiomyopathy characterized by fibrofatty replacement of the right ventricular myocardium, predisposing to ventricular arrhythmias and sudden cardiac death, particularly during exercise. ECG shows T-wave inversions in V1-V3 and epsilon waves; diagnosis uses echocardiography, cardiac MRI, and genetic testing.

### **Arsenic Toxicity**

Systemic poisoning from arsenic exposure causing gastrointestinal distress, cardiac arrhythmias, peripheral neuropathy, and characteristic Mees lines on nails, requiring chelation therapy with dimercaprol or succimer.

### **Art Therapy**

Use of art-making for therapeutic purposes. Emotional expression, coping, self-awareness.

### **Arterial Blood Gas**

Measurement of arterial pH, carbon-dioxide tension, oxygen tension, bicarbonate, and related acid-base variables. It helps assess ventilation, oxygenation, and metabolic or respiratory acid-base disorders.

### **Arterial Blood Gas Analyzer**

An analyzer that measures arterial pH, partial pressures of oxygen and carbon dioxide, and usually bicarbonate or calculated acid-base variables. It is used to assess ventilation, oxygenation, and metabolic or respiratory acid-base disorders.

### **Arterial Catheter**

A catheter placed in an artery, commonly the radial artery, for continuous blood-pressure monitoring and repeated arterial blood sampling. Complications include hemorrhage, thrombosis, infection, and distal ischemia.

### **Arterial Catheterization**

Placement of a catheter in an artery, usually the radial artery, for continuous blood-pressure measurement and repeated arterial blood sampling. It is used when rapid hemodynamic or gas-exchange assessment is clinically necessary and carries risks including bleeding, infection, thrombosis, and ischemia.

### **Arterial Duplex**

Ultrasound technique combining B-mode imaging and Doppler flow assessment. Used for evaluating arterial stenosis, aneurysm, graft patency. Non-invasive, widely available.

### **Arterial Insufficiency**

Reduced arterial blood flow to a tissue or limb, causing ischemic symptoms such as claudication, rest pain, cool skin, delayed capillary refill, and diminished pulses. Most commonly caused by atherosclerosis; assessed by ankle-brachial index and duplex ultrasound.

### **Arterial Line**

A catheter inserted into a peripheral artery (most commonly radial, also femoral, brachial, dorsalis pedis) for continuous blood pressure monitoring and arterial blood gas sampling. Allen test: assesses ulnar collateral flow before radial artery cannulation.

### **Arterial Ulcer**

A chronic wound caused by arterial insufficiency

---

(peripheral artery disease). Located on distal extremities: toes, heels, lateral malleolus, and sites of pressure. Presents with punched-out, deep, well-demarcated wound with pale or necrotic base, minimal exudate, and cool, hairless, shiny skin.

### **Arteriole**

A small artery that delivers blood to a capillary bed. Arteriolar smooth muscle regulates vascular resistance and controls tissue perfusion and systemic blood pressure.

### **Arteriosclerosis**

Chronic inflammatory disease of medium and large arteries characterized by accumulation of lipids, inflammatory cells, and fibrous tissue within the arterial wall, forming atherosclerotic plaques. See Atherosclerosis.

### **Arteriovenous Fistula**

A surgically created connection between an artery and a vein, usually for hemodialysis. The increased blood flow enlarges and strengthens the vein for repeated access. The site and time needed for maturation depend on the patient's vessels and clinical circumstances.

### **Arteriovenous Graft**

Synthetic conduit connecting artery to vein for dialysis. Used when veins inadequate for fistula. Thrombosis and infection more common than AVF. Can be used earlier than fistula. Dec clotting with thrombectomy or angioplasty.

### **Arteriovenous Malformation**

Abnormal connection between artery and vein without capillary bed. Can bleed or cause symptoms.

### **Arthralgia**

Pain in one or more joints without objective evidence of joint inflammation such as swelling, warmth, or structural damage. Common causes include viral infections, overuse, autoimmune disease, and early degenerative change; persistent, severe, or multifocal pain warrants clinical evaluation.

### **Artery**

A blood vessel that carries oxygenated blood away from the heart to the tissues, except for the pulmonary arteries which carry deoxygenated blood to the lungs. Arteries have thick, elastic, muscular walls that withstand high pressure and distribute blood throughout the body. The aorta is the largest artery.

### **Arthritis**

Inflammation of one or more joints, characterized by joint pain, swelling, warmth, and stiffness.

#### **Synonyms:**

Joint Inflammation (Arthritis)

### **Arthrocentesis**

Aspiration of joint fluid for diagnostic or therapeutic purposes. Indications: septic arthritis (urgent, crystals), inflammatory arthritis (gout, pseudogout), hemorrhagic effusion (trauma, coagulopathy), and therapeutic drainage for symptomatic relief.

### **Arthrodesis**

Surgical fusion of a joint by removing or preparing articular surfaces and stabilizing the bones until osseous union occurs. It relieves pain and provides stability at the cost of joint motion.

### **Arthrography**

Contrast injected into joint for imaging. Used for shoulder, knee, hip evaluation. MR arthrography more common now.

### **Arthrogryposis**

A group of congenital disorders characterized by multiple joint contractures present at birth, caused by decreased fetal movement (fetal akinesia) during development.

### **Arthroplasty**

Surgical reconstruction or replacement of a joint to relieve pain, restore alignment, or improve function. It may be partial or total and is commonly performed for advanced degenerative joint disease, fracture, inflammatory arthritis, or other destruc-

---

tive joint conditions.

### **Arthroscopy**

Minimally invasive joint visualization and intervention via a rigid arthroscope inserted through small portals, used for meniscal and ligamentous repair, chondroplasty, loose body removal, and synovectomy.

### **Articular Cartilage Injuries**

Chondral/osteochondral lesions: Outerbridge grading (I: softening, II: fibrillation <50%, III: fibrillation >50%, IV: subchondral bone exposed). OCD (osteochondritis dissecans): subchondral bone necrosis, fragment separation (knee: lateral femoral condyle, elbow: capitellum, ankle: talar dome).

### **Artifacts**

Image distortions not representing true anatomy. Types: motion, beam hardening, metal, aliasing, partial volume. Recognition important for accurate interpretation.

### **Artificial Pacemaker**

An implanted device that delivers electrical impulses to maintain an appropriate heart rate when the heart's natural conduction system is inadequate.

### **Artificial Rupture Of Membranes**

The intentional rupture of the amniotic sac with a small hook-like instrument (Amnihook) during a cervical exam to induce or augment labor. Indications: induction or augmentation of labor, placement of internal monitors (fetal scalp electrode, intrauterine pressure catheter), and assessment of amniotic fluid (meconium staining).

### **Artificial Ventricle (Total Artificial Heart)**

A pulsatile, pneumatically or electrically driven biventricular replacement that removes the native ventricles. Indications: end-stage heart failure bridging to transplant or destination therapy. Requirements: surgical implantation, external power source, anticoagulation.

**Synonyms:**

Total Artificial Heart

### **Arytenoid Cartilage**

The arytenoid cartilages are a pair of small, pyramid-shaped cartilages located on the posterior aspect of the larynx, articulating with the superior border of the cricoid cartilage lamina, and they serve as the attachment points for the vocal cords and the intrinsic laryngeal muscles that control vocal cord movement.

### **ASA Physical Status Classification System**

A system developed by the American Society of Anesthesiologists to assess and communicate a patient's pre-operative physical status and comorbidities. It ranges from ASA I (a normal healthy patient) to ASA VI (a declared brain-dead patient whose organs are being removed for donor purposes).

### **Asbestosis**

Diffuse pulmonary fibrosis caused by prolonged inhalation of asbestos fibers. It may cause progressive shortness of breath and increases the risk of lung cancer and mesothelioma.

### **Ascariasis**

Infection with the soil-transmitted roundworm *Ascaris lumbricoides*.

### **Ascending Aorta**

From left ventricle at the aortic valve to the sternal angle (approximately 5 cm), enclosed in pericardium. Gives rise to right/left coronary arteries at the aortic sinuses. Most common site of aneurysm and dissection, especially in Marfan syndrome, bicuspid aortic valve, and hypertension.

### **Ascending Aortic Aneurysm**

Abnormal enlargement of the ascending portion of the aorta. It may be associated with a bicuspid aortic valve, connective-tissue disease, hypertension, or atherosclerosis.

---

## Ascending Colon

Extends from cecum to hepatic flexure below the liver, approximately 15-20 cm, retroperitoneal (fixed to posterior abdominal wall). Anteriorly: abdominal wall. Posteriorly: right kidney. Absorbs water/electrolytes and compacts fecal matter. Tumors may present as a palpable right-sided mass.

## Ascites

Pathological accumulation of fluid within the peritoneal cavity representing the most common decompensating event in cirrhosis. The pathogenesis involves splanchnic arterial vasodilation reducing effective arterial blood volume and activating neurohormonal mechanisms leading to sodium and water retention.

## Aseptic Loosening

Loss of fixation of an implant without active infection, commonly caused by mechanical stress and a biologic response to wear particles. It may cause pain, radiographic lucency, instability, and need for revision surgery.

## Aseptic Technique

A set of laboratory practices preventing contamination of sterile sites, cultures, and specimens by unwanted microorganisms. Key elements include hand hygiene, sterile fields and instruments, surface disinfection, and minimal exposure of sterile items to air and touch, forming the basis of reliable clinical and culture work.

## Asherman Syndrome

Intrauterine adhesions or scar tissue that partially or completely obliterate the uterine cavity, most often after uterine instrumentation or pregnancy-related curettage. It may cause hypomenorrhea or amenorrhea, infertility, recurrent miscarriage, or abnormal placentation.

## Asperger Syndrome

A former diagnostic term for a neurodevelopmental condition characterized by persistent social-communication difficulties and restricted or repetitive interests or behaviors, without the intellec-

tual or language impairment traditionally associated with classic autism. Current diagnostic systems generally classify it within autism spectrum disorder; support is individualized.

### Synonyms:

Disorder Asperger (Asperger Syndrome) Syndrome Asperger (Asperger Syndrome)

## Aspergillosis

A spectrum of diseases caused by the fungus *Aspergillus* (most commonly *A. fumigatus*). Allergic forms: allergic bronchopulmonary aspergillosis (ABPA, in asthma or cystic fibrosis – wheezing, eosinophilia, pulmonary infiltrates), allergic *Aspergillus* sinusitis.

### Synonyms:

*Aspergillus* Infection (Aspergillosis)

## Asphyxia

A life-threatening lack of oxygen due to drowning, choking, or an obstruction of the airways. Management: remove obstruction, rescue breathing, CPR if needed. Foreign body airway obstruction: Heimlich maneuver (abdominal thrusts) for conscious adults; back blows and chest thrusts for infants.

## Aspiration

The inhalation of foreign material (oropharyngeal secretions, gastric contents, food, liquid, or blood) into the larynx and lower respiratory tract. Aspiration pneumonia (Mendelson syndrome) is a chemical lung injury caused by acidic gastric fluid.

## Aspiration Pneumonia

Infectious pneumonia from aspiration of oropharyngeal secretions. Risk factors: dysphagia, impaired consciousness, enteral feeding. Common pathogens: anaerobes, gram-negative bacilli. Treatment: antibiotics covering oral flora.

## Aspiration Pneumonitis

Chemical lung injury caused by inhalation of gastric contents, characterized by bronchospasm, hypoxemia, pulmonary edema, and atelectasis. Risk factors include full stomach, emergency surgery, obesity, pregnancy, gastroesophageal reflux, bowel ob-

---

struction, and decreased consciousness.

### **Aspiration Risk**

The likelihood that food, liquid, saliva, or gastric contents will enter the larynx or lower respiratory tract. Risk rises with dysphagia, delirium, stroke, neuromuscular disease, reflux, poor dentition, and reduced consciousness; assessment and prevention are multidisciplinary.

### **Acetylsalicylic Acid**

The chemical name for aspirin, a salicylate drug with analgesic, antipyretic, anti-inflammatory, and antiplatelet effects.

### **Acrochordon**

A benign, soft, flesh-colored skin tag, usually occurring in skin folds such as the neck, axilla, or groin.

### **Advanced Cardiac Life Support**

A structured set of interventions for cardiac arrest and other life-threatening cardiovascular emergencies, including high-quality CPR, rhythm recognition, defibrillation, airway management, and medications.

### **Allen Test**

A bedside test of collateral blood flow to the hand through the radial and ulnar arteries, commonly performed before radial-artery puncture or cannulation.

### **Anatomic Snuffbox**

A triangular depression on the lateral wrist that becomes visible when the thumb is extended. Tenderness there may suggest a scaphoid fracture.

### **Ankle-Foot Orthosis**

A brace that supports the ankle and foot and helps control alignment, stability, or foot drop.

### **Aspirin (Salicylate) Toxicity**

Mixed respiratory alkalosis and metabolic acidosis. Early: tinnitus, hyperventilation, respiratory alkalo-

sis. Late: metabolic acidosis, fever, seizures, coma. Treatment: activated charcoal, urine alkalization (sodium bicarbonate), hemodialysis if severe (renal failure, pulmonary edema, severe acidosis, very high levels).

### **Synonyms:**

Salicylate

### **Aspirin-Exacerbated Respiratory Disease**

A triad of asthma, nasal polyps, and aspirin sensitivity due to COX-1 inhibition. It involves overproduction of cysteinyl leukotrienes. Leukotriene receptor antagonists are specifically effective.

### **Assist-Control Ventilation**

Ventilator delivers a set tidal volume at a set rate. Every breath receives the full set volume. Guarantees minimum rate and minute ventilation. Risk of respiratory alkalosis and auto-PEEP.

### **Assisted Breech Delivery**

Vaginal breech delivery with operator assistance after spontaneous delivery to the umbilicus.

### **Assisted Living**

Residential setting with assistance for ADLs. Less intensive than nursing home.

### **Assisted Reproductive Technology**

ART: fertility treatments involving manipulation of oocytes/sperm/embryos: in vitro fertilization (IVF), intracytoplasmic sperm injection (ICSI), intrauterine insemination (IUI, some definitions), embryo cryopreservation, gamete donation, and surrogacy.

### **Assistive Device**

Equipment that helps a person perform activities, move safely, communicate, or maintain independence.

### **Assistive Device Training**

Instruction in selecting, fitting, using, and maintaining devices such as walkers, canes, or crutches, including safe walking and stair techniques.

---

## Association Study

Comparison of allele frequencies between cases and controls. Genome-wide association studies (GWAS) identify common variants with small effects on complex diseases.

## Astereognosis

Inability to identify an object by touch alone despite intact primary somatosensory modalities (touch, vibration, proprioception), indicating dysfunction of the contralateral parietal association cortex (typically the postcentral gyrus region or the dominant inferior parietal lobule).

## Asterixis

Brief, irregular, non-rhythmic lapse of sustained posture causing a flapping movement, best elicited by asking the patient to hold the arms extended with wrists dorsiflexed ("hold arms up") for 30 seconds.

## Asthenopia

Eye strain or visual fatigue, often experienced as aching, burning, blurred vision, headache, or difficulty focusing after prolonged visual tasks. Refractive errors, dry eye, poor lighting, and extended screen use may contribute.

## Asthma

A chronic inflammatory disorder of the airways characterized by recurrent episodes of wheezing, breathlessness, chest tightness, and cough. Airflow limitation is often reversible. It involves eosinophilic inflammation, mucus hypersecretion, and smooth muscle hypertrophy.

## Asthma Exacerbation

An acute or subacute worsening of asthma symptoms and airflow limitation, typically causing increased wheeze, cough, chest tightness, or breathlessness.

## Asthma-COPD Overlap

Features of both asthma and COPD in the same patient. Characterized by persistent airflow limitation with features of both diseases: airway inflammation (eosinophilic and neutrophilic), bronchial hyperre-

sponsiveness, and partially reversible obstruction. Treatment: inhaled corticosteroids plus long-acting bronchodilators.

## Astigmatism

A refractive error caused by an irregular curvature of the cornea or lens, resulting in light rays being focused at multiple points rather than a single point on the retina, leading to blurred or distorted vision at all distances.

## Astrocytoma

A glioma arising from star-shaped cells called astrocytes. Graded I-IV by the WHO; grade IV (glioblastoma) is the most aggressive and common primary malignant brain tumor in adults.

## Asymptomatic Bacteriuria In Pregnancy

The presence of significant bacterial growth in a pregnant person's urine without urinary symptoms. It is identified by urine culture and is treated because it increases the risk of symptomatic urinary infection and kidney infection during pregnancy.

## Asystole

Complete cessation of cardiac electrical activity, presenting as a flat line on the ECG with no QRS complexes, P waves, or other organized electrical activity.

## Ataxia

Lack of voluntary coordination of muscle movements, resulting from dysfunction of the cerebellum, posterior columns, or peripheral nerves. Types: cerebellar (gait and limb ataxia, dysarthria, nystagmus), sensory (impaired proprioception causing sensory ataxia, positive Romberg sign), and vestibular (vertigo, nystagmus, nausea).

## Ataxia-Telangiectasia

An autosomal-recessive disorder usually caused by biallelic ATM variants, characterized by progressive ataxia, telangiectasias, immune deficiency, and increased cancer risk.

---

### Ataxic Breathing

An irregular, unpredictable breathing pattern with random variations in rate and depth, seen in medullary lesions. It is the most dangerous respiratory pattern and often precedes respiratory arrest. It requires mechanical ventilation.

### Atelectasis

Complete or partial collapse of lung tissue, resulting in loss of aeration. It may be caused by airway obstruction (resorption atelectasis), pleural disease (compressive atelectasis), surfactant dysfunction (dissolution atelectasis), or scarring (cicatrization atelectasis). It impairs gas exchange and may predispose to infection.

#### Synonyms:

Lung Collapse

### Atherectomy

Mechanical removal of atherosclerotic plaque. Types: directional, laser, rotational, orbital. Used for peripheral arterial disease.

### Atherectomy (Vascular)

Removal or modification of atherosclerotic plaque from inside a blood vessel, usually with a catheter-based device.

#### Synonyms:

Vascular

### Atheroembolic Renal Disease

Cholesterol crystal embolization to kidneys after vascular procedures. AKI with livedo reticularis and peripheral eosinophilia. Renal biopsy shows cholesterol clefts. Poor prognosis with progressive renal failure.

### Atherosclerosis

Chronic inflammatory disease of medium and large arteries characterized by accumulation of lipids, inflammatory cells, and fibrous tissue within the arterial wall, forming atherosclerotic plaques. Initiating event is endothelial dysfunction from risk factors (hypertension, smoking, diabetes, dyslipidemia).

### Atherosclerotic Plaque

An atherosclerotic plaque is a lesion within the arterial intima composed of a necrotic lipid core covered by a fibrous cap, representing the pathological substrate of atherosclerotic cardiovascular disease.

### Athetosis

Slow, involuntary, writhing, sinuous movements predominantly of the distal extremities, sometimes also affecting the face, neck, and trunk, arising from dysfunction of the basal ganglia (putamen and globus pallidus).

### Athlete Foot

Tinea pedis: dermatophyte infection (*Trichophyton rubrum*, *T. mentagrophytes*) of the feet, common in those who wear occlusive footwear or use communal showers. Forms: interdigital (scaly, fissured, macerated between toes—most common), moccasin (diffuse plantar scaling), vesicular.

### Athlete's Foot

A superficial fungal infection of the feet, usually affecting the spaces between the toes and causing itching, scaling, maceration, or fissures. It is also called tinea pedis.

#### Synonyms:

tinea. Athletes Foot (Athlete's Foot) Ringworm Of The Foot Tinea Pedis (Athlete's Foot)

### Atlanto-Occipital Dislocation

Traumatic separation of the atlas from the occipital condyles, a highly unstable injury with high mortality often associated with spinal cord injury and requiring emergent immobilization.

### Atlas

First cervical vertebra articulating with occipital condyles at the atlanto-occipital joint for nodding movement. Lacks a body and spinous process; has anterior/posterior arches and lateral masses. Transverse foramina transmit vertebral arteries. The anterior arch has a facet for the axis dens.

---

## Atopic Dermatitis

A chronic, relapsing inflammatory skin disease characterized by pruritus, xerosis, and eczematous lesions. It reflects epidermal-barrier dysfunction and immune dysregulation, with flares triggered by irritants, allergens, infection, stress, or climate.

### Synonyms:

Allergy Eczema (Atopic Dermatitis)

## Atopic Eruption Of Pregnancy

Pruritic eczematous skin eruptions occurring in pregnancy, presenting as eczematous patches or pruritic urticarial papules and plaques, typically resolving after delivery.

## Atopy

The genetic predisposition to develop immediate (IgE-mediated, type I) hypersensitivity reactions to common environmental allergens (pollen, dust mites, foods, pet dander).

## Atovaquone–Proguanil

An antimalarial combination used for prevention and treatment of *Plasmodium falciparum* malaria and selected travel-related malaria regimens.

## ATP (Adenosine Triphosphate)

The primary energy currency of the cell, composed of adenine, ribose, and three phosphate groups. Hydrolysis of the terminal phosphoanhydride bond releases  $\Delta G^\circ = -30.5 \text{ kJ/mol}$  ( $-7.3 \text{ kcal/mol}$ ), driving endergonic cellular processes such as muscle contraction, active transport, and biosynthesis.

### Synonyms:

Adenosine Triphosphate

## ATP Synthase

Complex V of electron transport chain. Uses proton gradient to synthesize ATP. Rotational catalysis mechanism.

## Atransferrinemia

Very rare autosomal recessive disorder of iron transport caused by mutations in the TF gene (3q22.1) leading to absence or severe deficiency of transferrin.

## Atrial Fibrillation

The most common sustained cardiac arrhythmia, characterized by rapid, disorganized atrial activity with an irregular ventricular response. ECG typically shows absent organized P waves and irregularly irregular RR intervals. Associated conditions include hypertension, ischemic or valvular heart disease, cardiomyopathy, atrial septal defect, and thyroid dysfunction, especially hyperthyroidism. Alcohol, myocarditis, pericarditis, pulmonary embolism, pneumonia, and cardiac surgery can precipitate AF; sick sinus syndrome may coexist as tachycardia-bradycardia syndrome. Some cases have no identified cause (formerly called lone atrial fibrillation).

### Synonyms:

AF (Atrial Fibrillation) Afib (Atrial Fibrillation)

## Atrial Fibrillation Ablation

A catheter-based procedure that creates lesions, usually around the pulmonary veins, to reduce the electrical triggers of atrial fibrillation. It may be considered for symptomatic patients when medicines are ineffective, not tolerated, or not preferred. Results and the need for repeat treatment vary with the type of atrial fibrillation and the person's clinical features.

## Atrial Flutter

A rapid, regular atrial rhythm (typically 250-350 bpm) caused by a macro-reentrant circuit, most commonly in the right atrium. ECG shows sawtooth flutter waves best seen in leads II, III, and aVF, with regular or irregular ventricular response depending on AV conduction ratio (commonly 2:1 or 4:1).

## Atrial Natriuretic Peptide

A peptide hormone secreted by atrial myocytes in response to atrial stretch from volume expansion. ANP promotes natriuresis and diuresis by increasing glomerular filtration rate, inhibiting sodium reabsorption in the collecting ducts, and reducing renin and aldosterone secretion.

## Atrial Septal Defect

Congenital opening in the interatrial septum allowing left-to-right shunting of blood. Small defects

---

may close spontaneously. Larger defects cause right heart volume overload, right atrial and ventricular dilation, pulmonary hypertension, and eventually right heart failure. Paradoxical embolism may occur with right-to-left shunting.

### **Atrial Tachycardia**

Supraventricular tachycardia arising from an atrial focus outside the sinus node, often focal with rates 100-250 beats per minute with discrete P waves of different morphology from sinus P waves.

### **Atrioventricular Node**

Located in the posterior-inferior region of the interatrial septum near the coronary sinus. It receives impulses from the SA node via internodal pathways and delays them by approximately 120-200 milliseconds before transmitting them to the ventricles. This delay allows atrial contraction to complete before ventricular contraction.

### **Atrium**

One of the two upper chambers of the heart that receive blood returning to the heart. The right atrium receives deoxygenated blood from the superior and inferior venae cavae and the coronary sinus; the left atrium receives oxygenated blood from the four pulmonary veins.

### **Atropine In Organophosphate Poisoning**

A muscarinic antagonist used to reverse bronchospasm, bradycardia, and other muscarinic effects of organophosphate toxicity. Treatment is titrated to drying of respiratory secretions and improvement in ventilation, not to pupil size alone.

### **Attachment (Dental)**

Retentive device connecting denture to implant or tooth. Precision attachments preferred over bar attachments.

#### **Synonyms:**

Dental

### **Attack Rate**

The proportion of an at-risk population that de-

velops a specified illness during a defined outbreak or exposure period. It is a cumulative incidence measure commonly used for foodborne and other localized outbreaks.

### **Attention-Deficit/Hyperactivity Disorder**

A neurodevelopmental disorder characterized by persistent patterns of inattention, hyperactivity, and impulsivity that interfere with functioning or development. Three presentations: predominantly inattentive, predominantly hyperactive-impulsive, and combined.

### **Attenuation Correction**

Compensation for photon absorption in tissue. CT-based (PET/CT), transmission source (SPECT), or MR-based (PET/MRI).

### **Attributable Risk**

Difference in risk between exposed and unexposed.  $AR = \text{incidence exposed} - \text{incidence unexposed}$ .

### **Atypia**

Cytologic or architectural abnormality that deviates from the expected appearance of a cell or tissue. Atypia may be reactive, degenerative, premalignant, or malignant and must be interpreted with architecture, clinical context, and ancillary studies.

### **Atypical Antipsychotics**

A class of modern psychiatric medications used to treat schizophrenia and bipolar disorder. They work by balancing dopamine and serotonin levels in the brain, which helps reduce symptoms like hallucinations and delusions with fewer movement-related side effects than older antipsychotics.

### **Atypical Facial Pain**

Chronic facial pain without identifiable cause. Psychological factors may contribute.

### **Atypical Features**

A specifier for depressive episodes characterized by mood reactivity, significant weight gain or increased appetite, hypersomnia, leaden paralysis, and a long-

---

standing pattern of interpersonal rejection sensitivity. Atypical depression often presents in younger patients and may respond preferentially to MAOIs or SSRIs rather than TCAs.

### **Atypical Pneumonia**

Pneumonia with a gradual onset, relatively mild chest findings, and prominent systemic or extrapulmonary symptoms. Common causes include *Mycoplasma pneumoniae*, *Chlamydia pneumoniae*, and respiratory viruses.

### **Audiogram**

A chart that shows a person's ability to hear at different pitches or frequencies.

### **Audiologist**

A health professional who assesses hearing and fits hearing aids.

### **Audiometry**

Measurement of hearing sensitivity at different sound frequencies and intensities, usually using headphones or insert earphones.

### **Aural Fullness**

A sensation of pressure, blockage, or plugged feeling in the ear. Causes include eustachian-tube dysfunction, middle-ear fluid, cerumen impaction, inner-ear disorders, and temporomandibular-joint disease.

#### **Synonyms:**

Ear pressure; plugged-ear sensation; blocked-ear sensation.

### **Auer Rods**

Rod-shaped inclusions formed from fused azurophilic granules in myeloid precursor cells. They strongly support a myeloid neoplasm, especially acute myeloid leukemia, but diagnosis requires immunophenotyping, genetic studies, and clinical correlation.

### **Auger Electrons**

Low-energy electrons emitted during electron capture decay. Short range (nanometers), high linear

energy transfer. Potential for targeted radiotherapy if localized near DNA.

### **Augmentation Of Labor**

The stimulation of spontaneous contractions that are judged to be inadequate to achieve progressive cervical dilatation. Most commonly uses oxytocin (Pitocin) infusion. Also includes artificial rupture of membranes (AROM, amniotomy).

### **Auricle**

The visible external portion of the ear that projects from the side of the head, designed to collect and channel sound waves into the ear canal.

### **Auricular Hematoma**

A collection of blood between the cartilage of the external ear and its perichondrium, usually after blunt trauma. Without prompt drainage and compression, it may cause cartilage necrosis and permanent cauliflower-ear deformity.

#### **Synonyms:**

Pinna hematoma; subperichondrial auricular hematoma.

### **Auscultation**

The act of listening to sounds produced within the body, typically using a stethoscope. Essential for assessing heart sounds, lung sounds, bowel sounds, and vascular bruits. Normal findings: S1 and S2 heart sounds, vesicular breath sounds, normal bowel sounds. Abnormal: murmurs, crackles, wheezes, rubs, bruits.

### **Auscultatory Gap**

A transient silence between the first and second sounds of blood pressure measurement, sometimes heard in hypertensive patients. Can lead to underestimation of systolic pressure if not recognized.

### **Austin Flint Murmur**

A mid-diastolic, low-pitched rumbling murmur heard at the apex, caused by the regurgitant jet from severe aortic regurgitation striking the anterior mitral leaflet.

---

## Autism Spectrum Disorder

Neurodevelopmental disorder characterized by persistent deficits in social communication and social interaction across multiple contexts, restricted and repetitive patterns of behavior, interests, or activities. Symptoms present in early developmental period and cause clinically significant impairment.

## Autoantibody

An immunoglobulin that recognizes and binds an endogenous antigen. Autoantibodies may be pathogenic, as in autoimmune hemolytic anemia, or may serve as laboratory markers of autoimmune disease.

## Autoclave

Sterilization device using high-pressure steam. Parameters: 121°C, 15 psi, 15-30 minutes. Essential for infection control.

## Autogenic Drainage

A breathing technique using controlled breathing at different lung volumes to mobilize secretions from peripheral to central airways. It involves breathing at low lung volumes (collect), mid lung volumes (loosen), and high lung volumes (evacuate). It requires patient training and cooperation.

## Autograft

Tissue transplanted from one site to another within the same individual. Autografts are genetically identical to the recipient and generally avoid alloimmune rejection, although donor-site morbidity may occur.

## Autoimmune Disease

Autoimmune diseases result from loss of immunological self-tolerance, leading to immune-mediated attack on the body's own tissues.

## Autoimmune Disorder

A disease caused by an abnormal immune response against the body's own cells, tissues, or organs. Autoimmune disorders may be organ-specific or systemic and can produce inflammation, tissue injury, functional impairment, or circulating autoantibodies.

## Autoimmune Enteropathy

Rare immune-mediated disease causing persistent diarrhoea and small-intestinal mucosal injury, usually with villous atrophy and crypt hyperplasia. It may occur in children or adults and can be associated with other autoimmune disorders or immune dysregulation.

## Autoimmune Gastritis

Chronic atrophic gastritis caused by antibodies against parietal cells leading to achlorhydria and vitamin B12 deficiency. Associated with pernicious anemia and increased risk of gastric carcinoid tumors and type 1 gastric neuroendocrine tumors. Anti-parietal cell antibodies are present in approximately ninety percent of patients.

## Autoimmune Hemolytic Anemia

AIHA: hemolytic anemia due to antibodies directed against red blood cells. Warm AIHA (IgG, 37°C—idiopathic, SLE, CLL, drugs: methyl dopa, penicillin): splenic sequestration, spherocytes, positive direct antiglobulin (DAT).

## Autoimmune Hepatitis

Chronic hepatitis caused by immune-mediated destruction of hepatocytes characterized by interface hepatitis with lymphoplasmacytic infiltrate, elevated transaminases, hypergammaglobulinemia, and autoantibodies.

## Autoimmune Keratitis

Corneal inflammation associated with an immune-mediated disorder, sometimes occurring with rheumatoid arthritis, lupus, or granulomatosis with polyangiitis. It may cause pain, redness, corneal opacity, and reduced vision and requires urgent ophthalmic assessment. Treatment is directed at the cause and may include anti-inflammatory or immunosuppressive therapy.

## Autoimmune Pancreatitis

Chronic inflammatory condition characterized by dense lymphoplasmacytic infiltrate with IgG4-positive plasma cells representing the pancreatic manifestation of IgG4-related disease. Type 1 is

---

more common affecting older men with elevated serum IgG4 and extrapancreatic involvement.

### **Autoimmune Polyendocrine Syndromes**

APS-1 (APECED, AIRE mutation): autosomal recessive, chronic mucocutaneous candidiasis, hypoparathyroidism, adrenal insufficiency (Addison's), plus type 1 diabetes, autoimmune thyroiditis, vitiligo, alopecia, pernicious anemia, hepatitis, asplenia.

### **Autoimmunity: Mechanisms**

Loss of tolerance: central (thymic negative selection defects, AIRE mutation → APS-1) and peripheral (Treg dysfunction, anergy failure, ignorance loss). Molecular mimicry: cross-reactivity between pathogen and self (rheumatic fever: Strep M protein + cardiac myosin; Guillain-Barre: Campylobacter + GM1 ganglioside; reactive arthritis).

### **Autologous Blood Donation**

Autologous blood donation involves preoperative collection and storage of the patient's own blood for intraoperative or postoperative transfusion. It eliminates risks of alloimmune reactions, transfusion-transmitted infections, and immune modulation.

### **Autonomic Dysreflexia**

Acute, potentially life-threatening sympathetic discharge in a person with spinal-cord injury at or above approximately T6, triggered by a noxious stimulus below the lesion. It causes sudden hypertension, headache, flushing or sweating above the lesion, and reflex bradycardia or other heart-rate changes.

### **Autonomic Nervous System**

The part of the peripheral nervous system that regulates involuntary functions, including heart rate, vascular tone, digestion, sweating, pupil size, and bladder activity.

### **Autonomic Neuropathy**

Damage to nerves that control involuntary functions such as heart rate, blood pressure, digestion, sweating, bladder function, and sexual function. Diabetes

is a common cause, but other diseases, toxins, and medicines may contribute. Symptoms depend on the affected organs and require evaluation of the underlying cause.

#### **Synonyms:**

Neuropathy, Autonomic

### **Autophagy**

Cellular self-degradation process delivering cytoplasmic components to lysosomes for recycling. Macroautophagy: phagophore forms, expands to autophagosome (LC3-II on membrane), fuses with lysosome (autolysosome) for degradation. Selective autophagy: mitophagy (damaged mitochondria), xenophagy (pathogens), and aggrephagy (protein aggregates).

### **Autopsy**

A postmortem examination of a body to determine cause and manner of death, performed by a forensic pathologist (medical examiner/coroner) or, for hospital autopsies, a pathologist.

### **Autopsy (Medicolegal)**

Systematic external examination and surgical dissection of a deceased body performed under legal authority by a forensic pathologist to determine the Cause, Manner, and Mechanism of Death, document injuries, collect evidence, and assist judicial investigations.

#### **Synonyms:**

Medicolegal

### **Autopsy (Post-Mortem Examination)**

Specialized surgical procedure performed on a deceased body to determine the cause of death, mechanism of death, manner of death (natural, accidental, suicide, homicide, or undetermined), state of health prior to death, and to document injuries or disease processes.

#### **Synonyms:**

Post-Mortem Examination

### **Autosomal Dominant PKD**

Most common hereditary kidney disease affecting 1 in 400 to 1000. PKD1 chromosome 16 more se-

---

vere with earlier ESRD than PKD2 chromosome 4. Progressive cyst growth causes hypertension, pain, hematuria, infections, and eventually ESRD. Screen family members with ultrasound. Tolvaptan may slow cyst growth.

### **Autosomal Dominant Polycystic Kidney Disease**

An inherited disorder causing progressive growth of numerous renal cysts that enlarge the kidneys and destroy parenchyma, leading to hypertension, flank pain, and eventual kidney failure. Associated with hepatic cysts and intracranial aneurysms.

**Synonyms:**  
ADPKD

### **Autosomal Inheritance**

Transmission of a genetic trait through one of the 22 non-sex chromosomes. Autosomal dominant traits may appear in successive generations, whereas autosomal recessive disease generally requires pathogenic variants on both homologous chromosomes.

### **Autosomal Recessive PKD**

Rare childhood disorder from PKHD1 mutation. Bilateral enlarged kidneys with fusiform dilation of collecting ducts. Associated with congenital hepatic fibrosis. Severe forms cause pulmonary hypoplasia in utero. Variable severity from perinatal lethal to presentation in childhood or adolescence.

### **Avascular Necrosis**

Death of bone tissue caused by impaired blood supply. It commonly affects the hip or shoulder and may cause pain, collapse of the joint surface, and arthritis. Risk factors include corticosteroid exposure, alcohol use, trauma, sickle-cell disease, and systemic lupus erythematosus. Treatment depends on the site and stage and may include observation, joint-preserving surgery, or joint replacement.

### **Avascular Necrosis (Osteonecrosis)**

Death of bone tissue caused by impaired blood supply. It commonly affects the femoral head and may lead to subchondral collapse, secondary arthritis, and need for joint-preserving surgery or arthro-

plasty.

**Synonyms:**  
Osteonecrosis Ischemic Bone Necrosis

### **Avian Influenza**

Influenza caused by avian-adapted influenza A viruses, acquired mainly through contact with infected birds or contaminated environments. Human infection can cause severe pneumonia, respiratory failure, and occasionally systemic disease.

### **Avoidant Personality Disorder**

A pattern of social inhibition, feelings of inadequacy, and hypersensitivity to negative evaluation.

### **Avolition**

A severe lack of motivation to initiate and perform self-directed, purposeful activities. It is a negative symptom of schizophrenia and is seen in severe depression. It manifests as neglect of personal hygiene, inability to complete tasks, and social withdrawal.

### **Avulsed Tooth**

A tooth completely displaced from its socket by trauma. It is a dental emergency; management depends on patient age, extraoral dry time, storage medium, root development, and periodontal-ligament viability, and may require urgent replantation by a dental professional.

### **Avulsion**

An injury in which tissue is forcibly torn from the body by shearing or pulling. Common forms include dental, fingertip, nail, and degloving avulsions. Management focuses on hemorrhage control, debridement, tissue preservation, and urgent consultation.

### **Avulsion Fracture**

A fracture in which a fragment of bone is pulled away by the tendon or ligament attached to it, usually during sudden forceful contraction or injury. Common sites include the pelvis, ankle, elbow, and fingers; evaluation considers displacement, joint involvement, skeletal maturity, and associated soft-tissue injury.

---

## Awake Fiberoptic Intubation

An intubation technique performed while the patient remains responsive and breathing spontaneously, using topical airway anesthesia and a flexible bronchoscope. It is one option when difficult airway management is anticipated and maintaining oxygenation is important.

## Awareness Under Anesthesia

Unintended awareness or recall of events during general anesthesia. It may involve hearing, sensation, or pain and can be associated with significant psychological distress after the procedure.

## Axilla

Pyramidal space between the upper lateral thorax and medial arm. Bounded by anterior fold (pectoralis major/minor), posterior fold (latissimus dorsi/teres major), medial wall (ribs/serratus anterior), and lateral wall (humerus). Contains axillary artery/vein, brachial plexus cords, and lymph nodes.

## Axillary Artery

The continuation of the subclavian artery, running from the outer border of the first rib to the lower border of teres major, where it becomes the brachial artery. Divided into three parts by the pectoralis minor.

## Axillary Nerve

From posterior cord (C5-C6), passing through the quadrangular space with the posterior circumflex humeral artery. Innervates deltoid and teres minor; provides sensation to the regimental badge area (lateral deltoid skin). Vulnerable in anterior shoulder dislocations and surgical neck humeral fractures.

## Axis

Second cervical vertebra with the dens (odontoid process) projecting superiorly, serving as a pivot for atlas rotation, allowing approximately 50 percent of cervical rotation. Has a large spinous process and flat superior articular facets.

## Axon

The single long process of a neuron that conducts

action potentials away from the cell body toward the axon terminal for synaptic transmission.

## Azole Antifungals

A class of antifungal agents that inhibit the enzyme lanosterol 14- $\alpha$ -demethylase, a cytochrome P450 enzyme essential for ergosterol synthesis in fungal cell membranes. The depletion of ergosterol and accumulation of toxic methylated sterols disrupt membrane integrity and function.

## Azoospermia

Absence of spermatozoa in the ejaculate after appropriate centrifugation and microscopic examination. It may be obstructive, with sperm production preserved but outflow blocked, or nonobstructive, with impaired spermatogenesis.

## Azygos Vein

A vein that drains the posterior intercostal veins and empties into the superior vena cava. It forms an important collateral pathway when the SVC is obstructed. On chest imaging, enlargement of the azygos vein may indicate SVC obstruction, heart failure, or portal hypertension.

## Azygous Vein

A large vein that drains the posterior thoracic wall and mediastinum, ascending along the right side of the vertebral column to empty into the superior vena cava. It provides collateral venous return when the superior or inferior vena cava is obstructed.

## Aarskog Syndrome

A rare inherited disorder affecting growth, facial development, the skeleton, and sometimes the genitals.

## Acute Kidney Failure

A sudden decline in kidney function that causes waste products and fluid to accumulate in the body.

## Addison's Disease

A disorder in which the adrenal glands produce too little cortisol and, often, too little aldosterone.

---

**Synonyms:**

Chronic Adrenal Insufficiency Primary Adrenal Insufficiency

**Adrenal Cortex**

The outer part of an adrenal gland that produces steroid hormones, including cortisol and aldosterone.

**Aortic Valve Insufficiency**

Leakage of the aortic valve that allows blood to flow back into the left ventricle.

**Aortic Valve Stenosis**

Narrowing of the aortic valve that obstructs blood flow from the left ventricle into the aorta.

**Synonyms:**

Stenosis, Aortic Valve

**Aortitis**

Inflammation of the aortic wall.

**Arachnoiditis**

Inflammation and scarring of the arachnoid membrane and nearby spinal nerves, often causing chronic pain or neurological symptoms.

**Atrioventricular Block**

Delayed or interrupted electrical conduction between the atria and ventricles of the heart.

**5-Alpha Reductase**

An enzyme that converts testosterone to dihydrotestosterone, a hormone involved in prostate growth and male sexual development.

**Abdominoplasty**

A surgical procedure that removes excess abdominal skin and may tighten the abdominal wall. It is commonly called a tummy tuck.

**Synonyms:**

a tummy tuck.

**Ablation**

Destruction or removal of a small area of abnormal

tissue using methods such as heat, cold, chemicals, or electrical energy.

**Abutment**

A tooth or implant that supports and anchors a dental prosthesis.

**Accommodation**

The ability of the eye to change the shape of its lens so that near objects can be focused clearly.

**Acetaldehyde**

A chemical produced when the body metabolizes alcohol. Accumulation may contribute to flushing, nausea, and vomiting.

**Achilles Tendon**

The strong tendon connecting the calf muscles to the heel bone. It can become inflamed or rupture.

**Acupressure**

Application of pressure to selected body points, usually to relieve symptoms such as pain or nausea.

**Acupuncture**

A treatment in which thin needles are inserted into selected points of the body.

**Acute Pain**

Pain that begins suddenly and usually lasts for a limited period, often because of injury, illness, or a procedure.

**Acute Urinary Retention**

Sudden inability to empty the bladder, often causing painful lower-abdominal distension and requiring urgent assessment.

**Adenosine Triphosphate**

A molecule that stores and transfers energy within cells. It is commonly abbreviated ATP.

**Adhesion**

A band of scar-like tissue that abnormally connects surfaces or organs inside the body.

---

### **Advance Care Directive**

A legal document stating a person's preferences for medical care if the person later cannot make or communicate decisions.

### **AIDS Dementia**

A disorder of thinking, memory, behavior, or movement caused by advanced HIV-related disease affecting the brain.

### **Accident And Emergency Medicine (A&E Medicine)**

The medical specialty concerned with the immediate assessment, resuscitation, diagnosis, and initial treatment of acute illness and injury.

#### **Synonyms:**

A&E Medicine

### **Acute Abdomen**

Sudden or severe abdominal pain with clinical features suggesting a potentially serious intra-abdominal disorder that may require urgent investigation or surgery.

### **Acetone**

A volatile ketone body produced during increased fat metabolism. It may contribute to the characteristic breath odor of ketosis and ketoacidosis.

### **Adenitis**

Inflammation of a gland or lymph node, usually caused by infection or an inflammatory disorder. Lymphadenitis is a common form.

### **Adolescence**

The developmental period between childhood and adulthood, involving physical maturation, puberty, and major psychological and social changes.

### **Adrenergic Receptors**

Cell-surface receptors activated by adrenaline and noradrenaline. Alpha and beta subtypes regulate cardiovascular, respiratory, metabolic, and other physiological responses.

### **Aetiology (Etiology)**

The cause or group of causes underlying a disease, injury, or other medical condition.

#### **Synonyms:**

Etiology

### **Afterpains**

Intermittent uterine cramps occurring after childbirth as the uterus contracts and returns toward its pre-pregnancy size. They may be more noticeable during breastfeeding.

### **Agenesis**

Complete failure of an organ or body structure to develop, usually because of a congenital developmental abnormality.

### **Albinism**

An inherited condition involving reduced or absent melanin production, affecting the skin, hair, and eyes.

#### **Synonyms:**

Oculocutaneous Albinism

### **Alopecia Totalis**

Complete loss of hair from the scalp, usually caused by an autoimmune disorder.

### **Alopecia Universalis**

Loss of hair from the entire body, including the scalp, eyebrows, eyelashes, and other hair-bearing areas.

### **Alpha Blockers**

Medicines that block alpha-adrenergic receptors and may lower blood pressure or improve urine flow in prostate enlargement.

### **Alveoli**

Microscopic air sacs in the lungs where oxygen enters the blood and carbon dioxide leaves it.

### **Alzheimer's Disease**

A progressive brain disorder causing deterioration of memory, thinking, behavior, and the ability to

---

perform daily activities.

### **Amsler Grid**

A simple chart used to detect or monitor distortions and missing areas in central vision, especially in macular disease.

### **Amyloid**

An abnormal protein that can accumulate in tissues and impair their function in several diseases.

### **Anagen**

The active growth phase of the hair cycle.

### **Analgesia**

Absence or reduction of pain without necessarily causing loss of consciousness.

### **Androgen**

A sex hormone, such as testosterone, that contributes to male reproductive development and other body functions.

### **Angiotensin I**

An inactive precursor that is converted to angiotensin II in the renin-angiotensin system.

### **Angiotensin II**

A hormone that narrows blood vessels and promotes sodium retention, thereby increasing blood pressure.

### **Antibody**

A protein produced by the immune system that specifically binds to a foreign or abnormal substance.

### **Anticoagulant**

A medicine or substance that reduces the blood's ability to form clots.

### **Antidepressant**

A medicine used to treat depressive disorders and some other conditions involving mood, anxiety, pain, or sleep.

### **Antiplatelet Agents**

Medicines that reduce platelet activation or aggregation and thereby lower the risk of some blood clots.

### **Apolipoproteins**

Proteins associated with lipids in the blood that help transport and metabolize cholesterol and triglycerides.

### **Articular Cartilage**

Smooth cartilage covering the ends of bones within a joint, allowing low-friction movement and distributing load.

### **Atrophy**

Reduction in the size and functional capacity of a tissue, organ, or muscle caused by loss or shrinkage of its cells. It may result from disuse, denervation, inadequate blood supply, malnutrition, endocrine deficiency, chronic disease, or aging. Atrophy can be reversible when the underlying cause is corrected, but prolonged injury may produce permanent structural loss and fibrosis. Clinical assessment identifies the distribution, time course, associated weakness or dysfunction, and the underlying neurologic, vascular, nutritional, or systemic cause.

### **Auditory Nerve**

The portion of the vestibulocochlear nerve that carries hearing signals from the inner ear to the brain.

### **Aura**

A temporary sensory, visual, or other neurological symptom that may precede a migraine or seizure.

### **Autoantibodies**

Antibodies that mistakenly react with the body's own cells or tissues.

### **Axon Terminal**

The end of a nerve-cell axon that releases chemical messengers to communicate with another cell.

---

### **Achilles Tendinitis**

Painful inflammation or degeneration of the Achilles tendon, usually caused by repeated loading.

#### **Synonyms:**

Tendinitis, Achilles

### **ACL Injury**

A sprain or tear of the anterior cruciate ligament in the knee.

### **Acute Myelogenous Leukemia**

A fast-growing cancer of immature myeloid blood cells in the bone marrow and blood; also called acute myeloid leukemia.

#### **Synonyms:**

acute myeloid leukemia. Leukemia, Acute Myelogenous

### **Acute Radiation Sickness**

Illness caused by a high dose of penetrating radiation received over a short time.

### **Airplane Ear**

Ear pain, pressure, or temporary hearing loss caused by unequal air pressure across the eardrum during flight.

#### **Synonyms:**

Barotitis Media

### **Alcohol Intolerance**

An unpleasant reaction to alcohol caused by difficulty metabolizing alcohol or one of its components.

### **Alcohol Poisoning**

A life-threatening condition caused by drinking enough alcohol to impair breathing, consciousness, and other vital functions.

### **Alpha-Gal Syndrome**

An allergy to the carbohydrate alpha-gal found in most nonhuman mammalian meat and some products derived from mammals.

### **Ampullary Cancer**

Cancer arising in the ampulla of Vater, where the

bile duct and pancreatic duct empty into the small intestine.

### **Appendix Cancer**

Cancer that begins in the appendix, including neuroendocrine tumors, mucinous tumors, and adenocarcinoma.

### **Antibiotic-Associated Diarrhea**

Loose or frequent stools that occur during or soon after antibiotic treatment.

#### **Synonyms:**

Diarrhea, Antibiotic-Associated

### **Asthma Attack**

A sudden worsening of asthma caused by increased airway narrowing and inflammation.

### **Atrioventricular Canal Defect**

A congenital heart defect involving abnormal development of the septum and atrioventricular valves; also called an atrioventricular septal defect.

#### **Synonyms:**

an atrioventricular septal defect. Septal Defect, Atrioventricular

### **Atrioventricular Nodal Reentry Tachycardia**

A rapid regular heart rhythm caused by a reentry circuit near the atrioventricular node; commonly abbreviated AVNRT.

### **Atypical Genitalia**

External genital anatomy that does not have typical male or female features, often because of differences in sex development.

### **Atypical Hyperplasia Of The Breast**

An overgrowth of abnormal cells in breast tissue that is not cancer but may increase future breast-cancer risk.

### **Atypical Teratoid Rhabdoid Tumor**

A rare, aggressive cancer of the central nervous system that occurs mainly in infants and young

---

children.

### **Autoimmune Encephalitis**

Brain inflammation caused by antibodies or other immune responses directed against neuronal proteins.

### **Autoimmune Epilepsy**

Recurrent seizures caused by an immune attack on the brain or by inflammation associated with an autoimmune disorder.

### **Abdominal Regions**

The nine named areas used to describe locations on the abdominal wall: the right and left hypochondriac, epigastric, right and left lumbar, umbilical, right and left iliac, and hypogastric regions.

### **Abdominopelvic Cavity**

The continuous body cavity below the diaphragm that contains the abdominal and pelvic organs.

### **Abortifacient**

A drug or substance that induces abortion by ending a pregnancy.

### **Acute Rhinitis**

Sudden inflammation of the nasal lining, commonly caused by a viral infection or an irritant, producing congestion, nasal discharge, and sneezing.

### **Adnexa**

Structures adjacent to an organ; in gynecology, the uterine adnexa include the ovaries, fallopian tubes, and supporting tissues.

### **Adrenogenital Syndrome**

A group of disorders, usually caused by congenital adrenal hyperplasia, in which excess adrenal androgens cause atypical genital development or early puberty.

### **Afferent Neuron**

A sensory nerve cell that carries impulses from receptors toward the central nervous system.

### **Agranulocytes**

White blood cells without prominent cytoplasmic granules; the main types are lymphocytes and monocytes.

### **Airway**

A passage through which air moves between the outside environment and the lungs, including the nose, mouth, pharynx, larynx, trachea, and bronchi.

### **Anastomosis**

A natural or surgically created connection between two tubular structures, such as blood vessels or segments of the intestine.

#### **Synonyms:**

Anastomosis, Intestinal

### **Anastomosis, Intestinal**

Alternate index label; see *Anastomosis*.

### **Allis Clamp**

A toothed surgical clamp used to grasp and hold firm tissue during an operation.

### **Aphagia**

Complete inability to swallow, which may result from neurologic disease, obstruction, severe pain, or loss of swallowing-muscle function.

### **Apical Pulse**

The heart rate measured by listening over the apex of the heart, usually at the left fifth intercostal space near the midclavicular line.

### **Areola**

The pigmented circular area surrounding the nipple. It contains glands that help lubricate and protect the skin during breastfeeding.

### **Asthenia**

Abnormal lack of physical strength or energy. It is a symptom that may occur with illness, malnutrition, or medication effects.

---

### **Azotemia**

Accumulation of nitrogen-containing waste products in the blood, usually because the kidneys are not filtering adequately.

### **Atrioventricular Valves**

The heart valves between the atria and ventricles: the tricuspid valve on the right and the mitral valve on the left.

### **Antimicrobial Sensitivity Test**

A laboratory test that determines which antimicrobial medicines inhibit or kill a microorganism isolated from a patient.

### **Antideformity Position**

A therapeutic positioning method that places a limb or joint in an alignment that helps prevent or limit a contracture or deformity.

### **Autosomal Dominant Inheritance**

Inheritance in which one pathogenic variant on a non-sex chromosome can cause a trait or disorder. An affected heterozygous parent may transmit it to about half of the children.

### **Autosomal Recessive Inheritance**

Inheritance in which a disorder generally requires pathogenic variants in both copies of a gene. Carrier parents typically have a one-in-four chance of an affected child in each pregnancy.

### **Abdominal Angina**

Postprandial abdominal pain caused by inadequate blood flow through the arteries supplying the intestines, usually because of atherosclerotic disease.

### **Abdominal Binder**

A wide supportive garment placed around the abdomen to provide gentle compression after surgery, injury, or selected abdominal-wall conditions.

### **Abdominal Migraine**

A migraine-related disorder characterized mainly by recurrent episodes of moderate to severe midline

abdominal pain, often with nausea or vomiting and little or no headache.

### **Abdominocentesis**

Surgical or needle puncture of the abdominal wall to enter the peritoneal cavity, commonly for removal or analysis of ascitic fluid.

### **Abdominal Hernia**

Protrusion of an organ or tissue through a weakness or opening in the abdominal wall. Common types include incisional, umbilical, epigastric, and ventral hernias.

### **Ablative Surgery**

Surgery that destroys or removes abnormal tissue, often using excision, heat, cold, electrical energy, or other tissue-destructive methods.

### **Afferent Loop Syndrome**

Obstruction or impaired emptying of the afferent intestinal limb created by some gastric operations, causing bile and pancreatic-secretions to accumulate with pain, nausea, vomiting, or malabsorption.

### **Acute Chest Syndrome**

A potentially life-threatening pulmonary complication of sickle cell disease characterized by a new lung infiltrate plus fever or respiratory symptoms such as chest pain, cough, hypoxemia, or breathing difficulty.

### **Acute Inflammatory Demyelinating Polyradiculoneuropathy**

The most common form of Guillain-Barré syndrome, in which immune-mediated demyelination of peripheral nerves causes progressive, usually symmetric weakness and reduced reflexes.

### **Acute Nephritic Syndrome**

A clinical syndrome of glomerular inflammation marked by hematuria, variable proteinuria, edema, hypertension, and reduced kidney function.

---

### Acute Retroviral Syndrome

The acute illness that may occur shortly after HIV infection, commonly involving fever, rash, sore throat, lymph-node enlargement, muscle aches, or headache.

### Acute Transverse Myelitis

Inflammation across a segment of the spinal cord that can cause rapidly developing weakness, sensory changes, and bladder or bowel dysfunction.

### Adult Polycystic Kidney Disease

An inherited disorder, usually autosomal dominant polycystic kidney disease, in which multiple kidney cysts enlarge over time and may cause hypertension, pain, hematuria, and chronic kidney failure.

### Alcohol Withdrawal Syndrome

A set of symptoms occurring after abrupt reduction or cessation of prolonged heavy alcohol use. Symptoms range from tremor, sweating, anxiety, and nausea to seizures and delirium tremens.

### Anemia Of Inflammation

An anemia caused by chronic infection, inflammatory disease, or cancer, involving impaired iron availability, reduced erythropoietin response, and shortened red-cell survival.

### Anterior Cord Syndrome

A spinal-cord injury syndrome causing impaired motor function and loss of pain and temperature sensation below the lesion, with relative preservation of vibration and position sense.

### Adhesiolysis

Surgical division or removal of abnormal fibrous adhesions that bind tissues or organs together, often after inflammation, infection, surgery, or trauma.

### Abulia

Marked reduction in motivation, initiative, and spontaneous activity, usually caused by dysfunction of frontal-subcortical brain circuits or related neurologic disease.

### Acrocyanosis

Persistent, usually painless bluish discoloration and coolness of the hands or feet caused by reduced peripheral blood flow, often worsened by cold exposure.

### Adipsia

Absent or markedly reduced thirst, which can impair normal fluid intake and lead to dehydration or hyponatremia.

### Aerophagia

Excessive swallowing of air, which may cause belching, abdominal bloating, distention, or increased intestinal gas.

### Alpha Thalassemia

An inherited blood disorder caused by reduced production of alpha-globin chains of hemoglobin. Severity ranges from mild microcytosis or anemia to severe fetal or newborn disease.

### Anasarca

Severe, generalized edema involving large areas of the body, often associated with heart failure, kidney disease, liver disease, or profound hypoalbuminemia.

### Abdominal Muscles

The muscles forming the front and sides of the abdominal wall. They support the trunk, help with posture and breathing, and increase intra-abdominal pressure during coughing, lifting, and defecation.

#### Synonyms:

Abdominal wall muscles.

### Acceptance-Based Therapies

Psychotherapeutic approaches that help a person notice and accept thoughts, feelings, or bodily sensations while reducing unhelpful attempts to control or avoid them.

#### Synonyms:

Acceptance-based psychotherapy; acceptance-focused therapy.

---

## Acquisition

The process by which new information or a skill is learned and initially encoded, especially in discussions of memory and learning.

### Synonyms:

Learning acquisition; memory acquisition.

## Actin

A structural and contractile protein found in many cells. In muscle, actin interacts with myosin to produce contraction; in other cells, it supports shape, movement, and intracellular transport.

### Synonyms:

Actin filament; microfilament protein.

## Adequate Intake

A recommended average daily nutrient intake based on observed or experimentally determined levels in healthy people when evidence is insufficient to establish a recommended dietary allowance.

### Synonyms:

AI; adequate nutrient intake.

## Adult Day Services

Community-based daytime programs providing supervision, social activities, health-related support, or assistance with daily activities for adults who cannot safely remain alone throughout the day.

### Synonyms:

Adult day care; adult day program.

## Aesthetician

A trained skin-care professional who provides non-medical cosmetic skin treatments, such as cleansing, superficial exfoliation, and selected skin-care procedures within the scope of local regulation.

### Synonyms:

Esthetician; skin-care specialist.

## After-Cataract

Clouding of the posterior lens capsule that develops after cataract surgery and may cause blurred or hazy vision. It is also called posterior capsule opacification.

### Synonyms:

Posterior capsule opacification; secondary cataract.

## Age-Related Cognitive Decline

A modest, age-associated change in memory, processing speed, or other cognitive abilities that does not necessarily interfere substantially with independent daily functioning.

### Synonyms:

Age-associated cognitive decline; normal cognitive aging.

## Alcohol Abuse

A nonpreferred older term for a pattern of alcohol use that causes recurrent problems or harm. Current clinical classification generally uses alcohol use disorder and specifies its severity.

### Synonyms:

Problem drinking; harmful alcohol use.

## Alcohol Dehydrogenase

An enzyme, found mainly in the liver, that catalyzes the first major step in ethanol metabolism by converting alcohol to acetaldehyde.

### Synonyms:

ADH; ethanol dehydrogenase.

## Alcohol Dependence

A pattern of alcohol use characterized by impaired control, compulsive use, tolerance, withdrawal, and continued drinking despite harm. In current terminology, it is generally classified under alcohol use disorder.

### Synonyms:

Alcohol use disorder; alcohol addiction; alcoholism.

## Alendronate

A bisphosphonate that reduces bone resorption and is used to treat or prevent osteoporosis and selected other disorders of excessive bone turnover.

### Synonyms:

Alendronic acid; oral bisphosphonate therapy.

## Alpha Cells

Endocrine cells in the pancreatic islets that produce and release glucagon, a hormone that raises blood

---

glucose during fasting or low-glucose states.

**Synonyms:**

Pancreatic alpha cells; glucagon-secreting cells.

### Alpha Hydroxy Acids

A group of organic acids used in dermatology and cosmetics to exfoliate the outer skin layer and improve texture or pigmentation. Examples include glycolic and lactic acid.

**Synonyms:**

AHAs; fruit acids.

### Alpha Waves

Rhythmic electroencephalographic waves, typically around 8–13 Hz, most prominent when a relaxed, awake person has the eyes closed.

**Synonyms:**

Alpha rhythm; posterior dominant rhythm.

### Alpha-Delta Sleep

A sleep pattern in which alpha-frequency activity intrudes into delta-wave deep sleep and may be associated with nonrestorative sleep or chronic pain.

**Synonyms:**

Alpha-delta intrusion; alpha-delta rhythm.

### Amyloid Precursor Protein

A normal transmembrane protein that can be processed into amyloid-beta peptides, which may accumulate in the brain in Alzheimer disease.

**Synonyms:**

APP; amyloid-beta precursor protein.

### Anterior Myocardial Infarction

A myocardial infarction involving the anterior wall of the left ventricle, usually because of obstruction in the left anterior descending coronary artery.

**Synonyms:**

Anterior heart attack; anterior MI.

### Anti-Cyclic Citrullinated Peptide

An autoantibody directed against citrullinated proteins and used, with clinical findings and other tests, to support the diagnosis of rheumatoid arthritis.

**Synonyms:**

Anti-CCP antibody; cyclic citrullinated peptide antibody.

### Antileukotriene

A drug class that blocks leukotriene-mediated airway inflammation or bronchoconstriction and is used in selected allergic or respiratory conditions.

**Synonyms:**

Leukotriene modifier; leukotriene pathway inhibitor.

### Antispasmodic Drugs

Medicines that reduce smooth-muscle spasm or cramping in selected gastrointestinal, urinary, biliary, or other conditions. Choice and use depend on the cause and clinical context.

**Synonyms:**

Antispasmodics; spasmolytics.

### Arterial Resistance

The opposition to blood flow produced mainly by the diameter and tone of small arteries and arterioles. It contributes to systemic vascular resistance and blood pressure.

**Synonyms:**

Vascular resistance; systemic vascular resistance.

### Arterioles

Small branches of arteries that regulate blood flow into capillary beds through contraction and relaxation of their smooth muscle.

**Synonyms:**

Resistance vessels; small arteries.

### Atheroma

A localized accumulation of lipid, inflammatory cells, and fibrous tissue within an arterial wall, forming part of an atherosclerotic plaque.

**Synonyms:**

Atheromatous plaque; arterial plaque.

### Atherothrombotic Stroke

An ischemic stroke caused by thrombosis or artery-to-artery embolism arising from atherosclerotic disease in a large artery supplying the brain.

**Synonyms:**

---

Large-artery atherosclerotic stroke; atherothrombotic ischemic stroke.

### **Autologous Fat Transplant**

A procedure that removes a person's own fat from one body area and transfers it to another area for soft-tissue volume restoration or contouring.

#### **Synonyms:**

Autologous fat grafting; fat transfer; lipofilling.

### **Axillary**

Relating to the armpit or to structures located in the axilla, including axillary lymph nodes and vessels.

#### **Synonyms:**

Armpit-related; pertaining to the axilla.

### **Arm Pain**

Pain in the shoulder, upper arm, elbow, forearm, or related tissues. Causes include muscle or tendon injury, nerve compression, arthritis, vascular disease, and referred pain; sudden severe pain with chest discomfort, weakness, or shortness of breath requires urgent assessment.

#### **Synonyms:**

Pain in the arm; upper-limb pain.

### **Acute Flaccid Myelitis (AFM)**

A rare neurologic condition causing sudden weakness and loss of muscle tone, usually affecting the arms or legs and sometimes the face or breathing muscles.

### **Attention-Deficit/Hyperactivity Disorder (ADHD) In Children**

A childhood neurodevelopmental disorder involving persistent inattention, hyperactivity, impulsivity, or combinations of these symptoms that impair functioning.

### **Adult Attention-Deficit/Hyperactivity Disorder (ADHD)**

ADHD that persists into adulthood, often affecting attention, organization, impulse control, activity level, and daily functioning.

### **Adnexal Tumors And Masses**

Abnormal growths or masses involving the ovary, fallopian tube, or nearby supporting tissues; they may be benign or malignant.

### **Adult Still Disease**

A systemic inflammatory disorder characterized by fever, joint pain or arthritis, and a transient salmon-colored rash.

### **Age Spots (Liver Spots)**

Flat brown, gray, or black skin spots caused by long-term ultraviolet exposure, usually appearing on sun-exposed areas.

#### **Synonyms:**

Lentigines, Solar Solar Lentigines

### **Anaplastic Large Cell Lymphoma**

A rare T-cell non-Hodgkin lymphoma characterized by large abnormal lymphocytes and expression of the CD30 marker; it may be systemic or skin-limited.

### **Alcoholic Hepatitis (Alcohol-Associated Hepatitis)**

Inflammation and injury of the liver related to alcohol use, potentially causing jaundice, abdominal pain, fever, and liver failure.

### **Amyotrophic Lateral Sclerosis (ALS)**

A progressive neurodegenerative disease that damages motor neurons, causing muscle weakness, loss of movement, speech or swallowing difficulty, and eventually respiratory failure.

#### **Synonyms:**

Lou Gehrig's Disease

### **Aneurysms**

Abnormal bulges or enlargements in weakened areas of blood-vessel walls that may enlarge, clot, dissect, or rupture.

### **Angina**

Chest discomfort caused by inadequate oxygen-rich blood flow to the heart muscle, usually from coro-

---

nary artery disease.

### **Anorgasmia In Women**

Persistent or recurrent difficulty achieving orgasm despite adequate sexual stimulation, causing personal distress.

### **Anterior Vaginal Prolapse (Cystocele)**

Bulging of the front wall of the vagina caused by weakening of the tissue supporting the bladder, sometimes producing urinary symptoms.

#### **Synonyms:**

Bladder Prolapse Prolapsed Bladder

### **Anxiety Disorders**

Mental health disorders involving excessive fear, worry, or anxiety that is persistent, difficult to control, and disruptive to daily life.

### **Aortic Valve Regurgitation**

Backward leakage of blood through an incompletely closing aortic valve, which can make the heart work harder and eventually cause heart failure.

#### **Synonyms:**

Regurgitation, Aortic Valve

### **Auditory Processing Disorder**

Difficulty recognizing or interpreting sounds despite normal or near-normal hearing sensitivity.

### **Arteriosclerosis / Atherosclerosis**

Arteriosclerosis is hardening and thickening of arteries; atherosclerosis is plaque buildup within artery walls that can restrict blood flow.

### **Atrial Septal Defect (ASD)**

A congenital opening between the heart's upper chambers that permits abnormal blood flow between the atria.

### **Atrioventricular Nodal Reentry Tachycardia (AVNRT)**

A rapid regular heart rhythm caused by a reentrant electrical circuit involving or near the atrioventricular node.

### **Atypical Teratoid Rhabdoid Tumor (ATRT)**

A rare aggressive cancer of the central nervous system, most often occurring in infants and young children.

## A Guide To Clinical Trials For Cancer

An educational resource explaining clinical trials for cancer, including study purpose, eligibility, consent, benefits, risks, and questions for the research team.

## A Guide To Help Children Understand Cancer

Patient information concerning a guide to help children understand cancer .

## A Guide To Herbal Remedies

An educational resource about herbal products, their possible uses, adverse effects, interactions, and the importance of discussing them with a healthcare professional.

## A1C Test

A1C test measures glycated hemoglobin, the fraction of hemoglobin with glucose attached, to estimate average blood glucose over roughly the preceding 2 to 3 months.

## Aase Syndrome

Aase syndrome is a rare inherited disorder characterized by congenital hypoplastic anemia and distinctive skeletal abnormalities.

## Abdomen - Swollen

A symptom or clinical concern involving abdomen - Swollen; evaluation considers onset, severity, associated findings, possible causes, and need for medical

---

assessment.

### **Abdominal Aortic Aneurysm Repair - Open**

A procedure or perioperative-care topic involving abdominal Aortic Aneurysm Repair - Open; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Abdominal Aortic Aneurysm Repair - Open - Discharge**

A patient-care topic concerning recovery or symptom management after abdominal aortic aneurysm repair - open. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Abdominal CT Scan**

A computed tomography study that produces cross-sectional images of abdominal using X-rays. It can identify structural abnormalities, injury, inflammation, bleeding, or masses.

### **Abdominal Exploration**

Surgical inspection of the abdominal cavity to identify or treat a suspected source of pain, bleeding, infection, obstruction, or other disease.

### **Abdominal MRI Scan**

A magnetic resonance imaging study that produces detailed images of abdominal using magnetic fields and radiofrequency energy.

### **Abdominal Pain - Children Under Age 12**

A clinical topic concerning abdominal Pain - Children Under Age 12; assessment and management depend on the specific clinical question, findings, and patient context.

### **Abdominal Radiation - Discharge**

A clinical topic concerning abdominal Radiation - Discharge; assessment and management depend on the specific clinical question, findings, and patient context.

### **Abdominal Sounds**

Sounds produced by movement of gas and fluid through the intestines; changes in frequency or character may support, but do not establish, a diagnosis.

### **Abdominal Tap**

A clinical topic concerning abdominal Tap; assessment and management depend on the specific clinical question, findings, and patient context.

### **Abdominal Thrusts**

First-aid maneuver used for severe choking in a conscious person, intended to expel an obstructing object from the airway.

### **Abdominal Ultrasound**

An ultrasound examination that uses sound waves to produce images of abdominal and assess its structure and blood flow when applicable.

### **Abdominal Wall Fat Pad Biopsy**

A procedure that removes a small tissue sample from abdominal wall fat pad for microscopic or laboratory examination.

### **Abdominal Wall Surgery**

A procedure or perioperative-care topic involving abdominal Wall Surgery; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Abnormal Hemoglobins Testing**

A diagnostic test used to evaluate abnormal Hemoglobins Testing; interpretation depends on the test method, clinical findings, and reference range.

### **Abnormally Dark Or Light Skin**

A symptom or clinical concern involving abnormally Dark Or Light Skin; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Abortion - Medication**

Medication abortion uses prescribed medicines, commonly mifepristone followed by misoprostol or miso-

---

proctol alone, to end an early intrauterine pregnancy; confirmation of completion and assessment for ectopic pregnancy are important.

### **Abortion - Procedure**

A procedure or perioperative-care topic involving abortion - Procedure; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Abortion - Procedure - Aftercare**

A patient-care topic concerning recovery or symptom management after abortion - procedure. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Abscess - Abdomen Or Pelvis**

A localized collection of pus within the abdominal or pelvic cavity, usually caused by infection or leakage from an injured or inflamed organ. It may cause pain, fever, and sepsis and often requires antimicrobial treatment and drainage.

### **Absence Of Sweating**

A symptom or clinical concern involving absence Of Sweating; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Absent Menstrual Periods - Primary**

Primary amenorrhea, meaning failure to have the first menstrual period by the expected age. Causes include chromosomal or reproductive-tract abnormalities, endocrine disorders, chronic disease, and inadequate energy availability.

### **Absent Menstrual Periods - Secondary**

Secondary amenorrhea, meaning absence of menstrual periods for an extended interval in a person who previously menstruated. Pregnancy is considered first; other causes include endocrine disease, medications, stress, weight change, and ovarian dysfunction.

### **Absent Pulmonary Valve**

Absent pulmonary valve is a congenital heart defect in which the pulmonary valve is missing or severely underdeveloped, often causing pulmonary-artery enlargement and respiratory symptoms.

### **ACE Blood Test**

ACE blood test measures angiotensin-converting enzyme in serum; it may support evaluation of sarcoidosis and selected granulomatous or liver disorders but is not diagnostic alone.

### **ACE Inhibitors**

ACE inhibitors block formation of angiotensin II and are used for hypertension, heart failure, diabetic kidney protection, and selected cardiovascular conditions.

### **Acetaminophen And Codeine Overdose**

Toxic effects caused by excessive exposure to Acetaminophen and codeine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Acetaminophen Dosing For Children**

Weight-based dosing guidance for acetaminophen in children; the total daily dose must account for all combination products to avoid liver toxicity.

### **Acetaminophen Overdose**

Toxic effects caused by excessive exposure to Acetaminophen. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Acetone Poisoning**

Toxic effects caused by excessive exposure to Acetone poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Acetylcholine Receptor Antibody**

Acetylcholine receptor antibody testing detects antibodies associated with autoimmune myasthenia

---

gravis and is interpreted with the neurologic examination and other studies.

### **Aches And Pains During Pregnancy**

A symptom or clinical concern involving aches And Pains During Pregnancy; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Achilles Tendon Repair**

Achilles tendon repair reconnects a ruptured Achilles tendon, followed by immobilization and graduated rehabilitation to restore plantar-flexion strength.

### **Achilles Tendon Rupture - Aftercare**

A patient-care topic concerning recovery or symptom management after achilles tendon rupture. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Acid Loading Test (PH)**

A test of the kidney's ability to excrete acid after an acid load, used in evaluating renal tubular acidification disorders.

### **Acid Mucopolysaccharides**

An older term for glycosaminoglycans, long carbohydrate chains in connective-tissue substances such as cartilage, skin, and synovial fluid. Abnormal degradation or storage can cause mucopolysaccharidoses.

### **Acid Soldering Flux Poisoning**

Toxic effects caused by excessive exposure to Acid soldering flux poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Acid-Fast Stain**

Acid-fast stain uses dyes that remain in the cell wall of mycobacteria and some related organisms, helping identify them in clinical specimens.

### **ACL Reconstruction - Discharge**

A patient-care topic concerning recovery or symp-

tom management after acl reconstruction. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Acne - Self-Care**

A patient-care topic concerning recovery or symptom management after acne. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Acquired Platelet Function Defect**

Impaired platelet adhesion or aggregation that develops after birth. Causes include antiplatelet medicines, kidney failure, hematologic disease, and other systemic disorders; platelet counts may remain normal, but mucocutaneous bleeding can occur.

### **Acrodysostosis**

A rare genetic skeletal dysplasia characterized by short, broad fingers and toes, nasal and midface hypoplasia, short stature, and variable intellectual disability. Some patients have resistance to parathyroid or other hormones.

### **ACTH Blood Test**

A laboratory test that measures acth or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Acute Adrenal Crisis**

Acute adrenal crisis is life-threatening cortisol deficiency causing hypotension, vomiting, abdominal pain, electrolyte disturbance, hypoglycemia, or shock; urgent glucocorticoid and fluid treatment is required.

### **Acute Arterial Occlusion - Kidney**

Acute arterial occlusion of the kidney abruptly reduces renal blood flow and may cause flank pain, hematuria, hypertension, or acute kidney injury.

### **Acute Cerebellar Ataxia**

Sudden or rapidly developing incoordination caused by cerebellar dysfunction. In children it may follow an infection, but stroke, intoxication, inflammation,

---

tumor, and other urgent causes must be considered.

### **Acute Lymphoblastic Leukemia (ALL)**

Acute lymphoblastic leukemia is a rapidly progressive cancer of immature lymphoid precursor cells that crowds the bone marrow and can involve blood, lymph nodes, or the central nervous system.

### **Acute Myeloid Leukemia (AML) - Children**

Childhood acute myeloid leukemia is a marrow and blood cancer caused by uncontrolled proliferation of immature myeloid cells, producing anemia, infection, and bleeding risk.

### **Acute Myeloid Leukemia - Adult**

Adult acute myeloid leukemia is an aggressive malignancy of myeloid blood-cell precursors that impairs normal blood-cell production.

### **Adenoid Removal**

A procedure or perioperative-care topic involving adenoid Removal; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Adolescent Development**

A clinical topic concerning adolescent Development; assessment and management depend on the specific clinical question, findings, and patient context.

### **Adolescent Test Or Procedure Preparation**

A procedure or perioperative-care topic involving adolescent Test Or Procedure Preparation; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Adrenal Gland Removal**

A procedure or perioperative-care topic involving adrenal Gland Removal; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Adrenal Glands**

Adrenal glands sit above the kidneys and produce cortisol, aldosterone, adrenal androgens, and catecholamines that regulate stress, blood pressure, salt balance, and metabolism.

### **Adrenergic Bronchodilator Overdose**

Toxic effects caused by excessive exposure to Adrenergic bronchodilator. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Adult Soft Tissue Sarcoma**

A malignant tumor arising from connective or supporting tissues, such as muscle, fat, fibrous tissue, blood vessels, or peripheral nerves. It often presents as a painless enlarging mass and requires imaging and biopsy for diagnosis.

### **Advance Care Directives**

Documents and instructions that state a person's healthcare preferences and designate a surrogate decision-maker if the person later lacks decision-making capacity.

### **Aerobic Bacteria**

Bacteria that grow using oxygen or tolerate oxygen, although individual species differ in their exact oxygen requirements.

### **Aflatoxin**

Aflatoxin is a toxin produced by certain *Aspergillus* molds in contaminated foods; chronic exposure can injure the liver and increase hepatocellular-carcinoma risk.

### **After A C-Section - In The Hospital**

A patient-care topic concerning recovery or symptom management after after a c-section. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **After A Fall In The Hospital**

A patient-care topic concerning recovery or symp-

---

tom management after after a fall in the hospital. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **After An Exposure To Sharps Or Body Fluids**

Post-exposure evaluation after possible contact with blood or body fluids, including wound care, source assessment, and timely consideration of HIV, hepatitis B, or hepatitis C prevention and testing.

### **After Chemotherapy - Discharge**

A patient-care topic concerning recovery or symptom management after after chemotherapy. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **After Vaginal Delivery - In The Hospital**

A patient-care topic concerning recovery or symptom management after after vaginal delivery. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **After Weight-Loss Surgery - What To Ask Your Doctor**

Patient education about recovery after weight-loss surgery, including diet progression, activity, medicines, warning signs, and follow-up.

### **Aftershave Poisoning**

Toxic effects caused by excessive exposure to Aftershave poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Age-Related Hearing Loss**

A symptom or clinical concern involving age-Related Hearing Loss; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Aging Changes In Body Shape**

Age-related changes involving body shape. The changes vary with age, health, medicines, lifestyle,

and coexisting disease.

### **Aging Changes In Hair And Nails**

Age-related changes involving hair and nails. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Hormone Production**

Age-related changes involving hormone production. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Immunity**

Age-related changes involving immunity. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Organs, Tissue And Cells**

Age-related changes involving organs, tissue and cells. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Skin**

Age-related changes involving skin. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Sleep**

Age-related changes involving sleep. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Teeth And Gums**

Age-related changes involving teeth and gums. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Bones - Muscles - Joints**

Age-related changes involving the bones - muscles - joints. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

---

### **Aging Changes In The Breast**

Age-related changes involving the breast. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Face**

Age-related changes involving the face. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Female Reproductive System**

Age-related changes involving the female reproductive system. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Heart And Blood Vessels**

Age-related changes involving the heart and blood vessels. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Kidneys And Bladder**

Age-related changes involving the kidneys and bladder. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Lungs**

Age-related changes involving the lungs. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Male Reproductive System**

Age-related changes involving the male reproductive system. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Nervous System**

Age-related changes involving the nervous system. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In The Senses**

Age-related changes involving the senses. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Changes In Vital Signs**

Age-related changes involving vital signs. The changes vary with age, health, medicines, lifestyle, and coexisting disease.

### **Aging Spots - Should You Be Concerned?**

A topic about age-related lentigines, which are usually flat brown skin patches caused by cumulative sun exposure. A changing or bleeding lesion requires assessment.

### **Aicardi Syndrome**

Aicardi Syndrome is a rare developmental brain disorder classically involving agenesis of the corpus callosum, chorioretinal lacunae, and infantile seizures.

### **Alanine Transaminase (ALT) Blood Test**

A laboratory test that measures alanine transaminase or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Albumin Blood (Serum) Test**

A laboratory test that measures albumin or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Alcohol And Pregnancy**

Alcohol crosses the placenta and can cause fetal alcohol spectrum disorders; no known amount or timing during pregnancy is established as safe.

### **Alcohol Use And Safe Drinking**

Guidance on reducing alcohol-related harm, including standard-drink awareness, lower-risk limits, and situations in which alcohol should be avoided.

### **Alcohol Use Disorder - Resources**

Information about alcohol use disorder and avail-

---

able assessment, treatment, recovery, and support resources.

### **Alcoholic Liver Disease**

Alcoholic liver disease includes steatosis, alcohol-associated hepatitis, and cirrhosis caused by sustained alcohol exposure.

### **Aldolase Blood Test**

A laboratory test that measures aldolase or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Aldosterone Blood Test**

A laboratory test that measures aldosterone or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Allergic Rhinitis - Self-Care**

A patient-care topic concerning recovery or symptom management after allergic rhinitis. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Allergic Rhinitis - What To Ask Your Doctor - Adult**

A patient discussion topic about allergic rhinitis, including symptoms, triggers, treatment options, and questions about diagnosis and follow-up.

### **Allergic Rhinitis - What To Ask Your Doctor - Child**

A patient discussion topic about allergic rhinitis, including symptoms, triggers, treatment options, and questions about diagnosis and follow-up.

### **Allergies, Asthma, And Dust**

Dust can carry allergens such as dust-mite particles that trigger allergic rhinitis or asthma in susceptible people. Symptoms may include sneezing, congestion, wheezing, cough, and shortness of breath.

### **Allergies, Asthma, And Molds**

Mold spores and fragments can trigger allergic rhini-

tis, conjunctivitis, or asthma in sensitized people. Reducing exposure and treating the specific allergic or airway condition are guided by clinical assessment.

### **Allergies, Asthma, And Pollen**

Pollen is a seasonal airborne allergen that can trigger allergic rhinitis, conjunctivitis, or asthma. Typical symptoms include sneezing, itchy eyes, nasal congestion, cough, and wheezing.

### **Allergy Shots**

Subcutaneous allergen immunotherapy involving gradually increasing doses of selected allergens to reduce allergic sensitivity; administration requires monitoring for systemic reactions.

### **Allergy Testing - Skin**

A diagnostic test used to evaluate allergy Testing - Skin; interpretation depends on the test method, clinical findings, and reference range.

### **Aloe**

A plant-derived substance used in some topical products and supplements; topical preparations may soothe minor irritation, while oral latex-containing products can cause cramps, diarrhea, and electrolyte problems.

### **ALP - Blood Test**

A laboratory test that measures alp - or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **ALP Isoenzyme Test**

A diagnostic test used to evaluate aLP Isoenzyme Test; interpretation depends on the test method, clinical findings, and reference range.

### **Alpha-1 Antitrypsin Blood Test**

A laboratory test that measures alpha-1 antitrypsin or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

---

## ALS - Resources

Information and support resources for amyotrophic lateral sclerosis, including symptom management, rehabilitation, assistive care, and caregiver support.

## Alstrom Syndrome

A rare autosomal-recessive disorder caused by ALMS1 variants, associated with cone-rod dystrophy, hearing loss, obesity, insulin resistance, cardiomyopathy, and progressive kidney or liver disease.

## Alternative Medicine - Pain Relief

A clinical topic concerning alternative Medicine - Pain Relief; assessment and management depend on the specific clinical question, findings, and patient context.

## Alveolar Abnormalities

Structural or functional changes in the lung alveoli that can impair gas exchange and occur with infection, edema, emphysema, interstitial disease, or developmental disorders.

## Alzheimer Disease - Resources

Alzheimer disease resources provide education about progressive cognitive decline, caregiver support, safety, advance planning, and available treatment and services.

## Am I In Labor?

Information about possible labor, including regular painful contractions, rupture of membranes, bloody show, and indications for contacting the maternity team.

## Amino Acids

Amino acids are organic molecules that form proteins and also serve as precursors or fuels in human metabolism.

## Aminoaciduria

Aminoaciduria is abnormal urinary loss of amino acids caused by renal tubular transport defects, inherited metabolic disease, or generalized tubular

injury.

## Aminophylline Overdose

Toxic effects caused by excessive exposure to Aminophylline. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Amitriptyline And Perphenazine Overdose

Toxic effects caused by excessive exposure to Amitriptyline and perphenazine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Amitriptyline Hydrochloride Overdose

Toxic effects caused by excessive exposure to Amitriptyline hydrochloride. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Ammonia Blood Test

A laboratory test that measures ammonia or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

## Ammonia Poisoning

Toxic effects caused by excessive exposure to Ammonia poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Ammonium Hydroxide Poisoning

Toxic effects caused by excessive exposure to Ammonium hydroxide poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Amniotic Band Sequence

Amniotic band sequence results when fibrous amniotic strands entangle developing fetal parts, producing constriction rings, limb defects, or craniofacial

---

and body-wall abnormalities.

### **Amniotic Constriction Bands**

Alternate descriptive label; see *Amniotic band sequence*.

### **Amylase - Blood**

A blood test measuring amylase, an enzyme produced mainly by the pancreas and salivary glands; elevated values may occur in pancreatitis and other conditions.

### **Amylase - Urine**

A urine test measuring amylase excretion, sometimes used with blood amylase when evaluating pancreatic or salivary-gland disease.

### **Anal Itching - Self-Care**

A patient-care topic concerning recovery or symptom management after anal itching. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Anemia Caused By Low Iron - Children**

Iron-deficiency anemia in a child caused by insufficient iron intake, increased requirements, blood loss, or impaired absorption. It reduces hemoglobin production and may cause pallor, fatigue, irritability, or impaired development.

### **Anemia Caused By Low Iron - Infants And Toddlers**

Iron-deficiency anemia in an infant or toddler, commonly related to inadequate dietary iron, excessive cow's milk intake, increased growth requirements, or blood loss. It may cause pallor, fatigue, irritability, and developmental effects.

### **Anesthesia - What To Ask Your Doctor - Adult**

A patient discussion topic about anesthesia, including the planned technique, preparation, risks, medicines, and recovery.

### **Anesthesia - What To Ask Your Doctor -**

### **Child**

A patient discussion topic about anesthesia, including the planned technique, preparation, risks, medicines, and recovery.

### **Aneurysm In The Brain**

A brain aneurysm is a focal weakness and ballooning of a cerebral-artery wall; rupture causes subarachnoid hemorrhage and sudden severe headache.

### **Angina - Discharge**

A patient-care topic concerning recovery or symptom management after angina. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Angina - What To Ask Your Doctor**

A patient discussion topic about angina, including symptom pattern, emergency warning signs, testing, treatment, and prevention.

### **Angina - When You Have Chest Pain**

Angina with chest pain reflects transient myocardial ischemia; new, severe, prolonged, or rest pain may signal acute coronary syndrome and requires emergency assessment.

### **Angiodysplasia Of The Colon**

A degenerative abnormality of small blood vessels in the colon that can cause intermittent or recurrent lower gastrointestinal bleeding, often without pain. Diagnosis and treatment depend on the bleeding pattern and endoscopic findings.

### **Angioplasty And Stent - Heart - Discharge**

A patient-care topic concerning recovery or symptom management after angioplasty and stent - heart. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Angioplasty And Stent Placement - Carotid Artery**

A clinical topic concerning angioplasty And Stent Placement - Carotid Artery; assessment and man-

---

agement depend on the specific clinical question, findings, and patient context.

### **Angioplasty And Stent Placement - Carotid Artery - Discharge**

A patient-care topic concerning recovery or symptom management after angioplasty and stent placement - carotid artery. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Angioplasty And Stent Placement - Heart**

A clinical topic concerning angioplasty And Stent Placement - Heart; assessment and management depend on the specific clinical question, findings, and patient context.

### **Angioplasty And Stent Placement - Peripheral Arteries**

A clinical topic concerning angioplasty And Stent Placement - Peripheral Arteries; assessment and management depend on the specific clinical question, findings, and patient context.

### **Angioplasty And Stent Placement - Peripheral Arteries - Discharge**

A patient-care topic concerning recovery or symptom management after angioplasty and stent placement - peripheral arteries. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Animal Bites - Self-Care**

A patient-care topic concerning recovery or symptom management after animal bites. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Ankle Arthroscopy**

A procedure or perioperative-care topic involving ankle Arthroscopy; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Ankle Fracture - Aftercare**

A patient-care topic concerning recovery or symptom management after ankle fracture. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Ankle Replacement**

A procedure or perioperative-care topic involving ankle Replacement; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Ankle Replacement - Discharge**

A patient-care topic concerning recovery or symptom management after ankle replacement. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Ankle Sprain - Aftercare**

A patient-care topic concerning recovery or symptom management after ankle sprain. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Anomalous Left Coronary Artery From The Pulmonary Artery**

A rare congenital anomaly in which the left coronary artery arises from the pulmonary artery instead of the aorta. It can cause myocardial ischemia, heart failure, arrhythmia, or sudden death, particularly in infancy or exertion.

### **Anorchia**

Complete absence of testicular tissue, present from birth or caused by loss of previously formed testes. It results in absent or severely reduced testosterone production and infertility unless treated with appropriate hormone replacement.

### **Anoscopy And High-Resolution Anoscopy**

An examination of the anal canal and lower rectum using an anoscope; high-resolution anoscopy provides magnified views for evaluation of abnormal tissue.

---

### **Anterior Cruciate Ligament (ACL) Injury**

A sprain or tear of the ligament that limits forward movement and rotation of the tibia relative to the femur. It commonly occurs during sudden stopping, pivoting, or landing and may cause a pop, rapid swelling, pain, and knee instability.

### **Anterior Cruciate Ligament (ACL) Injury - Aftercare**

A patient-care topic concerning recovery or symptom management after anterior cruciate ligament (acl) injury. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Anterior Knee Pain**

A symptom or clinical concern involving anterior Knee Pain; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Anterior Vaginal Wall Repair**

A procedure or perioperative-care topic involving anterior Vaginal Wall Repair; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Anthrax Blood Test**

A laboratory test that measures anthrax or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Anti-DNase B Blood Test**

A laboratory test that measures anti-dnase b or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Anti-Glomerular Basement Membrane Blood Test**

A laboratory test that measures anti-glomerular basement membrane or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Anti-Glomerular Basement Membrane Disease**

An autoimmune disease in which antibodies target basement-membrane components in the kidney and sometimes the lungs. It can cause rapidly progressive glomerulonephritis, pulmonary hemorrhage, or both and requires urgent treatment.

### **Anti-Insulin Antibody Test**

A diagnostic test used to evaluate anti-Insulin Antibody Test; interpretation depends on the test method, clinical findings, and reference range.

### **Anti-Reflux Surgery - Children**

A procedure or perioperative-care topic involving anti-Reflux Surgery - Children; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Anti-Reflux Surgery - Children - Discharge**

A patient-care topic concerning recovery or symptom management after anti-reflux surgery - children. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Anti-Reflux Surgery - Discharge**

A patient-care topic concerning recovery or symptom management after anti-reflux surgery. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

### **Anti-Rust Product Poisoning**

Toxic effects caused by excessive exposure to Anti-rust product poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Anti-Smooth Muscle Antibody**

An autoantibody associated especially with autoimmune hepatitis, although low levels can occur in other autoimmune or infectious conditions.

---

### **Antibody Titer Blood Test**

A laboratory test that measures antibody titer or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Anticoagulant Rodenticides Poisoning**

Toxic effects caused by excessive exposure to Anticoagulant rodenticides poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Antidiarrheal Medicine Overdose**

Toxic effects caused by excessive exposure to Antidiarrheal medicine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Antidiuretic Hormone Blood Test**

A laboratory test that measures antidiuretic hormone or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Antifreeze Poisoning**

Toxic effects caused by excessive exposure to Antifreeze poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Antihistamines For Allergies**

Medicines that block histamine effects and reduce symptoms such as itching, sneezing, and runny nose; sedation and interactions vary by agent.

### **Antimitochondrial Antibody**

An autoantibody strongly associated with primary biliary cholangitis, interpreted with cholestatic liver tests and clinical findings.

### **Antinuclear Antibody Panel**

A laboratory test that measures antinuclear anti-

body panel or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Antiparietal Cell Antibody Test**

A diagnostic test used to evaluate antiparietal Cell Antibody Test; interpretation depends on the test method, clinical findings, and reference range.

### **Antiphospholipid Syndrome - APS**

Antiphospholipid syndrome is an autoimmune thrombophilia associated with venous or arterial clots and pregnancy morbidity in the presence of persistent antiphospholipid antibodies.

### **Antiplatelet Medicines - P2Y12 Inhibitors**

Antiplatelet drugs such as clopidogrel, prasugrel, and ticagrelor that reduce ADP-mediated platelet activation and thrombosis risk, with bleeding as a major adverse effect.

### **Antithrombin III Blood Test**

A laboratory test that measures antithrombin iii or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Antithyroglobulin Antibody Test**

A diagnostic test used to evaluate antithyroglobulin Antibody Test; interpretation depends on the test method, clinical findings, and reference range.

### **Aortic Aneurysm Repair - Endovascular**

A procedure or perioperative-care topic involving aortic Aneurysm Repair - Endovascular; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Aortic Aneurysm Repair - Endovascular - Discharge**

A patient-care topic concerning recovery or symptom management after aortic aneurysm repair - endovascular. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and

---

follow-up plan.

### **Aortic Angiography**

An imaging study of blood vessels that uses contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

### **Aortic Arch Syndrome**

Symptoms and signs caused by narrowing or blockage of the aorta or its major branches. Causes include large-vessel vasculitis, atherosclerosis, thrombosis, and congenital disease; findings may include unequal pulses, limb claudication, or neurologic symptoms.

### **Aortic Valve Surgery - Minimally Invasive**

A procedure or perioperative-care topic involving aortic Valve Surgery - Minimally Invasive; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Aortic Valve Surgery - Open**

A procedure or perioperative-care topic involving aortic Valve Surgery - Open; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

### **Aplastic**

Describing failure of a tissue, especially bone marrow, to produce adequate cells; aplastic anemia causes pancytopenia from marrow failure.

### **Apolipoprotein B100**

The structural apolipoprotein on atherogenic particles such as LDL and VLDL; its concentration reflects the number of potentially atherogenic lipoprotein particles.

### **Apolipoprotein CII**

A cofactor required to activate lipoprotein lipase, the enzyme that hydrolyzes triglycerides in circulating lipoproteins.

### **Apoplexy**

An older term for sudden loss of neurologic function,

historically referring to stroke and sometimes used for hemorrhage or infarction in an organ.

### **Appetite - Decreased**

A symptom or clinical concern involving appetite - Decreased; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Appetite - Increased**

A symptom or clinical concern involving appetite - Increased; evaluation considers onset, severity, associated findings, possible causes, and need for medical assessment.

### **Appropriate For Gestational Age (AGA)**

Describing a fetus or newborn whose estimated weight or size falls within the expected reference range for the gestational age, commonly between the 10th and 90th percentiles.

### **Arachnodactyly**

Abnormally long and slender fingers or toes. It may occur as an isolated trait or as a feature of connective-tissue disorders such as Marfan syndrome.

### **Are You Getting Too Much Exercise?**

Information about excessive exercise, which may cause persistent fatigue, declining performance, sleep disturbance, recurrent injury, or menstrual changes. Recovery and clinical assessment may be needed.

### **Arm CT Scan**

A computed tomography study that produces cross-sectional images of arm using X-rays. It can identify structural abnormalities, injury, inflammation, bleeding, or masses.

### **Arm MRI Scan**

A magnetic resonance imaging study that produces detailed images of arm using magnetic fields and radiofrequency energy.

---

## Arrhythmias

Abnormal heart rhythms caused by altered impulse formation or conduction; they range from harmless premature beats to rhythms that impair circulation.

## Arterial Embolism

Sudden blockage of an artery by material carried through the bloodstream, usually a blood clot. It can cause acute limb, brain, kidney, intestinal, or other organ ischemia and requires urgent assessment.

### Synonyms:

Arterial Thromboembolism

## Arterial Thromboembolism

Alternate index label; see *Arterial embolism*.

## Arterial Stick

Needle puncture of an artery, usually to obtain blood for arterial blood-gas or related testing; bleeding and arterial injury are possible complications.

## Arteriogram

An imaging study of blood vessels that uses contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

## Arthritis - Resources

Information and support resources for arthritis, including diagnosis, pain management, exercise, medicines, joint protection, and rehabilitation.

## Artificial Urinary Sphincter

An implanted device that restores urinary continence by allowing controlled compression and release of the urethra. It is used mainly for selected cases of stress urinary incontinence and requires surgical placement and follow-up.

## Aspartate Aminotransferase (AST) Blood Test

A laboratory test that measures aspartate aminotransferase or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

## Aspartic Acid

A nonessential amino acid incorporated into proteins and involved in the urea cycle, nucleotide synthesis, and other metabolic pathways. It is not the same as aspartame, an artificial sweetener that contains aspartic acid.

## Aspergillosis Precipitin

An antibody test that may support evaluation of exposure or immune response to *Aspergillus*; results must be interpreted with symptoms, imaging, and other tests.

## Asphalt Cement Poisoning

Toxic effects caused by excessive exposure to Asphalt cement poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Aspirin And Heart Disease

Aspirin inhibits platelet aggregation and may prevent recurrent cardiovascular events in selected patients; routine primary prevention requires individualized assessment of benefit and bleeding risk.

## Aspirin Overdose

Toxic effects caused by excessive exposure to Aspirin. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## Assisted Delivery With Forceps

A procedure or perioperative-care topic involving assisted Delivery With Forceps; indications, preparation, risks, and follow-up depend on the specific procedure and patient.

## Asthma - Child - Discharge

A patient-care topic concerning recovery or symptom management after asthma - child. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

---

## **Asthma - Control Drugs**

Long-term asthma medicines, especially inhaled corticosteroids, reduce airway inflammation and prevent exacerbations; they do not replace a rapid-relief medicine for acute symptoms.

## **Asthma - Quick-Relief Drugs**

Rapid-relief asthma medicines, commonly inhaled short-acting beta-2 agonists, relax bronchial smooth muscle for prompt symptom relief; frequent use signals inadequate control.

## **Asthma And Allergy Resources**

Information and support resources for asthma and allergic disease, including trigger avoidance, medicines, action plans, and emergency warning signs.

## **Asthma And School**

School-based asthma care includes an action plan, access to prescribed rescue medicine, trigger reduction, and staff training to recognize worsening breathing.

## **Asthma In Adults - What To Ask The Doctor**

A patient discussion topic about asthma, including symptom control, medicines, inhaler technique, action plans, and follow-up.

## **Asthma In Children**

A chronic inflammatory airway disorder in children causing variable wheeze, cough, chest tightness, and shortness of breath; diagnosis and treatment are guided by age-appropriate history and testing.

## **Asthma In Children - What To Ask Your Doctor**

A patient discussion topic about asthma, including symptom control, medicines, inhaler technique, action plans, and follow-up.

## **Asymptomatic Bacteriuria**

Bacteria detected in urine without urinary symptoms; treatment is selective, such as during preg-

nancy or before certain urologic procedures.

## **Asymptomatic HIV Infection**

HIV infection without current symptoms; ongoing viral replication can damage immunity, so diagnosis, monitoring, and antiretroviral treatment remain important.

## **Atopic Dermatitis - Children - Homecare**

A patient-care topic concerning recovery or symptom management after atopic dermatitis - children. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

## **Atopic Dermatitis - Self-Care**

A patient-care topic concerning recovery or symptom management after atopic dermatitis. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

## **Atrial Fibrillation - Discharge**

A patient-care topic concerning recovery or symptom management after atrial fibrillation. Appropriate care depends on the diagnosis, treatment, symptoms, warning signs, and follow-up plan.

## **Atrial Fibrillation And Atrial Flutter**

Atrial fibrillation produces chaotic atrial activity, while atrial flutter produces a rapid organized circuit; both can cause palpitations and increase stroke risk.

## **Atrial Myxoma**

A usually benign primary heart tumor, most often in the left atrium, that may obstruct blood flow or produce emboli and constitutional symptoms.

## **Aural Polyps**

Abnormal tissue projections in the ear canal or middle ear, often associated with chronic infection, inflammation, or cholesteatoma and requiring otologic evaluation.

## **Autism - Resources**

Information and support resources for autism, in-

---

cluding diagnosis, developmental services, education, communication support, and caregiver resources.

### **Autism Spectrum Disorder - Asperger Syndrome**

A former diagnostic label for autism spectrum disorder in a person without intellectual disability or clinically significant early language delay. Current diagnostic systems classify this presentation under autism spectrum disorder rather than as a separate disorder.

### **Autism Spectrum Disorder - Childhood Disintegrative Disorder**

Childhood disintegrative disorder, also called Heller syndrome, is a rare condition involving marked loss of previously acquired language, social, and adaptive skills after apparently typical early development. Modern classifications place it within autism spectrum disorder, and evaluation should exclude other neurologic causes.

### **Autoerythrocyte Sensitivity**

A rare syndrome of painful bruising or purpura attributed to an abnormal reaction to a person's own red-cell components. The diagnosis is one of exclusion after bleeding disorders, medication effects, and other causes of bruising are assessed.

### **Autoimmune Diseases**

Autoimmune diseases arise when immune responses target the body's own tissues, producing organ-specific or systemic inflammation and damage.

### **Autoimmune Liver Disease Panel**

A laboratory test that measures autoimmune liver disease panel or related markers in blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Autoinflammatory Diseases**

Disorders of innate immune regulation that cause recurrent or persistent inflammation without the disease-specific autoantibodies typical of autoimmune disorders. They may cause fever, rash, joint inflammation, or organ damage and can be inherited

or acquired.

### **Autoinoculation**

Transfer of an infectious agent from one body site to another on the same person, often by touching or scratching.

### **Automatic Dishwasher Soap Poisoning**

Toxic effects caused by excessive exposure to Automatic dishwasher soap poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Autosomal Dominant**

Autosomal dominant inheritance occurs when one altered copy of a gene can produce a trait or disorder; an affected heterozygous parent may transmit it to about half of offspring.

### **Autosomal Dominant Tubulointerstitial Kidney Disease**

An inherited kidney disorder caused by pathogenic variants in genes such as UMOD, REN, or MUC1. It causes progressive loss of kidney function with relatively bland urine findings; some subtypes cause early gout or anemia.

### **Autosomal Recessive**

Autosomal recessive inheritance generally requires pathogenic variants in both copies of a gene; unaffected carrier parents can have an affected child.

### **Axillary Nerve Dysfunction**

Impairment of the axillary nerve, often from shoulder trauma, dislocation, compression, or surgery. It can cause weakness of shoulder abduction, deltoid wasting, and numbness over the lateral shoulder.

### **A Hemophilia (Hemophilia)**

Alternate index label for Hemophilia.

### **AA (Alopecia Areata)**

Alternate index label for Alopecia Areata.

---

### **AAA (Abdominal Aortic Aneurysm)**

Alternate index label for Abdominal Aortic Aneurysm.

### **Abbreviations Medical Terms (Common Medical Abbreviations And Terms)**

Alternate index label for Common Medical Abbreviations and Terms.

### **Abdominal Pain (Causes, Remedies, Treatment)**

Alternate index label for Causes, Remedies, Treatment.

### **Abnormal Heart Rhythms (Heart Rhythm Disorders)**

Alternate index label for Heart Rhythm Disorders.

### **Abortion Spontaneous (Miscarriage Causes And Symptoms)**

Alternate index label for Miscarriage Causes and Symptoms.

### **Abscessed Tooth Guide**

An abscessed tooth contains a localized collection of pus caused by bacterial infection, usually from decay, a crack, or gum disease. Dental drainage, root-canal treatment, or extraction may be needed; fever, facial swelling, or difficulty swallowing requires urgent care.

#### **Synonyms:**

Tooth Infected (Abscessed Tooth Guide)

### **Abscesses Skin (Boils)**

Alternate index label for Boils.

### **Abuse Child (Child Abuse Facts)**

Alternate index label for Child Abuse Facts.

### **Abuse Steroid (Anabolic Steroid Abuse)**

Alternate index label for Anabolic Steroid Abuse.

### **ACA (Affordable Care Act (ACA Or ObamaCare))**

Alternate index label for Affordable Care Act (ACA

or ObamaCare).

### **Aches, Pain, Fever**

Aches, pain, and fever are common symptoms of infection, inflammation, injury, medication effects, or other illness. The pattern, duration, associated symptoms, and temperature help determine whether evaluation or urgent treatment is needed.

### **Achondroplasia Vs Pseudoachondroplasia Differences**

Achondroplasia is a common skeletal dysplasia caused by altered FGFR3 signaling, whereas pseudoachondroplasia is usually caused by COMP or related cartilage-matrix variants. Both cause disproportionate short stature, but their spine, joint, radiographic, and inheritance features differ.

### **Acid Reflux (Gastroesophageal Reflux Disease (GERD))**

Alternate index label for Gastroesophageal Reflux Disease (GERD).

### **Acid Reflux (GERD In Infants And Children)**

Alternate index label for GERD in Infants and Children.

### **Acid Reflux Vs. Heartburn (Heartburn Vs. Acid Reflux Differences Similarities)**

Alternate index label for Heartburn vs. Acid Reflux Differences Similarities.

### **Acne Rosacea (Rosacea)**

Alternate index label for Rosacea.

### **Acquired Generalized And Inherited Lipodystrophy**

Lipodystrophy is abnormal loss or absence of adipose tissue. Acquired generalized forms develop after an immune or other trigger, while inherited forms result from gene variants; both can cause severe insulin resistance, diabetes, high triglycerides, and fatty liver.

#### **Synonyms:**

---

Lipodystrophy (Acquired Generalized And Inherited Lipodystrophy)

### **Acquired Immunodeficiency Syndrome (AIDS)**

Alternate index label for AIDS.

### **Acrochordon (Skin Tag)**

Alternate index label for Skin Tag.

### **Actinic Purpura Vs Senile Purpura**

Actinic or senile purpura consists of painless purple bruises on sun-damaged, thin skin, especially on the hands and forearms. It reflects fragile dermal vessels and connective tissue rather than a dangerous bleeding disorder, although widespread or unexplained bruising needs assessment.

### **Acute And Chronic Bursitis**

Bursitis is inflammation of a fluid-filled bursa that cushions a joint. Acute bursitis may follow trauma, infection, or sudden overuse; chronic bursitis reflects repeated pressure or inflammatory disease and causes localized pain, swelling, and tenderness with movement.

#### **Synonyms:**

Bursa Inflammation (Acute And Chronic Bursitis)

### **Acute Bronchitis (Bronchitis (Acute))**

Alternate index label for Bronchitis (Acute).

### **Addiction Sexual (Sexual Addiction)**

Alternate index label for Sexual Addiction.

### **Addisons Anemia (Pernicious Anemia)**

Alternate index label for Pernicious Anemia.

### **Addison's Disease How Treated And Can It Be Cured**

Addison disease is primary adrenal insufficiency, in which the adrenal glands do not produce enough cortisol and often aldosterone. Lifelong hormone replacement usually controls it; stress dosing and emergency injectable steroid plans help prevent adrenal crisis.

### **Adenoids And Tonsils**

The adenoids and tonsils are lymphoid tissues in the upper airway that participate in immune surveillance. Enlargement or recurrent infection can cause mouth breathing, snoring, sleep apnea, swallowing problems, or recurrent throat disease and may require medical or surgical evaluation.

#### **Synonyms:**

Tonsil Inflammation (Adenoids And Tonsils)

### **ADHD In Teens (Attention Deficit Hyperactivity Disorder In Teens)**

Alternate index label for Attention Deficit Hyperactivity Disorder in Teens.

### **Adhesive Capsulitis Of Shoulder (Frozen Shoulder)**

Alternate index label for Frozen Shoulder.

### **Adult ADHD**

Adult attention-deficit/hyperactivity disorder is a persistent pattern of inattention, impulsivity, and hyperactivity that begins in childhood and impairs work, relationships, or daily organization. Diagnosis uses developmental history and symptom assessment; treatment may combine skills-based therapy and medication.

#### **Synonyms:**

Attention Deficit Hyperactivity Disorder (Adult ADHD)

### **Adult-Onset Asthma**

Adult-onset asthma is variable airway inflammation and narrowing that begins in adulthood, producing episodic wheezing, cough, chest tightness, or shortness of breath. Diagnosis uses symptoms and lung-function testing, and treatment reduces triggers and airway inflammation.

#### **Synonyms:**

Asthma Adult-Onset (Adult-Onset Asthma)

### **Adults Autism (Autism And Communication)**

Alternate index label for Autism and Communication.

---

## **Adults Jaundice (Jaundice In Adults)**

Alternate index label for Jaundice in Adults.

## **Advance Directives (Advance Medical Directives)**

Alternate index label for Advance Medical Directives.

## **Advance Medical Directives**

Advance medical directives record a person's preferences for future medical care and identify a health-care proxy when the person cannot decide. They may address resuscitation, life support, artificial nutrition, and other treatments, and should be reviewed as circumstances change.

### **Synonyms:**

Advance Directives (Advance Medical Directives)

## **Advantages And Disadvantages Of A Hospital Birth**

A hospital birth provides immediate access to obstetric, anesthesia, newborn, and surgical services, which can be important when complications arise. Tradeoffs may include more routine interventions, less control over setting, and separation or transfer policies that vary by facility.

## **Advantages And Disadvantages Of Hysterectomy**

Hysterectomy removes the uterus and permanently ends pregnancy and menstruation. It can treat cancer, fibroids, severe bleeding, prolapse, or pain, but involves operative risks, recovery time, and possible effects on ovarian function or pelvic organs depending on the procedure.

## **AF (Atrial Fibrillation)**

Alternate index label for Atrial Fibrillation.

## **Affordable Care Act (ACA Or ObamaCare)**

Alternate index label for ACA or ObamaCare.

## **Afib (Atrial Fibrillation (AFib) Warning**

## **Symptoms)**

Alternate index label for Atrial Fibrillation (AFib) Warning Symptoms.

## **Afib (Atrial Fibrillation)**

Alternate index label for Atrial Fibrillation.

## **AFib Vs VFib Symptoms (Atrial Fibrillation Vs. Ventricular Fibrillation)**

Alternate index label for Atrial Fibrillation vs. Ventricular Fibrillation.

## **After A Positive Ovulation Test Are You Fertile?**

A positive ovulation test detects a rise in luteinizing hormone that usually precedes ovulation by about one to two days. Fertility is highest around this interval, but timing varies and the test does not confirm that an egg was released.

## **After Endolymphatic Sac Decompression Surgery**

After endolymphatic sac decompression, follow-up focuses on wound healing, vertigo, hearing, balance, and recurrence of inner-ear symptoms. Activity and ear-care instructions depend on the operation, and persistent severe vertigo, drainage, fever, or facial weakness needs prompt review.

## **Age Related Macular Degeneration (Macular Degeneration)**

Alternate index label for Macular Degeneration.

## **AIDS Vs. HIV (HIV Vs AIDS)**

Alternate index label for HIV vs AIDS.

## **Alcohol Abuse And Alcoholism**

Alcohol use disorder is a medical condition involving impaired control over drinking despite harm, craving, tolerance, or withdrawal. Treatment can include medically supervised withdrawal, counseling, peer support, and medications that reduce drinking or relapse risk.

### **Synonyms:**

Alcohol Dependence (Alcohol Abuse And Alco-

---

holism)

### **Alcohol And Teens**

Alcohol exposure during adolescence can impair judgment, increase injury and unsafe-sex risk, and affect developing brain systems involved in learning and impulse control. Early screening, supportive communication, treatment of coexisting mental-health problems, and limiting access reduce harm.

### **Alcohol Dependence (Alcohol Abuse And Alcoholism)**

Alternate index label for Alcohol Abuse and Alcoholism.

### **Alcohol Pregnancy (Fetal Alcohol Syndrome (FAS))**

Alternate index label for Fetal Alcohol Syndrome (FAS).

### **Allergic Cascade**

The allergic cascade is the sequence in which an allergen activates immune cells, including IgE-bearing mast cells, causing release of histamine and other mediators. This produces symptoms such as itching, swelling, mucus, wheezing, hives, or anaphylaxis.

### **Allergies (Allergy)**

Alternate index label for Allergy.

### **Allergy**

An allergy is an inappropriate immune response to a normally harmless substance such as pollen, food, medicine, insect venom, or animal proteins. Symptoms range from localized rhinitis or hives to life-threatening anaphylaxis.

#### **Synonyms:**

Allergies (Allergy)

### **Allergy Diaper (Intertrigo)**

Alternate index label for Intertrigo.

### **Allergy Eczema (Atopic Dermatitis)**

Alternate index label for Atopic Dermatitis.

### **Allergy Eye (Eye Allergy)**

Alternate index label for Eye Allergy.

### **Allergy Food (Food Allergy)**

Alternate index label for Food Allergy.

### **Allergy Home Remedies (Allergy Treatment Begins At Home)**

Alternate index label for Allergy Treatment Begins At Home.

### **Allergy Insect (Insect Sting Allergies)**

Alternate index label for Insect Sting Allergies.

### **Allergy Latex (Latex Allergy)**

Alternate index label for Latex Allergy.

### **Allergy Plant Contact (Poison Ivy, Oak, And Sumac)**

Alternate index label for Poison Ivy, Oak, and Sumac.

### **Allergy Rash (Rash)**

Alternate index label for Rash.

### **Allergy Treatment Begins At Home**

Home allergy care may include reducing exposure to the trigger, improving indoor air filtration, washing after outdoor exposure, saline nasal rinsing with safe water, and using recommended medicines correctly. Breathing difficulty, throat swelling, faintness, or widespread symptoms require emergency care.

#### **Synonyms:**

Allergy Home Remedies (Allergy Treatment Begins At Home)

### **Alopecia (Hair Loss)**

Alternate index label for Hair Loss.

### **ALS Vs. MS (ALS Vs. MS Differences And Similarities)**

Alternate index label for ALS vs. MS Differences and Similarities.

---

## ALS Vs. MS Differences And Similarities

Amyotrophic lateral sclerosis primarily destroys motor neurons and causes progressive weakness, while multiple sclerosis causes immune-mediated lesions in the brain and spinal cord with varied sensory, visual, motor, or cognitive symptoms. Examination, imaging, laboratory testing, and time course distinguish them.

## Alternative Therapy For Multiple Sclerosis

Complementary approaches for multiple sclerosis may support symptoms such as fatigue, pain, stress, or mobility but do not replace disease-modifying treatment. Exercise, rehabilitation, mindfulness, and selected supplements should be discussed with clinicians because interactions and unproven claims are common.

### Synonyms:

MS Alternative And Complementary Therapies (Alternative Therapy For Multiple Sclerosis)

## Alternative Treatments For Hot Flashes

Nonhormonal approaches to hot flashes include cooling strategies, layered clothing, sleep and stress measures, cognitive behavioral therapy, and selected prescription medicines. Herbal products have variable evidence and can interact with medicines; treatment choice depends on symptoms and medical history.

## Alveolar Osteitis (Dry Socket Overview)

Alternate index label for Dry Socket Overview.

## Alzheimer's Disease Causes, Stages, And Symptoms

Alzheimer disease is a progressive neurodegenerative disorder causing decline in memory and other thinking abilities, followed by increasing difficulty with communication, judgment, movement, and self-care. Progression varies, and evaluation looks for reversible contributors and other dementias.

## Alzheimer's Disease Symptoms And Stages

Alzheimer disease commonly progresses from subtle memory and planning problems to loss of indepen-

dence, language and recognition difficulties, and eventually extensive assistance needs. Symptoms and speed of progression differ, so staging supports care planning rather than predicting an exact timeline.

### Synonyms:

Alzheimers Disease Stages And Symptoms (Alzheimer's Disease Symptoms And Stages)

## Alzheimers Disease Stages And Symptoms (Alzheimer's Disease Symptoms And Stages)

Alternate index label for Alzheimer's Disease Symptoms and Stages.

## Am I Depressed

Depression is more than temporary sadness: it involves persistent low mood or loss of interest with changes in sleep, appetite, energy, concentration, movement, self-worth, or hope. Thoughts of self-harm require immediate emergency or crisis support.

## Amblyopia Lazy Eye

Amblyopia is reduced vision in an eye that did not develop normal visual processing during childhood, often because of unequal focusing power, misalignment, or obstruction. Early treatment may include glasses, patching or blurring the stronger eye, and correction of the underlying problem.

## Amebiasis Entamoeba Histolytica Infection

Amebiasis is infection with *Entamoeba histolytica*, acquired through fecally contaminated food, water, or hands. It may cause diarrhea or dysentery and can spread to the liver; stool testing and appropriate tissue-active and luminal treatment are used.

### Synonyms:

Amoebic Dysentery (Amebiasis Entamoeba Histolytica Infection)

## Amoebic Dysentery (Amebiasis Entamoeba Histolytica Infection)

Alternate index label for Amebiasis Entamoeba histolytica Infection.

---

## **Amyloid Disease (Amyloidosis)**

Alternate index label for Amyloidosis.

## **Anabolic Steroid Abuse**

Anabolic-androgenic steroid misuse can cause infertility, testicular shrinkage, acne, mood changes, high blood pressure, adverse cholesterol changes, liver injury, and cardiovascular events. Stopping may produce withdrawal symptoms and is safest with medical support.

### **Synonyms:**

Abuse Steroid (Anabolic Steroid Abuse)

## **Anal Ulcer (Anal Fissure)**

Alternate index label for Anal Fissure.

## **Anemia How Is It Treated And Can It Be Cured**

Anemia is reduced oxygen-carrying capacity from low red-cell number or hemoglobin. Treatment depends on cause, such as iron or vitamin deficiency, blood loss, kidney disease, inflammation, or inherited disease; correcting the cause may resolve it, while some conditions require long-term management.

## **Aneurysm Vs Stroke (Stroke Vs Aneurysm Differences And Similarities)**

Alternate index label for Stroke vs Aneurysm Differences and Similarities.

## **Aneurysm Vs Stroke Which Is Worse**

An aneurysm is a weakened, bulging blood-vessel wall, whereas a stroke is brain injury from interrupted blood flow or bleeding. A ruptured brain aneurysm can cause a hemorrhagic stroke, and the seriousness of either condition depends on location, size, bleeding, and neurologic injury.

## **Angiitis (Vasculitis)**

Alternate index label for Vasculitis.

## **Angina Symptoms**

Angina is chest discomfort caused by inadequate blood flow to heart muscle, commonly from coronary

artery disease. Pressure or squeezing may spread to the arm, jaw, back, or shoulder and can occur with exertion; new, severe, or resting symptoms require emergency assessment.

### **Synonyms:**

Ischemic Chest Pain (Angina Symptoms)

## **Angioedema (Hives)**

Alternate index label for Hives.

## **Angioedema Hereditary (Hereditary Angioedema HAE)**

Alternate index label for Hereditary Angioedema HAE.

## **Ankle Dislocated (Dislocated Ankle (Ankle Dislocation))**

Alternate index label for Dislocated Ankle (Ankle Dislocation).

## **Ankle Pain And Tendinitis**

Ankle pain may result from sprain, fracture, arthritis, tendon inflammation, nerve disease, infection, or referred pain. Tendinitis causes pain along an affected tendon and often worsens with loading; swelling, deformity, inability to bear weight, fever, or numbness warrants evaluation.

## **Ankle Swollen (Swollen Ankles And Swollen Feet)**

Alternate index label for Swollen Ankles and Swollen Feet.

## **Antidiabetics-Oral**

Oral antidiabetic medicines lower blood glucose through different mechanisms, including increasing insulin release, improving insulin sensitivity, reducing hepatic glucose production, or increasing urinary glucose loss. Selection considers kidney function, hypoglycemia risk, weight, cardiovascular disease, and cost.

### **Synonyms:**

Medications Type 2 Diabetes (Antidiabetics-Oral)

---

## Antiemetics

Antiemetics are medicines used to prevent or treat nausea and vomiting. Drug classes act on serotonin, dopamine, histamine, acetylcholine, or neurokinin pathways; choice depends on the cause, age, pregnancy, other medicines, heart rhythm risk, and hydration status.

## Anxiety Separation (Separation Anxiety)

Separation anxiety is excessive fear or distress when separated from an attachment figure, beyond what is expected for developmental stage. It can cause avoidance, physical complaints, sleep difficulty, and school impairment and is treated with behavioral therapy and, when needed, medication.

## Apnea Sleep (Sleep Apnea)

Sleep apnea consists of repeated pauses or reductions in breathing during sleep. Obstructive apnea results from upper-airway collapse, while central apnea reflects reduced respiratory drive; untreated disease can cause daytime sleepiness, impaired concentration, hypertension, and cardiovascular risk.

## APS (Antiphospholipid Syndrome)

Alternate index label for Antiphospholipid Syndrome.

## Are Antiperspirants Harmful

Antiperspirants reduce sweating, usually with aluminum salts, and are generally safe when used on intact skin as directed. Irritation or contact dermatitis can occur; persistent excessive sweating, a new generalized change, or symptoms of illness deserves medical evaluation.

## Are Bananas Bad For Kidneys?

Bananas are not universally harmful to the kidneys, but they contain potassium. People with advanced kidney disease or medicines that raise potassium may need individualized portions and laboratory monitoring rather than making dietary changes without clinical advice.

## Are Bananas Bad If You Are Trying To

## Lose Weight?

Bananas can fit a weight-loss eating pattern because they provide carbohydrate, fiber, and nutrients, but portion size and total energy intake determine weight change. Pairing fruit with a balanced meal or protein may improve satiety.

## Are Bananas Fattening For You?

Bananas are not inherently fattening; body weight changes when average energy intake exceeds expenditure. They contain natural carbohydrate and calories, so serving size matters, especially in calorie-restricted diets or diabetes meal planning.

## Are Bananas Good For Diabetes

People with diabetes can often include bananas in portions that fit their carbohydrate plan. Ripeness, serving size, total meal composition, glucose-lowering treatment, and individual glucose response influence their effect on blood sugar.

## Are Bean Sprouts Good For You

Bean sprouts provide fiber and micronutrients but can harbor *Salmonella*, *E. coli*, or other pathogens because they grow in warm, moist conditions. Cooking sprouts thoroughly lowers infection risk, especially for pregnant people, children, older adults, and immunocompromised people.

## Are Bedbugs Contagious

Bedbugs do not spread from person to person like an infection, but they can travel in clothing, luggage, bedding, and furniture. Bites cause itchy skin reactions in some people; control requires treating the environment rather than treating the person for contagion.

### Synonyms:

Bedbugs Contagious (Are Bedbugs Contagious)

## Are Belly Bands Safe During Pregnancy

A pregnancy belly band may temporarily support the abdomen or reduce pelvic and back discomfort when properly fitted. It should not be tight enough to impair breathing, circulation, digestion, or fetal movement, and persistent pain or swelling needs obstetric evaluation.

---

### **Are Blood Clots Normal In Early Pregnancy**

Small clots or spotting in early pregnancy are not automatically normal and can occur with benign cervical changes, miscarriage, or ectopic pregnancy. Heavy bleeding, one-sided pain, shoulder pain, dizziness, or fainting requires urgent assessment.

### **Are Breast Implants Worth It?**

Whether breast implants are worthwhile depends on goals, expected appearance, health, cost, and willingness to accept revision surgery and implant-related risks. Complications include capsular contracture, rupture, infection, changes in sensation, and rare implant-associated malignancy.

### **Are C-Sections Really That Bad**

Cesarean delivery can be lifesaving and appropriate, but it is major abdominal surgery with risks such as infection, bleeding, blood clots, organ injury, and longer recovery. It can also affect risks in later pregnancies; decisions depend on maternal and fetal circumstances.

### **Are Canker Sores Contagious**

Canker sores are shallow ulcers inside the mouth and are not contagious. They may be associated with minor trauma, stress, nutritional deficiency, immune disease, or other triggers; unusually large, frequent, persistent, or systemic-associated ulcers need evaluation.

#### **Synonyms:**

Contagious Canker Sores (Are Canker Sores Contagious) Sores Canker Contagious (Are Canker Sores Contagious)

### **Are Carrots Healthy For Babies?**

Carrots can provide fiber and beta-carotene for babies when introduced in an age-appropriate, soft form. Choking risk depends on texture and shape, so whole raw pieces are unsafe for young children; introduce foods according to developmental readiness.

### **Are Collagen Supplements Good For**

### **You?**

Collagen supplements provide amino-acid peptides that may modestly affect skin elasticity or joint symptoms in some studies, but evidence and product quality vary. They do not replace adequate dietary protein, and allergies, contaminants, cost, and medicine interactions should be considered.

### **Are Contact Lenses Better Than Glasses?**

Contact lenses provide a wider field of view and may be preferred for sports or appearance, while glasses are easier to maintain and avoid direct corneal infection risk. The better option depends on prescription, eye health, comfort, hygiene, and ability to follow care instructions.

### **Are Contact Lenses Safe?**

Contact lenses are generally safe with proper fitting, hand hygiene, cleaning, replacement, and wear time. Sleeping or swimming in lenses and using contaminated solutions raises the risk of microbial keratitis, which can threaten vision and requires urgent care for pain, redness, or light sensitivity.

### **Are CPAP Machines Worth It**

Continuous positive airway pressure can reduce obstructive sleep-apnea events, improve oxygenation and daytime alertness, and lower some health risks when used consistently. Benefit depends on correct diagnosis, mask fit, comfort, adherence, and follow-up adjustment.

### **Are Dental Implants Worth It**

Dental implants can restore chewing and support a crown, bridge, or denture after tooth loss. Success depends on bone, gums, smoking, diabetes control, oral hygiene, surgical risk, time, and cost; complications include infection, bone loss, nerve injury, and implant failure.

### **Are Dimples Rare?**

Facial dimples are common inherited variations caused by differences in the muscles or connective tissue beneath the skin. They are usually harmless and do not indicate a medical disorder.

---

### **Are Earwigs Harmful To Humans**

Earwigs are not known to crawl into human ears as a normal behavior and are generally harmless. They can pinch defensively, but they do not have venom; a bite or pinch should be cleaned and observed for infection.

### **Are Eggs Bad For Pancreatitis**

Eggs are not automatically prohibited after pancreatitis, but tolerance depends on disease severity and dietary fat. During recovery, clinicians may recommend a gradual return to lower-fat meals; persistent pain, vomiting, or inability to eat needs medical review.

### **Are Eggs Good For An Upset Stomach**

Plain, well-cooked eggs may be tolerated during recovery from some stomach illnesses and provide protein, but they can worsen symptoms for people with particular food intolerance, reflux, gallbladder disease, or infection. Hydration and the underlying cause remain more important than one food.

### **Are Gastric Bypasses Reversible?**

Gastric bypass anatomy can sometimes be revised, but reversal is complex and not routine. It may be considered for serious complications or specific nutritional problems and carries operative risks; long-term dietary and supplement needs continue to require monitoring.

### **Are Ground-Glass Opacities Common**

Ground-glass opacity is a hazy area on chest CT in which vessels remain partly visible. It is a radiologic finding rather than a diagnosis and can reflect infection, inflammation, edema, hemorrhage, fibrosis, or early malignancy; interpretation depends on pattern and clinical context.

### **Are Heated Blankets Bad For You**

Heated blankets are generally safe when used according to instructions, but burns, overheating, fire, and electrical injury can occur. People with reduced sensation, limited mobility, or inability to respond to heat should use extra caution or avoid them.

### **Are Hiccups Good Or Bad**

Hiccups are involuntary diaphragm contractions that are usually brief and harmless. Persistent or recurrent hiccups can result from irritation, medication, metabolic disease, or nervous-system disorders and may interfere with eating, sleeping, or breathing.

### **Are Hives (Urticaria) Contagious**

Alternate index label for Urticaria) Contagious.

### **Are Hives And Rash The Same Thing**

Hives are a specific type of rash consisting of raised, itchy welts that usually move or fade within 24 hours. Other rashes may involve scales, blisters, bruising, or fixed lesions, so appearance and duration help identify the cause.

### **Are Katydid's Dangerous?**

Katydid's are generally harmless insects and do not normally attack people. Contact may cause a minor pinch or local irritation, but severe reactions are unusual; rapidly spreading swelling, breathing trouble, or systemic symptoms need emergency care.

### **Are Loofahs Bad For You?**

Loofahs can harbor bacteria and fungi when kept damp and may irritate or abrade skin. Rinse and dry them thoroughly, replace them regularly, and avoid sharing or using them on broken, infected, or freshly shaved skin.

### **Are Menstrual Cups Bad For You**

Menstrual cups are generally safe when correctly fitted, cleaned, and emptied on schedule. Possible problems include irritation, pain, leakage, difficult removal, and rare toxic shock syndrome; use during an intrauterine-device placement should be discussed with a clinician.

### **Are Pregnancy Pillows Good For Back Pain?**

Pregnancy pillows can support the abdomen, hips, or knees and may improve sleep-related back or pelvic discomfort. They do not treat serious causes of pain; weakness, numbness, fever, bleeding, con-

---

tractions, or severe persistent pain needs obstetric advice.

### **Are Rubella And German Measles The Same Thing**

Rubella and German measles are the same viral infection. It is usually mild in children and adults but can cause miscarriage, fetal death, or congenital rubella syndrome when infection occurs during pregnancy; vaccination prevents it.

### **Are Shirataki Noodles Bad For You?**

Shirataki noodles contain glucomannan fiber and are generally safe in appropriate portions with adequate fluid. Large amounts may cause bloating, diarrhea, choking, or obstruction, and they can affect absorption of medicines if taken too close together.

### **Are Skin Rashes Contagious**

Some rashes spread through infection, while others result from allergy, irritation, inflammation, medication, or internal disease and are not contagious. Fever, rapid spread, mucosal involvement, severe pain, blistering, or breathing symptoms warrants prompt evaluation.

#### **Synonyms:**

Skin Rashes Contagious (Are Skin Rashes Contagious)

### **Are Smelly Farts Healthy? Types Of Farts**

Intestinal gas and odor are normal results of swallowed air and bacterial fermentation of food. A sudden persistent change with weight loss, bleeding, severe pain, vomiting, fever, or altered bowel habits can indicate gastrointestinal disease.

### **Are Strawberries Good For Your Stomach?**

Strawberries provide fiber and vitamin C and are tolerated by many people. Their acidity, seeds, or fermentable carbohydrates can aggravate reflux, allergy, or bowel symptoms in some individuals, so response and portion size matter.

### **Are Warts Caused By Being Dirty**

Warts are caused by infection with human papillomavirus, not by being dirty. The virus enters small breaks in skin and spreads through contact or shared surfaces; hygiene can reduce spread but does not imply blame.

### **Are Warts Contagious?**

Warts can spread through direct contact, shared items, or self-inoculation from one body site to another. Avoid picking them, keep them covered when appropriate, and do not share towels, nail tools, or footwear.

### **Are Widow's Peaks Attractive**

A widow's peak is a V-shaped hairline variant with no established medical significance. Its appearance is a normal trait and does not reliably indicate personality, health, or genetic disease.

### **Are You Too Sick To Work**

Whether illness warrants staying home depends on symptoms, contagiousness, ability to function safely, job demands, and workplace policy. Fever, vomiting, significant diarrhea, uncontrolled respiratory symptoms, or a positive contagious-infection test commonly support staying home and seeking advice.

### **Arrest Cardiac (Sudden Cardiac Death)**

Alternate index label for Sudden Cardiac Death.

### **Arsenic Poisoning**

Arsenic poisoning results from acute or chronic exposure to inorganic or organic arsenic. It can cause gastrointestinal illness, cardiovascular instability, neuropathy, characteristic skin changes, anemia, and increased cancer risk; suspected exposure requires poison-control or emergency guidance.

#### **Synonyms:**

Poisoning Arsenic (Arsenic Poisoning)

### **Arthritis Ankylosing Spondylitis (Ankylosing Spondylitis)**

Alternate index label for Ankylosing Spondylitis.

---

### **Arthritis Degenerative (Osteoarthritis)**

Alternate index label for Osteoarthritis.

### **Arthritis Gout (Gout (Gouty Arthritis))**

Alternate index label for Gout (Gouty Arthritis).

### **Arthritis Infectious (Septic Arthritis)**

Alternate index label for Septic Arthritis.

### **Arthritis Juvenile (Juvenile Arthritis)**

Alternate index label for Juvenile Arthritis.

### **Arthritis Lyme (Lyme Disease)**

Alternate index label for Lyme Disease.

### **Arthritis MCTD (Mixed Connective Tissue Disease)**

Alternate index label for Mixed Connective Tissue Disease.

### **Arthritis Plant Thorn (Plant Thorn Synovitis)**

Alternate index label for Plant Thorn Synovitis.

### **Arthritis Pseudogout (Pseudogout)**

Alternate index label for Pseudogout.

### **Arthritis Psoriatic (Psoriatic Arthritis)**

Alternate index label for Psoriatic Arthritis.

### **Arthritis Quackery (Quackery Arthritis)**

Alternate index label for Quackery Arthritis.

### **Arthritis Reactive (Reactive Arthritis)**

Alternate index label for Reactive Arthritis.

### **Arthritis Reiters (Reactive Arthritis)**

Alternate index label for Reactive Arthritis.

### **Arthritis Sarcoid (Sarcoidosis)**

Alternate index label for Sarcoidosis.

### **Arthritis Scleroderma (Scleroderma)**

Alternate index label for Scleroderma.

### **Arthritis Sjogrens Syndrome (Sjogren's Syndrome)**

Alternate index label for Sjogren's Syndrome.

### **Arthritis SLE (Systemic Lupus)**

Alternate index label for Systemic Lupus.

### **Arthritis Still (Still's Disease)**

Alternate index label for Still's Disease.

### **Asbestos-Related Disorders**

Asbestos exposure can cause pleural plaques, diffuse pleural thickening, asbestosis, lung cancer, and mesothelioma after a long latency. Risk increases with cumulative exposure and smoking, and evaluation may include occupational history, imaging, and lung-function testing.

### **Aspergillus Infection (Aspergillosis)**

Alternate index label for Aspergillosis.

### **Asthma Adult-Onset (Adult-Onset Asthma)**

Alternate index label for Adult-Onset Asthma.

### **Asthma Complexities**

Asthma varies in trigger, severity, airway inflammation, and response to treatment. Difficult-to-control symptoms may reflect poor inhaler technique, ongoing exposure, incorrect diagnosis, comorbid disease, or severe asthma requiring specialist assessment.

### **Asthma Medications**

Asthma medicines include controller treatments that reduce airway inflammation and reliever treatments that quickly relax airway muscle. The regimen is guided by symptom frequency, lung function, exacerbation risk, age, pregnancy, technique, and response.

### **Asthma OTC Medication (Asthma: Over The Counter Treatment)**

Alternate index label for Asthma: Over The Counter Treatment.

---

## **Asthma Overview**

Asthma is a chronic disorder of variable airway inflammation and narrowing that causes wheezing, cough, chest tightness, or breathlessness. Symptoms fluctuate with triggers, and management combines an individualized action plan, inhaled medicines, trigger reduction, and monitoring.

### **Synonyms:**

Bronchial Asthma (Asthma Overview)

## **Asthma Vs. COPD (COPD Vs. Asthma Differences And Similarities)**

Alternate index label for COPD vs. Asthma Differences and Similarities.

## **Asthma: Over The Counter Treatment**

Over-the-counter products do not replace prescription asthma evaluation or a rescue plan. Some may temporarily relieve symptoms but can delay treatment of dangerous airway obstruction; worsening breathlessness, difficulty speaking, cyanosis, or poor response to a reliever is an emergency.

### **Synonyms:**

Asthma OTC Medication (Asthma: Over The Counter Treatment)

## **Astigmatism Overview**

Astigmatism is an irregular curvature of the cornea or lens that prevents light from focusing at one retinal point. It can cause blurred or distorted vision, eyestrain, and headaches and is corrected with glasses, contact lenses, or selected procedures.

## **At What Age Do Late Talkers Talk**

Late talking varies widely, but a child with delayed words, gestures, understanding, or social communication should be assessed rather than watched indefinitely. Hearing testing and developmental evaluation can identify language disorder, autism, hearing loss, or other causes and support early therapy.

## **At What Age Does Gender Identity Develop**

Gender identity is a person's internal sense of gender and develops through a combination of biological,

developmental, and social factors. Children may express a gender identity early, and supportive, non-judgmental care is appropriate regardless of whether identity changes over time.

## **At What Age Is A Parent Not Legally Responsible**

Legal responsibility for a child varies by jurisdiction, age, custody arrangement, and circumstances such as disability or emancipation. Medical consent and financial responsibility may follow different rules, so local legal or social-service advice is needed for a specific case.

## **At What Age Is Co-Sleeping Safe With Your Baby**

The safest sleep arrangement for an infant is a separate, firm, flat sleep surface in the same room as a caregiver, without pillows, loose bedding, or soft objects. Bed-sharing carries increased suffocation and sleep-related death risk, especially for young infants and when adults smoke, drink, or use sedating drugs.

## **At What Age Should You Stop Birth Control?**

Birth control is usually continued until pregnancy is no longer possible, which is commonly around menopause but varies by method and health history. Stopping requires a plan for pregnancy prevention or conception and review of bleeding, migraine, clot, cancer, and medication risks.

## **At What Stage Is CLL Treated?**

Chronic lymphocytic leukemia is often observed when it is asymptomatic and stable. Treatment is generally started for progressive anemia or thrombocytopenia, enlarging disease, significant symptoms, rapid progression, or complications, using blood counts, examination, genetics, and symptoms to guide timing.

## **At What Stage Of Cancer Is Chemotherapy Used**

Chemotherapy may be used before surgery or radiation, after local treatment, as the main treatment for

---

disseminated disease, or for symptom control. The stage and regimen depend on cancer type, molecular features, treatment goals, organ function, and patient preferences.

### **Athletes Foot (Athlete's Foot)**

Alternate index label for Athlete's Foot.

### **Atopic Dermatitis Vs Contact Dermatitis**

Atopic dermatitis is a chronic eczema associated with skin-barrier dysfunction and an atopic tendency, while contact dermatitis follows exposure to an irritant or allergen. Distribution, exposure history, recurrence, and patch testing can help distinguish them; both require skin protection and targeted treatment.

### **Atopic Dermatitis Vs Psoriasis**

Atopic dermatitis commonly causes intensely itchy, poorly defined eczema in flexural areas, while psoriasis produces well-demarcated thicker plaques with silvery scale and may involve nails or extensor surfaces. Overlap occurs, so examination and history guide diagnosis.

### **Atrial Fibrillation (AFib) Warning Symptoms**

Alternate index label for AFib) Warning Symptom.

### **Atrial Fibrillation AFib Treatment Drugs**

Medicines for atrial fibrillation may slow the ventricular rate, restore or maintain rhythm, or reduce stroke risk with anticoagulation. Choice depends on symptoms, heart structure, kidney function, bleeding risk, other diseases, and whether rhythm control is appropriate.

### **Atrial Fibrillation Vs. Atrial Flutter (Atrial Flutter Vs. Atrial Fibrillation)**

Alternate index label for Atrial Flutter vs. Atrial Fibrillation.

### **Atrial Fibrillation Vs. Ventricular Fibrillation**

Atrial fibrillation is a rapid, irregular atrial rhythm

that may allow the ventricles to pump, whereas ventricular fibrillation is chaotic ventricular activity that stops effective circulation. Ventricular fibrillation causes cardiac arrest and requires immediate defibrillation and resuscitation.

### **Atrial Flutter Vs. Atrial Fibrillation**

Atrial flutter usually has a rapid organized atrial circuit with characteristic sawtooth activity, while atrial fibrillation has chaotic atrial activation and an irregular ventricular response. Both can cause palpitations and stroke risk and may require rate control, rhythm treatment, and anticoagulation.

### **Atrophy Vaginal (Vaginal Dryness And Vaginal Atrophy)**

Alternate index label for Vaginal Dryness and Vaginal Atrophy.

### **Attention Deficit Hyperactivity Disorder (Adult ADHD)**

Alternate index label for Adult ADHD.

### **Attention Deficit Hyperactivity Disorder In Teens**

ADHD in teenagers causes persistent inattention, impulsivity, or hyperactivity that interferes with school, relationships, driving, or organization. Assessment includes childhood history and screening for learning disorders, sleep problems, substance use, anxiety, depression, and other conditions.

#### **Synonyms:**

ADHD In Teens (Attention Deficit Hyperactivity Disorder In Teens)

### **Autism And Communication**

Autism can affect social communication, language development, nonverbal interaction, and the use of communication for shared attention or relationships. Individualized speech-language therapy, visual supports, augmentative communication, and respectful environmental accommodations can improve participation.

#### **Synonyms:**

Adults Autism (Autism And Communication) Children Autism (Autism And Communication)

---

### **Autonomic Neuropathy Diabetic (Diabetic Neuropathy)**

Alternate index label for Diabetic Neuropathy.

### **Avascular Necrosis (Aseptic Necrosis)**

Alternate index label for Aseptic Necrosis.

### **Average Life Expectancy After A Liver Transplant?**

Life expectancy after liver transplantation varies with the original disease, recipient health, graft function, rejection, infection, cancer recurrence, and adherence to follow-up. Lifelong immunosuppression, surveillance, preventive care, and management of cardiovascular and metabolic risks are essential.

### **Avian Flu (Avian Influenza (Bird Flu))**

Avian influenza is infection with influenza A viruses adapted primarily to birds. Human infection is uncommon but can be severe after contact with infected birds or mammals; exposure history, respiratory symptoms, and public-health testing guide evaluation and treatment.

### **Avian Influenza (Bird Flu)**

Avian influenza is infection with influenza A viruses adapted primarily to birds. Human infection is uncommon but can be severe after contact with infected birds or mammals; exposure history, respiratory symptoms, and public-health testing guide evaluation and treatment.

### **A (Adenine)**

In genetics, A denotes adenine, a nucleobase that pairs with thymine in DNA and with uracil in RNA.

### **A-T**

A-T is the adenine–thymine base pair in DNA, formed by specific hydrogen bonding between the two complementary bases.

### **A.C.**

A prescription abbreviation meaning “before meals,” from the Latin ante cibum.

### **AAA**

Abdominal aortic aneurysm: an abnormal enlargement or ballooning of the abdominal aorta that can rupture and cause life-threatening internal bleeding.

### **AAAS**

The American Association for the Advancement of Science, a scientific organization that publishes the journal *Science* and supports research and science education.

### **AAD**

The American Academy of Dermatology, a professional organization representing dermatologists and advancing dermatologic care, education, and research.

### **AAO**

An abbreviation that may mean alert and oriented or refer to an ophthalmology, otolaryngology, or orthodontics professional organization; the clinical context determines the intended meaning.

### **AAP**

The American Academy of Pediatrics, a professional organization focused on the health and well-being of infants, children, adolescents, and young adults.

### **Aarskog-Scott Syndrome**

A rare inherited developmental disorder, often related to FGD1 variants, characterized by distinctive facial features, short stature, skeletal differences, and genital anomalies.

### **Aase-Smith Syndrome I**

A rare congenital-malformation syndrome associated with hydrocephalus, cleft palate, severe joint contractures, distinctive hand and facial findings, and sometimes heart defects.

### **Aase-Smith Syndrome II**

A rare inherited disorder characterized by hypoplastic anemia and triphalangeal thumbs, in which the thumbs contain three phalanges rather than the usual two.

---

## **Ab-**

A medical prefix meaning away from, off, or separating from, as in abduction (movement away from the midline) and ablation (removal or destruction of tissue).

## **Abate**

To become less intense or to reduce in severity, frequency, or amount; symptoms, inflammation, pain, or fever may abate.

## **Abatement**

A reduction in the severity, intensity, frequency, or amount of a symptom, disease process, exposure, or other condition.

## **Abdomen, Acute**

Acute abdomen is sudden or severe abdominal pain with possible tenderness, guarding, vomiting, distention, or altered bowel function that may indicate a surgical or other urgent condition.

## **Abdominal**

Relating to the abdomen, the body region between the chest and pelvis that contains organs of the digestive, urinary, and reproductive systems.

## **Abdominal Guarding**

Involuntary or voluntary tensing of the abdominal muscles in response to palpation, often associated with irritation or inflammation of the peritoneum.

## **Abdominal Hysterectomy**

Surgical removal of the uterus through an incision in the abdominal wall; the cervix, ovaries, and fallopian tubes may or may not also be removed.

## **Abducent Nerve**

The sixth cranial nerve, also called the abducens nerve, which supplies the lateral rectus muscle and abducts the eye.

## **Abductor Muscle**

A muscle that moves a body part away from the midline or, for a digit, away from the axis of the

hand or foot.

## **Aberration**

A deviation from normal structure, function, or appearance; in optics, it is an imperfection that prevents light from forming a sharply focused image.

## **Abiotic**

Nonliving; in biology and medicine, the term describes physical or chemical environmental factors rather than living organisms.

## **Abiotrophy**

Progressive degeneration or loss of function in a tissue or organ, often due to an inherited or developmental defect rather than an acquired injury. The process may reflect a genetically determined failure of cellular maintenance, metabolism, or structural integrity. Clinical manifestations vary with the affected organ and can include progressive weakness, sensory loss, ataxia, or organ-specific dysfunction. Diagnosis is guided by the clinical course, examination, laboratory studies, imaging, and genetic or pathologic evaluation when indicated.

## **Ablate**

To remove or destroy tissue, usually by surgery, heat, cold, chemicals, or another energy source.

## **Abortive**

Incomplete, unsuccessful, or stopped before full development; an abortive infection produces limited disease without the usual complete clinical course.

## **Abortive Polio**

A mild, nonparalytic poliovirus infection causing nonspecific fever, sore throat, headache, nausea, or malaise without the neurologic findings of paralytic polio.

## **ABR Test**

Auditory brainstem response testing records electrical activity from the auditory nerve and brainstem through scalp electrodes to assess hearing and auditory-pathway function, especially in infants

---

or people unable to provide reliable behavioral responses.

### **Abrade**

To wear away tissue by friction or erosion; an abrasion is the resulting scrape or superficial loss of skin.

### **Abs**

An informal term for the abdominal muscles, particularly the anterior abdominal-wall muscles.

### **Abscission**

Removal of tissue by cutting it away, as in a surgical procedure.

### **Absence Of The Breast**

Congenital absence of breast development, called amastia; it may affect one or both sides and can occur with other developmental anomalies.

### **Absence Of The Nipple**

Athelia: a rare congenital absence of one or both nipples, which may occur with hereditary disorders, chromosomal abnormalities, or developmental syndromes.

### **Absent Eye**

Anophthalmia, a congenital absence or severe underdevelopment of the eye globe and ocular tissue; it may affect one or both eyes and may occur with other birth defects.

### **Absinthism**

A historical disorder attributed to habitual absinthe abuse, associated with alcohol dependence and reported hallucinations, insomnia, tremor, and seizures; the specific contribution of absinthe constituents was uncertain.

### **Absorb**

To take in a substance, such as through the skin or intestine, or to reduce the intensity of radiation or light by taking up its energy.

### **Abstinence**

Deliberate avoidance of a substance or behavior, especially refraining from alcohol, drugs, tobacco, or sexual activity.

### **AC Joint**

The acromioclavicular joint, a gliding joint between the acromion of the scapula and the clavicle at the top of the shoulder.

### **Acanthamoeba**

A free-living amoeba found in soil and water that can cause keratitis, skin infection, or rarely granulomatous amoebic encephalitis, especially in people with impaired immunity.

### **Acaricide**

A pesticide or other agent used to kill mites and related arachnids such as ticks.

### **ACC**

Adenoid cystic carcinoma, a malignant tumor that most often arises in glandular tissues such as the salivary glands and may grow slowly but invade nerves or recur.

### **Access**

In health care, the opportunity to obtain care; in dialysis, vascular access is the site where a needle or catheter enters the bloodstream.

### **Accessory**

Additional or supplementary; in anatomy, an accessory structure is an extra part or a structure that assists the usual organ or system.

### **Accessory Digestive Organ**

An organ that supports digestion but is not part of the alimentary canal, such as the liver, pancreas, gallbladder, or salivary glands.

### **Accessory Dwelling Unit**

A secondary, independent residential unit on the same property as a primary home; it is a housing and community-health term rather than a disease

---

or body structure.

### **Accessory Placenta**

An extra placental lobe separate from the main placenta but connected to it by fetal blood vessels; it can increase the risk of retained placental tissue or vessel injury during delivery.

### **Acellular**

Lacking cells; an acellular material may consist of extracellular matrix, mineral, fluid, or other components without intact living cells.

### **Acentric Chromosome**

A chromosome fragment that lacks a centromere and therefore usually cannot attach normally to the spindle during cell division.

### **Acetaminophen**

A non-opioid analgesic and antipyretic, also called paracetamol, used to relieve mild-to-moderate pain and reduce fever. It has little clinically useful anti-inflammatory activity. Excessive doses can cause severe, potentially fatal hepatic injury, especially with alcohol misuse, fasting, liver disease, or concurrent use of other acetaminophen-containing products; dosing must therefore follow the product label or a clinician's advice.

### **Acetate**

The salt or ester of acetic acid; acetate is also a two-carbon metabolic substrate that can be converted to acetyl-CoA.

### **Acetylcysteine**

A cysteine derivative used as a mucolytic and as the antidote for acetaminophen poisoning because it replenishes glutathione and helps detoxify its harmful metabolite.

### **ACh (Acetylcholine)**

Acetylcholine, a neurotransmitter released at the neuromuscular junction and in autonomic and central nervous systems; it acts through nicotinic and muscarinic receptors.

### **AChE (Acetylcholinesterase)**

An enzyme that rapidly breaks down acetylcholine into acetate and choline, terminating cholinergic signaling at synapses and neuromuscular junctions.

### **Achillobursitis**

Inflammation of a bursa near the Achilles tendon, causing pain, tenderness, swelling, or friction-related discomfort at the back of the heel.

### **Achoo Syndrome**

The photic sneeze reflex: repeated sneezing triggered by sudden exposure to bright light, especially after entering sunlight from darkness.

### **Acid Indigestion**

Dyspepsia or upper-abdominal discomfort that may include burning, fullness, belching, or nausea; it can accompany reflux, gastritis, ulcer disease, or other conditions.

### **Acidophilus**

*Lactobacillus acidophilus*, a lactic-acid-producing bacterium found in the intestinal and genital microbiota and used in some fermented foods and probiotic products.

### **Acinus, Pulmonary**

The portion of a lung supplied by a terminal bronchiole and containing respiratory bronchioles, alveolar ducts, and alveoli where gas exchange occurs.

### **Acou-**

A medical combining form referring to hearing or sound, as in acoustic nerve, audiology, and acoumeter.

### **Acoustic**

Relating to sound, hearing, or the physical properties and transmission of sound waves.

### **Acquired**

Developed after birth rather than being present at birth or inherited; an acquired condition may result from infection, exposure, injury, aging, or another

---

later event.

### **Acquired Immunity**

Immune protection that develops after infection, vaccination, or transfer of antibodies, involving adaptive immune responses directed toward specific antigens.

### **Acrocentric Chromosome**

A chromosome whose centromere lies close to one end, producing a very short p arm and a longer q arm; human acrocentric chromosomes include 13, 14, 15, 21, and 22.

### **Acrodynia**

A painful condition with red, swollen, sweaty hands and feet, classically associated with mercury poisoning and historically called pink disease in children.

### **Acrophobia**

An excessive, persistent fear of heights that causes marked anxiety, avoidance, or impairment beyond the ordinary caution associated with high places.

### **Actinic**

Relating to ultraviolet radiation from sunlight or UV lamps; chronic actinic exposure can cause sunburn, photoaging, and actinic keratoses.

### **Acu-**

A combining form meaning sharp, pointed, or related to acuity; in medical terms it may refer to sharp sensation or vision, as in acuity, acute, or acupuncture, depending on the word formed.

### **Acute Idiopathic Polyneuritis**

Guillain-Barré syndrome, an acute immune-mediated disorder of peripheral nerves that usually causes progressive symmetric weakness and reduced reflexes and may impair breathing.

### **Acute Illness**

A disease or health problem that begins suddenly or over a short period and generally lasts a limited time, although its severity may range from mild to

life-threatening.

### **Acute Mountain Sickness (AMS)**

A high-altitude illness caused by insufficient acclimatization, typically producing headache with nausea, dizziness, fatigue, or sleep disturbance after ascent.

### **Acute Myocardial Infarction**

Sudden death of heart muscle caused by prolonged inadequate coronary blood flow, usually from an acutely obstructed coronary artery; it is a medical emergency.

### **Acute Thrombocytopenic Purpura**

An acute disorder with a markedly reduced platelet count and bleeding or purpura, historically used for immune thrombocytopenic purpura, often following an infection in children.

### **Acyclovir**

An antiviral drug that inhibits herpesvirus DNA polymerase and is used for infections caused by herpes simplex virus and varicella-zoster virus.

### **Ad Lib**

A prescription or clinical instruction meaning as desired or as tolerated, from the Latin *ad libitum*.

### **Ad-**

A medical prefix meaning toward, to, or near, as in adduction (movement toward the midline) and adrenal (near the kidney).

### **ADA Deficiency**

An inherited lack of adenosine deaminase activity that causes toxic purine metabolites to accumulate and can produce severe combined immunodeficiency affecting both T- and B-cell function.

### **Adamantine**

Hard or resembling diamond; in dentistry, adamantine refers to enamel or enamel-like tissue.

### **ADCC (Antibody-Dependent**

---

### **Cell-Mediated Cytotox.)**

Antibody-dependent cellular cytotoxicity, in which immune effector cells such as natural killer cells recognize antibodies attached to a target cell and destroy it.

### **ADD (Attention Deficit Disorder)**

An older term for attention-deficit disorder, now generally classified within attention-deficit/hyperactivity disorder, especially presentations dominated by inattention.

### **Addison Anemia**

An older name for pernicious anemia, a vitamin B12-deficiency megaloblastic anemia caused by inadequate intrinsic factor and impaired B12 absorption.

### **Addisonian Anemia**

Another historical term for pernicious anemia, in which autoimmune loss of gastric parietal-cell function or intrinsic factor causes vitamin B12 deficiency.

### **Additive Genetic Effects**

The contributions of individual alleles that combine approximately additively to influence a measurable trait, without requiring interaction between those alleles.

### **Adductor Muscle**

A muscle that moves a body part toward the body's midline or, for a digit, toward the axis of the hand or foot.

### **Aden-**

A combining form meaning gland or glandular tissue, as in adenitis and adenoma.

### **Adeno-**

A combining form referring to a gland or glandular tissue, as in adenovirus, adenoid, and adenocarcinoma.

### **Adenoiditis**

Inflammation or infection of the adenoids, the pha-

ryngeal tonsil behind the nose, which may cause nasal obstruction, mouth breathing, snoring, or ear problems.

### **Adenopathy**

Disease or enlargement of a gland, most often used for lymph-node enlargement or abnormal lymph-node involvement.

### **Adenosine**

A purine nucleoside made of adenine linked to ribose; it participates in cellular energy transfer and signaling and can transiently slow atrioventricular-node conduction when given medically.

### **Adenosine Deaminase (ADA) Deficiency**

An inherited purine-metabolism disorder in which toxic deoxyadenosine metabolites accumulate and damage lymphocytes, commonly causing severe combined immunodeficiency.

### **ADHD (Attention Deficit Hyperactivity Disorder)**

A neurodevelopmental disorder involving persistent inattention and/or hyperactivity-impulsivity that begins in childhood and impairs functioning in more than one setting.

### **ADI**

Acceptable daily intake: the estimated amount of a substance that can be consumed every day over a lifetime without appreciable health risk, based on available evidence and safety factors.

### **Adipose**

Relating to body fat or composed of adipose tissue, which stores energy and also functions as an endocrine and immune-active organ.

### **Adiposity**

The amount or distribution of body fat; excess adiposity is associated with increased risk of metabolic, cardiovascular, and mechanical disease.

---

## Adjacent

Next to, close to, or sharing a boundary with another structure, tissue, organ, or lesion.

## Adjuvant

An added treatment or substance that enhances the effect of a primary treatment; in vaccines, an adjuvant strengthens the immune response to an antigen.

## ADLs (Activities Of Daily Living)

Basic self-care activities such as bathing, dressing, toileting, transferring, eating, and maintaining continence; ADL ability is used to assess functional independence.

## Admission

The process of accepting a patient into a hospital or other facility for evaluation, treatment, monitoring, or care.

## Adrenal Failure

Inadequate production of adrenal hormones, especially cortisol and sometimes aldosterone; severe acute deficiency can cause adrenal crisis with hypotension and shock.

## Adrenaline

Epinephrine, a hormone and neurotransmitter released during stress that increases heart rate and contractility, constricts some blood vessels, and relaxes bronchial muscle.

## ADU

Accessory dwelling unit, a secondary independent residential unit located on the same property as a primary home.

## Adult Primary Liver Cancer

Cancer that begins in the liver of an adult, most commonly hepatocellular carcinoma or intrahepatic cholangiocarcinoma, rather than cancer that has spread to the liver from another organ.

## Advance Directives

Written instructions about a person's future medical-care preferences and/or designation of a health-care proxy if the person later cannot make or communicate decisions.

## Adventitious

Abnormal, unexpected, or arising from an unusual location or process; adventitious lung sounds include crackles, wheezes, and other added breath sounds.

## Adverse Effect

An unintended and harmful or bothersome effect of a medicine or other treatment given at normal doses or for an intended purpose.

## Aer-, Aero-

A combining form meaning air or gas, as in aerobic, aerosol, and aerophagia.

## Aerophobia

An excessive fear of flying or air travel that causes significant anxiety, avoidance, or impairment.

## Aerotitis

Ear pain or middle-ear injury caused by failure to equalize pressure during rapid changes in altitude, such as during aircraft ascent or descent.

## Aesculapius

The Roman name for Asclepius, the Greek god of healing; the name is associated with medicine and the rod-and-serpent medical symbol.

## Aetiology

The cause or causes of a disease, injury, symptom, or other medical condition; also spelled etiology.

## Affect

The observable expression of a person's emotional state, including facial expression, voice, posture, and emotional responsiveness.

## Afferent

Carrying signals toward a central organ or structure;

---

afferent nerves transmit sensory information from the body toward the brain and spinal cord.

### **Affinity**

The strength of attraction or binding between two molecules, such as an antibody and antigen, receptor and ligand, or enzyme and substrate.

### **AFIP**

The Armed Forces Institute of Pathology, a former United States institution known for consultation, education, and research in diagnostic pathology.

### **AFO (Ankle-Foot Orthosis)**

A brace that supports the ankle and foot, helps control alignment and motion, and may improve walking in people with weakness, spasticity, instability, or foot drop.

### **Afterbirth**

The placenta and fetal membranes expelled from the uterus after delivery of the baby.

### **Age By Decade**

Classification of a person's age into ten-year groups, such as the twenties, thirties, or seventies, for demographic description or analysis.

### **Agent, Tocolytic**

A medicine that reduces uterine contractions, used selectively to delay preterm birth long enough for corticosteroids, transfer, or other preparations to take effect.

### **Aggressive**

Characterized by forceful or hostile behavior, or by rapid growth and invasive or destructive clinical behavior, depending on context.

### **Agita**

An informal term for heartburn, indigestion, or an uneasy feeling of stomach discomfort; its meaning can vary by region and context.

### **Ague**

A fever, often associated with malaria, marked by recurrent episodes of chills, fever, and sweating; the term can also mean a fit of shivering.

### **Agyrophobia**

An excessive, persistent fear of crossing streets, highways, or other thoroughfares, causing anxiety or avoidance despite limited objective danger.

### **AHD**

An abbreviation that may mean alveolar hydatid disease, American Hospital Directory, or atherosclerotic heart disease; the clinical context determines the meaning.

### **AID (Artificial Insemination By Donor)**

Intrauterine insemination using sperm from a donor other than the intended mother's partner to attempt fertilization and pregnancy.

### **AIH (Artificial Insemination By Husband)**

Intrauterine insemination using sperm from the woman's male partner; it is also called homologous insemination.

### **Air Bag**

An inflatable vehicle safety device that rapidly deploys during a collision to reduce impact with the steering wheel, dashboard, or window; it supplements seat belts.

### **Air-Conditioner Lung**

Hypersensitivity pneumonitis caused by inhaled mold, fungus, or other contaminants from air-conditioning or humidifying systems.

### **AK**

Actinic keratosis, a rough, scaly precancerous skin lesion caused by chronic ultraviolet exposure.

### **AKA (Above The Knee Amputation)**

Amputation of the lower limb through the thigh above the knee joint, usually performed for severe

---

vascular disease, infection, trauma, or cancer.

### **Akinetic**

Characterized by little or no voluntary movement; akinesia may result from neurologic disease, medication effects, or severe motor impairment.

### **ALA**

An abbreviation for alpha-linolenic acid, an essential omega-3 fatty acid, or aminolevulinic acid, a heme-pathway compound used topically in some photodynamic treatments; context determines the meaning.

### **Alb-**

A prefix derived from the Latin *albus*, meaning white, as in albino and albinism.

### **Albinism, Oculocutaneous**

An inherited disorder of melanin production affecting the skin, hair, and eyes, often causing light sensitivity, nystagmus, reduced visual acuity, and increased sun sensitivity.

### **Albino**

A person or animal with albinism; person-first language such as “person with albinism” is generally preferred.

### **Albumen**

The white of an egg, composed largely of water and proteins; it is distinct from albumin, the major protein in blood plasma.

### **Alembic**

A distillation apparatus historically used in chemistry and laboratory work to separate or purify substances by differences in volatility.

### **Algia**

A word ending meaning pain, as in neuralgia, myalgia, and arthralgia.

### **Alimentary**

Relating to food, nourishment, or the organs and

processes of digestion.

### **Alkaloid**

A naturally occurring nitrogen-containing organic compound, often produced by plants, with potentially potent physiologic or pharmacologic effects.

### **Allelic**

Relating to an allele, one of two or more alternative forms of a gene at a particular genomic location.

### **Allergic Contact Dermatitis**

A delayed, T-cell-mediated skin reaction after contact with a substance to which the person has become sensitized, causing itching, redness, swelling, and sometimes blisters or scaling.

### **Allogeneic**

Derived from a genetically different individual of the same species, as in an allogeneic blood, tissue, stem-cell, or organ transplant.

### **Allopathic Medicine**

A historical term commonly used for conventional, evidence-based medical practice; it is not a precise scientific classification and may be used differently by different groups.

### **Allopathy**

A historical label for conventional medical treatment, often contrasted with homeopathy; modern clinical practice is more accurately described by its specific methods and evidence.

### **Alongshan Virus (ALSV)**

A tick-associated segmented RNA virus reported to cause a febrile illness, often with headache, fatigue, nausea, or neurologic symptoms; its epidemiology and clinical significance remain under study.

### **Alprazolam**

A short- to intermediate-acting benzodiazepine used mainly for anxiety and panic disorder; it can cause sedation, dependence, withdrawal, and dangerous respiratory depression with opioids or other depres-

---

sants.

### **ALT (Alanine Aminotransferase)**

An enzyme concentrated in liver cells; an increased blood ALT level may indicate hepatocellular injury but must be interpreted with other tests and clinical findings.

### **Alternative Medicine**

A nonconventional health practice used instead of standard medical treatment; evidence, safety, and interactions vary widely, and replacing effective care can be harmful.

### **Altitude Sickness**

Illness caused by rapid ascent to high altitude without adequate acclimatization, ranging from acute mountain sickness to life-threatening pulmonary or cerebral edema.

### **Alveolar**

Relating to an alveolus, especially one of the tiny air sacs in the lungs where oxygen and carbon dioxide are exchanged.

### **Alveolar Hydatid Disease**

A serious parasitic infection caused by the larval stage of *Echinococcus multilocularis*, usually producing an infiltrative, tumor-like lesion in the liver that can spread to other organs.

### **Alveolitis**

Inflammation of the pulmonary alveoli, usually causing cough and breathlessness, or inflammation of a tooth socket after extraction, called alveolar osteitis or dry socket; the organ involved distinguishes the two meanings.

### **Amastia**

Congenital absence of one or both breasts, sometimes accompanied by absence of the nipple or pectoral muscles and other developmental anomalies.

### **Amathophobia**

An excessive or persistent fear of dust that causes

significant anxiety, avoidance, or impairment.

### **Ambidextrous**

Able to use the right and left hands with approximately equal skill or preference.

### **Ambient**

Surrounding or present in the immediate environment, as in ambient temperature, light, noise, or air.

### **AMC (Arthrogryposis Multiplex Congenita)**

A group of congenital conditions characterized by multiple joint contractures present at birth, often with muscle weakness or abnormal development of nerves, muscles, or connective tissue.

### **Amelioration**

Improvement or reduction in the severity of a symptom, disease, impairment, or other adverse condition.

### **American Academy Of Pediatrics**

A professional organization of pediatricians that promotes the health and well-being of infants, children, adolescents, and young adults through clinical guidance, education, advocacy, and research.

### **American Dental Association (ADA)**

A professional organization representing dentistry and supporting oral-health education, standards, advocacy, and practice resources in the United States.

### **AMI**

Acute myocardial infarction, the sudden death of heart muscle caused by prolonged inadequate coronary blood flow.

### **Amino Acid Symbols**

Standard one-letter and three-letter abbreviations used to identify the 20 common protein-building amino acids in biochemical and genetic notation.

---

### **Aminotransferase**

An enzyme that transfers an amino group between an amino acid and an alpha-keto acid; clinically measured examples include ALT and AST.

### **Amitriptyline**

A tricyclic antidepressant that affects serotonin and norepinephrine signaling and is also used for selected chronic pain, migraine-prevention, and sleep-related indications.

### **AML**

Acute myeloid leukemia, an aggressive cancer of immature myeloid blood-cell precursors that crowds the bone marrow and impairs normal blood-cell production.

### **Amok**

A historical culture-related term for a sudden episode of uncontrolled, often violent behavior followed by exhaustion or amnesia; modern assessment considers psychiatric, neurologic, substance-related, and cultural factors.

### **Amphetamine**

A central nervous system stimulant that increases catecholamine signaling and is used in selected attention-deficit/hyperactivity and sleep disorders; misuse can cause dependence and cardiovascular or psychiatric harm.

### **Ampulla**

A widened portion of a tubular structure, such as the ampulla of the bile and pancreatic ducts or the ampulla of a fallopian tube.

### **Amusia**

An acquired or developmental inability to perceive, recognize, produce, or understand music despite otherwise adequate hearing and language ability.

### **Amygdaloid Nucleus**

A group of nuclei in the medial temporal lobe involved in processing emotional significance, fear responses, learning, memory, and autonomic re-

sponses.

### **Amyl-**

A combining form referring to starch or a starch-like substance, as in amylase and amyloid.

### **Amylo-**

A combining form referring to starch-like material or amyloid protein deposits.

### **An-**

A prefix meaning without, lacking, or not, as in anoxia, anesthesia, and anencephaly.

### **ANA**

Antinuclear antibody, an autoantibody directed against components of cell nuclei; ANA testing can support evaluation of autoimmune disease but is not diagnostic by itself.

### **Anaesthesia**

Reversible loss of sensation, with or without loss of consciousness, produced by medicines or other techniques; also spelled anesthesia.

### **Anal Papilla**

A small normal projection of mucosa at the anal canal's dentate line, where columnar and squamous epithelium meet.

### **Anal Papillae**

Multiple small mucosal projections at the dentate line of the anal canal; they are usually normal but may become enlarged or symptomatic.

### **Analog**

A structure, substance, or process that resembles another and performs a similar function but is not necessarily chemically or structurally identical.

### **Analogous**

Similar in function or purpose to another structure or process, despite having a different origin or structure.

---

## **Analysis**

Systematic examination or interpretation of a specimen, measurement, dataset, symptom pattern, or clinical problem.

## **Anaphia**

Loss or absence of the sense of touch or tactile sensation.

## **Anaphylactoid Purpura**

An older term for IgA vasculitis, an immune-mediated small-vessel vasculitis causing palpable purpura, often with joint, abdominal, or kidney involvement.

## **Anaptic**

Lacking a normal sense of touch or tactile sensation; the term is rarely used in modern clinical writing.

## **Anastrozole**

An aromatase inhibitor that lowers estrogen production and is used mainly in hormone-receptor-positive breast cancer, particularly after menopause.

## **Anatomic Orientation Terms**

Standard words used to describe the position and relationships of body structures, including superior, inferior, anterior, posterior, medial, lateral, proximal, distal, superficial, and deep.

## **Anatomy, Gross**

The study of body structures visible without a microscope, including organs, regions, bones, muscles, vessels, and their relationships.

## **ANC**

Absolute neutrophil count, the number of circulating neutrophils in a blood sample; a low ANC indicates increased risk of bacterial and fungal infection.

## **Androgenic**

Relating to androgens or producing masculine sexual development and other androgen-mediated effects.

## **Android Pelvis**

A relatively heart-shaped or funnel-shaped pelvic configuration with a narrower midpelvis, which may increase the risk of obstructed labor compared with a gynecoid pelvis.

## **Anemic**

Having anemia, meaning reduced red-cell mass or hemoglobin and therefore reduced blood oxygen-carrying capacity.

## **Anger**

An emotional response involving displeasure or perceived threat, ranging from mild irritation to intense hostility; persistent or harmful anger may require clinical assessment.

## **Angiogram**

An image of blood vessels, usually obtained after contrast material is injected, used to identify narrowing, blockage, aneurysm, malformation, or bleeding.

## **Angioneurotic Edema, Hereditary**

Hereditary angioedema, an inherited bradykinin-mediated disorder causing recurrent swelling of the skin, gastrointestinal tract, or airway, usually without hives.

## **Angiopathy**

Disease or abnormality of blood vessels, including changes caused by diabetes, inflammation, atherosclerosis, trauma, or inherited disorders.

## **Angiotensin**

A family of peptides in the renin–angiotensin system that regulate blood pressure and fluid balance, with angiotensin II causing vasoconstriction and stimulating aldosterone release.

## **Angiotensin Converting Enzyme**

An enzyme that converts angiotensin I to vasoconstricting angiotensin II and also breaks down bradykinin; it is inhibited by ACE-inhibitor medicines.

---

### **Angiotensin Receptor Blocker**

A medicine that blocks angiotensin II at the AT1 receptor, reducing vasoconstriction and aldosterone effects; it is used for hypertension, heart failure, and selected kidney disease.

### **Angle-Closure Glaucoma**

Glaucoma caused by narrowing or closure of the drainage angle, which can abruptly raise eye pressure and threaten vision; acute attacks require emergency treatment.

### **Anion**

Anion is an ion with a net negative electrical charge, such as chloride, bicarbonate, or phosphate in body fluids.

### **Aniso-**

A combining form meaning unequal or unequal in size, number, or degree.

### **Anisometropia**

A difference in the refractive power of the two eyes, which can cause unequal image focus, blurred vision, or amblyopia.

### **Ankle Bone**

A bone forming the ankle joint, especially the talus or the distal tibia and fibula that form the ankle mortise.

### **Ankylose**

To become stiff or immobile at a joint, sometimes because the joint surfaces become fused.

### **Ankylosing**

Causing or involving progressive stiffness and fixation of a joint, often through fibrous or bony fusion.

### **Annulus**

A ring-shaped structure or band; examples include the annulus fibrosus around an intervertebral disk and the fibrous rings around heart valves.

### **Anogenital Tract**

The connected anatomic region comprising the anus, perianal tissues, genital structures, and related mucosal surfaces.

### **Anomaly**

A deviation from the usual structure, development, function, or measurement of the body; it may be harmless or clinically significant.

### **Anorgasm**

Inability to achieve orgasm despite adequate sexual stimulation; possible contributors include medications, hormonal or neurologic disorders, psychological factors, and relationship difficulties.

### **Antagonist**

A substance, drug, muscle, or other factor that opposes or blocks the action of another; a receptor antagonist binds without activating the receptor.

### **Antegrade**

Moving or occurring in the normal forward direction of flow or conduction, such as blood flow away from the heart or electrical conduction through the usual pathway.

### **Anterior Cruciate Ligament**

A strong ligament inside the knee that runs from the femur to the tibia and limits forward movement and rotation of the tibia.

### **Antero-**

A combining form meaning anterior or toward the front.

### **Anterolisthesis**

Forward displacement of one vertebral body relative to the vertebra below it, usually in the spine.

### **Anteroposterior**

Directed from front to back; an anteroposterior radiographic view passes through the body from the anterior surface toward the posterior surface.

---

### **Anteroposterior (AP)**

Directed from the front of the body toward the back; an AP radiograph is made with the X-ray beam entering anteriorly and exiting posteriorly.

### **Anti-**

A prefix meaning against, opposed to, or preventing a specified process or condition.

### **Anti-Infective**

A medicine or other agent used to prevent or treat infection caused by microorganisms, including bacteria, viruses, fungi, or parasites.

### **Antibacterial**

Destroying bacteria or inhibiting their growth; the term may describe a drug, disinfectant, surface treatment, or immune defense.

### **Anticholinergic**

Blocking the effects of acetylcholine, commonly at muscarinic receptors; these drugs can reduce secretions and smooth-muscle activity but may cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

### **Anticoagulant Agent**

A drug that reduces blood clot formation by interfering with the coagulation cascade; examples include heparin, warfarin, and direct oral anticoagulants.

### **Antidepressants**

Medicines used mainly to treat depressive disorders; different classes alter serotonin, norepinephrine, dopamine, or other signaling and may also treat anxiety, pain, or related conditions.

### **Antidiabetic Agent**

A medicine that lowers blood glucose or improves glucose regulation in diabetes, such as insulin, metformin, sulfonylureas, or GLP-1 receptor agonists.

### **Antidiuretic Hormone (ADH)**

Vasopressin, a hormone released from the posterior pituitary that increases water reabsorption in the

kidney and, at higher concentrations, constricts blood vessels.

### **Antiestrogen**

A drug that blocks estrogen effects or reduces estrogen production; it may be used in hormone-sensitive breast cancer or to alter reproductive hormone signaling.

### **Antifungal Agent**

A drug or chemical that kills fungi or inhibits their growth, used to treat fungal infections of the skin, mucosa, or internal organs.

### **Antifungal Medication**

A medicine used to treat fungal infection; the choice and route depend on the organism and site, and examples include azoles, terbinafine, polyenes, and echinocandins.

### **Antihistamines**

Medicines that block histamine receptors; H1 antihistamines relieve allergy symptoms and some cause sedation, while H2 antihistamines reduce gastric acid secretion.

### **Antimalarial**

A drug used to prevent or treat malaria caused by Plasmodium parasites; selection depends on species, disease severity, resistance, and geographic exposure.

### **Antimetabolite**

A compound resembling a substance needed for metabolism or DNA synthesis that disrupts cellular processes; many antimetabolites are used as anticancer or immunosuppressive drugs.

### **Antimicrobial Agent**

A substance that kills microorganisms or inhibits their growth, including antibacterial, antiviral, antifungal, and antiparasitic agents.

### **Antimicrobial Drug**

A medicine used to treat infection by bacteria,

---

viruses, fungi, or parasites; the drug is selected according to the organism, infection site, and patient factors.

### **Antimony**

A metallic chemical element whose compounds can be toxic; selected antimony compounds, such as the pentavalent agents, have been used to treat leishmaniasis.

### **Antiprotozoal**

Destroying protozoa or inhibiting their growth; antiprotozoal medicines treat infections such as malaria, giardiasis, or amoebiasis.

### **Antiprotozoal Drug**

A medicine used to prevent or treat disease caused by protozoa, including drugs directed against malaria, intestinal protozoa, or tissue parasites.

### **Antiretroviral**

Active against retroviruses; antiretroviral medicines inhibit different stages of HIV replication and are generally used in combination therapy.

### **Antithyroid Drug**

A medicine that reduces thyroid hormone production or release, used to treat hyperthyroidism; examples include methimazole, propylthiouracil, and radioactive iodine.

### **Antrum**

A cavity or chamber in an organ, especially the lower part of the stomach near the pylorus or the air-filled maxillary sinus.

### **AOA**

An abbreviation commonly used for the American Optometric Association; in other clinical contexts it may have a different expansion.

### **Aortal**

Relating to the aorta, the large artery that carries blood from the left ventricle to the systemic circulation.

### **Aortic**

Relating to the aorta, the main artery carrying blood from the heart to the body.

### **AP**

An abbreviation commonly meaning anteroposterior, or directed from front to back; in some contexts it may have another medical expansion.

### **AP, X-Ray**

An anteroposterior radiographic projection in which the X-ray beam travels from the front of the body toward the back.

### **APA**

An abbreviation for American Psychiatric Association, American Psychological Association, or American Podiatry Association; it can also mean antiphospholipid antibody or alkaline phosphatase activity.

### **APC**

An abbreviation that may refer to an antigen-presenting cell, an argon plasma coagulation procedure, or another context-specific medical term.

### **APC (Immunology)**

Antigen-presenting cell, an immune cell that processes antigens and displays peptide fragments on major histocompatibility complex molecules to activate T cells.

### **APC (Medication)**

A combination of aspirin, phenacetin, and caffeine; phenacetin-containing APC products were associated with kidney injury and are no longer widely used.

### **APECED (Autoimmune Polyendocrinopathy)**

An inherited autoimmune syndrome, also called autoimmune polyendocrine syndrome type 1, characterized by chronic mucocutaneous candidiasis, hypoparathyroidism, adrenal insufficiency, and other autoimmune disorders.

---

## **Apex**

The tip or pointed end of a structure; examples include the apex of the heart, formed mainly by the left ventricle, and the upper tip of a lung.

## **Aphasia**

Loss or impairment of the ability to speak, often used as an older or less precise term related to aphasia.

## **Apical**

Relating to or located at the apex, or tip, of a structure such as the lung, heart, or tooth.

## **APLS (Antiphospholipid Antibody Syndrome)**

An autoimmune disorder in which antiphospholipid antibodies are associated with abnormal blood clotting, recurrent pregnancy loss, thrombocytopenia, and sometimes migraine or heart-valve abnormalities.

## **Apneic**

Relating to or characterized by apnea, meaning a temporary cessation of breathing.

## **Apophenia**

The perception of meaningful patterns or connections in unrelated or random events; marked apophenia may occur in some psychiatric or neurologic conditions.

## **Appendiceal**

Relating to the vermiform appendix, a narrow pouch projecting from the beginning of the large intestine.

## **Appendiceal Cancer**

A malignant tumor arising in the appendix; types include neuroendocrine tumors and epithelial neoplasms, which can rupture or spread mucus-producing tumor cells within the abdomen.

## **Appendiceal Rupture**

Tearing or perforation of an inflamed appendix, allowing intestinal contents to enter the abdomen and

potentially causing peritonitis or an abscess.

## **Apposition**

Placement of two structures next to or against each other; in wound care, good apposition means that tissue edges are accurately aligned.

## **APS (Autoimmune Polyglandular Syndrome)**

A group of disorders in which autoimmune disease affects multiple endocrine glands; manifestations vary by type and may include adrenal insufficiency, hypoparathyroidism, and thyroid disease.

## **Aquaporin**

A membrane water-channel protein that permits rapid movement of water across cells; aquaporin-2 in kidney collecting ducts is regulated by vasopressin.

## **ARD**

An abbreviation that may mean acute respiratory disease or acute respiratory distress; the precise expansion depends on the clinical context.

## **Arm**

The upper limb between the shoulder and elbow; in everyday use, the term may also include the entire upper extremity.

## **Aromatase**

An enzyme that converts androgens into estrogens in tissues such as the ovaries, adipose tissue, and breast; it is inhibited by drugs such as anastrozole.

## **Aromatherapy**

Use of essential oils or other plant-derived scents, usually by inhalation or topical application, for perceived relaxation or symptom relief; evidence and safety vary by oil and use.

## **Arrector Pili**

A small involuntary smooth muscle attached to a hair follicle that contracts to raise the hair and produce gooseflesh.

---

## **Arsenic**

A naturally occurring metalloid that is toxic in many forms; exposure can cause gastrointestinal, neurologic, cardiovascular, and skin effects, while arsenic trioxide has specific therapeutic uses.

## **ART (Antiretroviral Therapy)**

Combination treatment with antiretroviral medicines that suppress HIV replication, preserve immune function, and reduce the risk of HIV transmission and disease progression.

## **Artemisinin**

A plant-derived antimalarial compound from *Artemisia annua*; artemisinin derivatives are used in combination regimens, especially for falciparum malaria.

## **Arteria Femoralis**

The femoral artery, the major artery of the thigh and continuation of the external iliac artery below the inguinal ligament.

## **Arterial Blood Gas (ABG)**

A test of arterial blood that measures pH, oxygen, carbon dioxide, and usually bicarbonate or related values to assess oxygenation, ventilation, and acid-base balance.

## **Arterial Tension**

The pressure or partial pressure measured in arterial blood; depending on context, it may refer to blood pressure or to the tension of an arterial gas such as oxygen or carbon dioxide.

## **Arteriosclerotic Retinopathy**

Retinal vascular changes associated with thickening or hardening of small arteries, often occurring with chronic hypertension or atherosclerotic disease.

## **Arteriovenous Malformation (AVM)**

An abnormal tangle of arteries and veins connected without the normal capillary bed; an AVM can bleed, cause seizures or neurologic symptoms, or produce high-flow complications.

## **Arthro-**

A combining form meaning joint.

## **Arthrogram**

An image of a joint obtained after contrast material is introduced into or around the joint, used to evaluate structures such as cartilage, ligaments, or the joint capsule.

## **Arthrosis**

Degenerative disease of a joint, characterized by progressive cartilage loss and changes in the underlying bone; osteoarthritis is the most common example.

## **Articulation**

A joint or connection between bones; the term also refers to the production and clarity of speech sounds by the vocal organs.

## **Artificial Abortion**

An induced termination of pregnancy using medication, a procedure, or both, rather than a spontaneous miscarriage.

## **Artificial Insemination By Husband (AIH)**

Placement of sperm from a woman's husband or male partner into her reproductive tract to achieve pregnancy, usually by intrauterine insemination.

## **ASA (Drug Caution Code)**

A medication caution code indicating that a product contains acetylsalicylic acid, or aspirin.

## **Ascorbic Acid**

Vitamin C, a water-soluble vitamin needed for collagen formation, wound healing, antioxidant activity, and normal immune and connective-tissue function.

## **Ascus**

An abbreviation for atypical squamous cells of undetermined significance, a Pap-test finding in which cervical squamous cells are abnormal but not clearly precancerous.

---

### **Aseptic**

Free from disease-causing microorganisms, or performed using methods intended to prevent microbial contamination; it does not necessarily mean sterile.

### **ASL**

American Sign Language, a visual language used by many Deaf and hard-of-hearing people.

### **ASOT**

Antistreptolysin O titer, a blood test measuring antibodies to streptolysin O produced by group A *Streptococcus*.

### **Asp**

The standard amino-acid abbreviation for aspartic acid, an acidic amino acid incorporated into proteins and involved in cellular metabolism.

### **Aspartame**

A low-calorie artificial sweetener made from two amino-acid components; people with phenylketonuria must avoid it because it provides phenylalanine.

### **Aspartate Aminotransferase (AST)**

An enzyme found mainly in the liver, heart, and skeletal muscle; increased blood AST can indicate injury to these tissues, especially liver injury.

### **Aspirate**

To withdraw fluid, cells, or tissue with suction, usually through a needle; to aspirate can also mean to inhale material into the airway.

### **Aspirin**

Acetylsalicylic acid, a salicylate that relieves pain and fever, reduces inflammation, and irreversibly inhibits platelet aggregation; it can cause gastrointestinal bleeding and is generally avoided in children with viral illness.

### **Association**

A relationship or co-occurrence between two variables, findings, or conditions; association alone does

not prove that one causes the other.

### **Asthenic**

Characterized by reduced strength or a slender, lightly built body habitus; in clinical descriptions it may refer to physical weakness or, less precisely, an asthenic constitution and should be distinguished from asthenia as a symptom.

### **Athelia**

Congenital or acquired absence of one or both nipples.

### **Atherosclerotic**

Relating to atherosclerosis, the buildup of lipid-rich plaque and fibrous tissue in arterial walls that can narrow arteries or promote thrombosis.

### **Atlas And Axis Joint**

The atlantoaxial joint between the first cervical vertebra, the atlas, and the second, the axis; it permits much of the head's rotation.

### **ATM**

An abbreviation that may mean the temporomandibular joint or ataxia-telangiectasia mutated, a protein kinase involved in DNA-damage repair; context determines the meaning.

### **Atom**

The smallest unit of an element that retains that element's chemical properties, consisting of a nucleus surrounded by electrons.

### **Atonic**

Lacking normal muscle tone or contractile strength; an atonic bladder, for example, does not contract effectively to empty urine.

### **Atopic**

Relating to an inherited or acquired tendency to develop allergic reactions such as eczema, allergic rhinitis, or asthma.

---

## **ATP**

Adenosine triphosphate, the principal energy-transfer molecule in cells; hydrolysis of its phosphate bonds powers many cellular processes.

## **Atresia**

Congenital absence, closure, or severe narrowing of a normal body opening or passage, such as the intestinal, biliary, or pulmonary outflow tract.

## **Atria**

The two upper chambers of the heart, which receive blood from the systemic and pulmonary veins and pass it to the ventricles.

## **Atrial**

Relating to an atrium, especially one of the two upper chambers of the heart.

## **Atrial Fib**

Atrial fibrillation, an irregular and often rapid atrial rhythm that can reduce coordinated heart contraction and increase the risk of blood clots and stroke.

## **Atrial Septum**

The wall separating the right and left atria; an atrial septal defect is an abnormal opening in this wall.

## **Atrioventricular (AV)**

Relating to an atrium and ventricle, especially the atrioventricular valves or the conduction system connecting the atria and ventricles.

## **Atropine**

An anticholinergic drug that blocks muscarinic acetylcholine receptors; it can increase heart rate, reduce secretions, dilate the pupils, and treat selected poisonings or bradycardia.

## **Attention**

The ability to select, focus on, and sustain mental processing of relevant information while limiting distraction.

## **Attention Deficit Disorder (ADD)**

An older term for a condition now generally included under attention-deficit/hyperactivity disorder, especially a presentation dominated by persistent inattention that interferes with daily functioning.

## **Attenuated**

Weakened or reduced in force, severity, concentration, or biological activity; an attenuated vaccine contains a weakened form of a microorganism.

## **Atypical**

Not typical of the usual appearance, behavior, structure, or course of a condition; atypical does not by itself indicate whether a finding is benign or malignant.

## **Atypical Measles Syndrome (AMS)**

A rare severe illness formerly reported after exposure to measles virus in people who had received an inactivated measles vaccine; it can cause unusual rash, high fever, and pneumonia.

## **Auditory Acuity**

The sensitivity or sharpness of hearing, commonly assessed by determining the softest sounds a person can detect at different frequencies.

## **Auditory Perception**

The brain's process of detecting, recognizing, and interpreting sounds received through the auditory system.

## **Autistic Savant**

A person with autism who has an unusually advanced, specific ability—such as in music, art, calculation, or memory—relative to overall functioning.

## **Autoimmune**

Relating to an immune response directed against the body's own cells, tissues, or molecules.

## **Autoimmunity**

An immune response against self-antigens; it can be harmless or can cause autoimmune disease when it

---

damages tissues or disrupts their function.

### **Autologous**

Derived from or involving the same individual who will receive it, such as an autologous blood transfusion or stem-cell transplant.

### **Autolysis**

Self-digestion of cells or tissues by their own enzymes, commonly occurring after cell death and contributing to decomposition.

### **Automated External Defibrillator**

A portable device that analyzes heart rhythm and delivers an electrical shock when it detects a shockable cardiac arrest rhythm such as ventricular fibrillation.

### **Autonomy, Patient**

A patient's right and capacity to make informed, voluntary decisions about medical care, including accepting or refusing treatment.

### **Autophobia**

An excessive or irrational fear of being alone; it may occur as a specific phobia or alongside other anxiety conditions.

### **AV (Atrioventricular)**

An abbreviation for atrioventricular, relating to an atrium and ventricle or to the conduction pathway between them.

### **Avuncular**

Relating to an uncle or resembling the kindly, familiar manner traditionally associated with an uncle.

### **Axial Tomography, Computerized**

Computed tomography, or CT, an imaging method that uses X-rays and computer processing to create cross-sectional images of the body.

### **Ayurveda**

A traditional system of medicine from India that emphasizes balance among bodily principles and uses

individualized diet, lifestyle practices, and herbal or other treatments.

### **Arteries**

Blood vessels that carry blood away from the heart. Most arteries carry oxygenated blood, except the pulmonary and umbilical arteries; their walls contain elastic tissue and smooth muscle to withstand and regulate pressure.

#### **Synonyms:**

arterial vessels

### **ABO Blood Types**

The major blood-group system based on the presence or absence of A and B antigens on red blood cells and corresponding antibodies in plasma.

### **Atopic Dermatitis (Eczema)**

A chronic inflammatory skin condition causing itchy, dry, irritated, or rash-covered skin, often associated with an atopic tendency.

#### **Synonyms:**

Dermatitis, Atopic

### **Actinic Keratosis (Solar Keratosis)**

A rough, scaly precancerous skin lesion caused by long-term ultraviolet exposure and capable of progressing to squamous cell carcinoma.

#### **Synonyms:**

Solar Keratosis

### **Adolescent Obesity**

Obesity during adolescence, assessed using age- and sex-specific growth charts rather than adult BMI thresholds alone. It may affect metabolic, cardiovascular, orthopedic, and psychological health.

### **A & E Medicine**

Accident and emergency medicine provides rapid assessment, stabilization, diagnosis, and initial treatment for acute illness, injury, and other urgent conditions.

### **Abdomen, Diseases Of**

Diseases of the abdomen affect abdominal organs,

---

blood vessels, lining, or abdominal wall and may cause pain, vomiting, altered bowel function, bleeding, or distention.

### **Abduct**

To abduct a limb or body part is to move it away from the body's midline; the opposite movement is adduction.

### **ABO Blood Groups**

The ABO blood-group system classifies red cells by A and B antigens and plasma antibodies; compatibility is essential for safe transfusion and transplantation.

### **ABO System**

The major red-cell blood-group system based on whether A and/or B antigens are present on the red-cell surface and the corresponding antibodies are present in plasma. The four principal phenotypes are A, B, AB, and O; correct ABO matching is critical for safe transfusion.

### **Abreaction**

Abreaction is the expression and re-experiencing of intense emotion linked to a distressing memory; it is a historical psychological term and is not itself a diagnosis.

### **Abruptio Placenta**

Abruptio placenta, more commonly called placental abruption, is premature separation of the placenta from the uterine wall before delivery, which can cause maternal bleeding and fetal compromise.

### **Abstract**

In medical literature, an abstract is a brief summary of a study or report describing its purpose, methods, main results, and conclusions.

### **Acarus**

Acarus is a mite genus; mites and related arthropods can cause skin infestation, allergy, or occupational exposure depending on the species.

### **Accident And Emergency Medicine**

Accident and emergency medicine is the specialty concerned with immediate evaluation and treatment of acute illness, injury, poisoning, and life-threatening emergencies.

### **Accouchement**

Accouchement is the process of childbirth, including labor, delivery of the infant, and expulsion of the placenta.

### **Accretion**

Accretion is gradual accumulation or growth of material; in medicine it may describe deposits such as dental calculus or mineral buildup around a lesion or device.

### **Acebutolol**

Acebutolol is a beta-adrenergic blocker with intrinsic sympathomimetic activity used in some settings for hypertension and cardiac rhythm disorders; it can slow heart rate and conduction.

### **Acetazolamide**

Acetazolamide inhibits carbonic anhydrase and promotes bicarbonate loss in urine; it is used for glaucoma, altitude illness, selected edema, and some acid-base or neurologic disorders.

### **Acetylsalicyclic Acid**

Acetylsalicyclic acid is the commonly misspelled name for acetylsalicylic acid, or aspirin, a salicylate that reduces pain, fever, and inflammation and inhibits platelet aggregation.

### **Achalasia Of The Cardia**

Achalasia of the cardia is failure of the lower esophageal sphincter to relax with loss of esophageal peristalsis, causing progressive swallowing difficulty, regurgitation, and food retention.

### **Achromia**

Achromia is loss or marked reduction of pigment in skin, hair, eye, or another tissue; causes include genetic disorders, autoimmune depigmentation, injury,

---

and chemical exposure.

### **Aciclovir**

Aciclovir, also called acyclovir, is an antiviral drug that inhibits herpesvirus DNA polymerase and is used for infections such as herpes simplex and varicella-zoster.

### **Aciduria**

Aciduria means an abnormally acidic urine or the presence of excess organic acids in urine; it may reflect diet, dehydration, medication, or an inherited metabolic disorder.

### **Acinus**

An acinus is a small functional secretory unit of a gland, such as a pancreatic or salivary acinus, whose cells release their product into a duct.

### **Acne Rosacea**

Acne rosacea is a chronic inflammatory facial skin disorder causing flushing, persistent redness, visible vessels, papules, pustules, or eye symptoms; it is distinct from acne vulgaris.

### **Acro-**

Acro- is a medical word element meaning extremity, tip, or highest part, as in acromegaly and acrocyanosis.

### **Acroparaesthesia**

Acroparaesthesia is tingling, pins-and-needles, burning, or altered sensation in the hands or feet, commonly related to nerve compression, neuropathy, vascular disease, or metabolic causes.

### **ACTH (Adrenocorticotrophic Hormone)**

ACTH is a pituitary hormone that stimulates the adrenal cortex to produce cortisol and some adrenal androgens; testing helps evaluate pituitary and adrenal disorders.

### **Actinomycin D**

Actinomycin D, or dactinomycin, is an antineoplastic antibiotic that blocks DNA-dependent RNA syn-

thesis and is used for selected cancers; myelosuppression and tissue injury are important risks.

### **Acute Life-Threatening Event (ALTE)**

ALTE is an older term for an unexpected infant event involving altered breathing, color, tone, or responsiveness; current practice generally uses the more specific term brief resolved unexplained event (BRUE).

### **Acute Respiratory Distress Syndrome (ARDS)**

ARDS is acute inflammatory lung injury causing severe hypoxemia and diffuse pulmonary opacities that are not fully explained by heart failure or fluid overload.

### **Adactyly**

Adactyly is congenital absence of one or more fingers or toes, ranging from loss of a digit to more extensive limb malformation.

### **Adaptation**

Adaptation is the adjustment of a cell, organism, or person to a changing internal or external condition; in medicine it may involve physiologic compensation, behavior, or rehabilitation.

### **Adduct**

To adduct a limb or body part is to move it toward the body's midline; the opposite movement is abduction.

### **Adenolipoma**

An adenolipoma is a usually benign tumor containing both glandular tissue and mature fatty tissue.

### **Adenomatosis**

Adenomatosis is the presence of multiple adenomas or diffuse adenomatous overgrowth in an organ or tissue; its implications depend on the site and underlying syndrome.

### **Adenosine Triphosphate (ATP)**

ATP is the cell's principal immediately usable en-

---

ergy carrier; hydrolysis of its high-energy phosphate bonds powers transport, movement, synthesis, and signaling.

### **Adenoviruses**

Adenoviruses are non-enveloped DNA viruses that can cause respiratory, eye, gastrointestinal, urinary, or other infections, usually self-limited but sometimes severe in vulnerable people.

### **Adiposis Dolorosa**

Adiposis dolorosa, or Dercum disease, is a rare disorder characterized by painful fatty deposits, often with obesity, fatigue, and other systemic symptoms.

### **Adoption**

In healthcare and genetics, adoption may be relevant to family history, consent, psychosocial care, and assessment when biological family information is unavailable or differs from the caregiving family.

### **Adrenocorticotrophic Hormone (ACTH)**

Adrenocorticotrophic hormone, or ACTH, is released by the pituitary and stimulates the adrenal cortex, especially cortisol production; abnormal levels help localize endocrine disease.

### **Advance Statements About Medical Treatment**

Advance statements about medical treatment record a person's preferences, values, and wishes for future care if illness later prevents effective communication; legal status varies by jurisdiction.

### **Adverse Reactions To Drugs**

Adverse drug reactions are harmful, unintended responses to medicines taken at normal doses, ranging from predictable side effects to allergic, organ-toxic, or idiosyncratic reactions.

### **AëDes Aegypti**

Aëdes aegypti, now usually written Aedes aegypti, is a mosquito that transmits dengue, yellow fever, chikungunya, Zika, and other viruses.

### **Aegophony**

Aegophony is an altered “E” sound heard through a stethoscope as an “A,” classically suggesting lung consolidation or fluid-related change when present over the chest.

### **Aerobic Bacterium**

An aerobic bacterium grows using oxygen, although some species can tolerate or use alternative metabolic pathways; oxygen requirements help guide culture and infection assessment.

### **Afibrinogenaemia**

Afibrinogenaemia is severe or complete deficiency of fibrinogen, an essential clotting protein, causing a bleeding tendency; it is usually inherited but may be acquired.

### **Agammaglobulinaemia**

Agammaglobulinaemia is profound deficiency of immunoglobulins and mature B cells, leading to recurrent bacterial infections; X-linked disease is a classic form.

### **Ageing**

Ageing is the progressive biological and functional change over time, including altered repair, immunity, metabolism, organ reserve, and susceptibility to disease.

### **Agglutinin**

An agglutinin is an antigen, often on a red blood cell, that can trigger production of a corresponding agglutinin and cause visible cell clumping in a compatible reaction.

### **AI**

In medicine, AI means artificial intelligence: computer methods that analyze data or recognize patterns to support research, diagnosis, prediction, treatment, or clinical workflow; they require validation and oversight.

### **Air Passages**

The air passages are the conducting airways from

---

the nose and mouth through the pharynx, larynx, trachea, bronchi, and bronchioles; obstruction can impair ventilation.

### **Air-Sickness**

Air-sickness is motion sickness triggered by aircraft movement or conflicting visual and vestibular signals, causing nausea, dizziness, sweating, and sometimes vomiting.

### **Alastrim**

Alastrim is a historical name for a generally milder form of smallpox, caused by variola minor; smallpox has been eradicated worldwide.

### **Albendazole**

Albendazole is a benzimidazole antiparasitic drug that disrupts parasite microtubules and is used for several intestinal and tissue helminth infections.

### **Albumins**

Albumins are water-soluble proteins, especially serum albumin made by the liver, that maintain oncotic pressure and transport hormones, fatty acids, drugs, and other substances.

### **Alcuronium**

Alcuronium is a nondepolarizing neuromuscular-blocking drug that causes skeletal-muscle paralysis during anesthesia; it requires airway and respiratory support.

### **Alfacalcidol**

Alfacalcidol is a vitamin-D analogue converted in the liver to an active form that increases calcium and phosphate absorption and is used in selected bone and mineral disorders.

### **Alglucerase**

Alglucerase is a modified form of the lysosomal enzyme glucocerebrosidase formerly used as enzyme-replacement therapy for Gaucher disease; newer preparations are more commonly used.

### **Algorithm**

A medical algorithm is a defined sequence of rules or calculations used to support diagnosis, risk assessment, treatment, triage, or data analysis; it does not replace clinical judgment.

### **Alimentary Canal**

The alimentary canal is the continuous digestive tube from mouth to anus, including the pharynx, esophagus, stomach, small intestine, and large intestine.

### **Alkali**

An alkali is a basic substance that accepts hydrogen ions or produces hydroxide in solution; caustic alkalis can cause severe chemical burns, while controlled bases have medical and laboratory uses.

### **Alkaloids**

Alkaloids are nitrogen-containing plant or microbial compounds with diverse biologic effects; examples include morphine, quinine, nicotine, and atropine.

### **Alkylating Agents**

Alkylating agents are drugs or chemicals that add alkyl groups to DNA or other molecules; anticancer agents exploit this to inhibit replication, while normal-tissue toxicity includes myelosuppression and mutagenic risk.

### **Allantoin**

Allantoin is a compound used in some topical products for its skin-protective, moisturizing, and keratolytic properties; formulation and indication determine its clinical role.

### **Allantois**

The allantois is an embryonic membrane involved in early waste handling, blood-vessel development, and formation of structures related to the umbilicus and urinary bladder.

### **Azotaemia**

Azotaemia is excess nitrogen-containing waste, especially urea and creatinine, in the blood, usually

---

reflecting reduced kidney filtration, increased production, or altered renal blood flow.

### **Acute Decompensated Heart Failure**

A rapid onset or worsening of heart-failure symptoms and signs caused by increased cardiac filling pressures and/or inadequate cardiac output. It commonly presents with breathlessness, pulmonary or systemic congestion, edema, or fatigue and requires prompt assessment for precipitating causes and urgent treatment when respiratory failure, hypotension, or organ dysfunction is present.

### **ANOCA**

Angina with non-obstructive coronary arteries: angina symptoms without a flow-limiting obstructive stenosis in the epicardial coronary arteries. Causes may include coronary microvascular dysfunction or vasospastic angina, and further evaluation can help identify the mechanism.

### **Appendageal**

Relating to skin appendages or structures derived from the skin, including hair follicles, sweat glands, and sebaceous glands.

### **Arciform**

Having a curved or arch-like shape, used to describe the configuration of a skin lesion, rash, or other anatomical finding.

### **Asymmetrical**

Unequal in shape, size, distribution, or appearance between corresponding sides; asymmetry of a pigmented lesion can be a warning feature requiring assessment.

### **Acute Febrile Illness (AFI)**

A sudden illness characterized by fever, often with headache, chills, muscle aches, gastrointestinal symptoms, or other signs of infection; the cause may be infectious or noninfectious.

### **Asymptomatic Carrier**

A person who harbors a pathogen and can poten-

tially transmit it despite having no symptoms of the associated infection.

### **Autosomal Recessive Polycystic Kidney Disease**

An inherited cystic kidney disorder, usually presenting in infancy or childhood, caused by pathogenic variants commonly affecting PKHD1; it may cause enlarged echogenic kidneys, impaired kidney function, liver fibrosis, and hypertension.

#### **Synonyms:**

ARPKD

### **ARPKD**

Alternate index label; see *Autosomal Recessive Polycystic Kidney Disease*.

### **ADPKD**

Alternate index label; see *Autosomal dominant polycystic kidney disease*.

### **AKI**

Alternate index label; see *Acute Kidney Injury*.

### **Autosomal Recessive Disorders**

Disorders caused when a person inherits pathogenic variants in both copies of a gene, usually one from each parent; carriers with one altered copy are often unaffected.

### **Acute Exacerbation**

A rapid worsening of a chronic pulmonary condition, with increased breathlessness, cough, oxygen need, or other symptoms; infection, aspiration, embolism, and other triggers may contribute.

### **Amplified Musculoskeletal Pain Syndrome**

A chronic pain condition, often beginning in childhood or adolescence, in which pain is unusually intense or widespread and may be accompanied by sensitivity, fatigue, or functional limitation despite no single structural explanation; it is also called AMPS.

---

### **Axial Spondyloarthritis**

An inflammatory rheumatic disease primarily affecting the sacroiliac joints and spine, causing chronic inflammatory back pain and stiffness; it includes radiographic and non-radiographic forms.

### **Advanced Sleep-Wake Phase Disorder**

A circadian rhythm sleep-wake disorder in which a person becomes sleepy and falls asleep earlier than desired and wakes earlier than desired; symptoms persist despite an opportunity for a preferred schedule.

### **Arousal Index**

The number of brief awakenings or arousals from sleep per hour of sleep, usually measured during polysomnography; an elevated value may indicate sleep fragmentation.

### **Anticholinergic Toxidrome**

A poisoning pattern caused by blockade of muscarinic acetylcholine receptors, commonly producing dry skin and mouth, dilated pupils, rapid heart rate, urinary retention, reduced bowel sounds, overheating, agitation, or delirium.

### **Augmentation Mammoplasty**

Surgical enlargement of the breasts using implants or, in selected procedures, transferred fat; risks, expected results, and suitability depend on anatomy and the chosen technique.

### **Atypical Fibroxanthoma**

A superficial, usually low-grade malignant fibrohistiocytic tumor of sun-damaged skin in older adults; it may resemble squamous-cell carcinoma or melanoma and is treated by complete excision.

### **Atypical Spitz Nevus**

A melanocytic proliferation with Spitz-like features and atypia that may resemble melanoma; diagnosis relies on clinicopathologic correlation and, when needed, expert histopathologic review.

### **Adenomyoepithelioma Of The Breast**

A rare biphasic breast tumor composed of proliferating epithelial and myoepithelial cells. Most are benign, but local recurrence and malignant transformation can occur, so complete excision is usually recommended.

### **Angiosarcoma Of The Breast**

A malignant vascular tumor of the breast that may arise primarily or, more rarely, after radiation or chronic lymphoedema. It often presents as an enlarging mass or bruise-like skin discoloration and requires oncologic management.

### **Appendiceal Adenocarcinoma**

A malignant gland-forming epithelial tumor of the appendix. It may present with appendicitis or be discovered incidentally, and its management depends on histologic type, grade, invasion, and peritoneal spread.

### **Anal Intraepithelial Neoplasia**

A premalignant squamous lesion of the anal canal or perianal skin, usually related to persistent high-risk HPV infection. It ranges from low- to high-grade disease and may progress to anal squamous cell carcinoma.

### **Anal Condyloma**

A benign wart-like squamous lesion of the anus or perianal skin, usually caused by low-risk HPV types. Multiple or recurrent lesions may coexist with high-grade intraepithelial neoplasia.

### **Angiosarcoma Of The Heart**

A rare aggressive primary cardiac sarcoma, most often arising in the right atrium and potentially causing obstruction, pericardial effusion, arrhythmia, or metastases. Diagnosis requires imaging and tissue evaluation.

### **Aggressive Angiomyxoma**

A locally infiltrative, usually slow-growing mesenchymal tumor of the pelvis and perineum, predominantly affecting reproductive-age women. It may be mistaken for a Bartholin cyst and has a tendency

---

to recur.

### **Angiomyofibroblastoma**

A benign mesenchymal tumor of the vulvovaginal region, usually presenting as a small, well-circumscribed painless mass in reproductive-age or middle-aged women.

### **Adenoid Cystic Carcinoma Of The Vulva**

A rare malignant tumor of vulvar Bartholin-type glands, often causing pain because of perineural invasion. It is usually slow-growing but may recur locally or metastasize after long intervals.

### **Adenocarcinoma Of The Vulva, Clear Cell Type**

A rare vulvar glandular carcinoma with clear-cell morphology that may arise from Müllerian-type or other specialized vulvar glands; diagnosis requires immunohistochemical and clinical correlation.

### **Acute Coronary Syndromes**

A spectrum of acute myocardial ischemia comprising unstable angina, non-ST-elevation myocardial infarction, and ST-elevation myocardial infarction, usually caused by acute coronary plaque disruption and thrombosis.

### **Adolescent Medicine**

A medical specialty focused on the physical, mental, reproductive, and social health needs of adolescents and young adults, including prevention, risk behavior, chronic disease, and confidentiality-sensitive care.

### **Aesthetic Medicine**

Medical care intended to improve appearance or reduce visible signs of aging through procedures, devices, medicines, or skin care; appropriate assessment includes risks, contraindications, and realistic expectations.

### **Age-Related Macular Degeneration And Retinal Disease**

Age-related macular degeneration is a degenerative

disease of the macula causing central-vision loss; retinal diseases also include vascular, inflammatory, inherited, and tractional disorders requiring ophthalmic evaluation.

### **Alveolar Rhabdomyosarcoma**

A malignant small-round-cell tumor showing skeletal-muscle differentiation, usually arising in the extremities, trunk, or head and neck of children and adolescents. It may disseminate early through lymphatic and hematogenous routes and often carries characteristic PAX3-FOXO1 or PAX7-FOXO1 fusions. Diagnosis requires biopsy with immunophenotyping and molecular testing, followed by staging for local and distant disease. Treatment is multimodal and commonly includes systemic chemotherapy with surgery and/or radiotherapy according to risk group.

### **Ampullary Carcinoma**

A malignant epithelial tumor arising in or around the ampulla of Vater, where the bile duct and pancreatic duct enter the duodenum. It commonly presents with obstructive jaundice, abnormal liver tests, pancreatitis, or gastrointestinal bleeding. Histologic subtype and local extension influence prognosis, staging, and treatment selection. Diagnosis uses endoscopy, cross-sectional imaging, and tissue sampling, with surgery considered for resectable disease.

### **Aplastic Crisis**

An abrupt temporary cessation of red-cell production causing a rapid fall in hemoglobin and reticulocyte count. It most often follows Parvovirus B19 infection in people with shortened red-cell survival, such as those with sickle-cell disease or hereditary spherocytosis. Symptoms may include pallor, fatigue, tachycardia, and worsening anemia without the usual increase in reticulocytes. Diagnosis relies on blood counts, reticulocyte measurement, and targeted viral testing; treatment is supportive and directed at the underlying disorder.

### **Asymptomatic Adults**

Adults who report no symptoms attributable to the

---

condition or disease being assessed. Asymptomatic status does not exclude subclinical disease, risk factors, or early pathology. Evaluation may involve history, examination, screening tests, or targeted investigations according to age, risk, and clinical guidelines. The term is used in screening, preventive medicine, epidemiology, and studies of disease detected before symptoms develop.

## B

### B Cell (B Lymphocyte)

A key cellular component of adaptive humoral immunity that matures in the bone marrow. Upon antigen recognition via B-cell receptor (BCR/surface IgM) and T-cell help (CD40/CD40L interaction), B cells proliferate and differentiate into antibody-secreting plasma cells and long-lived memory B cells.

#### Synonyms:

B Lymphocyte

### B Chromosome

A supernumerary chromosome that is not part of the standard chromosome complement and is not required for normal development. It may occur in certain plants, animals, or tumors and varies in number between cells.

### B-Cell Receptor

The membrane-bound immunoglobulin complex on a B lymphocyte that recognizes native antigen. BCR signaling, with appropriate co-stimulation, promotes B-cell activation, proliferation, differentiation, and antibody production.

### B-Lynch Suture

A surgical technique for controlling postpartum hemorrhage due to uterine atony unresponsive to medical management. A compressive suture placed around the uterus to mechanically compress the uterine walls and reduce blood flow. The suture creates a brace-like effect. Can be combined with other compression sutures (Cho, Hayman).

### Babesiosis

A tick-borne infection caused by *Babesia* parasites, commonly *B. microti* in the United States

and *B. divergens* in Europe. The parasites infect red blood cells and can cause fever, fatigue, haemolytic anaemia, thrombocytopenia, jaundice, and haemoglobinuria; severe disease is more likely in people without a spleen or with impaired immunity.

### Babinski Reflex

An extensor plantar response present from birth to approximately 2 years. When the lateral sole is stroked, the great toe dorsiflexes and other toes fan outward. Disappears as the corticospinal tract myelinates. Persistence beyond age 2 may indicate neurologic abnormality.

### Babinski Sign

The Babinski sign is a pathological reflex elicited by stroking the lateral aspect of the sole of the foot from the heel to the metatarsal heads with a blunt object. A normal response (flexor plantar response) is plantar flexion (curling downward) of all toes.

### Bacillary Angiomatosis

A vascular proliferative disease caused by *Bartonella henselae* or *B. quintana*, occurring in immunocompromised patients (HIV/AIDS, transplant). Presents with erythematous papules, nodules, or pedunculated lesions resembling Kaposi sarcoma or pyogenic granuloma. Can involve skin, liver (peliosis hepatis), spleen, bone, and lymph nodes.

### Bacilluria

The presence of bacilli in the urine, usually referring to rod-shaped bacteria detected by microscopy or culture. Its clinical significance depends on symptoms, quantitative culture, and the organism identified.

---

## Back Injury

Damage to the muscles, ligaments, joints, discs, vertebrae, or nerves of the back caused by trauma, lifting, or repetitive strain. Pain and stiffness are common; weakness, numbness, loss of bladder or bowel control, or severe pain after major trauma requires urgent assessment.

## Back Pain

One of the most common medical complaints, affecting up to 80 percent of the population at some point in life, and the leading cause of disability worldwide. Back pain is classified by duration: acute (less than 4 weeks), subacute (4-12 weeks), and chronic (greater than 12 weeks).

### Synonyms:

Pain, Back

## Backache

Pain or discomfort located anywhere in the posterior trunk from neck to buttocks, a symptom rather than a disease. Causes include musculoskeletal strain (most common), disc herniation, spinal stenosis, facet arthropathy, sacroiliac joint dysfunction, and referred pain from renal, pancreatic, or vascular sources.

## Bacteremia

The presence of viable bacteria in the bloodstream, a serious condition that can be transient (after dental procedures, toothbrushing), intermittent (undrained abscess), or continuous (endovascular infection like endocarditis). Bacteremia triggers systemic inflammatory responses ranging from fever and leukocytosis to septic shock.

## Bacteria

Single-celled microscopic organisms lacking a nucleus, which can exist independently or in colonies; some are beneficial to health (microbiome) while others cause infectious disease.

## Bacterial Adherence

The process by which bacteria attach to host cell surfaces, a critical first step in colonisation and infection. Adherence is mediated by adhesins, which

are surface structures that bind to specific receptors on host cells. Adhesins include pili, fimbriae, outer membrane proteins, and capsules.

## Bacterial Biofilms

Structured communities of bacteria attached to surfaces and embedded in a self-produced matrix of extracellular polymeric substances. Biofilms are a major cause of chronic infections, particularly on medical devices including catheters, prosthetic joints, and heart valves.

## Bacterial Capsule

A polysaccharide layer surrounding the bacterial cell wall that protects against phagocytosis and complement-mediated killing. Capsules are major virulence factors for many pathogens including *Streptococcus pneumoniae*, *Haemophilus influenzae*, and *Klebsiella pneumoniae*.

## Bacterial Cell Wall

The rigid outer layer of bacteria that provides structural integrity and determines cell shape. The cell wall is composed primarily of peptidoglycan, a polymer of sugars cross-linked by short peptides.

## Bacterial Classification

The organisation of bacteria into taxonomic groups based on genetic, phenotypic, and evolutionary relationships. Bacteria are classified using a hierarchical system: domain, phylum, class, order, family, genus, and species.

## Bacterial Conjugation

The transfer of genetic material between bacteria through direct cell-to-cell contact via a pilus. Conjugation is mediated by conjugative plasmids that encode the genes for transfer. The donor cell (F+) forms a conjugative pilus that attaches to the recipient cell (F-).

## Bacterial Conjunctivitis

An infection of the conjunctival mucous membrane caused by various bacterial pathogens, presenting with a purulent or mucopurulent discharge that causes the eyelids to become matted together, par-

---

ticularly upon waking, conjunctival injection, and a gritty or foreign body sensation.

### **Bacterial Dermatitis**

Inflammation of the skin caused by bacterial infection, typically presenting with erythema, edema, warmth, pain, and purulent discharge. Common causative organisms include *Staphylococcus aureus* and *Streptococcus pyogenes*, and the condition may arise de novo or as a superinfection of pre-existing dermatitis.

### **Bacterial Dormancy**

A state of reduced metabolic activity that allows bacteria to survive unfavourable conditions. Dormant forms include spores, persisters, and viable but non-culturable cells. Spores are highly resistant structures formed by *Bacillus* and *Clostridium*. Persisters are phenotypic variants that are tolerant to antibiotics.

### **Bacterial Endocarditis**

Infection of the heart's inner lining or valves by bacteria, usually producing fever and a new or changing heart murmur. It can cause valve damage and embolic complications.

### **Bacterial Endocarditis Vegetations**

Vegetations in bacterial endocarditis are complex masses composed of bacteria, fibrin, and platelets that form on heart valve surfaces or endocardium. The pathogenesis begins with bacteremia seeding a site of endothelial damage or a previously abnormal valve surface.

### **Bacterial Endospores**

Highly resistant dormant structures formed by certain gram-positive bacteria including *Bacillus* and *Clostridium* species. Endospores form during nutrient deprivation and can survive for decades. They are resistant to heat, radiation, chemicals, and desiccation.

### **Bacterial Flagella**

Thread-like appendages composed of flagellin protein that provide motility to bacteria. Flagella are

composed of three parts: the filament, hook, and basal body. The basal body is embedded in the cell wall and functions as a rotary motor.

### **Bacterial Gastroenteritis**

Acute inflammation of the stomach and intestines caused by pathogenic bacteria such as *Salmonella*, *Campylobacter*, *Shigella*, or pathogenic *Escherichia coli*. It commonly causes diarrhea, abdominal cramps, fever, and sometimes bloody stools or vomiting.

### **Bacterial Genetics**

The study of genes and genetic processes in bacteria. Bacteria have a single circular chromosome and may contain plasmids, which are extrachromosomal DNA elements. Bacterial genes are organized into operons, which are clusters of genes regulated as a unit.

### **Bacterial Growth Phases**

The stages of bacterial growth in culture. The lag phase is when bacteria adapt to their environment. The log (exponential) phase is when bacteria multiply at their maximum rate. The stationary phase is when nutrient depletion and waste accumulation limit growth. The death phase is when bacteria die.

### **Bacterial Infections**

Illnesses caused by pathogenic bacteria proliferating in the body, ranging from mild sore throats and ear infections to life-threatening sepsis and meningitis. They are diagnosed through cultures, PCR testing, or other microbiological methods.

### **Bacterial Meningitis**

Infection of the meninges by bacteria, a medical emergency. In neonates: Group B *Streptococcus*, *E. coli*, *Listeria*. In older children: *Neisseria meningitidis*, *Streptococcus pneumoniae*. Presents with fever, headache, neck stiffness, altered consciousness, and Kernig/Brudzinski signs.

### **Bacterial Metabolism**

The chemical processes that occur within bacteria to maintain life. Bacteria have diverse metabolic

---

capabilities including aerobic and anaerobic respiration, fermentation, and photosynthesis. Metabolic pathways are targets for antimicrobial drugs.

### **Bacterial Morphology**

The shape and arrangement of bacteria as observed under microscopy. Basic shapes include cocci (spheres), bacilli (rods), and spirilla (spirals). Cocci can be arranged in pairs (diplococci), chains (streptococci), clusters (staphylococci), or tetrads. Bacilli can be single, paired, or arranged in chains.

### **Bacterial Overgrowth**

Excessive proliferation of bacteria in the small intestine, commonly called small-intestinal bacterial overgrowth. It may result from impaired intestinal motility, anatomical stasis, blind loops, strictures, diverticula, or loss of the normal ileocaecal barrier.

#### **Synonyms:**

small-intestinal bacterial overgrowth.

### **Bacterial Pathogenesis**

The mechanisms by which bacteria cause disease. Pathogenesis involves adhesion, invasion, toxin production, and immune evasion. Adhesins mediate attachment to host cells. Invasins allow penetration of tissues. Toxins damage host cells.

### **Bacterial Pili**

Hair-like appendages on the bacterial surface composed of pilin protein. Pili are shorter and thicker than flagella. Type I pili mediate adherence to host cells and are important virulence factors. Type IV pili are involved in twitching motility and DNA uptake during transformation.

### **Bacterial Pneumonia**

Infection of the lung tissue by bacteria, causing inflammation and air-space filling. It may cause fever, cough, sputum, chest pain, and shortness of breath.

### **Bacterial Spore**

A metabolically dormant, highly resistant structure produced by certain bacteria, notably *Bacillus* and *Clostridioides* species, in response to environmental

stress. Spores resist desiccation, heat, and many disinfectants and require validated sterilization for reliable destruction.

### **Bacterial Toxins**

Substances produced by bacteria that cause damage to host cells. There are two major categories: exotoxins and endotoxins. Exotoxins are proteins secreted by bacteria that have specific toxic effects. Endotoxins are lipopolysaccharide components of gram-negative bacterial outer membranes released during cell lysis.

### **Bacterial Tracheitis**

Bacterial infection and inflammation of the trachea, often causing fever, a harsh cough, noisy breathing, and potentially rapid airway obstruction.

### **Bacterial Transduction**

The transfer of bacterial DNA from one bacterium to another through bacteriophages (bacterial viruses).

### **Bacterial Transformation**

The uptake of free DNA from the environment by competent bacteria. Transformation occurs naturally in some bacterial species including *Streptococcus pneumoniae*, *Haemophilus influenzae*, and *Neisseria*. Competence is the ability to take up DNA and is regulated by specific genes.

### **Bacterial Vaginosis**

BV: replacement of normal vaginal lactobacilli by an overgrowth of mixed anaerobes (*Gardnerella vaginalis*, *Mobiluncus*, etc.), the most common cause of vaginal discharge in reproductive-age women. Risk: new/multiple partners, douching, smoking.

### **Bacterial Virulence Factors**

Molecules produced by bacteria that contribute to their ability to cause disease. Virulence factors include adhesins, invasins, toxins, capsules, and enzymes. Adhesins mediate attachment to host cells. Toxins damage host cells directly. Capsules protect against phagocytosis.

---

## **Bactericide**

An agent that kills bacteria rather than merely inhibiting their growth (bacteriostatic). Bactericidal antibiotics include beta-lactams (penicillins, cephalosporins, carbapenems), aminoglycosides, fluoroquinolones, metronidazole, and vancomycin.

## **Bacteriology**

The branch of microbiology concerned with the study of bacteria, including their morphology, genetics, physiology, ecology, and clinical significance.

## **Bacteriophage**

A virus that infects and replicates within bacteria.

## **Bacteriophage Therapy**

The investigational use of bacteriophages, viruses that infect bacteria, to treat selected bacterial infections. Their activity is usually limited to susceptible bacterial strains.

## **Bacterium**

A unicellular prokaryote lacking a nucleus and membrane-bound organelles, possessing a single circular chromosome and typically a peptidoglycan cell wall.

## **Bacteriuria**

The presence of bacteria in urine, detected by urinalysis or culture. It may occur with urinary symptoms, as in a urinary-tract infection, or without symptoms, as in asymptomatic bacteriuria; interpretation depends on specimen quality, bacterial quantity, patient context, and the presence of inflammation or symptoms.

## **Bag-Mask Ventilation**

Manual ventilation of a non-breathing or inadequately breathing patient using a self-inflating bag (AMBU) attached to a mask sealed over the face. Effective technique: correct mask size, jaw thrust/head extension, two-person technique (two-hand seal), adequate tidal volumes with ETCO<sub>2</sub> monitoring.

## **Bagassosis**

An occupational hypersensitivity pneumonitis (extrinsic allergic alveolitis) caused by inhalation of dust from moldy bagasse—the fibrous residue of sugarcane after extraction. Caused by thermophilic actinomycetes (*Saccharopolyspora rectivirgula*) that colonize stored bagasse.

## **Bainbridge Reflex**

An increase in heart rate produced by stretch of the atrial walls, especially during increased venous return. The reflex helps limit venous congestion by adjusting cardiac output.

## **Baker Cyst**

A fluid-filled cyst in the popliteal fossa, resulting from herniation of the synovial membrane through the posterior knee joint capsule or from a communication between the knee joint and the gastrocnemius-semimembranosus bursa.

### **Synonyms:**

Bakers Cyst (Baker Cyst) Popliteal Cyst (Baker Cyst)

## **Baker's Cyst**

A fluid-filled synovial cyst arising from the gastrocnemius-semimembranosus bursa posterior to the knee, typically caused by chronic knee joint effusion from conditions such as osteoarthritis, rheumatoid arthritis, or meniscal tears. It presents as a palpable, tender mass in the popliteal fossa that may rupture causing calf swelling.

## **Balamuthia Mandrillaris Infection**

A rare, usually fatal infection caused by the free-living amoeba *Balamuthia mandrillaris*. It may begin as a skin lesion and progress to granulomatous amoebic encephalitis with headache, confusion, seizures, or focal neurologic deficits. Diagnosis is difficult and requires specialized testing; urgent infectious-disease and neurologic evaluation is essential.

## **Balance**

The ability to maintain the body's center of mass over its base of support, relying on input from the

---

vestibular system, vision, and proprioception. It is essential for walking, standing, and performing daily activities without falling. Age-related decline, medications, and neurological disorders can impair balance, increasing fall risk.

### **Balance Assessment**

An evaluation of steadiness and the ability to maintain safe posture during standing and movement. It may include standardized tests and helps identify mobility or fall risk.

### **Balance Disorders And Vertigo**

Balance disorders encompass conditions that cause dizziness, unsteadiness, or a sensation of motion, often arising from dysfunction in the inner ear, brain, or sensory pathways.

### **Balance Impairment**

The ability to maintain the body's center of mass over its base of support, relying on input from the vestibular system, vision, and proprioception. See balance.

### **Balance Training**

Exercises improving postural stability and preventing falls. Components: static balance, dynamic balance, reactive balance. Techniques: weight shifting, tandem stance, single-leg stance, perturbations, balance boards. Essential for elderly, neurological conditions.

### **Balanitis**

Inflammation of the glans penis, often involving the prepuce (balanoposthitis). Causes include poor hygiene, irritants, infection, and dermatologic conditions such as lichen planus, psoriasis, and lichen sclerosus. It may cause erythema, swelling, discharge, pruritus, and discomfort; treatment depends on the cause.

### **Balanoposthitis**

Inflammation of both the glans penis and the prepuce. It may cause pain, erythema, swelling, discharge, or difficulty retracting the foreskin and can result from infection, irritation, or inflammatory

skin disease.

### **Baldness**

Commonly used term for substantial hair loss, especially androgenetic alopecia, also called pattern hair loss. In this condition, genetically susceptible hair follicles gradually become smaller under the influence of androgens.

**Synonyms:**  
pattern.

### **Ballard Score**

Clinical assessment of gestational age in newborns using 6 physical and 6 neuromuscular maturity criteria. Physical parameters: skin texture, ear form and recoil, eye appearance, breast tissue, and genitalia. Neuromuscular: posture, arm and leg recoil, popliteal angle, scarf sign, and heel-to-ear.

### **Ballism**

A hyperkinetic movement disorder characterized by sudden, involuntary, large-amplitude, flinging movements of a limb or limbs. It is often related to dysfunction of the subthalamic region or connected basal-ganglia circuits.

### **Ballistocardiography**

The graphic recording of repetitive body movements produced by the ejection of blood with each heart-beat. It has been used to study cardiac mechanical activity and circulation.

### **Balloon (Vascular)**

An inflatable catheter component used to widen a narrowed blood vessel or expand a vascular stent.

**Synonyms:**  
Vascular

### **Balloon Aortic Valvuloplasty**

Catheter-based procedure using balloon inflation to dilate a stenotic aortic valve. Provides temporary hemodynamic improvement in severe AS but restenosis is common within 6-12 months. Used as a bridge to TAVR or surgical AVR in hemodynamically unstable patients, or as palliation in patients

---

not eligible for definitive valve replacement.

### **Balloon Catheter**

A catheter with an inflatable tip used to widen a narrowed vessel, expand a stent, or dilate another body passage.

### **Band Keratopathy**

A horizontal band of calcium deposition in the superficial cornea, typically across the interpalpebral area. It may occur with chronic ocular inflammation, hypercalcemia, renal disease, or longstanding eye disease and can impair vision.

### **Bandage**

Material applied to cover, protect, compress, or support an injured body part. Examples include gauze, adhesive, elastic, and tubular bandages.

### **Bandage Scissors**

Blunt-tipped scissors for cutting bandages.

### **Bankart Lesion**

A tear of the anterior-inferior glenoid labrum, usually caused by anterior shoulder dislocation and associated with recurrent instability.

### **Bannayan-Riley-Ruvalcaba Syndrome**

Autosomal dominant PTEN hamartoma tumor syndrome (PHTS) caused by loss-of-function mutations in PTEN (10q23), allelic to Cowden syndrome.

### **Banti Disease**

A historical term for congestive splenomegaly associated with portal hypertension and hypersplenism. Modern evaluation usually identifies the underlying hepatic, portal-venous, or hematologic cause.

### **Banti Syndrome**

A historical term for portal hypertension with splenomegaly and hypersplenism. Modern evaluation usually identifies an underlying hepatic, portal-venous, or hematologic disorder.

### **Barbiturate**

A class of CNS depressants derived from barbituric acid that enhance GABA-A receptor activity by increasing the duration of chloride channel opening (as opposed to benzodiazepines, which increase the frequency). At low doses: anxiolysis and sedation. At moderate doses: hypnosis and anesthesia.

### **Bare Stent (Vascular)**

A metal mesh tube placed inside a narrowed vessel without a drug coating to keep the vessel open.

#### **Synonyms:**

Vascular

### **Bariatric Surgery**

Weight loss procedures and surgery, collectively known as bariatric surgery, are invasive interventions for severe obesity that produce substantial and sustained weight loss by altering gastrointestinal anatomy and physiology.

### **Barium**

A metallic element (atomic number 56, symbol Ba) whose sulfate salt (barium sulfate) is used as a radiopaque agent due to its high atomic number, which effectively absorbs X-rays.

### **Barium Enema**

Fluoroscopic imaging of the large intestine after retrograde filling with barium contrast. Double-contrast (barium + air) provides better mucosal detail. Indications: colorectal cancer screening (historical, now CT colonography preferred), evaluation of colonic obstruction, diverticulosis, and postsurgical anatomy.

### **Barium Study**

X-ray imaging using barium sulfate contrast. Barium swallow, barium enema, upper GI series. Evaluates GI tract morphology and function.

### **Barium Swallow**

Fluoroscopic examination of the esophagus after ingestion of barium contrast. Used to evaluate esophageal anatomy, motility, strictures, and struc-

---

tural abnormalities. The study demonstrates mucosal detail, filling defects, strictures, and motility disorders. A barium follow-through extends the examination to the small bowel.

### **Barium-133**

Calibration source. Half-life 10.5 years. Used for energy calibration.

### **Barognosis**

The ability to recognize and distinguish the weight of objects by handling them, with intact primary sensation. Impaired barognosis indicates a cortical sensory deficit.

### **Baroreceptor Reflex**

The rapid neural mechanism for short-term blood pressure regulation, involving baroreceptors (mechanoreceptors) in the carotid sinus (innervated by CN IX) and aortic arch (innervated by CN X). When blood pressure rises, baroreceptors increase their firing rate, signaling the cardiovascular center in the medulla.

### **Bouchard Nodes**

Bony enlargements of the proximal interphalangeal joints, usually associated with osteoarthritis.

### **Buffy Coat**

The thin layer of white blood cells and platelets that forms between plasma and red blood cells after centrifugation of whole blood.

### **Barotrauma**

Lung injury from excessive pressure during ventilation, causing alveolar rupture (pneumothorax, pneumomediastinum). Risk factors: high pressures, high PEEP. Prevented by lung-protective ventilation.

### **Barrel Chest**

A rounded, enlarged appearance of the chest caused by increased lung volume or changes in the chest wall. It may occur with chronic obstructive pulmonary disease, severe asthma, or other long-standing lung conditions.

### **Barrett Esophagus**

Metaplastic transformation of the normal stratified squamous epithelium of the distal esophagus to specialized intestinal-type columnar epithelium containing goblet cells, occurring as a consequence of chronic gastroesophageal reflux disease.

### **Barrett Esophagus Surveillance**

Periodic endoscopic evaluation of Barrett esophagus to detect dysplasia or early esophageal adenocarcinoma. The interval and biopsy protocol depend on the presence and grade of dysplasia and current clinical guidelines.

### **Barrier Creams**

Topical preparations applied to the skin to create a physical protective layer against irritants, moisture, and pathogens. Common formulations include zinc oxide, petrolatum, dimethicone, and titanium dioxide.

### **Barthel Index**

A standardized scale that measures assistance needed for activities of daily living, including feeding, bathing, dressing, toileting, transfers, mobility, and stair use. Scores are interpreted according to the version of the scale and the clinical setting.

### **Bartholin Cyst**

A cyst of the Bartholin gland (paired mucus-secreting glands at the posterolateral introitus) due to obstruction of the duct; if infected, a Bartholin abscess.

### **Bartholin Gland**

One of two small glands near the vaginal opening that produce lubricating mucus. Blockage of its duct can cause a painless cyst; infection can produce a painful abscess with swelling, redness, and difficulty walking or sitting. Recurrent or atypical masses require gynecologic assessment.

### **Bartonellosis**

A group of infections caused by Bartonella species, including cat-scratch disease, bacillary angiomatosis, and, in some regions, bloodstream infection with

---

fever and anemia. The clinical features depend on the species and the patient's immune status.

### **Bartter Syndrome**

Inherited autosomal recessive disorder of the thick ascending limb of the loop of Henle causing salt wasting, hypokalemic metabolic alkalosis, and hypercalciuria. Results from mutations in genes encoding the NKCC2 transporter or its regulatory subunits. Presents in childhood with failure to thrive, polyuria, and polydipsia.

### **Basal Cell Carcinoma**

The most common malignant skin tumor, arising from basal keratinocyte-lineage cells and associated with cumulative ultraviolet exposure and Hedgehog-pathway abnormalities. It commonly presents as a pearly papule or nodule with telangiectasia, ulceration, or a rolled border.

### **Basal Ganglia**

Deep gray matter nuclei in the cerebral hemispheres for motor control, cognition, and emotion. Key structures: caudate nucleus, putamen, globus pallidus (internal/external segments), subthalamic nucleus, substantia nigra. Direct pathway facilitates movement; indirect inhibits it.

### **Basal Ganglia Dysfunction**

Abnormal function of the deep cerebral nuclei that regulate movement, cognition, and procedural learning. It may cause tremor, rigidity, bradykinesia, chorea, dystonia, or abnormal involuntary movements, as in Parkinson disease and Huntington disease.

### **Basal Metabolic Rate**

Energy expenditure at rest for basic physiological functions. Accounts for 60-75% of total energy expenditure. Affected by age, sex, body composition, thyroid status, genetics. Measured by indirect calorimetry.

### **Base**

A substance that accepts protons ( $H^+$ ) or donates electron pairs (Lewis base). In aqueous solution,

bases increase  $OH^-$  concentration ( $pH > 7$ ). Strong bases ( $NaOH$ ,  $KOH$ ) dissociate completely; weak bases ( $NH_3$ ,  $HCO_3^-$ , protein side chains) partially.

### **Base Excision Repair**

The repair pathway for small, non-helix-distorting base lesions including oxidized bases (8-oxoguanine), deaminated bases (uracil from cytosine deamination), alkylated bases, and abasic (AP) sites.

### **Basement Membrane**

A thin, delicate layer of extracellular matrix that anchors epithelial tissue to the underlying connective tissue.

### **Basic Life Support**

Immediate care for a person with cardiac arrest or respiratory failure, including recognition, emergency activation, chest compressions, ventilation, and defibrillation when indicated.

### **Basic Metabolic Panel**

A panel of blood tests measuring serum glucose, sodium, potassium, chloride, bicarbonate, BUN, and creatinine. Also includes calcium in some institutions. Uses: assess hydration status, renal function, acid-base balance, and glucose control.

### **Basic Reproduction Number**

The expected number of secondary infections generated by one typical infectious person in a completely susceptible population, under specified conditions. It is a population and context parameter, not a fixed biological constant.

### **Basilar Artery Aneurysm**

Dilation of the basilar artery, most commonly fusiform, often associated with atherosclerosis or hypertension. May compress cranial nerves or brainstem structures causing facial pain, double vision, or hemiparesis. Rupture causes subarachnoid hemorrhage with high morbidity.

### **Basophil**

A rare ( $< 1$  percent of leukocytes) granulocyte with

---

large, basophilic granules containing histamine, heparin, and leukotrienes. Basophils bear high-affinity IgE receptors (Fc-epsilon-RI) and, like mast cells, release histamine and mediators during immediate hypersensitivity (allergic) reactions.

### **Bath Salts Abuse And Addiction**

Misuse of synthetic cathinones, stimulant drugs that may cause agitation, paranoia, hallucinations, seizures, dangerously high temperature, cardiovascular complications, and dependence. Severe agitation, chest pain, seizure, hyperthermia, or altered consciousness requires emergency care. Treatment is supportive and may require addiction and mental-health services.

### **Battered Child Syndrome**

A pattern of repeated, non-accidental physical injury inflicted on a child by a caregiver, formally described by Kempe in 1962. Features include fractures of differing ages, subdural and retinal hemorrhages, inconsistent histories, and delayed presentation; mandatory reporting is required in most jurisdictions.

### **Bauhin Valve**

The ileocecal valve, a mucosal sphincter at the junction of the terminal ileum and cecum that helps regulate passage of intestinal contents and limits reflux from the colon.

### **BCG Vaccine**

A live attenuated vaccine derived from *Mycobacterium bovis* that helps prevent severe forms of tuberculosis, especially in children. Its use depends on national tuberculosis-risk policies.

### **Beals Syndrome**

A congenital connective-tissue disorder characterized by congenital contractures, arachnodactyly, kyphoscoliosis, and crumpled ears. It is usually associated with pathogenic variants affecting fibrillin-2.

### **Beam Hardening Artifact**

CT artifact from dense structures. Reduced by beam hardening correction algorithms.

### **Beau Lines**

Transverse depressions or grooves across the nail plate caused by temporary interruption of nail-matrix growth. They may follow severe illness, fever, trauma, malnutrition, chemotherapy, or systemic inflammatory disease.

### **Beau's Lines**

Transverse grooves or depressions across a fingernail or toenail caused by temporary interruption of nail-matrix growth. They may follow severe illness, injury, high fever, nutritional stress, or local trauma; the timing of the groove can help estimate when the event occurred.

### **Bechterew Disease**

Historical eponym for ankylosing spondylitis (also known as Marie-Strümpell disease), describing the chronic inflammatory arthritis of the axial skeleton first reported by Vladimir Bekhterev (Russian, 1892) and Adolf Strümpell (German, 1884).

#### **Synonyms:**

Marie-Strümpell disease),.

### **Beck Triad**

Classic diagnostic clinical triad of Cardiac Tamponade: (1) Hypotension, (2) Distended neck veins (elevated JVP), and (3) Muffled / distant heart sounds. See Cardiac Tamponade.

### **Becker Muscular Dystrophy**

An X-linked recessive neuromuscular disorder caused by mutations in the dystrophin gene, similar to Duchenne muscular dystrophy (DMD), but with in-frame mutations that allow production of some functional dystrophin protein, albeit reduced in quantity or abnormal in size. The result is a milder clinical phenotype compared to DMD.

### **Becker's Nevus**

A benign hamartomatous lesion appearing as a unilateral, hyperpigmented, often hairy patch, typically developing in adolescence on the shoulder or upper trunk of males. It results from a localized androgen-dependent increase in dermal smooth muscle and pigmentation. It is cosmetically concerning but

---

carries no malignant potential.

### **Beckwith-Wiedemann Syndrome**

An overgrowth disorder associated with 11p15.5 imprinting defects. Features: macrosomia, macroglossia, omphalocele, visceromegaly, and neonatal hypoglycemia. Increased risk of embryonal tumors (Wilms tumor, hepatoblastoma).

### **Becquerel (Bq)**

The SI unit of radioactive activity, equal to one nuclear transformation per second. Administered activity is commonly reported in megabecquerels or gigabecquerels in nuclear medicine.

#### **Synonyms:**

Bq

### **Bedbug Bites**

Cutaneous reactions to bites of *Cimex lectularius* (bedbugs), nocturnal blood-feeding insects. Bites are painless but cause erythematous, pruritic papules, often in a linear arrangement (breakfast, lunch, dinner sign) or clusters on exposed skin (face, neck, arms, hands). Delayed hypersensitivity develops over days.

### **Bedpan**

A receptacle used by a person who cannot safely leave bed to urinate or pass stool.

### **Bedsore**

Pressure ulcer (decubitus): localized skin/soft tissue injury from prolonged pressure over bony prominences (sacrum, heels, occiput, trochanters), usually in immobile patients.

### **Bedwetting**

Involuntary urination during sleep after the age at which nighttime bladder control is usually established. It may be primary or secondary to urinary infection, constipation, diabetes, sleep disorders, stress, or other medical conditions and should be assessed when persistent, new, or accompanied by daytime symptoms.

### **Beers Criteria**

A regularly updated list of medicines that may pose increased risks for some older adults. It supports medication review but does not replace individualized clinical judgment.

### **Behavioral Rehabilitation**

Behavioral interventions for chronic conditions: pain management, addiction, adjustment.

### **Behcet Disease**

A chronic, relapsing systemic vasculitis characterized by recurrent oral ulcers, genital ulcers, and ocular inflammation, with a distribution along the ancient Silk Road from the Mediterranean to East Asia.

### **Belching**

The release of swallowed air or gas from the stomach through the mouth. Frequent belching may occur with aerophagia, gastroesophageal reflux, functional dyspepsia, or carbonated-drink consumption.

### **Bell Palsy**

Acute, idiopathic, unilateral facial nerve (CN VII) paralysis of lower motor neuron type, with an incidence of approximately 20-30 per 100,000 person-years.

### **Bell's Palsy**

Acute peripheral facial-nerve weakness of uncertain cause, usually affecting one side of the face. Eye protection and timely clinical assessment are important; treatment is individualized.

#### **Synonyms:**

Palsy, Bell's Palsy, Facial

### **Bence Jones Protein**

Monoclonal immunoglobulin light chains (free kappa or lambda) detectable in urine of patients with monoclonal gammopathies, most characteristically multiple myeloma but also Waldenstrom macroglobulinemia, MGUS, and primary amyloidosis (AL).

---

### **Bence-Jones Protein**

A monoclonal immunoglobulin light chain found in urine or blood, classically associated with plasma-cell disorders such as multiple myeloma. Detection contributes to evaluation of monoclonal gammopathy and kidney injury.

### **Bends**

A manifestation of decompression sickness caused by gas bubbles forming in tissues or blood after a rapid reduction in ambient pressure. It commonly produces deep joint or muscle pain but may also involve the nervous system or lungs.

### **Beneficence And Non-Maleficence**

Core biomedical ethical principles guiding clinical practice and medical research. Beneficence requires healthcare providers to act in the best interest of the patient, taking positive steps to promote health, prevent harm, and relieve suffering.

### **Benign Intracranial Hypertension**

An older term for idiopathic intracranial hypertension, a disorder of raised intracranial pressure without an intracranial mass or hydrocephalus. Headache and papilledema are typical, and untreated disease may threaten vision.

### **Benign Mixed Tumor**

A benign salivary-gland tumor containing epithelial and connective-tissue components, usually called a pleomorphic adenoma.

### **Benign Neoplasm**

Benign neoplasms are proliferations of cells that remain confined to their site of origin, grow by expansion rather than invasion, and do not metastasize to distant sites. They typically grow slowly, pushing aside adjacent normal tissue and often becoming enclosed by a fibrous pseudocapsule formed from compressed connective tissue.

### **Benign Paroxysmal Positional Vertigo**

A common peripheral vertigo from dislodged otoconia (canalithiasis) within the semicircular canals, most often the posterior canal. Brief episodes of ro-

tational vertigo lasting under one minute provoked by changes in head position.

### **Benign Positional Vertigo**

Brief episodes of spinning dizziness triggered by changes in head position, usually caused by displaced calcium carbonate crystals in a semicircular canal. It is also called benign paroxysmal positional vertigo or BPPV.

### **Benign Prostatic Hyperplasia**

Noncancerous enlargement of the prostate that may obstruct urine flow and cause hesitancy, weak stream, urgency, frequency, nocturia, or incomplete emptying. Assessment uses the symptoms, examination, and selected tests.

#### **Synonyms:**

BPH (Benign Prostatic Hyperplasia)

### **Benign Prostatic Obstruction**

Bladder-outlet obstruction caused by benign prostatic enlargement or increased prostatic smooth-muscle tone. It can produce weak stream, hesitancy, intermittency, straining, incomplete emptying, retention, infection, and upper-tract deterioration.

### **Benign Tumor**

Non-cancerous growth, slow-growing, well-differentiated, localized, does not invade or metastasize. Examples: lipoma, fibroma, adenoma. May cause problems by compression or hormone secretion.

### **Bent Spine Syndrome**

A marked, usually reducible forward flexion of the trunk caused by weakness or abnormal contraction of axial extensor muscles. It is also called camptocormia and may accompany neuromuscular or movement disorders.

#### **Synonyms:**

camptocormia and may accompany.

### **Benzene**

Solvent, industrial chemical. Chronic exposure: aplastic anemia, leukemia (especially AML). Acute:

---

CNS depression, arrhythmias. Prevention: substitution, ventilation, monitoring.

### **Benzo(A)Pyrene**

Polycyclic aromatic hydrocarbon from combustion. Carcinogenic (lung, skin cancer). Found in tobacco smoke, charred meat, air pollution.

#### **Synonyms:**

a

### **Benzodiazepine Use Disorder**

A problematic pattern of benzodiazepine use leading to significant impairment. Benzodiazepines include alprazolam, clonazepam, diazepam, and lorazepam. Dependence can develop rapidly with regular use. Withdrawal can be life-threatening, presenting with anxiety, insomnia, tremor, seizures, and psychosis.

### **Benzodiazepine Withdrawal**

Symptoms from cessation or reduction of prolonged benzodiazepine use. Early symptoms include anxiety, insomnia, tremor, and diaphoresis. Severe withdrawal can include seizures, psychosis, and delirium. Withdrawal severity depends on the half-life of the benzodiazepine, duration of use, and dose.

### **Benzodiazepines**

A class of drugs that enhance the effect of the inhibitory neurotransmitter gamma-aminobutyric acid at the GABA-A receptor, increasing the frequency of chloride channel opening and producing anxiolytic, sedative, anticonvulsant, and muscle relaxant effects.

### **Bereavement**

Natural grief response to the death of a loved one, marked by sadness, yearning, and preoccupation with the deceased, experienced in waves that diminish over weeks to months with preserved self-esteem. Distinct from major depression by its wave-like quality and preserved self-worth.

### **Bereavement Reaction**

A normal emotional response to the death of a loved one, involving grief that generally follows a variable course without necessarily indicating a mental dis-

order.

### **Berger Disease**

Historical name for IgA nephropathy named after Jean Berger who first characterized mesangial IgA deposition in 1968. Characterized by recurrent gross hematuria triggered by mucosal infections with intervals of microscopic hematuria and proteinuria. Generally benign course in most patients but subset progresses to CKD.

### **Beriberi**

A nutritional deficiency disease caused by inadequate thiamine (vitamin B1), occurring in two forms. Wet beriberi presents with high-output heart failure, peripheral vasodilation, edema, and tachycardia due to impaired cardiac energy metabolism.

### **Bernard–Soulier Syndrome**

An inherited platelet-adhesion disorder caused by deficiency or dysfunction of the glycoprotein Ib-IX-V complex, producing mucocutaneous bleeding and giant platelets.

### **Berry Aneurysm**

A small, rounded saccular aneurysm arising at an arterial branch point in the circle of Willis. Rupture is a major cause of nontraumatic subarachnoid hemorrhage.

### **Berylliosis**

A granulomatous lung disease from beryllium exposure. Chronic berylliosis resembles sarcoidosis. Diagnosis requires beryllium lymphocyte proliferation test.

### **Beta Blockers**

A class of medications that block the effects of adrenaline on the body's beta receptors. They slow down the heart rate and reduce blood pressure, making them widely used for treating heart conditions, high blood pressure, and anxiety.

### **Beta-Adrenergic Blocker**

A drug that antagonizes beta-adrenergic receptors,

---

reducing heart rate, myocardial contractility, and renin release. It is used in selected patients with hypertension, angina, arrhythmias, post-myocardial infarction disease, and heart failure; abrupt withdrawal may worsen ischemia.

### **Beta-Blocker Overdose**

Toxic exposure to a beta-adrenergic blocker that may cause slow heart rate, low blood pressure, low blood glucose, bronchospasm, seizures, or altered consciousness. It requires urgent poison-control and medical management.

### **Beta-Blockers**

Beta-adrenergic blocking agents, commonly known as beta-blockers, are topical medications used in the treatment of glaucoma that lower intraocular pressure by reducing the production of aqueous humor by the ciliary body, primarily through blockade of beta-2 adrenergic receptors.

### **Beta-Lactam Antibiotics**

A large class of antimicrobial agents characterized by a beta-lactam ring in their molecular structure, which is essential for their bactericidal activity.

### **Beta-Lactamase Inhibitor Combinations**

Combinations of beta-lactam antibiotics with beta-lactamase inhibitors that extend activity against beta-lactamase producing organisms. The major combinations include amoxicillin-clavulanate, ampicillin-sulbactam, piperacillin-tazobactam, cefoperazone-sulbactam, and ceftolozane-tazobactam.

### **Beta-Oxidation**

The catabolic process by which fatty acid molecules are broken down in the mitochondria (and peroxisomes) to generate acetyl-CoA, NADH, and FADH<sub>2</sub>.

### **Beta-Thalassemia**

An inherited hemoglobin disorder with deficient or absent beta-globin chain synthesis, ranging from mild trait to transfusion-dependent major disease with iron overload, extramedullary hematopoiesis, and skeletal changes.

### **Bezoar**

A mass of indigestible material retained in the gastrointestinal tract, commonly composed of hair, plant fiber, or medication material.

### **BI-RADS**

Breast Imaging-Reporting and Data System. Standardizes mammography reporting. Categories: 0 (incomplete), 1 (negative), 2 (benign), 3 (probably benign), 4 (suspicious), 5 (highly suggestive of malignancy), 6 (known biopsy-proven malignancy).

### **Bicarbonate**

The principal extracellular buffer anion, formed from carbon dioxide and water and regulated chiefly by the lungs and kidneys. The bicarbonate-carbonic-acid system helps maintain arterial pH; serum bicarbonate is commonly used to assess metabolic components of acid-base disorders.

### **Biceps Brachii Muscle**

Two-headed anterior arm muscle. Long head from supraglenoid tubercle, short head from coracoid process, both inserting on the radial tuberosity. Innervated by musculocutaneous nerve (C5-C6). Most powerful elbow flexor in supination; supinates forearm; weakly flexes shoulder. Distal rupture causes Popeye deformity.

### **Biceps Reflex**

A tendon reflex produced by tapping the biceps tendon, causing elbow flexion through the musculocutaneous nerve and predominantly C5-C6 spinal segments. It helps assess the corresponding peripheral and central pathways.

### **Bicipital Groove**

The intertubercular groove of the humerus that transmits the tendon of the long head of the biceps brachii, with the transverse humeral ligament and adjacent rotator-cuff structures contributing to tendon stability.

### **Bicipital Tuberosity**

The radial tuberosity, a roughened prominence on the proximal radius where the biceps brachii tendon

---

inserts and produces flexion and supination of the forearm.

### **Bicuspid Aortic Valve**

A congenital aortic valve with two leaflets instead of the usual three. It can lead to aortic stenosis, aortic regurgitation, enlargement of the aorta, or other congenital heart abnormalities.

### **Bicuspid Valve**

A heart valve with two leaflets rather than the usual three. The term most often refers to congenital bicuspid aortic valve, which can cause aortic stenosis, regurgitation, infective endocarditis, or ascending-aortic disease.

### **Bietti's Crystalline Dystrophy**

A rare autosomal recessive chorioretinal dystrophy characterized by tiny crystalline deposits in the retina and cornea with progressive chorioretinal atrophy, presenting with night blindness and progressive visual field loss beginning in early adulthood.

### **Biguanide**

A class of medicines that lower blood glucose by reducing hepatic glucose production and improving insulin sensitivity. Metformin is the principal biguanide in current clinical use; its use depends on kidney function, tolerability, and the person's treatment goals.

### **Bilateral Peritonsillar Abscesses**

Suppurative infection in the peritonsillar space on both sides, a rare complication of acute tonsillitis presenting with severe sore throat, dysphagia, trismus, and muffled hot potato voice. Bilateral involvement risks acute upper airway obstruction and requires urgent needle aspiration or incision and drainage.

### **Bile Acids**

Substances produced by the liver that aid digestion and absorption of fats and fat-soluble vitamins. They are also measured when a hepatobiliary disorder, including intrahepatic cholestasis of pregnancy, is suspected.

### **Bile Duct**

A channel that carries bile from the liver and gallbladder to the duodenum. The right and left hepatic ducts unite as the common hepatic duct; union with the cystic duct forms the common bile duct, which usually joins the pancreatic duct before entering the duodenum at the major duodenal papilla.

### **Bile Reflux**

Reflux of duodenal contents (bile acids, lysolecithin, pancreatic enzymes) into the stomach and esophagus, caused by incompetence of the pyloric sphincter, prior gastric surgery (Billroth II, Roux-en-Y, vagotomy with pyloroplasty), cholecystectomy, or functional gastroparesis.

#### **Synonyms:**

Reflux, Bile

### **Bile Salt Emulsification**

Bile salts (derived from cholesterol in the liver) are amphipathic molecules with hydrophobic and hydrophilic regions that act as biological detergents, emulsifying dietary lipids into smaller droplets (micelles). This increases the surface area of lipid substrate available for pancreatic lipase action.

### **Bile Salt Malabsorption**

Condition characterized by impaired reabsorption of bile acids in the terminal ileum leading to excessive bile acids entering the colon where they stimulate water and electrolyte secretion causing chronic watery diarrhea.

### **Bilharzia**

A parasitic infection caused by *Schistosoma* species. See Schistosomiasis.

### **Biliary Atresia**

A progressive, obliterative cholangiopathy of the extrahepatic bile ducts in neonates, leading to biliary obstruction, cholestasis, and ultimately biliary cirrhosis if untreated.

#### **Synonyms:**

Congenital Biliary Atresia Extrahepatic Biliary Atresia

---

## **Biliary Cirrhosis**

Chronic liver scarring associated with long-standing injury to the bile ducts. The term is often used for primary biliary cholangitis, an autoimmune small-duct disease.

## **Biliary Colic**

Episodic right-upper-quadrant or epigastric pain caused by transient obstruction of the cystic duct, usually by a gallstone. Pain is typically steady, may follow meals, and resolves when the obstruction passes; fever and persistent inflammatory findings suggest a complication.

## **Biliary Dyskinesia**

A functional gallbladder disorder causing biliary-type pain without gallstones or another clear structural cause. A hepatobiliary scan may show abnormal gallbladder emptying, but no single ejection-fraction cutoff establishes the diagnosis; other causes must be considered.

## **Biliary Fever**

Fever associated with infection or inflammation of the biliary tract, classically acute ascending cholangitis. It may occur with right-upper-quadrant pain and jaundice and can progress rapidly to sepsis.

## **Biliary Stent**

A tube placed in a bile duct to maintain drainage when the duct is narrowed or blocked. Stents may be plastic or metal, and complications include migration, blockage, infection, and pancreatitis.

## **Biliary Tract**

The network of ducts that carries bile from the liver and gallbladder to the small intestine. Blockage or inflammation can cause abdominal pain, jaundice, infection, or pancreatitis.

## **Biliary Tract Injuries**

Damage to the gallbladder, bile ducts, or adjacent biliary structures, often occurring after abdominal surgery or trauma. It may cause bile leakage, obstruction, jaundice, infection, or later biliary narrowing.

## **Bilious Vomiting**

Vomiting of green/yellow, bilious material in the newborn or infant, defined as emerald green or yellow vomitus that contains bile.

## **Bilirubin**

A yellow pigment formed mainly from heme breakdown. Unconjugated bilirubin is transported bound to albumin to the liver, where it is conjugated with glucuronic acid and excreted in bile; accumulation causes jaundice.

## **Bilirubin Encephalopathy**

Neurologic injury caused by deposition of unconjugated bilirubin in the brain, especially the basal ganglia. Severe neonatal hyperbilirubinemia can produce acute lethargy, abnormal tone, feeding difficulty, seizures, and permanent kernicterus.

## **Bilirubin Metabolism**

Bilirubin is the breakdown product of heme from senescent red blood cells, metabolized primarily by the liver through a series of enzymatic steps. Heme is converted to biliverdin by heme oxygenase, then to unconjugated bilirubin by biliverdin reductase. Unconjugated bilirubin is lipophilic and transported bound to albumin to the liver.

## **Bilirubinuria**

The presence of conjugated bilirubin in urine. It indicates that water-soluble bilirubin has entered the circulation, often because of hepatocellular disease or biliary obstruction.

## **Binet-Simon Scale**

An early developmental assessment used to estimate intellectual functioning in children by comparing performance with age-based tasks. Modern evaluation uses standardized, validated developmental and cognitive instruments.

## **Binge Eating Disorder**

Recurrent episodes of eating large quantities of food with a sense of lack of control, without regular compensatory behavior. Associated with obesity, depression, and anxiety. Diagnosis by DSM-5 criteria.

---

Treatment: cognitive behavioral therapy, interpersonal therapy, and SSRIs. Weight management with dietary counseling and exercise.

### **Binocular Visual Loss**

Reduction in vision affecting both eyes simultaneously, typically resulting from bilateral optic neuropathy, chiasmal lesions, or diffuse bilateral retinal disease rather than monocular ocular pathology. Evaluation requires neuroimaging and visual field testing to localise the lesion along the visual pathway.

### **Bioabsorbable Stent (Vascular)**

A vascular scaffold designed to provide temporary support and gradually break down after its function is completed.

#### **Synonyms:**

Vascular

### **Bioavailability**

The fraction of an administered drug that reaches the systemic circulation in its unchanged active form. It is expressed as a percentage and is determined by the route of administration and the extent of first-pass metabolism. For intravenous administration, bioavailability is 100 percent by definition.

### **Bioburden**

The number and type of viable microorganisms contaminating a surface, medical device, tissue, or pharmaceutical product; a measure of contamination. Bioburden testing assesses the level of microbial contamination (total viable count) before sterilization or in quality control.

### **Biochemical Assessment**

Blood tests: albumin, prealbumin, transferrin, electrolytes, vitamins, minerals, glucose, lipids. Reflect nutritional status and metabolic function.

### **Biocompatibility**

Ability of material to function without adverse response. ISO 10993 standards for biocompatibility testing.

### **Biodegradable Implant**

An implant designed to perform a temporary function and then degrade into products that can be metabolized or eliminated by the body. Degradation rate, local tissue response, and mechanical strength must be matched to the intended clinical use.

### **Biodistribution**

The time-dependent distribution of a radiopharmaceutical among organs, tissues, blood, and excretory pathways. It determines image quality, target-to-background contrast, therapeutic delivery, and radiation exposure to normal organs.

### **Bioequivalence**

The property of two drug products (brand-name and generic) that have the same rate and extent of absorption when administered at the same molar dose under similar conditions, resulting in comparable bioavailability and therapeutic effect.

### **Bioethics**

Interdisciplinary study of the ethical, legal, philosophical, and social implications of advancements in medicine, biology, healthcare technology, and biotechnology.

### **Bioethics (Geriatric)**

Ethical considerations in elderly care: autonomy vs. paternalism, informed consent capacity, end-of-life decisions, resource allocation, elder abuse. Principles: respect for autonomy, beneficence, non-maleficence, justice. Advance directives: living will, durable power of attorney for healthcare.

#### **Synonyms:**

Geriatric

### **Biofilm**

An organized community of microorganisms attached to a surface and embedded in a self-produced extracellular polymeric matrix (polysaccharides, proteins, DNA).

### **Biofilm-Associated Infections**

Infections caused by bacteria growing in biofilms on

---

medical devices or tissues. Biofilms are structured communities of bacteria embedded in extracellular polymeric substances. Bacteria in biofilms are more resistant to antibiotics and host immune responses.

### **Biologic Therapy**

Treatment with biologic agents targeting specific immune pathways, used in autoimmune and inflammatory disease.

### **Biologic Therapy In Dermatology**

Treatment with targeted biological agents, usually monoclonal antibodies or receptor proteins, that inhibit selected immune pathways. Biologics are used for diseases such as psoriasis, atopic dermatitis, hidradenitis suppurativa, and urticaria; infection risk, vaccination status, screening, and monitoring must be considered.

### **Biologic Variation**

Natural fluctuation in a measurable analyte within an individual over time and variation between individuals. It should be considered when interpreting serial results and deciding whether a change is clinically meaningful.

### **Biological Half-Life**

Time required for the human body to eliminate half the administered quantity of a drug or radiopharmaceutical through metabolic and excretory processes. Different from physical half-life (radioactive decay) and effective half-life (combined biological and physical elimination). Formula:  $1/T_{\text{effective}} = 1/T_{\text{physical}} + 1/T_{\text{biological}}$ .

### **Biomarker**

Measurable indicator of disease. Cancer biomarkers: diagnostic, prognostic, predictive.

### **Biomarker Testing**

Laboratory analysis of biological features, such as genes, proteins, or metabolites, that may help diagnose disease, estimate prognosis, or guide treatment.

### **Biomechanics**

Study of movement mechanics. Gait analysis, joint forces, muscle activation. Applied to rehabilitation device design.

### **Biomolecule**

Any organic molecule produced by living organisms, essential for structure, function, and regulation of biological processes.

### **Biomonitoring**

Measurement of substances in body. Examples: blood glucose, drug levels, toxicants.

### **Biophysical Profile**

A non-stress test combined with ultrasound assessment of five fetal parameters, each scored 0 or 2 for a total of 0-10. Parameters include non-stress test (fetal heart rate reactivity), fetal breathing movements, fetal tone, fetal movement, and amniotic fluid volume.

### **Biopsy**

Removal of tissue for histological examination to diagnose disease. Types: needle biopsy (fine needle aspiration, core needle), excisional, incisional, punch, endoscopic. Sites: breast, lung, liver, lymph node, bone marrow. Complications: bleeding, infection, seeding (rare).

### **Biopsy Needle**

A needle designed to obtain cells or tissue for cytologic or histopathologic examination. Fine-needle aspiration retrieves cells, whereas core biopsy obtains a tissue cylinder that preserves architecture.

### **Biosensor**

A device that combines a biological recognition element with a physical or chemical transducer to detect and measure an analyte. Medical examples include sensors for glucose, pathogens, hormones, and cardiac biomarkers.

### **Biosimilar**

A biologic medicine highly similar to an approved

---

reference biologic, with no clinically meaningful differences in safety, purity, or potency for its approved uses. Because biologics are complex, biosimilarity is established through a comparative evidence program rather than simple chemical identity.

### **Biot Breathing**

An irregular breathing pattern with random periods of normal breathing interspersed with apneic episodes, seen in brainstem lesions. It is less organized than Cheyne-Stokes breathing and indicates medullary damage.

### **Biotelemetry**

The remote measurement and transmission of physiologic data from a person or animal. Clinical applications include ambulatory cardiac rhythm monitoring, temperature monitoring, and intensive-care observation.

### **Bioterrorism Agents**

Category A: anthrax (*Bacillus anthracis*), smallpox (*variola*), botulism (*Clostridium botulinum*), plague (*Yersinia pestis*), tularemia (*Francisella tularensis*), viral hemorrhagic fevers (Ebola, Marburg, Lassa, Machupo). Anthrax: inhalational (mediastinal widening, hemorrhagic mediastinitis), cutaneous (eschar), GI.

### **Biotinidase Deficiency**

An autosomal recessive inborn error of biotin recycling caused by BTB gene mutations, resulting in inability to cleave biotin from biocytin (proteolytic degradation product of biotin-dependent carboxylases).

### **Biotransformation**

The process by which drugs and other xenobiotics are chemically modified by metabolic enzymes, primarily in the liver, to facilitate elimination from the body. Biotransformation occurs in two phases.

### **Biotrauma**

Inflammatory response to ventilator-induced lung injury with systemic cytokine release. Can lead to multi-organ dysfunction. Minimized by lung-

protective ventilation strategies.

### **BiPAP**

Bilevel Positive Airway Pressure, a form of non-invasive ventilation delivering two levels of pressure: IPAP (inspiratory) for ventilation and EPAP (expiratory) for alveolar recruitment. It is particularly effective for COPD exacerbations with hypercapnic respiratory failure. It reduces work of breathing and improves gas exchange.

### **BiPAP Machine**

A device that provides two levels of positive airway pressure, commonly a higher pressure during inhalation and a lower pressure during exhalation.

### **Biparietal Diameter**

The transverse diameter of the fetal skull measured at the level of the thalami and cavum septum pellucidum. Used for dating (14-26 weeks,  $\pm 7$ -10 days) and assessing growth. Normal growth: 2-4 mm per week. BPD is less reliable after 26 weeks and in abnormal fetal head shapes (dolichocephaly, brachycephaly).

### **Bipolar Disorder**

A mood disorder characterized by episodes of mania/hypomania and depression. Bipolar I: at least one manic episode (elevated mood, grandiosity, decreased need for sleep, pressured speech, increased goal-directed activity, risky behavior) lasting  $\geq 1$  week or requiring hospitalization.

#### **Synonyms:**

Manic-Depressive Illness

### **Bipolar I Disorder**

A mood disorder defined by at least one manic episode lasting at least seven days or requiring hospitalization. A manic episode is a distinct period of abnormally elevated, expansive, or irritable mood and increased goal-directed activity or energy.

### **Bipolar II Disorder**

A mood disorder characterized by at least one hypomanic episode and at least one major depressive episode, with no history of a full manic episode.

---

The depressive episodes in bipolar II tend to be more frequent and longer-lasting than in bipolar I, leading to greater cumulative disability.

### **Bird Fancier's Lung**

HP from avian proteins in bird droppings or feathers. Common among pigeon breeders. Chronic exposure leads to progressive fibrosis.

### **Bird Flu**

Influenza caused by avian-adapted influenza A viruses. Human infection is uncommon but may cause severe respiratory disease, and public-health assessment depends on exposure history, testing, and infection-control measures.

### **Birt-Hogg-Dube Syndrome**

Autosomal dominant disorder caused by mutations in the FLCN gene (17p11.2) encoding folliculin.

### **Birth Control**

Methods used to prevent pregnancy, including barrier, hormonal, intrauterine, behavioral, and permanent methods.

### **Birthmarks**

Congenital or early-appearing marks on the skin, including vascular lesions such as hemangiomas and port-wine stains and pigmented lesions such as nevi and café-au-lait macules. Most are benign, but changes in appearance warrant assessment.

### **Bishop Score**

A clinical score used before labor induction to describe cervical readiness. It incorporates cervical dilation, effacement, consistency, position, and fetal-head station; a more favorable cervix generally indicates a greater likelihood of successful induction.

### **Bisphenol A**

Endocrine disruptor in plastics. Estrogenic effects, associated with reproductive disorders, obesity, diabetes. Avoid BPA-containing products, especially for children.

### **Bitemporal Hemianopia**

Loss of vision in the temporal (lateral) half of both visual fields due to lesions that cross the optic chiasm, damaging the decussating fibers from the nasal retina of each eye (which carry temporal field information).

### **Bitewing**

A dental radiograph that records the crowns of the upper and lower teeth and the adjacent alveolar bone in one image. It is particularly useful for detecting interproximal caries and assessing crestal bone levels.

### **Bitewing Radiograph**

An intraoral radiograph showing the crowns of the maxillary and mandibular posterior teeth and the alveolar crest. It is particularly useful for detecting interproximal caries and assessing crestal bone levels.

### **Bitot's Spots**

Foamy, whitish, triangular patches on the conjunctiva, usually near the temporal limbus, associated classically with vitamin A deficiency. They may accompany night blindness and xerosis of the conjunctiva or cornea.

### **BK Virus Nephropathy**

Polyomavirus infection in transplant recipients. Viral cytopathic changes on biopsy. Reduce immunosuppression as primary treatment. Can lead to graft loss. Monitor viral loads in blood for early detection.

### **Black Eye**

Bruising and swelling around the eye, usually caused by blunt trauma. Vision may remain normal, but eye pain, double vision, reduced vision, an irregular pupil, severe headache, vomiting, or loss of consciousness can indicate an eye or orbital injury and requires urgent assessment.

#### **Synonyms:**

Eye Black (Black Eye)

---

## Black Hairy Tongue

A benign elongation and dark discoloration of the filiform papillae on the dorsal tongue caused by impaired desquamation and trapping of debris or pigment. Predisposing factors include smoking, poor oral hygiene, dry mouth, and some exposures.

## Black Lung

Coal workers' pneumoconiosis caused by prolonged inhalation of coal-mine dust. It ranges from simple anthracosis to progressive massive fibrosis and may cause cough, breathlessness, and permanent lung impairment.

## Black Stain

Dark discoloration on the tooth surface, often near the gumline, caused by external deposits or chromogenic bacteria. Dental assessment determines the cause and appropriate removal.

## Black Triangle

Triangular space between teeth at gumline. Caused by papilla loss, tooth shape, bone level. Treatment: orthodontics, restorative, papilla reconstruction.

## Blackheads

Open comedones formed when a hair follicle becomes blocked with sebum and keratin and the surface material oxidizes. They are a common non-inflammatory lesion of acne, especially on the face, chest, and back.

## Bladder Cancer

A malignant tumor arising in the urinary bladder, most often from the urothelial lining. Blood in the urine is a common presenting feature, although symptoms vary.

### Synonyms:

Bladder Carcinoma (Bladder Cancer)

## Bladder Carcinoma

A malignant tumor arising in the urinary bladder, most often from the urothelial lining. Blood in the urine is a common presenting sign; smoking and certain occupational chemical exposures increase

risk.

## Bladder Diverticula

Outpouchings of the bladder mucosa through the muscular wall, often acquired from chronic bladder outlet obstruction or congenital in origin. Acquired diverticula are associated with benign prostatic hyperplasia and may cause urinary stasis, recurrent infections, and stone formation.

## Bladder Diverticulum

Outpouching of bladder wall. Congenital or acquired (obstruction). Asymptomatic or causes urinary stasis, stones, infection. Treatment: address obstruction, diverticulectomy if symptomatic.

## Bladder Exstrophy

A rare congenital abdominal wall defect where the bladder is exposed on the outside of the body due to failure of the lower abdominal wall and bladder to close during embryonic development. Part of the exstrophy-epispadias complex. Associated with pubic bone diastasis, external genital anomalies, and potential bladder dysfunction.

## Bladder Fistula

An abnormal connection between the bladder and another organ or the skin, most often the vagina, bowel, or uterus. It may cause continuous urine leakage, recurrent infections, gas or stool in the urine, or unusual vaginal wetness. Treatment depends on the cause and may require catheter drainage and surgical repair.

## Bladder Health And Disorders

Bladder health involves the proper storage and voluntary release of urine through coordinated function of the detrusor muscle and sphincters. Common disorders include urinary tract infections, overactive bladder, stress incontinence, and interstitial cystitis.

## Bladder Outlet Obstruction

Blockage of urine flow at the bladder neck or urethra, commonly caused by benign prostatic enlargement, urethral stricture, stones, tumors, or pelvic-organ prolapse. It may cause weak stream, hesitancy,

---

retention, hydronephrosis, infection, and renal impairment.

### **Bladder Pain Syndrome**

Chronic bladder-related pain, pressure, or discomfort associated with urinary symptoms in the absence of infection or another identifiable cause. It is a diagnosis of exclusion and is managed with multimodal, patient-centered treatment.

### **Bladder Perforation**

A tear or hole in the bladder wall caused by trauma, pelvic surgery, instrumentation, severe inflammation, or obstruction. Urine may leak into surrounding tissues, causing abdominal pain, distention, blood in the urine, or infection. It requires urgent medical assessment and may need catheter drainage or surgical repair.

### **Bladder Problems**

A range of conditions affecting urine storage and voiding, including incontinence, overactive bladder, urinary retention, and recurrent infections. Causes may include neurological damage, pelvic floor weakness, prostate enlargement, or bladder outlet obstruction.

### **Bladder Retraining**

Scheduled voiding and gradual increases in the time between voids to improve bladder control.

### **Bladder Spasm**

An involuntary contraction of the bladder muscle that can cause sudden urgency, cramping, urine leakage, or pain. It may occur with infection, catheter use, bladder irritation, neurological conditions, or after surgery. Treatment addresses the cause and may include bladder training or medicines.

### **Bladder Stone**

A mineral deposit formed in or entering the urinary bladder. It may cause painful urination, blood in the urine, interrupted flow, or recurrent infection; treatment addresses the stone and its cause.

### **Blalock-Taussig Operation**

A surgical systemic-to-pulmonary shunt that increases pulmonary blood flow in selected cyanotic congenital heart disease. The modern modified procedure commonly uses a prosthetic conduit rather than direct sacrifice of a subclavian artery.

### **Blast Crisis**

Aggressive, terminal phase of myeloid (chiefly CML) or, less commonly, lymphoid malignancies in which immature blasts dominate the marrow and peripheral blood, behaving like acute leukemia. CML blast crisis is defined by 20% blasts in peripheral blood or bone marrow or by the presence of extramedullary blastic infiltrates (chloromas).

### **Blast Injury**

Tissue injury caused by an explosion, classified as primary injury from the pressure wave, secondary injury from projectiles, tertiary injury from displacement or impact, and quaternary injury from burns, inhalation, toxins, or crush. Multiple mechanisms may coexist.

### **Blastic Plasmacytoid Dendritic-Cell Neoplasm**

A rare, aggressive hematologic malignancy derived from plasmacytoid dendritic cells. It often involves skin, bone marrow, lymph nodes, and central nervous system, with a poor prognosis.

### **Blastocyst**

An early stage in embryonic development, consisting of a hollow sphere of cells that implants into the uterine wall.

### **Blastoma**

Generic descriptor for embryonal (primitive) malignant tumors arising from precursor ("blast") cells that fail to differentiate normally.

### **Blastomyces Dermatitidis**

A dimorphic fungus that causes blastomycosis, a systemic pyogranulomatous infection acquired by inhalation of conidia from soil in endemic regions such as the Ohio and Mississippi River valleys. Cuta-

---

neous manifestations include verrucous or ulcerated plaques, and pulmonary involvement is common.

### **Blastomycosis**

A fungal infection caused by *Blastomyces dermatitidis*, endemic to the Ohio and Mississippi River valleys and Great Lakes region. Inhalation of conidia causes pulmonary infection. Pulmonary: acute pneumonia (often misdiagnosed as bacterial), chronic pneumonia with nodules and cavitation.

### **Bleeding**

The escape of blood from the vascular system, which may be external (visible hemorrhage from a wound, orifice, or natural opening) or internal (bleeding into a body cavity, organ, or tissue).

### **Bleeding Disorders**

A heterogeneous group of conditions characterized by abnormal hemostasis, resulting from defects in blood vessels, platelets, or coagulation factors.

### **Bleeding Esophageal Varices**

Life-threatening hemorrhage from dilated submucosal veins in the lower esophagus, occurring as a complication of portal hypertension, most commonly from cirrhosis. Varices form when the portal venous pressure gradient exceeds 10 mmHg (the threshold for variceal development).

### **Bleeding Gums**

Bleeding from the gum tissue, often caused by plaque-related gingivitis, periodontitis, trauma, or vigorous brushing. It can also occur with blood disorders or medicines that affect clotting. Persistent bleeding, swelling, loose teeth, or spontaneous bleeding requires dental or medical evaluation.

### **Bleeding Into A Thyroid Nodule**

Hemorrhage within a thyroid nodule, presenting with sudden onset of neck pain and rapid enlargement of a pre-existing or new thyroid mass. It may mimic thyroid malignancy clinically and on imaging. Ultrasound shows a complex cystic lesion with internal echoes. Fine needle aspiration confirms the benign nature of the hemorrhagic cyst.

### **Blennorrhea**

A mucopurulent discharge from a mucous membrane, especially the urethra or conjunctiva. The finding requires clinical assessment for infectious and noninfectious causes rather than treatment based on the symptom alone.

### **Blepharitis**

Chronic inflammation of the eyelid margins, one of the most common ophthalmic conditions, classified into anterior blepharitis (affecting the eyelash follicle and base) and posterior blepharitis (affecting the meibomian glands).

#### **Synonyms:**

Eyelid Inflammation Eyelid Inflammation (Blepharitis)

### **Blepharoconjunctivitis**

Inflammation involving the eyelid margins and conjunctiva. It may cause crusting, itching, redness, tearing, irritation, and recurrent symptoms associated with infection, allergy, or eyelid-gland dysfunction.

### **Blepharoplasty**

Surgical reconstruction or reshaping of the eyelids, often involving removal or repositioning of excess skin, muscle, or orbital fat. It may be functional, cosmetic, or reconstructive.

### **Band Cell**

An immature neutrophil with a curved, unsegmented nucleus. An increased number in blood may occur during acute infection or inflammation.

### **Blepharospasm**

Involuntary spasms of the muscles around the eyes that cause repeated or sustained eyelid closure. It may be primary or associated with eye irritation, medications, or a neurologic disorder.

### **Blind Loop Syndrome**

Malabsorption syndrome due to stasis and bacterial overgrowth (SIBO) in a non-propulsive ("blind") segment of small bowel, classically caused by surgical

---

bypass loops (Billroth II, end-to-side anastomosis), strictures (Crohn disease, radiation, adhesions), diverticulosis, or impaired motility (diabetes, scleroderma).

### **Blinding**

Concealing group assignment. Single-blind: participants. Double-blind: participants and investigators. Triple-blind: participants, investigators, analysts.

### **Blindness**

Severe or complete loss of vision in one or both eyes, caused by disease or injury affecting the cornea, lens, retina, optic nerve, visual pathways, or visual cortex. It may be congenital or acquired, sudden or progressive, and reversible or permanent; sudden visual loss is an ophthalmic emergency.

### **Blood Alcohol Concentration**

The concentration of ethanol in blood, commonly expressed as mass per volume or as a percentage. Interpretation depends on sampling, timing, metabolism, tolerance, co-ingestants, and local standards; clinical impairment cannot be inferred from a single value without context.

### **Blood Alcohol Level**

Measurement of ethanol concentration in blood. The clinical effects depend on the concentration, timing, tolerance, co-ingestants, and individual factors; a single level does not by itself determine impairment or prognosis.

### **Blood Clot**

A mass of coagulated blood within a blood vessel or body cavity. A clot may be protective when it stops bleeding, but an abnormal thrombus can obstruct blood flow or embolize to the lungs, brain, heart, or other organs.

### **Blood Coagulation**

The cascade of enzymatic reactions converting circulating fibrinogen into an insoluble fibrin clot.

### **Blood Coagulation Disorder**

A disorder in which clot formation is deficient, excessive, or inappropriately regulated, causing abnormal bleeding or thrombosis. Causes include inherited factor deficiencies, platelet disorders, liver disease, vitamin deficiencies, immune conditions, and acquired systemic disease.

### **Blood Culture**

A laboratory test in which blood is placed in culture bottles to detect bacteria or fungi in the bloodstream. It is used when bloodstream infection, sepsis, or infective endocarditis is suspected.

### **Blood Culture Contamination**

Introduction of skin or environmental microorganisms into a blood-culture bottle during collection or handling rather than true bloodstream infection. It can lead to unnecessary antimicrobial treatment and should be assessed using the organism, number of positive sets, time to positivity, and clinical findings.

### **Blood Film (Peripheral Blood Smear)**

A stained microscopic preparation of peripheral blood used to assess erythrocyte, leukocyte, and platelet morphology and to detect abnormal cells, parasites, blasts, and red-cell fragments.

#### **Synonyms:**

Peripheral Blood Smear

### **Blood Flow**

The volume of blood passing through a vessel, organ, or the systemic circulation per unit time, typically expressed in mL/min. Governed by the hemodynamic equivalent of Ohm's law: flow = pressure gradient / resistance. Total cardiac output (5 L/min at rest) equals systemic blood flow.

### **Blood Gas (Venous)**

Sampling of venous blood (typically from a peripheral vein or central line) for pH, PvCO<sub>2</sub>, HCO<sub>3</sub>, and base excess. Less painful than ABG, avoids arterial puncture risks. Limitations: no PaO<sub>2</sub> or SpO<sub>2</sub> data; peripheral venous gases in shock may not reflect arterial pH. VBG pH is typically 0.03-0.05 lower than

---

ABG; PvCO<sub>2</sub> is 3-8 mmHg higher.

**Synonyms:**

Venous

### **Blood Glucose Monitoring**

Blood sugar monitoring involves measuring glucose levels in the blood to manage diabetes, typically using a glucometer with finger-stick testing or continuous glucose monitors that track interstitial glucose in real time.

### **Blood Group**

The classification of blood based on the presence or absence of specific antigens (agglutinogens) on the surface of red blood cells. The ABO system has four groups: A (A antigen), B (B antigen), AB (both A and B), and O (neither A nor B). The Rh system: RhD-positive (85% of population) or RhD-negative (15%).

### **Blood In Semen**

Hematospermia, or the presence of blood in the ejaculate. It is often temporary and related to inflammation, infection, recent urologic procedures, or trauma, but persistent or recurrent bleeding, pain, fever, urinary symptoms, or bleeding in older men warrants medical evaluation.

**Synonyms:**

Semen Blood (Blood In Semen)

### **Hematospermia**

Blood in the semen, often temporary and associated with infection, inflammation, trauma, or a recent urologic procedure. Persistent or recurrent bleeding, pain, fever, urinary symptoms, or bleeding in an older adult requires medical evaluation.

### **Blood Loss**

The volume of blood lost during surgery or trauma, estimated by weighing swabs, suction contents, and hemodynamic monitoring, guiding fluid and transfusion management.

### **Blood Pressure**

The force exerted by blood against arterial walls,

measured in millimeters of mercury (mmHg). Systolic pressure (peak during ventricular ejection, normally approximately 120 mmHg) and diastolic pressure (minimum during ventricular relaxation, normally approximately 80 mmHg).

### **Blood Products**

Components prepared from donated blood for transfusion, including red blood cells, platelets, plasma, and cryoprecipitate. Each component has specific indications, benefits, and risks; selection depends on the patient's clinical condition and laboratory findings.

### **Blood Smear**

Peripheral blood film: a thin blood smear on a slide stained (Wright/Giemsa) and examined microscopically for cell morphology, aiding diagnosis.

### **Blood Spatter Analysis**

The forensic interpretation of bloodstain patterns to reconstruct events surrounding a violent incident. Types: passive (drops, pools, flows), transfer (contact patterns), and impact/expired spatter.

### **Blood Sugar Test**

Measurement of blood glucose to detect or monitor diabetes and other disorders of glucose regulation. Testing may be performed fasting, randomly, or after a glucose load, using a laboratory sample or a point-of-care meter.

### **Blood Transfusion**

The administration of whole blood or blood components (packed red blood cells, platelets, fresh frozen plasma, cryoprecipitate) to restore or maintain adequate circulating blood volume and oxygen-carrying capacity.

### **Blood Urea Nitrogen**

BUN: serum urea, the end product of protein catabolism, filtered and partially reabsorbed by the tubules. Used with creatinine to assess renal function and volume status.

---

### **Blood Viscosity**

The internal friction of blood that resists flow, determined primarily by hematocrit (red cell concentration), with smaller contributions from plasma proteins and temperature. Normal whole-blood viscosity is approximately 3-4 times that of water.

### **Blood-Borne Disease**

An infection that can spread through contact with infected blood or other body fluids. Examples include HIV and hepatitis B and C.

### **Blood-Brain Barrier**

The blood-brain barrier is a highly selective semipermeable membrane that separates the circulating blood from the brain extracellular fluid, consisting of endothelial cells connected by tight junctions, astrocyte foot processes, and a basement membrane.

### **Bloom Syndrome**

Rare autosomal recessive chromosomal instability syndrome caused by biallelic mutations in BLM (15q26.1) encoding a RecQ helicase.

### **Blount Disease**

A growth disorder of the proximal tibia causing progressive bowing of the legs, usually involving the medial tibial physis. It may occur in infants or adolescents and can lead to gait abnormality, limb-length discrepancy, and early knee degeneration.

### **Blue Baby**

Generic term for an infant with cyanosis (bluish skin, lips, nail beds) from arterial oxygen desaturation.

### **Blue Bloater**

A clinical phenotype of chronic bronchitis in COPD. Patients present with chronic cough, sputum production, cyanosis, right heart failure, and airway-centric inflammation. They tend to be younger, have more hypercapnia, and less emphysema on imaging.

### **Blunt Abdominal Trauma**

Trauma to the abdomen without penetrating injury. Mechanisms: motor vehicle collisions (most

common), falls, assaults. Commonly injured organs: spleen (most common, left upper quadrant), liver (right upper quadrant), kidneys (flank), bowel (seatbelt sign, delayed perforation), and pancreas (epigastric).

### **Blunt Force Trauma**

Injury produced when a blunt object strikes the body, or the body strikes a blunt surface, without a sharp edge penetrating the skin. Patterns include abrasions, contusions, lacerations with tissue bridging, and fractures; patterned injuries may reproduce the impacting object.

### **BMI (Body Mass Index)**

Weight in kg divided by height in meters squared. Screening tool for weight categories: underweight ( $<18.5$ ), normal ( $18.5-24.9$ ), overweight ( $25-29.9$ ), obese ( $\geq 30$ ). Limitations: does not distinguish muscle from fat, may misclassify athletes, elderly, certain ethnic groups.

#### **Synonyms:**

Body Mass Index

### **BNP**

B-type natriuretic peptide. Marker of heart failure. Released from ventricles in response to stretch.

### **Bocavirus Infection**

Infection caused by human bocavirus, a respiratory virus that most often affects young children. It may cause cough, wheezing, fever, runny nose, bronchiolitis, or pneumonia and can occur with other respiratory infections. Treatment is generally supportive; breathing difficulty, dehydration, or marked lethargy requires prompt assessment.

### **Bochdalek Hernia**

A congenital diaphragmatic hernia (CDH) occurring through the posterolateral foramen of Bochdalek, resulting from failure of the pleuroperitoneal membrane to close by the 8th week of gestation. The left side is affected in 85% of cases (the right pleuroperitoneal canal closes earlier).

---

## Body Aches

Generalized muscle or body pain that may occur with viral infections, fever, exertion, inflammation, medication effects, or other systemic illness. Severe pain with weakness, dark urine, breathing difficulty, chest pain, or high fever requires prompt medical assessment.

## Body Dysmorphic Disorder

Preoccupation with one or more perceived defects or flaws in physical appearance that are not observable or appear slight to others. The individual performs repetitive behaviors in response to appearance concerns such as mirror checking, excessive grooming, skin picking, reassurance seeking, and comparing.

### Synonyms:

BDD

## Body Identification

The process of establishing the identity of a deceased person, essential in forensic and mass-disaster contexts.

## Body Lice

Infestation of clothing and skin by the human body louse, causing intense itching, excoriations, and sometimes secondary bacterial infection. Treatment requires hygiene, laundering or heat treatment of clothing and bedding, and appropriate antiparasitic measures.

### Synonyms:

Lice, Body

## Body Plethysmography

Technique for measuring lung volumes (TLC, RV, FRC) using a sealed chamber. Gold standard for TLC measurement. Useful for diagnosing restriction and hyperinflation.

## Body Ringworm

Dermatophyte infection of the glabrous skin, also called tinea corporis. It typically produces an expanding annular scaly lesion with a more active border and central clearing.

### Synonyms:

tinea corporis.

## Body Temperature

The balance between heat production (metabolism, muscle activity) and heat loss (radiation, conduction, convection, evaporation). See Temperature (Body Temperature).

## Boeck's Sarcoid

An older eponym for sarcoidosis, a multisystem granulomatous disease characterized by noncaseating granulomas and commonly involving the lungs, intrathoracic lymph nodes, skin, or eyes.

## Boerhaave Syndrome

Transmural spontaneous rupture of the esophagus typically occurring after forceful vomiting in the setting of a full stomach. Most commonly involves the left posterolateral wall of the distal esophagus. Presents with severe chest pain, subcutaneous emphysema, mediastinal emphysema, and rapidly progressive sepsis.

## Bohn Nodules

Small, benign keratin-filled cysts on the gums or palate of a newborn that usually resolve without treatment.

## Bohr Effect

The decrease in hemoglobin's oxygen affinity (right shift of the dissociation curve) caused by decreased pH (increased H<sup>+</sup>) and increased PCO<sub>2</sub>. In metabolically active tissues, CO<sub>2</sub> production and lactic acid accumulation lower the local pH, causing hemoglobin to release more oxygen precisely where it is needed most.

## Boil

Furuncle: an acute, deep infection of a hair follicle (folliculitis that extends to the dermis) by *Staphylococcus aureus*, forming a painful, red, swollen nodule with central purulent core that may spontaneously drain.

---

## **Boil (Furuncle)**

A painful, deep-seated infection of a hair follicle caused most commonly by *Staphylococcus aureus*, extending into the surrounding subcutaneous tissue. Presents as a tender, erythematous, fluctuant nodule that eventually discharges pus. When multiple adjacent follicles coalesce, it forms a carbuncle, often with systemic symptoms.

### **Synonyms:**

Furuncle

## **Bone**

A rigid, mineralised connective tissue that forms the skeleton, providing structural support, protection of vital organs, hematopoiesis (bone marrow), and mineral storage (calcium, phosphate). Bone composition: organic matrix (90% type I collagen) and inorganic mineral (hydroxyapatite, calcium phosphate).

## **Bone Cancer**

Cancer that begins in bone, such as osteosarcoma or chondrosarcoma, or cancer that has spread to bone from another organ. Possible features include persistent localized bone pain, swelling, or a fracture after minor trauma. Diagnosis requires imaging and tissue evaluation; treatment depends on the type and extent of disease.

### **Synonyms:**

Sarcoma, Bone Cancer

## **Bone Cement (Polymethylmethacrylate—PMMA)**

Acrylic polymer used to fix prosthetic joints to bone. Mixes as dough, cures exothermically. Used in hip/knee arthroplasty, vertebroplasty, cranial reconstruction. Complications: cement implantation syndrome (hypotension, hypoxia), infection, loosening.

### **Synonyms:**

Polymethylmethacrylate—PMMA

## **Bone Densitometry**

Dual-energy X-ray absorptiometry measures bone mineral density at the lumbar spine and hip. Results are expressed as T-score comparing to young

adult mean and Z-score comparing to age-matched controls. T-score of minus 1.0 to minus 2.5 indicates osteopenia. T-score of minus 2.5 or less indicates osteoporosis.

## **Bone Density**

The amount of mineral in bone, commonly estimated by dual-energy X-ray absorptiometry. Lower density is associated with increased fracture risk, and interpretation depends on the person's age, sex, and clinical context.

## **Bone Density Screening**

Testing, usually with DXA, that measures bone mineral density and helps estimate fracture risk or assess osteoporosis.

## **Bone Fracture**

A partial or complete break in a bone caused by injury, repeated stress, or weakened bone. Pain, swelling, bruising, deformity, and inability to use the limb may occur. Open fractures, loss of circulation or sensation, or major deformity require emergency care.

## **Bone Graft**

Bone tissue or a bone-substitute material used to fill a defect, promote fusion, support reconstruction, or enhance fracture healing. Autograft provides osteogenic cells and biologic signals; allograft and synthetic substitutes provide variable osteoconductive and osteoinductive properties.

## **Bone Graft (Dental)**

Material placed to augment alveolar bone. Types: autograft, allograft, xenograft, alloplast. Used for implants, ridge preservation.

### **Synonyms:**

Dental

## **Bone Health**

The strength and condition of the skeleton, influenced by bone density, structure, nutrition, hormones, activity, medicines, and disease.

---

## **Bone Infection**

Infection of bone, usually caused by bacteria and called osteomyelitis. It may arise from bloodstream spread, nearby tissue, surgery, or an open injury.

## **Bone Marrow**

Vascular tissue within the medullary cavities and cancellous bone. Red marrow produces blood cells, whereas yellow marrow primarily stores fat and can revert to red marrow when demand increases.

## **Bone Marrow Aspiration**

A procedure that withdraws liquid marrow, usually from the posterior iliac crest, for cytologic, flow-cytometric, cytogenetic, molecular, and microbiologic evaluation. It complements the core biopsy, which assesses marrow architecture.

## **Bone Marrow Aspiration And Biopsy**

Sampling of bone marrow, typically from the posterior iliac crest. Aspiration: liquid marrow for cytology (differential, morphology), flow cytometry, cytogenetics, and MRD. Biopsy: core of bone for cellularity, architecture, fibrosis, and infiltrative disease (lymphoma, metastatic cancer, granulomas).

## **Bone Marrow Biopsy**

A procedure sampling bone marrow (typically posterior iliac crest) via aspiration (cytology, flow cytometry, cultures) and trephine core biopsy (histology, architecture, fibrosis, cellularity).

## **Bone Marrow Depression**

Reduced production of blood cells by the bone marrow, causing anemia, low white-cell counts, low platelet counts, or combinations of these findings.

## **Bone Marrow Hyperplasia**

Increased cellularity of the bone marrow resulting from accelerated hematopoiesis, typically compensating for chronic hemolytic anemia, hemorrhage, or systemic hypoxia.

## **Bone Marrow Necrosis**

Death of hematopoietic and stromal cells within the

bone marrow, often associated with sickle cell crisis, malignancy, or infections, presenting with severe bone pain and cytopenias.

## **Bone Metastases**

Cancer deposits that have spread to bone from another primary site. They may cause pain, fracture, high blood calcium, or spinal-cord compression.

## **Bone Metastasis**

A deposit of cancer that has spread to bone from another primary site. It may cause pain, fracture, high blood calcium, or spinal-cord compression, and treatment depends on the cancer and clinical context.

## **Bone Scan**

Skeletal imaging using Tc-99m MDP. Detects osteoblastic activity. Sensitivity: high; specificity: low. Used for metastasis detection, fracture, infection, metabolic bone disease. "Hot spots" indicate increased uptake; "cold spots" indicate decreased uptake.

## **Bone Scan (Nuclear Scintigraphy)**

Nuclear medicine imaging using Tc-99m MDP (methylene diphosphonate) that accumulates in areas of increased bone turnover. Three phases: perfusion (immediate), blood pool (5 min), and delayed (2-3 hours).

### **Synonyms:**

Nuclear Scintigraphy

## **Bone Turnover Markers**

Biochemical markers reflecting the rate of bone remodeling. Formation markers include bone-specific alkaline phosphatase, osteocalcin, and N-terminal and C-terminal propeptides of type I procollagen. Resorption markers include C-terminal and N-terminal telopeptides of type I collagen and deoxypyridinoline.

## **Bones And Joints**

Bones and joints form the skeletal system, providing structural support, protection of organs, and enabling movement through articulations between

---

bones. Joints are classified as fibrous, cartilaginous, or synovial, with synovial joints offering the greatest range of motion.

### **Bony Exostosis**

A benign localized bony protuberance, including torus palatinus of the palate and torus mandibularis of the mandible. Treatment is usually unnecessary unless the lesion causes trauma, interferes with speech or prosthesis, or requires diagnostic clarification.

### **Borderline Personality Disorder**

A pattern of instability in interpersonal relationships, self-image, and affects, with marked impulsivity.

#### **Synonyms:**

BPD (Borderline Personality Disorder) Emotional Dysregulation Disorder (Borderline Personality Disorder) Personality Disorder, Borderline

### **Bordetella Pertussis**

A Gram-negative coccobacillus and the causative agent of whooping cough, a highly contagious respiratory infection. It produces pertussis toxin, which inhibits G-protein signaling in respiratory epithelial cells, and tracheal cytotoxin, which damages ciliated epithelium.

### **Bornholm Disease**

An acute epidemic pleurodynia caused most often by coxsackieviruses. It produces sudden attacks of severe chest or upper-abdominal muscle pain, fever, and sometimes headache or vomiting.

### **Borrelia**

A genus of spiral-shaped bacteria (spirochetes) transmitted by arthropod vectors, most notably ticks and lice. The major human pathogen is *Borrelia burgdorferi* sensu lato, the causative agent of Lyme disease, transmitted by Ixodes ticks.

### **Borrelia Burgdorferi**

A spirochete bacterium transmitted by Ixodes ticks and the principal cause of Lyme disease in North America and Europe.

### **Borreliosis**

Infection caused by bacteria of the genus *Borrelia*. Human disease includes Lyme borreliosis and relapsing fever, with manifestations varying according to species, stage, and organ involvement.

### **Bosniak Classification**

System classifying renal cysts by CT features. Categories I-II benign, IIF follow-up, III-IV likely malignant.

### **Bot Fly**

A parasitic fly of the family Oestridae whose larvae cause myiasis in humans and animals. *Dermatobia hominis*, the human bot fly, deposits eggs on blood-sucking insects; larvae penetrate the skin and develop subcutaneously, causing a painful boil-like lesion with a central breathing pore. Treatment is manual extraction of the larva.

### **Botryomycosis**

A chronic bacterial infection characterized by granule-forming lesions that can resemble a fungal infection. It most often affects skin and subcutaneous tissue but may involve viscera in susceptible patients.

### **Botulism**

A rare, potentially fatal neuroparalytic disease caused by botulinum toxin, a potent presynaptic neurotoxin produced by *Clostridium botulinum*, an anaerobic, spore-forming, gram-positive bacillus.

### **Bouchard's Node**

A hard, palpable enlargement of the proximal interphalangeal joint caused by osteoarthritis. It reflects osteophyte formation and may be associated with pain, stiffness, and reduced finger motion.

### **Bougienage**

The use of a bougie to dilate or explore a narrowed tubular structure, such as the esophagus or urethra. It is a procedure that requires assessment of the cause and risks of the stricture.

---

### **Bourbon Virus**

A rare tick-borne viral infection associated with fever, fatigue, anorexia, nausea, and a low white-cell or platelet count. There is no established specific antiviral treatment or vaccine; management is supportive and requires exclusion of other serious tick-borne infections.

### **Boutonneuse Fever**

A tick-borne rickettsial infection, usually caused by *Rickettsia conorii*, characterized by fever, headache, rash, and often a dark inoculation eschar called a tache noire.

### **Bouveret Syndrome**

Rare variant of gallstone ileus where a large gallstone erodes through a cholecystoduodenal fistula and impacts in the duodenum or pylorus causing gastric outlet obstruction. Represents approximately two to three percent of gallstone ileus cases. Presents with nausea, vomiting, epigastric pain, and anorexia.

### **Bovine Spongiform Encephalopathy**

A fatal transmissible prion disease of cattle causing progressive neurologic degeneration. It is related to variant Creutzfeldt–Jakob disease in humans through exposure to contaminated tissue.

### **Bowel Incontinence**

The involuntary loss of solid or liquid stool through the anus, also known as fecal incontinence, affecting approximately 2-15 percent of the general population and increasing in prevalence with age.

#### **Synonyms:**

fecal.

### **Bowel Infarction**

Ischemic necrosis of bowel tissue from occlusive or non-occlusive mesenteric ischemia, presenting with severe abdominal pain out of proportion to examination, bloody stools, and peritoneal signs. Causes include mesenteric arterial embolism or thrombosis, venous thrombosis, and low-flow states.

### **Bowel Ischemia**

Reduced blood flow to the intestines causing mucosal injury, most commonly from mesenteric atherosclerosis, low-flow states, or mesenteric venous thrombosis. Presents with abdominal pain, bloody stools, and elevated lactate. Severe cases progress to transmural necrosis.

### **Bowel Obstruction**

Blockage of intestinal lumen. X-ray, CT diagnosis. Differentiate small vs. large bowel obstruction. Mechanical vs.

### **Bowel Program**

A planned routine using diet, fluids, medicines, and scheduled toileting to promote regular bowel movements and manage constipation or bowel dysfunction.

### **Bowenoid Papulosis**

A low-grade squamous intraepithelial neoplasia of the anogenital skin caused by human papillomavirus infection, typically types 16 and 18, presenting as multiple pigmented papules on the genital mucosa. Histologically it resembles squamous cell carcinoma in situ but follows a benign clinical course.

### **Bowlegs**

Outward bowing of the legs causing the knees to remain apart when the feet and ankles are together, also called genu varum. It is common in early childhood but requires assessment when severe, asymmetric, painful, or persistent beyond the expected age.

#### **Synonyms:**

genu varum.

### **Bowman Capsule**

Double-walled epithelial cup surrounding the glomerular capillaries forming the beginning of the nephron. The visceral layer is composed of podocytes whose foot processes interdigitate to form filtration slits. The parietal layer is composed of simple squamous epithelium.

---

## Bowman's Gland

A serous gland in the olfactory mucosa whose secretion helps dissolve odorant molecules and cleanse the olfactory surface. It is located in the lamina propria beneath the olfactory epithelium.

## Boxed Warning

The most prominent safety warning required in prescribing information for a medicine when there is a serious or life-threatening risk. It communicates major hazards and does not necessarily mean that the medication is never appropriate.

## BPH

Abbreviation for benign prostatic hyperplasia, a noncancerous enlargement of the prostate that may obstruct urine flow.

## Brachial Artery

The continuation of the axillary artery, running from the lower border of teres major to the cubital fossa, where it divides into radial and ulnar arteries. Lies medial to the biceps; palpated for blood pressure and brachial pulse. Branches: profunda brachii (deep brachial), superior/inferior ulnar collaterals.

## Brachial Plexopathy

Dysfunction of the brachial plexus causing pain, weakness, sensory loss, or paralysis in the shoulder and upper limb. Causes include trauma, compression, tumors, inflammation, and radiation injury.

## Brachial Plexus

Nerve network (C5-T1) formed by roots, trunks, divisions, and cords, giving rise to upper limb nerves. Roots unite into superior/middle/inferior trunks, dividing into anterior/posterior divisions, recombining into lateral/posterior/medial cords. Major branches: musculocutaneous, axillary, radial, median, ulnar.

## Brachial Plexus Cords

Formed by divisions recombining behind the pectoralis minor. Lateral cord (anterior divisions of upper/middle trunks), posterior cord (all three posterior divisions), medial cord (anterior division of lower trunk). Named for relationship to the axil-

lary artery. Lateral cord: lateral pectoral nerve, contributes to median nerve.

## Brachial Plexus Injuries

Injuries to the network of nerves supplying the shoulder and upper limb, caused by traction, compression, or penetrating trauma. They may produce pain, weakness, sensory loss, or paralysis; the pattern and severity depend on which roots, trunks, or cords are affected.

## Brachial Plexus Injury

Damage to the brachial plexus nerves during birth, most commonly from shoulder dystocia or excessive traction. Erb's palsy (C5-C6) presents with waiter's tip position (arm adducted, elbow extended, forearm pronated). Klumpke's palsy (C8-T1) affects the hand and may cause Horner syndrome. Most cases resolve spontaneously.

## Brachial Plexus Roots

Ventral rami of C5-T1 emerging from intervertebral foramina, passing between anterior and middle scalene muscles (interscalene triangle). C5-C6 form the upper trunk, C7 continues as middle trunk, C8-T1 form the lower trunk. Root injuries cause specific dermatome/myotome deficits. C5 avulsion causes loss of deltoid/biceps function.

## Brachial Plexus Trunks

Formed in the posterior neck triangle. Upper (C5-C6), middle (C7), and lower (C8-T1) trunks each divide into anterior/posterior divisions behind the clavicle. Upper trunk is most commonly injured in birth injuries (Erb-Duchenne palsy), causing waiter's tip position.

## Brachialis Muscle

Flat strong muscle deep to the biceps, from distal anterior humerus to ulnar tuberosity and coronoid process. Innervated by musculocutaneous nerve (C5-C6). Primary elbow flexor regardless of forearm position ("workhorse" of elbow flexion). Less visible than biceps but significantly contributes to arm strength.

---

## Brachiocephalic Trunk

The first and largest branch of the aortic arch. It ascends to the right sternoclavicular joint, where it divides into the right common carotid and right subclavian arteries.

## Brachytherapy

Radiation treatment in which a radioactive source is placed inside or near a tumor to deliver a concentrated dose.

## Brachytherapy Seed

Radioactive source implanted directly into tumor. I-125 or Pd-103 seeds for prostate cancer. Permanent or temporary implantation.

## Bradycardia

A heart rate <60 beats per minute. May be physiologic (athletes) or pathologic due to sinus node dysfunction, AV block, or medication effects. Symptomatic bradycardia causes fatigue, dizziness, syncope, or heart failure. Evaluation includes ECG, Holter monitoring, and assessment of reversible causes.

### Synonyms:

Slow Heartbeat

## Bradycardia Of Prematurity

Heart rate less than 100 beats per minute in a premature infant, often associated with apnea and oxygen desaturation. May be caused by vagal stimulation, reflux, or immaturity of the cardiac conduction system. Treatment: gentle stimulation, caffeine, and addressing underlying causes.

## Bradykinesia

Slowness and reduced amplitude of voluntary movement, often accompanied by difficulty initiating or sustaining repetitive actions. It is a cardinal feature of parkinsonism and may be associated with rigidity, resting tremor, postural instability, reduced arm swing, masked facial expression, and a shuffling gait.

## Bradypnea

Abnormally slow respiratory rate (adult <12 breaths/min). Causes: opioid/benzodiazepine/sedative overdose, central nervous system depression (stroke, trauma, increased ICP), hypothyroidism, hypothermia, and metabolic (e.g., hypokalemia). May lead to hypoventilation, hypercapnia, and respiratory failure.

## Brain

The central organ of the nervous system, enclosed in the cranial cavity and composed of the cerebrum, cerebellum, and brainstem. The brain receives, processes, and integrates sensory information; initiates and coordinates motor responses; and serves as the seat of cognition, emotion, memory, and consciousness.

## Brain Abscess

A focal, purulent infection within the brain parenchyma, most commonly occurring in the frontal or temporal lobes.

## Brain Concussion

A mild traumatic brain injury caused by a blow, jolt, or force that temporarily changes brain function. Symptoms may include headache, dizziness, confusion, memory difficulty, nausea, and sensitivity to light or noise, sometimes without loss of consciousness. Worsening headache, repeated vomiting, seizure, weakness, or increasing drowsiness requires urgent assessment.

## Brain Death

The irreversible cessation of all brain and brainstem function, including consciousness and brainstem reflexes, with absent respiratory drive—a legal definition of death.

## Brain Edema

Swelling caused by excess fluid in brain tissue, which can raise pressure inside the skull. Causes include head injury, stroke, infection, tumor, bleeding, and severe metabolic disturbances. Symptoms may include headache, vomiting, confusion, seizures, weak-

---

ness, or reduced consciousness; severe cases are medical emergencies.

### **Brain Health**

Brain health encompasses the ability to perform cognitive functions such as memory, learning, decision-making, and emotional regulation across the lifespan. Key factors include cardiovascular health, nutrition, sleep, social engagement, cognitive stimulation, and management of chronic conditions like hypertension and diabetes.

### **Brain Herniation**

Displacement of brain tissue across rigid intracranial compartments or through the foramen magnum due to mass effect or raised ICP. It can compress the brainstem and cranial nerves and is a life-threatening neurosurgical emergency.

### **Brain Injuries**

Brain injuries range from mild concussions to severe traumatic brain injury caused by falls, motor vehicle accidents, sports impacts, or penetrating trauma. Symptoms depend on injury location and severity, including headache, confusion, memory loss, seizures, and altered consciousness.

### **Brain Injury**

Damage to the brain caused by trauma, lack of oxygen, stroke, infection, toxins, or other disease. Effects depend on the location and severity of injury.

### **Brain Metastases**

Cancer deposits that have spread to the brain from another primary site. They may cause headache, seizures, or focal neurologic deficits.

#### **Synonyms:**

Secondary Brain Cancer

### **Brain Metastasis**

A deposit of cancer that has spread to the brain from another primary site. It may cause headache, seizures, or focal neurologic deficits; treatment depends on the number, location, and biology of the lesions.

### **Brain Monitoring**

Brain monitoring during anesthesia assesses the depth of hypnosis and neurological function. Bispectral index (BIS) processes the frontal EEG into a number from 0 (isoelectric) to 100 (fully awake), with 40 to 60 recommended for general anesthesia. BIS monitoring reduces awareness risk and may reduce anesthetic requirements.

### **Brain Natriuretic Peptide**

A hormone released mainly by the heart ventricles in response to myocardial wall stress. BNP and NT-proBNP can support the assessment of suspected heart failure, but results are affected by age, kidney function, body size, rhythm, and other illnesses and must be interpreted with the clinical findings.

### **Brain SPECT**

Cerebral perfusion imaging using Tc-99m HMPAO or ECD. Used for epilepsy localization, dementia differentiation, cerebrovascular disease.

### **Brain Tumor**

An abnormal growth of cells within the brain or its surrounding structures, classified as primary (originating from brain tissue or its coverings) or secondary/metastatic (spread from a cancer elsewhere in the body, which are more common, accounting for approximately 50 percent of all brain tumors).

### **Brain Ventricles**

The four interconnected fluid-filled cavities within the brain that produce and contain cerebrospinal fluid (CSF).

### **Brainstem**

Connects cerebrum to spinal cord, with midbrain (superior), pons (middle), and medulla oblongata (inferior). Contains cranial nerve nuclei (III-XII), ascending/descending tracts, and vital autonomic centers for cardiac, respiratory, and vasomotor function. Reticular formation regulates consciousness and sleep-wake cycles.

### **Branchial Arch**

One of the paired embryonic arches that contribute

---

to development of facial, pharyngeal, laryngeal, muscular, skeletal, vascular, and neural structures of the head and neck.

### **Branchial Cleft**

An embryonic groove between adjacent branchial arches. Persistence of cleft remnants can produce congenital branchial cysts, sinuses, or fistulas, most commonly along the lateral neck.

### **Branchial Cleft Anomaly**

A congenital remnant of the branchial apparatus presenting as a cyst, sinus, or fistula in the head and neck. Recurrent infection or drainage from a persistent opening warrants imaging and specialist management.

### **Branchial Cleft Cyst**

Congenital cystic mass arising from incomplete obliteration of branchial cleft apparatus during embryogenesis.

### **Braxton Hicks Contractions**

Irregular, painless uterine contractions occurring throughout pregnancy, becoming more frequent in the third trimester. Usually last 30-60 seconds and are felt as a tightening of the abdomen. Distinguished from true labour contractions by their irregularity, lack of cervical change, and resolution with rest or hydration.

#### **Synonyms:**

Contractions Braxton-Hicks (Braxton Hicks Contractions) Labor False (Braxton Hicks Contractions)

### **BRCA**

BRCA1 and BRCA2 are tumor-suppressor genes involved in repair of DNA double-strand breaks. Pathogenic variants increase susceptibility to breast, ovarian, fallopian-tube, primary peritoneal, prostate, and pancreatic cancers.

### **BRCA1 And BRCA2**

Tumor-suppressor genes involved in homologous-recombination DNA repair. Germline pathogenic variants increase susceptibility to breast, ovarian, fallopian-tube, primary peritoneal, prostate, and

pancreatic cancers and may guide surveillance and treatment.

### **Breakbone Fever**

A traditional name for dengue fever, reflecting the severe myalgia and arthralgia that may accompany the acute viral illness.

### **Breast Abscess**

A localized collection of pus within the breast tissue, most commonly a complication of lactational mastitis. Presents as a fluctuant, painful mass with overlying erythema and systemic symptoms. Diagnosis by ultrasound. Treatment requires incision and drainage plus antibiotics.

### **Breast Cancer**

A malignant tumor arising in breast tissue. Risk, screening, and treatment depend on age, inherited and acquired biology, stage, and the person's circumstances.

### **Breast Density**

The relative proportion of fibroglandular tissue compared with fat in a breast on mammography. Higher density can make small cancers harder to see and is associated with an increased risk of breast cancer.

### **Breast Cancer Genetics**

The study of inherited variants that increase breast-cancer risk. Important genes and syndromes include BRCA1, BRCA2, PALB2, TP53, PTEN, and CHEK2. Genetic counseling can help determine whether testing is appropriate.

### **Breast Cyst**

A fluid-filled sac within breast tissue, usually benign and sometimes tender or larger before menstruation. Examination and imaging distinguish a cyst from a solid lesion; persistent, growing, bloody, or newly discovered breast lumps should be assessed by a clinician.

### **Breast Discharge**

Fluid released from the nipple without breastfeed-

---

ing. It may be caused by hormonal changes, infection, benign duct disease, or cancer. Bloody, clear, spontaneous, one-sided, or persistent discharge, especially with a lump or skin change, requires prompt breast evaluation.

### **Breast Engorgement**

Overfilling of the breasts with milk, causing bilateral pain, firmness, warmth, and nipple flattening. Occurs 3-5 days postpartum. Pathophysiology: vascular congestion and edema before milk secretion is established.

### **Breast Health**

Breast health involves routine self-awareness, clinical examinations, and mammographic screening to detect abnormalities such as lumps, pain, or skin changes that may indicate benign conditions or breast cancer. Risk factors include genetics, age, hormone exposure, and lifestyle factors.

### **Breast Infection**

Infection and inflammation of breast tissue, most commonly mastitis during breastfeeding. It causes localized pain, warmth, redness, swelling, and sometimes fever; an untreated infection may progress to a breast abscess.

### **Breast Lump**

A localized thickening, mass, or swelling in breast tissue caused by a cyst, fibroadenoma, infection, trauma, or malignancy. New, persistent, hard, fixed, or changing lumps require clinical and often imaging assessment.

### **Breast MRI**

Magnetic resonance imaging used to evaluate breast tissue. Contrast may be administered when clinically indicated.

### **Breast Pain**

Pain or tenderness in one or both breasts, caused by hormonal changes, cysts, infection, trauma, medications, or musculoskeletal disease. Persistent focal pain or an associated lump requires assessment.

**Synonyms:**

Pain, Breast

### **Breast Surgery**

Breast cancer surgery: breast-conserving therapy (BCT: lumpectomy + radiation) equivalent survival to mastectomy for early stage. Margins: "no ink on tumor" for invasive cancer; 2mm for DCIS.

### **Breast Ultrasound**

Ultrasound imaging of the breast. Indications: evaluating palpable masses (distinguishing solid vs. cystic), characterizing mammographic abnormalities, guiding biopsy (core needle, fine needle, or vacuum-assisted), evaluating implant integrity, and imaging young/dense breast tissue.

### **Breastfeeding**

The feeding of an infant with breast milk, recommended exclusively for the first 6 months and continued with complementary foods to 2 years and beyond. Benefits: infant (nutrition, immune protection—IgA, reduced infection/allergy/obesity, bonding) and maternal (uterine involution, contraception, reduced breast/ovarian cancer).

### **Breath Sounds**

The sounds produced by airflow through the respiratory tract during breathing, assessed by auscultation with a stethoscope over the chest wall.

### **Breath Stacking**

A technique using a manual resuscitation bag or glosopharyngeal breathing to deliver successive breaths without exhaling, stacking tidal volumes to achieve higher lung volumes. It improves cough effectiveness and secretion clearance in patients with weak respiratory muscles.

### **Breath-Holding Spells**

A benign paroxysmal phenomenon in young children (6 months to 6 years), provoked by frustration, pain, or fear. Cyanotic type (more common): child cries, forcefully exhales, becomes cyanotic, and may lose consciousness briefly.

---

### **Breech Delivery**

Vaginal delivery of a breech presentation. Types: assisted breech (the baby delivers spontaneously to the umbilicus, then the operator assists delivery of the shoulders and head) and total breech extraction (the operator delivers the entire baby by grasping the feet and pulling).

### **Breech Presentation**

A fetal presentation where the buttocks or feet are positioned to deliver first. Types include frank breech (hips flexed, knees extended, most common), complete breech (hips and knees flexed), and footling breech (one or both feet presenting). Associated with increased risk of cord prolapse, head entrapment, and birth trauma.

### **Bremsstrahlung**

Braking radiation produced when beta particles decelerate in matter. Continuous spectrum. Detected in I-131 imaging (poor quality). Used for Y-90 bremsstrahlung SPECT.

### **Brenner Tumor**

Rare ovarian epithelial neoplasm (1-2% of ovarian tumors) composed of nests of transitional (urothelial-like) epithelial cells embedded in a dense fibromatous stroma. Most are unilateral, small (< 2 cm), benign (90%) and incidental; borderline (proliferative) and malignant variants are uncommon.

### **Breslow Thickness**

Microstaging measurement of melanoma invasion depth from the top of the granular layer of the epidermis to the deepest point of tumor invasion, in millimeters. Most important prognostic factor in primary cutaneous melanoma, used in the AJCC TNM staging system (T category).

### **Bridge (Dental)**

Fixed prosthetic replacing missing teeth. Retained by adjacent teeth (abutments). Requires preparation of abutments.

#### **Synonyms:**

Dental

### **Brief Psychotic Disorder**

A disturbance characterized by the sudden onset of at least one psychotic symptom: delusions, hallucinations, disorganized speech, or grossly disorganized or catatonic behavior. The disturbance lasts at least one day but less than one month, after which the individual fully returns to premorbid functioning.

#### **Synonyms:**

Psychotic Disorder Brief (Brief Psychotic Disorder)

### **Brief Resolved Unexplained Event**

A sudden, brief, and now-resolved episode in an infant involving abnormal breathing, skin color, muscle tone, or responsiveness, with no explanation after the initial evaluation. Risk assessment is based on age, history, examination findings, and recurrence; higher-risk events require targeted investigation.

### **Bright's Disease**

A historical term encompassing several forms of kidney disease, particularly glomerular disorders associated with proteinuria, edema, and altered urinary findings. Modern diagnosis specifies the underlying renal lesion.

### **Brill's Disease**

A recrudescent form of epidemic typhus caused by reactivation of latent *Rickettsia prowazekii* infection years after the original illness. It is usually milder than the initial infection but can transmit to body lice.

### **Brittle Asthma**

An uncommon term for severe asthma with unusually unpredictable and difficult-to-control airflow or attacks despite appropriate treatment. The term is not a universally standardized diagnostic category; specialist assessment is required to identify triggers, alternative diagnoses, and effective management.

### **Brittle Diabetes**

Labile, unstable type 1 diabetes mellitus characterized by unpredictable, large, recurrent swings in blood glucose between severe hyperglycemia and recurrent hypoglycemia (often with ketoacidosis) despite optimal adherence, significantly disrupting

---

quality of life.

### **Broca Aphasia**

Acquired language disorder of expressive speech (motor aphasia) caused by lesion of the posterior inferior frontal gyrus (Broca area, Brodmann area 44/45) of the dominant (usually left) hemisphere, most commonly from middle cerebral artery (MCA) superior division infarction.

### **Broca's Aphasia**

A nonfluent language disorder caused by dysfunction of the dominant inferior frontal language region. Speech is effortful and reduced, while comprehension is relatively preserved compared with repetition and fluent language production.

### **Broca's Area**

A language-related region of the dominant inferior frontal gyrus involved in speech production, language formulation, and aspects of syntax. Lesions may cause expressive aphasia.

### **Broken Finger**

A fracture of one of the finger bones caused by trauma, crushing, or twisting. Pain, swelling, bruising, deformity, and reduced movement may occur. Assessment should check alignment, tendon function, sensation, and circulation; some fractures require reduction, splinting, or surgery.

#### **Synonyms:**

Pinky Broken Finger (Broken Finger)

### **Broken Foot**

A fracture of one or more bones of the foot, commonly caused by a fall, direct impact, twisting injury, or repetitive stress. Pain, swelling, bruising, and difficulty bearing weight are typical. Deformity, an open wound, numbness, or inability to walk requires urgent evaluation and imaging.

### **Broken Heart Syndrome**

A temporary weakening of the heart muscle, often triggered by severe emotional or physical stress. It can resemble a heart attack but usually occurs without an obstructing coronary clot.

### **Broken Toe**

A fracture of a toe bone, usually after direct impact or crushing. Pain, swelling, bruising, and tenderness are common; deformity, an open injury, numbness, or impaired circulation requires prompt assessment. Treatment may include protection and immobilization, with reduction or surgery for displaced or unstable fractures.

#### **Synonyms:**

Toe Broken (Broken Toe)

### **Bromhidrosis**

Excessive or unpleasant body odor produced when microbial metabolism acts on sweat or skin secretions. It is often prominent in the axillae or feet and may be associated with hyperhidrosis or local skin disease.

### **Bromoderma**

A skin eruption or dermatitis attributed to exposure to bromine or bromide compounds. It may present with acneiform, pustular, or other inflammatory lesions.

### **Bronchi**

The major airways conducting air from the trachea into the lungs. The trachea bifurcates at the carina (T4-T5) into right and left main bronchi. The right main bronchus is wider, shorter, and more vertical—aspirated foreign bodies preferentially lodge here.

### **Bronchial Artery**

An artery arising from the systemic circulation that supplies the walls of the bronchi, connective tissue of the lungs, and visceral pleura. It differs from the pulmonary arteries, which carry blood for gas exchange.

### **Bronchial Biopsy**

Tissue sampling of the bronchial wall during bronchoscopy. It is used to diagnose inflammatory conditions (sarcoidosis, eosinophilic bronchitis), infections, and malignancy. Endobronchial biopsy of visible lesions and transbronchial biopsy of parenchymal lesions provide complementary diagnostic informa-

---

tion.

### **Bronchial Carcinoid**

Pulmonary neuroendocrine tumor arising from Kulchitsky cells of the bronchial mucosa; subclassified as typical carcinoid (TC, generally lower grade, with fewer mitoses and no necrosis) and atypical carcinoid (AC, generally higher grade, with more mitoses or necrosis and greater risk of recurrence or metastasis).

### **Bronchial Stenosis**

Narrowing of a bronchus from trauma, infection, inflammation, or prior intervention. It causes localized wheezing, recurrent infections, and impaired secretion clearance. Diagnosis is by bronchoscopy. Treatment includes balloon dilation, stenting, or surgical resection.

### **Bronchial Tree**

The branching airway system formed by the trachea, main bronchi, lobar and segmental bronchi, bronchioles, and terminal airways leading toward the alveoli.

### **Bronchial Vein**

A vein draining portions of the bronchial walls and larger airways. It empties partly into the azygos system and partly into pulmonary veins, creating a small physiologic venous admixture.

### **Bronchiectasis**

Permanent, abnormal dilation of bronchi caused by destruction of the bronchial wall from chronic airway inflammation and infection. Causes include CF, immune deficiency, primary ciliary dyskinesia, and post-infectious damage. Features include chronic cough, copious purulent sputum, and recurrent hemoptysis.

### **Bronchiole**

Small airways (less than 2 mm diameter) without cartilage, branching from segmental bronchi to terminal bronchioles (conducting zone) to respiratory bronchioles (transitional, alveoli bud from walls) to alveolar ducts to alveolar sacs to alveoli.

### **Bronchiolectasis**

Permanent abnormal dilation of bronchioles, usually caused by chronic inflammation, infection, or obstruction. It may accompany bronchiectasis and contribute to impaired mucus clearance and recurrent infection.

### **Bronchiolitis**

Lower respiratory tract infection causing inflammation and obstruction of small airways. Most common cause is respiratory syncytial virus. Affects infants under 12 months. Presents with wheezing, tachypnea, nasal flaring, and retractions. Diagnosis is clinical.

### **Bronchiolitis Obliterans**

An uncommon, often irreversible obstructive small-airway disease caused by inflammation and fibrotic narrowing or obliteration of the bronchioles. Causes include severe infection, inhalational injury, autoimmune disease, and complications after lung or bone-marrow transplantation.

### **Bronchitis**

Inflammation of the bronchial mucosa. Acute bronchitis is typically viral, presents with cough (often productive), and resolves spontaneously. Cough with sputum production for at least 3 months in 2 consecutive years, often due to smoking.

### **Bronchoalveolar Lavage**

Diagnostic procedure during bronchoscopy where saline is instilled and aspirated. Analyzed for cell counts, microbiology, and cytology. Useful for *Pneumocystis pneumonia*, pulmonary alveolar proteinosis, and sarcoidosis diagnosis.

### **Bronchodilator Response**

The change in spirometric airflow after administration of a short-acting bronchodilator. A significant response can support variable airflow limitation, but a negative response does not exclude asthma and a positive response is not specific to one disease.

### **Bronchodilator Reversibility**

Improvement in airflow measurements after an in-

---

haled bronchodilator. A measurable increase may support variable airway obstruction, but no single response proves or excludes asthma or chronic obstructive pulmonary disease.

### **Bronchoesophageal Fistula**

Abnormal communication between the bronchial tree and the esophagus, most commonly acquired from malignancy, mediastinal infection, or tuberculous lymphadenitis. Congenital forms are associated with esophageal atresia.

### **Bronchogenic Cyst**

A congenital cyst derived from abnormal budding of the ventral foregut. It is typically found in the middle mediastinum or near the carina. It is usually asymptomatic but may cause compression of adjacent structures. Treatment is surgical resection if symptomatic.

### **Bronchophony**

Increased transmission of spoken sounds to the stethoscope over consolidated lung tissue. It is normally heard over the central airways. Excessive bronchophony over peripheral lung fields indicates consolidation. It is part of the constellation of physical examination findings in pneumonia.

### **Bronchopleural Fistula**

An abnormal communication between the bronchial tree and pleural space. It is a complication of pneumonectomy, lung surgery, or empyema. It causes persistent air leak, subcutaneous emphysema, and respiratory compromise. Treatment includes chest tube drainage, bronchoscopic intervention, and surgical repair.

### **Bronchopneumonia**

Patchy consolidation centered on bronchioles across multiple lobes. Caused by *S. aureus*, gram-negative bacteria, and *Pseudomonas*.

### **Bronchopulmonary Dysplasia**

A chronic lung disease of premature infants, resulting from lung injury from mechanical ventilation, oxygen toxicity, and inflammation. Most commonly

occurs in infants born at less than 28 weeks gestation with birth weight less than 1500 grams.

### **Bronchoscopy**

Endoscopic examination of the tracheobronchial tree. Flexible bronchoscopy: most common, for diagnosis (lung mass, persistent cough, hemoptysis, suspected infection, ILD) and therapy (foreign body removal, bronchial washing, biopsy, BAL). Rigid bronchoscopy: for massive hemoptysis, large foreign bodies, and stent placement.

### **Bronchospasm**

Involuntary constriction of bronchial smooth muscle causing airway obstruction, wheezing, and increased airway pressures. Triggers include airway manipulation, volatile anesthetics (sevoflurane is bronchodilating; desflurane can cause bronchospasm), histamine-releasing drugs (morphine, atracurium), and reactive airway disease.

### **Bronchostenosis**

Narrowing of a bronchus that restricts airflow. Causes include scarring, tumors, foreign bodies, inflammation, external compression, or postinfectious and postprocedural changes.

### **Bronchus**

One of the two main branches of the trachea that conduct air into the lungs. The right main bronchus is wider, shorter, and more vertical than the left, making it more susceptible to aspiration. Each main bronchus divides into lobar bronchi (secondary), segmental bronchi (tertiary), and progressively smaller branches (bronchioles).

### **Bronze Diabetes**

Historical eponym for hereditary hemochromatosis (HFE-related HH, C282Y homozygous mutation), characterized by the classic triad of skin pigmentation ("bronze"), cirrhosis, and diabetes mellitus from pancreatic iron deposition. Also known as "Troisier syndrome" or pigment cirrhosis.

#### **Synonyms:**

"Troisier syndrome" or pigment cirrhosis.

---

### **Brow Presentation**

A fetal presentation where the fetal head is in a military position between full flexion (vertex) and hyperextension (face). The presenting diameter is the largest (occipitofrontal, 13.5 cm). Incidence: 1:1000-1:2000. Vaginal delivery is impossible with a persistent brow in a term fetus unless it converts to vertex or face.

### **Brown Lung Disease**

An occupational airway disease associated with inhalation of cotton, flax, or hemp dust, classically causing byssinosis. Symptoms may include chest tightness, cough, wheezing, and work-related airflow limitation.

### **Brown Sequard Syndrome**

Brown-Sequard syndrome (hemisection of the spinal cord) results from a lesion affecting one half of the spinal cord, producing a characteristic pattern of ipsilateral and contralateral neurological deficits.

### **Brown Stain**

Extrinsic staining from chromogenic bacteria, diet, tobacco. Removed by prophylaxis.

### **Brucellosis**

A zoonotic infection caused by *Brucella* bacteria, transmitted through contact with infected animals or consumption of unpasteurized animal products. It commonly causes fever, sweats, fatigue, and joint or muscle pain.

### **Brudzinski Sign**

Flexion of the hips and knees that occurs involuntarily when the neck is passively flexed. It is a meningeal irritation sign that may occur in meningitis but lacks sufficient sensitivity or specificity to establish the diagnosis alone.

### **Brugada Syndrome**

A genetic channelopathy causing abnormal sodium channel function (SCN5A mutation). ECG pattern: coved ST elevation >2mm in V1-V3 (type 1) followed by negative T wave. Patients are at risk for ventricular fibrillation and sudden cardiac death, of-

ten at rest or during sleep. More common in young Southeast Asian men.

### **Bruise**

A contusion: localized hemorrhage into tissues due to blunt force trauma rupturing small blood vessels, with intact skin.

### **Bruising**

Ecchymosis/contusion: a purplish-blue discoloration from blood extravasation into skin/subcutaneous tissue following trauma; color changes with age (red-blue purple green/yellow—bilirubin breakdown).

### **Brunner's Gland**

A mucus-secreting gland in the submucosa of the duodenum. Its alkaline secretion helps protect the mucosa from gastric acid and provides conditions favorable for intestinal enzymes.

### **Bruxism**

Grinding or clenching teeth, often during sleep. Causes: stress, occlusion, sleep disorders. Consequences: tooth wear, fractures, muscle pain, TMJ disorders. Treatment: occlusal guard, stress management, behavior modification.

### **Synonyms:**

Teeth Grinding (Bruxism)

### **Buccal Gland**

A minor salivary gland located in the cheek. It secretes mucus into the oral cavity to lubricate the buccal mucosa and assist formation and handling of the food bolus.

### **Budd-Chiari Syndrome**

Obstruction of hepatic venous outflow at any level from small hepatic venules to the inferior vena cava junction with the right atrium. The most common predisposing condition is myeloproliferative disorders accounting for forty to fifty percent of cases. Other risk factors include thrombophilia and oral contraceptive use.

---

## Buerger Disease

An inflammatory disorder of small and medium arteries and veins, strongly associated with tobacco use, that can cause limb ischemia and tissue loss.

## Buerger's Disease

Thromboangiitis obliterans, a nonatherosclerotic inflammatory disease of small and medium arteries and veins, strongly associated with tobacco exposure. It causes distal ischemia, pain, ulcers, and sometimes gangrene.

## Buffer

A solution that resists pH change upon addition of acid or base, composed of a weak acid and its conjugate base (or weak base and conjugate acid). Buffer capacity is maximal when  $\text{pH} = \text{pK}_a \pm 1$ .

## Bulbar Conjunctiva

The bulbar conjunctiva is the portion of the conjunctival membrane that covers the anterior surface of the sclera, extending from the limbus (the junction of the cornea and sclera) to the fornices where it reflects onto the inner surface of the eyelids.

## Bulbar Paralysis

Weakness or paralysis of muscles supplied by the lower cranial nerves, causing dysarthria, dysphagia, impaired gag or cough, and sometimes respiratory compromise. Causes include brainstem disease, motor-neuron disease, and neuromuscular disorders.

## Bulimia Nervosa

An eating disorder characterized by recurrent episodes of binge eating followed by compensatory behaviors (purging, laxatives, excessive exercise). Self-esteem overly influenced by body shape and weight.

### Synonyms:

Eating Disorders, Bulimia

## Bullae

Large, fluid-filled blisters that form within or beneath the skin or mucous membrane. Causes include friction, burns, infection, allergy, and autoimmune

disease.

## Bullet Track

The path a projectile traverses through the body, defined by the entry wound, internal course (through organs, vessels, bones), and exit wound (or retained bullet).

## Bullous Impetigo

A superficial staphylococcal skin infection caused by exfoliative toxins that produce fragile, flaccid bullae and honey-coloured or varnish-like crusts, especially in infants and young children.

## Bullous Pemphigoid

An autoimmune subepidermal blistering disease affecting elderly patients. It presents with tense blisters on erythematous or normal-appearing skin, often preceded by pruritic urticarial plaques. Autoantibodies target BP180 and BP230 (hemidesmosome proteins).

### Synonyms:

Pemphigoid Bullous (Bullous Pemphigoid)

## Bumetanide

A potent loop diuretic inhibiting the Na-K-2Cl co-transporter in the thick ascending limb of the loop of Henle. Used for edema in heart failure, cirrhosis, and renal disease, and for hypertension in renal impairment. Approximately 40 times more potent than furosemide; more bioavailable orally, so equivalent IV-to-oral dosing is possible.

## Bundle Branch Block

Delay or block in the electrical conduction through the bundle branches. Left Bundle Branch Block (LBBB): QRS  $>120$  ms, broad notched R waves in lateral leads (I, V5-V6), deep S waves in V1-V2. Right Bundle Branch Block (RBBB): QRS  $>120$  ms, rSR' pattern in V1-V2, wide S waves in I, V5-V6.

## Bundle Of His

A narrow band of specialized cardiac tissue that conducts electrical impulses from the AV node through the fibrous cardiac skeleton to the interventricular septum. It divides into the right and left bundle

---

branches. The bundle of His is the only electrical connection between atria and ventricles through the fibrous skeleton.

### **Bunion**

A bony prominence (exostosis) at the medial aspect of the first metatarsal head, causing lateral deviation of the great toe (hallux valgus). The deformity is characterized by a structural abnormality at the first metatarsophalangeal joint, with the first metatarsal deviating medially and the proximal phalanx deviating laterally.

### **Bunionectomy**

Surgical correction of hallux valgus (bunion) deformity, indicated for symptomatic bunions refractory to conservative measures (proper footwear, orthoses, toe spacers, NSAIDs). Procedure chosen based on severity (hallux valgus angle and intermetatarsal angle) and patient factors (age, activity, comorbidities).

### **Buphthalmos**

Enlargement of the eye caused by elevated intraocular pressure during early childhood, when the ocular coats are still distensible. It is classically associated with congenital or infantile glaucoma.

### **Burkitt Lymphoma**

A highly aggressive B-cell lymphoma characterized by MYC translocation (t(8;14) IGH-MYC, t(8;22) IGL-MYC, t(2;8) IGK-MYC) and a "starry sky" morphology (tingible body macrophages). Three variants: endemic (African, EBV+, jaw/facial bones), sporadic (abdominal, ileocecal), immunodeficiency-associated (HIV).

#### **Synonyms:**

Burkitt's Tumor

### **Burn**

An injury to skin or deeper tissue caused by heat, chemicals, electricity, radiation, or friction. Severity depends on depth, extent, location, and associated injury.

### **Burn (Oral)**

Thermal or chemical injury to the lining of the mouth, often causing pain, redness, or ulceration. Severity depends on the substance, temperature, depth, and extent of injury.

#### **Synonyms:**

Oral

### **Burn Surgery**

Burn assessment: rule of 9s (adult), Lund-Browder (children). Depth: superficial (epidermis), superficial partial (dermis, blanch, blister, painful), deep partial (deeper dermis, white, sluggish capillary refill, less painful), full thickness (all dermis, white/charred, anesthetic).

### **Burning Mouth Syndrome**

A chronic oral pain disorder causing daily burning, scalding, or tingling discomfort in the mouth, often involving the tongue, lips, or palate, usually with a normal-appearing mucosa. Altered taste or dry mouth may occur. It may be primary, with no identifiable cause, or secondary to conditions or exposures such as nutritional deficiency, oral infection, medication effects, allergy, diabetes, or hormonal change; evaluation should exclude treatable causes.

#### **Synonyms:**

Scalded Mouth Syndrome Stomatodynia

### **Bursectomy**

Surgical excision of a bursa, usually performed for persistent painful bursitis, recurrent infection, or another structural problem that has not responded to appropriate conservative management.

### **Bursitis**

Inflammation of a bursa, a fluid-filled sac that reduces friction between tendons, muscles, bones, and skin. Bursae are lined by synovial cells and normally contain a thin layer of lubricating synovial fluid.

### **Button Magnets In The Nasal Cavity**

Ingestion or insertion of small magnets into the nose, posing a risk of nasal septal perforation or necrosis if multiple magnets are involved, requiring urgent removal.

---

## **Bypass**

Surgical creation of alternative route around blocked vessel. Uses vein or prosthetic graft.

## **Bypass (Vascular)**

Surgical procedure creating detour around blocked vessel using autologous vein (saphenous) or prosthetic graft (PTFE, Dacron). See Bypass Graft.

### **Synonyms:**

Vascular

## **Bypass Graft**

Surgical procedure creating detour around blocked vessel using autologous vein (saphenous) or prosthetic graft (PTFE, Dacron). Indications: peripheral arterial disease, coronary artery disease, aortic aneurysm. Long-term patency depends on graft type, inflow/outflow, patient factors.

## **Bypass Surgery**

A surgical conduit that reroutes flow around an obstructed or diseased segment, applied to coronary arteries (CABG), peripheral arteries (autologous vein or prosthetic bypass), and the gastrointestinal tract (gastric bypass). Principal long-term concerns are conduit patency, graft infection, and anastomotic stenosis.

## **Byssinosis**

An occupational obstructive airway disease caused by inhalation of textile fibers, especially cotton, flax, or hemp dust. It may cause chest tightness and cough that worsen during or after work exposure.

## **Baroreflex**

A rapid reflex that helps regulate blood pressure by adjusting heart rate and blood-vessel tone in response to changes in arterial pressure.

## **Bartter Disease**

A group of inherited kidney disorders that cause excessive loss of salt and potassium in the urine.

## **Behcet Syndrome**

A chronic inflammatory disorder that can cause re-

current mouth and genital ulcers, eye inflammation, and other organ involvement.

## **Beta Thalassemia**

An inherited blood disorder in which reduced production of beta-globin causes anemia.

## **Brachial Plexus Neuropathies**

Disorders caused by injury or dysfunction of the network of nerves supplying the shoulder and arm.

## **Brain Stem Glioma**

A tumor arising from glial cells in the brainstem.

## **Breakthrough Pain**

A temporary flare of severe pain that occurs despite otherwise controlled persistent pain.

## **Bundle-Branch Block**

Delayed or interrupted electrical conduction through one of the heart's ventricular bundle branches.

## **Burkitt's Lymphoma**

A rapidly growing type of non-Hodgkin lymphoma arising from B lymphocytes.

## **Beach Chair Position**

A semisitting position in which the patient's back is elevated and the hips and knees are flexed; it is commonly used for shoulder surgery.

## **Balloon Angioplasty**

A procedure that uses an inflatable balloon catheter to widen a narrowed artery, often followed by stent placement.

## **Barrett's Esophagus**

A change in the lower esophageal lining caused by chronic reflux and associated with an increased risk of esophageal adenocarcinoma.

### **Synonyms:**

Barretts Esophagus (Barrett's Esophagus) Columnar Epithelium Lined Lower Esophagus

---

### **Basilar Artery**

The artery formed by the union of the vertebral arteries that supplies the brainstem, cerebellum, and posterior brain.

### **Beta Cells**

Pancreatic cells that produce and release insulin.

### **Bile**

A fluid produced by the liver that helps digest and absorb dietary fats.

### **Bilevel Positive Airway Pressure**

Noninvasive ventilation that provides different pressures during inhalation and exhalation to support breathing.

### **Bisphosphonate**

A medicine that reduces bone breakdown and is used to prevent or treat osteoporosis and some other bone disorders.

### **Blood Urea Nitrogen Test**

A blood test that measures urea nitrogen and helps assess kidney function and hydration.

### **Brain Stem**

The lower part of the brain connecting the cerebrum with the spinal cord and controlling essential functions such as breathing and consciousness.

### **Bronchodilator**

A medicine that relaxes airway muscle and widens the airways to improve breathing.

### **Bruit**

An abnormal sound heard over a blood vessel, usually with a stethoscope, caused by turbulent blood flow.

### **Bursa**

A small fluid-filled sac that reduces friction between moving tissues near a joint.

### **Baby Acne**

Small red or white bumps on an infant's skin, usually caused by temporary hormonal effects and often resolving without treatment.

### **Bad Breath**

An unpleasant odor of the breath, medically called halitosis.

#### **Synonyms:**

Breath Bad (Bad Breath)

### **Bags Under Eyes**

Mild swelling or fullness beneath the eyes, commonly related to aging, fluid retention, or inherited anatomy.

#### **Synonyms:**

Puffy Eyes

### **Balance Problems**

Difficulty maintaining body stability while standing or moving, often caused by disorders of the inner ear, nervous system, vision, or muscles.

### **Bardet-Biedl Syndrome**

A rare inherited disorder that may cause retinal degeneration, obesity, extra fingers or toes, kidney disease, and reproductive abnormalities.

### **Bartholin's Cyst**

A fluid-filled cyst caused by blockage of a Bartholin gland near the vaginal opening.

#### **Synonyms:**

Cyst, Bartholin's

### **Bile Duct Cancer**

Cancer arising in the bile ducts; also called cholangiocarcinoma.

#### **Synonyms:**

cholangiocarcinoma.

### **Binge-Eating Disorder**

A disorder marked by recurrent episodes of eating unusually large amounts of food with a sense of loss of control and without regular compensatory behaviors.

---

**Synonyms:**

Compulsive Overeating Eating Disorders, Binge Eating

**Blastocystis Hominis**

A microscopic organism that can inhabit the intestinal tract; its role in causing gastrointestinal symptoms is variable and sometimes uncertain.

**Synonyms:**

Blastocystosis

**Blocked Tear Duct**

Partial or complete blockage of the passage that drains tears from the eye into the nose.

**Boils And Carbuncles**

Painful skin infections caused by pus-filled inflammation around hair follicles; a carbuncle is a connected group of boils.

**Synonyms:**

Carbuncles And Boils

**Bone Spurs**

Bony projections that form along the edges of bones, usually near joints, often because of long-term wear or arthritis.

**Synonyms:**

Osteophytes

**B-Cell Lymphoma**

A group of lymphatic cancers arising from B lymphocytes.

**Brainstem Tumor**

A tumor arising in the brainstem, the part of the brain that connects the cerebrum with the spinal cord.

**Babcock Clamp**

An atraumatic surgical clamp with fenestrated jaws used to hold delicate tubular tissue.

**Bone Saw**

A surgical saw used to cut bone during procedures such as amputation or orthopedic reconstruction.

**Body Surface Area**

An estimate of the total external surface area of the body, calculated from height and weight and used in some medication dosing and physiologic calculations.

**Bolus**

A discrete amount of medication or fluid given over a short period, usually by injection or infusion. In digestion, a bolus is chewed food ready to be swallowed.

**Bougie**

A slender, flexible instrument used to examine or gradually dilate a narrowed tubular structure, such as the esophagus or urethra.

**Bronchoscope**

A thin, lighted instrument used to examine the trachea and bronchi and, when needed, obtain tissue or fluid samples.

**Bacillary Dysentery**

Acute inflammatory diarrhea caused by *Shigella* species, typically producing fever, abdominal cramps, and frequent stools that may contain blood or mucus.

**Bacillus Anthracis**

The spore-forming bacterium that causes anthrax. Infection may be cutaneous, gastrointestinal, or inhalational.

**Bacillus Cereus**

A spore-forming bacterium that can cause food poisoning, usually through a rapid-onset vomiting syndrome or a diarrheal syndrome after ingestion of contaminated food.

**Bacteriostasis**

Inhibition of bacterial growth and reproduction without necessarily killing the bacteria.

**Bacteriostatic**

Describing an agent or condition that inhibits bac-

---

terial growth rather than directly killing bacteria.

### **Bartonella**

A genus of bacteria that includes organisms causing cat-scratch disease, trench fever, bacillary angiomatosis, and other infections.

### **Batten Disease**

An inherited group of neuronal ceroid lipofuscinoses causing progressive neurodegeneration, seizures, vision loss, and cognitive or motor decline, usually beginning in childhood.

### **Bednar Aphthae**

Traumatic ulcers on the posterior palate of an infant, often associated with pressure or irritation during feeding.

### **Balloon Tamponade**

Temporary control of bleeding or obstruction using an inflatable balloon catheter to apply pressure or occlude a passage. Examples include tamponade of variceal bleeding, postpartum hemorrhage, or selected vascular injuries.

### **Bacterial Pharyngitis**

Infection and inflammation of the pharynx caused by bacteria, most commonly group A *Streptococcus*. Symptoms may include sore throat, fever, painful swallowing, and tender cervical lymph nodes.

### **Bacterial Peritonitis**

Infection of the peritoneal cavity, which may occur spontaneously in patients with ascites or secondarily after perforation, surgery, or another intra-abdominal infection. It requires prompt evaluation and antimicrobial treatment.

### **Bacillus**

A rod-shaped bacterium. The term may refer broadly to bacterial shape or specifically to members of the genus *Bacillus*, some of which form resistant spores and cause human disease.

### **Baroreceptor**

A pressure-sensitive sensory receptor, mainly in the carotid sinus and aortic arch, that detects arterial-wall stretch and helps regulate blood pressure through autonomic reflexes.

### **Barrier Nursing (Isolation Nursing)**

Nursing care arranged to reduce the spread of infection between a patient, healthcare workers, and other patients by using appropriate hand hygiene, protective equipment, and isolation measures.

#### **Synonyms:**

Isolation Nursing

### **Basilic Vein**

A superficial vein of the upper limb that ascends along the medial side of the arm and joins the brachial veins to form the axillary vein. It is used for venous access in selected settings.

### **Basophilia**

An abnormally increased number of basophils in the blood. It may occur with myeloproliferative disorders, allergic or inflammatory conditions, and some infections.

### **Biochemistry**

The study of the chemical substances and reactions occurring in living organisms. Clinical biochemistry uses laboratory measurements to assess health and disease.

### **Biofeedback**

A technique that provides information about a physiological process, such as muscle activity, heart rate, or breathing, to help a person learn voluntary control of it.

### **Biological Warfare**

The deliberate use of microorganisms, toxins, or other biological agents to cause disease or death in humans, animals, or plants.

### **Birth Defect (Congenital Anomaly)**

A structural, functional, or metabolic abnormality

---

present at birth, caused by genetic, environmental, nutritional, infectious, or multifactorial factors.

**Synonyms:**

Congenital Anomaly

**Birth Asphyxia**

Inadequate oxygenation or ventilation around the time of birth, potentially causing respiratory failure, metabolic acidosis, organ injury, or hypoxic-ischaemic encephalopathy. It requires immediate neonatal assessment and resuscitation.

**Birth Rate**

The number of live births in a population during a specified period, usually expressed per 1,000 people per year.

**Blackwater Fever**

A severe form of malaria, classically associated with *Plasmodium falciparum*, characterized by intravascular hemolysis, hemoglobinuria, anemia, and possible kidney failure.

**Blood Donor**

A person who voluntarily gives blood or blood components for transfusion or medical use. Donors are screened to protect both donor health and recipient safety.

**Blood Poisoning (Septicaemia)**

An older term commonly used for serious bloodstream infection or sepsis. Sepsis is life-threatening organ dysfunction caused by a dysregulated response to infection.

**Synonyms:**

Septicaemia

**Blood Vessels**

Tubular structures that transport blood through the body, including arteries, arterioles, capillaries, venules, and veins.

**B-Mode Ultrasound**

Brightness-mode ultrasonography, which produces a two-dimensional image from echoes returning from

tissues. It is the standard imaging mode for many organs and soft tissues.

**Borborygmi**

Rumbling or gurgling sounds produced by the movement of gas and fluid through the intestines. They may be normal or altered in gastrointestinal obstruction and other disorders.

**Bow Legs (Genu Varum)**

Outward curvature of the legs so that the knees remain apart when the ankles are together. It may be a normal developmental stage in young children or result from bone disease.

**Synonyms:**

Genu Varum

**Breast Examination**

Systematic inspection and palpation of the breasts and regional lymph nodes to assess masses, skin or nipple changes, pain, or other abnormalities.

**Breast Milk**

Milk produced by the mammary glands after childbirth, providing nutrients, immune factors, and other substances important for infant growth and development.

**Breast Reconstruction**

Surgical restoration of breast shape after mastectomy or trauma, using an implant, the patient's own tissue, or a combination of techniques.

**Breast Screening**

Examination of people without breast symptoms to detect breast cancer at an earlier stage, most commonly using mammography according to age and risk-based programs.

**Breathlessness (Dyspnoea)**

The uncomfortable awareness of difficult, labored, or insufficient breathing. Causes include respiratory, cardiac, metabolic, and psychological disorders.

**Synonyms:**

Dyspnoea

---

## Bubo

A tender, enlarged lymph node, usually in the groin, armpit, or neck, caused by infection. Buboes are classically associated with plague but occur in other infections.

## B Cell

A lymphocyte that develops in the bone marrow and can differentiate into antibody-producing plasma cells or memory B cells after activation.

### Synonyms:

B lymphocyte; B-cell.

## Balloon Dilation

A procedure that widens a narrowed body passage or vessel by inflating a balloon at the affected site.

### Synonyms:

Balloon dilatation; balloon angioplasty when performed in a blood vessel.

## Baseline EKG

An electrocardiogram obtained for comparison with later tracings or before a treatment, procedure, or change in clinical status.

### Synonyms:

Baseline ECG; reference electrocardiogram.

## Benign

Not malignant and not expected to invade nearby tissue or spread to distant sites, although a benign lesion can still cause problems because of its size or location.

### Synonyms:

Nonmalignant; noncancerous.

## Benign Orgasmic Headache

A sudden severe headache occurring during sexual activity or at orgasm after dangerous secondary causes have been excluded.

### Synonyms:

Primary headache associated with sexual activity; sexual-activity headache.

## Bernstein Test

A historical provocative test in which acid is intro-

duced into the esophagus to reproduce heartburn symptoms; it has largely been replaced by more direct evaluation of reflux.

### Synonyms:

Acid perfusion test; Bernstein acid perfusion test.

## Beta Agonists

Drugs that activate beta-adrenergic receptors, producing effects such as relaxation of airway smooth muscle or increased cardiac stimulation depending on receptor selectivity.

### Synonyms:

Beta-adrenergic agonists; beta-agonist drugs.

## Beta Amyloid

Peptides generated from amyloid precursor protein that can accumulate as plaques in the brain in Alzheimer disease.

### Synonyms:

Amyloid-beta; A-beta peptide.

## Beta Carotene

A carotenoid pigment found in plants that can be converted by the body into vitamin A.

### Synonyms:

Beta-carotene; provitamin A carotenoid.

## Biguanides

A class of glucose-lowering medicines that reduce hepatic glucose production and improve insulin sensitivity; metformin is the principal example.

### Synonyms:

Biguanide drugs; biguanide antidiabetics.

## Binge Drinking

A pattern of consuming enough alcohol over a short period to produce a high blood alcohol concentration and increased risk of injury or acute toxicity.

### Synonyms:

Episodic heavy drinking; heavy episodic drinking.

## Binocular Vision

Vision that uses both eyes together to produce a single image and support depth perception.

### Synonyms:

---

Two-eyed vision; binocular visual function.

### **Binswanger's Dementia**

A form of vascular cognitive impairment caused by diffuse small-vessel disease affecting the brain's deep white matter.

#### **Synonyms:**

Subcortical ischemic vascular disease; subcortical arteriosclerotic encephalopathy.

### **Biochanin A**

A naturally occurring isoflavone found mainly in legumes and other plants. It is studied for biologic effects but is not established as a treatment for disease.

#### **Synonyms:**

Biochanin A isoflavone; 5,7-dihydroxy-4'-methoxyisoflavone.

### **Biochemical Recurrence**

A rise in a disease-specific laboratory marker after treatment, suggesting recurrent or persistent disease before clinical or imaging findings become apparent.

#### **Synonyms:**

Biochemical relapse; biochemical failure.

### **Biological Variability**

Natural variation in a measured biologic quantity within the same person over time or between people, independent of measurement error.

#### **Synonyms:**

Biologic variation; physiologic variability.

### **Blackout**

A period of partial or complete memory loss, commonly associated with alcohol or other causes of impaired consciousness.

#### **Synonyms:**

Amnestic episode; alcohol-related amnesia when caused by alcohol.

### **Bladder Neck**

The narrow lower part of the urinary bladder where it connects to the urethra and contributes to urinary continence.

#### **Synonyms:**

Vesical neck; bladder outlet.

### **Blister**

A fluid-filled elevation between or within layers of skin or mucosa, caused by friction, burns, infection, allergy, or an autoimmune blistering disorder.

#### **Synonyms:**

Bulla; vesicle when small.

### **Blocking Agent**

A substance that prevents or reduces a biologic process by blocking a receptor, channel, enzyme, or other target.

#### **Synonyms:**

Blocker; antagonist when it acts by receptor antagonism.

### **BMD**

A measurement of bone mineral content adjusted for area, used to assess bone strength and help diagnose osteoporosis.

#### **Synonyms:**

Bone mineral density; bone density.

### **BMI**

A weight-to-height index calculated as weight in kilograms divided by height in meters squared. It is used as a population-level measure related to body size, not as a complete individual health assessment.

#### **Synonyms:**

Body mass index; Quetelet index.

### **Body Mass Index**

A weight-to-height index calculated as weight in kilograms divided by height in meters squared. It is used to classify weight categories in populations and clinical screening.

#### **Synonyms:**

BMI; Quetelet index.

### **Bone Mass**

The amount of mineralized bone tissue in the skeleton or in a specified region.

#### **Synonyms:**

---

Bone mineral content; skeletal bone mass.

### **Bone Mineral Density**

The concentration of mineral in bone, usually measured by dual-energy X-ray absorptiometry to assess fracture risk and osteoporosis.

#### **Synonyms:**

BMD; bone density.

### **Bouchard's Nodes**

Firm bony enlargements of the proximal interphalangeal joints, most commonly caused by hand osteoarthritis.

#### **Synonyms:**

Proximal interphalangeal osteophytes; PIP-joint nodes.

### **Bowel**

The small and large intestines, which receive digested food, absorb nutrients and water, and form and transport stool.

#### **Synonyms:**

Intestine; intestinal tract.

### **Brain Imaging**

Medical imaging used to examine brain structure or function, including CT, MRI, vascular imaging, and selected nuclear medicine techniques.

#### **Synonyms:**

Neuroimaging; cerebral imaging.

### **Brain Waves**

Electrical activity generated by the coordinated firing of neurons and recorded by electroencephalography.

#### **Synonyms:**

Cerebral electrical activity; EEG rhythms.

### **Breast Augmentation**

Surgery or another procedure intended to increase breast volume or alter breast shape, commonly using an implant or transferred tissue.

#### **Synonyms:**

Breast enlargement; augmentation mammoplasty.

### **Breath Focus**

A mindfulness or relaxation practice that uses attention to breathing to stabilize awareness and reduce physiological or emotional arousal.

#### **Synonyms:**

Breath-focused meditation; breathing-focused mindfulness.

### **Bronchial Tubes**

The right and left main bronchi and their branches that conduct air from the trachea into the lungs.

#### **Synonyms:**

Bronchi; bronchial tree when referring to the branching airway system.

### **Bunionette**

A painful prominence at the outer side of the fifth metatarsophalangeal joint, often associated with footwear pressure or altered foot mechanics.

#### **Synonyms:**

Tailor's bunion; bunion of the fifth toe.

### **Babesia**

A genus of intraerythrocytic protozoan parasites transmitted mainly by Ixodes ticks; infection (babesiosis) can cause fever, haemolytic anaemia, thrombocytopenia, and severe disease in people without a spleen or with impaired immunity.

### **Babesia Divergens**

*Babesia divergens* is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Babesia Microti**

*Babesia microti* is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillaceae**

Bacillaceae is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical

---

context.

### **Bacillus Lentus**

Bacillus lentus is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillus Licheniformis**

Bacillus licheniformis is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillus Megaterium**

Bacillus megaterium is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillus Mycoides**

Bacillus mycoides is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillus Pumilus**

Bacillus pumilus is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacillus Subtilis**

Bacillus subtilis is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bacitracin**

Bacitracin is a topical polypeptide antibiotic that interferes with bacterial cell-wall synthesis and is used for selected superficial infections.

### **Baclofen**

Baclofen is a medication or pharmacologic agent;

its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Bacteria Present**

Bacteria present is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacterial Protein**

Bacterial protein is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacterial Toxemia**

Bacterial toxemia is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacterial Toxin**

Bacterial toxin is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacterial Typing**

Bacterial typing is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacterial Vaccine**

Bacterial vaccine is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteriocin**

Bacteriocin is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

---

### **Bacteriophage Lambda**

Bacteriophage lambda is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteriophage T4**

Bacteriophage t4 is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteriophages**

Bacteriophages is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteriorhodopsin**

Bacteriorhodopsin is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroidaceae**

Bacteroidaceae is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides**

Bacteroides is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Caccae**

Bacteroides caccae is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Dorei**

Bacteroides dorei is a biological organism or infectious agent; its clinical importance depends on

the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Eggerthii**

Bacteroides eggerthii is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Faecis**

Bacteroides faecis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Fragilis**

Bacteroides fragilis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Gingivalis**

Bacteroides gingivalis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Heparinolyticus**

Bacteroides heparinolyticus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Intestinalis**

Bacteroides intestinalis is a diagnostic or laboratory method used to evaluate a clinical question; interpretation depends on the specimen or body site, method, reference range, and patient context.

### **Bacteroides Nordii**

Bacteroides nordii is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

---

### **Bacteroides Ovatus**

Bacteroides ovatus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Pyogenes**

Bacteroides pyogenes is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Salyersiae**

Bacteroides salyersiae is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Stercoris**

Bacteroides stercoris is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Thetaiotaomicron**

Bacteroides thetaiotaomicron is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Uniformis**

Bacteroides uniformis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Ureolyticus**

Bacteroides ureolyticus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Vulgatus**

Bacteroides vulgatus is a biological organism or infectious agent; its clinical importance depends on

the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroides Xylanisolvens**

Bacteroides xylanisolvens is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bacteroidete**

Bacteroidete is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Baculoviridae**

Baculoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Bad Protein**

Bad protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Bak Protein**

Bak protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Balamuthia**

A biomedical term referring to balamuthia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Balamuthia Mandrillaris**

A biomedical term referring to balamuthia mandrillaris; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

---

## Balanced Study

Balanced study is used in relation to balanced study during assessment, diagnosis, treatment, monitoring, or patient support.

## Balantidiasis

Balantidiasis is intestinal infection caused by the protozoan *Balantidium coli*, producing diarrhea, abdominal pain, or colitis, especially after fecal exposure.

## Balantidium

A biomedical term referring to *balantidium*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Balantidium Coli

A biomedical term referring to *balantidium coli*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Balbani Body

A specialized aggregate of organelles, including mitochondria and messenger RNA, near the nucleus of a developing oocyte; it helps organize maternal determinants during early embryonic development.

## Balloon Brachytherapy

Balloon brachytherapy is used in relation to balloon brachytherapy during assessment, diagnosis, treatment, monitoring, or patient support.

## Balloon Dilatation

Balloon dilatation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## Barakat Syndrome

A clinical disorder or finding related to barakat syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## Barbiturates

Barbiturates is used in relation to barbiturates during assessment, diagnosis, treatment, monitoring, or patient support.

## Barium Sulfate

An insoluble radiopaque contrast agent used for radiographic examinations of the gastrointestinal tract; aspiration or leakage from the bowel can cause serious complications.

## Barlow Test

Barlow test is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## Bartonella Elizabethae

A biomedical term referring to *bartonella elizabethae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Bartonella Henselae

A biomedical term referring to *bartonella henselae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Bartonella Infections

A biomedical term referring to *bartonella* infections; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Bartonella Quintana

A biomedical term referring to *bartonella quintana*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Bartonellaceae

Bartonellaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen

---

source, host factors, and evidence of infection rather than colonization.

### **Bart's Hemoglobinopathy**

A severe alpha-thalassaemia syndrome caused by deletion or inactivation of all four alpha-globin genes, producing haemoglobin Bart's (gamma<sub>4</sub>); it usually causes hydrops fetalis and is commonly fatal before or shortly after birth.

### **Basal**

Basal means at the base, lowest level, or resting state, such as basal metabolism, basal cells, or basal body temperature.

### **Basal Body**

A microtubule-organizing structure at the base of a cilium or flagellum, derived from a centriole, that anchors the cilium and initiates its axoneme.

### **Basal Cell**

Basal cell denotes basal cell, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Basal Lamina**

The basal lamina is a thin extracellular-matrix layer supporting epithelial cells and separating them from underlying connective tissue.

### **Basal Tear**

A basal tear is a tear occurring at the base of a structure; in the eye, a basal tear layer helps lubricate and protect the ocular surface.

### **Base Pair**

Two complementary nucleobases joined by hydrogen bonds in nucleic acids: adenine pairs with thymine (or uracil in RNA), and cytosine pairs with guanine.

### **Base Pairing**

The specific hydrogen-bonded association of complementary nucleobases that stabilizes nucleic-acid structure and permits accurate DNA replication,

transcription, and RNA hybridization.

### **Base Sequence**

The ordered sequence of nucleotides in a DNA or RNA molecule; it encodes genetic information and can be analysed to identify variants, pathogens, or inherited disorders.

### **Baseline**

A reference measurement or clinical state obtained before an intervention, illness, or period of observation, used for comparison with subsequent findings.

### **Basic Fuchsin**

Basic fuchsin is a magenta laboratory dye used in stains and microbiology, including methods for detecting selected bacteria.

### **Basic Research**

Basic research is used in relation to basic research during assessment, diagnosis, treatment, monitoring, or patient support.

### **Basidiomycota**

Basidiomycota is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Basilar Membrane**

Basilar membrane denotes basilar membrane, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Basiliximab**

Basiliximab is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Basis Pontis**

The basis pontis is the front portion of the pons containing descending motor fibers and pontine nuclei that relay signals to the cerebellum.

---

### **Basophil Adenoma**

A basophil adenoma is a usually benign pituitary tumor composed of basophilic hormone-producing cells and may cause hormone excess or pressure symptoms.

### **Basophilic Focus**

A basophilic focus is an area that stains blue or purple with basic dyes, reflecting particular cellular or tissue components.

### **Basosquamous Carcinoma**

A neoplastic process affecting basosquamous carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Batabulin**

Batabulin is an investigational vascular-disrupting antineoplastic agent studied for effects on tumor blood vessels and cancer growth.

### **Batimastat**

Batimastat is an investigational matrix-metalloproteinase inhibitor studied to limit tumor invasion and tissue breakdown.

### **Batrachotoxin**

A highly potent steroidal alkaloid toxin found in some poison frogs and birds that persistently activates voltage-gated sodium channels, causing neuronal and cardiac depolarization, arrhythmias, paralysis, and potentially death.

### **Batracylin**

Batracylin is an investigational anticancer compound studied for DNA damage and topoisomerase-related cytotoxic effects.

### **Batroxobin**

Batroxobin is a snake-venom-derived thrombin-like enzyme that converts fibrinogen to fibrin and has been studied or used in selected clotting and bleeding settings.

### **Batley Bacillus**

Batley bacillus is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bax Protein**

Bax protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **B-Cell Activation**

B-cell activation denotes b-cell activation, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bcgosis**

BCGosis is infection or disseminated disease caused by Bacille Calmette–Guérin organisms, usually after intravesical BCG treatment or in immune deficiency.

### **Beacopp Regimen**

Beacopp regimen is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Beat Number**

Beat number is the count of heartbeats or other rhythmic events over a specified interval and helps describe rate or rhythm.

### **Becaplermin**

Becaplermin is a recombinant platelet-derived growth factor gel used in selected diabetic foot ulcers with appropriate wound care.

### **Becatecarin**

Becatecarin is an investigational topoisomerase-I inhibitor studied for anticancer activity.

### **Beclomethasone**

Beclomethasone is a corticosteroid used by inhalation, nasal spray, or topical routes to reduce inflam-

---

mation in asthma, rhinitis, or skin disease.

### **Becquerel**

A becquerel is the SI unit of radioactivity equal to one nuclear decay per second.

### **Bed Rest**

Bed rest is used in relation to bed rest during assessment, diagnosis, treatment, monitoring, or patient support.

### **Behavior**

Behavior is used in relation to behavior during assessment, diagnosis, treatment, monitoring, or patient support.

### **Behavior Disorder**

A clinical disorder or finding related to behavior disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Behavior Test**

Behavior test is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

### **Behavior Therapy**

Behavior therapy is used in relation to behavior therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Behavioral Abnormality**

Behavioral abnormality is used in relation to behavioral abnormality during assessment, diagnosis, treatment, monitoring, or patient support.

### **Behavioral Genetics**

Behavioral genetics is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Behavioral Medicine**

Behavioral medicine is used in relation to behavioral medicine during assessment, diagnosis, treatment, monitoring, or patient support.

### **Behenic Acid**

Behenic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

### **Behr Syndrome**

A clinical disorder or finding related to behr syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Belinostat**

Belinostat is a histone-deacetylase inhibitor used for selected relapsed or refractory peripheral T-cell lymphomas.

### **Belotecan Hydrochloride**

Belotecan hydrochloride is an investigational topoisomerase-I inhibitor studied as an anticancer drug.

### **Benchmarking**

Benchmarking compares performance, outcomes, quality, or processes with a reference standard or peer group to identify improvement opportunities.

### **Bendamustine**

Bendamustine is an alkylating antineoplastic drug used for selected lymphoid cancers and chronic lymphocytic leukemia, with marrow and infection risks.

### **Bendamustine Hydrochloride**

Bendamustine hydrochloride is the hydrochloride salt formulation of the alkylating antineoplastic drug bendamustine.

### **Bendiocarb**

Bendiocarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after exposure.

---

### **Bendroflumethiazide**

Bendroflumethiazide is a thiazide diuretic used for hypertension or fluid retention and can lower blood pressure, potassium, and sodium.

### **Benfuracarb**

Benfuracarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic toxicity after exposure.

### **Benign Ameloblastoma**

A neoplastic process affecting benign ameloblastoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Benign Epithelioma**

A benign epithelioma is a noncancerous epithelial tumor or growth that does not invade or metastasize but may require removal if symptomatic or uncertain.

### **Benign Hemangiopericytoma**

A benign hemangiopericytoma is a usually nonmalignant tumor around small blood vessels; modern classification often groups related lesions as solitary fibrous tumors.

### **Benign Meningioma**

A benign meningioma is a usually slow-growing tumor arising from the membranes around the brain and spinal cord and may cause symptoms by compression.

### **Benign Mesenchymoma**

A benign mesenchymoma is a rare noncancerous tumor containing more than one type of mesenchymal tissue, such as fat, cartilage, or bone.

### **Benign Myoepithelioma**

A benign myoepithelioma is a noncancerous tumor of myoepithelial cells, commonly arising in a salivary gland or other glandular tissue.

### **Benign Paraganglioma**

A benign paraganglioma is a usually slow-growing

neuroendocrine tumor arising from paraganglion cells and may secrete catecholamines or compress nearby structures.

### **Benign Prostate Hyperplasia**

A biomedical term referring to benign prostate hyperplasia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Benzaldehyde**

An aromatic aldehyde used mainly as a flavouring, fragrance, and chemical intermediate; concentrated exposure may irritate the eyes, skin, and respiratory tract and it is not a routine therapeutic medicine.

### **Benzazepines**

A family of chemical compounds containing a benzene ring fused to a seven-membered azepine ring; some derivatives have pharmacological activity, but the clinical effects depend on the individual compound.

### **Benzoates**

Salts or esters of benzoic acid, used as preservatives and, in selected preparations, as pharmaceutical excipients or metabolic agents; their safety depends on the specific compound and exposure.

### **Benzocaine**

Benzocaine is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Benzopyran**

A fused benzene-pyran chemical ring system found in several natural products and drug classes; it is a structural chemical term rather than one specific medicine.

### **Benzopyrene**

A polycyclic aromatic hydrocarbon formed during incomplete combustion and present in tobacco smoke and some charred foods; benzo[a]pyrene is

---

mutagenic and carcinogenic after metabolic activation.

### **Benzopyrenes**

Polycyclic aromatic hydrocarbons containing a benzopyrene structure, produced by incomplete combustion; several are environmental carcinogens and may damage DNA after metabolic activation.

### **Benzoyl Peroxide**

Benzoyl peroxide is a defined chemical or biologic substance involved in benzoyl peroxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Benzoylphenylurea**

A class of insecticides that disrupt chitin formation in developing insects; these compounds are used for pest control rather than as human medicines.

### **Benzphetamine**

A sympathomimetic amine and stimulant formerly used in some countries as a short-term adjunct for weight reduction; it can cause dependence, cardiovascular effects, and insomnia and is restricted or unavailable in many jurisdictions.

### **Benztropine**

An antimuscarinic medicine used mainly to reduce drug-induced parkinsonism and acute dystonia; adverse effects include dry mouth, blurred vision, constipation, urinary retention, confusion, and worsening of glaucoma.

### **Benzydamine**

A topical non-steroidal anti-inflammatory analgesic used for painful inflammation of the mouth, throat, or skin; local irritation, numbness, or allergic reactions may occur.

### **Benzylamines**

Organic compounds containing a benzyl group attached to an amino group; some derivatives are pharmacologically active, while others are chemical intermediates or industrial compounds.

### **BEP Regimen**

BEP regimen is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Berberine**

Berberine is a plant alkaloid sold in supplements and studied for metabolic and antimicrobial effects; interactions and adverse effects are possible.

### **Bergeyella**

Bergeyella is a genus of Gram-negative bacteria found in animals and the environment; human infection is uncommon and depends on the clinical isolate.

### **Bergeyella Zoohelcum**

Bergeyella zoohelcum is an uncommon zoonotic Gram-negative bacterium reported after animal exposure, especially in people with underlying illness.

### **Beryllium**

Beryllium is a metal whose dust or fumes can cause sensitization, chronic granulomatous lung disease, and cancer risk after occupational exposure.

### **Best Practice**

Best practice is used in relation to best practice during assessment, diagnosis, treatment, monitoring, or patient support.

### **Beta 2-Microglobulin**

A small protein associated with the class I major histocompatibility complex on nucleated cells; its blood or urine concentration may rise with inflammation, lymphoproliferative disease, or impaired renal handling.

### **Beta Globulin**

A group of serum proteins that migrate in the beta region during protein electrophoresis, including transferrin, complement proteins, and some lipoproteins; abnormal levels can reflect inflammation, liver disease, or plasma-cell disorders.

---

### **Beta Particle**

A high-energy electron or positron emitted during radioactive beta decay; beta radiation can damage tissue and is used in selected medical imaging and radiotherapy applications.

### **Beta Radiation**

Ionizing radiation consisting of high-energy electrons or positrons emitted by unstable nuclei; it has moderate tissue penetration and can cause radiation injury or be used therapeutically.

### **Beta Tocopherol**

One of the naturally occurring forms of vitamin E, a lipid-soluble antioxidant; it is less biologically active than alpha-tocopherol in humans.

### **Beta-Chemokines**

A group of chemokines, generally in the CC family, that attract monocytes, lymphocytes, eosinophils, and other leukocytes through specific chemokine receptors during immune and inflammatory responses.

### **Betacoronavirus**

Betacoronavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Beta-Endorphin**

An endogenous opioid peptide derived from proopiomelanocortin in the pituitary and hypothalamus; it binds opioid receptors and contributes to modulation of pain, stress, and neuroendocrine function.

### **Beta-Glucans**

Polysaccharides made of glucose units linked by beta bonds, found in cereals, fungi, and yeast; their physiological effects vary by structure and may include effects on fibre intake and innate immune signalling.

### **Betaherpesvirinae**

Betaherpesvirinae is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific

product and patient.

### **Betaine**

A naturally occurring zwitterionic compound that acts as a methyl-group donor in homocysteine metabolism and helps maintain cellular osmotic balance; inherited defects in its pathway can cause homocystinuria.

### **Beta-Lactamase**

A bacterial enzyme that hydrolyses the beta-lactam ring of susceptible penicillins, cephalosporins, or related antibiotics, producing antimicrobial resistance; inhibitors may restore activity against selected organisms.

### **Beta-Mannosidosis**

Beta-mannosidosis is an inherited lysosomal storage disorder caused by beta-mannosidase deficiency and can produce developmental, hearing, immune, or skeletal problems.

### **Betamethasone**

A potent synthetic glucocorticoid used topically or systemically to suppress inflammation and immune responses; prolonged or extensive use can cause skin atrophy, infection, adrenal suppression, and other corticosteroid effects.

### **Betamethasone Valerate**

A topical corticosteroid ester used for inflammatory skin disorders such as eczema and psoriasis; prolonged, occlusive, or extensive application increases the risk of local skin atrophy and systemic corticosteroid absorption.

### **Betaretrovirus**

Betaretrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Beta-Sheet**

A protein secondary structure formed by extended polypeptide strands stabilized by hydrogen bonds;

---

abnormal beta-sheet-rich aggregates occur in disorders such as amyloidosis and some neurodegenerative diseases.

### **Betaxolol**

Betaxolol is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Betazole**

Betazole is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Bevacizumab**

Bevacizumab is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Bexarotene**

An oral retinoid X-receptor agonist used mainly for cutaneous T-cell lymphoma; it commonly causes hypertriglyceridaemia, hypothyroidism, and liver abnormalities and is teratogenic.

### **Bezafibrate**

Bezafibrate is a fibrate lipid-lowering drug that activates PPAR-alpha and lowers triglycerides; muscle and liver effects require monitoring.

### **Bibliotherapy**

Bibliotherapy is used in relation to bibliotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Bicalutamide**

A non-steroidal androgen-receptor antagonist used in prostate cancer, usually with androgen-deprivation therapy; adverse effects include hot flashes, breast enlargement, sexual dysfunction, and possible liver injury.

### **Bicuculline**

Bicuculline is a research compound that blocks GABA-A receptors and can provoke seizures in experimental systems.

### **Bicuspid**

Bicuspid means having two cusps, as in a bicuspid aortic valve or a premolar tooth with two main points.

### **Bid Protein**

Bid protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Bifidobacterium**

Bifidobacterium is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bifidobacterium Adolescentis**

Bifidobacterium adolescentis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bifidobacterium Animalis**

Bifidobacterium animalis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bifidobacterium Bifidum**

Bifidobacterium bifidum is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bifidobacterium Breve**

Bifidobacterium breve is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

---

### **Bifidobacterium Dentium**

Bifidobacterium dentium is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Bifidobacterium Longum**

Bifidobacterium longum is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Biglycan**

Biglycan is a small proteoglycan of the extracellular matrix involved in collagen organization, inflammation, and tissue repair.

### **Bilateral**

Bilateral means affecting or involving both sides of the body or a paired structure.

### **Bilateral Microphthalmos**

Bilateral microphthalmos is abnormally small size of both eyes, a congenital condition that can impair vision and occur with other developmental abnormalities.

### **Bilateral Oophorectomy**

Bilateral oophorectomy is used in relation to bilateral oophorectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Bile Pigment**

A pigment derived largely from haem breakdown, chiefly bilirubin, that is processed by the liver and excreted in bile; accumulation in blood and tissues causes jaundice.

### **Biliary**

Biliary means relating to bile, the gallbladder, or bile ducts that transport bile from the liver to the intestine.

### **Biliary Calculi**

Biliary calculi are gallstones or stones in the biliary

tract formed from crystallized bile components and capable of causing pain, obstruction, or inflammation.

### **Biliary Fistula**

A biliary fistula is an abnormal connection allowing bile to leak from the biliary system into another organ, the abdomen, or the skin.

### **Bilophila**

Bilophila is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bilophila Wadsworthia**

Bilophila wadsworthia is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bimatoprost**

Bimatoprost is a prostaglandin analogue used as eye drops to lower intraocular pressure and, in some formulations, promote eyelash growth.

### **Binder Excipient**

A binder excipient is an inactive pharmaceutical ingredient that helps powder particles adhere during tablet formation.

### **Binding Protein**

Binding protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Binding Site**

A specific region of a receptor, enzyme, antibody, nucleic acid, or other molecule to which another molecule binds through chemical and physical interactions, influencing biological activity or measurement.

---

## **Binswanger Disease**

A clinical disorder or finding related to binswanger disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## **Bioaccumulation**

Bioaccumulation is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

## **Bioassay**

Bioassay is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## **Biochemical Reaction**

Biochemical reaction is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

## **Bioengineering**

The application of engineering principles to biology and medicine, including the design of medical devices, biomaterials, tissue-engineering systems, prostheses, and diagnostic technologies.

## **Bio-Informatics**

The use of computational methods to store, analyse, and interpret biological data such as DNA sequences, gene expression, protein structures, and clinical genomic information.

## **Biological**

Relating to living organisms, their structures, functions, processes, or products; in medicine, a biological product is a therapeutic or diagnostic substance made from or resembling a biological source.

## **Biological Availability**

Biological availability is a pharmacologic, physio-

logic, or clinical-care concept used to describe a measurable effect, intervention, or patient-management issue.

## **Biological Clock**

An internal timing system that coordinates recurring biological rhythms, especially the circadian rhythm, through networks involving the suprachiasmatic nucleus, hormones, and environmental cues.

## **Biological Model**

A cell, tissue, organism, computational system, or other representation used to study biological mechanisms, disease, or treatment responses.

## **Biological Process**

A coordinated series of molecular, cellular, or physiological events in a living organism, such as metabolism, cell division, inflammation, or tissue repair.

## **Biological Relative**

A person related by shared genetic ancestry, in contrast to a relative related solely by marriage or legal adoption; family history uses this distinction when assessing inherited risk.

## **Biological Therapy**

Biological therapy is used in relation to biological therapy during assessment, diagnosis, treatment, monitoring, or patient support.

## **Biological Transport**

The movement of ions, molecules, cells, or fluids within or across biological membranes and tissues, by processes such as diffusion, filtration, channels, pumps, and vesicular transport.

## **Bioluminescence**

Light produced by a living organism through a chemical reaction, commonly involving luciferin and luciferase; it is used in biological research and diagnostic assays.

---

## **Biomaterial**

A natural or synthetic material designed to interact with a biological system, for example in implants, prostheses, drug delivery, wound dressings, or tissue engineering.

## **Biomechanical Compliance**

The change in volume or displacement produced by a given change in pressure or force in a biological structure; examples include lung, vascular, and joint compliance.

## **Biomedical Cement**

Biomedical cement is a material used to fill, stabilize, anchor, or repair bone or other tissues in medical procedures.

## **Biomedical Research**

Biomedical research is used in relation to biomedical research during assessment, diagnosis, treatment, monitoring, or patient support.

## **Biomedical Tape**

Biomedical tape is adhesive material used to secure dressings, devices, sensors, or skin edges; its adhesive and backing determine skin tolerance.

## **Biomedicine**

Medicine grounded in the biological sciences, including the study of disease mechanisms, diagnosis, prevention, and treatment through laboratory and clinical research.

## **Biometry**

Biometry is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## **Biomimetics**

The design of materials, devices, or processes that imitate biological structures or functions, such as tissue-like scaffolds or gecko-inspired adhesives.

## **Biomphalaria**

A genus of freshwater snails that serves as an intermediate host for *Schistosoma mansoni*, the parasite causing intestinal schistosomiasis in humans.

## **Biopolymer**

A polymer produced by living organisms, such as proteins, nucleic acids, polysaccharides, and natural polyesters; biopolymers provide biological structure and function and are also used in biomaterials.

## **Biopsy Lung**

Biopsy lung is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## **Biopsy Site**

Biopsy site is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## **Biopsy Specimen**

Biopsy specimen is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## **Bioreactor**

A controlled vessel or system in which cells, tissues, microorganisms, or enzymes are cultured or used to produce biological materials, medicines, or engineered tissues.

## **Biospecimen**

Biospecimen is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

---

## **Biotechnology**

The use of living cells, organisms, or biological molecules to develop products and processes, including vaccines, recombinant medicines, molecular diagnostics, and gene therapies.

## **Biotin**

A water-soluble B vitamin that acts as a cofactor for carboxylase enzymes involved in fatty-acid synthesis, gluconeogenesis, and amino-acid metabolism; deficiency is uncommon but can cause dermatitis, alopecia, and neurological symptoms.

## **Biotinylation**

Biotinylation is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

## **Bipartite Ossification**

Bipartite ossification is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## **Biphenyl Compounds**

Chemicals containing two benzene rings joined by a single bond; some polychlorinated biphenyls are persistent environmental pollutants associated with toxic, endocrine, immune, and carcinogenic effects.

## **Bipolar Neuron**

A bipolar neuron has one dendrite and one axon extending from opposite sides of its cell body, as found in the retina and sensory pathways.

## **Bipolaris**

A biomedical term referring to bipolaris; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## **Birth**

Birth is delivery of a fetus from the uterus, involving labor, delivery of the infant, and separation or delivery of the placenta.

## **Birth Injury**

A clinical disorder or finding related to birth injury; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## **Birth Order**

Birth order is used in relation to birth order during assessment, diagnosis, treatment, monitoring, or patient support.

## **Birth Weight**

Birth weight is used in relation to birth weight during assessment, diagnosis, treatment, monitoring, or patient support.

## **Bisacodyl**

Bisacodyl is a stimulant laxative that increases bowel movement and is used for short-term constipation or bowel preparation.

## **Bisbenzimidazole**

Bisbenzimidazole is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Bisexuality**

Bisexuality is a sexual orientation involving attraction to more than one gender; it is not a disease or disorder.

## **Bismuth**

Bismuth is a metal used in some medicines and industrial products; excessive exposure or certain compounds can cause toxicity.

## **Bisoprolol**

Bisoprolol is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Bizelesin**

Bizelesin is an investigational DNA-alkylating anti-neoplastic compound studied for cytotoxic effects.

---

## **BK Virus**

BK virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## **Bladder Neoplasm**

A neoplastic process affecting bladder neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Bladder Pain**

Pain perceived in the lower abdomen, pelvis, or bladder region, often related to urinary infection, bladder pain syndrome, stones, inflammation, or malignancy; assessment depends on urinary and systemic symptoms.

## **Blast Cell**

Blast cell denotes blast cell, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## **Blast Phase**

Blast phase is an advanced stage of a myeloproliferative blood cancer marked by a high proportion of immature blast cells and aggressive disease.

## **Blastocystis**

A biomedical term referring to blastocystis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## **Blautia Producta**

Blautia producta is an anaerobic bacterium found in the human gut; its clinical significance depends on the specimen and compatible illness.

## **Bleeding Tendency**

Bleeding tendency is used in relation to bleeding tendency during assessment, diagnosis, treatment, monitoring, or patient support.

## **Bleeding Time**

Bleeding time is used in relation to bleeding time during assessment, diagnosis, treatment, monitoring, or patient support.

## **Bleomycin**

Bleomycin is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Bleomycin Sulfate**

Bleomycin sulfate is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Blepharophimosis**

Blepharophimosis is abnormally short horizontal eyelid openings, often with drooping lids and other features in blepharophimosis-ptosis syndromes.

## **Blepharoptosis**

Blepharoptosis is drooping of the upper eyelid caused by muscle, nerve, tendon, congenital, aging, or mechanical problems.

## **Blinded**

Blinded describes a research participant, clinician, or assessor who does not know the assigned treatment or relevant result, reducing expectation bias.

## **Bloating**

Bloating is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

## **Blocking Antibody**

An antibody that prevents a ligand from binding to its receptor or interferes with a biological interaction; blocking antibodies can be therapeutic, protective, or involved in autoimmune disease.

---

## Blood

A fluid connective tissue consisting of plasma, red blood cells, white blood cells, and platelets; it transports gases, nutrients, hormones, and waste and participates in immunity, coagulation, and temperature regulation.

## Blood Bank

A service that collects, tests, processes, stores, and distributes blood and blood components for transfusion, with compatibility testing and safeguards against infection and transfusion reactions.

## Blood Cell

Blood cell denotes blood cell, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Blood Circulation

The continuous movement of blood through the pulmonary and systemic vascular circuits, driven by the heart, to deliver oxygen and nutrients and remove carbon dioxide and metabolic waste.

## Blood Glucose

The concentration of glucose in blood, maintained by dietary absorption, hepatic production, insulin, and counter-regulatory hormones; abnormal levels indicate hypoglycaemia or hyperglycaemia.

## Blood Preservation

The collection, anticoagulation, processing, refrigeration, freezing, and quality control used to maintain donated blood or blood components until transfusion.

## Blood Product

A therapeutic component prepared from donated blood, such as red-cell concentrates, platelets, plasma, or cryoprecipitate, selected according to the patient's clinical need.

## Blood Protein

Blood protein is a protein or protein-related

molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

## Blood Sedimentation

The settling of red blood cells in anticoagulated blood; the erythrocyte sedimentation rate is a non-specific marker that may increase with inflammation, infection, anaemia, or other conditions.

## Blood Substitutes

Fluids or artificial products intended to restore circulating volume or, in some cases, oxygen-carrying capacity when donated blood is unavailable or unsuitable; most currently used substitutes provide volume rather than durable oxygen transport.

## Blood Treatment

The diagnosis-specific use of medicines, transfusion, apheresis, replacement factors, or other interventions to treat disorders of blood cells, coagulation, plasma proteins, or blood-borne infection.

## Blood Vessel

Blood vessel denotes blood vessel, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Blood Volume

The total amount of blood in the circulation, comprising plasma and cellular components; it varies with body size and fluid balance, and abnormal reductions or increases contribute to shock or circulatory strain.

## Blue Nevus

A blue nevus is a usually benign blue-gray skin mole caused by pigment cells located deeper in the dermis.

## Blunted Affect

Blunted affect is a medical term describing the named concept; its precise interpretation depends

---

on its defining features, associated findings, and clinical context.

### **Blurred Vision**

Blurred vision is used in relation to blurred vision during assessment, diagnosis, treatment, monitoring, or patient support.

### **B-Lymphocyte**

A B lymphocyte is an immune cell that can mature into an antibody-producing plasma cell or a memory B cell.

### **Bocavirus**

Bocavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Bodily Secretion**

Bodily secretion is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Body Cavity**

A fluid-containing space within the body that houses and protects organs, including the cranial, vertebral, thoracic, abdominal, and pelvic cavities.

### **Body Composition**

The proportions of fat, lean tissue, bone mineral, and body water in the body; it is assessed in nutrition, obesity, sports medicine, and some chronic diseases.

### **Body Fluid**

Water and dissolved substances in intracellular or extracellular compartments, including plasma, interstitial fluid, cerebrospinal fluid, and lymph; abnormal volume or composition causes fluid and electrolyte disorders.

### **Body Height**

The vertical measurement from the soles of the

feet to the top of the head; it is used to assess growth, nutrition, body-mass index, and medication or physiological calculations.

### **Body Image**

A person's perception, thoughts, and feelings about their own body and appearance; severe disturbance may occur in body dysmorphic disorder or eating disorders.

### **Body Odor**

Odour produced when skin secretions, especially sweat, are metabolized by microorganisms; a new or unusual odour may occasionally reflect infection, metabolic disease, or medication.

### **Body Piercing**

The intentional creation of a skin or mucosal opening to insert jewellery; complications include bleeding, infection, scarring, allergic reaction, and damage to teeth or cartilage.

### **Body Position**

The arrangement and orientation of the body or its parts, such as standing, supine, prone, or lateral positions; position affects examination findings, ventilation, circulation, and procedures.

### **Body Region**

A named anatomical area used to locate structures, symptoms, injuries, or examination findings, such as the chest, abdomen, pelvis, or upper limb.

### **Body Space**

An anatomical compartment or potential space within the body, such as the pleural, peritoneal, or retroperitoneal space, where fluid, air, blood, or infection may accumulate.

### **Body Substance**

Any material originating from or present in the body, including blood, saliva, urine, faeces, respiratory secretions, and tissue; handling may require infection-control precautions.

---

## Body Surface

The external area of the skin and accessible mucous membranes; body-surface area is also estimated clinically for burns, drug dosing, and physiological calculations.

## Body Wall

The layers of muscle, fascia, connective tissue, bone, and skin that enclose a body compartment, such as the thoracic or abdominal wall.

## Body Weight

The measured mass of a person, influenced by fat, muscle, bone, water, and organs; it is used with height and clinical context to assess growth, nutrition, fluid balance, and medication dosing.

## Bohring Syndrome

A clinical disorder or finding related to bohring syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## Bolt Device

Bolt device is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

## Bolus Infusion

A medical procedure, treatment, device, or care topic related to bolus infusion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Bombesin

Bombesin is a peptide signaling molecule related to gastrointestinal and neurologic hormones and used in research on digestion, appetite, and tumors.

## Bombesin Receptor

Bombesin receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

## Bone Callus

Bone callus denotes bone callus, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Bone Cement

Bone cement denotes bone cement, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Bone Cyst

Bone cyst denotes bone cyst, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Bone Development

Bone development denotes bone development, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Bone Disease

A clinical disorder or finding related to bone disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## Bone Marrow Disorder

A clinical disorder or finding related to bone marrow disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

## Bone Marrow Transplantation

Bone marrow transplantation denotes bone marrow transplantation, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Bone Matrix

Bone matrix denotes bone matrix, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, inner-

---

vation, and function.

### **Bone Necrosis**

Bone necrosis denotes bone necrosis, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Neoplasm**

A neoplastic process affecting bone neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Bone Pain**

Bone pain denotes bone pain, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Plate**

Bone plate denotes bone plate, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Regeneration**

Bone regeneration denotes bone regeneration, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Remodeling**

Bone remodeling denotes bone remodeling, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Resorption**

Bone resorption denotes bone resorption, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Screws**

Bone screws denotes bone screws, an anatomical

structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bone Transplantation**

Bone transplantation denotes bone transplantation, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bony Labyrinth**

The system of fluid-filled spaces within the petrous temporal bone that encloses the membranous labyrinth of the inner ear and contains the cochlea, vestibule, and semicircular canals.

### **Boranes**

Boranes are compounds of boron and hydrogen used in chemical synthesis and research; some are flammable or toxic.

### **Border Definition**

Border definition is used in relation to border definition during assessment, diagnosis, treatment, monitoring, or patient support.

### **Borderline**

Borderline is used in relation to borderline during assessment, diagnosis, treatment, monitoring, or patient support.

### **Bordetella**

Bordetella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bordetella Avium**

Bordetella avium is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bordetella Bronchiseptica**

Bordetella bronchiseptica is a bacterial taxon; dis-

---

ease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bordetella Hinzii**

*Bordetella hinzii* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bordetella Parapertussis**

*Bordetella parapertussis* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bordetella Petrii**

*Bordetella petrii* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Boric Acid**

A weak boron-containing compound used in some antiseptic, insecticidal, and industrial products; ingestion can be toxic.

### **Boron**

A chemical element present in food, water, and industrial materials; it has no established essential human biological role, and excessive exposure can cause gastrointestinal, skin, reproductive, or developmental toxicity.

### **Borrelia Infection**

*Borrelia* infection is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Borrelia Miyamotoi**

*Borrelia miyamotoi* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Bortezomib**

A proteasome inhibitor used mainly to treat multiple myeloma and some lymphomas; important adverse effects include peripheral neuropathy, cytopenias, gastrointestinal symptoms, and herpes-zoster reactivation.

### **Bosentan**

Bosentan is an endothelin-receptor antagonist used for pulmonary arterial hypertension and requiring liver-function and pregnancy precautions.

### **Botany**

Botany is the scientific study of plants, including their structure, growth, physiology, classification, and uses.

### **Bottle Feeding**

Bottle feeding is used in relation to bottle feeding during assessment, diagnosis, treatment, monitoring, or patient support.

### **Botulinum Toxin**

A neurotoxin produced by *Clostridium botulinum* that blocks acetylcholine release at neuromuscular junctions; purified preparations are used for selected muscle spasticity, dystonias, migraine, sweating, and cosmetic indications, but excess exposure can cause paralysis and respiratory failure.

### **Bouin's Solution**

Bouin's solution is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Bovine Anaplasmosis**

Bovine anaplasmosis is a tick- or blood-transmitted infection of cattle caused by *Anaplasma marginale*, producing red-cell destruction and anemia.

### **Bovine Papillomavirus**

Bovine papillomavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of

---

transmission, tissue tropism, and ability to cause disease.

### **Bowel Burn**

Bowel burn is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Bowel Urgency**

A sudden, difficult-to-defer need to defecate, commonly associated with diarrhoea, inflammatory bowel disease, irritable bowel syndrome, infection, or rectal disorders.

### **Bowen's Disease**

A clinical disorder or finding related to bowen's disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Bowman Membrane**

Bowman membrane denotes bowman membrane, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Brachycephaly**

Brachycephaly is a broad, shortened skull shape that may be positional or caused by premature fusion of coronal sutures.

### **Brachydactyly**

Brachydactyly is congenital shortening of fingers or toes caused by abnormal development of the bones or surrounding tissues.

### **Bradykinin**

Bradykinin is a peptide mediator that increases blood-vessel permeability, dilates vessels, and contributes to pain and inflammation.

### **Brain Disorder**

A clinical disorder or finding related to brain disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Brain Fornix**

A C-shaped fibre tract of the limbic system connecting the hippocampus with the mammillary bodies and septal region; it contributes to memory circuitry.

### **Brain Mapping**

Methods used to identify the anatomical or functional organization of the brain, including neuroimaging, electrophysiology, and cortical stimulation during selected neurosurgical procedures.

### **Brain Neoplasm**

A neoplastic process affecting brain neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Brain Wave**

An oscillating pattern of electrical activity generated by populations of neurons and recorded by electroencephalography; frequency and amplitude vary with sleep, alertness, and neurological disease.

### **Branchioma**

A branchioma is a tumor or cyst arising from tissues related to embryonic branchial structures, often presenting in the neck.

### **Branchio-Oto-Renal Syndrome**

A clinical disorder or finding related to branchio-oto-renal syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Brassicasterol**

Brassicasterol is a plant sterol found especially in rapeseed and related oils and used as a marker of plant-oil composition.

### **Brassidic Acid**

Brassidic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

---

## Breast

A paired mammary organ composed of glandular tissue, ducts, fat, connective tissue, and skin; it produces milk after pregnancy and is a site of benign and malignant disease.

## Breast Carcinoma

A neoplastic process affecting breast carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Breast Duct

A channel that carries milk from mammary lobules toward the nipple; ductal obstruction, inflammation, atypia, or carcinoma can produce a breast lump or nipple discharge.

## Breast Feed

To feed an infant with human milk directly from the breast; breastfeeding provides nutrition and immune factors, and may be affected by maternal or infant medical conditions and medicines.

## Breast Finding

Any abnormal or notable breast observation, such as a lump, pain, skin change, nipple inversion, or discharge; assessment may require examination and imaging or biopsy.

## Breast Lobe

A major subdivision of the mammary gland containing groups of lobules and ducts that converge toward the nipple.

## Breast Lobule

A functional unit of the mammary gland composed of milk-producing acini and their small ducts; lobules enlarge and differentiate during pregnancy and lactation.

## Breast Neoplasm

A neoplastic process affecting breast neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Breast Self-Examination

Inspection and palpation of one's own breasts to notice new lumps or changes; it may improve awareness but is not a substitute for recommended population screening or clinical assessment.

## Breath Test

Analysis of exhaled air to detect or measure a substance produced by the body or by intestinal microorganisms; examples include the urea breath test for *Helicobacter pylori* and hydrogen or methane testing for carbohydrate malabsorption and intestinal overgrowth.

## Brefeldin A

Brefeldin A is a fungal compound used experimentally to disrupt Golgi trafficking and intracellular protein transport.

## Bretylium Tosylate

Bretylium tosylate is an older antiarrhythmic drug that suppresses ventricular fibrillation and is now rarely used because of alternatives and adverse effects.

## Brevibacillus

Brevibacillus is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

## Brevibacterium

Brevibacterium is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Brevibacterium Casei

Brevibacterium casei is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Brevundimonas

A biomedical term referring to brevundimonas; its

---

classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Brevundimonas Diminuta**

A biomedical term referring to *brevundimonas diminuta*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Brevundimonas Vesicularis**

A biomedical term referring to *brevundimonas vesicularis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Brimonidine Tartrate**

Brimonidine tartrate is an alpha-2 adrenergic agonist used in eye drops to lower intraocular pressure and topically for some facial redness.

### **Brivanib**

Brivanib is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Brivanib Alaninate**

Brivanib alaninate is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Brivudine**

Brivudine is an antiviral drug used in some countries for herpes zoster; it has a dangerous interaction with fluoropyrimidine chemotherapy.

### **Broad Ligament**

Broad ligament denotes broad ligament, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bromelain**

A mixture of proteolytic enzymes derived from pineapple; it is marketed as a supplement and has been studied for inflammation and pain, but evidence and product standardization vary and interactions or allergy are possible.

### **Bromhexine**

A mucolytic medicine that reduces the viscosity of bronchial mucus and may help expectoration; gastrointestinal upset, rash, or rare serious skin reactions can occur.

### **Bromine**

A reactive halogen used in industrial chemicals and flame retardants; elemental bromine and many bromine compounds can irritate or burn tissues, and excessive exposure may cause systemic toxicity.

### **Bromobenzenes**

A group of aromatic compounds in which one or more bromine atoms are attached to benzene; they are mainly industrial chemicals and may cause irritation or toxic effects depending on the compound and exposure.

### **Bromocriptine**

An ergot-derived dopamine D2-receptor agonist used for hyperprolactinaemia and selected Parkinson disease or endocrine disorders; nausea, postural hypotension, hallucinations, and rare fibrotic complications may occur.

### **Bromodeoxyuridine**

A thymidine analogue incorporated into newly synthesized DNA during the S phase; it is used experimentally to measure cell proliferation and can interfere with DNA replication at high exposure.

### **Bromophos**

An organophosphorus insecticide; exposure can inhibit acetylcholinesterase and produce cholinergic poisoning, including sweating, salivation, bronchospasm, vomiting, weakness, and seizures.

---

### **Bromouracil**

A thymine analogue used mainly in experimental mutagenesis research; its altered base pairing can introduce DNA replication errors.

### **Bromovirus**

Bromovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Bromthymol Blue**

A pH indicator that changes colour near neutrality and is used in laboratory demonstrations and some analytical tests; it is not a therapeutic medicine.

### **Bronchial**

Relating to the bronchi, the large airways branching from the trachea; bronchial disease may cause cough, wheeze, mucus production, or airflow obstruction.

### **Bronchial Fistula**

An abnormal connection involving a bronchus and another structure, such as the pleural space, oesophagus, or skin; it can cause persistent air leak, infection, coughing, or respiratory compromise.

### **Bronchial Hemorrhage**

Bleeding from bronchial vessels or airways, usually presenting as haemoptysis; severe bleeding can obstruct the airway or cause respiratory failure.

### **Bronchial Obstruction**

Partial or complete blockage of a bronchus by mucus, a foreign body, tumour, swelling, or external compression, causing impaired ventilation and sometimes distal collapse or infection.

### **Bronchial Stricture**

Abnormal narrowing of a bronchus, caused by scarring, inflammation, tumour, infection, or prior instrumentation, which may produce localized wheeze, cough, recurrent infection, or atelectasis.

### **Bronchoconstriction**

Narrowing of the bronchi due to contraction of airway smooth muscle, mucosal swelling, or mucus; it increases airway resistance and occurs in asthma, allergic reactions, and some irritant exposures.

### **Bronchoconstrictor Agents**

Substances that narrow the airways by contracting bronchial smooth muscle or causing airway inflammation, including histamine, leukotrienes, irritant gases, and some medicines.

### **Bronchogenic Carcinoma**

A neoplastic process affecting bronchogenic carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Bronchomalacia**

Weakness and excessive collapsibility of the bronchial walls due to deficient cartilage or structural support; it may cause noisy breathing, cough, recurrent infections, or expiratory airway obstruction.

### **Bronchus Disease**

A clinical disorder or finding related to bronchus disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Bronchus Neoplasm**

A neoplastic process affecting bronchus neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Brown Fat**

Adipose tissue rich in mitochondria that produces heat through uncoupled oxidative metabolism; it is prominent in infants and can be activated by cold exposure in adults.

### **Brucella**

Brucella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

---

### **Brucella Abortus**

*Brucella abortus* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Brucella Canis**

*Brucella canis* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Brucella Melitensis**

*Brucella melitensis* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Brucella Suis**

*Brucella suis* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Brucellaceae**

Brucellaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Brunner Gland**

Brunner gland denotes brunner gland, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bryostatin**

Bryostatin is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Buccal Mucosa**

The moist mucous membrane lining the inside of the cheeks; it is examined for ulcers, infection, pig-

mentation, trauma, and oral cancer and can absorb some medicines.

### **Buccalmucosa**

A spelling variant of buccal mucosa, the moist lining of the inner cheeks.

### **Budesonide**

A corticosteroid used by inhalation for asthma or chronic obstructive pulmonary disease and by oral or rectal preparations for selected inflammatory bowel disorders; local and systemic corticosteroid adverse effects are possible.

### **Budvicia**

Budvicia is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Budvicia Aquatica**

Budvicia aquatica is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bufonidae**

Bufonidae is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Buformin**

Buformin is a former biguanide diabetes drug withdrawn or restricted because of lactic-acidosis risk.

### **Bulbourethral Glands**

Bulbourethral glands denotes bulbourethral glands, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Bulimia**

An eating-disorder symptom characterized by recurrent episodes of binge eating with a sense of

---

loss of control; in bulimia nervosa, episodes are followed by recurrent compensatory behaviours such as vomiting, fasting, or excessive exercise.

## **Bulla**

A bulla is a large fluid-filled blister or a hollow air-filled structure, depending on the clinical context.

## **Bully**

Bullying is repeated harmful aggression or intimidation involving a power imbalance and can cause injury, anxiety, depression, and other health effects.

## **Bungarotoxins**

Neurotoxins from kraits (*Bungarus* species) that bind or interfere with nicotinic acetylcholine receptors at the neuromuscular junction; envenomation can cause progressive paralysis and respiratory failure.

## **Bunyaviridae**

Bunyaviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## **Bupivacaine**

Bupivacaine is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Bupivacaine Hydrochloride**

Bupivacaine hydrochloride is a medication or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

## **Buprenorphine**

Buprenorphine is a partial opioid agonist used for opioid-use disorder and pain; it can cause dependence but has a ceiling effect on respiratory depression.

## **Bupropion**

Bupropion is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## **Burkholderia**

Burkholderia is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Burkholderia Cenocepacia**

Burkholderia cenocepacia is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Burkholderia Cepacia**

Burkholderia cepacia is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Burkholderia Gladioli**

Burkholderia gladioli is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Burkholderia Mallei**

Burkholderia mallei is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Burkholderia Pseudomallei**

Burkholderia pseudomallei is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

## **Burkholderiaceae**

Burkholderiaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, speci-

---

men source, host factors, and evidence of infection rather than colonization.

### **Bursa Of Fabricius**

The bursa of Fabricius is a lymphoid organ in birds where B lymphocytes mature; it has no direct human counterpart.

### **Buruli Ulcer**

Buruli ulcer is a destructive skin infection caused by *Mycobacterium ulcerans*, producing painless nodules or ulcers that can damage tissue and joints.

### **Buserelin**

Buserelin is a gonadotropin-releasing hormone analogue that suppresses reproductive hormones after an initial stimulation phase and is used in selected fertility or hormone-sensitive conditions.

### **Buspirone**

Buspirone is a nonbenzodiazepine anxiolytic used mainly for generalized anxiety and does not provide immediate relief like sedative medicines.

### **Busulfan**

An alkylating chemotherapy medicine used chiefly as conditioning before haematopoietic stem-cell transplantation and, less commonly, for chronic myeloid leukaemia; it can cause prolonged myelosuppression, seizures, infertility, pulmonary injury, and hepatic veno-occlusive disease.

### **Butanol**

Butanol is a flammable alcohol solvent; ingestion or substantial exposure can irritate tissues and depress the central nervous system.

### **Buthionine Sulfoximine**

Buthionine sulfoximine is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Butocarboxim**

Butocarboxim is a carbamate insecticide that can

inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

### **Buttiauxella**

*Buttiauxella* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Buttiauxella Agrestis**

A biomedical term referring to *buttiauxella agrestis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Buttiauxella Ferragutiae**

A biomedical term referring to *buttiauxella ferragutiae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Buttiauxella Gaviniae**

A biomedical term referring to *buttiauxella gaviniae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Buttiauxella Noackiae**

A biomedical term referring to *buttiauxella noackiae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Buttocks**

The paired fleshy regions overlying the gluteal muscles at the back of the pelvis, formed mainly by muscle and subcutaneous fat.

### **Bent Penis**

Curvature of the penis that may be congenital or acquired, often from Peyronie disease; it can cause pain or difficulty with sexual intercourse.

### **Bleeding During Pregnancy**

Vaginal bleeding during pregnancy; its significance

---

varies with gestational age and amount. Urgent evaluation is needed for heavy bleeding, pain, dizziness, or bleeding later in pregnancy.

### **Blood Clots**

Clumps of blood formed during clotting; abnormal clots can obstruct veins or arteries and cause deep vein thrombosis, pulmonary embolism, stroke, or other ischemia.

#### **Synonyms:**

Clot Blood (Blood Clots)

### **Brain Lesions**

Areas of abnormal brain tissue caused by tumors, stroke, infection, inflammation, trauma, demyelination, or vascular disease; symptoms depend on the lesion's location and size.

### **Breast Calcifications**

Small calcium deposits in breast tissue seen on mammography; they are often benign, but some patterns require additional imaging or biopsy.

### **Breast Lumps**

Localized breast swelling or a mass; causes include cysts, fibroadenoma, infection, trauma, or cancer. Persistent or new lumps need clinical evaluation.

### **Breast Rash**

A rash affecting breast skin; causes include dermatitis, infection, irritation, or, less commonly, inflammatory breast cancer. Persistent one-sided changes require evaluation.

### **Burning Feet**

Burning, tingling, or painful sensations in the feet, commonly related to peripheral neuropathy, diabetes, nutritional deficiency, alcohol, medicines, or nerve compression.

### **Bardet-Biedl Syndrome (BBS)**

A rare inherited disorder that may cause retinal degeneration, obesity, extra fingers or toes, kidney disease, and developmental or reproductive problems.

#### **Synonyms:**

BBS

### **Bedbugs**

Small blood-feeding insects that cause itchy bites and skin reactions and can spread through bedding, clothing, and furniture.

### **Bedsore (Pressure Ulcers)**

Injuries to skin and underlying tissue caused by prolonged pressure, usually over bony areas in people with limited mobility.

### **Bee Sting**

A skin injury caused by a bee's stinger that may cause local pain and swelling or, in allergic people, a serious systemic reaction.

#### **Synonyms:**

Stings, Bee

### **Benign Brain Tumor**

A noncancerous growth in or around the brain that can still cause symptoms by pressing on brain tissue, nerves, or fluid pathways.

### **Benign Paroxysmal Positional Vertigo (BPPV)**

Brief episodes of spinning dizziness triggered by changes in head position, usually caused by displaced inner-ear crystals.

### **Benign Peripheral Nerve Tumor**

A noncancerous tumor arising from or near a peripheral nerve, potentially causing a lump, pain, tingling, numbness, or weakness.

### **Benign Prostatic Hyperplasia (BPH)**

Noncancerous enlargement of the prostate that can obstruct urine flow and cause urinary frequency, urgency, weak stream, or incomplete emptying.

#### **Synonyms:**

Prostate Gland Enlargement

### **Bladder Stones**

Hard mineral deposits that form in the bladder and

---

may cause painful urination, blood in urine, urinary frequency, or difficulty emptying the bladder.

**Synonyms:**

Bladder Calculi

**Blood In Urine (Hematuria)**

Visible or microscopic blood in the urine, which may result from infection, stones, injury, kidney disease, medicines, or urinary tract cancer.

**Synonyms:**

Microscopic Hematuria

**Brain AVM (Arteriovenous Malformation)**

An abnormal tangle of brain arteries and veins that can disrupt blood flow and may bleed or cause seizures, headaches, or neurologic deficits.

**Synonyms:**

Brain Arteriovenous Malformation

**Breast Cysts**

Fluid-filled sacs within breast tissue that may be tender or palpable and are usually benign.

**Broken Collarbone**

A fracture of the clavicle, usually caused by a fall, direct impact, or contact injury and associated with shoulder pain and reduced arm movement.

**Synonyms:**

Broken Clavicle

**Broken Hand**

A fracture of one or more bones of the hand, causing pain, swelling, bruising, deformity, or impaired movement.

**Broken Leg**

A fracture of one or more bones in the leg, commonly causing pain, swelling, bruising, deformity, or inability to bear weight.

**Synonyms:**

Leg Fracture

**Broken Nose**

A fracture of one or more nasal bones that may

cause pain, swelling, bleeding, deformity, or difficulty breathing through the nose.

**Broken Ribs**

Fractures of one or more ribs, usually causing localized chest pain that worsens with breathing, coughing, or movement.

**Broken Wrist**

A fracture involving one or more bones near the wrist, often causing pain, swelling, bruising, deformity, or reduced hand function.

**Bunions**

A bony prominence and deformity at the base of the big toe caused by shifting of the joint, often producing pain and footwear difficulty.

**Burns**

Tissue injuries caused by heat, chemicals, electricity, radiation, or friction, with severity determined by depth, size, and location.

**Synonyms:**

Burn Injury Burns First Aid (Burns)

**BANF**

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

**Barber's Itch**

Alternate index label; see *Folliculitis*.

**Barlow's Syndrome**

Alternate index label; see *Mitral valve prolapse*.

**Barotitis Media**

Alternate index label; see *Airplane ear*.

**Basal Joint Arthritis**

Alternate index label; see *Thumb arthritis*.

**BBS**

Alternate index label; see *Bardet-Biedl syndrome (BBS)*.

---

## **BDD**

Alternate index label; see *Body dysmorphic disorder*.

## **Benign Migratory Glossitis**

Alternate index label; see *Geographic tongue*.

## **Berger's Disease**

Alternate index label; see *IgA nephropathy (Berger disease)*.

## **Bilateral Acoustic Neurofibromatosis**

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

## **Bladder Calculi**

Alternate index label; see *Bladder stones*.

## **Bladder Control, Loss Of**

Alternate index label; see *Urinary incontinence*.

## **Bladder Infection**

Alternate index label; see *Cystitis*.

## **Bladder Inflammation**

Alternate index label; see *Interstitial cystitis*.

## **Bladder Prolapse**

Alternate index label; see *Anterior vaginal prolapse (cystocele)*.

## **Blastocystosis**

Alternate index label; see *Blastocystis hominis*.

## **Blocked Ureter**

Alternate index label; see *Ureteral obstruction*.

## **Body Odor And Sweating**

Alternate index label; see *Sweating and body odor*.

## **Bradycardia-Tachycardia Syndrome**

Alternate index label; see *Sick sinus syndrome*.

## **Brain Arteriovenous Malformation**

Alternate index label; see *Brain AVM (arteriove-*

*nous malformation)*.

## **Brain Embolism**

Alternate index label; see *Embolic stroke (brain embolism)*.

## **Brain Tumor, Child**

Alternate index label; see *Pediatric brain tumors*.

## **Breast Cancer, Inflammatory**

Alternate index label; see *Inflammatory breast cancer*.

## **Breast Cancer, Male**

Alternate index label; see *Male breast cancer*.

## **Broken Blood Vessel In Eye**

Alternate index label; see *Subconjunctival hemorrhage (broken blood vessel in eye)*.

## **Broken Clavicle**

Alternate index label; see *Broken collarbone*.

## **Broken Hip**

Alternate index label; see *Hip fracture*.

## **Burn Injury**

Alternate index label; see *Burns*.

## **Burning Thigh Pain**

Alternate index label; see *Meralgia paresthetica*.

## **Bunyaviruses**

Alternate index label; see *Viral hemorrhagic fevers*.

## **Burkitt's Tumor**

Alternate index label; see *Burkitt lymphoma*.

## **Bursitis Of The Knee**

Alternate index label; see *Knee bursitis*.

## **B And T Cell Screen**

B and T cell screen uses immunophenotyping to measure and characterize circulating B lymphocytes and

---

T lymphocytes, supporting evaluation of immune deficiency, leukemia, and lymphoma.

### **B-Cell Leukemia/Lymphoma Panel**

B-cell leukemia/lymphoma panel uses flow cytometry and antibody markers to identify abnormal B-cell populations in blood, marrow, or tissue.

### **Bacitracin Overdose**

Toxic effects caused by excessive exposure to bacitracin. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Bacitracin Zinc Overdose**

Toxic effects caused by excessive exposure to bacitracin zinc. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Bacterial Vaginosis - Aftercare**

After treatment for bacterial vaginosis, care includes completing prescribed therapy, avoiding practices that disrupt vaginal flora, and seeking review for persistent or recurrent symptoms.

### **BAER - Brainstem Auditory Evoked Response**

BAER records electrical responses from the auditory nerve and brainstem after sound stimulation, helping assess hearing pathways when behavioral testing is difficult.

### **Baking Powder Overdose**

Toxic effects caused by excessive exposure to baking powder. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Baking Soda Overdose**

Toxic effects caused by excessive exposure to baking soda. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Barbiturate Intoxication And Overdose**

Toxic effects caused by excessive exposure to a barbiturate medicine. Severe poisoning may cause central nervous system depression, respiratory failure, hypotension, or coma and requires emergency treatment.

### **Bartholin Cyst Or Abscess**

Bartholin cyst is a blocked gland duct near the vaginal opening; infection can produce a painful abscess requiring drainage and sometimes antibiotics.

### **Basal Cell Skin Cancer**

Basal cell skin cancer is a usually slow-growing skin malignancy arising from basal keratinocytes; it rarely metastasizes but can destroy nearby tissue if untreated.

### **Bassen-Kornzweig Syndrome**

Bassen-Kornzweig syndrome, or abetalipoproteinemia, is an inherited disorder of lipoprotein assembly causing fat malabsorption, acanthocytosis, vitamin E deficiency, and neurologic disease.

### **Bathing A Patient In Bed**

Safe bathing care involves maintaining water temperature, preventing falls or drowning, protecting skin, and providing assistance appropriate to the person's age and mobility.

### **Bathing An Infant**

Safe bathing care involves maintaining water temperature, preventing falls or drowning, protecting skin, and providing assistance appropriate to the person's age and mobility.

### **Bathroom Safety - Children**

Bathroom safety measures reduce falls, burns, drowning, and medication exposure through supervision, non-slip surfaces, grab supports, and secure storage.

### **Bathroom Safety For Adults**

Bathroom safety measures reduce falls, burns, drowning, and medication exposure through super-

---

vision, non-slip surfaces, grab supports, and secure storage.

### **Bed Rest During Pregnancy**

Bed rest during pregnancy is a medical recommendation that restricts activity for a specific indication. Routine bed rest is not generally used because it can cause deconditioning and thromboembolism.

### **Bedtime Habits For Infants And Children**

Healthy bedtime habits for infants and children include a consistent routine, a safe sleep environment, and age-appropriate sleep duration.

### **Bee, Wasp, Hornet, Or Yellow Jacket Sting**

A clinical topic about bee, wasp, hornet, or yellow jacket sting. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

### **Beeswax Poisoning**

Toxic effects caused by excessive exposure to beeswax. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Before Weight-Loss Surgery - What To Ask Your Doctor**

Preoperative information about weight-loss surgery, including preparation, expected benefits, risks, alternatives, and long-term follow-up.

### **Being Active After Your Heart Attack**

Physical activity after a heart attack or with heart disease should be gradual and individualized, usually with clinician guidance or cardiac rehabilitation.

### **Being Active When You Have Heart Disease**

Physical activity after a heart attack or with heart disease should be gradual and individualized, usually with clinician guidance or cardiac rehabilitation.

### **Benefits Of Breastfeeding**

Breastfeeding provides human milk containing nu-

trients and immune factors and may benefit infant and maternal health when it is safe and desired.

### **Benefits Of Quitting Tobacco**

Stopping tobacco use reduces cardiovascular, respiratory, cancer, and pregnancy-related risks, with benefits beginning soon after cessation.

### **Benign Ear Cyst Or Tumor**

A benign ear cyst or tumor is a noncancerous mass involving the external, middle, or inner ear. Symptoms and treatment depend on location and size.

### **Benign Positional Vertigo - Aftercare**

Benign positional vertigo aftercare covers activity, fall prevention, recurrence, and vestibular exercises after treatment for brief vertigo caused by displaced inner-ear otoconia.

### **Benign Prostate Hyperplasia (BPH) - Resources**

Information about benign prostatic hyperplasia, including urinary symptoms, evaluation, medicines, procedures, and follow-up.

### **Benzene Poisoning**

Toxic effects caused by excessive exposure to benzene. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Beta-Blockers Overdose**

Toxic effects caused by excessive exposure to beta-blockers. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Beta-Carotene Blood Test**

A diagnostic test used to evaluate beta-carotene or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Bicycle Safety**

Bicycle safety includes helmet use, visibility, traffic awareness, suitable equipment, and supervision

---

appropriate to age and skill.

### **Bilateral Hydronephrosis**

Bilateral hydronephrosis is enlargement of both renal collecting systems from impaired urine drainage, with causes including obstruction, reflux, stones, or bladder dysfunction.

### **Bilateral Tonic-Clonic Seizure**

A bilateral tonic-clonic seizure causes loss of consciousness followed by stiffening and rhythmic jerking of both sides of the body.

### **Bile Acid Sequestrants For Cholesterol**

Medicines that bind bile acids in the intestine and lower low-density lipoprotein cholesterol by increasing hepatic conversion of cholesterol into bile acids.

### **Bile Culture**

A laboratory culture of bile to identify bacteria or fungi in suspected biliary infection.

### **Bile Duct Obstruction**

Impaired flow of bile through the biliary tract, causing jaundice, dark urine, pale stools, itching, abdominal pain, or infection.

### **Bile Duct Stricture**

Narrowing of a bile duct that impairs bile flow and may cause jaundice, abdominal pain, cholangitis, or abnormal liver tests.

### **Bili Lights**

Phototherapy lights used to treat neonatal jaundice by converting bilirubin into forms that can be eliminated more easily.

### **Biliary System**

The network of liver, gallbladder, and bile ducts that produces, stores, and transports bile to the intestine.

### **Bilirubin - Urine**

A urine test for conjugated bilirubin. Its presence may indicate cholestasis or hepatocellular disease

because unconjugated bilirubin is not normally excreted in urine.

### **Bilirubin Blood Test**

A diagnostic test used to evaluate bilirubin or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Biopsy - Biliary Tract**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Birth Control - Slow Release Methods**

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

### **Birth Control And Family Planning**

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

### **Birth Control Pill Overdose**

Toxic effects caused by excessive exposure to birth control pill. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Birth Control Pills**

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

### **Birth Control Pills - Combination**

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

### **Birth Control Pills - Progestin Only**

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

---

### **Birthmarks - Pigmented**

Pigmented birthmarks are localized areas of increased or altered skin pigmentation present at birth or appearing early in life. Changes in size, color, or shape require assessment.

### **Black Nightshade Poisoning**

Toxic effects caused by excessive exposure to black nightshade. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Black Or Tarry Stools**

Black or tarry stools may indicate upper gastrointestinal bleeding, but can also result from iron or bismuth. New or persistent findings require medical assessment.

### **Black Widow Spider**

The black widow spider is a venomous spider whose bite can cause severe muscle pain, abdominal cramping, sweating, hypertension, and autonomic symptoms.

### **Bladder Biopsy**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Bladder Exstrophy Repair**

Bladder exstrophy repair reconstructs the exposed bladder and lower abdominal and genital structures present in this congenital defect, often through staged surgery.

### **Bland Diet**

A bland diet consists of foods that are soft, mildly seasoned, and low in irritants. It may be used temporarily for selected gastrointestinal symptoms.

### **Bleeding During Cancer Treatment**

A clinical topic about bleeding during cancer treatment. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

### **Bleeding Into The Skin**

A clinical topic about bleeding into the skin. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

### **Blindness - Resources**

Resources for blindness provide information about low-vision services, mobility training, assistive devices, rehabilitation, and support.

### **Blindness And Vision Loss**

Blindness or vision loss is reduced visual function that may result from eye disease, optic-nerve disease, brain disease, injury, or congenital conditions.

### **Blockage Of Upper Airway**

Upper-airway obstruction prevents normal airflow through the nose, mouth, pharynx, or larynx and can rapidly cause respiratory failure.

### **Blood Differential Test**

A diagnostic test used to evaluate blood differential or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Blood Donation Before Surgery**

A medical procedure involving blood donation before surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Blood Gases**

Laboratory measurements of oxygen, carbon dioxide, acidity, and related values in blood to assess ventilation, oxygenation, and acid-base balance.

### **Blood In The Semen**

Blood in semen, called hematospermia, is usually benign and self-limited but may result from infection, inflammation, trauma, or a urologic disorder.

### **Blood Pressure Measurement**

Measurement of the pressure exerted by circulating blood on arterial walls, recorded as systolic and diastolic pressure.

---

### **Blood Pressure Monitors For Home**

Devices used to measure blood pressure outside a clinic. Accurate cuff size, positioning, and repeated measurements improve reliability.

### **Blood Transfusions**

A medical procedure involving blood transfusions. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Blood Typing**

Laboratory determination of ABO and Rh blood-group antigens to support safe transfusion and pregnancy-related care.

### **Bloodborne Pathogens**

Bloodborne pathogens are infectious agents transmitted through blood or certain body fluids, including HIV, hepatitis B virus, and hepatitis C virus.

### **Blue Discoloration Of The Skin**

Bluish discoloration of the skin or mucous membranes, called cyanosis, may indicate reduced oxygenation or abnormal blood flow.

### **Blue Nightshade Poisoning**

Toxic effects caused by excessive exposure to blue nightshade. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Body Temperature Norms**

Normal body temperature varies with age, time of day, activity, measurement site, and health. Fever and hypothermia are defined using clinical context and measurement method.

### **Boils**

Boils are localized infections of hair follicles, usually caused by *Staphylococcus aureus*, that form painful pus-filled nodules.

#### **Synonyms:**

Abscesses Skin (Boils)

### **Bonding With Your Newborn**

Bonding with a newborn is the development of an emotional relationship through responsive caregiving, touch, feeding, and interaction.

### **Bone Lesion Biopsy**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Bone Marrow (Stem Cell) Donation**

Bone marrow or stem-cell donation is collection of blood-forming stem cells from marrow or circulating blood for transplantation into another person.

### **Bone Marrow Culture**

A laboratory culture of bone-marrow material used to identify bacteria, fungi, or other organisms in suspected infection.

### **Bone Marrow Transplant**

A treatment in which healthy hematopoietic stem cells replace or restore blood-forming cells after conditioning therapy. Recovery requires monitoring for infection, graft failure, and graft-versus-host disease.

### **Bone Marrow Transplant - Discharge**

A treatment in which healthy hematopoietic stem cells replace or restore blood-forming cells after conditioning therapy. Recovery requires monitoring for infection, graft failure, and graft-versus-host disease.

### **Bone Marrow Transplant In Children - Discharge**

A treatment in which healthy hematopoietic stem cells replace or restore blood-forming cells after conditioning therapy. Recovery requires monitoring for infection, graft failure, and graft-versus-host disease.

### **Bone Mineral Density Test**

A diagnostic test used to evaluate bone mineral density or related findings. Results are interpreted

---

with the test method, clinical findings, and reference range.

### **Bone Pain Or Tenderness**

Bone pain or tenderness may result from injury, infection, metabolic disease, inflammation, or cancer. Persistent or unexplained pain requires assessment.

### **Bone Tumor**

A mass arising in bone that may be benign or malignant. Evaluation uses imaging and biopsy when indicated.

### **Bone X-Ray**

An X-ray examination used to assess the specified body region for fracture, abnormal structure, or disease.

### **Boric Acid Poisoning**

Toxic effects caused by excessive exposure to boric acid. Severity depends on the dose, route, timing, co-existing conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Botulinum Toxin Injection - Larynx**

A medical procedure involving botulinum toxin injection - larynx. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Bowel Retraining**

Bowel retraining is a structured program using regular timing, adequate fluid and fiber, toileting posture, and other measures to establish predictable bowel movements.

### **Bowel Transit Time**

Bowel transit time is the time required for material to pass through the gastrointestinal tract, measured to evaluate selected motility disorders.

### **Brachial Plexus Injury In Newborns**

A brachial plexus injury in a newborn affects the network of nerves supplying the shoulder, arm, and hand, usually after difficult delivery. Weakness may

improve or require specialist care.

### **Brain Aneurysm Repair**

A medical procedure involving brain aneurysm repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Brain Aneurysm Repair - Discharge**

A medical procedure involving brain aneurysm repair - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Brain Injury - Discharge**

Discharge care after brain injury includes supervision, medication management, activity guidance, and monitoring for worsening headache, confusion, vomiting, seizure, or weakness.

### **Brain Natriuretic Peptide Test**

A diagnostic test used to evaluate brain natriuretic peptide or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Brain PET Scan**

A positron-emission tomography study that shows metabolic or molecular activity in the brain using a radioactive tracer.

### **Brain Radiation - Discharge**

Discharge care after brain radiation includes skin and symptom care, medication instructions, monitoring for neurologic changes, and scheduled follow-up.

### **Brain Surgery**

A medical procedure involving brain surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Brain Surgery - Discharge**

A medical procedure involving brain surgery - dis-

---

charge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Brain Tumor - Children**

A primary brain tumor is an abnormal growth arising in brain tissue or nearby structures. It may be benign or malignant and can cause neurologic symptoms through invasion or pressure.

### **Brain Tumor - Primary - Adults**

A primary brain tumor is an abnormal growth arising in brain tissue or nearby structures. It may be benign or malignant and can cause neurologic symptoms through invasion or pressure.

### **BRCA1 And BRCA2 Gene Testing**

A diagnostic test used to evaluate *brca1* and *brca2* gene testing or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Break The Bonds Of Emotional Eating**

Emotional eating is eating in response to stress or other emotions rather than physical hunger. Management may include behavioral strategies and treatment of underlying conditions.

### **Breast Augmentation Surgery**

A medical procedure involving breast augmentation surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Breast Biopsy - Stereotactic**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Breast Biopsy - Ultrasound**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Breast Cancer In Men**

Breast cancer in men is a malignant tumor of male breast tissue, usually presenting as a painless lump or nipple change and requiring diagnostic imaging and biopsy.

### **Breast Cancer Screening**

Testing used to detect breast cancer before symptoms develop, usually with mammography and, for selected patients, additional imaging.

### **Breast Cancer Staging**

Breast cancer staging describes the extent of disease using tumor features, lymph-node involvement, and distant spread to guide prognosis and treatment.

### **Breast Enlargement In Males**

Enlargement of male breast tissue, called gynecomastia, caused by glandular proliferation. Causes include hormonal changes, medicines, obesity, and systemic disease.

### **Breast External Beam Radiation - Discharge**

Discharge care after breast external-beam radiation includes skin care, symptom monitoring, treatment completion, and follow-up.

### **Breast Lift**

A breast lift, or mastopexy, surgically reshapes and raises sagging breast tissue by removing excess skin and repositioning the nipple when necessary.

### **Breast Lump Removal**

A medical procedure involving breast lump removal. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Breast Milk - Pumping And Storing**

Guidance on expressing, storing, labeling, and handling breast milk to preserve safety and nutritional quality.

---

### **Breast MRI Scan**

A magnetic resonance imaging study that produces detailed images of the specified body region using magnetic fields and radiofrequency energy.

### **Breast Reconstruction - Implants**

A medical procedure involving breast reconstruction - implants. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Breast Reconstruction - Natural Tissue**

A medical procedure involving breast reconstruction - natural tissue. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Breast Reduction**

Breast reduction, or reduction mammoplasty, removes breast tissue, fat, and skin to reduce breast size and related symptoms.

### **Breast Self-Exam**

Breast self-examination is personal observation and palpation for new changes. It does not replace recommended screening or clinical evaluation.

### **Breast Skin And Nipple Changes**

Changes in breast skin or the nipple may result from benign conditions, infection, hormonal change, or cancer. New, persistent, or one-sided changes require assessment.

### **Breastfeeding - Resources**

Breastfeeding resources provide information about feeding technique, lactation support, maternal medicines, infant feeding, and common problems.

### **Breastfeeding - Self-Care**

Breastfeeding self-care includes breast and nipple care, adequate hydration and nutrition, pain management, and assessment of fever or persistent breast symptoms.

### **Breastfeeding - Skin And Nipple Changes**

Breastfeeding-related skin or nipple changes may result from friction, dermatitis, infection, or other causes and require assessment when persistent or painful.

### **Breastfeeding Vs. Formula Feeding**

Breastfeeding and formula feeding are methods of infant nutrition. Choice depends on medical factors, feeding goals, access to support, and family preference.

### **Breath Alcohol Test**

A diagnostic test used to evaluate breath alcohol or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Breath Odor**

Unpleasant breath odor, or halitosis, commonly results from oral disease, dry mouth, tobacco, diet, or infection.

### **Breath-Holding Spell**

A brief involuntary episode in a young child, usually after crying or upset, involving apnea, color change, and rapid recovery.

### **Breathing - Slowed Or Stopped**

Slowed or absent breathing, called respiratory depression or apnea, can result from airway obstruction, medicines, neurologic disease, or severe illness and requires immediate assessment.

### **Breathing Difficulties - First Aid**

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

### **Breathing Difficulty**

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

---

## **Breathing Difficulty - Lying Down**

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

## **Breech Birth**

A breech birth occurs when the fetus presents buttocks or feet first rather than the head. Delivery planning depends on fetal position, gestational age, and maternal and fetal factors.

## **Brief Resolved Unexplained Event - BRUE**

A brief resolved unexplained event is a sudden, brief, and resolved episode in an infant involving altered breathing, color, muscle tone, or responsiveness without an identifiable cause after evaluation.

## **Bringing Your Child To Visit A Very Ill Sibling**

Preparing a child to visit a seriously ill sibling includes age-appropriate explanation, emotional support, and attention to infection-control and safety requirements.

## **Broad Nasal Bridge**

A broad nasal bridge is increased width of the upper nose. It may be a normal familial feature or part of a congenital or genetic syndrome.

## **Broken Bone**

A broken bone, or fracture, is a partial or complete disruption of bone continuity caused by injury, repetitive stress, or weakened bone.

## **Broken Collarbone - Aftercare**

Aftercare for a broken collarbone includes protection of the fracture, pain control, activity guidance, and follow-up to assess healing.

## **Broken Kneecap - Aftercare**

Aftercare for a broken kneecap includes protection of the knee, pain control, mobility guidance, and follow-up to assess bone and extensor-mechanism

healing.

## **Broken Or Dislocated Jaw**

A fracture or dislocation of the jaw can cause pain, swelling, malocclusion, limited movement, and difficulty speaking or swallowing.

## **Broken Or Knocked Out Tooth**

A broken or avulsed tooth is a dental injury caused by trauma. An avulsed permanent tooth requires urgent dental care.

## **Broken Toe - Self-Care**

Self-care for a broken toe includes protection, suitable footwear, pain control, and monitoring for deformity, numbness, impaired circulation, or infection.

## **Brompheniramine Overdose**

Toxic effects caused by excessive exposure to brompheniramine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

## **Bronchiolitis - Discharge**

Home care after bronchiolitis includes hydration, monitoring breathing and feeding, avoiding smoke exposure, and seeking urgent care for worsening respiratory distress.

## **Bronchoscopic Culture**

Bronchoscopic culture examines respiratory specimens collected through bronchoscopy for bacteria, fungi, or mycobacteria when ordinary samples are inadequate.

## **Bronchoscopy - Aftercare**

Bronchoscopy aftercare includes observation for breathing difficulty, bleeding, fever, chest pain, and swallowing recovery after an airway examination or sampling procedure.

## **Brown Recluse Spider**

The brown recluse spider is a venomous spider whose bite may cause local tissue injury and, rarely, sys-

---

temic illness.

### **Bruised Rib Care**

Care for a bruised rib includes pain control, normal gentle breathing, activity modification, and assessment for shortness of breath or other chest injury.

### **Brushing Your Child's Teeth**

Brushing a child's teeth removes plaque and helps prevent dental caries and gum disease. Fluoride toothpaste and age-appropriate supervision are recommended.

### **Bubble Bath Soap Poisoning**

Toxic effects caused by excessive exposure to bubble bath soap. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Buccal Smear**

A laboratory examination of cells collected from the specified site to identify abnormal, infectious, or malignant changes.

### **Bug Repellent Safety**

Bug-repellent safety concerns appropriate product selection, application, storage, and prevention of skin, eye, inhalation, or ingestion exposure.

### **Bug Spray Poisoning**

Toxic effects caused by excessive exposure to bug spray. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **BUN - Blood Test**

A diagnostic test used to evaluate bun or related findings. Results are interpreted with the test method, clinical findings, and reference range.

### **Bunion Removal**

A medical procedure involving bunion removal. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Bunion Removal - Discharge**

A medical procedure involving bunion removal - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Burns - Resources**

Burn-care resources provide information about first aid, wound care, infection prevention, pain control, and indications for specialist treatment.

### **Bursitis Of The Heel**

Heel bursitis is inflammation of a fluid-filled bursa near the heel, producing localized tenderness and pain with pressure or walking.

### **Butazolidin Overdose**

Toxic effects caused by excessive exposure to butazolidin. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

### **Butter, Margarine, And Cooking Oils**

Butter, margarine, and cooking oils are dietary fat sources. Their nutritional effects depend on portion size, fatty-acid composition, and the overall eating pattern.

### **Button Batteries**

Button batteries are small batteries that can cause severe tissue injury if swallowed or inserted into the nose or ear. Suspected ingestion requires emergency evaluation.

### **Buying And Caring For Baby Bottles And Nipples**

Safe selection and cleaning of baby bottles and nipples reduce contamination, feeding injury, and improper preparation risks.

### **B Hemophilia (Hemophilia)**

Alternate index label for Hemophilia.

### **Bacterial Vaginosis (Causes, Symptoms,**

---

## **Treatment)**

Alternate index label for Causes, Symptoms, Treatment.

## **Bakers Cyst (Baker Cyst)**

Alternate index label for Baker Cyst.

## **Balanitis (Penis Disorder)**

Alternate index label for Penis Disorder.

## **Barlow Syndrome (Mitral Valve Prolapse)**

Alternate index label for Mitral Valve Prolapse.

## **Barretts Esophagus (Barrett's Esophagus)**

Alternate index label for Barrett's Esophagus.

## **Bedbugs Bed Bugs Vs Lice**

Bedbugs and head lice are different parasites. Bedbugs live in the environment and bite exposed skin, while head lice live on the scalp and spread mainly through close contact; inspection of the insect, eggs, and usual body site distinguishes them.

## **Bedbugs Bite (Bed Bugs)**

Alternate index label for Bed Bugs.

## **Bedbugs Contagious (Are Bedbugs Contagious)**

Alternate index label for Are Bedbugs Contagious.

## **Bee And Wasp Sting**

Bee and wasp stings inject venom and usually cause immediate localized pain, redness, swelling, and itching. Widespread hives, throat or tongue swelling, breathing difficulty, dizziness, or vomiting may indicate anaphylaxis and require emergency treatment.

## **Behcet's Syndrome**

Behcet syndrome is a relapsing inflammatory disorder that can cause recurrent mouth and genital ulcers, eye inflammation, skin lesions, and vascular, neurologic, or gastrointestinal disease. Treatment is tailored to the organs involved and may include

immunosuppression.

## **Synonyms:**

Silk Road Disease (Behcet's Syndrome)

## **Being Good Partner To Someone With Chronic Illness**

Supporting a partner with chronic illness involves listening, respecting autonomy, sharing practical tasks by agreement, and recognizing fluctuating symptoms and treatment demands. Clear communication, respite, boundaries, and professional or peer support help protect both partners' well-being.

## **Bells Palsy (Facial Nerve Problems)**

Alternate index label for Facial Nerve Problems.

## **Benefits And Risks Of Taking Amino Acid Supplement**

Amino-acid supplements may be useful for a documented deficiency or a specific clinical indication, but most people obtain adequate amino acids from protein-containing foods. Excessive or unnecessary use can cause gastrointestinal symptoms, metabolic effects, interactions, or kidney and liver concerns.

## **Benefits Of Taking Magnesium Glycinate?**

Magnesium glycinate is a magnesium salt often marketed for deficiency, muscle symptoms, or sleep. Evidence for specific benefits varies; supplements can cause diarrhea or excess magnesium, and kidney disease increases toxicity risk, so dose and indication should be reviewed.

## **Bernard-Soulier Disease**

Bernard-Soulier disease is a rare inherited platelet disorder caused by defects in the platelet glycoprotein Ib-IX-V complex. Platelets are unusually large and do not adhere normally, producing mucocutaneous bleeding, easy bruising, and prolonged bleeding after procedures.

## **Best Foods To Eat For Constipation Relief (Top Foods For Constipation Relief)**

Alternate index label for Top Foods For Constipation

---

tion Relief.

### **Best Foods To Eat When You Have Gallstones**

For gallstones, meals lower in saturated fat and moderate in portion size may reduce symptoms in people whose pain follows fatty foods. No food dissolves most gallstones; recurrent right-upper-abdominal pain, fever, jaundice, or vomiting needs medical assessment.

### **Best Fruits For Lowering Blood Pressure**

Fruits such as citrus, berries, bananas, and other potassium- and fiber-containing choices can support a blood-pressure-friendly eating pattern. They complement, but do not replace, prescribed treatment, sodium reduction, physical activity, and monitoring.

### **Best Home Remedies For Upper Respiratory Infection**

Most uncomplicated upper-respiratory infections improve with rest, fluids, humidified air, saline nasal care, and appropriate symptom relief. Antibiotics do not treat viral infections; breathing difficulty, dehydration, persistent high fever, or worsening symptoms needs evaluation.

### **Best Home Remedies For Vaginal Itching**

Vaginal itching may result from yeast, bacterial vaginosis, sexually transmitted infection, irritant dermatitis, hormonal change, or skin disease. Avoiding scented products and keeping the area dry may help, but recurrent, painful, malodorous, or discharge-associated symptoms need diagnosis before treatment.

### **Best Infusion For Rheumatoid Arthritis (RA)**

Alternate index label for RA.

### **Best Medicinal Mushroom Health Benefits**

Medicinal mushrooms are marketed for immune, metabolic, or cancer-related benefits, but evidence and product standardization differ substantially by species and preparation. They should not replace

proven treatment and may cause allergy, toxicity, or medicine interactions.

### **Best Medicine And Treatment For Bronchitis**

Acute bronchitis is usually viral and improves with fluids, rest, and symptom-directed care; antibiotics rarely help unless another bacterial diagnosis is present. Persistent breathlessness, high fever, bloody sputum, chest pain, or symptoms in a high-risk person warrants evaluation.

### **Best Natural Treatments For Gastritis**

Gastritis treatment depends on the cause, including *Helicobacter pylori*, anti-inflammatory medicines, alcohol, bile reflux, or autoimmune disease. Avoiding irritants may reduce symptoms, but persistent pain, bleeding, vomiting, anemia, or weight loss requires medical diagnosis and targeted therapy.

### **Best Temperature For Roasting Vegetables**

Roasting vegetables commonly uses a moderately high oven temperature, with time adjusted for the vegetable, size, moisture, and desired texture. Safe food handling and avoiding charring are more important than a single universal temperature.

### **Best Thing To Eat For Breakfast To Lose Weight**

A weight-supportive breakfast can combine protein, fiber, fruit or vegetables, and a portion that fits daily energy needs. No single food causes weight loss; sustainable intake, activity, sleep, medications, and medical conditions determine long-term change.

### **Best Time To Measure Your Blood Pressure**

Blood pressure is best compared when measured under consistent conditions, after several minutes of rest and before exercise, caffeine, smoking, or medications when instructed. Repeated readings at similar times provide more useful information than one isolated measurement.

### **Best Treatment For Degenerative Disc**

---

## Disease

Degenerative disc disease describes age- or wear-related changes in spinal discs and does not always cause pain. Treatment usually begins with activity modification, exercise-based rehabilitation, and pain management; selected patients may need injections or surgery after specialist assessment.

## Best Treatment For Hidradenitis Suppurativa

Hidradenitis suppurativa causes recurrent painful nodules, abscesses, and tunnels in skin folds. Management may include weight and smoking support, antiseptic care, antibiotics, hormonal or biologic medicines, injections, and surgery according to severity.

## Best Treatment For Yellow Jacket Stings

A yellow-jacket sting should be washed, and a cold pack can reduce local pain and swelling. Remove any visible bee stinger without squeezing, use symptom relief as appropriate, and seek emergency care for hives away from the site, breathing trouble, throat swelling, faintness, or vomiting.

## Best Treatment Options For Acne Rosacea

Rosacea treatment reduces flushing, persistent redness, bumps, and eye symptoms through trigger avoidance, gentle skin care, sunscreen, and selected topical or oral medicines. The regimen depends on subtype, severity, ocular involvement, and response.

## Best Treatments For Allergic Conjunctivitis

Allergic conjunctivitis causes itchy, watery, red eyes after exposure to an allergen. Limiting exposure, cool compresses, lubricating drops, and antihistamine or mast-cell-stabilizing eye medicines can help; severe pain, vision loss, or marked light sensitivity suggests another urgent eye problem.

## Best Way To Treat Razor Bumps From Shaving

Razor bumps are inflammatory ingrown hairs caused by shaving or hair removal. Pausing close shaving,

using a clean sharp tool, shaving with hair growth, avoiding skin stretching, and selected topical treatment can reduce recurrence; widespread infection or scarring needs care.

## Beyond Food What Triggers Heartburn And GERD

Heartburn and gastroesophageal reflux can be triggered by lying down after meals, obesity, pregnancy, smoking, alcohol, certain medicines, large meals, and individual foods. Persistent symptoms, difficulty swallowing, bleeding, weight loss, or chest pain require medical evaluation.

## Bible Cyst (Ganglion)

Alternate index label for Ganglion.

## Bile Duct Cancer (Cholangiocarcinoma)

Alternate index label for Cholangiocarcinoma.

## Bilharzia (Schistosomiasis)

Alternate index label for Schistosomiasis.

## Biliary Cirrhosis Primary (Primary Biliary Cirrhosis (PBC))

Alternate index label for Primary Biliary Cirrhosis (PBC).

## Bilirubin (Bilirubin And Bilirubin Blood Test)

Alternate index label for Bilirubin and Bilirubin Blood Test.

## Bilirubin And Bilirubin Blood Test

Bilirubin is a yellow pigment produced when red blood cells are broken down. A blood test measures total and sometimes direct and indirect bilirubin to help evaluate liver disease, bile-duct obstruction, hemolysis, and newborn jaundice.

### Synonyms:

Bilirubin (Bilirubin And Bilirubin Blood Test)

## Biorhythms

Biorhythms is a medical term describing the named concept; its precise interpretation depends on its

---

defining features, associated findings, and clinical context.

### **Bioterrorism**

Bioterrorism is the deliberate release of biological agents to cause illness, death, or disruption. Preparedness includes surveillance, laboratory identification, public-health communication, vaccination or prophylaxis when indicated, and rapid isolation or treatment of exposed people.

### **Birth Control Methods**

Birth-control methods include condoms, pills, implants, injections, intrauterine devices, patches, rings, fertility-awareness approaches, and permanent contraception. Effectiveness, sexually transmitted infection protection, side effects, reversibility, and medical eligibility vary by method.

### **Birth Control Pill Vs. Depo-Provera Shot**

Combined or progestin-only pills require regular dosing, whereas the depot medroxyprogesterone injection provides contraception for about three months at a time. Both are effective when used correctly, but bleeding changes, bone-health considerations, contraindications, return to fertility, and adherence differ.

### **Birthmarks And Other Skin Pigmentation Problems**

Birthmarks and pigment changes may reflect vascular lesions, melanocytic cells, post-inflammatory change, medication, hormonal conditions, or genetic disease. A lesion that changes rapidly, bleeds, ulcerates, or differs from others should be examined.

### **Bite Chigger (Chiggers (Bites))**

Alternate index label for Chiggers (Bites).

### **Bite Dog (Dog Bite Treatment)**

Alternate index label for Dog Bite Treatment.

### **Bite Snake (Snake Bite)**

Alternate index label for Snake Bite.

### **Bites Flea (Flea Bites In Humans)**

Alternate index label for Flea Bites in Humans.

### **Bladder Carcinoma (Bladder Cancer)**

Alternate index label for Bladder Cancer.

### **Bladder Infection (Urinary Tract Infection)**

Alternate index label for Urinary Tract Infection.

### **Bleeding After Not Having A Period For 10 Years**

Any vaginal bleeding after menopause requires medical evaluation, even when it is light or occurs once. Causes include thinning tissue, polyps, hormone effects, and cancer; examination and often ultrasound or endometrial sampling determine the source.

### **Bleeding Varices**

Varices are enlarged, fragile veins, commonly in the esophagus or stomach when portal pressure is high. Rupture causes life-threatening gastrointestinal bleeding with vomiting blood, black stool, weakness, or shock and requires emergency treatment.

### **Bloated (Why Am I So Bloated)**

Alternate index label for Why Am I So Bloated.

### **Blood Cancer (Leukemia)**

Alternate index label for Leukemia.

### **Blood Clot In The Lung (Pulmonary Embolism)**

Alternate index label for Pulmonary Embolism.

### **Blood In The Stool (Rectal Bleeding)**

Alternate index label for Rectal Bleeding.

### **Blood In Urine**

Blood in the urine, or hematuria, may arise from infection, stones, prostate disease, kidney disease, trauma, medicines, or urinary-tract cancer. Visible blood, clots, pain, fever, inability to urinate, or persistent microscopic blood requires timely evaluation.

---

## **Blood Low Red Cell Count (Anemia)**

Alternate index label for Anemia.

## **Blood Pressure Chart: Reading By Age**

Blood-pressure interpretation depends on repeated measurements, technique, age, pregnancy, comorbidities, and the guideline used; age alone does not define a safe target. Very high readings with chest pain, neurologic symptoms, shortness of breath, or confusion are emergencies.

## **Blood Pressure Low (Low Blood Pressure)**

Low blood pressure can be normal or can result from dehydration, bleeding, infection, heart disease, endocrine disease, or medicines. Symptoms such as fainting, confusion, chest pain, severe weakness, or shock require urgent assessment.

## **Blood When I Wipe: 11 Causes Of Rectal Bleeding**

Blood on toilet paper may come from hemorrhoids, anal fissure, irritation, infection, inflammatory bowel disease, polyps, or colorectal cancer. The amount, color, pain, bowel changes, age, and recurrence guide evaluation; heavy bleeding or faintness is urgent.

## **Body Type Ectomorph, Endomorph Or Mesomorph**

Ectomorph, endomorph, and mesomorph are informal body-type categories that do not reliably predict metabolism, health, or exercise response. Fitness and nutrition decisions are better based on measured health, goals, activity, and individual response.

## **Bone Cancer Overview**

Primary bone cancer is a malignant tumor arising in bone, while cancer more commonly spreads to bone from another organ. Persistent focal bone pain, swelling, or an unexplained fracture may prompt imaging and biopsy; treatment depends on tumor type and stage.

### **Synonyms:**

Bone Tumor (Bone Cancer Overview)

## **Bone Fractures (Broken Bone (Types Of Bone Fractures))**

Alternate index label for Broken Bone (Types of Bone Fractures).

## **Bone Tumor (Bone Cancer Overview)**

Alternate index label for Bone Cancer Overview.

## **Bottom Number Of Your Blood Pressure Is Over 100**

A diastolic blood-pressure reading over 100 mm Hg is markedly elevated when confirmed with correct repeated measurements. Persistent elevation increases cardiovascular risk, while a very high reading with chest pain, breathlessness, neurologic symptoms, or confusion needs urgent care.

## **BPD (Borderline Personality Disorder)**

Alternate index label for Borderline Personality Disorder.

## **BPH (Benign Prostatic Hyperplasia)**

Alternate index label for Benign Prostatic Hyperplasia.

## **BPH Vs. Prostatitis (Prostatitis Vs BPH Enlarged Prostate Gland)**

Benign prostatic hyperplasia and prostatitis are different conditions: the former enlarges prostate tissue, while the latter is inflammation or infection of the prostate.

## **Braces And Retainers (Dental Braces)**

Alternate index label for Dental Braces.

## **Brain Aneurysm**

A brain aneurysm is a weakened area of a cerebral artery that can enlarge and rupture. Rupture causes sudden severe headache, vomiting, neck stiffness, loss of consciousness, or neurologic deficits and is a medical emergency.

## **Brain Cancer**

Brain cancer consists of malignant tumors arising in or affecting brain tissue and its coverings. Sym-

---

toms depend on location and may include seizures, headache, weakness, speech or vision changes, personality change, or raised intracranial pressure; diagnosis uses imaging and tissue characterization.

**Synonyms:**

Tumor Brain Cancer (Brain Cancer)

**Brain Hemorrhage**

A brain hemorrhage is bleeding within or around the brain, often from hypertension, aneurysm, vascular malformation, trauma, or blood-thinning treatment. Sudden headache, weakness, speech difficulty, vomiting, seizure, or reduced consciousness requires emergency evaluation.

**Brain Injury (Head Injury)**

Alternate index label for Head Injury.

**Brain Lesions (Lesions On The Brain)**

Alternate index label for Lesions on the Brain.

**Branchial Cleft Cyst (Branchial Cyst)**

Alternate index label for Branchial Cyst.

**Branchial Cyst**

A branchial cyst is a congenital, usually benign fluid-filled lesion along an embryonic branchial-cleft remnant in the neck. It may present as a painless mass or become infected; examination and imaging guide management, and new adult neck masses require evaluation.

**Synonyms:**

Branchial Cleft Cyst (Branchial Cyst)

**Braxton Hicks Vs. True Labor Contractions**

Braxton Hicks contractions are usually irregular, do not progressively intensify, and may ease with rest or hydration. True labor contractions become longer, stronger, and closer together and lead to cervical change; rupture of membranes, bleeding, or decreased fetal movement requires obstetric advice.

**Breast Anatomy**

The breast contains skin, fat, lobules that produce

milk, ducts, connective tissue, blood vessels, nerves, and lymphatic drainage, extending toward the axilla. Normal structure varies with age, hormones, pregnancy, and lactation; a new persistent lump or skin change needs assessment.

**Breast Cancer (Facts, Stages)**

Breast cancer is an uncontrolled growth of breast cells that may invade nearby tissue or spread to lymph nodes and distant organs. Stage reflects tumor size, nodes, and metastasis; receptor status and other biology also guide surgery, radiation, endocrine treatment, chemotherapy, or targeted therapy.

**Synonyms:**

Cancer Inflammatory Breast (Breast Cancer (Facts, Stages))

**Breast Cancer And Coping With Stress**

Stress during breast-cancer diagnosis and treatment can affect sleep, mood, concentration, relationships, and adherence but does not mean a person caused the cancer. Counseling, support groups, exercise when safe, symptom treatment, and oncology or mental-health care can help.

**Synonyms:**

Stress Breast Cancer (Breast Cancer And Coping With Stress)

**Breast Cancer And Lymphedema**

Breast-cancer treatment can impair lymph drainage and cause swelling, heaviness, tightness, or skin changes in the arm, breast, or chest. Early assessment, compression when appropriate, exercise, skin protection, and specialized therapy can limit progression and complications.

**Breast Cancer Prevention**

Breast-cancer risk can be lowered but not eliminated through physical activity, healthy weight, limiting alcohol, avoiding tobacco, appropriate screening, and discussing inherited risk. Preventive medicines or surgery may be considered for people at substantially elevated risk.

**Breast Cancer Questions To Ask The**

---

## Doctor

Useful breast-cancer questions cover the pathology, stage, receptor and genetic results, treatment goals, alternatives, benefits, side effects, fertility, clinical trials, and follow-up. Written notes and a support person can help with complex decisions.

## Breast Cancer Recurrence

Breast-cancer recurrence is return of cancer after treatment, either near the original site, in regional nodes, or at distant sites. New lumps, bone pain, persistent cough, neurologic symptoms, or other concerning changes should be evaluated, but many symptoms have noncancer causes.

## Breast Implants Before Or After Pregnancy

Pregnancy after breast implants is usually possible, but breast shape and volume may change and breastfeeding ability depends on the operation and duct or nerve effects. Implant rupture, capsular contracture, pain, or new breast changes require surgical assessment.

## Breast Lumps In Women

A breast lump may be a cyst, fibroadenoma, infection, hormonal change, trauma-related finding, or cancer. Clinical examination and age-appropriate imaging, with biopsy when indicated, determine the cause; a new hard, fixed, enlarging, or skin-associated lump needs prompt review.

### Synonyms:

Women Breast Lumps (Breast Lumps In Women)

## Breastfeeding With Rheumatoid Arthritis

People with rheumatoid arthritis may be able to breastfeed, but disease activity, fatigue, hand function, and medicine safety must be considered. Some medicines are compatible and others require avoidance or timing changes; treatment should be planned with rheumatology and obstetric or pediatric clinicians.

## Breath Bad (Bad Breath)

Alternate index label for Bad Breath.

## Breathing Disorders Sleep Related (Sleep Related Breathing Disorders)

Alternate index label for Sleep Related Breathing Disorders.

## Brittle Bone Disease (Osteogenesis Imperfecta Brittle Bone Disease)

Alternate index label for Osteogenesis Imperfecta Brittle Bone Disease.

## Broken Bone (Types Of Bone Fractures)

Alternate index label for Types of Bone Fractures.

## Bronchial Asthma (Asthma Overview)

Alternate index label for Asthma Overview.

## Bronchiectasis (Acquired, Congenital)

Alternate index label for Acquired, Congenital.

## Bronchitis (Acute)

Alternate index label for Acute.

## Bronchitis Chronic (Chronic Bronchitis)

Alternate index label for Chronic Bronchitis.

## Brown Recluse (Spider Bites (Black Widow And Brown Recluse))

Alternate index label for Spider Bites (Black Widow and Brown Recluse).

## Brucellosis Facts

Brucellosis is a bacterial infection acquired from unpasteurized dairy products or contact with infected animals or tissues. It can cause prolonged fever, sweats, fatigue, joint or back pain, and organ complications and requires prolonged combination antibiotic treatment.

### Synonyms:

Mediterranean Fever (Brucellosis Facts)

## Bruises

A bruise is bleeding beneath the skin after small blood vessels are damaged. Frequent, large, spontaneous, painful, or unusually persistent bruises may reflect medicines, platelet or clotting disorders, liver

---

disease, nutritional deficiency, or injury and should be assessed.

### **Bruxism (Teeth Grinding (Bruxism))**

Alternate index label for Teeth Grinding (Bruxism).

### **Bullying**

Bullying is repeated aggression or intimidation involving a power imbalance and can be physical, verbal, social, or digital. It is associated with anxiety, depression, sleep problems, injury, school avoidance, and self-harm risk; safety planning and adult intervention are important.

### **Burns First Aid (Burns)**

Alternate index label for Burns.

### **Bursa Inflammation (Acute And Chronic Bursitis)**

Alternate index label for Acute and Chronic Bursitis.

### **Bursitis Calcific (Calcific Bursitis)**

Alternate index label for Calcific Bursitis.

### **Bursitis Shoulder (Shoulder Bursitis)**

Alternate index label for Shoulder Bursitis.

### **B Virus**

Herpes B virus, also called Macacine alphaherpesvirus 1, a macaque virus that can cause severe and sometimes fatal encephalomyelitis in humans after exposure to infected animals or tissues.

### **B-Type Natriuretic Peptide**

A hormone released mainly by cardiac ventricles in response to increased wall stretch; blood BNP or NT-proBNP levels help evaluate suspected heart failure.

### **B.I.D. (On Prescription)**

An abbreviation from the Latin bis in die meaning twice a day; medication instructions should specify times clearly to avoid dosing errors.

### **Ba**

The chemical symbol for barium, a metal used in compounds such as barium sulfate for contrast studies of the digestive tract.

### **Babinski Response**

Extension of the great toe and fanning of the other toes when the sole is stimulated; it is normal in infants but may indicate corticospinal-tract dysfunction in older children or adults.

### **Baby Blues**

A common, short-lived period of tearfulness, irritability, anxiety, or mood lability during the first days after childbirth, usually resolving within about two weeks.

### **Bacillophobia**

An excessive fear of bacteria or germs; it may lead to avoidance, repeated cleaning, or other anxiety-driven behaviors.

### **Bacterial**

Relating to bacteria, single-celled microorganisms that may be harmless, beneficial, or capable of causing infection.

### **Bar Graph**

A chart that represents values with rectangular bars whose lengths or heights correspond to the quantities being compared.

### **Barber Itch**

An inflammatory infection of hair follicles in the beard area, often caused by bacteria or dermatophyte fungi and associated with itchy bumps or pustules.

### **Barber Say Syndrome**

A rare congenital disorder characterized by excess, lax facial skin, distinctive facial features, sparse hair and eyelashes, and eyelid abnormalities such as ectropion.

---

## **Bariatrics**

The branch of medicine concerned with the prevention and treatment of obesity and its associated diseases, including lifestyle, medication, and bariatric surgery.

## **Basal Temperature**

The body's resting temperature, measured immediately after waking and before activity; a sustained small rise can occur after ovulation.

## **Basilar**

Relating to or located at the base of a structure, such as the base of the skull or the basilar artery.

## **Bathophobia**

An excessive or irrational fear of depths, such as deep water, wells, or other very deep spaces.

## **Bayes Theorem**

A rule for updating the probability of a condition after new evidence, using the prior probability and the likelihood of that evidence in people with and without the condition.

## **BCC**

Basal cell carcinoma, the most common skin cancer, usually arising on sun-exposed skin and growing slowly with rare distant spread.

## **BCG**

Bacillus Calmette-Guérin, a live attenuated mycobacterial vaccine used against tuberculosis and, when placed in the bladder, as immunotherapy for selected bladder cancers.

## **BCM**

Body cell mass, the metabolically active portion of body mass, including cells of muscle, organs, blood, and other living tissues.

## **Beijerinck, Martinus W.**

A Dutch microbiologist who helped establish the concept of viruses as infectious agents that reproduce only in living cells and contributed to the

development of enrichment culture methods.

## **Bekam**

A Malay name for cupping, a practice in which cups create suction on the skin; wet cupping may also involve superficial skin incisions.

## **Belladonna**

*Atropa belladonna*, the deadly nightshade plant, whose tropane alkaloids such as atropine and scopolamine can cause anticholinergic poisoning.

## **Belly**

The abdomen, the region of the body between the chest and pelvis containing much of the digestive, urinary, and reproductive organs.

## **Benign Melanoma**

A nonstandard or contradictory phrase: melanoma is a malignant melanocytic tumor, so a benign pigmented lesion should generally be described by its specific benign diagnosis rather than as benign melanoma.

## **BER**

Base excision repair, a DNA-repair pathway that removes damaged individual bases and replaces the resulting nucleotide gap.

## **Beta Blocker**

A drug that blocks beta-adrenergic receptors, lowering sympathetic effects such as heart rate and contractility; beta blockers are used for conditions including hypertension, angina, arrhythmias, and heart failure.

## **Beta Cell**

An endocrine cell in the pancreatic islets that produces and releases insulin in response to increased blood glucose.

## **Beta-Agonist**

A drug that stimulates beta-adrenergic receptors; beta-2 agonists relax airway smooth muscle and are used as bronchodilators.

---

**BF**

Physician's shorthand for Black female; demographic abbreviations should be used cautiously and replaced with precise, patient-preferred language when possible.

**Bi-**

A prefix meaning two, twice, or involving two sides or components.

**Bias**

A systematic deviation that distorts a measurement, study result, clinical judgment, or decision away from the truth or from an intended fair comparison.

**Bicornuate**

Having two horn-shaped cavities or projections; a bicornuate uterus is a congenital uterine anomaly with two partially separated upper cavities.

**Biermer's Anemia**

Pernicious anemia, a vitamin B12-deficiency anemia caused by impaired absorption, usually because autoimmune loss of intrinsic factor prevents normal B12 uptake.

**Big Toe Sign**

Upward extension of the great toe, often with fanning of the other toes, when the sole is stimulated; in adults it may indicate corticospinal-tract disease.

**Bilateral Pneumonia**

Pneumonia involving both lungs; severity ranges from limited infection to diffuse respiratory failure depending on the cause and host factors.

**Biliary Decompression**

Drainage of obstructed bile ducts, using methods such as endoscopic stenting, nasobiliary drainage, or percutaneous catheter drainage, to restore bile flow.

**Biliary Sand**

Fine particulate material or thick sludge in bile, usually composed of cholesterol crystals, calcium salts,

and pigment, which can contribute to gallstones or duct obstruction.

**Bilious**

Containing or relating to bile; bilious vomiting is typically yellow-green because bile has entered the stomach contents.

**Biliousness**

An older nonspecific term for nausea, indigestion, or vomiting thought to be associated with bile or liver and gallbladder dysfunction.

**Bio-**

A combining form meaning life or living organisms.

**Bioactive**

Having an effect on living cells, tissues, or organisms, such as a bioactive drug, hormone, nutrient, or signaling molecule.

**Biochemical**

Relating to the chemical substances and reactions that occur in living organisms, including metabolism and cellular signaling.

**Biofluid**

A fluid produced by or present in a living organism, such as blood, urine, saliva, cerebrospinal fluid, or synovial fluid.

**Biosafety**

The practices, equipment, and containment procedures used to prevent accidental exposure to or release of biological agents and toxins.

**Biotherapy**

Treatment that uses living organisms, cells, genes, or biological substances to prevent or treat disease; immunotherapy is one form of biotherapy.

**Birth Defect**

A structural, functional, or biochemical abnormality present at birth, caused by genetic, environmental, developmental, or often unknown factors.

---

### **Birthmark**

A localized skin or vascular mark present at birth or appearing soon afterward, such as a nevus, hemangioma, or port-wine stain.

### **Bis In Die (On Prescription)**

Latin for twice a day, traditionally abbreviated b.i.d.; medication directions should state the intended dosing times clearly.

### **BKA**

Below-knee amputation, surgical removal of the lower leg while preserving the knee joint.

### **Bladder**

A hollow muscular organ that stores urine received from the kidneys and expels it through the urethra during urination.

### **Bladder Outlet Obstruction (BOO)**

Blockage or narrowing at the bladder neck or urethra that restricts urine flow and can cause hesitancy, weak stream, retention, hydronephrosis, or kidney injury.

### **BLAST**

An immature blood-forming cell, also called a blast; an increased blast percentage in blood or bone marrow can indicate an acute leukemia.

### **Blasts**

Immature precursor cells in the blood-forming tissues; excess blasts may be seen in acute leukemia or other marrow disorders.

### **Bleb**

A thin-walled, blister-like structure, generally larger than 5 mm and containing fluid or air; a fluid-filled bleb is also called a bulla.

### **Blind**

Having severe or complete loss of vision that substantially limits visual function; the degree and cause of visual impairment should be specified.

### **Blood Blister**

A raised, fluid-filled blister containing blood, usually caused by friction, pinching, pressure, or other injury that damages small blood vessels.

### **Blood Cleaner**

A pathogen-inactivation process for donated blood components that uses chemicals, light, or other methods to reduce infectious microorganisms while preserving the blood product.

### **Blood Draw**

Collection of blood, usually by inserting a needle into a vein, for laboratory testing, donation, or other medical use.

### **Blood Group, ABO**

The blood-group system defined by A and B antigens on red blood cells and corresponding antibodies in plasma, producing type A, B, AB, or O.

### **Blood In The Eye**

Bleeding within or around the eye, such as a subconjunctival hemorrhage on the eye surface or a hyphema in the front chamber; the location and cause determine urgency.

### **Blood In The Urine**

Hematuria, the presence of red blood cells or blood products in urine; it may be visible or detected only by urinalysis and requires evaluation for urinary-tract causes.

### **Blood PH**

A measure of blood acidity or alkalinity, regulated mainly by the lungs and kidneys; normal arterial blood pH is approximately 7.35–7.45.

### **Blue Baby Operation**

A historical term for palliative surgery used to improve oxygenation in an infant with cyanotic congenital heart disease, often by increasing pulmonary blood flow.

---

### **Blue Sclera**

A bluish appearance of the normally white outer coat of the eye, often caused by scleral thinning and classically associated with osteogenesis imperfecta.

### **Blush**

Temporary reddening or warmth of the face caused by increased superficial blood flow, which may result from emotion, heat, exertion, substances, or medical conditions.

### **BMI Calculation**

Body mass index calculated as weight in kilograms divided by height in meters squared; it is a population-level screening measure and does not directly measure body fat or determine an individual's health.

### **BMT**

An abbreviation commonly meaning bone marrow transplantation, in which blood-forming stem cells are infused after conditioning to replace or restore marrow function.

### **Board Eligible**

Having completed the training or other requirements of a specialty board and being permitted to apply for its certification examination; it does not mean that certification has been achieved.

### **Body Cell Mass**

The metabolically active component of the body, including the cells of muscle, organs, blood, and other living tissues, excluding extracellular water and stored fat.

### **Body Habitus**

A person's general physical build or body composition, including features such as size, shape, muscle, and fat distribution.

### **Bone Type**

A classification of bones by shape or structure, including long, short, flat, irregular, and sesamoid bones.

### **Bones Of The Arm, Wrist And Hand**

The upper-limb bones: humerus; radius and ulna; eight carpal bones; five metacarpals; and the phalanges of the fingers and thumb.

### **Bones Of The Head**

The skull bones, including the cranial bones that enclose the brain and the facial bones that form the face, nasal cavity, orbit, and jaws.

### **Bones Of The Leg, Ankle And Foot**

The lower-limb bones from the knee downward: tibia and fibula; the ankle's talus and other tarsals; five metatarsals; and the toe phalanges.

### **Bones Of The Skeleton**

The adult human skeleton normally contains 206 named bones, forming the axial skeleton and appendicular skeleton and providing support, protection, movement, mineral storage, and marrow for blood formation.

### **Bones Of The Trunk**

The bones forming the central body framework, chiefly the vertebral column, ribs, and sternum, which support the trunk and protect the spinal cord and thoracic organs.

### **Borborygmus**

A rumbling or gurgling sound produced by movement of gas and fluid through the intestines.

### **Bovine**

Relating to cattle, including substances, diseases, or biological products derived from cattle.

### **Bowel Sounds**

Sounds produced by intestinal contractions and movement of gas and fluid, heard with a stethoscope; their frequency and character may change with gastrointestinal disorders.

### **BP**

Blood pressure, the force exerted by circulating blood against arterial walls, usually reported as

---

systolic over diastolic pressure in millimeters of mercury.

### **BPD**

An abbreviation commonly meaning bronchopulmonary dysplasia, chronic lung disease after premature birth; it can also mean borderline personality disorder in psychiatric contexts.

### **Brachy-**

A combining form meaning short or abnormally short.

### **Bradykinetic**

Characterized by abnormally slow movement, often used for the movement slowness seen in Parkinson disease and related disorders.

### **Bradyphrenia**

Slowness of thought and mental processing, which may occur with neurologic disease, psychiatric illness, medication effects, or other conditions.

### **Braille System**

A tactile writing and reading system using patterns of raised dots to represent letters, numbers, punctuation, and symbols for people who are blind or have low vision.

### **Breast Bone**

The sternum, a flat bone in the center of the chest that joins the ribs through costal cartilage and helps protect the heart and lungs.

### **Breast Surgeon**

A surgeon who evaluates and treats breast conditions, including benign disease, breast cancer, and reconstructive or risk-reducing surgical needs.

### **Breathing**

Movement of air into and out of the lungs, enabling oxygen uptake and carbon-dioxide removal through ventilation.

### **Bromism**

Toxicity from prolonged or excessive exposure to bromide compounds, which may cause neurologic, psychiatric, gastrointestinal, or skin symptoms.

### **Bronchopulmonary Segments**

Anatomically distinct subdivisions of a lung lobe, each supplied by a segmental bronchus and pulmonary artery branch and separated from neighboring segments by connective-tissue planes.

### **Brontophobia**

An excessive or irrational fear of thunder, often associated with fear of lightning or storms.

### **Bruce Protocol**

A standardized graded treadmill exercise test in which speed and incline increase at set intervals to assess exercise capacity and cardiovascular response.

### **Brunhilde Virus**

A strain of poliovirus type 1 used in research and vaccine studies; poliovirus can invade the nervous system and cause paralytic disease.

### **Brushfield's Spots**

Small gray or white spots arranged around the iris, commonly associated with Down syndrome but also found in some people without it.

### **BSA**

Body surface area, an estimate of the body's external area calculated from height and weight and sometimes used for medication dosing or physiologic assessment.

### **BSL**

Biosafety level, a classification of laboratory containment practices and facilities required for work with biological agents of different risks.

### **Bulbar**

Relating to the medulla oblongata or to functions controlled by its cranial-nerve nuclei, including swallowing, speech, and movements of the tongue and

---

palate.

### **Bulbourethral Gland**

One of two small male reproductive glands below the prostate that secrete lubricating, alkaline pre-ejaculate into the urethra.

### **Bulging**

Protruding or swelling outward beyond the usual contour, as in a bulging intervertebral disk or bulging membrane.

### **Bullous**

Characterized by bullae, which are large, raised, fluid-filled blisters; bullous disorders may result from infection, burns, drugs, or autoimmune disease.

### **Bumps**

Raised or palpable areas on the skin or under the skin; the cause may range from folliculitis and cysts to trauma, allergy, infection, or tumors.

### **BUN**

Blood urea nitrogen, the amount of nitrogen in blood from urea produced by protein metabolism; it is influenced by kidney function, hydration, protein intake, and tissue breakdown.

### **Bursopathy**

Disease of a bursa, a fluid-filled sac that reduces friction around joints; bursopathy includes inflammation, infection, bleeding, or degeneration.

### **Burundanga (Hyoscine Hydrobromide)**

A name associated with scopolamine, or hyoscine, an anticholinergic drug that can cause dry mouth, blurred vision, confusion, drowsiness, and memory impairment; exposure can be dangerous.

### **Bx**

A common medical abbreviation for biopsy, the removal of cells or tissue for microscopic or laboratory examination.

### **Bursae**

Small fluid-filled sacs that reduce friction between moving tissues, such as tendon and bone or skin and bone. Inflammation of a bursa is called bursitis.

#### **Synonyms:**

synovial bursae

### **Benign Adrenal Tumors**

Noncancerous growths of an adrenal gland that may be discovered incidentally or may produce excess hormones.

### **Broken Ankle**

A fracture of one or more bones forming the ankle joint, usually causing pain, swelling, bruising, and difficulty bearing weight.

### **Broken Arm**

A fracture of one or more bones of the arm, commonly causing pain, swelling, bruising, deformity, or loss of function.

### **Bird Flu (Avian Influenza)**

Influenza caused by avian influenza viruses, which primarily infect birds but can occasionally infect humans and cause severe respiratory illness.

#### **Synonyms:**

Influenza, Avian

### **B And T Lymphocytes**

B lymphocytes produce antibodies, while T lymphocytes coordinate immune responses or kill infected and abnormal cells; both are adaptive immune cells.

### **Babyhood**

Babyhood is the period of infancy, when rapid growth, brain development, motor skills, feeding, and immune maturation occur.

### **Bacille Calmette-Guérin (BCG)**

Bacille Calmette-Guérin is a live attenuated mycobacterial vaccine used mainly against tuberculosis and, in some settings, as bladder-cancer immunotherapy.

---

### Back-Blows

Back-blows are firm blows between the shoulder blades used as a first-aid maneuver for severe choking in a responsive person.

### Back Pressure

Back pressure is pressure exerted in the reverse direction of flow; in medicine it may result from obstruction in an airway, vessel, duct, or organ.

### Bacteraemia

Bacteraemia is the presence of viable bacteria in the bloodstream; it may be transient or lead to sepsis and infection of distant sites.

### Balint's Syndrome

Balint's syndrome is a neurologic disorder caused by bilateral parietal-occipital injury, characterized by impaired visual attention, reaching under visual guidance, and simultaneous perception.

### Ballistocardiograph

A ballistocardiograph records small body movements produced by cardiac ejection and blood flow; it is a historical method of assessing cardiac function.

### Balneology

Balneology is the study or therapeutic use of mineral waters, baths, and spa treatments; evidence and safety depend on the condition and treatment.

### Balsam

A balsam is a resinous plant-derived substance used in some traditional remedies, fragrances, and topical preparations; it may cause contact allergy.

### Banti's Syndrome

Banti's syndrome is an older term for splenic enlargement with anemia and portal hypertension, often associated with chronic congestive or hepatic disease.

### Barium Meal

A barium meal is an upper-gastrointestinal contrast

study in which swallowed barium outlines the esophagus, stomach, and duodenum on radiographs or fluoroscopy.

### Barlow's Disease

Barlow's disease is an older name for severe vitamin-C deficiency, or scurvy, causing bleeding gums, bruising, poor wound healing, and bone or joint symptoms.

### Baroreceptors

Baroreceptors are stretch-sensitive nerve endings in major arteries that detect blood-pressure changes and help regulate heart rate and vascular tone through reflexes.

### Barr Body

A Barr body is the condensed, inactive X chromosome visible in the nucleus of many cells with more than one X chromosome.

### Barraquer-Simons Disease

Barraquer-Simons disease is acquired partial lipodystrophy with loss of subcutaneous fat from the face and upper body and relative fat accumulation in the lower body.

### Barrett's Oesophagus

Barrett's oesophagus is replacement of normal lower-esophageal lining by specialized intestinal-type epithelium after chronic reflux, increasing the risk of dysplasia and adenocarcinoma.

### Bartholin's Glands

Bartholin's glands are paired glands near the vaginal opening that secrete mucus for lubrication through ducts opening into the vestibule.

### Bartholinitis

Bartholinitis is inflammation or infection of a Bartholin gland, often causing painful swelling or an abscess near the vaginal opening.

### Basal Metabolic Rate (BMR)

Basal metabolic rate is the energy the body uses at

---

rest to maintain essential functions such as breathing, circulation, temperature, and cellular activity.

### **Basal Nuclei**

The basal nuclei are deep cerebral structures that help select and regulate movement, habits, learning, and other motor and cognitive functions.

### **Basedow's Disease**

Basedow's disease is Graves disease, an autoimmune disorder in which thyroid-stimulating antibodies cause hyperthyroidism, goiter, and sometimes eye or skin manifestations.

### **Basic First Aid**

Basic first aid is immediate care for illness or injury, including scene safety, emergency activation, bleeding control, resuscitation, choking care, and monitoring until help arrives.

### **Basket Cell**

A basket cell is an inhibitory interneuron that forms synaptic contacts around the cell body or axon initial segment of another neuron.

### **Bath Anoaesthesia**

Bath an(a)esthesia is a historical term for loss of sensation associated with bathing or immersion; the wording is uncommon and its meaning depends on the source.

### **Bather's Itch**

Bather's itch is an itchy rash caused by skin penetration of cercarial larvae released by freshwater or marine snails, usually resolving without systemic illness.

### **Battery**

A battery is a collection of cells or tests used together; in healthcare it may also refer to a power source for an implanted device or to harmful battery ingestion.

### **Bauxite-Workers' Lung**

Bauxite-workers' lung is an occupational pneumo-

coniosis associated with inhalation of bauxite dust, potentially causing chronic airway or interstitial lung disease.

### **Bazin's Disease**

Bazin's disease is erythema induratum, a nodular inflammation of subcutaneous fat on the calves, classically associated with tuberculosis but having other causes.

### **Bdellotomy**

Bdellotomy is the surgical incision or removal of a leech attached to tissue, a historical procedure used to control bleeding or prevent retained mouthparts.

### **Beats, Cardiac**

Cardiac beats are the repeated cycles of atrial and ventricular electrical activation and contraction that propel blood through the circulation.

### **Becker's Muscular Dystrophy**

Becker muscular dystrophy is an X-linked dystrophinopathy causing progressive skeletal-muscle weakness, usually later and more slowly than Duchenne muscular dystrophy.

### **Bedbug**

A bedbug is a blood-feeding *Cimex* insect that causes itchy bites, skin reactions, anxiety, and occasionally secondary infection but is not known to transmit human disease routinely.

### **Bee Stings**

Bee stings inject venom and can cause localized pain and swelling, large local reactions, or life-threatening anaphylaxis in sensitized people.

### **Beer-Drinker's Heart**

Beer-drinker's heart is an older term for alcohol-related dilated cardiomyopathy, in which chronic heavy alcohol use weakens and enlarges the heart.

### **Behçet's Syndrome**

Behçet's syndrome is a relapsing inflammatory disorder causing recurrent oral and genital ulcers, eye

---

inflammation, skin lesions, and sometimes vascular, neurologic, or gastrointestinal disease.

### **Bejel**

Bejel is endemic treponematosi, a chronic infection caused by *Treponema pallidum pertenue* or related treponemes and spread mainly by close nonsexual contact in endemic areas.

### **Benedikt's Syndrome**

Benedikt's syndrome is a midbrain lesion causing ipsilateral oculomotor palsy with contralateral tremor, ataxia, or involuntary movements.

### **Benserazide**

Benserazide inhibits peripheral dopa decarboxylase and is combined with levodopa to increase brain delivery and reduce peripheral adverse effects in Parkinson disease.

### **Benzhexol**

Benzhexol, or trihexyphenidyl, is an anticholinergic drug used mainly to reduce tremor and rigidity in Parkinson disease or drug-induced extrapyramidal symptoms.

### **Benzyl Benzoate**

Benzyl benzoate is a topical acaricide and insecticide used for scabies and sometimes lice; skin irritation and careful application are important.

### **Benzylpenicillin**

Benzylpenicillin, or penicillin G, is a beta-lactam antibiotic used for susceptible serious infections, including some streptococcal and syphilis infections.

### **Berkeley's Sign**

Berkeley's sign is an eponym with varying historical use; the exact clinical finding should be confirmed from the source in which it appears.

### **Beta-Adrenoceptor-Blocking Drugs**

Beta-adrenoceptor-blocking drugs reduce beta-adrenergic effects on the heart and other tissues and are used for hypertension, angina, arrhythmias,

heart failure, and other indications.

### **Beta-Haemolytic Streptococcus**

A beta-haemolytic streptococcus completely lyses red cells around colonies on blood agar; important species include group A and group B streptococci.

### **Beta-Human Chorionic Gonadotrophin**

Beta-human chorionic gonadotrophin is the beta subunit of hCG, measured in blood or urine to detect pregnancy and to assess selected tumors or pregnancy problems.

### **Bethanechol**

Bethanechol is a muscarinic cholinergic agonist that stimulates bladder and gastrointestinal smooth muscle, used selectively for urinary retention or impaired motility.

### **Biacetyl**

Biacetyl, or diacetyl, is a diketone compound with a buttery odor used in flavoring and industry; inhalational exposure can injure the small airways.

### **Bicêtre Hospital**

Bicêtre Hospital is a historic hospital in France associated with medical and psychiatric history; the term is institutional rather than a disease or body structure.

### **Biceps**

The biceps is a two-headed muscle, especially the biceps brachii of the upper arm, that flexes the elbow and supinates the forearm.

### **Bichat's Membrane**

Bichat's membrane is an older anatomical term generally referring to a serous or connective-tissue membrane; its exact usage depends on the historical source.

### **Bicipital**

Bicipital means relating to a two-headed muscle, especially the biceps tendon, groove, or muscle of the upper arm.

---

## **Bicolor**

Bicolor means having two colors; in medicine it may describe a two-toned lesion, specimen, iris, or other structure and requires context.

## **Biconcave**

Biconcave means concave on both sides; the normal red blood cell is a classic biconcave disc, a shape that supports flexibility and gas exchange.

## **Biconvex**

Biconvex means convex on both sides; the term may describe a lens, implant, or radiologic shape.

## **Bicornuate Uterus**

A bicornuate uterus is a congenital uterine shape with two upper cavities caused by incomplete fusion of the embryonic Müllerian ducts; it may affect pregnancy outcomes.

## **Bicycled Foot**

Bicycled foot is an uncommon descriptive term for a foot deformity or position associated with cycling or repetitive mechanical stress; exact meaning depends on the source.

## **Bifocal**

Bifocal means having two focal points; bifocal spectacles correct near and distance vision, while bifocal imaging or lenses have two optical zones.

## **Bifurcation**

Bifurcation is the division of one structure, vessel, airway, nerve, or pathway into two branches.

## **Bigeminy**

Bigeminy is a cardiac rhythm pattern in which a normal beat alternates regularly with a premature beat, often a premature ventricular contraction.

## **Bile Ducts**

Bile ducts are channels that carry bile from the liver and gallbladder to the duodenum; obstruction can cause jaundice, pain, infection, or pancreatitis.

## **Bile Salts**

Bile salts are bile-derived detergent molecules that emulsify dietary fats and help absorb lipids and fat-soluble vitamins in the intestine.

## **Biliverdin**

Biliverdin is a green bile pigment formed during heme breakdown and normally converted to bilirubin by biliverdin reductase.

## **Billroth's Operation**

Billroth's operations are historical partial gastrectomy procedures, especially Billroth I and II, that reconnect the remaining stomach to the duodenum or jejunum.

## **Bimedial**

Relating to or positioned on the medial side of two structures, or involving both medial aspects; the exact anatomical reference must be specified by the structure being described.

## **Bimellar**

Bimellar means composed of two lamellae or layers, such as a double-layered membrane or tissue structure.

## **Bimanual**

Bimanual means performed with both hands, as in a bimanual pelvic examination or two-handed surgical technique.

## **Binary Fission**

Binary fission is asexual reproduction in which one cell or organism divides into two genetically similar descendants, common among bacteria and protozoa.

## **Biomedical Engineering**

Biomedical engineering applies engineering, materials science, computing, and design to medical devices, diagnostics, prostheses, imaging, and health systems.

## **Biomicroscopy**

Biomicroscopy is microscopic examination of liv-

---

ing tissue, especially slit-lamp examination of the eye's cornea, anterior chamber, lens, and related structures.

### **Bionics**

Bionics uses electronic or mechanical systems to reproduce or augment biological functions, such as hearing, movement, or sensory feedback.

### **Biorhythm**

A biorhythm is a recurring biological pattern such as the circadian sleep-wake cycle; popular fixed-cycle theories are not established medical diagnoses.

### **Biostatistics**

Biostatistics applies statistical methods to biomedical data, including study design, estimation, hypothesis testing, epidemiology, and interpretation of clinical evidence.

### **Biosynthesis**

Biosynthesis is the enzyme-directed production of complex molecules by living cells from simpler precursors.

### **Biot's Breathing**

Biot's breathing is an abnormal pattern of irregular breaths interrupted by unpredictable periods of apnea, associated with disruption of respiratory control.

### **Biparental**

Biparental means involving or inherited from both biological parents, as in biparental inheritance or a pregnancy involving genetic contributions from both parents.

### **Biphosphonates**

Biphosphonates are drugs that reduce osteoclast-mediated bone resorption and treat osteoporosis, Paget disease, and some cancer-related bone complications.

### **Bipolar**

Bipolar is a medical term describing the named

concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### **Bipolar Affective Disorder**

Bipolar affective disorder is a mood disorder with recurrent manic or hypomanic episodes and usually depressive episodes, causing changes in mood, energy, sleep, and function.

### **Birth Pains**

Birth pains are painful uterine contractions and related pressure during labor as the cervix dilates and the baby moves through the birth canal.

### **Bisexual**

Bisexual describes sexual or romantic attraction to more than one gender; it is an identity or orientation, not a disease or disorder.

### **Bistoury**

A bistoury is a small surgical knife, historically used for precise incision or opening of tissue.

### **Bitters**

Bitters are intensely flavored plant preparations traditionally used as digestive remedies; evidence, composition, interactions, and safety vary by product.

### **Bituminosis**

Bituminosis is an occupational lung condition caused by inhalation of bitumen or asphalt fumes and dust, potentially producing airway irritation or chronic respiratory disease.

### **Biuret Test**

The biuret test detects peptide bonds by producing a violet color with proteins in alkaline copper solution; it is a laboratory chemistry test.

### **Bivalve**

Bivalve means having two shells or valves; bivalve mollusks may be relevant to food allergy, poisoning, or parasitic exposure.

---

## **Black Death**

The Black Death was the historic pandemic of plague, primarily caused by *Yersinia pestis*, with severe mortality in the fourteenth century.

## **Blackflesh**

Blackflesh is a descriptive term for dark or blackened tissue, potentially reflecting bruising, necrosis, gangrene, pigmentation, or contamination; clinical examination determines the cause.

## **Black Fly**

A black fly is a biting Simuliidae insect that can cause local reactions and, in endemic regions, transmit *Onchocerca volvulus*.

## **Black Hair, Hairy Tongue**

Black hairy tongue is benign elongation and discoloration of the tongue's filiform papillae, associated with smoking, antibiotics, poor oral hygiene, and some foods or medicines.

## **Blackhead**

A blackhead is an open comedone in which sebum and keratin plug a hair follicle and darken at the surface through oxidation.

## **Black Lung Disease**

Black lung disease is coal workers' pneumoconiosis caused by inhaled coal dust, ranging from simple nodules to progressive massive fibrosis and respiratory impairment.

## **Bladder, Diseases Of**

Diseases of the bladder include infection, inflammation, stones, obstruction, neurogenic dysfunction, bleeding, and tumors, often causing urinary or pelvic symptoms.

## **Bladder, Urinary**

The urinary bladder is a muscular reservoir that stores urine and contracts to expel it through the urethra.

## **Bleeder's Disease**

Bleeder's disease is an older name for hemophilia, an inherited clotting-factor deficiency causing prolonged or recurrent bleeding.

## **Blind Spot**

A blind spot is an area of absent vision, especially the optic-disc region where the optic nerve exits the retina and photoreceptors are absent.

## **Bloated**

Bloated describes a feeling or appearance of abdominal fullness, pressure, or enlargement, commonly caused by gas, constipation, diet, or gastrointestinal disease.

## **Block**

A block is obstruction or interruption of flow, conduction, movement, or communication, such as an airway block, nerve block, or heart block.

## **Blocking Agents**

Blocking agents inhibit a receptor, enzyme, ion channel, nerve signal, or physiologic pathway; their effects and risks depend on the target and drug.

## **Blood Brain Barrier**

The blood-brain barrier is a selective system of brain capillary cells and supporting structures that limits movement of substances from blood into nervous tissue.

## **Blood Count**

A blood count measures numbers and characteristics of red cells, white cells, and platelets to assess anemia, infection, inflammation, marrow disease, and bleeding risk.

## **Blood Gas Analysis**

Blood gas analysis measures oxygen, carbon dioxide, pH, and related values to assess ventilation, oxygenation, and acid-base status.

## **Blood Groups**

Blood groups classify inherited red-cell antigens,

---

such as ABO and Rh, to guide compatible transfusion, pregnancy care, and transplantation.

### **Blood Plasma**

Blood plasma is the liquid component of blood containing water, electrolytes, proteins, nutrients, hormones, gases, and waste products.

### **Blood Poisoning**

Blood poisoning is a nontechnical term usually referring to sepsis or bloodstream infection, a potentially life-threatening dysregulated response to infection.

### **Blood Results**

Blood results are laboratory measurements from a blood sample, interpreted using the test method, reference interval, symptoms, and clinical context.

### **Blood Test**

A blood test analyzes blood cells, chemicals, proteins, hormones, antibodies, genes, or other markers to investigate health or disease.

### **Blue Bottle**

Blue bottle is a common name for several organisms or objects; in medical contexts it may refer to a bluebottle jellyfish whose sting causes pain and skin inflammation.

### **Blue-Green Algae**

Blue-green algae are cyanobacteria; some produce toxins that can contaminate water or food and cause gastrointestinal, neurologic, liver, or skin illness.

### **Blue Nævus**

A blue naevus is a usually benign melanocytic skin lesion containing pigment deep in the dermis, giving it a blue or blue-black appearance.

### **Blushing**

Blushing is temporary facial redness caused by increased cutaneous blood flow, triggered by emotion, heat, exertion, hormones, medicines, or some diseases.

### **BMR**

BMR is basal metabolic rate, the energy the body expends at rest to maintain essential functions.

### **Board-Like Rigidity**

Board-like rigidity is marked involuntary abdominal-wall stiffness, classically suggesting peritoneal irritation and a possible surgical abdomen.

### **Boas' Sign**

Boas' sign is referred pain or skin hypersensitivity below the right shoulder blade described in association with gallbladder disease; it is not sufficiently specific alone for diagnosis.

### **Bobbing, Ocular**

Ocular bobbing is a rapid downward movement of both eyes followed by a slower return, a sign of severe pontine or other neurologic dysfunction.

### **Bock's Disease**

Bock's disease is an older name for sarcoidosis, a granulomatous inflammatory disorder that can affect the lungs, lymph nodes, skin, eyes, and other organs.

### **Body**

The body is the physical organism and its integrated systems, tissues, organs, and functions; medical assessment considers structure, physiology, and health together.

### **Body Fat**

Body fat is adipose tissue that stores energy, cushions organs, insulates the body, and produces endocrine signals; excess or insufficient amounts affect health.

### **Body Fluids**

Body fluids include blood, lymph, cerebrospinal fluid, urine, synovial fluid, and other water-based compartments that transport substances and support physiology.

---

### **Body Mass Index (BMI)**

BMI is weight in kilograms divided by height in meters squared; it screens population-level weight categories but does not directly measure body fat or individual health.

### **Body Odour**

Body odour is smell produced when skin secretions are metabolized by microorganisms; changes may reflect hygiene, diet, medicines, infection, or metabolic disease.

### **Boerhaave's Syndrome**

Boerhaave's syndrome is spontaneous full-thickness rupture of the esophagus, usually after forceful vomiting, causing severe chest pain, infection, and mediastinal contamination.

### **Bogros' Space**

Bogros' space is a preperitoneal anatomical plane behind the inguinal region used as a surgical dissection plane in hernia repair.

### **Bojlen's Syndrome**

Bojlen's syndrome is an uncommon historical eponym whose usage varies; the original clinical definition should be verified from the source.

### **Bombay Blood Group**

The Bombay blood group is a rare phenotype lacking the H antigen, causing apparent type O blood that can receive red cells only from compatible Bombay-type donors.

### **Bombe**

Bombe is a historical term used in medical and biological naming; its precise meaning depends on the organism, apparatus, or source in which it appears.

### **Bone Conduction**

Bone conduction transmits sound through skull vibration to the inner ear, bypassing the outer and middle ear; testing helps distinguish conductive from sensorineural hearing loss.

### **Bone-Marrow Transplantation**

Bone-marrow transplantation replaces diseased or damaged marrow with hematopoietic stem cells, either from the patient or a donor.

### **Bongkrek Poisoning**

Bongkrek poisoning is severe food poisoning from bongkrekin acid produced by contaminated fermented foods, causing mitochondrial energy failure and potentially fatal liver or neurologic injury.

### **Bonnevie-Ullrich Syndrome**

Bonnevie-Ullrich syndrome is a historical name for features associated with Turner syndrome, including short stature, webbed neck, gonadal dysfunction, and characteristic physical findings.

### **Borna Disease**

Borna disease is an uncommon neurologic infection caused by Borna disease virus, primarily recognized in animals and rarely considered in humans.

### **Botfly**

A botfly is a fly whose larvae can infest animal or human tissue, causing furuncular or wound myiasis.

### **Bothriocephalus**

Bothriocephalus is a historical or taxonomic tapeworm genus; related fish tapeworm infections may cause abdominal symptoms or vitamin-B12 deficiency.

### **Bowel Cancer**

Bowel cancer is malignant growth in the colon or rectum, commonly causing altered bowel habit, bleeding, anemia, weight loss, or abdominal symptoms.

### **Bowel, Diseases Of**

Diseases of the bowel include infection, inflammation, obstruction, malabsorption, functional disorders, bleeding, and tumors affecting the small or large intestine.

### **Bowman's Capsule**

Bowman's capsule is the cup-shaped beginning of a

---

nephron that surrounds the glomerulus and collects the filtrate produced from blood.

### **Boxer's Ear**

Boxer's ear is deformity of the outer ear caused by repeated trauma, usually involving cartilage thickening, scarring, or a cauliflower-ear appearance.

### **Boxer's Fracture**

A boxer's fracture is a fracture of the neck of the fifth metacarpal, commonly caused by punching, producing hand pain, swelling, and altered knuckle contour.

### **Brachial**

Brachial means relating to the upper arm, especially its bones, vessels, or nerves.

### **Brachialgia**

Brachialgia is pain radiating along the arm, often from cervical nerve-root irritation or brachial plexus disease.

### **Brachium**

The brachium is the anatomical upper arm between the shoulder and elbow.

### **Brachycephalic**

Brachycephalic means having a relatively short, broad skull; it may describe normal variation or a craniofacial pattern in a genetic condition.

### **Bradypnoea**

Bradypnoea is abnormally slow breathing, which may result from medicines, neurologic disease, metabolic disturbance, or severe illness.

### **Brain Haemorrhage**

Brain haemorrhage is bleeding within or around the brain, caused by trauma, hypertension, vascular lesions, clotting problems, or other disease.

### **Brain Malformations**

Brain malformations are structural abnormalities of the brain that develop before birth. They may result

from genetic factors, disrupted fetal development, infection, or other prenatal influences and can affect neurologic function.

### **Brain Sand**

Brain sand is an older name for corpora arenacea, tiny calcified deposits commonly found in the pineal gland and sometimes other brain regions.

### **Brain Tumour**

A brain tumour is an abnormal growth in or near the brain, which may be benign or malignant and can cause seizures, headache, cognitive change, or focal deficits.

### **Bramwell's Disease**

Bramwell's disease is an older eponym with variable usage, historically associated with cardiac or circulatory disease; the source context is required for precision.

### **Branchial**

Branchial means relating to embryonic gill-arch structures or their derivatives in the head and neck.

### **Brass-Founder's Ague**

Brass-founder's ague is metal-fume fever, an influenza-like illness after inhalation of fumes from heated metals such as zinc or brass.

### **Breast Development**

Breast development is growth and maturation of mammary tissue during puberty, pregnancy, lactation, and hormonal life stages.

### **Breath**

Breath is air moved into and out of the lungs; its odor, volume, pattern, and gas composition can provide clinical information.

### **Breathalyzer**

A breathalyzer estimates blood alcohol concentration by measuring alcohol in exhaled air; results can be affected by device, timing, and sampling conditions.

---

## Breathing Exercises

Breathing exercises deliberately change respiratory pattern to improve ventilation, relaxation, airway clearance, breath control, or rehabilitation.

## Breathlessness

Breathlessness is the subjective sensation of difficult or uncomfortable breathing, caused by pulmonary, cardiac, metabolic, neuromuscular, or psychological conditions.

## Bregma

Bregma is the skull landmark where the coronal and sagittal sutures meet; in infants it corresponds to the anterior fontanelle.

## Brenner Tumour

A Brenner tumour is usually a benign ovarian epithelial tumor with transitional-cell-like nests; rare borderline and malignant forms occur.

## Breslau Bacillus

Breslau bacillus is an older name for *Salmonella enterica* serovar Typhimurium, a bacterium associated with gastroenteritis and foodborne disease.

## Bricklayer's Disease

Bricklayer's disease is an occupational lung condition historically associated with inhalation of silica-containing dust, potentially causing silicosis.

## Bridge Work

Bridge work is a fixed dental prosthesis that replaces one or more missing teeth by attaching artificial teeth to adjacent teeth or implants.

## Brill-Zinsser Disease

Brill-Zinsser disease is reactivation of latent epidemic typhus years after the original infection, causing a usually milder typhus-like illness.

## Brine Bath

A brine bath is immersion in salty water, used recreationally or therapeutically; benefits and risks depend on skin condition, temperature, and patient

health.

## Brittle Bone Disease

Brittle bone disease is osteogenesis imperfecta, an inherited connective-tissue disorder causing fragile bones, recurrent fractures, and variable hearing, dental, or skeletal findings.

## Brodie's Abscess

Brodie's abscess is a localized, usually subacute form of bone infection, often in the metaphysis of a long bone, causing persistent pain and a cavity in bone.

## Bromides

Bromides are salts or compounds containing bromide; prolonged or excessive exposure can cause bromism with neurologic, psychiatric, gastrointestinal, or skin symptoms.

## Bromodosis

Bromodosis is unusually offensive foot odor caused by sweat, moisture, and bacterial or fungal breakdown of skin debris.

## Bronchial Asthma

Bronchial asthma is a chronic inflammatory airway disorder with variable, usually reversible bronchoconstriction, wheeze, cough, chest tightness, and breathlessness.

## Bronchioles

Bronchioles are small branching airways that conduct air from the bronchi toward the alveoli and regulate airflow through smooth muscle.

## Bronchocele

Bronchocele is an abnormal dilation or mucus-filled expansion of a bronchus, often related to obstruction or congenital airway abnormality.

## Brooke Disease

Brooke disease is a rare inherited skin disorder historically associated with widespread keratinization or follicular abnormalities; the precise eponym re-

---

quires source context.

### Brooke-Spiegler Syndrome

An inherited skin-tumor syndrome, usually caused by pathogenic variants in *CYLD*, characterized by multiple benign adnexal tumors including trichoepitheliomas, cylindromas, and spiradenomas.

### Brown-Séguard Syndrome

Brown-Séguard syndrome follows hemisection or asymmetric injury of the spinal cord, causing ipsilateral weakness and loss of vibration with contralateral pain and temperature loss below the lesion.

### Brown Teeth

Brown teeth are teeth with brown discoloration from staining, decay, developmental enamel defects, fluorosis, medicines, trauma, or other causes.

### Bruch's Membrane

Bruch's membrane is a thin extracellular matrix layer between the retinal pigment epithelium and choroid that supports retinal metabolism and transport.

### Bruck's Syndrome

Bruck syndrome is a rare inherited disorder combining bone fragility resembling osteogenesis imperfecta with congenital joint contractures.

### Brugia

*Brugia* is a filarial nematode genus that includes parasites causing lymphatic filariasis, transmitted by mosquitoes.

### Brunner's Glands

Brunner's glands are mucus- and bicarbonate-secreting glands in the duodenum that help protect the intestinal lining from gastric acid.

### Brush Burns

Brush burns are superficial friction burns caused by scraping skin against a rough surface, producing pain, redness, and abrasions.

### Bryant's Traction

Bryant's traction is a historical traction technique for treating selected pediatric femoral fractures or hip conditions by elevating the child's legs; it is used cautiously.

### Bubonic Plague

Bubonic plague is infection with *Yersinia pestis* causing painful swollen lymph nodes, fever, and systemic illness, usually after a flea bite.

### Buccal

Buccal means relating to the cheek or the inner cheek surface; buccal medicines are placed between cheek and gum for absorption.

### Buccinator

The buccinator is a cheek muscle that compresses the cheek and assists chewing, sucking, blowing, and speech.

### Buchanan's Disease

Buchanan's disease is a historical eponym with inconsistent usage; its intended diagnosis must be established from the original clinical source.

### Buffalo Hump

A buffalo hump is a pad of fat at the back of the neck and upper back, associated with obesity, corticosteroid excess, HIV therapy, or Cushing syndrome.

### Bulbar Palsy

Bulbar palsy is weakness or paralysis of muscles supplied by lower cranial nerves, causing dysarthria, dysphagia, impaired gag, and difficulty handling secretions.

### Bulbocavernosus

Bulbocavernosus is a medical term describing the named concept; its precise interpretation depends on its defining features, associated findings, and clinical context.

### Bulbospongiosus

Bulbospongiosus is the paired perineal muscle that

---

helps empty the urethra and contributes to erection and expulsion of genital secretions.

### **Bullet Wounds**

Bullet wounds are penetrating or perforating injuries caused by firearm projectiles, potentially damaging skin, organs, vessels, nerves, and bone.

### **Bunionplasty**

Bunionplasty is surgery to correct a bunion or hallux valgus deformity, often by realigning bone and balancing surrounding soft tissues.

### **Burnout**

Burnout is occupational exhaustion, mental distancing or cynicism, and reduced professional efficacy caused by chronic workplace stress; it is distinct from a medical diagnosis of depression.

### **Burnt-Out Joint**

A burnt-out joint is an older description of a joint in which active inflammatory disease has subsided but permanent structural damage and restricted movement remain.

### **Burroughs**

Burroughs is a surname or eponym used inconsistently in medical sources; the associated condition or person must be identified from context.

### **Buttock**

The buttock is the rounded posterior region overlying the gluteal muscles, used for movement, sitting, examination, and selected injections.

### **Buttonhole Deformity**

Buttonhole deformity is a finger deformity with flexion of the proximal interphalangeal joint and hyperextension of the distal interphalangeal joint, often due to central slip injury or rheumatoid disease.

### **Buttressing**

Buttressing is reinforcement or thickening that supports a weakened structure; in bone it may describe

cortical stress adaptation or surgical structural support.

### **Butylamine**

Butylamine is an irritating industrial amine whose vapor or liquid can injure the eyes, skin, and respiratory tract after exposure.

### **Butyric Acid**

Butyric acid is a short-chain fatty acid produced by gut bacteria during fiber fermentation and used by colon cells as an energy source; concentrated exposure irritates tissue.

### **By-Pass**

A by-pass is a route created around an obstruction, such as a vascular, gastrointestinal, or urinary surgical bypass, or a cardiac bypass circuit.

### **Bridge To Transplant**

Temporary mechanical circulatory support used to maintain a patient with advanced heart failure until heart transplantation can be performed. The device and duration depend on ventricular function, organ status, complications, and transplant eligibility.

### **Blaschko Lines**

Invisible developmental skin-cell lines that may become visible when certain congenital or acquired dermatoses follow their characteristic linear or whorled patterns. They do not usually correspond to nerves or blood vessels.

### **Blood Banking**

The collection, testing, processing, storage, and distribution of blood and blood components for transfusion.

### **Blood-Borne Pathogens**

Infectious microorganisms transmitted through blood or certain body fluids, including viruses such as HIV and hepatitis B and C; prevention requires appropriate barrier precautions and safe handling of sharps.

---

### **Breakthrough Infection**

An infection that occurs after a person has received a vaccine or other preventive intervention intended to reduce that infection; severity and protection vary by pathogen, product, and host factors.

### **Bilateral Gynecomastia**

Enlargement of breast glandular tissue affecting both breasts in a male patient; causes include hormonal imbalance, medicines, obesity, liver or kidney disease, and rarely malignancy.

### **Brachioplasty**

An operation, commonly called an arm lift, that removes or reshapes excess skin and tissue of the upper arm; risks include scarring, sensory change, fluid collection, and wound complications.

### **Breast Cytology**

Cytologic evaluation of breast lesions using fine-needle aspiration, nipple discharge, or other samples. It can help distinguish benign, suspicious, and malignant processes but may require core biopsy for definitive classification.

### **Bethesda System For Reporting Thyroid Cytopathology**

A six-tier standardized system for reporting thyroid fine-needle aspiration results, from nondiagnostic and benign categories to follicular-pattern, suspicious, and malignant categories; each tier guides risk assessment and management.

### **Benign CNS Cyst**

A non-neoplastic fluid-filled lesion within or around the central nervous system, such as an arachnoid, epidermoid, or colloid cyst. Clinical significance depends on location, size, growth, and obstruction of cerebrospinal-fluid pathways.

### **Bartholin Gland Hyperplasia**

Enlargement and proliferation of Bartholin gland tissue, which may present as a vulvar mass and can mimic a cyst or neoplasm; persistent or atypical lesions require clinical assessment and biopsy.

### **Benign Mullerian Papilloma**

A rare benign papillary lesion of the vulvovaginal region showing Müllerian-type epithelial differentiation, usually presenting as a small polypoid lesion.

### **Bartholin Gland Mucinous Cyst**

A mucus-filled cyst arising from obstruction of a Bartholin gland duct, usually presenting as a fluctuant mass in the posterolateral vaginal introitus; infection may produce an abscess.

### **Bizarre Parosteal Osteochondromatous Proliferation**

A rare benign but locally recurrent bone-surface lesion, also called Nora Lesion, composed of cartilage, bone, and spindle cells; it most often affects the hands or feet.

### **Bone And Mineral Disorders**

Conditions affecting bone strength, mineralization, calcium-phosphate balance, or skeletal remodeling, including osteoporosis, osteomalacia, hyperparathyroidism, and inherited metabolic bone disease.

## C

### C-Peptide

A peptide released in equimolar amounts with endogenous insulin when proinsulin is cleaved. Measurement helps estimate endogenous beta-cell insulin secretion and distinguish endogenous from injected insulin, with interpretation affected by renal function and glucose level.

### C. Diff

Alternate index label; see *C. difficile infection*.

### C. Difficile Colitis

Alternate index label; see *Pseudomembranous colitis*.

**Cardiomyopathy, Dilated**

Alternate index label; see *Dilated cardiomyopathy*.

**Cardiomyopathy, Hypertrophic**

Alternate index label; see *Hypertrophic cardiomyopathy*.

**Carotid Arteries**

Major paired arteries in the neck supplying blood to the brain, neck, and face; common site for atherosclerotic plaque formation and stenosis.

**Carotid Artery Stenosis**

Narrowing of one or both carotid arteries, usually from atherosclerotic plaque, which can reduce blood flow to the brain or release emboli and cause a transient ischemic attack or stroke. It is often asymptomatic until severe and is evaluated with vascular imaging, commonly carotid ultrasound.

**Carotid Insufficiency**

Alternate index label; see *Carotid artery disease*.

**CAS**

Alternate index label; see *Childhood apraxia of speech*.

**Costosternal Chondrodynia**

Alternate index label; see *Costochondritis*.

---

## Costosternal Syndrome

Alternate index label; see *Costochondritis*.

## COVID-19

Coronavirus disease caused by infection with SARS-CoV-2. Illness ranges from asymptomatic or mild disease to pneumonia, respiratory failure, thrombosis, or death; common symptoms include fever, cough, shortness of breath, fatigue, muscle aches, and altered taste or smell. Some people develop persistent symptoms after the acute infection.

## Crabs

Alternate index label; see *Pubic lice (crabs)*.

## Cramp, Muscle

Alternate index label; see *Muscle cramp*.

## Cramps, Menstrual

Alternate index label; see *Menstrual cramps*.

## Crib Death

Alternate index label; see *Sudden infant death syndrome (SIDS)*.

## Crossmatch

Laboratory test mixing donor and recipient blood to detect preformed antibodies that could cause transfusion or transplant reactions.

## Cyst, Bartholin's

Alternate index label; see *Bartholin's cyst*.

## Cyst, Ganglion

Alternate index label; see *Ganglion cyst*.

## Cyst, Kidney

Alternate index label; see *Kidney cysts*.

## Cyst, Ovarian

Alternate index label; see *Ovarian cysts*.

Alternate index label; see *Pilonidal cyst*.

## Cyst, Spermatic

Alternate index label; see *Spermatocele*.

## Cystitis, Interstitial

Alternate index label; see *Interstitial cystitis*.

## Cysts, Epidermoid

Alternate index label; see *Epidermoid cysts*.

## Cysts, Sebaceous

Alternate index label; see *Epidermoid cysts*.

## C-Reactive Protein

An acute-phase reactant produced by the liver in response to inflammation (IL-6). CRP rises within 4-6 hours of inflammatory stimulus and peaks at 36-50 hours. Uses: monitoring inflammatory disease activity (RA, vasculitis), detecting infection post-operatively, and cardiovascular risk stratification (hs-CRP: high-sensitivity).

## C-Section

Cesarean section, surgical delivery of a fetus through incisions in the abdominal wall and uterus.

## C. Difficile

*Clostridioides difficile*, a gram-positive, spore-forming bacterium that causes antibiotic-associated diarrhea and colitis. *C. difficile* produces toxins A and B that cause colonic inflammation. Risk factors include antibiotic exposure, proton pump inhibitor use, and advanced age. Treatment includes vancomycin or fidaxomicin.

## C282Y Mutation

Most common genetic cause of hereditary hemochromatosis, a C to T transition in the HFE gene resulting in cysteine to tyrosine substitution at position 282. Homozygosity occurs in approximately one in two hundred individuals of Northern European descent.

---

## CA 19-9

A blood marker that may be elevated in pancreatic and other gastrointestinal cancers as well as in benign biliary or inflammatory conditions. It is not sufficiently specific for cancer screening or diagnosis by itself.

## CA-125

A blood marker used mainly to assess some ovarian cancers and to monitor selected patients. It can also rise in benign gynecologic, inflammatory, liver, and other malignant conditions, so it is not sufficient by itself to screen for or diagnose ovarian cancer.

## CA125

Cancer Antigen 125, a protein tumor marker used primarily in the evaluation of ovarian cancer.

## CABG (Coronary Artery Bypass Grafting)

Open heart surgery to bypass stenotic coronary arteries using autologous grafts. On-pump: cardiopulmonary bypass, cardioplegic arrest. Off-pump (OPCAB): beating heart, no bypass machine.

### Synonyms:

Coronary Artery Bypass Grafting

## Cabot Ring

A threadlike or ring-shaped inclusion in a red blood cell, sometimes seen in severe anemia or disorders of erythropoiesis. It represents residual nuclear material or mitotic spindle remnants.

## Cachexia

A multifactorial syndrome of involuntary weight loss, skeletal-muscle wasting, and systemic inflammation associated with chronic diseases such as cancer, heart failure, COPD, and advanced kidney disease.

## Cacosmia

A distorted or unpleasant perception of smell, in which odors may seem foul or disagreeable. It can occur with sinonasal disease, infection, seizures, trauma, or other neurologic disorders.

## Cadaver

A dead human body used for anatomical dissection, surgical training, and medical research. Cadavers are preserved through embalming (arterial injection of formaldehyde-based fixatives) to prevent decomposition and maintain tissue integrity.

## Cadaveric Spasm

Rare form of instantaneous post-mortem stiffening of a specific group of voluntary muscles at the exact moment of death, without an intervening period of muscle relaxation.

## Caecitis

Inflammation of the cecum. Causes include infection, inflammatory bowel disease, ischemia, neutropenic enterocolitis, and extension of adjacent inflammatory disease.

## Caecopexy

Surgical fixation of the cecum to the abdominal wall or retroperitoneum, performed to prevent or treat abnormal cecal mobility or recurrent cecal volvulus.

## Caecostomy

Surgical creation of an opening from the cecum to the abdominal wall for decompression or diversion of intestinal contents. It may be temporary or part of treatment for selected distal obstruction.

## Caecotomy

Surgical incision into the cecum, usually to remove a foreign body, access the bowel, or facilitate another abdominal procedure.

## Caesarean Birth

An operative procedure in which a baby is delivered through an incision in the abdominal wall and uterus. Indications: fetal distress, failure to progress in labor, breech presentation, placenta praevia, multiple pregnancy, previous cesarean, and maternal request.

## Cafe-Au-Lait Macules

Flat, uniformly hyperpigmented, light-brown to

---

dark-brown (café-au-lait, "coffee with milk") macules, > 5 mm in prepubertal children or > 15 mm in postpubertal individuals.

### Caffeine

A naturally occurring xanthine alkaloid and central nervous system stimulant found in coffee, tea, chocolate, and many soft drinks and energy beverages. Mechanism: adenosine receptor antagonist (primarily A1 and A2A subtypes), increasing neuronal activity and promoting catecholamine release.

### Caffeine Withdrawal

A syndrome occurring after abrupt cessation or reduction of caffeine use. Symptoms include headache, fatigue, depressed mood, difficulty concentrating, and flu-like symptoms. Onset is typically 12–24 hours after last caffeine intake, peak at 20–51 hours, and duration of 2–9 days.

### Café Au Lait Spot

A flat, sharply demarcated, light-brown skin macule caused by increased melanin. Multiple lesions may be a feature of neurofibromatosis type 1 or other genetic disorders.

### Caisson Disease

Decompression sickness caused by formation of inert-gas bubbles after a rapid reduction in ambient pressure. It can cause joint pain, neurologic injury, respiratory symptoms, or circulatory collapse.

### Calcaneus

Largest tarsal bone forming the heel. Articulates with talus proximally and cuboid anteriorly. Lever for the calf muscles via the Achilles tendon on its posterior tuberosity. Predominantly trabecular bone, the most commonly fractured tarsal bone from falls from height. Bohler's angle assesses fractures on lateral radiographs.

### Calciferol

Vitamin D is a fat-soluble vitamin (actually a prohormone) essential for calcium and phosphorus homeostasis and bone health. See Vitamin D: Calcitriol.

### Calcific Uremic Arteriopathy

A rare disorder, usually associated with advanced kidney disease, in which small blood vessels calcify and cause painful skin and soft-tissue injury or necrosis.

### Calcification

Calcification is abnormal deposition of calcium salts in tissue; its significance depends on the site, pattern, underlying injury, and associated disease. Calcium or phosphate metabolism is abnormal.

### Calcinosis

Cutaneous calcinosis, the deposition of insoluble calcium phosphate salts within the skin and subcutaneous tissues, occurring in connective tissue diseases such as scleroderma and dermatomyositis, or as a localized phenomenon. Lesions present as firm, white, subcutaneous nodules that may ulcerate and extrude chalky material.

### Calcinosis

The pathological deposition of calcium salts in cutaneous and subcutaneous tissues, presenting as firm, white to yellowish nodules or plaques that may ulcerate and extrude chalky material.

### Calciphylaxis

Calcific uremic arteriopathy causing painful skin necrosis in CKD. Risk factors include warfarin use, elevated calcium-phosphorus product, and obesity. High mortality rate. Treat with sodium thiosulfate, wound care, and discontinuation of warfarin. Avoid calcium-based binders.

### Calcitonin

A 32-amino-acid peptide hormone secreted by the parafollicular C-cells of the thyroid gland in response to elevated serum calcium. It lowers blood calcium by inhibiting osteoclast-mediated bone resorption and increasing renal calcium excretion.

### Calcitriol And Analogues

Active vitamin D forms suppressing PTH. Calcitriol, paricalcitol, doxercalciferol. Monitor calcium and phosphorus to avoid hypercalcemia and hyperphos-

---

phatemia. Part of CKD-MBD management.

## Calcium

A mineral and intracellular second messenger required for bone mineralization, muscle contraction, neurotransmitter release, blood coagulation, and enzyme regulation. Plasma calcium is present as ionized, protein-bound, and complexed fractions.

## Calcium Blood Test

Measurement of calcium in the blood, usually reported as total calcium and interpreted with albumin; ionized calcium may be measured directly when the biologically active fraction is needed. It helps evaluate parathyroid disorders, bone disease, kidney disease, and abnormal calcium levels.

## Calcium Channel Blocker Overdose

Toxic exposure to a calcium-channel blocker that may cause low blood pressure, slow heart rate, conduction abnormalities, high blood glucose, or shock. It requires urgent medical and poison-control management.

## Calcium Channel Blockers

Agents that block L-type calcium channels, reducing calcium influx into cardiac and smooth muscle cells. Dihydropyridines (amlodipine, nifedipine) cause vasodilation and are used for hypertension and angina.

## Calcium Phosphate

The principal mineral constituent of bone and teeth, existing as hydroxyapatite crystals. In pathological states, calcium phosphate deposits form in soft tissues through dystrophic calcification in damaged tissue or metastatic calcification in hypercalcemic conditions.

## Calcium Pyrophosphate Arthritis

Acute or chronic inflammatory arthritis caused by deposition of calcium pyrophosphate crystals in cartilage and joints. Acute attacks, often called pseudogout, commonly affect the knee or wrist and are diagnosed by identifying weakly positively birefringent crystals in synovial fluid.

## Calcium Pyrophosphate Deposition Disease

A crystal arthropathy caused by deposition of calcium pyrophosphate dihydrate crystals in articular cartilage (chondrocalcinosis). Presents with acute pseudogout (most common): acute monoarticular inflammation of the knee or wrist, mimicking gout but less painful.

### Synonyms:

Calcium Pyrophosphate Deposition

## Calcium Sensing Receptor

G-protein coupled receptor expressed primarily on parathyroid glands and renal tubular cells that senses extracellular ionized calcium levels. On parathyroid glands activation suppresses PTH secretion. On renal tubular cells activation increases calcium excretion and decreases phosphate reabsorption.

## Calcium Stones

Most common kidney stone type composed of calcium oxalate or calcium phosphate. Risk factors include hypercalciuria, hyperoxaluria, hypocitraturia, and low urine volume. Treat with thiazides for hypercalciuria, dietary modification, and hydration. Potassium citrate for hypocitraturia.

## Calculus (Tartar)

Mineralized dental plaque. Cannot be removed by brushing. Requires professional scaling. Retains plaque, promotes inflammation.

### Synonyms:

Tartar

## Calculus Removal

Professional cleaning to remove hardened plaque. Scaling and root planing. Ultrasonic and hand instruments.

## Caldwell-Luc Operation

A surgical approach to the maxillary sinus through the canine fossa of the anterior maxilla. It is used selectively for access to maxillary sinus disease, lesions, or foreign bodies.

---

## Caloric Restriction

Reduced calorie intake without malnutrition. Associated with longevity, reduced chronic disease risk. Requires careful planning.

## Calorie

A unit of energy measurement used in nutrition to quantify the energy content of foods and energy expenditure of the body. One kilocalorie (kcal, commonly called a Calorie with capital C) equals the energy required to raise 1 kilogram of water by 1 degree Celsius.

### Synonyms:

a Calorie.

## Cambridge Classification

ERCP-based grading system for chronic pancreatitis severity evaluating the main pancreatic duct, branches, and common bile duct. Normal pancreas shows smooth duct without abnormalities. Equivocal shows fewer than three abnormal side branches. Mild shows three or more abnormal side branches. Moderate shows abnormal main duct.

## Cameron Lesions

Linear gastric erosions or ulcers found on the mucosal folds at the diaphragmatic hiatus in patients with large hiatal hernias. They result from mechanical trauma as the gastric mucosa prolapses through the diaphragmatic crura during respiration and movement.

## Campimetry

Measurement and mapping of the visual field, usually by presenting stimuli at different locations while the patient maintains fixation. It helps detect and characterize defects from retinal, optic-nerve, or retrochiasmal disease.

## Camptocormia

A marked forward flexion of the trunk that increases while standing or walking and improves when lying down. It can occur with axial myopathy, Parkinsonian disorders, dystonia, or other neuromuscular disease.

## Camptodactyly

A congenital or acquired flexion deformity of one or more fingers, usually caused by shortening or abnormality of tendons, muscles, fascia, or joints. It often affects the proximal interphalangeal joints.

## Campylobacter Infection

Bacterial gastroenteritis caused most often by *Campylobacter jejuni* or *C. coli*, usually acquired from contaminated poultry, food, water, or unpasteurized milk. It causes fever, abdominal cramps, and diarrhea that may be bloody and can rarely precede Guillain-Barre syndrome.

## Campylobacteriosis

Infection caused by *Campylobacter* species, commonly producing fever, abdominal pain, and inflammatory diarrhea that may be bloody. Complications can include dehydration, bacteremia, reactive arthritis, or Guillain-Barré syndrome.

## Canal Of Schlemm

A circular endothelial-lined channel at the corneoscleral junction that drains aqueous humor from the anterior chamber into the episcleral venous circulation. Impaired outflow contributes to glaucoma.

## Canalith Repositioning Maneuver

A series of head movements used to move displaced inner-ear crystals out of a semicircular canal, commonly to treat posterior-canal benign positional vertigo.

## Canavan Disease

An autosomal-recessive leukodystrophy caused by aspartoacylase deficiency, leading to accumulation of N-acetylaspartate and progressive spongy degeneration of cerebral white matter. It typically presents in infancy with hypotonia followed by developmental impairment and macrocephaly.

## Cancer

Cancer is uncontrolled growth of abnormal cells that can invade nearby tissue and spread to distant organs; behavior and treatment depend on its tissue of origin and molecular features. or spread to

---

distant sites. Cancer may arise in any tissue and is classified by its site and cell type. Early detection and treatment improve outcomes.

### **Cancer Care Team**

The multidisciplinary group of health professionals involved in cancer care, which may include oncologists, surgeons, radiologists, pathologists, nurses, pharmacists, rehabilitation specialists, psychologists, and palliative-care professionals.

### **Cancer Cell**

A cell that has acquired genetic and epigenetic abnormalities allowing uncontrolled growth, impaired normal differentiation, resistance to cell death, invasion of surrounding tissues, or spread to distant sites.

### **Cancer Genetics**

Inherited cancer syndromes. Examples: BRCA1/2 (breast, ovarian), Lynch syndrome (colon), Li-Fraumeni (various).

### **Cancer Nutrition**

Malnutrition common in cancer. Hypermetabolism, cachexia, treatment side effects. Nutritional support improves outcomes. High protein, high calorie.

### **Cancer Of Unknown Primary**

Metastatic cancer in which the primary site cannot be identified despite investigation. Workup includes histology, immunohistochemistry, and molecular profiling to guide treatment.

### **Cancer Pain**

Pain caused by a tumor, its spread, or cancer treatment. It may be continuous or episodic and can involve bone, nerves, or internal organs. Management may include treating the cancer, non-opioid medicines, opioids, nerve-directed treatments, and supportive care.

#### **Synonyms:**

Pain Cancer (Cancer Pain)

### **Cancer Registry**

System for collecting cancer data. Used for epidemiology, quality improvement, research.

### **Cancer Screening**

Testing people without symptoms to detect certain cancers or precancerous changes early, when treatment may be more effective.

### **Cancer Staging**

Classification of cancer extent. TNM system: T (tumor size/extent), N (nodal involvement), M (metastasis). Stages: 0 (in situ), I (early), II-III (advanced), IV (metastatic). Guides treatment and prognosis.

### **Cancer Surveillance**

The systematic, ongoing collection and analysis of information about cancer incidence, stage, treatment, survival, recurrence, and mortality for patient follow-up, research, and public-health planning.

### **Cancer Survivor**

Person living with cancer from diagnosis through end of life and beyond.

### **Cancer Susceptibility Genes**

Genes in which inherited pathogenic variants increase a person's risk of developing one or more cancers. Examples include BRCA1, BRCA2, APC, and mismatch-repair genes; a susceptibility variant does not guarantee that cancer will develop.

### **Cancer Vaccine**

A vaccine intended either to prevent cancer-causing infections or to stimulate an immune response against cancer cells. Preventive examples target oncogenic infections, while therapeutic vaccines are designed for selected established cancers.

### **Cancer-Associated Thrombosis**

Venous or arterial thrombosis occurring in the setting of active malignancy or its treatment. Tumor biology, immobilization, surgery, central venous devices, and systemic therapy contribute to risk; anti-

---

coagulation is individualized according to bleeding risk and cancer factors.

### **Cancrum Oris**

Noma, a rapidly destructive gangrenous infection of the mouth and face that occurs mainly in severely malnourished or immunocompromised children. It begins with gingival or mucosal necrosis and can extend through facial tissues.

### **Candida Albicans Infection**

Infection caused by the yeast *Candida albicans*, ranging from mucosal disease to invasive bloodstream or organ infection in vulnerable patients.

### **Candida Auris**

A multidrug-resistant yeast that can colonize skin and cause invasive bloodstream, wound, or ear infections, especially in hospitalized or immunocompromised patients. It spreads readily in healthcare settings and requires laboratory identification and strict infection-control measures.

### **Candidal Intertrigo**

A *Candida* infection of skin folds (axillae, inframammary, inguinal, intergluteal, pannus) characterized by erythematous, macerated plaques with satellite pustules at the periphery. Most common in obese, diabetic, and immunocompromised patients, and with prolonged antibiotic use. Presents with itching, burning, and soreness.

### **Candidemia**

The presence of *Candida* species in the bloodstream. It is an invasive fungal infection associated with intravascular devices, surgery, intensive care, immunosuppression, and substantial risk of organ dissemination.

### **Candidiasis**

Fungal infection caused by *Candida* species, most commonly *C. albicans*. Mucocutaneous: oral thrush (white plaques on oral mucosa), esophagitis, vulvovaginitis (itching, discharge), and intertrigo. Invasive candidiasis: candidemia and deep organ infection, typically in immunocompromised or ICU

patients. Diagnosis: culture, histopathology.

### **Cane**

Walking aid for balance. Types: quad (four-base), single-point. Held on opposite side of injury.

### **Canicola Fever**

A form of leptospirosis associated particularly with *Leptospira interrogans* serovar canicola. It may cause fever, headache, myalgia, conjunctival suffusion, and renal or hepatic involvement.

### **Canker Sore**

A common aphthous ulcer of the oral mucosa, appearing as a painful, shallow, round or oval ulcer with an erythematous border. Most heal spontaneously, but recurrent, severe, or atypical ulcers require assessment.

#### **Synonyms:**

Recurrent Oral Ulcers Ulcer, Aphthous

### **Cannabis Use Disorder**

A problematic pattern of cannabis use leading to significant impairment. Criteria include tolerance and withdrawal (irritability, anger, decreased appetite, restlessness, anxiety, sleep disturbance). Cannabis intoxication includes euphoria, impaired judgment, and time distortion.

### **Cannot Intubate Cannot Oxygenate**

The most critical airway emergency — inability to intubate the trachea and inability to oxygenate the patient by face mask or supraglottic airway despite optimal efforts. CICO is a life-threatening situation requiring immediate surgical airway access. Signs: SpO<sub>2</sub> decreasing despite 100% O<sub>2</sub>, absent end-tidal CO<sub>2</sub>, no chest rise.

### **Cannulation**

The insertion of a cannula into a blood vessel, body cavity, duct, or other anatomical passage to permit drainage, infusion, monitoring, sampling, or access for a procedure.

---

### **Cantlie Line**

Functional liver division extending from the gallbladder fossa to the IVC, corresponding to the middle hepatic vein plane. Unlike the falciform ligament (anatomical division), it represents the true functional blood supply/biliary drainage division. Right hepatic artery and portal vein supply the right half; left supply the left.

### **Capacity**

Autonomous voluntary authorization given by a competent patient to undergo a specific medical intervention, procedure, or clinical trial. See informed consent.

### **Capacity And Competence**

Decision-making capacity is a clinical evaluation performed by a physician to determine whether a patient understands the nature, consequences, risks, and alternatives of a specific proposed medical decision at a given time.

### **Capgras Syndrome**

A delusional misidentification syndrome in which a person believes that someone familiar has been replaced by an identical impostor. It can occur in neurodegenerative disease, psychosis, brain injury, or other neurologic conditions.

### **Capillaroscopy**

Examination of the small vessels in the nail-fold or another accessible surface using magnification. It can reveal capillary dilation, hemorrhage, avascular areas, and abnormal architecture in connective-tissue and microvascular disease.

### **Capillary**

The smallest blood vessel in the body, forming a microscopic network (capillary bed) that connects arterioles to venules.

### **Capillary Bed**

A network of interconnected capillaries that links arterioles to venules within a tissue. It provides a large surface area for exchange of oxygen, carbon dioxide, nutrients, hormones, and metabolic waste

between blood and interstitial fluid.

### **Capillary Leak Syndrome**

A disorder of increased capillary permeability in which plasma and proteins move from the intravascular space into surrounding tissues. It may cause hypotension, haemoconcentration, hypoalbuminaemia, oedema, and shock; causes include severe infection, immune-mediated disease, toxins, and rare idiopathic episodes.

### **Capillary Refill**

A bedside assessment of peripheral perfusion performed by briefly pressing a nail bed or skin and measuring the time for normal color to return. Delayed refill may indicate poor circulation, shock, hypothermia, or vascular disease.

### **Capillary Refill Time**

The time required for color to return after pressure briefly blanches a nail bed or area of skin. A delayed result may suggest impaired peripheral perfusion, but interpretation depends on age, temperature, technique, and the clinical setting.

### **Capitate**

Largest carpal bone, centrally located in the distal row as the carpal keystone. Rounded head articulates with scaphoid and lunate; distal surface with the third metacarpal. Last carpal bone to ossify. Wrist joint axis, bearing significant axial load. Avascular necrosis may occur with fractures similar to scaphoid injuries.

### **Capnocytophaga Canimorsus**

A Gram-negative, capnophilic bacillus found in the oral flora of dogs and cats that causes severe sepsis, meningitis, and cellulitis in humans, particularly the immunocompromised, asplenic, or elderly. Infection typically follows dog or cat bites. It is a fastidious organism requiring prolonged incubation for culture.

### **Capnography**

Continuous measurement and graphical display of exhaled carbon dioxide during anesthesia and sedation. The waveform and end-tidal value help

---

assess ventilation, airway patency, circulation, and confirmation of tracheal tube placement.

### **Capsular Contracture**

Abnormal tightening and hardening of the fibrous capsule around an implanted device, especially a breast implant. It may cause pain, distortion, firmness, or displacement.

### **Capsule Endoscopy**

Non-invasive diagnostic technique using a swallowable wireless endoscopic device to capture images of the small intestinal mucosa. The capsule contains a miniature video camera and transmitter that sends images to a receiver worn on the patient's belt.

### **Capsule Of Glisson**

The connective-tissue capsule surrounding the liver, which sends fibrous septa inward along portal tracts and supports the organ's vessels, ducts, and nerves.

### **Capsule Of Tenon**

A fascial sheath surrounding the globe of the eye and separating it from orbital fat. It contributes to eye movement and forms a potential space used in some ophthalmic procedures.

### **Capsulectomy**

Surgical removal of part or all of a fibrous capsule surrounding an organ, implant, or other structure. The indication depends on contracture, infection, pathology, or the need to revise a reconstruction.

### **Caput Medusae**

Dilated periumbilical veins radiating outward from the umbilicus, seen in portal hypertension with recanalization of the umbilical vein. Not strictly a cardiac finding but relevant in right heart failure causing hepatic congestion and portal hypertension. It must be distinguished from caval collateral circulation.

### **Caput Succedaneum**

Edema of the scalp presenting as a soft, boggy swelling that crosses suture lines. Caused by pres-

sure of the vaginal walls on the fetal head during labor. Resolves within hours to days. Differentiated from cephalohematoma (subperiosteal, does not cross suture lines) and subgaleal hemorrhage (life-threatening, crosses suture lines).

### **CAR T-Cell**

Chimeric antigen receptor T-cells. Engineered immune cells targeting cancer.

### **Carbapenem-Resistant Enterobacteriaceae Infection**

Infection caused by Enterobacteriaceae bacteria resistant to carbapenem antibiotics, often involving the urinary tract, lungs, bloodstream, or wounds. These infections are difficult to treat and may spread in healthcare settings. Culture and susceptibility testing guide therapy, with strict infection-control measures needed to prevent transmission.

### **Carbapenem-Resistant Organisms**

Bacteria that are resistant to carbapenem antibiotics, typically through production of carbapenemases. The most important carbapenemases include KPC (Klebsiella pneumoniae carbapenemase), NDM (New Delhi metallo-beta-lactamase), and OXA-48-like enzymes. CRO are a major public health threat due to limited treatment options.

### **Carbidopa**

A peripheral dopa decarboxylase inhibitor that does not cross the blood-brain barrier; combined with levodopa to prevent its peripheral conversion to dopamine, reducing side effects (nausea, hypotension) and increasing CNS levodopa delivery.

### **Carbohydrate**

A class of organic compounds composed of carbon, hydrogen, and oxygen (general formula  $C_m(H_2O)_n$ ), serving as the primary energy source for the body.

### **Carbohydrate Counting**

Method for diabetes management. Matching insulin to carbohydrate intake. Education essential.

---

## Carbolic Acid (Phenol)

An aromatic organic compound (C<sub>6</sub>H<sub>5</sub>OH) with antiseptic, disinfectant, and caustic properties. Historically significant as the first surgical antiseptic introduced by Joseph Lister in 1867, dramatically reducing post-operative infection and mortality. Mechanism: denatures bacterial proteins and disrupts cell membranes.

### Synonyms:

Phenol

## Carbon Dioxide Absorber

A safety device used in anesthesia breathing circuits that filters out carbon dioxide from a patient's exhaled breath, allowing the remaining anesthetic gases to be safely recycled and rebreathed.

## Carbon Dioxide Transport

The movement of CO<sub>2</sub> from tissues to lungs. CO<sub>2</sub> is carried in blood in three forms: dissolved (approximately 10 percent), bound to hemoglobin as carbamino compounds (approximately 20 percent), and as bicarbonate (approximately 70 percent).

## Carbon Ion Therapy

Radiation using carbon ions. Higher biological effectiveness. Limited availability.

## Carbon Monoxide Poisoning

Inhibits hemoglobin oxygen binding (affinity 200x oxygen). Causes headache, dizziness, nausea, cherry-red skin, syncope, death. Diagnosis: carboxyhemoglobin level (not routine). Treatment: 100% oxygen, hyperbaric oxygen if severe (neurological symptoms, COHb >25%, pregnancy).

## Carbonic Anhydrase Inhibitors

Medicines that inhibit carbonic anhydrase and reduce formation of aqueous humor. They are used mainly to lower intraocular pressure and, in some circumstances, to treat edema or metabolic disorders.

## Carboxyhemoglobin

Toxicity from inhalation of carbon monoxide (CO),

a colorless, odorless gas binding hemoglobin 200-300 times more avidly than oxygen, forming carboxyhemoglobin (COHb) and reducing oxygen delivery. See carbon monoxide poisoning.

## Carbuncle

A cluster of interconnected furuncles caused most often by *Staphylococcus aureus*, producing a painful inflamed swelling with multiple draining points and sometimes fever; diabetes increases risk.

## Carcinogen

Substance causing cancer. Types: chemical (benzene, asbestos, aflatoxin), physical (radiation), biological (HPV, HBV, HCV). Mechanisms: DNA damage, mutations, epigenetic changes. IARC classifications: Group 1 (carcinogenic), Group 2A (probably carcinogenic), Group 2B (possibly carcinogenic), Group 3 (not classifiable).

## Carcinoid Heart Disease

Cardiac complication of carcinoid syndrome occurring in approximately fifty percent of patients with hepatic metastases. Serotonin and other vasoactive substances bypass hepatic metabolism and cause endocardial fibrosis affecting the right-sided heart valves particularly the tricuspid and pulmonary valves.

## Carcinoid Syndrome

Serotonin-secreting neuroendocrine tumor causing flushing, diarrhea, bronchospasm, and right-sided heart disease. Occurs when vasoactive substances bypass hepatic metabolism through venous drainage or liver metastases. Diagnosis is with twenty-four hour urine 5-hydroxyindoleacetic acid or serum chromogranin A.

## Carcinoid Tumor

Carcinoid tumors are well-differentiated neuroendocrine neoplasms that arise from enterochromaffin cells throughout the gastrointestinal tract and bronchial system. The most common primary sites are the appendix, small intestine, and rectum.

---

## **Carcinoma**

Malignant tumor of epithelial origin. Types: squamous cell carcinoma, adenocarcinoma, basal cell carcinoma, transitional cell carcinoma. Most common cancer type (80-90% of malignancies). Examples: lung carcinoma, breast carcinoma, colon carcinoma.

## **Carcinoma En Cuirasse**

An unusual form of breast cancer characterized by diffuse, firm, indurated skin that resembles armor. It results from extensive dermal lymphatic invasion by tumor cells.

## **Carcinoma In Situ**

Full-thickness dysplasia without invasion through basement membrane. Stage 0 cancer.

## **Carcinosarcoma**

A malignant tumor containing both carcinomatous and sarcomatous elements, most commonly of the uterus (malignant mixed Müllerian tumor), with an aggressive course.

## **Cardiac Allograft**

A donor heart transplanted into a recipient with end-stage heart failure. The procedure requires lifelong immunosuppression to prevent rejection. Complications include rejection, cardiac allograft vasculopathy, infection, and malignancy; monitored by endomyocardial biopsy and echocardiography.

## **Cardiac Amyloidosis**

Deposition of amyloid protein in the heart, causing stiff ventricular walls, impaired filling, arrhythmias, or heart failure. Important types include immunoglobulin light-chain (AL) and transthyretin (ATTR) amyloidosis; treatment depends on the type and organ involvement.

## **Cardiac Amyloidosis Diagnosis**

Diagnosis involves a combination of clinical suspicion, imaging, and tissue biopsy. Non-invasive diagnosis using Tc-99m pyrophosphate (PYP) or DPD scintigraphy for ATTR cardiac amyloidosis (with negative serum/urine free light chains to exclude AL amyloidosis).

## **Cardiac Amyloidosis Staging**

Mayo Clinic staging system for ATTR cardiac amyloidosis: Stage I (NT-proBNP <3000 pg/mL), Stage II (NT-proBNP 3000-8499), Stage III (NT-proBNP ≥8500). Median survival: Stage I: 69 months, Stage II: 47 months, Stage III: 14 months. Treatment with tafamidis (TTR stabilizer) improves survival and functional capacity.

## **Cardiac Arrest**

Sudden loss of effective heart pumping, causing unresponsiveness, absent normal breathing, and no detectable pulse. Initial rhythms may be shockable or nonshockable; treatment requires immediate cardiopulmonary resuscitation, defibrillation when indicated, and advanced resuscitation care.

## **Cardiac Arrest Survival**

Outcome after cardiac arrest depends on the cause, location, initial rhythm, time to CPR and defibrillation, and post-arrest care. Early recognition, high-quality CPR, rapid defibrillation when indicated, advanced life support, and appropriate post-arrest treatment improve the chance of survival.

## **Cardiac Axis**

The mean direction of ventricular depolarization in the frontal plane, estimated from the QRS complex on a 12-lead ECG. Left or right axis deviation may reflect conduction disease, ventricular hypertrophy, infarction, or altered cardiac position.

## **Cardiac Biomarkers**

Blood measurements used to assess myocardial injury. Cardiac troponins I and T are the preferred specific biomarkers; CK-MB may assist in selected situations, while myoglobin is sensitive but nonspecific. Results must be interpreted with symptoms, electrocardiography, and serial testing.

## **Cardiac Catheterization**

Invasive procedure involving insertion of catheters into the heart via peripheral arteries or veins. Diagnostic catheterization measures intracardiac pressures, saturations, and performs coronary angiography. Indications include evaluation of CAD, valvu-

---

lar disease, cardiomyopathy, and congenital heart disease.

### **Cardiac Imaging Tests**

Noninvasive or minimally invasive studies used to evaluate cardiac structure, function, blood flow, or tissue characteristics. They include echocardiography, cardiac CT, cardiac MRI, nuclear perfusion imaging, and other modality-specific tests selected according to the clinical question.

### **Cardiac Radionuclide Imaging**

Cardiac imaging performed after administration of a radioactive tracer, usually with SPECT or PET, to assess myocardial perfusion, viability, metabolism, or inflammation. ECG-gated studies can also estimate ventricular volumes and ejection fraction; results must be interpreted with symptoms and other cardiac tests.

### **Cardiac Conduction System**

The specialized tissue responsible for generating and conducting electrical impulses through the heart. Components include the sinoatrial (SA) node, internodal pathways, atrioventricular (AV) node, bundle of His, right and left bundle branches, and Purkinje fibers.

### **Cardiac CT**

CT imaging of heart and coronary arteries. Coronary calcium scoring, coronary CT angiography, cardiac function assessment.

### **Cardiac CT Angiography**

Noninvasive imaging using CT to visualize coronary arteries and cardiac structures. It has high negative predictive value for excluding coronary artery disease, making it useful for low-to-intermediate risk patients with chest pain. Calcium scoring quantifies coronary artery calcification as a marker of atherosclerosis.

### **Cardiac Cycle**

The sequence of events occurring during one complete heartbeat, consisting of systole (contraction) and diastole (relaxation). During diastole, the ven-

tricles fill with blood; during systole, they contract and eject blood.

### **Cardiac Defibrillation**

Delivery of an unsynchronized electrical shock for ventricular fibrillation or pulseless ventricular tachycardia. It is combined with high-quality CPR and advanced life support according to the cardiac-arrest rhythm and protocol.

### **Cardiac Device Infections**

Infection involving a pacemaker, implantable defibrillator, generator pocket, or lead. Findings may include local inflammation, drainage, bacteremia, or endocarditis. Evaluation uses clinical examination, blood cultures, and imaging when indicated; treatment may require antimicrobial therapy and removal of infected hardware.

### **Cardiac Diet**

A dietary pattern emphasizing vegetables, fruits, whole grains, legumes, fish, unsaturated fats, and limited sodium, added sugars, and saturated or trans fats. It supports cardiovascular risk reduction but should be individualized for heart failure, kidney disease, diabetes, and nutritional adequacy.

### **Cardiac Gated SPECT**

SPECT imaging synchronized with ECG. Assess ventricular function, wall motion, viability.

### **Cardiac Index**

Cardiac output normalized to body surface area (BSA), calculated as  $CO / BSA$ . Normal cardiac index is 2.5–4.2 L/min/m<sup>2</sup>. It provides a more accurate assessment of cardiac function than cardiac output alone, accounting for body size. A cardiac index below 2.2 L/min/m<sup>2</sup> indicates cardiogenic shock.

### **Cardiac Metastases**

More common than primary cardiac tumors. Most frequent sources: lung cancer, breast cancer, melanoma, lymphoma, and renal cell carcinoma. Most commonly involve the pericardium (effusion, tamponade), but can affect myocardium and endo-

---

cardium.

### **Cardiac MRI**

Magnetic-resonance imaging of the heart that characterizes ventricular function, myocardial tissue, perfusion, scar, edema, infiltration, and congenital anatomy without ionizing radiation. Gadolinium contrast is avoided or used cautiously in selected patients with severe renal dysfunction.

### **Cardiac Muscle**

Involuntary, striated muscle forming the myocardium. Cardiac muscle cells are electrically connected by intercalated discs, allowing coordinated contraction of the heart.

### **Cardiac Output**

The volume of blood pumped by the heart per minute, calculated as the heart rate multiplied by the stroke volume.

### **Cardiac Output Measurement**

Methods include: thermodilution via pulmonary artery catheter (bolus of cold saline and temperature change measurement), Fick principle ( $O_2$  consumption / arteriovenous  $O_2$  difference), echocardiographic Doppler (flow velocity time integral x valve area x heart rate), and non-invasive cardiac output monitors (bioimpedance, bioreactance).

### **Cardiac Pacemaker Types**

Single-chamber: pacing one chamber (atrium or ventricle). Dual-chamber (DDD): paces and senses both atrium and ventricle, maintaining AV synchrony. Biventricular (CRT): paces both ventricles for resynchronization in heart failure.

### **Cardiac PET**

Viability, perfusion, amyloidosis. Quantitative perfusion measurement.

### **Cardiac PET Imaging**

Positron emission tomography using radiotracers ( $Rb-82$ ,  $N-13$  ammonia,  $O-15$  water) for quantitative myocardial perfusion assessment. Advantages over

SPECT: superior resolution, shorter scan time, attenuation correction, and absolute myocardial blood flow quantification (mL/g/min).

### **Cardiac Radiation Injury**

Late complication of mediastinal radiation therapy (Hodgkin lymphoma, breast cancer, lung cancer). Manifestations include pericardial disease (constrictive pericarditis, effusion), coronary artery disease (accelerated atherosclerosis), valvular disease (fibrosis), myocardial fibrosis, and conduction abnormalities.

### **Cardiac Rehab Outcomes**

Cardiac rehabilitation can improve exercise capacity, cardiovascular risk-factor control, quality of life, and psychological well-being after selected cardiac conditions. The benefits and participation rates vary among populations and programs.

### **Cardiac Rehabilitation**

Supervised program for cardiac patients post-MI, PCI, CABG, heart failure. Phases: inpatient (early mobilization), outpatient (supervised exercise, education), maintenance. Components: exercise training, risk factor modification, psychological support, return to work counseling. Reduces mortality, hospitalizations.

### **Cardiac Resynchronization Therapy**

Biventricular pacing that synchronizes contraction of the left and right ventricles in patients with heart failure, reduced EF, and prolonged QRS duration (especially LBBB). CRT improves symptoms, exercise capacity, and quality of life, and reduces heart failure hospitalizations and mortality.

### **Cardiac Sarcoidosis**

Infiltrative disease characterized by non-caseating granulomas in the myocardium, affecting 25-30% of patients with systemic sarcoidosis. Presentation includes conduction abnormalities (AV block), ventricular arrhythmias, and heart failure.

### **Cardiac Skeleton**

A dense connective tissue framework composed of

---

four fibrous rings that surround the heart valves and provide structural support. The cardiac skeleton includes the annuli fibrosi (valve rings), the membranous septum, and the left and right fibrous trigones.

### Cardiac SPECT

A nuclear-imaging method that evaluates myocardial perfusion and can help identify ischemia, infarction, or viable myocardium. When synchronized with the heartbeat, gated images can also assess ventricular motion and function.

### Cardiac Stress Test

Evaluation of cardiac function and ischemia under increased cardiac workload. Exercise stress test (treadmill, Bruce protocol): ECG monitoring for ST-segment changes, symptoms, BP response, and arrhythmias. Sensitivity 65-75% for CAD.

### Cardiac Stress Testing

Assessment of cardiac function under physiological or pharmacological stress to detect ischemia. Exercise stress testing involves treadmill or bicycle exercise with continuous ECG monitoring. Pharmacological stress (dobutamine, adenosine, regadenoson) is used when patients cannot exercise.

### Cardiac Tamponade

Cardiac tamponade occurs when fluid or blood under pressure around the heart restricts filling, reducing cardiac output and potentially causing obstructive shock. and causing reduced circulation. It is a medical emergency.

### Cardiac Tamponade Physiology

Accumulation of pericardial fluid causing compression of cardiac chambers, impairing diastolic filling and reducing cardiac output. Hemodynamic consequences include equalization of diastolic pressures (RA = RV diastolic = PCWP), pulsus paradoxus, and decreased cardiac output.

### Cardiac Tumors

Tumors involving the heart may be primary or metastatic. Primary tumors are rare; myxoma is a

common benign primary tumor and angiosarcoma is a recognized malignant type. Symptoms and treatment depend on the tumor's location, tissue type, obstruction, embolic risk, and spread.

### Cardiac Tumors Management

Myxoma: surgical excision is curative, with low recurrence rate. Benign tumors (rhabdomyoma, fibroma) may be observed if asymptomatic but require surgery if causing obstruction or arrhythmia. Malignant tumors: prognosis is poor; treatment may include surgery, chemotherapy, and radiation depending on tumor type.

### Cardio-Oncology

The subspecialty focusing on cardiovascular care of cancer patients, addressing cancer therapy-related cardiac dysfunction, prevention, and management. Key concerns include anthracycline cardiotoxicity, trastuzumab-related cardiomyopathy, immune checkpoint inhibitor myocarditis, and radiation-induced heart disease.

### Cardiogenic Shock

A state of inadequate tissue perfusion caused by severe cardiac dysfunction. It may produce low blood pressure, altered mental status, cool extremities, reduced urine output, metabolic acidosis, or other signs of organ hypoperfusion.

### Cardiogenic Shock Management

Emergency management of shock caused by severe cardiac dysfunction. It includes support of oxygenation and circulation, treatment of the underlying cause, and selected use of vasopressors, inotropes, mechanical support, or revascularization.

### Cardiology

The branch of medicine devoted to the study, diagnosis, and treatment of disorders of the heart and circulatory system. Cardiologists manage conditions including coronary artery disease, heart failure, valvular heart disease, arrhythmias, cardiomyopathy, pericardial disease, congenital heart disease, and hypertension.

---

## Cardiomegaly

Abnormal enlargement of the heart, identified clinically, on chest radiography, or with cardiac imaging. It may reflect chamber dilatation, myocardial hypertrophy, pericardial effusion, or a combination of these; causes include hypertension, valvular disease, cardiomyopathy, congenital heart disease, and high-output states.

## Cardiomyopathy

Cardiomyopathy is disease of the heart muscle that can impair contraction, relaxation, rhythm, or valve function and may lead to heart failure or sudden death. disease, valvular disease, and congenital heart disease as primary causes. The three main types are dilated, hypertrophic, and restrictive cardiomyopathy.

## Cardiomyopathy Classification

The MOGE(S) classification system provides phenotypic and genotypic description: M (morpho-functional phenotype), O (organ/system involvement), G (genetic inheritance), E (etiology), S (functional status/NYHA class).

## Cardioplegia

Deliberate temporary arrest and protection of the heart during cardiac surgery, usually achieved with a cold or blood-based solution that alters myocardial electrical and metabolic activity.

## Cardiopulmonary Exercise Testing

Comprehensive assessment of cardiovascular and pulmonary function during graded exercise on a treadmill or cycle ergometer. Measures: VO<sub>2</sub> max, anaerobic threshold, ventilatory efficiency (VE/VCO<sub>2</sub> slope), and hemodynamic responses.

## Cardiopulmonary Resuscitation

A sequence of chest compressions, ventilation, defibrillation when indicated, and advanced life-support interventions for cardiac arrest. Its purpose is to maintain circulation and oxygen delivery until spontaneous circulation is restored or definitive treatment is provided.

## Cardiorenal Syndrome

Dysfunction of the heart and kidneys where acute or chronic failure of one organ contributes to dysfunction of the other. Type 1: acute cardiac dysfunction causing acute kidney injury (e.g., cardiogenic shock). Type 2: chronic cardiac dysfunction causing progressive CKD. Type 3: acute kidney injury causing cardiac dysfunction.

## Cardioselective Beta-Blockers

Cardioselective beta-blockers selectively block beta-1 adrenergic receptors, which are predominant in the heart, while having minimal effects on beta-2 receptors in the bronchial smooth muscle and peripheral vasculature at therapeutic doses. Common cardioselective beta-blockers include metoprolol, atenolol, bisoprolol, and nebivolol.

## Cardiospasm

Spasm or impaired relaxation of the lower esophageal sphincter, historically used as a term for achalasia. It causes dysphagia, regurgitation, and sometimes chest discomfort.

## CTG

Abbreviation for cardiotocography; continuous electronic monitoring of fetal heart rate and uterine contractions during labour.

### Synonyms:

Cardiotocography

## Cardiotocography

A continuous electronic recording of the fetal heart rate and uterine contractions used to assess fetal well-being during pregnancy and labor. The CTG machine uses two transducers placed on the maternal abdomen: an ultrasound transducer records the fetal heart rate, and a tocodynamometer records uterine contractions.

## Cardiotoxicity

Injury or functional impairment of the heart caused by a toxic exposure, systemic disease, or treatment. Manifestations include arrhythmia, myocardial dysfunction, ischemia, or heart failure.

---

## Cardiotoxicity From Chemotherapy

Chemotherapy agents that damage the myocardium, most commonly anthracyclines (doxorubicin, daunorubicin). Cardiotoxicity presents as dilated cardiomyopathy with reduced ejection fraction. Risk is dose-dependent (doxorubicin cumulative dose >550 mg/m<sup>2</sup>).

## Cardiovascular Changes In Pregnancy

Plasma volume increases 40-50% (total volume 5 L), red cell mass increases 20-30% (physiologic anemia of pregnancy due to dilution). Cardiac output increases 30-50% by 32 weeks (stroke volume increases initially, then heart rate).

## Cardiovascular Disease

Disease affecting the heart or blood vessels, including coronary artery disease, heart failure, arrhythmias, valvular disease, and vascular disorders.

## Cardiovascular Health

Cardio is shorthand for cardiovascular health or exercise that elevates heart rate and respiratory effort to strengthen the heart, lungs, and circulatory system. Aerobic activities such as walking, running, cycling, and swimming improve cardiac output, lower blood pressure, and enhance metabolic efficiency.

## Cardiovascular Screening

Evaluation of cardiovascular risk or disease in people with or without symptoms. It may include blood-pressure measurement, lipid testing, diabetes assessment, and targeted testing based on age and risk.

## Cardiovascular System

The organ system comprising the heart and blood vessels (arteries, arterioles, capillaries, venules, veins) responsible for circulating blood throughout the body.

## Cardioversion

Restoration of a regular heart rhythm from an arrhythmia, using synchronized electrical shock or medicines; anticoagulation and assessment for atrial thrombus may be needed in atrial fibrillation.

## Cardioversion (Synchronized)

Delivery of an electrical shock synchronized with the QRS complex to restore a more organized cardiac rhythm. It is used for selected tachyarrhythmias, with energy, sedation, anticoagulation, and monitoring determined by the rhythm and the patient's clinical condition.

### Synonyms:

Synchronized

## Carditis

Inflammation of the heart or one of its layers, including the myocardium, endocardium, or pericardium. It may result from infection, immune-mediated disease, or systemic inflammation.

## Care Coordination

Deliberate organization and communication of healthcare activities among professionals, services, patients, and caregivers to support safe, continuous, and appropriate care across settings.

## Caregiver

A person who provides assistance with another person's health care, daily activities, or support. A caregiver may be a family member, friend, or paid professional.

## Caregiver Burden

The emotional, physical, social, or financial strain associated with providing ongoing care for another person.

## Caregiver Stress

Emotional, physical, social, or financial strain associated with providing ongoing care for another person.

## Caries

A biofilm-mediated, multifactorial disease in which acids from bacterial metabolism of fermentable carbohydrates cause net demineralization of enamel, dentin, or cementum. Early lesions may be arrested or remineralized, but progressive disease forms cavities and can reach the pulp, causing pain or infection.

---

tion.

### **Caries (Dental)**

A biofilm-mediated, sugar-driven, multifactorial disease causing net demineralization of enamel, dentin, or cementum. Risk is influenced by fermentable-carbohydrate frequency, fluoride exposure, saliva, oral hygiene, tooth anatomy, and previous disease.

#### **Synonyms:**

Dental

### **Caries Risk Assessment**

Systematic evaluation of an individual's likelihood of developing dental caries. Low risk: no active caries, good oral hygiene, regular fluoride exposure. Moderate risk: one or more active lesions in past 3 years, fair oral hygiene.

### **Carina**

The ridge at the base of the trachea where it bifurcates into the right and left main bronchi. It is a landmark for endotracheal tube placement and bronchoscopy. The right main bronchus is wider, shorter, and more vertical than the left, making it the preferred path for aspirated foreign bodies.

### **Cariogenic**

Capable of promoting dental caries, especially by producing acid from fermentable carbohydrates or supporting a plaque environment that demineralizes tooth structure.

### **Cariogram**

A computer-based program that illustrates the interaction of caries-related factors and provides an overall caries risk assessment. Factors: diet (content, frequency), bacteria (mutans streptococci, lactobacilli), fluoride exposure, saliva (flow rate, buffering capacity), plaque amount, and clinical/social history.

### **Carney Complex**

Autosomal dominant multiple endocrine neoplasia syndrome (NAME syndrome / LAMB syndrome), caused by PRKAR1A (17q22-24, protein kinase A regulatory subunit type 1A, 70% of cases) or

PRKACA locus.

### **Carnitine**

Transports long-chain fatty acids into mitochondria for beta-oxidation. Deficiency causes hypoketotic hypoglycemia.

### **Caroli Disease**

Congenital, autosomal recessive fibropolycystic liver disease (PKHD1 gene, encodes fibrocystin/polyductin; same gene as infantile polycystic kidney disease) characterized by non-obstructive, segmental, saccular dilation of the larger intrahepatic bile ducts.

### **Carotid Artery**

The paired arterial system supplying the head and neck. Each common carotid artery divides into internal and external carotid arteries; the internal carotid supplies the brain and orbit, while the external carotid supplies most external head and neck structures.

### **Carotid Artery Disease**

Narrowing or blockage of the carotid arteries, most often caused by atherosclerotic plaque. It can reduce cerebral blood flow or release emboli and is an important cause of transient ischemic attack and ischemic stroke.

#### **Synonyms:**

Carotid Insufficiency

### **Carotid Artery Stenting**

Endovascular placement of a stent across a carotid stenosis, usually with embolic-protection strategies, to improve cerebral blood flow and reduce stroke risk in selected patients. Antiplatelet therapy and peri-procedural neurologic monitoring are required.

### **Carotid Bruit**

An audible sound over a carotid artery caused by turbulent blood flow. It may occur with carotid atherosclerosis but does not reliably indicate the severity of stenosis; suspected disease is assessed with appropriate vascular imaging and risk evaluation.

---

### **Carotid Cavernous Fistula**

An abnormal communication between the carotid artery or its branches and the cavernous sinus, most commonly traumatic but also spontaneous. Clinical features include pulsatile proptosis, chemosis, bruit over the orbit, and cranial nerve palsies. Diagnosis is by CT or MR angiography.

### **Carotid Cavernous Sinus Fistula**

An abnormal connection between the carotid arterial system and the cavernous sinus, which may cause eye redness, pulsation, proptosis, or impaired vision.

### **Carotid Duplex**

Ultrasound combining B-mode and Doppler imaging of carotid arteries. Assesses stenosis, plaque characterization.

### **Carotid Duplex Ultrasound**

Ultrasound evaluation of the carotid arteries for atherosclerotic plaque and stenosis. Measures peak systolic velocity (PSV) and end-diastolic velocity (EDV) in the internal carotid artery (ICA).

### **Carotid Endarterectomy**

Surgical removal of atherosclerotic plaque from a carotid artery to reduce stroke risk in selected patients. Suitability depends on symptoms, degree of narrowing, operative risk, life expectancy, and current clinical guidance.

### **Carotid Stenosis**

Narrowing of a carotid artery, usually caused by atherosclerosis. It can reduce blood flow to the brain or serve as a source of emboli. Evaluation and treatment depend on symptoms, degree of narrowing, imaging, and overall stroke risk.

### **Carpal Tunnel**

Narrow passageway on the palmar wrist, bounded by carpal bones dorsally and the flexor retinaculum as the roof. Transmits the median nerve and flexor tendons. Carpal tunnel syndrome causes numbness in the lateral 3.5 digits and thenar weakness.

### **Carpal Tunnel Syndrome**

The most common entrapment neuropathy, caused by compression of the median nerve as it passes through the carpal tunnel, a narrow fibro-osseous canal bounded by the carpal bones and the flexor retinaculum (transverse carpal ligament) at the wrist.

#### **Synonyms:**

Median Nerve Compression (Carpal Tunnel Syndrome)

### **Carpal Tunnel Syndrome Tests**

Provocative tests for diagnosing carpal tunnel syndrome. Tinel sign: percuss over median nerve at the carpal tunnel tingling in median distribution. Phalen sign: hold wrists in full flexion for 60 seconds reproduces symptoms. Durkan test (carpal compression): direct compression over carpal tunnel for 30 seconds paresthesias.

### **Carrier**

Individual heterozygous for a recessive genetic disorder. Typically asymptomatic but can pass mutant allele to offspring. Carrier screening recommended for certain populations (e.g., Ashkenazi Jewish for Tay-Sachs).

### **Carrier State**

Asymptomatic infection with pathogen capable of transmission. Examples: typhoid carrier, hepatitis B carrier, meningococcal carrier. Importance: public health control, screening, treatment.

### **Cartilage**

A tough, flexible avascular connective tissue found in joints, the ear, nose, rib cage, and intervertebral discs. Composed of chondrocytes embedded in an extracellular matrix of collagen fibers, proteoglycans, and water, providing resilience and compressive strength.

### **Carvedilol**

A nonselective beta-blocker with additional alpha-1 adrenergic blockade and antioxidant properties, producing vasodilation with balanced reduction of heart rate, contractility, and afterload.

---

### Case Definition

Standardized clinical, laboratory, and epidemiologic criteria used to classify a person as a suspected, probable, or confirmed case for surveillance or outbreak investigation. It may differ from the criteria used for individual clinical diagnosis.

### Case Fatality Rate

Proportion of cases dying from disease. Measures severity.

### Case Management

Coordinated planning and follow-up of health and social services to help a person obtain appropriate care, avoid duplication, and meet clinical and functional goals.

### Case-Control Study

Observational study comparing cases with disease to controls without. Looks back at exposures.

### Case-Fatality Rate

Proportion of cases dying from disease. Formula: deaths / cases. Measures severity.

### Caseous Necrosis

A distinctive form of cell death that characteristically occurs in granulomatous infections, most notably tuberculosis. The term derives from the cheese-like, friable, whitish-yellow appearance of the necrotic tissue on gross examination.

### Castleman Disease

Heterogeneous group of lymphoproliferative disorders (angiofollicular lymph node hyperplasia, giant lymph node hyperplasia) sharing lymph node histopathology.

### Cat Scratch Disease

A regional lymphadenitis caused by *Bartonella henselae*, a gram-negative bacillus transmitted to humans through cat scratches, bites, or licks on broken skin, particularly from kittens (which carry higher bacterial loads).

### Cat-Scratch Disease

An infection caused by *Bartonella henselae*, usually transmitted by a scratch or bite from an infected cat. It commonly causes a papule followed by regional lymph-node enlargement, fever, and fatigue; atypical disease may affect the eye, liver, spleen, or nervous system.

### Cat-Scratch Fever

A usually self-limited infection caused by *Bartonella henselae*, commonly producing a papule at the inoculation site and regional lymph-node enlargement.

### Catabolism

The set of metabolic pathways that break down complex molecules into simpler units, releasing energy captured as ATP, NADH, FADH<sub>2</sub>, NADPH. Examples: glycolysis, beta-oxidation, proteolysis, glycogenolysis, nucleotide catabolism.

### Catalepsy

A state of markedly reduced movement and responsiveness in which a person may maintain an imposed posture. It can occur in catatonia and other neurologic or psychiatric conditions.

### Catalyst

A substance that increases the rate of a chemical reaction without being consumed, by lowering the activation energy (providing an alternative reaction pathway). Enzymes are biological catalysts (proteins or ribozymes). Catalysts do not alter the reaction equilibrium ( $\Delta G$ ), only the kinetics.

### Cataract

A cataract is an opacity or clouding of the crystalline lens that impairs the transmission of light to the retina, resulting in blurred vision, glare, decreased contrast sensitivity, and progressive vision loss, and it is the leading cause of preventable blindness worldwide.

### Catastrophic Aging

Rapid functional decline after stressor (illness, surgery, fall). Elderly have decreased reserve, less ability to recover. Prevention: comprehensive as-

---

assessment, optimization, early intervention.

### **Catatonia**

A neuropsychiatric syndrome characterized by motor abnormalities including immobility, mutism, posturing, waxy flexibility, stereotypy, mannerisms, grunting, echolalia, and echopraxia. It can occur in mood disorders, psychotic disorders, medical conditions, or as catatonia due to another medical condition.

### **Catch-Up Immunization**

Vaccination of a person who is behind the recommended schedule using age- and risk-appropriate intervals. Doses generally do not need to be restarted because of delay, but minimum ages and intervals must be respected.

### **Catecholamine Crisis**

Acute life-threatening elevation of catecholamines causing severe hypertension, tachycardia, and multi-organ dysfunction. Occurs in pheochromocytoma and paraganglioma precipitated by anesthesia, surgery, trauma, or medications that stimulate catecholamine release.

### **Catecholamines (Urine/Plasma)**

Measurement of catecholamines or their metabolites in blood or urine. These tests help evaluate suspected pheochromocytoma or paraganglioma, but results must be interpreted with medications, stress, sampling conditions, and clinical findings.

#### **Synonyms:**

Urine/Plasma

### **Category I Fetal Heart Tracing**

A normal fetal heart rate tracing by NICHD 2008 criteria. All three characteristics present: baseline 110-160 bpm, moderate variability (6-25 bpm), and no late or variable decelerations. May have accelerations. Category I tracings are associated with normal fetal acid-base status.

### **Category II Fetal Heart Tracing**

An indeterminate fetal heart rate tracing that falls between Category I and III.

### **Category III Fetal Heart Tracing**

An abnormal fetal heart rate tracing indicating potential fetal hypoxia or acidosis. Two specific patterns: (1) absent baseline variability with recurrent late decelerations, (2) absent baseline variability with recurrent variable decelerations, and (3) sinusoidal pattern.

### **Catheter**

Flexible tube for drainage or infusion. Types: urinary (Foley), intravenous, central venous, arterial. Materials: silicone, latex, PVC.

### **Catheter-Associated UTI**

Urinary tract infection related to indwelling urinary catheter. Most common healthcare-associated infection. Risk: prolonged catheterization, female sex, diabetes, immunosuppression. Prevention: avoid unnecessary catheters, aseptic insertion, closed drainage, daily hygiene, early removal.

### **Catheter-Related Infections**

Infections caused by microorganisms entering along or contaminating an intravascular or other indwelling catheter. They may cause local inflammation or bloodstream infection; removal or replacement and antimicrobial treatment depend on the catheter and severity.

### **Catheterization (Urinary)**

Insertion of a flexible tube (catheter) through the urethra or suprapubically into the urinary bladder to drain urine. Types: Foley catheter (indwelling balloon catheter), intermittent (in-out) catheter, and suprapubic catheter.

#### **Synonyms:**

Urinary

### **Cauda Equina Syndrome**

A neurosurgical emergency caused by compression of the cauda equina nerve roots below the level of the conus medullaris (typically at L1-L2 and below), resulting in bilateral lower extremity weakness, sensory loss, and bladder and bowel dysfunction.

#### **Synonyms:**

Syndrome Cauda Equina (Cauda Equina Syndrome)

---

## Caudal

Positioned toward the tail or lower part of the body.

## Cauliflower Ear

A permanent deformity of the outer ear caused by blood or fluid collecting between the cartilage and its covering, usually after blunt trauma or repeated friction. Untreated separation can deprive cartilage of blood supply and produce a thickened, irregular ear. Prompt drainage and compression reduce the risk of deformity.

### Synonyms:

Perichondrial Hematoma (Cauliflower Ear)

## Cause Of Death

The specific disease, injury, or toxic agent responsible for initiating the lethal physiological sequence leading directly to death (e.g., Gunshot wound to the head, Acute myocardial infarction).

## Cavernous Sinus Thrombosis

Life-threatening septic thrombosis of the cavernous sinus, usually a complication of mid-face, nasal, paranasal sinus (sphenoid, ethmoid), dental, or orbital infection spreading through the valveless ophthalmic veins.

## CD4 Count

The number of CD4-positive T-helper lymphocytes in a blood sample. It helps assess immune function and risk of opportunistic infection in people with HIV, but interpretation depends on trends, viral load, clinical findings, and current treatment guidance.

## CD4-Positive T Cell

A T lymphocyte that recognizes peptide presented by major histocompatibility complex class II molecules. Its differentiated subsets coordinate immune responses, including macrophage activation, B-cell help, mucosal defense, and immune regulation.

## CD8-Positive T Cell

A T lymphocyte that recognizes peptide pre-

sented by major histocompatibility complex class I molecules. Cytotoxic CD8-positive cells can induce apoptosis in infected, malignant, or otherwise altered target cells.

## CEA (Carcinoembryonic Antigen)

A blood tumor marker used mainly to monitor selected colorectal and other cancers. Levels can be affected by smoking, benign disease, and other malignancies; changes are interpreted with imaging, symptoms, and the clinical context rather than a single cutoff.

### Synonyms:

Carcinoembryonic Antigen

## Cecal Volvulus

Axial twisting of the cecum and ascending colon around its mesentery, accounting for approximately one-third of colonic volvulus cases. It presents with acute or subacute large bowel obstruction, abdominal pain, and distension. Diagnosis is by CT scan showing the characteristic whirl sign and a massively dilated cecum.

## Cecum

First and widest large intestinal part in the right iliac fossa below the ileocecal valve, a blind-ended pouch approximately 6 cm long. Appendix arises from its posteromedial wall approximately 2 cm below the valve, containing abundant lymphoid tissue. Cecal volvulus causes large bowel obstruction.

## Ceftazidime-Avibactam

A combination of the third-generation cephalosporin ceftazidime with the non-beta-lactam beta-lactamase inhibitor avibactam. Avibactam inhibits class A, class C, and some class D beta-lactamases, including KPC carbapenemases. This combination has activity against many carbapenem-resistant Enterobacteriaceae and *Pseudomonas aeruginosa*.

## Celiac Artery

The first major ventral branch of the abdominal aorta at T12, arising from the aorta just below the diaphragm and supplying the foregut (stomach, proximal duodenum, liver, gallbladder, spleen, pan-

---

creas). It trifurcates into the left gastric, splenic, and common hepatic arteries, with rich collateral circulation between these branches.

### **Celiac Crisis**

Acute life-threatening presentation of celiac disease characterized by severe dehydration, electrolyte imbalances, metabolic acidosis, hypocalcemic tetany, and hypovolemic shock. Most commonly occurs in infants and young children after a viral illness or introduction of gluten-containing foods.

### **Celiac Disease**

An immune-mediated enteropathy triggered by gluten ingestion in genetically predisposed individuals (HLA-DQ2/DQ8). Gliadin peptides from wheat, barley, and rye activate an autoimmune response against tissue transglutaminase (tTG), causing villous atrophy, crypt hyperplasia, and intraepithelial lymphocytosis in the small intestine.

#### **Synonyms:**

Nontropical Sprue

### **Celiac Trunk**

First major abdominal aortic branch at T12-L1, the foregut artery. Divides into left gastric (lesser curvature), splenic (spleen, pancreas, greater curvature), and common hepatic (proper hepatic/gastroduodenal) arteries. Surrounded by the celiac plexus.

### **Celiac Trunk Stenosis**

Narrowing of the celiac trunk typically caused by extrinsic compression from the median arcuate ligament of the diaphragm, known as median arcuate ligament syndrome or celiac artery compression syndrome. Causes chronic abdominal pain particularly after eating and weight loss due to postprandial mesenteric ischemia.

### **Cell**

The fundamental structural and functional unit of all living organisms. Human cells are eukaryotic, characterized by a nucleus containing DNA and membrane-bound organelles.

### **Cell-Free Fetal DNA Screening**

A prenatal screening test that analyzes placental cell-free DNA in maternal blood to estimate the chance of selected chromosomal conditions. It is usually offered from early pregnancy onward. It is a screening test, not a diagnostic test, and a positive or inconclusive result requires appropriate counseling and follow-up.

### **Cell-Mediated Immunity**

An immune response mediated mainly by T lymphocytes and other cells rather than by antibodies. It is important in defense against intracellular pathogens and in immune surveillance.

#### **Synonyms:**

Cell-Mediated Immune Response

### **Cellular Adaptation**

Cellular adaptations are reversible changes in cell morphology and function that occur in response to altered physiological demands or mild pathological conditions.

### **Cellular Swelling**

An early manifestation of reversible injury caused by failure of ATP-dependent ion pumps and intracellular accumulation of sodium and water. It is also called hydropic change and is often most apparent in cells exposed to ischemia or toxins.

#### **Synonyms:**

hydropic change.

### **Cellulitis**

Cellulitis is a bacterial infection of the deeper skin and subcutaneous tissue, causing expanding redness, warmth, swelling, and tenderness with possible systemic illness. commonly caused by beta-hemolytic streptococci (particularly *Streptococcus pyogenes*) or *Staphylococcus aureus*.

### **Cemento-Enamel Junction**

Junction between enamel and cementum. Three relationships: butt junction, enamel overlapping cementum, cementum overlapping enamel.

---

## **Cementum**

A mineralized connective tissue covering the tooth root. It provides attachment for periodontal-ligament fibers and is thinner near the cemento-enamel junction and thicker toward the root apex.

## **Centenarian**

Person aged 100 or older. 100,000 worldwide. More women than men (4:1). Often maintain functional independence, cognitive function. Models for healthy aging research.

## **Central**

Located near or toward the middle of the body or an organ.

## **Central Auditory Processing Disorder**

Impaired processing of auditory information by the central nervous system despite adequate peripheral hearing. It may cause difficulty understanding speech, especially in noise, and can affect learning and communication.

## **Central Deafness**

Loss or severe impairment of hearing caused by disease of the auditory pathways or auditory cortex in the brain, rather than by a disorder of the external, middle, or inner ear.

## **Central Diabetes Insipidus**

Excessive urination and thirst caused by deficient secretion of antidiuretic hormone from the hypothalamus or posterior pituitary. The kidneys cannot appropriately concentrate urine, producing hypernatremia if water intake is insufficient.

## **Central Line Placement**

Insertion of a catheter into a central vein (internal jugular, subclavian, or femoral), with the tip in the superior (or inferior) vena cava. Ultrasound guidance is standard. Indications: administration of vasopressors, TPN, chemotherapy, long-term antibiotics, central venous pressure monitoring, hemodialysis, and plasmapheresis.

## **Central Line-Associated Bloodstream Infection**

Bloodstream infection associated with central venous catheter. Prevention: maximal sterile barriers, chlorhexidine skin preparation, optimal site selection (subclavian preferred), daily review of line necessity. Diagnosis: paired blood cultures (peripheral and line). Treatment: antibiotics, catheter removal if possible.

## **Central Nervous System**

The part of the nervous system comprising the brain and spinal cord, enclosed within the skull and vertebral column.

## **Central Pontine Myelinolysis**

A form of osmotic demyelination syndrome caused by overly rapid correction of hyponatremia, leading to demyelination of the central pons. Clinical features include flaccid quadriparesis, pseudobulbar palsy, dysarthria, dysphagia, and in severe cases locked-in syndrome.

## **Central Retinal Artery Occlusion**

Acute obstruction of the central retinal artery causing sudden, usually painless, severe monocular visual loss. It is an ocular stroke and requires urgent systemic and vascular evaluation because it may signal a high risk of cerebral ischemia.

## **Central Serous Chorioretinopathy**

Accumulation of serous fluid beneath the neurosensory retina, usually in the macular region, due to altered choroidal vascular permeability and retinal pigment-epithelium dysfunction. It often causes acute or subacute central visual distortion and may be associated with corticosteroid exposure.

## **Central Sleep Apnea**

Apneas from variability in respiratory effort without airway obstruction. Associated with heart failure (Cheyne-Stokes respiration), high altitude, and opioid use.

### **Synonyms:**

Sleep Apnea, Central

---

### Central Venous Catheter

A catheter whose tip terminates in a central vein, usually the lower superior vena cava or cavoatrial junction. It provides reliable access for vasoactive drugs, irritating infusions, hemodynamic monitoring, and prolonged therapy, but may cause bloodstream infection, thrombosis, or mechanical complications.

### Central Venous Pressure

Pressure measured in or near the right atrium, usually through a central venous catheter. It reflects right-sided filling conditions but is affected by ventilation, heart function, vascular tone, and measurement technique; it should not be used alone to guide fluid treatment.

### Centriacinar Emphysema

A subtype of emphysema in which destruction begins in the respiratory bronchioles and extends peripherally. It predominantly affects the upper lobes and is strongly associated with cigarette smoking. It is the most common form of emphysema and often coexists with chronic bronchitis.

### Centrifuge

Spins samples to separate components by density. Used for blood processing, urine analysis, tissue preparation. Speed: RPM or RCF.

### Cephalalgia

Headache or pain in the head, including pain arising from cranial or related structures. It is a symptom with many possible primary and secondary causes.

### Cephalhaematoma

A collection of blood between the periosteum and the skull bone, caused by rupture of blood vessels during childbirth, most commonly associated with ventouse (vacuum) delivery. Unlike caput succedaneum, a cephalhaematoma does not cross suture lines and is limited by the periosteal attachments.

### Cephalohematoma

A collection of blood beneath the periosteum of a newborn's skull, usually caused by birth trauma. It

is confined by suture lines and generally resolves gradually.

### Cephalopelvic Disproportion

A mismatch between the size or shape of the maternal pelvis and the fetal head that prevents or impedes vaginal delivery. It may be suspected from clinical assessment but cannot always be diagnosed reliably before labor.

### Cephalosporin

A class of beta-lactam antibiotics derived from the fungus *Cephalosporium acremonium*, with a mechanism identical to penicillins — inhibition of bacterial cell wall synthesis by binding to penicillin-binding proteins and inhibiting transpeptidase. Cephalosporins are classified into five generations based on their antimicrobial spectrum.

### Ceramide

A sphingolipid composed of a sphingoid base linked to a fatty acid. Ceramides are structural components of cell membranes and the epidermal permeability barrier and also participate in cell signaling.

### Cerclage

A surgical placement of a suture around the cervix to prevent preterm delivery in patients with cervical insufficiency. Types include transvaginal (McDonald or Shirodkar) and transabdominal. Usually placed at 12-14 weeks gestation and removed at 36-37 weeks.

### Cerebellar Ataxia

A neurological sign characterized by impaired coordination of voluntary movements, resulting from dysfunction of the cerebellum or its connections. The cerebellum coordinates the timing, force, and accuracy of movements, and cerebellar dysfunction produces a characteristic constellation of findings.

### Cerebellar Tumor

A neoplasm involving the cerebellum that may cause ataxia, dysmetria, nystagmus, vomiting, or hydrocephalus.

---

## Cerebellitis

Inflammation of the cerebellum, often after infection and sometimes associated with an autoimmune response. It may produce ataxia, dysarthria, nystagmus, headache, and altered consciousness.

## Cerebellopontine Angle

The angle-shaped region at the junction of the cerebellum, pons, and petrous temporal bone. Lesions in this space may affect cranial nerves and commonly include vestibular schwannoma.

## Cerebellopontine Angle Tumor

Lesion at the cerebellopontine angle (CPA), an anatomic space between the cerebellum and pons, medial to the temporal lobe and lateral to the brainstem, containing CN V (trigeminal), VII (facial), VIII (vestibulocochlear), and the anterior inferior cerebellar artery (AICA).

## Cerebellum

Largest brain portion (approximately 10 percent of volume but over 50 percent of neurons) in the posterior cranial fossa behind the brainstem. Two hemispheres and a vermis, divided into vestibulocerebellum (balance, eye movements), spinocerebellum (posture, gait, coordination), and cerebrocerebellum (motor planning, cognition).

## Cerebral Amyloid Angiopathy

Deposition of amyloid beta in the walls of small and medium cerebral and leptomeningeal arteries. It commonly causes recurrent lobar intracerebral hemorrhage in older adults and may also cause transient focal neurological episodes or cognitive decline.

## Cerebral Aneurysm

An abnormal focal enlargement of an artery in or around the brain. It may remain asymptomatic or rupture and cause subarachnoid hemorrhage. Risk factors include hypertension, smoking, certain inherited disorders, and family history.

## Cerebral Angiography

Contrast imaging of cerebral vessels. Evaluates

aneurysms, AVMs, stenosis. Invasive procedure.

## Cerebral Arteriovenous Malformation

An abnormal direct connection between cerebral arteries and veins without a normal capillary bed. It may cause intracranial hemorrhage, seizures, headache, or focal neurological deficits and is evaluated with brain imaging and angiography.

## Cerebral Autoregulation

The intrinsic ability of cerebral arterioles to maintain relatively stable cerebral blood flow across a range of perfusion pressures. It may be impaired by severe brain injury, ischemia, hypercapnia, or anesthetic and vasoactive drugs.

## Cerebral Cavernous Malformations

Low-flow vascular malformations composed of dilated, thin-walled capillaries without intervening brain parenchyma, often multiple and familial (autosomal dominant with mutations in CCM1, CCM2, or CCM3 genes). They may present with seizures, focal neurological deficits, or intracerebral hemorrhage.

## Cerebral Cortex

The outermost layer of the cerebrum, composed of gray matter (neuronal cell bodies) folded into gyri (ridges) and sulci (grooves), greatly increasing surface area.

## Cerebral Edema

The accumulation of excess fluid within the brain parenchyma, leading to increased intracranial pressure and potentially fatal brain herniation. There are three main types with different pathophysiological mechanisms.

## Cerebral Hemorrhage

Bleeding within the brain parenchyma, a type of hemorrhagic stroke causing mass effect, edema, and neurological deficits. Causes: hypertension (most common—basal ganglia, thalamus), cerebral amyloid angiopathy (lobar, elderly), arteriovenous malformation, aneurysm, anticoagulants, trauma, tumors.

---

## Cerebral Hypoxia

Insufficient oxygen delivery to the brain, caused by cardiac arrest, respiratory failure, severe hypotension, or another interruption of oxygen supply. Prolonged hypoxia can produce permanent neuronal injury and hypoxic-ischemic encephalopathy.

## Cerebral Infarction

Cerebral infarction, or ischemic stroke, results from occlusion of a cerebral artery causing irreversible neuronal damage. The most common cause is thromboembolism from atherosclerotic carotid or intracranial arteries, or cardioembolism from atrial fibrillation or cardiac thrombus.

## Cerebral Lobes

Four lobes divided by sulci. Frontal (anterior to central sulcus): executive function, motor control (precentral gyrus), Broca's area. Parietal (between central and parieto-occipital sulci): somatosensory (postcentral gyrus), spatial awareness. Temporal (below lateral sulcus): auditory processing, memory (hippocampus), Wernicke's area.

## Cerebral Palsy

A group of permanent disorders of movement and posture development causing activity limitation, attributed to non-progressive disturbances occurring in the developing fetal or infant brain. It is the most common motor disability in childhood, affecting approximately 1 in 500 live births.

### Synonyms:

Palsy, Cerebral Palsy Cerebral (Cerebral Palsy)

## Cerebral Peduncle

Paired structures of the ventral midbrain carrying descending motor tracts (corticospinal, corticobulbar, corticopontine) connecting the cerebrum to the pons and below. Lesions produce contralateral hemiparesis; Weber syndrome (peduncle + CN III) causes ipsilateral CN III palsy with contralateral hemiparesis.

## Cerebral Perfusion Pressure

The pressure gradient driving blood flow through the brain, approximated as mean arterial pressure

minus intracranial pressure. CPP falls when systemic pressure decreases or ICP rises and must be interpreted with the clinical context.

## Cerebral Salt Wasting

Renal sodium wasting causing hyponatremia and volume depletion occurring after intracranial surgery or in setting of intracranial disease. Distinguished from SIADH by the presence of volume depletion with negative sodium balance and compensatory elevation of renin and aldosterone.

## Cerebral Tumor

A neoplasm arising within or involving the brain, producing symptoms according to its location, growth rate, and effect on intracranial pressure.

## Cerebral Venous Sinus Thrombosis

Thrombosis of the cerebral venous sinuses (most commonly the superior sagittal sinus; also transverse, sigmoid, straight; or cortical veins), with resultant venous hypertension, intracranial hypertension, hemorrhagic cortical infarcts, and venous congestion.

## Cerebral Visual Impairment

Visual impairment caused by damage to the brain's visual pathways or occipital cortex rather than the eye itself; the leading cause of childhood visual impairment in developed countries. Features include poor visual attention, difficulty recognizing faces or objects, and variable vision; management is educational and rehabilitative.

## Cerebriform Nevus Sebaceous

A variant of nevus sebaceous presenting as a soft, cerebriform (brain-like), pedunculated or sessile nodule, often found on the scalp or face. It is a benign adnexal hamartoma composed of sebaceous glands, but like other nevus sebaceous lesions, it carries a low risk of secondary neoplasms and may warrant monitoring or excision.

## Cerebritis

Inflammatory process in brain parenchyma without abscess formation. May precede abscess. Causes:

---

bacterial, fungal, parasitic infections. Diagnosis: MRI with contrast showing enhancement. Treatment: antibiotics/antifungals, surgical drainage if abscess forms.

### **Cerebroplacental Ratio**

The ratio of the middle cerebral artery (MCA) pulsatility index to the umbilical artery (UA) pulsatility index. CPR <5th percentile (or <1.0-1.1) suggests fetal brain-sparing effect (vasodilation of cerebral vessels in response to hypoxemia) due to placental insufficiency.

### **Cerebrospinal Fluid**

A clear, colorless fluid that fills the ventricles of the brain, the central canal of the spinal cord, and the subarachnoid space around the brain and spinal cord. Produced primarily by the choroid plexus of the lateral, third, and fourth ventricles ( 500 mL/day, total volume 150 mL in adults).

### **Cerebrospinal Fluid Analysis**

Laboratory examination of cerebrospinal fluid, usually obtained by lumbar puncture. It may assess infection, bleeding, inflammation, demyelinating disease, or malignant cells. Analysis can include opening pressure, appearance, cell counts, protein, glucose, microbiology, and other tests selected for the clinical question.

### **Cerebrovascular Accident**

An acute neurological deficit caused by interruption of blood flow to the brain or bleeding within the brain. See Stroke.

### **Cerebrovascular Accident (Stroke)**

Sudden brain dysfunction caused by interrupted blood flow or bleeding in the brain. See Stroke.

#### **Synonyms:**

Stroke

### **Cerebrum**

The largest part of the brain, comprising two cerebral hemispheres connected by the corpus callosum. Each hemisphere has four lobes: frontal (executive function, motor, Broca's area), parietal (somatosen-

sory, spatial awareness), temporal (auditory, memory, Wernicke's area), occipital (visual processing).

### **Ceruloplasmin**

The principal copper-carrying protein in blood, synthesized mainly by the liver. Its concentration and copper-binding function are clinically relevant in disorders such as Wilson disease.

### **Cerumen**

A substance that helps keep dirt out of the ear and lubricates the skin in the ear. More commonly known as earwax.

### **Cerumen Impaction**

Accumulation of earwax in the external auditory canal that causes symptoms or prevents visualization of the tympanic membrane. It may cause aural fullness, conductive hearing loss, tinnitus, itching, or pain.

### **Cervical Cancer**

A malignant tumour arising from the cervix, most commonly caused by persistent infection with high-risk human papillomavirus. It may be asymptomatic early or cause abnormal vaginal bleeding, discharge, or pelvic pain; prevention and early detection rely on HPV vaccination, screening, and assessment of abnormal results.

### **Cervical Carcinoma**

A malignant tumor of the uterine cervix, most commonly associated with persistent high-risk human papillomavirus infection.

### **Cervical Cerclage**

Surgical placement of a non-absorbable suture around the cervix to provide mechanical support and prevent preterm delivery in patients with cervical insufficiency.

### **Cervical Dilatation**

Progressive opening of the cervical os during labor, measured in centimeters from 0 (closed) to 10 cm (fully dilated). The cervix must also efface (thin out)

---

before significant dilatation occurs. Cervical status assessed by digital vaginal examination during labor.

### **Cervical Dilation**

The opening of the cervical canal during labor, measured in centimeters from closed (0 cm) to fully dilated (10 cm); required for vaginal delivery. Occurs with effacement (thinning/shortening of the cervix) during the first stage of labor, driven by effective uterine contractions.

### **Cervical Disc Herniation**

A common cause of neck pain and radiculopathy, occurring when the nucleus pulposus of an intervertebral disc in the cervical spine herniates through the annulus fibrosus, compressing adjacent nerve roots or the spinal cord.

### **Cervical Dysplasia**

Abnormal growth of cervical epithelial cells, representing a premalignant condition that may progress to cervical cancer if untreated. Also known as cervical intraepithelial neoplasia (CIN). CIN is caused by persistent infection with high-risk human papillomavirus (HPV) types, most commonly HPV 16 and 18.

#### **Synonyms:**

cervical intraepithelial. Cervical Intraepithelial Neoplasia Cervical (Cervical Dysplasia) Dysplasia Cervical (Cervical Dysplasia) Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)

### **Cervical Dystonia**

A focal movement disorder causing involuntary contractions of neck muscles and abnormal positioning of the head. It may produce pain, tremor, and sustained or intermittent twisting of the neck.

#### **Synonyms:**

Dystonia, Cervical Torticollis, Spasmodic

### **Cervical Effacement**

Thinning and shortening of the cervix during labor, measured as a percentage from 0% (thick, normal length) to 100% (paper thin). Effacement precedes and accompanies cervical dilatation. Nulliparous women often efface before dilating; multiparous

women may efface and dilate simultaneously.

### **Cervical Exam In Labor**

A digital vaginal examination used to assess cervical dilation, effacement, consistency, and position, together with the station and position of the fetal head. Serial examinations help assess labor progress.

### **Cervical Incompetence**

The inability of the cervix to maintain pregnancy in the second trimester due to painless cervical dilatation. Results in recurrent second trimester pregnancy loss or preterm delivery. Risk factors include prior cervical trauma, cone biopsy, and congenital anomalies.

### **Cervical Length Screening**

Transvaginal ultrasound measurement of the cervix between 18-24 weeks to assess risk of spontaneous preterm birth. Normal cervix measures greater than 25 mm. Short cervix (less than 25 mm) increases preterm delivery risk. Cervical funneling and dilatation are additional concerning findings.

### **Cervical Mucus**

Secretions from the cervical glands that change throughout the menstrual cycle under hormonal influence. Estrogen produces thin, clear, stretchy mucus favorable for sperm transport around ovulation (spinnbarkeit). Progesterone produces thick, sticky, opaque mucus that forms a plug in the cervical canal during pregnancy.

### **Cervical Polyps**

Usually benign, finger-like growths arising from the endocervical canal or cervix. They may cause irregular bleeding, postcoital bleeding, or vaginal discharge and are often found during a pelvic examination. Symptomatic or atypical polyps are removed and sent for pathology.

### **Cervical Pregnancy**

A rare ectopic pregnancy (0.1-1%) implanted in the cervical canal. Presents with painless vaginal bleeding in the first trimester. Diagnosis: ultrasound (hourglass-shaped uterus, gestational sac in

---

the cervix with absent sliding sign, empty uterine cavity). High risk of severe hemorrhage.

### **Cervical Radiculopathy**

A condition caused by compression, irritation, or inflammation of a spinal nerve root in the cervical spine, resulting in pain, numbness, tingling, and weakness in the distribution of the affected nerve root.

### **Cervical Rib**

An extra rib arising from a cervical vertebra, usually the seventh. It may be asymptomatic or contribute to thoracic outlet syndrome by compressing the brachial plexus or subclavian vessels.

### **Cervical Ripening Agents**

Medicines or mechanical devices used to soften and prepare the cervix before labor induction. Options include prostaglandins and cervical balloons; selection and dosing depend on the cervix, pregnancy, contraindications, and local obstetric protocol.

### **Cervical Screening (Pap Smear)**

Screening for cervical cancer by collecting cells from the transformation zone of the cervix. Liquid-based cytology (ThinPrep) or conventional Pap smear. HPV co-testing (high-risk HPV 16, 18, others) improves sensitivity.

#### **Synonyms:**

Pap Smear

### **Cervical Spine**

The upper segment of the vertebral column consisting of seven cervical vertebrae, C1 through C7, supporting the head and protecting the cervical spinal cord. It permits substantial flexion, extension, rotation, and lateral flexion while transmitting the vertebral arteries through the transverse foramina of C1-C6.

### **Cervical Spine Trauma**

Injury to the cervical spine that may affect the vertebrae, discs, ligaments, spinal cord, or nerve roots. Evaluation includes the mechanism, examination, and appropriate imaging; classification systems can

help guide treatment, which depends on stability and neurologic findings.

### **Cervical Spondyloarthropathy**

A degenerative condition of the cervical spine involving disc degeneration, osteophyte formation, and facet joint arthropathy that may compress nerve roots or the spinal cord. It can cause neck pain, radiculopathy, or myelopathy, and is a common cause of cervical spinal stenosis in older adults.

### **Cervical Spondylosis**

Age-related degenerative changes of the cervical spine—disc degeneration, osteophyte formation, facet joint arthritis, and ligament hypertrophy—affecting the intervertebral discs, vertebrae, and joints.

#### **Synonyms:**

Cervical Osteoarthritis Osteoarthritis, Cervical Spondylosis, Cervical

### **Cervical Vertebrae**

The seven vertebrae of the neck. Typical cervical vertebrae have small bodies, bifid spinous processes, and transverse foramina transmitting the vertebral vessels; C1, C2, and C7 are specialized.

### **Cervicitis**

Cervicitis is inflammation of the uterine cervix, commonly from sexually transmitted infection, bacterial imbalance, irritation, or allergy.

### **Cervix**

The cervix is the lower part of the uterus projecting into the vagina and producing mucus, allowing menstrual flow out and sperm passage in.

### **Cesarean Delivery**

Surgical delivery of the fetus through abdominal and uterine incisions. Performed when vaginal delivery is contraindicated or fails. Indications include malpresentation, placenta previa, previous cesarean, fetal distress, and failed induction. Most common uterine incision is low transverse (classical for very preterm or transverse lie).

---

## Cesarean Section

C-section: surgical delivery of the infant through incisions in the abdominal wall and uterus. Indications: fetal distress, failure to progress, malpresentation (breech, transverse), placenta previa, abruption, previous cesarean (some), multiple pregnancy, preeclampsia, cord prolapse, and maternal conditions.

## Cesarean Section (C-Section)

Surgical delivery of a fetus through incisions in the abdominal wall (laparotomy) and uterus (hysterotomy).

### Synonyms:

C-section

## Cestodiasis

Infection or infestation caused by cestodes, commonly called tapeworms. Disease may involve the intestine or tissues, depending on the species and life-cycle stage.

### Synonyms:

tapeworms.

## CFTR Modulator Therapy

Targeted therapies correcting the defective CFTR protein. Elexacaftor-tezacaftor-ivacaftor (Trikafta) is the most effective combination for patients with at least one F508del mutation. These therapies have dramatically changed CF prognosis.

## Chagas Disease

A parasitic infection caused by *Trypanosoma cruzi*, transmitted by reduviid bugs (kissing bugs), endemic in Latin America. Acute phase: fever, swelling at bite site (chagoma), Romana sign (peri-orbital edema). Chronic phase (years later): Chagas cardiomyopathy (most common and serious), megaeosophagus, and megacolon.

### Synonyms:

Trypanosomiasis, American

## Chagoma

A localized inflammatory lesion at the site where *Trypanosoma cruzi* enters the body. It is an early

manifestation of Chagas disease and may be accompanied by regional lymphadenopathy.

## Chain Of Custody

Meticulous paper trail and chronological documentation tracking the seizure, custody, control, transfer, analysis, and disposition of physical and electronic evidence in medico-legal investigations (e.g., blood samples for toxicology, bullets, sexual assault kits, biological fluids).

## Chalazion

A usually painless, firm eyelid lump caused by blockage and inflammation of a meibomian oil gland; persistent or atypical lesions require ophthalmic assessment.

## Chancre

A usually painless ulcer at the site of inoculation of an infection, especially the primary lesion of syphilis. It may be accompanied by regional lymph-node enlargement and heals without treatment, although infection persists.

## Chancroid

A sexually transmitted infection caused by *Haemophilus ducreyi*, characterized by painful ragged genital ulcers and tender suppurative inguinal lymph nodes.

## Channelopathy

A disorder caused by abnormal structure or function of an ion channel or its regulatory proteins. Channelopathies can affect excitable tissues and cause neurologic, muscular, or cardiac disease.

## Charcoal

Fine black powder produced by controlled pyrolysis of organic materials, processed to yield a massive micro-porous surface area (500-1500 m<sup>2</sup>/g). See activated charcoal.

## Charcot Arthropathy

Progressive destruction and deformity of a joint caused by loss of protective pain or proprioceptive

---

sensation. It is most often associated with peripheral neuropathy, particularly diabetic neuropathy.

### **Charcot Foot**

A progressive destructive arthropathy of the foot and ankle, usually occurring in people with peripheral neuropathy, especially diabetes. Repeated unnoticed trauma causes warmth, swelling, deformity, instability, and an increased risk of ulceration and amputation.

### **Charcot Joint**

Progressive, neurotrophic arthropathy caused by loss of sensation (proprioception and pain) leading to joint destruction with bone fragmentation, joint dislocation, deformity, and loss of normal pain and proprioceptive sensation in the affected limb.

### **Charcot Triad**

Clinical constellation of fever, right upper quadrant pain, and jaundice representing the classic presentation of ascending cholangitis, infection of the biliary tree from common bile duct obstruction by a gallstone. The full triad is found in approximately fifty to seventy percent of patients.

### **Charcot Triad (Cholangitis)**

Classic diagnostic triad of acute ascending cholangitis: (1) Fever, (2) Right Upper Quadrant abdominal pain, and (3) Jaundice. Reynolds Pentad adds Hypotension and Altered Mental Status. See Acute Cholangitis.

**Synonyms:**  
Cholangitis

### **Charcot-Marie-Tooth Disease**

Group of inherited peripheral neuropathies (hereditary motor and sensory neuropathy, HMSN), the most common inherited neuromuscular disorder (prevalence 1 in 2,500). More than 100 causative genes (PMP22, MPZ, GJB1, MFN2, NEFL).

**Synonyms:**  
Neuropathy, Hereditary Motor And Sensory Peroneal Muscular Atrophy

### **CHARGE Syndrome**

A genetic disorder caused by CHD7 gene mutations (autosomal dominant, most cases de novo) affecting multiple organ systems.

### **Checkpoint Inhibitor**

A medicine that blocks an inhibitory immune-checkpoint pathway, helping selected immune cells recognize and attack tumor cells. Examples target PD-1, PD-L1, or CTLA-4.

### **Checkpoints**

Immune regulatory molecules. Cancer exploits checkpoints. Inhibitors block checkpoints.

### **Chediak-Higashi Syndrome**

Autosomal recessive (LYST mutation, lysosomal trafficking regulator). Giant lysosomal granules in neutrophils, melanocytes, neurons. Partial oculocutaneous albinism, silvery hair, photophobia, nystagmus.

### **Cheilectropion**

An eversion deformity of the lip, usually involving the lower lip. It may result from scarring, congenital malformation, or loss of tissue support.

### **Cheilitis**

Inflammation of one or both lips, causing dryness, scaling, fissuring, erythema, swelling, pain, or ulceration. Causes include irritant or allergic contact exposure, infection, nutritional deficiency, chronic sun exposure, and inflammatory skin disease; persistent lesions require evaluation for premalignant or malignant change.

### **Cheiloplasty**

Plastic or reconstructive surgery of the lip, performed to repair congenital clefting, trauma, tumors, scars, or other deformity.

### **Cheiloschisis**

Cleft lip, a congenital fissure of the upper lip caused by incomplete fusion of facial processes during embryonic development. It may occur alone or with

---

cleft palate.

### **Cheilosis**

A disorder of the lips characterized by dryness, scaling, fissuring, or inflammation. Causes include irritation, nutritional deficiency, infection, and systemic disease.

### **Cheiopompholyx**

A form of dyshidrotic eczema affecting the hands, with intensely itchy small vesicles on the palms or sides of the fingers.

### **Chelation**

The formation of a stable complex between a metal ion and a molecule with multiple binding sites. In medicine, chelation can be used under supervision to bind and promote elimination of selected toxic metals.

### **Chelation Study**

Nuclear medicine study using chelating agents. Evaluates renal function, obstruction.

### **Chelation Therapy**

Use of chelating agents to bind metals for excretion. Agents: EDTA (lead), deferoxamine (iron), dimercaprol (arsenic, mercury, gold), DMSA (lead, mercury), penicillamine (copper, lead). Complications: nephrotoxicity, electrolyte disturbances, redistribution of metals.

### **Chemical Eye Injury**

Ocular damage caused by exposure to an acidic or alkaline substance. Immediate copious irrigation, removal of particulate material, measurement of ocular-surface pH, and urgent ophthalmic assessment are required; alkali injuries may penetrate deeply and continue to worsen after exposure.

### **Chemical Injury**

Tissue damage from corrosive substances. Acid burns: coagulation necrosis, eschar formation. Alkali burns: liquefaction necrosis, deeper penetration. Management: copious irrigation, remove contami-

nated clothing, assess for airway involvement.

### **Chemical Peels**

Chemical peels use acids to exfoliate skin layers. Superficial peels (glycolic acid 20 to 70 percent, salicylic acid 20 to 30 percent) affect the epidermis. Medium peels (trichloroacetic acid 35 to 50 percent) reach the papillary dermis. Deep peels (phenol 88 percent) reach the reticular dermis.

### **Chemical Pneumonitis**

Inflammation and lung injury caused by inhalation or aspiration of irritating chemicals, gastric contents, hydrocarbons, or other toxic substances. It may cause cough, dyspnea, hypoxemia, wheezing, and diffuse pulmonary infiltrates.

### **Chemodectoma**

A tumor arising from paraganglionic tissue, especially a carotid-body tumor. It is usually slow-growing and may compress nearby cranial nerves or vessels.

### **Chemoembolization**

A procedure that combines delivery of an antineoplastic agent with embolization of the blood supply to a tumor, most commonly for selected liver cancers.

### **Chemokine**

A family of small secreted cytokines that direct leukocyte migration (chemotaxis) to sites of infection, inflammation, and tissue repair. Classified by cysteine motif: CXC (e.g., IL-8/CXCL8, recruit neutrophils), CC (e.g., MCP-1/CCL2, attract monocytes), C, and CX3C.

### **Chemokinesis**

Nonspecific stimulation of cell movement by a chemical substance, without directional movement toward or away from a concentration gradient.

### **Chemophobia**

An excessive or irrational fear of chemicals, sometimes associated with anxiety or obsessive concerns

---

about contamination or toxicity.

### **Chemoprevention**

The use of drugs or natural agents to prevent, delay, or reverse cancer development, e.g., tamoxifen or raloxifene in high-risk breast cancer, HPV and hepatitis B vaccination, and aspirin in colorectal cancer.

### **Chemoradiation**

The concurrent combination of chemotherapy and radiation therapy, used to treat locoregionally advanced cancers such as anal, cervical, head and neck, esophageal, and limited-stage small cell lung cancer.

### **Chemoreceptor**

A sensory receptor that responds to changes in blood or CSF chemistry, involved in respiratory and cardiovascular regulation.

### **Chemoreceptor Trigger Zone**

A region near the floor of the fourth ventricle that detects emetic stimuli in blood and cerebrospinal fluid and helps initiate vomiting.

### **Chemoresistance**

Reduced or absent responsiveness of cells, especially tumor cells, to a chemical treatment that would ordinarily inhibit or destroy them.

### **Chemosensitivity**

The degree to which cells or a tumor respond to a chemical treatment. Testing may be used experimentally or clinically to help characterize treatment response.

### **Chemosis**

Chemosis is swelling of the conjunctiva, the membrane over the eye surface, caused by allergy, infection, irritation, trauma, or systemic fluid imbalance.

### **Chemotaxis**

Directed movement of a cell or organism toward or away from a chemical stimulus. It is important in immune-cell recruitment and inflammatory re-

sponses.

### **Chemotherapy**

A medical procedure, treatment, device, or care topic related to chemotherapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Chemotherapy Extravasation**

Leakage of an intravenous anticancer drug into surrounding tissue. Vesicant extravasation can cause severe local injury, so infusion must stop immediately while the catheter is managed and drug-specific antidote and surgical guidance are obtained.

### **Cherry Angioma**

A common benign proliferation of small dermal blood vessels that appears as a bright-red to purple papule, usually on the trunk or limbs. Lesions may bleed after trauma but generally require no treatment unless diagnosis is uncertain or removal is desired.

### **Cherry Eye**

Prolapse of the gland of the third eyelid, producing a rounded red mass at the inner corner of the eye. The term is used especially in veterinary ophthalmology.

### **Cherry-Red Spot**

A striking fundoscopic finding in which the macula appears bright red against a pale, ischemic, or lipid-laden surrounding retina. Mechanism: the fovea centralis lacks inner retinal layers and receives blood supply from the underlying choroid, preserving its natural red color while adjacent edematous retina turns opaque white.

### **Cherubism**

A rare inherited disorder characterized by bilateral enlargement of the jaws from expansile giant-cell lesions, usually beginning in childhood and often regressing after puberty.

### **Chest Pain**

A cardinal symptom with cardiac and non-cardiac

---

causes requiring urgent distinction. Cardiac: acute coronary syndrome (angina, MI), pericarditis, aortic dissection, myocarditis. Pulmonary: pulmonary embolism, pneumothorax, pneumonia, pleurisy. GI: GERD, esophageal spasm, peptic ulcer. Musculoskeletal and psychogenic causes also common.

**Synonyms:**

Pain, Chest

### Cough In Adults

A cough in an adult may be acute, subacute, or chronic and may result from infection, asthma, chronic obstructive pulmonary disease, reflux, upper-airway cough syndrome, medication, or other disease. Coughing blood, breathing difficulty, chest pain, low oxygen, or persistent unexplained cough requires medical assessment.

### Chest Physiotherapy

Techniques to mobilize and clear secretions from the lungs, including postural drainage, percussion, vibration, and huffing. It is used in bronchiectasis, CF, and post-operative patients. Positive expiratory pressure devices and oscillating PEP devices are also used.

### Chest Tube Insertion

Placement of a thoracostomy tube in the safe triangle (latissimus dorsi, pectoralis major, nipple level) to drain air, fluid, or blood from the pleural space. Connected to underwater seal drainage.

### Chest Tube Thoracostomy

Insertion of a tube into the pleural space to drain air, fluid, or blood. Indications: pneumothorax (large, tension, or on mechanical ventilation), hemothorax, pleural effusion (empyema, malignant, transudative), and postoperative (cardiac, thoracic surgery).

### Chest Wall

The musculoskeletal boundary of the thoracic cavity, formed by the skin, fascia, muscles, ribs, costal cartilages, sternum, thoracic vertebrae, and associated neurovascular structures. It protects the thoracic organs and participates in breathing through coordinated movement of the ribs and respiratory muscles.

### Chest Wall Deformity

Abnormalities of the chest wall that can affect lung function. Pectus excavatum (sunken sternum) may compress the heart and lungs. Pectus carinatum (protruding sternum) is usually cosmetic. Scoliosis can cause restrictive lung disease. These may require surgical correction if severe.

### Chest X-Ray

Initial imaging for respiratory symptoms. PA and lateral views. Evaluates pneumonia, pneumothorax, pleural effusion, heart size, mediastinal masses. Limited sensitivity for early disease.

### Chewing

Mastication of food. Teeth, muscles, joints coordinated. Difficulties: dental pain, missing teeth, TMJ disorder.

### Cheyne-Stokes Respiration

Crescendo-decrescendo breathing pattern with periods of apnea, seen in heart failure and stroke. It is a form of central sleep apnea.

### Chiari I Malformation

Downward displacement of the cerebellar tonsils through the foramen magnum, which may cause headache, neck pain, balance problems, or no symptoms.

### Chiari Malformation

Chiari malformations are structural abnormalities of the posterior fossa and cerebellum characterized by downward displacement of the cerebellar tonsils through the foramen magnum. Type I is the most common variant, defined as cerebellar tonsillar ectopia of five millimeters or more below the foramen magnum.

### Chiari-Frommel Syndrome

Persistent postpartum secretion of milk with absence of menstruation, associated with hyperprolactinemia after pregnancy. It is a form of galactorrhea-amenorrhea syndrome.

---

## Chickenpox

Chickenpox is a contagious varicella-zoster virus infection characterized by an itchy vesicular rash; complications are more likely in adults, pregnancy, immunosuppression, and some infants. in different stages (macules, papules, vesicles, crusts). Highly contagious via respiratory droplets and contact with lesions. Incubation 10-21 days. Complications include secondary bacterial infection, pneumonia, encephalitis, and Reye syndrome.

## Chignon

A temporary swelling (edema) on the baby's scalp caused by the vacuum cap used during ventouse (vacuum) assisted delivery. The chignon forms as the vacuum creates negative pressure pulling the scalp tissue into the cup. It settles within 24-48 hours after birth without any treatment.

## Chikungunya

An acute mosquito-borne viral infection characterized by fever and often severe joint pain, with rash and other systemic symptoms in some patients.

## Chikungunya Fever

An acute febrile illness caused by chikungunya virus and transmitted primarily by *Aedes* mosquitoes. It typically causes abrupt fever, severe symmetrical polyarthralgia, myalgia, headache, and rash; joint symptoms may persist for months or longer, especially in older adults or people with pre-existing rheumatic disease.

## Chikungunya Virus

Chikungunya virus is a mosquito-borne alphavirus that causes abrupt fever and severe joint pain, with arthralgia sometimes persisting for months. severe joint pain. The virus is transmitted by *Aedes* mosquitoes. Symptoms include fever, rash, and polyarthralgia that can be debilitating. Most patients recover fully, but some develop chronic joint pain lasting months to years.

## Chilblain

An inflammatory skin lesion caused by an abnormal response to cold and damp conditions. It produces

itchy, red or violaceous swollen areas, usually on fingers, toes, ears, or nose.

## Child Abuse

Physical, sexual, or emotional harm or neglect of a child by a caregiver. Recognized by inconsistent histories, injury patterns inconsistent with mechanism, and behavioral indicators. Types: physical abuse, sexual abuse, neglect, and emotional abuse. Mandatory reporting requirements for healthcare providers.

### Synonyms:

Child Maltreatment

## Child Neglect

The failure of a caregiver to provide adequate food, shelter, clothing, supervision, education, or medical care. The most common form of child maltreatment. Types: physical neglect, educational neglect, emotional neglect, and medical neglect. May result in failure to thrive, developmental delay, and chronic illness.

## Child Poisoning

Exposure of a child to a medicine, chemical, or other substance that may cause harm. Suspected poisoning requires prompt expert assessment.

## Child-Pugh Classification

Clinical scoring system assessing prognosis of chronic liver disease by evaluating five parameters: total bilirubin, serum albumin, international normalized ratio, ascites, and hepatic encephalopathy. Each parameter is scored one to three points.

## Childbirth

The process of giving birth, encompassing three stages: (1) First stage: from the onset of regular uterine contractions (cervical effacement and dilation) to full dilation (10 cm). See Parturition (Childbirth).

## Childhood Absence Epilepsy

An epilepsy syndrome beginning in childhood with frequent brief absence seizures, characterized by sudden impairment of awareness and a typical gen-

---

eralized spike-and-wave EEG pattern.

### **Childhood Obesity**

Excess body fat in a child or adolescent, assessed using age- and sex-specific body-mass-index percentiles. It reflects interacting genetic, behavioral, environmental, and medical factors and increases later cardiometabolic risk. Evaluation should be non-stigmatizing and include growth pattern, nutrition, activity, sleep, and comorbidities.

#### **Synonyms:**

Obesity, Childhood

### **Chills**

A sensation of cold with involuntary shivering, commonly accompanying fever or infection; chills without measured fever may also occur with anxiety, hypoglycaemia, or environmental cold.

### **Chimerism**

The presence in one individual of cell populations derived from genetically different zygotes or sources. It may occur naturally, after transplantation, or through exchange of cells between a pregnant person and fetus.

### **Chionablepsia**

Temporary visual impairment caused by exposure to intense reflected light from snow or ice, commonly called snow blindness. It is usually related to ultraviolet injury of the cornea.

#### **Synonyms:**

snow blindness.

### **Chlamydia**

A genus of obligate intracellular bacteria; *Chlamydia trachomatis* commonly causes sexually transmitted urethritis, cervicitis, pelvic inflammatory disease, and neonatal conjunctivitis or pneumonia.

### **Chlamydia Trachomatis Infection**

A bacterial infection transmitted mainly through sexual contact. It may cause urethritis, cervicitis, pelvic inflammatory disease, proctitis, or no symptoms.

### **Chlamydial Pneumonia**

Pneumonia caused by *Chlamydia* species, usually producing a gradual cough, fever, and malaise.

### **Chlamydiosis**

Infection caused by bacteria of the genus *Chlamydia*. Depending on the species and site, it may cause sexually transmitted infection, conjunctivitis, pneumonia, or other disease.

### **Chlamydophila Pneumonia**

Atypical pneumonia with mild presentation: sore throat, hoarseness, cough. Treatment is macrolides or tetracyclines.

### **Chloasma**

Patchy brown hyperpigmentation, especially of the face, associated with pregnancy, hormones, sun exposure, or other causes. It is commonly called melasma.

#### **Synonyms:**

melasma.

### **Chloracne**

An acne-like eruption caused by exposure to certain halogenated aromatic compounds, such as dioxins and related industrial chemicals.

### **Chloramphenicol**

A broad-spectrum antibiotic with activity against gram-positive and gram-negative organisms, as well as *Rickettsia*. Chloramphenicol inhibits bacterial protein synthesis by binding to the 50S ribosomal subunit. It is indicated for serious infections when other agents are not appropriate, including bacterial meningitis and typhoid fever.

### **Chloranemia**

Anemia in which the red blood cells are abnormally pale, usually because of reduced hemoglobin content, as in iron deficiency.

### **Chloroleukemia**

A rare form of myeloid leukemia associated with greenish tumor masses composed of myeloid cells,

---

also called granulocytic sarcoma or chloroma.

**Synonyms:**

granulocytic sarcoma or chloroma.

**Chloroma**

A greenish extramedullary mass of immature myeloid cells, usually associated with acute myeloid leukemia. It is also called granulocytic sarcoma or myeloid sarcoma.

**Synonyms:**

granulocytic sarcoma or myeloid sarcoma.

**Chloropsia**

A visual disturbance in which objects appear green or have a greenish tint. It can occur with retinal disease, medication or toxin exposure, or other visual-pathway disorders.

**Choanal Atresia**

A congenital obstruction of the posterior nasal passage (choana) due to failure of the buconasal membrane to rupture during embryogenesis. Bilateral choanal atresia presents as a respiratory emergency in the newborn, who is an obligate nasal breather — cyclic cyanosis that improves with crying.

**Choking**

Airway obstruction caused by an object lodged in the pharynx or larynx, producing impaired ventilation. Complete obstruction can cause hypoxic brain injury and death within minutes; treatment depends on the patient's age, consciousness, and effectiveness of coughing.

**Cholangiitis**

Inflammation of the bile ducts. It may be caused by infection, obstruction, autoimmune disease, or other biliary disorders.

**Cholangiocarcinoma**

Cholangiocarcinoma is cancer arising from bile-duct lining cells and may cause jaundice, itching, abdominal symptoms, or bile-flow obstruction.

**Synonyms:**

Bile Duct Cancer (Cholangiocarcinoma)

**Cholangiography**

Contrast imaging of bile ducts. Intraoperative, percutaneous, or ERCP approach. Evaluates biliary obstruction, stones, strictures.

**Cholangitis**

Cholangitis is inflammation or infection of the bile ducts, often from obstruction by a stone or stricture, and can rapidly cause sepsis.

**Cholecystectomy**

Surgical removal of the gallbladder, usually by a laparoscopic approach when appropriate. It may be performed for symptomatic gallstones, acute cholecystitis, selected gallstone pancreatitis, or other gallbladder disease.

**Cholecystitis**

Inflammation of the gallbladder, most commonly caused by obstruction of the cystic duct by a gallstone, which occurs in approximately 95 percent of cases. The obstruction leads to bile stasis, increased intraluminal pressure, and ischemia of the gallbladder wall, which may progress to bacterial infection.

**Synonyms:**

Inflamed Gallbladder

**Cholecystoses**

Non-inflammatory disorders causing deposits, wall thickening, or other structural changes in the gallbladder, including cholesterosis and adenomyomatosis. Many are incidental, but symptoms and imaging findings determine whether further evaluation is needed.

**Cholangiohepatitis**

Inflammation involving both the bile ducts and liver, often associated with ascending bacterial infection, biliary obstruction, parasites, or recurrent cholangitis. It may cause fever, right-upper-quadrant pain, jaundice, and cholestatic liver-test abnormalities.

**Cholecystography**

Radiographic examination of the gallbladder, usu-

---

ally after administration of a contrast substance, to assess its filling, concentration, and emptying.

### **Cholecystokinin**

CCK is a peptide hormone produced by I-cells in the duodenal and jejunal mucosa in response to fatty acids (long-chain fatty acids are the most potent stimuli) and amino acids in the chyme.

### **Choledochal Cyst**

Congenital dilatation of the biliary tree classified into five types according to the Todani classification. Type I involving dilation of the common bile duct is the most common. Presents with the classic triad of abdominal pain, jaundice, and palpable mass though all three are present in less than twenty percent of cases.

### **Choledocholithiasis**

A gallstone within the common bile duct, which may cause biliary pain, jaundice, cholangitis, or pancreatitis and is usually evaluated with liver tests and imaging.

### **Cholelithiasis**

The presence of stones in the gallbladder or biliary tract. Stones may contain cholesterol, pigment, or mixed material and may cause no symptoms or lead to biliary pain and complications.

### **Cholera**

An acute intestinal infection caused by toxigenic *Vibrio cholerae*, producing profuse watery diarrhoea and potentially life-threatening dehydration; prompt oral or intravenous rehydration is central treatment.

### **Cholestasis**

Reduced formation or flow of bile, causing conjugated hyperbilirubinaemia, itching, dark urine, pale stools, and raised alkaline phosphatase; obstruction and intrahepatic causes must be distinguished.

### **Cholesteatoma**

A keratin-filled sac of abnormal squamous epithe-

lium in the middle ear or mastoid that can erode bone and cause chronic discharge, hearing loss, or intracranial complications.

### **Chronic Suppurative Otitis Media**

Persistent inflammation and infection of the middle ear with recurrent or continuous ear discharge, usually through a perforated tympanic membrane. It can cause conductive hearing loss and may lead to cholesteatoma or other complications.

#### **Synonyms:**

CSOM; chronic otitis media with discharge; chronic suppurative middle-ear infection.

### **Cholesterol And Lipids**

Fatty substances in the blood, including LDL cholesterol, HDL cholesterol, and triglycerides, that play critical roles in cellular function and energy metabolism. Abnormal lipid levels, particularly high LDL and triglycerides with low HDL, promote atherosclerosis and increase the risk of heart attack and stroke.

### **Cholesterol Crystal Embolization**

Atheroembolic disease caused by cholesterol crystal fragments dislodging from proximal atherosclerotic plaques into distal small arteries, often after vascular procedures. Presents with livedo reticularis, blue-toe syndrome, renal failure, and eosinophilia. Diagnosis by skin, kidney, or muscle biopsy.

### **Cholesterol Crystals**

Needle-shaped, cleft-like spaces seen in histological sections representing dissolved cholesterol esters, commonly found in atherosclerotic plaques, atheroembolic disease, and cholesterol-rich effusions. In atheroembolic disease, cholesterol crystals embolize from ruptured plaques to distal organs causing tissue ischemia.

### **Cholesterol Emboli**

Cholesterol crystals released from an atherosclerotic plaque that lodge in small arteries and cause ischemia or inflammation in downstream tissues.

---

### **Cholesterol Embolism**

Blockage of small arteries by cholesterol crystals, often after vascular instrumentation or plaque disruption.

### **Cholesterol Embolization**

Release and downstream lodging of cholesterol crystals from an atherosclerotic arterial plaque.

### **Cholesterol Synthesis**

Occurs in all nucleated cells (primarily liver and intestine, approximately 1 g/day production), using acetyl-CoA as the precursor through approximately 30 enzymatic steps.

### **Cholesterolemia**

The presence and concentration of cholesterol in the blood. Abnormal elevation is a risk factor for atherosclerotic cardiovascular disease.

### **Cholinergic Crisis**

Excess acetylcholine from organophosphate or carbamate poisoning. SLUDGE syndrome: salivation, lacrimation, urination, defecation, GI upset, emesis. Miosis, bradycardia, bronchospasm, muscle fasciculations. Treatment: atropine, pralidoxime.

### **Cholinesterase Inhibitor**

A class of medications that inhibit acetylcholinesterase, the enzyme that breaks down acetylcholine in the synaptic cleft, thereby increasing cholinergic neurotransmission in the central nervous system and peripheral tissues.

### **Chondritis**

Inflammation of cartilage, such as the cartilage of the ear, nose, ribs, or larynx. It may result from infection, trauma, or immune-mediated disease.

### **Chondroblastic Osteosarcoma**

A variant of osteosarcoma in which the malignant cells produce a cartilaginous matrix. It typically affects the long bones of adolescents and young adults, with a predilection for the metaphyseal regions.

### **Chondrocalcinosis**

Calcification of cartilage visible on X-ray. Associated with CPPD disease. Found in knees, wrists, pubic symphysis. May be incidental or symptomatic.

### **Chondrodysplasia**

A disorder of cartilage and bone development that causes abnormal skeletal growth and, in some forms, disproportionate short stature.

### **Chondroma**

Benign cartilage-forming tumor composed of mature hyaline cartilage, most often intramedullary (enchondroma) or subperiosteal (juxtacortical / periosteal chondroma).

### **Chondromalacia**

Softening and degeneration of cartilage, especially articular cartilage. The term is often used for changes affecting the patella and causing anterior knee pain.

### **Chondrosarcoma**

The second most common primary malignant bone tumor (after osteosarcoma) and the most common primary malignant bone tumor in adults (peak age 40-70 years).

### **Chopart's Joint**

The transverse tarsal joint, consisting of the talonavicular and calcaneocuboid joints, between the hindfoot and the midfoot.

### **Chordae Tendineae**

Thin tendinous cords connecting the papillary muscles to the free edges of the atrioventricular valve leaflets (mitral and tricuspid). They tether the leaflets and, with papillary muscle contraction during ventricular systole, prevent valve prolapse and regurgitation.

### **Chordoma**

Slow-growing, locally aggressive malignant bone tumor originating from embryonic remnants of the notochord along the axial skeleton. Three anatomic

---

locations: (1) sacrococcygeal ( 50% of cases, most common), (2) spheno-occipital/clival ( 35%, base of skull), (3) vertebral (cervical thoracolumbar, 15%).

### **Chorea**

Involuntary, irregular, brief, non-repetitive jerky movements flowing randomly from one body part to another ('dance-like'), due to basal ganglia (striatal) dysfunction.

### **Chorioamnionitis**

Infection of the chorion and amnion, typically due to ascending bacterial infection from the genital tract. Risk factors include prolonged rupture of membranes, multiple vaginal exams, and preterm labor. Presents with maternal fever, uterine tenderness, and fetal tachycardia. Diagnosis is clinical; amniocentesis for confirmation.

### **Chorioamnionitis (Intraamniotic Infection)**

Infection or inflammation of the amniotic fluid, membranes, placenta, or decidua, usually due to ascending polymicrobial infection. Maternal fever, uterine tenderness, fetal tachycardia, and maternal leukocytosis may occur; treatment requires broad-spectrum antibiotics and delivery planning.

#### **Synonyms:**

Intraamniotic Infection

### **Choriocarcinoma**

Choriocarcinoma is an aggressive trophoblastic cancer producing human chorionic gonadotropin, usually arising after pregnancy or a molar pregnancy.

### **Chorion**

The outermost fetal membrane, derived from the trophoblast. The chorion frondosum (villous chorion) develops into the fetal portion of the placenta. The chorion laeve (smooth chorion) is the non-villous portion. Chorionic villi contain fetal blood vessels and are bathed in maternal blood.

### **Chorionic Villus Sampling**

Prenatal diagnostic test at 10-13 weeks gestation, earlier than amniocentesis. Transabdominal or tran-

scervical biopsy of chorionic villi (placental tissue). Indications: advanced maternal age, abnormal first-trimester screen, carrier screening, or family history of genetic disorders. Analyzed for karyotype, FISH, and microarray.

### **Chorioretinitis**

Inflammation involving the choroid and retina, often caused by infection, autoimmune disease, or systemic inflammatory illness. It can produce floaters and impaired vision.

### **Choroid**

An anatomical or cellular structure referred to as choroid. Its clinical importance depends on its location, function, and associated disease.

### **Choroid Plexus Cyst**

A fluid-filled cyst within the choroid plexus of a fetal cerebral ventricle. An isolated cyst with otherwise reassuring prenatal assessment is usually benign, but its significance depends on other ultrasound findings and screening results.

### **Choroid Plexus Tumor**

A papillary neoplasm of the choroid plexus, occurring most often in children, and frequently presenting with hydrocephalus from excessive cerebrospinal fluid production.

### **Choroidal Neovascularization**

The pathological growth of new, fragile blood vessels from the choroid through Bruch membrane into the subretinal or sub-retinal pigment epithelium space, and it is the hallmark of wet age-related macular degeneration and the primary cause of severe central vision loss in this condition.

### **Christmas Disease**

Hemophilia B, an inherited bleeding disorder caused by deficiency or dysfunction of coagulation factor IX.

### **Chromaffinoma**

A tumor of chromaffin cells, usually a pheochro-

---

mocytoma of the adrenal medulla or a related extra-adrenal paraganglioma. It may secrete catecholamines and cause episodic hypertension.

### **Chromatin**

The complex of DNA, histone proteins, and associated molecules that packages the genome in the nucleus. Its organization and chemical modification regulate DNA accessibility, replication, repair, and transcription.

### **Chromatopsia**

A visual disturbance in which objects appear abnormally colored. It may result from retinal disease, toxic exposure, medication effects, or other disorders of the visual system.

### **Chromhidrosis**

A rare condition in which sweat is abnormally colored, often yellow, green, blue, or black, because of pigment in the sweat glands or on the skin surface.

### **Chromoblastomycosis**

A chronic fungal infection of skin and subcutaneous tissue that produces slowly enlarging warty or scaly lesions, usually after traumatic implantation of the fungus.

### **Chromosomal Abnormality**

Change in chromosome number or structure. Numerical: aneuploidy (abnormal number, e.g., trisomy 21), polyploidy (extra sets). Structural: deletion, duplication, inversion, translocation.

### **Chromosome**

A chromosome is a DNA-protein structure carrying genetic information; humans normally have 46 chromosomes in most body cells.

### **Chronic**

A clinical condition or finding involving chronic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chronic Allograft Nephropathy**

Progressive transplant kidney function decline over months to years. Interstitial fibrosis and tubular atrophy on histology. Can be immunologic or non-immunologic. Optimize immunosuppression and manage risk factors including hypertension and recurrent disease.

### **Chronic Autoimmune Hashimoto Thyroiditis**

An autoimmune inflammatory disease of the thyroid that progressively destroys thyroid tissue and commonly causes hypothyroidism.

### **Chronic Autoimmune Thyroiditis**

Hashimoto thyroiditis, an autoimmune destruction of the thyroid that commonly causes hypothyroidism and may be associated with anti-thyroid antibodies.

### **Chronic Bronchitis**

Defined clinically as a productive cough for at least three months in each of two consecutive years, after excluding other causes. It is characterized by hypertrophy of mucus-secreting glands in the bronchi (Reid index > 0.5), goblet cell hyperplasia, and chronic airway inflammation.

#### **Synonyms:**

Bronchitis Chronic (Chronic Bronchitis)

### **Chronic Caries**

Tooth decay that progresses slowly and may produce a firm, darkened lesion.

### **Chronic Cough**

Cough lasting > 8 weeks. Top 3 causes in non-smokers with normal CXR: upper airway cough syndrome, asthma, GERD. ACE inhibitor use is another common cause.

#### **Synonyms:**

Cough Chronic (Chronic Cough)

### **Chronic Eosinophilic Leukaemia**

A clonal myeloid neoplasm characterized by persistent eosinophilia, increased or dysplastic eosinophils,

---

and evidence of an underlying clonal process or organ injury. Symptoms may include fatigue, fever, weight loss, rash, respiratory symptoms, splenomegaly, or cardiac and neurological complications.

### **Chronic Eosinophilic Pneumonia**

An idiopathic inflammatory lung disease characterized by eosinophilic infiltration of the pulmonary parenchyma, presenting with fever, cough, dyspnea, and peripheral airspace opacities on imaging.

### **Chronic Fatigue Syndrome**

A complex, debilitating disorder characterized by profound fatigue lasting >6 months that is not relieved by rest and is worsened by physical or mental exertion (post-exertional malaise). Associated symptoms: unrefreshing sleep, cognitive impairment (brain fog), orthostatic intolerance, joint pain, headaches, and sore throat.

#### **Synonyms:**

CFS (Chronic Fatigue Syndrome) SEID (Chronic Fatigue Syndrome)

### **Chronic Granulomatous Disease**

A primary immunodeficiency caused by defects in the NADPH oxidase complex in phagocytes (neutrophils, monocytes, macrophages), impairing the respiratory burst and killing of catalase-positive organisms.

### **Chronic Hypertension In Pregnancy**

Hypertension that predates pregnancy or is diagnosed early in pregnancy. It increases the risk of preeclampsia, fetal growth problems, preterm birth, and placental complications and requires ongoing maternal and fetal monitoring.

### **Chronic Inflammation**

A prolonged inflammatory response characterized by simultaneous tissue destruction and attempts at repair, lasting weeks to years. Unlike acute inflammation, it is predominantly mononuclear, involving macrophages, lymphocytes, and plasma cells rather than neutrophils.

### **Chronic Inflammatory Demyelinating Polyneuropathy**

An acquired, immune-mediated peripheral neuropathy with a relapsing-remitting or progressive course. Presents with symmetric proximal and distal weakness, sensory loss, areflexia, and elevated CSF protein. Distinguishing from Guillain-Barre: progressive course >8 weeks (vs. rapid onset in GBS).

### **Chronic Inflammatory Response Syndrome**

A proposed multisystem illness involving persistent inflammatory symptoms after an exposure such as certain water-damaged building environments. Reported symptoms are nonspecific and may include fatigue, headache, cognitive difficulty, and respiratory complaints. Symptoms require a careful medical evaluation for established infectious, allergic, toxic, autoimmune, and other causes.

### **Chronic Intestinal Pseudo-Obstruction**

Chronic condition of recurrent episodes of intestinal obstruction without mechanical blockage due to neuromuscular dysfunction of the gastrointestinal tract. May involve the small bowel, colon, or both. Causes include systemic sclerosis, diabetes, Parkinson disease, amyloidosis, and paraneoplastic syndromes.

### **Chronic Kidney Disease**

Chronic kidney disease is the progressive loss of kidney function over months to years, typically from diabetes, hypertension, or glomerular diseases. It is staged by estimated glomerular filtration rate and albuminuria, with end-stage renal disease requiring dialysis or transplantation.

#### **Synonyms:**

Chronic Kidney Failure Chronic Renal Failure Kidney Disease, Chronic Kidney Failure, Chronic

### **Chronic Kidney Disease Staging**

Classification of kidney disease by cause, eGFR category, and albuminuria category. G1 through G5 represent eGFR from normal or high to kidney failure; staging is applied when abnormalities persist for at least 3 months and helps estimate progression

---

and complications.

### **Chronic Lead Poisoning**

Prolonged low-level lead exposure causing abdominal pain, anemia with basophilic stippling, peripheral neuropathy, and nephropathy, requiring chelation therapy and removal of the exposure source.

### **Chronic Leukemia**

A leukemia characterized by an insidious onset, clonal proliferation of relatively mature blood cells, and a more indolent clinical course.

### **Chronic Limb-Threatening Ischemia**

The most severe clinical form of peripheral arterial disease, characterized by chronic ischemic rest pain, nonhealing ulceration, or gangrene attributable to arterial insufficiency. It carries high risks of limb loss and cardiovascular mortality and requires vascular evaluation for revascularization and wound management.

### **Chronic Liver Disease**

Persistent hepatic injury and structural change lasting at least 6 months, caused by viral, metabolic, alcohol-related, autoimmune, cholestatic, vascular, or drug-related disease. Progressive fibrosis can lead to cirrhosis, portal hypertension, liver failure, and hepatocellular carcinoma.

### **Chronic Lymphocytic Leukemia**

The most common leukemia in Western countries, characterized by the clonal proliferation of mature-appearing but functionally incompetent B lymphocytes that accumulate in blood, bone marrow, and lymphoid tissues.

#### **Synonyms:**

Cancer, Chronic Lymphocytic Leukemia CLL Leukemia, Chronic Lymphocytic

### **Chronic Mesenteric Ischemia**

Recurrent abdominal pain occurring after eating resulting from insufficient blood flow to meet the metabolic demands of the gastrointestinal tract. Most commonly caused by atherosclerotic stenosis of at least two of the three major mesenteric

arteries.

### **Chronic Migraine**

A migraine disorder with headache on at least 15 days per month for more than three months, with migraine features on at least eight days per month. Symptoms may include throbbing pain, nausea, vomiting, and light or sound sensitivity; frequent or disabling headaches require clinical evaluation.

### **Chronic Mucocutaneous Candidiasis**

Persistent/recurrent *Candida* infections of skin, nails, mucosa (oral, esophageal, vaginal) without systemic dissemination. Autosomal dominant (STAT1 gain-of-function) or recessive (IL17F, IL17RA, ACT1, RORC). Associated with autoimmunity (hypothyroidism, AIHA, ITP, alopecia), endocrinopathies, Staph infections.

### **Chronic Myelogenous Leukemia**

A myeloproliferative neoplasm associated with the BCR-ABL1 fusion gene, usually producing marked leukocytosis and splenomegaly.

#### **Synonyms:**

Cancer, Chronic Myelogenous Leukemia Leukemia, Chronic Myelogenous

### **Chronic Myeloid Leukemia**

A myeloproliferative neoplasm characterized by the Philadelphia chromosome [t(9;22)(q34;q11.2)], which creates the BCR-ABL1 fusion gene encoding a constitutively active tyrosine kinase.

### **Chronic Myelomonocytic Leukemia**

A rare myelodysplastic/myeloproliferative neoplasm characterized by persistent monocytosis (absolute monocyte count greater than 1,000 per microliter and greater than 10 percent of white blood cells) in the peripheral blood and bone marrow, with dysplastic features and variable blast count.

### **Chronic Neutrophilic Leukaemia**

A rare clonal myeloproliferative neoplasm characterized by sustained mature neutrophilic leukocytosis without a primary infectious or inflammatory cause. It may cause fatigue, fever, weight loss,

---

splenomegaly, and progressive constitutional symptoms.

### **Chronic Obstructive Pulmonary Disease**

COPD is a preventable lung disease characterized by persistent respiratory symptoms and airflow limitation due to airway and/or alveolar abnormalities, usually caused by significant exposure to noxious particles or gases (primarily tobacco smoke). Includes emphysema and chronic bronchitis.

#### **Synonyms:**

COPD (Chronic Obstructive Pulmonary Disease)

### **Chronic Pain**

Pain persisting longer than three months or beyond normal tissue healing time, often lacking an ongoing identifiable cause. It involves complex interactions between biological, psychological, and social factors that can amplify pain signaling in the nervous system.

### **Chronic Pain Management**

Chronic pain management extends beyond the perioperative period. Opioid therapy for chronic pain requires careful patient selection, informed consent, and regular reassessment.

### **Chronic Pancreatitis**

Progressive irreversible inflammatory condition characterized by permanent structural damage causing exocrine and endocrine impairment. The most common cause is chronic alcohol consumption. Other causes include hereditary pancreatitis, autoimmune pancreatitis, and metabolic factors.

### **Chronic Rhinitis**

Persistent inflammation or irritation of the nasal lining causing congestion, runny nose, sneezing, itching, or postnasal drainage. Allergic, nonallergic, medication-related, and structural causes are possible. Management depends on the cause and may include trigger avoidance, saline irrigation, and clinician-directed nasal treatment.

#### **Synonyms:**

Post-Nasal Drip (Chronic Rhinitis)

### **Chronic Rhinosinusitis**

Persistent inflammation of the nose and paranasal sinuses lasting at least 12 weeks, usually with nasal obstruction or discharge and sometimes facial pressure or reduced smell. It may occur with or without nasal polyps.

### **Chronic Sinusitis**

Persistent inflammation of the paranasal sinuses for at least 12 weeks, causing nasal obstruction, discharge, facial pressure, and reduced smell.

#### **Synonyms:**

Sinusitis, Chronic

### **Chronic Tension-Type Headache**

A recurring headache occurring on at least 15 days per month for more than three months, usually causing bilateral pressing or tightening pain rather than throbbing. It may be associated with scalp or neck tenderness but typically lacks prominent nausea; a new or changing pattern requires clinical assessment.

### **Chronic Thromboembolic Pulmonary Hypertension**

Pulmonary hypertension caused by organized, persistent thromboembolic obstruction and secondary pulmonary-vessel remodeling after pulmonary embolism. It is potentially curable in selected patients by pulmonary endarterectomy or balloon pulmonary angioplasty.

### **Chronic Toxicity**

Adverse effects from repeated or prolonged exposure to low doses. Cumulative damage may be irreversible. Examples: heavy metals (lead, mercury), asbestos, alcohol, solvent exposure. Monitoring: biomarkers, organ function tests.

### **Chronic Venous Disease**

A spectrum of venous outflow disorders caused by reflux, obstruction, or calf-muscle-pump dysfunction. Findings range from edema and varicose veins to skin changes, lipodermatosclerosis, and venous ulceration.

---

### Chronic Venous Insufficiency

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. Leads to venous hypertension, edema, skin changes (lipodermatosclerosis, hyperpigmentation), and venous stasis ulcers (medial malleolus). Risk factors: varicose veins, DVT, obesity, prolonged standing.

### Chronic Venous Stasis

Persistent pooling of blood in the lower limbs caused by impaired venous return. It can produce edema, skin discoloration, dermatitis, and venous ulcers.

### Churg-Strauss Syndrome

Eosinophilic granulomatosis with polyangiitis, a necrotizing inflammation of small and medium blood vessels associated with asthma, eosinophilia, and possible injury to the lungs, nerves, skin, heart, or kidneys.

#### Synonyms:

Churg Strauss Syndrome (Churg-Strauss Syndrome)

### Chvostek Sign

A clinical sign of latent tetany caused by hypocalcemia (ionized  $\text{Ca}^{2+} < 4.4 \text{ mg/dL}$ ). Elicited by tapping the facial nerve over the parotid gland just anterior to the ear canal. Positive response: involuntary twitching or contraction of ipsilateral facial muscles (lip twitching or facial spasm).

### Chylangioma

A benign malformation or tumor-like lesion of lymphatic vessels containing chyle or lymph. It may occur in the neck, mediastinum, or other tissues.

### Chylomicron

Transports dietary lipids. Largest, least dense lipoprotein.

### Chylothorax

Pleural effusion with chyle from thoracic duct disruption. Triglycerides  $> 110 \text{ mg/dL}$ . Treatment includes dietary modification, octreotide, and surgical ligation if refractory.

### Chyluria

Passage of lymphatic fluid into the urine, giving it a milky appearance. It usually results from an abnormal communication between lymphatic vessels and the urinary tract.

### Ciclopia

A rare severe congenital malformation in which the eyes are fused or a single median eye develops, usually as part of holoprosencephaly.

### CIDP

Chronic inflammatory demyelinating polyneuropathy (CIDP) is a chronic, immune-mediated, peripheral neuropathy characterized by progressive or relapsing symmetrical weakness and sensory loss in all four limbs, with areflexia or hyporeflexia, lasting for more than eight weeks.

### Ciguatera

Food poisoning caused by eating reef fish containing ciguatoxins. It may cause gastrointestinal illness followed by neurologic symptoms such as paresthesias and temperature-sensation disturbance.

### Ciliary Body

Circumferential structure between iris and choroid, with ciliary muscle (accommodation control via zonular fibers) and ciliary processes (aqueous humor production). Part of the uveal tract (iris, ciliary body, choroid).

### Ciliopathy

A disorder caused by abnormal structure or function of cellular cilia. Ciliopathies may affect development, vision, kidney function, respiration, or multiple organ systems.

### Cineangiocardiology

Radiographic recording of the heart and blood vessels during passage of contrast material, used to visualize cardiac chambers, valves, and coronary or great vessels.

---

### Cinefluorography

Motion-picture recording of fluoroscopic images, used to document movement of organs or contrast material during a diagnostic examination.

### Cineplasty

Surgical creation of a muscle-controlled stump or related reconstruction, historically used to improve control of a prosthetic limb.

### Cingulotomy

Surgical interruption of selected fibers of the cingulum, sometimes performed as a psychosurgical treatment for severe, treatment-resistant psychiatric illness or chronic pain.

### Circadian Rhythm

The approximately 24-hour endogenous biological cycle regulating sleep-wake behavior, hormone secretion, body temperature, metabolism, and other physiological processes. Generated by the suprachiasmatic nucleus of the hypothalamus, which is entrained to the environment primarily by light via the retinohypothalamic tract.

### Circle Of Willis

A ring-like arterial anastomosis at the base of the brain that provides collateral blood flow between the anterior (internal carotid) and posterior (vertebrobasilar) circulations. It is formed by the anterior cerebral, anterior communicating, internal carotid, posterior cerebral, and posterior communicating arteries.

### Circulating Tumor DNA

Fragments of tumor-derived DNA detectable in blood, enabling molecular profiling, treatment monitoring, and detection of minimal residual disease without tissue biopsy (liquid biopsy).

### Circumcision

A medical procedure involving circumcision. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure. medical reasons such as severe phimosis, recurrent balanoposthitis, paraphimosis, or lichen sclerosus (balanitis xerotica obliterans); elective infant circumcision for religious, cultural, or preventive health reasons.

### Circumflex Artery

A branch of the left coronary artery that travels in the left atrioventricular groove. It supplies the lateral wall of the left ventricle, the left atrium, and in left-dominant systems, the inferior wall and posteromedial papillary muscle.

### Cirrhosis

Cirrhosis is advanced liver scarring with regenerative nodules that distorts blood flow and liver function, potentially causing portal hypertension, jaundice, ascites, and liver failure. distortion of the hepatic architecture and formation of regenerative nodules. The most common causes include chronic hepatitis C infection, alcoholic liver disease, non-alcoholic steatohepatitis, chronic hepatitis B infection, and autoimmune hepatitis.

### Citrate Synthase

First enzyme of TCA cycle. Condenses oxaloacetate and acetyl-CoA to citrate.

### Citric Acid Cycle (Krebs Cycle)

A central metabolic pathway occurring in the mitochondrial matrix that oxidizes acetyl-CoA (derived from carbohydrates, lipids, and proteins) into CO<sub>2</sub>, generating 3 NADH, 1 FADH<sub>2</sub>, and 1 GTP (ATP) per turn. Rate-limiting enzyme: isocitrate dehydrogenase (inhibited by ATP and NADH; activated by ADP).

#### Synonyms:

Krebs Cycle

### CKD

Abbreviation for Chronic Kidney Disease: a progressive loss of kidney function over months to years, defined by a glomerular filtration rate (GFR) less than 60 mL/min/1.73m<sup>2</sup> or markers of kidney damage (albuminuria, haematuria, structural abnormalities) persisting for at least 3 months.

### CKD-Mineral Bone Disorder

Systemic disorder of mineral and bone metabolism

---

in CKD. Includes calcium, phosphorus, PTH, and vitamin D abnormalities with vascular calcification and bone disease. Renal osteodystrophy encompasses osteitis fibrosa, osteomalacia, adynamic bone disease, and mixed uremic osteodystrophy.

### **Class IA Antiarrhythmics**

Sodium channel blockers that slow phase 0 depolarization and prolong the action potential duration and refractory period. Examples include quinidine, procainamide, and disopyramide. Used for atrial and ventricular arrhythmias. Quinidine can cause QT prolongation and torsades de pointes.

### **Class IB Antiarrhythmics**

Sodium channel blockers that shorten the action potential duration and are preferentially taken up by ischemic tissue. Examples include lidocaine and mexiletine. Lidocaine is used for ventricular tachycardia and ventricular fibrillation, particularly in the setting of acute myocardial infarction.

### **Class IC Antiarrhythmics**

Sodium channel blockers that significantly slow phase 0 depolarization without affecting action potential duration. Examples include flecainide and propafenone. Used for supraventricular arrhythmias in patients without structural heart disease.

### **Class III Antiarrhythmics**

Potassium channel blockers that prolong the action potential duration and refractory period. Examples include amiodarone, sotalol, dofetilide, and ibutilide. Amiodarone is the most commonly used but has significant toxicity. Sotalol has additional beta-blocking properties and can cause torsades de pointes.

### **Claudication**

Muscle pain or cramping brought on by exertion and relieved by rest, usually because of reduced arterial blood flow to a limb.

#### **Synonyms:**

Vascular Claudication

### **Claudication Distance**

The distance a person can walk before exertional limb pain begins. It is used to describe symptoms and monitor change.

### **Claustrophobia**

An intense fear of enclosed or confined spaces that may cause anxiety, panic, or avoidance. Symptoms can occur in places such as elevators, tunnels, or MRI scanners.

### **Clavicle**

Only horizontally oriented long bone, serving as a shoulder-trunk strut. Medial end articulates with the manubrium (sternoclavicular joint); lateral end with the acromion (acromioclavicular joint). Most common fracture at the middle-lateral third junction from falls on an outstretched hand.

### **Clavicle Fracture**

A break in the collarbone that may occur during birth or after trauma. A newborn may show asymmetric arm movement or tenderness; older children and adults may have pain, swelling, or deformity. Diagnosis is usually made by examination and imaging.

### **Clavicle Fracture (Intentional)**

Intentional fracture of the fetal clavicle as a last resort to reduce the bisacromial diameter in shoulder dystocia. The operator applies upward pressure on the midportion of the anterior fetal clavicle with a finger, fracturing it. The clavicle heals without long-term sequelae.

#### **Synonyms:**

Intentional

### **Claw Foot**

A deformity in which the toes are hyperextended at the metatarsophalangeal joints and flexed at the interphalangeal joints. It may result from muscle imbalance or neurologic disease.

### **Claw Hand**

A hand deformity with hyperextension at the

---

metacarpophalangeal joints and flexion at the interphalangeal joints, classically caused by ulnar-nerve palsy or lower brachial-plexus injury.

### **Claw Toe**

A toe deformity characterized by extension at the metatarsophalangeal joint and flexion at the proximal and distal interphalangeal joints.

### **Clear Margins**

A histological finding indicating that no abnormal cells (e.g., cervical intraepithelial neoplasia or cancer cells) are present at the edge of a tissue specimen removed during a procedure such as LLETZ, cone biopsy, or surgical excision.

### **Clearance**

The volume of plasma from which a drug is completely removed per unit time, typically expressed in milliliters per minute or liters per hour. Total clearance is the sum of all clearance mechanisms, primarily hepatic and renal clearance.

### **Cleft Lip**

A congenital malformation: incomplete fusion of the lip (and often palate) during embryologic development, causing a facial cleft; cleft lip and/or cleft palate are the most common craniofacial birth defects.

### **Cleft Lip And Palate**

A congenital anomaly caused by failure of fusion of the facial prominences during embryonic development (4-10 weeks gestation). Cleft lip: failure of maxillary and medial nasal processes to fuse. Cleft palate: failure of palatal shelves to fuse. Can occur together or separately.

### **Cleft Palate**

A congenital malformation characterized by an opening (cleft) in the palate (roof of the mouth) due to failure of fusion of the palatal shelves during embryonic development (weeks 6–9 of gestation). Incidence: 1 in 1,500–2,500 live births. Cleft palate may occur in isolation or with cleft lip (cleft lip and palate—CLP).

### **Cleidocranial Dysplasia**

An inherited skeletal disorder characterized by defective development or ossification of the clavicles and skull, delayed closure of cranial sutures, dental abnormalities, and short stature.

### **Climacteric**

The period of physiologic change around the end of reproductive capacity, including the menopausal transition. It may involve changes in menstruation, vasomotor symptoms, and other endocrine effects.

### **Clinical Communication**

Exchange of information between healthcare professionals, patients, and caregivers to support diagnosis, treatment, safety, and informed decisions.

### **Clinical Counseling**

Guidance provided in healthcare to help patients make informed decisions about health, prevention, treatment, and self-management.

### **Clinical Depression**

A depressive disorder marked by persistent depressed mood or loss of interest with associated cognitive, emotional, or physical symptoms that cause clinically significant distress or impairment.

### **Clinical Deterioration**

Worsening of physiologic function or symptoms that increases risk of organ failure, disability, or death. Changes in mental status, respiratory effort, perfusion, urine output, and vital signs may precede overt collapse.

### **Clinical Documentation**

Recording of patient history, examination, assessment, treatment, and follow-up in the medical record.

### **Clinical Frailty Scale**

A clinician-rated scale that summarizes frailty from very fit to severely frail or terminally ill using activity, function, and disease burden. It supports communication and prognostic assessment but should

---

be interpreted in the patient's clinical context.

### **Clinical Guideline**

Systematically developed statements to assist practice. Examples: CDC guidelines, WHO guidelines, specialty society guidelines.

### **Clinical Handover**

Transfer of responsibility and relevant patient information from one healthcare professional or team to another. Effective handover communicates diagnosis, current status, risks, pending tasks, contingency plans, and accountability.

### **Clinical Practice Guideline**

Evidence-informed recommendations intended to help healthcare professionals and patients make decisions about a specific clinical condition or situation.

### **Clinical Presentation**

Signs and symptoms of disease. Varies by disease, severity, patient factors.

### **Clinical Reasoning**

The cognitive process of collecting, weighting, and integrating clinical information to formulate diagnostic and management decisions. It includes problem representation, differential diagnosis, probability assessment, and recognition of cognitive bias.

### **Clinical Research**

Research involving people or human health data to study disease, diagnosis, prevention, treatment, or healthcare delivery.

### **Clinical Research Bias**

Systematic error in clinical study design or analysis, including selection bias, information bias, and confounding.

### **Clinical Trial**

A planned study in which people receive or are observed for an intervention to evaluate its safety, effects, or outcomes. Trials may be conducted in

phases and for many types of health interventions.

### **Clinical Trial Phases**

Stages used to study a medical intervention. Phase I primarily evaluates initial safety and dosing, Phase II evaluates preliminary efficacy and safety, Phase III compares treatment with standard care in larger groups, and Phase IV monitors use after approval.

### **Clinicopathologic Correlation**

Integration of clinical history, examination, imaging, laboratory data, and pathologic findings to reach a diagnosis. It is essential when tissue findings are limited, nonspecific, or potentially affected by sampling or artifact.

### **Clinodactyly**

A congenital or developmental lateral curvature of a finger or toe, most often affecting the fifth finger and resulting from abnormal shape of a phalanx.

### **Clinoid Process**

One of several bony projections of the sphenoid bone that form part of the cranial base and support structures around the optic canal and cavernous sinus.

### **Clip (Vascular)**

A small device used to close, occlude, or secure a blood vessel during a procedure.

#### **Synonyms:**

Vascular

### **Clitoridectomy**

Surgical removal of part or all of the clitoris. In medicine it may be performed for selected tumors or severe disease; nonmedical removal is a harmful practice with no health benefit.

### **Clitoris**

A small, sensitive erectile organ located at the anterior junction of the labia minora, beneath the clitoral hood (prepuce). The clitoris is the primary source of female sexual pleasure and is homologous to the male penis.

---

## Cloacal Exstrophy

The most severe congenital anomaly of the ventral abdominal wall, also called the OEIS complex (Omphalocele, Exstrophy of the bladder, Imperforate anus, Spinal defects). Incidence 1 in 200,000-400,000 births.

**Synonyms:**  
the OEIS.

## Cloacitis

Inflammation of a cloaca or cloacal region, particularly in disorders affecting the common terminal outlet of the urinary, genital, and intestinal tracts.

## Clonal Evolution

The selection and expansion of tumor-cell subclones with biologic or treatment-related advantages over time. It contributes to progression, metastasis, and acquired resistance to anticancer therapy.

## Clonic Seizure

A seizure characterized by rhythmic, repetitive jerking caused by recurrent involuntary muscle contractions. It may be focal or generalized, with or without impaired awareness, and is classified using the clinical pattern, electroencephalography, and the underlying cause.

## Clonorchiasis

Infection with the Chinese liver fluke, *Clonorchis sinensis*. It affects the biliary tract and may cause inflammation, obstruction, and long-term hepatobiliary complications.

## Clonus

A rhythmic, involuntary oscillation of a muscle (usually ankle or patellar) produced by sustained stretch, indicating upper motor neuron (UMN) disease—hyperreflexia. Elicited by rapid dorsiflexion of the foot (sustained clonus—5 or more beats) or tapping. Associated with spasticity, hyperreflexia, and UMN signs (Babinski).

## Closed Comedo

A small skin lesion formed when a follicular opening

is blocked by sebum and keratin but remains covered by the epidermis. It is commonly called a whitehead.

**Synonyms:**

a whitehead.

## Closed Fracture

A fracture in which the broken bone does not communicate through a wound with the external environment.

## Closed Reduction

Nonoperative realignment of a fractured or dislocated bone or joint by manipulation without surgically opening the site.

## Closed-Angle Glaucoma

Glaucoma caused by obstruction of the drainage angle of the anterior chamber, preventing aqueous humor outflow and producing potentially rapid elevation of intraocular pressure.

## Closed-Loop Insulin Delivery

Automated insulin delivery systems that combine continuous glucose monitoring with an insulin pump and control algorithm. The algorithm adjusts basal insulin delivery based on sensor glucose values in real time. Hybrid closed-loop systems require user-initiated meal boluses but automatically manage basal rates.

## Clostridioides Difficile

An anaerobic, spore-forming, toxin-producing gram-positive bacillus causing antibiotic-associated diarrhea and pseudomembranous colitis. Risk factors: antibiotics (especially clindamycin, fluoroquinolones, cephalosporins), hospitalization, age >65, PPIs, and immunosuppression. Toxins A and B damage colonic epithelium.

## Clostridioides Difficile Infection

An infectious diarrhea caused by the bacterium *Clostridioides difficile*, typically occurring after disruption of normal gastrointestinal flora by antibiotics. *C. difficile* produces toxins A and B that cause colonic inflammation and diarrhea. Risk factors include antibiotic exposure, proton pump inhibitor

---

use, and advanced age.

### **Clostridioides Difficile Pathogenesis**

The mechanisms by which *C. difficile* causes disease. Antibiotic disruption of the normal gut flora allows the organism to colonize; its toxins injure the colonic mucosa and cause inflammation and diarrhea. Spores persist in the environment and facilitate transmission.

### **Clostridium**

A genus of anaerobic, usually spore-forming bacteria that includes species capable of causing diseases such as tetanus, botulism, gas gangrene, and antibiotic-associated colitis.

### **Clostridium Botulinum**

A gram-positive, spore-forming, anaerobic rod that produces botulinum toxin, the most potent toxin known. The toxin causes flaccid paralysis by blocking acetylcholine release at neuromuscular junctions. Infant botulism occurs from ingestion of spores in honey or soil. Wound botulism occurs from injection of contaminated heroin.

### **Clostridium Difficile**

*Clostridioides difficile* infection (CDI): a toxin-producing anaerobic gram-positive rod causing antibiotic-associated diarrhea and pseudomembranous colitis, most commonly after broad-spectrum antibiotics (clindamycin, cephalosporins, fluoroquinolones).

### **Clostridium Difficile Infection**

An anaerobic, spore-forming, toxin-producing gram-positive bacillus causing antibiotic-associated diarrhea and pseudomembranous colitis. See *Clostridioides difficile*.

### **Clostridium Perfringens**

A gram-positive, spore-forming, anaerobic rod that causes gas gangrene (clostridial myonecrosis) and food poisoning. The organism produces alpha-toxin, which causes tissue necrosis. Gas gangrene presents with crepitus, tissue necrosis, and systemic toxicity. Food poisoning presents with acute onset of diarrhea

and abdominal cramps.

### **Clostridium Tetani**

A gram-positive, spore-forming, anaerobic rod that causes tetanus. The organism produces tetanospasmin, a neurotoxin that causes spastic paralysis. Spores are found in soil and enter through wound contamination. The toxin blocks inhibitory neurotransmitters causing uncontrolled muscle contractions.

### **Clotting**

The cascade of enzymatic reactions converting circulating fibrinogen into an insoluble fibrin clot. See Blood Coagulation.

### **Clubbing**

Bulbous enlargement of the distal fingers or toes with increased nail curvature and loss of the normal nail-fold angle. It reflects proliferation of connective tissue in the distal digits and may be associated with chronic pulmonary disease, cyanotic heart disease, inflammatory bowel disease, or malignancy.

### **Clubfoot**

A clinical condition or finding involving clubfoot. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Clubfoot (Talipes Equinovarus)**

A congenital foot deformity with an incidence of approximately 1 in 1,000 live births, characterized by four components: equinus (ankle plantarflexion), varus (hindfoot inversion), adductus (forefoot adduction), and cavus (high arch).

#### **Synonyms:**

Talipes Equinovarus

### **Clubhand**

A congenital deformity of the hand in which the wrist and hand deviate toward the radial or ulnar side, often associated with deficiency or abnormal development of forearm bones.

---

## Cluster Headache

A primary headache disorder causing severe one-sided orbital or periorbital pain in attacks lasting about 15–180 minutes, often with tearing, conjunctival redness, nasal symptoms, eyelid swelling, or facial sweating on the same side.

## Clutton's Joints

Painless bilateral swelling of the knees or other large joints associated with congenital syphilis, caused by chronic synovitis.

## CMV

Cytomegalovirus, a common herpesvirus that may cause mild or asymptomatic infection but can cause serious disease in fetuses and people with weakened immunity.

### Synonyms:

Cytomegalovirus (CMV)

## CMV Colitis

Colonic inflammation caused by cytomegalovirus reactivation in immunocompromised patients including those with HIV and organ transplant recipients. Presents with bloody diarrhea and abdominal pain. Diagnosed by colonoscopy with biopsy showing characteristic owl-eye intranuclear inclusions in enlarged cells.

## CO Poisoning

Toxicity from inhalation of carbon monoxide (CO), a colorless, odorless gas binding hemoglobin 200-300 times more avidly than oxygen, forming carboxy-hemoglobin (COHb) and reducing oxygen delivery. See carbon monoxide poisoning.

## Coagulation Cascade

The coagulation cascade is a series of enzymatic reactions leading to fibrin clot formation, involving serine protease activation cascades. The intrinsic pathway is initiated by contact activation when factor XII binds exposed collagen, sequentially activating factors XI, IX, and the cofactor VIII.

## Coagulation Factor Deficiencies

Inherited or acquired disorders in which one or more clotting factors are reduced or function abnormally, causing excessive bleeding. The clinical pattern and laboratory findings depend on the affected factor.

## Coagulation Profile

Panel of tests assessing the coagulation cascade. PT (prothrombin time, 11-14 sec): measures extrinsic and common pathways; elevated in vitamin K deficiency, warfarin, liver disease, DIC. INR standardizes PT for warfarin monitoring.

## Coagulative Necrosis

The most common form of necrosis, typically resulting from ischemic injury or infarction in most solid organs except the brain. The fundamental process involves denaturation of both structural proteins and enzymatic proteins, which prevents the immediate liquefaction of the dead tissue.

## Coagulopathy

A disorder of hemostasis that impairs normal clot formation or regulation and predisposes to abnormal bleeding or thrombosis. It may result from coagulation-factor deficiency, platelet dysfunction, anticoagulant exposure, liver disease, consumptive coagulopathy, or systemic illness.

## Coal Worker's Pneumoconiosis

Pneumoconiosis from coal dust. Simple CWP shows upper lobe macules. Complicated CWP (progressive massive fibrosis) involves coalescent macules. May be associated with Caplan syndrome.

## Coarctation

A localized narrowing of a tubular anatomical structure, especially coarctation of the aorta, which obstructs blood flow and produces characteristic pressure differences.

## Coarctation Of The Aorta

A congenital narrowing of the aorta, typically near the ductus arteriosus. Presents with upper extremity hypertension, diminished femoral pulses, and a blood pressure gradient between arms and legs.

---

Associated with bicuspid aortic valve and other congenital heart defects.

### Coarse Crackles

Lower-pitched, longer-duration crackles heard throughout inspiration, caused by fluid or secretions in larger airways. They are heard in COPD, bronchiectasis, pneumonia, and pulmonary edema. They are less specific than fine crackles.

### Coats Disease

An uncommon retinal disorder characterized by abnormal retinal blood vessels, leakage, exudation, and sometimes retinal detachment, usually affecting one eye in childhood.

### Cobalamin Deficiency

Deficiency of vitamin B12 (cobalamin), a cofactor for methionine synthase (methylcobalamin) and methylmalonyl-CoA mutase (adenosylcobalamin).

### Cobalt-57

Calibration source for gamma cameras. Half-life 271 days. Used for quality control.

### Cobalt-Chromium

Base metal alloy for cast restorations. Strong, corrosion-resistant. Used for partial dentures, crowns.

### Cocaine Cardiotoxicity

Cocaine blocks norepinephrine and dopamine reuptake, causing sympathomimetic effects: tachycardia, hypertension, and coronary vasospasm. Acute myocardial infarction can occur even with normal coronary arteries due to vasospasm, accelerated atherosclerosis, and prothrombotic effects. Treatment: benzodiazepines for sympatholysis.

### Cocaine Toxicity

A toxic state caused by cocaine, often producing agitation, high blood pressure, rapid heart rate, hyperthermia, seizures, coronary vasospasm, myocardial infarction, or stroke. Treatment is supportive and may include sedation, temperature control, and

management of cardiovascular or neurologic complications.

### Coccidioidomycosis

A fungal infection caused by *Coccidioides* species, usually acquired by inhaling spores.

**Common name:** Valley fever

### Coccidiosis

Infection by coccidian protozoa. In humans it may cause intestinal disease or, in immunocompromised patients, infection of other organs.

### Coccydynia

Pain in the region of the coccyx, often worsened by sitting. Causes include trauma, childbirth, degenerative change, and less commonly infection or tumor.

**Synonyms:**

Pain Tailbone (Coccydynia)

### Coccygectomy

Surgical removal of the coccyx, reserved for selected cases of severe persistent coccygeal pain or a lesion that has not responded to conservative treatment.

### Coccyx

Terminal vertebral column part with 3-5 fused vertebrae. Articulates with the sacrum, allowing limited flexion important during childbirth. Provides attachment for gluteus maximus, coccygeus, and levator ani (pelvic floor). A common site of pain (coccydynia) following falls, direct trauma, and prolonged sitting.

### Cochlea

Snail-shaped hearing organ in the inner ear, coiled approximately 2.5 turns around the modiolus. Three fluid-filled chambers: scala vestibuli (perilymph), scala media (endolymph, organ of Corti), scala tympani (perilymph).

### Cochlear Implant

A cochlear implant is an electronic medical device that bypasses damaged or absent inner ear hair

---

cells to provide direct electrical stimulation of the auditory nerve, restoring a perception of sound in individuals with severe to profound sensorineural hearing loss who derive limited benefit from hearing aids.

### Cockayne Syndrome

A rare inherited disorder of DNA repair characterized by progressive neurologic dysfunction, growth failure, developmental impairment, photosensitivity, and a prematurely aged appearance.

### Code Blue

A hospital emergency signal indicating that a person may be in cardiopulmonary arrest and requires immediate resuscitation response.

### Codman Triangle

A characteristic periosteal reaction seen on plain radiographs, formed when an aggressive bone lesion elevates the periosteum away from the bone cortex, creating a triangular area of new reactive bone at the angle between the raised periosteum and underlying cortex.

### Codon

Sequence of three nucleotides coding for one amino acid or stop signal. 64 possible codons: 61 code for amino acids, 3 are stop codons (UAA, UAG, UGA). Degeneracy: multiple codons code for same amino acid.

### Coenzyme

A non-protein organic molecule that binds to an enzyme (apoenzyme) and is required for its catalytic activity. Coenzymes often act as transient carriers of specific chemical groups or electrons.

### Coenzyme Q

A lipid-soluble molecule in mitochondrial membranes that transfers electrons during cellular energy production.

### Cofactor

A non-protein chemical compound or metallic ion re-

quired for an enzyme's catalytic activity. Cofactors include: (1) Metal ions ( $Mg^{2+}$ ,  $Zn^{2+}$ ,  $Fe^{2+}/Fe^{3+}$ ,  $Cu^{2+}$ ,  $Mn^{2+}$ ,  $Ca^{2+}$ , Mo, Se) that stabilize structure, participate in redox, or act as Lewis acids; (2) Coenzymes (organic cofactors, often vitamin-derived).

### Cogan's Syndrome

An autoimmune vasculitis characterized by interstitial keratitis and vestibular dysfunction including vertigo, hearing loss, and tinnitus. May involve large vessels including the aorta, causing aortic aneurysm or regurgitation. Treatment includes corticosteroids and immunosuppressive agents.

### Cognitive Behavioral Therapy

A structured, time-limited psychotherapy that identifies and modifies maladaptive thought patterns (cognitive distortions) and behaviors. It is based on the cognitive model that thoughts, feelings, and behaviors are interconnected. CBT uses techniques including cognitive restructuring, behavioral activation, exposure, and skills training.

### Cognitive Behavioral Therapy For Insomnia

Cognitive behavioral therapy for insomnia is a structured, evidence-based program that targets the thoughts and behaviors perpetuating poor sleep. Components include sleep restriction, stimulus control, cognitive restructuring, and sleep hygiene education.

### Cognitive Decline

A reduction over time in one or more cognitive abilities, such as memory, attention, language, reasoning, or visuospatial function.

### Cognitive Distortions

Systematic errors in thinking that perpetuate negative emotional states and maladaptive behaviors. Common distortions include all-or-nothing thinking, catastrophizing, mind reading, overgeneralization, emotional reasoning, and should statements. CBT focuses on identifying and modifying these patterns.

---

## Cognitive Fitness

The active maintenance of mental sharpness and brain health through stimulating activities, physical exercise, social engagement, and proper nutrition. Regular challenges such as learning new skills, puzzles, reading, and social interaction support neuroplasticity and cognitive reserve.

## Cognitive Health And Memory

Cognitive health encompasses the ability to think clearly, learn, remember, and make decisions, with memory being a core component that involves encoding, storing, and retrieving information. Age-related changes in processing speed and recall are normal, but persistent decline may signal mild cognitive impairment or dementia.

## Cognitive Impairment

Decline in one or more cognitive domains: memory, attention, language, visuospatial, executive function. Types: subjective cognitive decline, mild cognitive impairment (MCI), dementia. MCI: functional independence preserved, impairment on testing. Dementia: functional impairment.

## Cognitive Rehabilitation

Structured therapy to improve cognitive function or help a person compensate for difficulties with memory, attention, language, or executive skills after illness or injury.

## Cognitive Screening

A brief assessment used to identify possible problems with memory, attention, language, or other cognitive functions. It does not by itself diagnose dementia or another disorder.

## Cohort Study

Follows exposed and unexposed groups over time. Prospective or retrospective. Measures incidence, relative risk.

## Coil (Vascular)

A catheter-delivered wire device used to block selected blood vessels, often to treat aneurysms or bleeding.

## Synonyms:

Vascular

## Coincidence Detection

Principle of PET imaging. Two 511 keV photons detected simultaneously (within nanoseconds) by opposing detectors. Line of response defined. Time-of-flight PET improves localization.

## Cold Abscess

An abscess that develops slowly with little heat, redness, or acute inflammation, classically in tuberculosis or other chronic infections.

## Cold Agglutinin

An antibody that causes red blood cells to agglutinate at relatively low temperatures. Pathologic cold agglutinins can cause autoimmune hemolytic anemia.

## Cold Agglutinin Disease

Autoimmune hemolytic anemia caused by IgM autoantibodies directed against the I/i antigens on RBC membranes (maximum reactivity at  $< 30^{\circ}\text{C}$ , optimal  $4^{\circ}\text{C}$ ).

## Cold Agglutinin Syndrome

An immune-mediated disorder in which antibodies react with red blood cells at low temperatures, potentially causing hemolytic anemia or circulation-related symptoms.

## Cold Agglutinins

IgM autoantibodies that bind red blood cell antigens at temperatures below 37 degrees Celsius, causing agglutination and potentially complement-mediated hemolysis in cooler peripheral circulation.

## Cold Injury

Tissue or systemic injury caused by exposure to low temperature, including hypothermia, frostbite, chilblains, and non-freezing cold injury. Severity depends on temperature, exposure duration, moisture, wind, and perfusion; affected patients require assessment for core-temperature disturbance and

---

local tissue damage.

### **Cold Intolerance**

A clinical condition or finding involving cold intolerance. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cold Sore**

Herpes labialis: recurrent herpes simplex virus type 1 (HSV-1) infection of the lips/around mouth, presenting as prodromal tingling, then grouped vesicles that crust and heal in 7-14 days. Triggered by stress, fever, sunlight, immunosuppression, illness. Recurrence due to reactivation of latent virus in the trigeminal ganglion.

### **Colectomy**

Surgical resection of part or all of the colon. Right hemicolectomy: for cecal/ascending colon cancer. Left hemicolectomy: for descending/sigmoid cancer. Sigmoidectomy: for diverticulitis or sigmoid cancer. Total colectomy: for FAP, UC, or Lynch syndrome.

### **Colibacillosis**

Disease caused by pathogenic strains of *Escherichia coli*, which may produce intestinal infection, urinary-tract infection, sepsis, or other illness.

### **Colic**

Sudden, severe, often cramping pain caused by contraction or obstruction of a hollow organ. The term is also used for recurrent unexplained crying in an otherwise healthy infant.

### **Colitis**

Colitis is inflammation of the colon caused by infection, inflammatory bowel disease, reduced blood flow, medicines, radiation, or other injury.

### **Collagen**

The major structural protein of connective tissue, composed of three polypeptide chains arranged in a triple helix. Different collagen types provide tensile strength to skin, bone, cartilage, tendons, blood vessels, and basement membranes.

### **Collagen Disease**

A systemic disorder involving connective tissue and often immune-mediated injury to collagen-rich structures. The term has historically included diseases such as systemic lupus erythematosus and systemic sclerosis.

### **Collagen Implant**

Biocompatible scaffold for tissue engineering. Types: bovine, porcine, synthetic. Used for hernia repair, soft tissue augmentation.

### **Collagenous Colitis**

Chronic inflammatory bowel disease characterized by thickening of the subepithelial collagen band in the colonic mucosa to greater than ten micrometers normally less than five micrometers with preservation of the epithelial surface. Presents with chronic watery non-bloody diarrhea primarily in middle-aged women.

### **Collapsed Lung**

A common description of pneumothorax, in which air enters the pleural space and partially or completely collapses the lung. It may cause sudden chest pain and shortness of breath and can be life-threatening when tension develops. See also Pneumothorax.

### **Collateral Circulation**

Alternative vascular pathways that develop when coronary arteries become chronically narrowed. Collaterals connect different coronary artery territories and can partially compensate for stenosis. They develop gradually in response to ischemia and are more prominent in patients with chronic coronary artery disease.

### **Collateral Ligament Injury**

MCL (medial) or LCL (lateral) knee ligament injury. MCL more common, often from valgus stress. Treatment: braces, physical therapy, surgical repair if severe.

### **Collecting Duct**

Final segment of the nephron where fine-tuning of

---

urine concentration and composition occurs. Principal cells respond to antidiuretic hormone by inserting aquaporin-2 water channels into the luminal membrane, enabling water reabsorption and urine concentration.

### **Colles Fracture**

A fracture of the distal radius with dorsal displacement and angulation of the distal fragment, usually caused by falling on an outstretched hand.

### **Collimator**

Lead device with holes to define gamma ray direction. Types: parallel-hole, pinhole, converging, diverging. Resolution vs. sensitivity trade-off.

### **Colloids**

Solutions containing large molecules that remain in the intravascular space, providing greater volume expansion per milliliter than crystalloids. Albumin (5 percent, 25 percent) is a natural plasma protein used for volume expansion and specific indications (cirrhosis with paracentesis, nephrotic syndrome).

### **Coloboma**

A congenital defect caused by failure of the optic fissure to close during embryonic development, resulting in a keyhole-shaped gap in any ocular structure including the iris, retina, choroid, or optic nerve. Iris colobomas are the most common and appear as a comma-shaped defect in the inferior iris.

### **Colocolonic Intussusception**

telescoping of a segment of colon into an adjacent segment, less common in adults than the ileocolic type and usually associated with a pathological lead point such as a polyp, tumor, or lipoma. Adults typically present with intermittent abdominal pain, bloating, and change in bowel habits.

### **Colon**

The largest part of the large intestine, extending from the cecum to the rectum. Anatomically divided into ascending colon (right side), transverse colon (across the abdomen), descending colon (left side), and sigmoid colon (S-shaped, leading to the rectum).

### **Colon Cancer**

Malignant neoplasm arising from the colonic epithelium, the third most common cancer worldwide and a leading cause of cancer-related mortality. Most arise from adenomatous polyps through the adenoma-carcinoma sequence over ten to fifteen years.

#### **Synonyms:**

Cancer, Colon Colorectal Cancer (Colon Cancer)

### **Colonic Ischemia**

Decreased blood flow to the colon causing mucosal or transmural injury. Most commonly affects watershed areas particularly the splenic flexure and rectosigmoid junction. Causes include non-occlusive hypoperfusion from cardiogenic shock, vasoconstrictive medications, and vasculitis.

### **Colonization**

Presence and multiplication of microorganisms on or in a body site without tissue invasion or clinical disease. Colonization may precede infection but does not by itself establish that symptoms are caused by the organism.

### **Colonoscopy**

Colonoscopy uses a flexible camera to examine the rectum and entire colon, allowing biopsy and removal of polyps or other lesions.

### **Colony-Forming Unit**

A unit used to estimate the number of viable microorganisms in a sample, derived from counting colonies grown on agar after plating a diluted sample. Each colony is assumed to arise from a single viable microorganism (or a cluster); results are reported as CFU/mL or CFU/g.

### **Color Blindness**

Reduced or absent ability to distinguish certain colors under normal lighting. It is often inherited, especially through X-linked variants, but may also result from eye disease, neurologic disease, aging, or medicines.

#### **Synonyms:**

Deficient Color Vision Poor Color Vision

---

## Color Doppler

An ultrasound method that displays the direction and relative speed of blood flow in color over a grayscale image.

## Color Vision Deficiency

Color vision deficiency, commonly known as color blindness, is a condition in which the ability to perceive and discriminate certain colors is reduced or absent, most commonly affecting the perception of red and green hues, and it is caused by abnormalities in the cone photoreceptors responsible for color vision.

## Colorado Tick Fever

An acute viral infection transmitted by ticks and characterized by fever, headache, myalgia, and sometimes leukopenia or rash.

## Colorectal Adenocarcinoma

The third most common cancer worldwide and the second leading cause of cancer death, arising from the colonic epithelium through the adenoma-carcinoma sequence over 10 to 15 years. The pathogenesis involves sequential accumulation of genetic mutations beginning with APC loss, followed by KRAS activation, TP53 loss, and other alterations.

## Colorectal Cancer

A malignant tumor of the colon or rectum. It may cause bleeding, altered bowel habits, anemia, abdominal pain, or no early symptoms; evaluation and treatment depend on the tumor's location and stage.

## Colorectal Cancer Genetics

The study of inherited variants that increase the risk of colorectal cancer. Important inherited syndromes include Lynch syndrome, involving DNA mismatch-repair genes, and familial adenomatous polyposis, involving the APC gene.

## Colorectal Cancer Screening

Public health strategy to detect colorectal cancer and precancerous polyps in asymptomatic individuals. Current guidelines recommend screening begin-

ning at age forty-five.

## Colorectal Cancer Screening Tests

Tests used to detect colorectal cancer or precancerous polyps in people without symptoms. They include stool-based tests and examinations that visualize the colon, such as colonoscopy, CT colonography, and flexible sigmoidoscopy. The appropriate test and interval depend on age, risk, and local guidance.

## Colorectal Surgery

Surgical treatment of diseases of the colon, rectum, and anus. Procedures may include segmental bowel resection, restorative reconstruction, stoma formation, or local procedures, depending on the disease and its extent.

## Colostomy

A clinical condition or finding involving colostomy. Its defining features, causes, evaluation, and management depend on the clinical context.

## Colostrum

The thick, yellowish fluid produced by the mammary glands in late pregnancy and the first few days postpartum. Rich in immunoglobulins (especially IgA), proteins, leukocytes, and growth factors.

## Colpitis

Inflammation of the vagina, often due to infection, altered vaginal flora, irritation, or hormonal change.

## Colposcopy

Magnified visualization of the cervix, vagina, and vulva after application of acetic acid. Indication: abnormal Pap smear (ASCUS with high-risk HPV, LSIL, HSIL, AGC). Acetic acid causes acetowhite lesions in dysplastic epithelium. Lugol iodine (Schiller test): normal glycogenated epithelium stains brown; abnormal epithelium does not.

## Coma

A state of profound unresponsiveness in which a person cannot be awakened and does not show pur-

---

poseful responses. It is a medical emergency with many possible causes.

**Synonyms:**

Severe Brain Injury, Coma

**Coma Scale**

A standardized tool for describing level of consciousness using eye opening, verbal response, and motor response.

**Combination Inhalers**

Inhalers containing both an inhaled corticosteroid and a long-acting beta-2 agonist. Examples include fluticasone/salmeterol (Advair), budesonide/formoterol (Symbicort), and fluticasone furoate/vilanterol (Breo Ellipta). They simplify asthma and COPD maintenance therapy and improve adherence.

**Combination Therapy**

Use of two or more treatments together to address a disease or mechanism. The benefits and risks depend on the condition and the specific combination.

**Combined Spinal-Epidural Analgesia**

A neuraxial analgesia technique for labor that combines a spinal injection (short-acting opioid or opioid + low-dose local anesthetic) with an epidural catheter. Advantages: rapid onset of pain relief (3-5 minutes from the spinal component), minimal motor block, and the ability to dose through the epidural catheter for prolonged labor.

**Comedocarcinoma**

A form of ductal carcinoma in situ of the breast characterized by central necrosis within malignant ducts, which may produce a comedo-like appearance.

**Comfort Measures Only**

A care plan focused on relief of pain, breathlessness, distress, and other symptoms rather than treatments intended to prolong life.

**Comminuted**

Describing a fracture in which a bone is broken into

multiple fragments.

**Comminuted Fracture**

A fracture in which the bone is broken into three or more fragments. It may result from high-energy trauma and can be associated with soft-tissue injury, instability, and impaired healing.

**Commissurotomy**

Surgical incision or separation of a commissure, especially a fused cardiac valve commissure, to relieve obstruction.

**Commode**

A portable toilet or chair placed near a bed for a person who cannot easily reach a bathroom.

**Common Bile Duct**

The duct formed by union of the common hepatic and cystic ducts. It conveys bile to the duodenum, usually joining the pancreatic duct at the hepatopancreatic ampulla.

**Common Cold**

An acute, self-limited viral infection of the upper respiratory tract, one of the most frequent illnesses in humans, with adults experiencing 2-4 episodes annually and children 6-8 episodes.

**Synonyms:**

Cold, Common Cold (Common Cold)

**Common Iliac Arteries**

Terminal abdominal aortic branches at L4, each approximately 4 cm long, dividing into internal and external iliac arteries. They supply the pelvis and lower extremities. The right common iliac artery crosses anterior to the right common iliac vein.

**Common Peroneal Nerve**

Sciatic division (L4-S2) winding around the fibular neck, the body's most vulnerable major nerve to external compression. Divides into superficial peroneal (peroneus longus/brevis, dorsal foot sensation) and deep peroneal (tibialis anterior, extensors, first web space sensation).

---

### **Common Peroneal Neuropathy**

A peripheral nerve disorder causing weakness of ankle dorsiflexion and eversion, sensory loss over the anterolateral leg and dorsum of the foot, and possible foot drop.

### **Common Variable Immunodeficiency**

The most common symptomatic primary immunodeficiency in adults, affecting approximately 1 in 25,000 individuals. It is characterized by hypogammaglobulinemia (low IgG with low IgA and/or IgM), impaired antibody response to vaccines, and increased susceptibility to infections.

### **Common Wart**

A benign epidermal proliferation caused by human papillomavirus, presenting as a rough hyperkeratotic papule, commonly on the hands or fingers.

### **Commotio Cordis**

Sudden cardiac arrest caused by a blunt, nonpenetrating impact to the chest at a vulnerable moment in the cardiac cycle, without structural heart injury.

### **Communicable Disease**

Any disease caused by bacteria, viruses, or other pathogens that is spread from person to person.

### **Communicating Hydrocephalus**

A type of hydrocephalus in which there is free flow of cerebrospinal fluid (CSF) between the ventricles, but impaired absorption of CSF at the arachnoid granulations or increased CSF production. The ventricles are uniformly dilated, including the fourth ventricle.

### **Community Acquired Infection**

An infection present or incubating at hospital admission, or developing within 48 hours of admission without recent healthcare exposure. Common examples include pneumonia, urinary tract infection, and meningitis caused by organisms such as *Streptococcus pneumoniae* and *Escherichia coli*, generally susceptible to narrow-spectrum antibiotics.

### **Community Health Worker**

A trained member of a community who helps connect people with health services, education, prevention, and social support.

### **Community Rehabilitation**

Rehabilitation delivered in community settings to improve a person's participation, independence, and daily functioning.

### **Community Reintegration**

Return to community roles: work, leisure, social. Vocational rehabilitation, accessibility modifications.

### **Community-Acquired**

Acquired outside a healthcare facility or before a person has been exposed to healthcare-associated conditions.

### **Community-Acquired Pneumonia**

CAP: acquired outside hospital. CURB-65 (confusion, uremia  $>7$ , respiratory rate  $\geq 30$ , BP  $<90/60$ , age  $\geq 65$ ) and PSI/PORT score for severity/site of care. Outpatient: amoxicillin 1g TID, doxycycline 100 mg BID, or macrolide (if resistance  $<25$  percent); respiratory fluoroquinolone (levofloxacin, moxifloxacin) as alternative.

### **Comorbidity**

Presence of two or more chronic conditions in same individual. Common in elderly: hypertension, diabetes, arthritis, COPD, depression. Increases complexity of care, polypharmacy risk, functional decline. Comprehensive assessment needed for each condition and interactions.

### **Comparison**

A reference in an imaging report to earlier studies used to assess whether a finding has changed.

### **Compartment Pressure**

The pressure within a closed osteofascial compartment. Markedly elevated pressure can impair capillary perfusion and cause acute compartment syn-

---

drome; pressure measurements support but do not replace clinical assessment.

### Compartment Syndrome

A surgical emergency caused by increased pressure within a closed osteofascial compartment, leading to tissue ischemia, necrosis, and permanent functional loss. The lower leg (anterior, lateral, deep posterior, and superficial posterior compartments) and forearm (flexor and extensor compartments) are the most commonly affected sites.

#### Synonyms:

Syndrome Compartment (Compartment Syndrome)

### Competence

Autonomous voluntary authorization given by a competent patient to undergo a specific medical intervention, procedure, or clinical trial. See informed consent.

### Competitive Antagonist

A competitive antagonist is a drug that binds to the same receptor site as an agonist and competes for binding, reducing the effect of the agonist without producing an effect of its own.

### Competitive Inhibition

A type of enzyme inhibition where the inhibitor (I) competes with the substrate (S) for binding to the enzyme's active site. The inhibitor structurally resembles the substrate and binds reversibly to the free enzyme (E), forming an EI complex that cannot proceed to product.

### Complement C1Q Deficiency

Autosomal recessive (C1QA, C1QB, C1QC). C1q essential for classical pathway activation and immune complex clearance. 85-90% develop SLE-like disease (malar rash, photosensitivity, nephritis, anti-nuclear antibodies). Recurrent infections with encapsulated bacteria. Low CH50, low C1q, normal C3/C4.

### Complement C2/C4 Deficiency

C2 deficiency: most common early complement deficiency (1:20,000 Caucasians). SLE-like disease (10-30%), recurrent sinopulmonary infections. C4 defi-

ciency: similar, strong SLE association (C4A/C4B null alleles). Low CH50, low C2 or C4, normal C3. Treatment: SLE management, prophylactic antibiotics, IVIG for recurrent infections.

### Complement C3

The central complement component cleaved into C3a and C3b during activation of the classical, lectin, or alternative pathway. C3b promotes opsonization and formation of downstream convertases; severe C3 deficiency causes recurrent severe infections, especially with encapsulated bacteria.

### Complement Cascade

The ordered activation of 30 serum and membrane proteins (complement) that opsonize pathogens, lyse microbes (membrane attack complex), and promote inflammation.

### Complement Deficiencies

Rare primary immunodeficiencies caused by genetic defects in complement pathway proteins, increasing susceptibility to specific infections and autoimmune diseases.

### Complete Blood Count

A panel measuring red blood cells, white blood cells, platelets, hemoglobin, hematocrit, red-cell indices, and often a white-cell differential. Results are interpreted using age-, sex-, and laboratory-specific reference ranges.

### Complete Denture

Removable prosthesis replacing all teeth in arch. Maxillary and mandibular. Stability challenging in edentulous patients.

### Complete Response

Disappearance of all detectable signs of a cancer after treatment. It does not necessarily mean that every cancer cell has been eliminated.

### Complex Carbohydrates

Carbohydrates made up of longer chains of sugars, chiefly starches and dietary fiber, found in foods

---

such as whole grains, legumes, vegetables, and potatoes. Fiber is not fully digested and supports bowel function, satiety, and metabolic health, while starch is digested into glucose at a rate that depends on food structure and processing.

### **Complex Regional Pain Syndrome**

A chronic pain condition characterized by regional pain and sensory changes disproportionate to the inciting event. Type I (reflex sympathetic dystrophy): no identifiable nerve injury. Type II (causalgia): follows a major nerve injury.

### **Compliance**

The extent to which a person follows a treatment recommendation; adherence is generally preferred because it emphasizes an agreed plan.

### **Complicated Grief**

Persistent, intense grief that substantially interferes with daily functioning and lasts longer than expected for the person's cultural and social context.

#### **Synonyms:**

Complicated Bereavement Traumatic Grief

### **Complicated Urinary Tract Infection**

A urinary infection associated with functional or structural abnormality, obstruction, catheterization, renal impairment, male anatomy, pregnancy, or another factor increasing treatment failure or complication risk. Management requires culture-directed therapy and correction of the underlying problem when possible.

### **Complication**

Any adverse event arising during or after a surgical procedure, graded by the Clavien-Dindo classification from minor deviation (Grade I) through organ failure (Grade IV) to death (Grade V). Common types include surgical site infection, hemorrhage, wound dehiscence, anastomotic leak, ileus, and venous thromboembolism.

### **Complications (Vascular)**

Post-procedural issues: bleeding, infection, thrombosis, embolism, limb ischemia.

#### **Synonyms:**

Vascular

### **Composite Resin**

Tooth-colored restorative material. Bis-GMA or UDMA resin matrix with silica filler. Adhesive bonding. Esthetic but less durable than ceramic.

### **Compound Presentation**

A fetal presentation where an extremity (hand, arm, foot) presents alongside the vertex or breech. Most common: hand alongside the head. Incidence: 1:300-1:1000. Fetal prognosis is generally good; the prolapsed extremity often retracts as labor progresses. Management: expectant management in most cases.

### **Compounding**

Preparation, mixing, or altering of a medicine to meet an individual patient's needs when an appropriate approved product is unavailable.

### **Comprehensive Geriatric Assessment**

A multidimensional assessment of an older person's medical conditions, medicines, function, cognition, mood, and social support, used to develop an individualized care plan.

### **Comprehensive Metabolic Panel**

Extended version of BMP including albumin, total protein, alkaline phosphatase, ALT, AST, and bilirubin (total and direct). Evaluates liver function, kidney function, electrolytes, glucose, calcium, and protein status. Uses: preoperative assessment, medication monitoring, and liver/kidney disease evaluation.

### **Compression Therapy**

Use of external pressure, usually from garments or bandages, to support venous or lymphatic flow and reduce swelling in selected conditions.

### **Compression Ultrasound**

An ultrasound technique in which gentle pressure is applied to assess whether a vein collapses. Failure of a vein to compress may suggest thrombosis.

---

### Compressive Atelectasis

Atelectasis caused by external compression of the lung by pleural fluid, air, or a mass. The lung volume is reduced by the external force. It is reversible when the compressing force is relieved (e.g., drainage of pleural effusion).

### Compton Scattering

An interaction in which a photon transfers part of its energy to an electron and changes direction. It contributes to scattered radiation in imaging.

### Compulsions

Repetitive behaviors or mental acts that the individual feels driven to perform in response to an obsession or according to rigid rules. They are aimed at preventing or reducing anxiety or preventing some dreaded event, but are not connected in a realistic way with what they are designed to neutralize.

### Computed Tomography

Cross-sectional imaging using rotating X-ray tube and detectors. Produces axial images, reconstructable into sagittal, coronal, 3D. CT number measured in Hounsfield units (HU): water = 0, air = -1000, bone = +1000. Contrast: iodine-based, enhances vascular structures and perfused organs. Speed: seconds.

### Computed Tomography Scan

Cross-sectional imaging using X-rays and computer processing. Emergency uses: head trauma (hemorrhage, fracture), chest (pulmonary embolism, aortic dissection), abdomen (appendicitis, bowel obstruction), CT pulmonary angiography (CTPA), CT angiography (CTA). Fast, widely available, high sensitivity for acute conditions.

### Concato's Disease

A historical term for primary polycythemia, now generally called polycythemia vera, a myeloproliferative neoplasm causing increased red-cell mass and often elevated blood viscosity.

### Concealed Pregnancy

Pregnancy that is hidden or not recognized until

delivery, often by denial (psychogenic) or deliberate concealment; a medicolegal concept relevant to infanticide.

### Concentration

Amount of substance per unit volume. Units: mg/dL, mmol/L, mEq/L, ppm. Conversion: molecular weight needed. Critical for toxicity assessment.

### Conception (Fertilization)

The fusion of a sperm and an ovum in the ampulla of the fallopian tube, forming a zygote. The sperm penetrates the corona radiata and zona pellucida (acrosome reaction). After fertilization, the zygote undergoes cleavage (mitotic division) as it travels toward the uterus. Implantation occurs approximately 6-10 days after ovulation.

#### Synonyms:

Fertilization

### Conchae

Curved bony structures covered by mucosa inside the nasal cavity that warm, humidify, and filter inhaled air.

### Conclusion

The part of a report that summarizes the main findings and their clinical significance or recommended next steps.

### Concomitant

A clinical condition or finding involving concomitant. Its defining features, causes, evaluation, and management depend on the clinical context.

### Concordance

Probability both twins have same trait. Monozygotic (identical) twins > dizygotic (fraternal) for genetic traits. High concordance suggests genetic influence.

### Concrescence

Union of adjacent teeth by cementum only. Usually posterior teeth.

---

### Concretio Cordis

Abnormal adhesion or fusion of structures within or around the heart, including adhesion of the pericardial surfaces or fusion of cardiac components.

### Concussion

A form of mild traumatic brain injury caused by a biomechanical force (direct blow to the head, face, neck, or elsewhere on the body with impulsive force transmitted to the head), resulting in a transient disturbance of brain function without structural damage visible on conventional neuroimaging.

### Condition

A general term for a state of bodily health or, in medical usage, a specific deviation from normal in structure or function that may or may not constitute a disease, including complaints lacking a discrete pathologic basis and overt diagnoses.

### Conduct Disorder

A childhood or adolescent disorder involving a persistent pattern of behavior that violates the rights of others or major age-appropriate rules. Examples include aggression, property destruction, deceitfulness, theft, and serious rule violations.

### Conduction Deafness

Hearing loss caused by impaired transmission of sound through the external or middle ear, with the inner ear and neural auditory pathways relatively preserved.

### Conductive Deafness

Hearing loss resulting from a problem in the external auditory canal, tympanic membrane, or middle ear that reduces conduction of sound to the inner ear.

### Conductive Hearing Loss

Hearing loss caused by impaired transmission of sound through the outer or middle ear. Audiometry commonly shows an air-bone gap, and causes include earwax, middle-ear fluid, perforation, otosclerosis, and ossicular disease.

### Condylar Process

The rounded articular projection of a bone, especially the mandibular process that articulates with the temporal bone to form the temporomandibular joint.

### Condyloma Acuminata

Soft, wart-like genital or perianal growths caused by certain human papillomavirus types.

### Condyloma Acuminatum

A benign, exophytic, papillomatous growth of the anogenital skin caused by human papillomavirus, most commonly types 6 and 11. They present as soft, flesh-colored, verrucous papules or plaques in the genital and perianal region. Condylomata are sexually transmitted and may be associated with cervical dysplasia.

### Condyloma Latum

Mucocutaneous lesion of secondary syphilis caused by *Treponema pallidum*, distinct from condyloma acuminata (genital wart).

### Condylomata Lata

Broad, flat, moist, grayish-white papules occurring in secondary syphilis, typically found in the anogenital region and other intertriginous areas. They are highly infectious and contain abundant *Treponema pallidum* organisms. Diagnosis is by darkfield microscopy or serological testing for syphilis.

### Cone-Beam Computed Tomography

Three-dimensional dental imaging using a cone-shaped X-ray beam and a rotating detector. It provides high-resolution views of teeth and maxillofacial bone with generally less radiation than conventional medical CT, but should be used only when the additional information affects care.

### Confabulation

Production of false or inaccurate statements or memories without conscious intent to deceive, often associated with memory impairment or frontal-lobe dysfunction.

---

## Confidentiality

The ethical and legal duty of healthcare professionals to protect patient information from unauthorized disclosure. Founded on the principle of respect for patient autonomy and trust, confidentiality is a core requirement of medical ethics (GMC guidelines) and law (GDPR, Data Protection Act, Caldicott principles).

## Confirmatory Test

A test used to verify a preliminary or screening result, often with a different method or greater specificity. Confirmation should be selected according to the condition, specimen, timing, and accepted clinical guidelines.

## Confounding

Distortion of association by third variable. Examples: age confounding relationship between exposure and disease. Controlled by matching, stratification, regression.

## Confusion (Delirium)

Acute onset fluctuating disturbance in attention and awareness. Usually reversible. Precipitants: infection, medications, metabolic derangement, pain, constipation, urinary retention. Differentiate from dementia (chronic, progressive). Treatment: identify and treat underlying cause, environmental modification, avoid anticholinergics.

### Synonyms:

Delirium

## Confusion Assessment Method

A standardized bedside algorithm for detecting delirium. It identifies acute or fluctuating change, inattention, disorganized thinking, and altered level of consciousness; delirium requires the first two features plus either of the latter two.

## Congenital Adrenal Hyperplasia

Group of autosomal recessive disorders caused by enzyme deficiencies in the adrenal steroidogenesis pathway. Twenty-one hydroxylase deficiency is the most common accounting for approximately ninety-five percent of cases.

## Congenital Cataract

Opacification of the crystalline lens present at birth, a leading cause of treatable childhood blindness worldwide.

## Congenital CMV

Cytomegalovirus infection acquired in utero, the most common congenital viral infection. Maternal primary infection poses highest risk of fetal transmission and disease. Can cause microcephaly, sensorineural hearing loss, chorioretinitis, hepatosplenomegaly, and petechiae. Diagnosis by CMV PCR in urine or saliva.

## Congenital Contractural Arachnodactyly

An inherited connective-tissue disorder characterized by long slender fingers and toes, congenital flexion contractures, muscular hypoplasia, and sometimes kyphoscoliosis.

## Congenital Cytomegalovirus Infection

Cytomegalovirus infection acquired before birth. It may cause hearing loss, developmental problems, microcephaly, or no symptoms.

## Congenital Diaphragmatic Hernia

A defect in the diaphragm allowing abdominal organs to herniate into the thoracic cavity, causing pulmonary hypoplasia and respiratory distress at birth. Most commonly a posterolateral (Bochdalek) defect on the left side. Presents with cyanosis, scaphoid abdomen, and bowel sounds in the chest.

## Congenital Disorder

A medical condition or structural abnormality present in an individual from birth, which may be caused by genetic factors or environmental influences in the womb.

## Congenital Glaucoma

A rare form of glaucoma (1 in 10,000-20,000 births) caused by developmental anomalies of the trabecular meshwork and anterior chamber angle, impairing aqueous humor outflow. Most cases are sporadic; familial forms are autosomal recessive (CYP1B1 gene mutations).

---

### **Congenital Heart Disease**

Structural or functional abnormalities of the heart or great vessels present at birth. Examples include septal defects, patent ductus arteriosus, tetralogy of Fallot, transposition of the great arteries, coarctation of the aorta, and hypoplastic left-heart syndrome.

### **Congenital Heart Murmur**

A heart murmur heard in a newborn or infant. It may be innocent or may indicate a structural heart defect; assessment considers the murmur's characteristics and associated symptoms or examination findings.

### **Congenital Hip Dislocation**

Abnormal development or displacement of the hip joint present at birth or developing in infancy, now generally called developmental dysplasia of the hip.

### **Congenital Hyperinsulinism**

Condition of inappropriate insulin secretion in neonates and infants causing severe hypoglycemia. Most commonly caused by mutations in the KATP channel genes ABCC8 and KCNJ11. Histologically classified into focal and diffuse forms. Presents with severe symptomatic hypoglycemia in the first days of life.

### **Congenital Hyperthyroidism**

Thyrotoxicosis present at birth most commonly caused by maternal Graves disease with transplacental passage of thyroid-stimulating immunoglobulins. Presents with tachycardia, irritability, poor feeding, weight loss, and goiter. Transient neonatal hyperthyroidism resolves as maternal antibodies are cleared over weeks to months.

### **Congenital Hypothyroidism**

Thyroid hormone deficiency present at birth occurring in approximately one in two thousand to four thousand live births. Most common cause is thyroid dysgenesis including aplasia, ectopia, and hypoplasia. Universal newborn screening with TSH or T4 allows early detection and treatment preventing intellectual disability.

### **Congenital Megacolon**

Hirschsprung disease, a congenital absence of enteric ganglion cells in a segment of the bowel that causes functional obstruction and enlargement of the proximal colon.

### **Congenital Melanocytic Nevus**

A melanocytic nevus present at birth or appearing within the first few weeks of life, ranging from small (< 1.5 cm) to giant lesions covering large body surface areas. It results from proliferation of melanocytes during embryonic development and carries a small but important risk of melanoma, which is higher in larger lesions.

### **Congenital Nevus**

A melanocytic mole present at birth or developing soon afterward. It is composed of melanocytes in the epidermis and dermis. Size, location, and changes over time determine the need for clinical assessment and surveillance.

### **Congenital Pneumonia**

Lung infection acquired in utero, often from ascending chorioamnionitis. Presents with respiratory distress, fever or hypothermia, and sepsis. Common organisms include Group B Streptococcus, *E. coli*, and Ureaplasma. Diagnosis by chest X-ray showing infiltrates and blood culture.

### **Congenital Rubella Syndrome**

Fetal infection with rubella virus, particularly dangerous in the first trimester. Classic triad: congenital heart disease (patent ductus arteriosus, pulmonary stenosis), cataracts, and sensorineural hearing loss. Also causes hepatosplenomegaly, thrombocytopenia, and blueberry muffin rash.

### **Congenital Scoliosis**

A lateral curvature of the spine caused by congenital vertebral anomalies that arise during embryogenesis (failure of formation or segmentation). Failure of formation: hemivertebra (wedge-shaped vertebra causing progressive curvature). Failure of segmentation: unilateral unsegmented bar (block of bone on one side).

---

## **Congenital Syphilis**

*Treponema pallidum* infection acquired transplacentally. Can cause stillbirth, prematurity, hepatosplenomegaly, rash, snuffles, osteochondritis, and Hutchinson teeth. Diagnosed by darkfield microscopy, VDRL/RPR in neonatal serum, or PCR.

## **Congenital Zika Syndrome**

Fetal brain infection with Zika virus, causing microcephaly, brain abnormalities, eye defects, hearing loss, and limb contractures. Transmission occurs via mosquito bite or sexual contact. Diagnosis by Zika virus PCR in maternal serum or amniotic fluid. No specific treatment. Prevention by avoiding endemic areas during pregnancy.

## **Congestion**

A passive vascular phenomenon of engorgement of a tissue or organ with blood from impaired venous or lymphatic drainage. Chronic venous congestion produces stasis, hypoxia, dilated vessels, edema, hemorrhage, and hemosiderin-laden macrophages, exemplified by the lungs (heart failure cells) and liver (nutmeg liver).

## **Congestive Heart Failure**

A historical term for heart failure with clinical fluid congestion. Current terminology is heart failure, which may occur with or without congestion and is classified by left-ventricular ejection fraction, symptoms, and disease stage.

## **Conization**

Surgical removal of a cone-shaped portion of the cervix for diagnosis or treatment of cervical dysplasia or selected early cervical cancers.

## **Conjoined Twins**

Monozygotic, monochorionic, monoamniotic twins who are physically connected at birth, resulting from incomplete fission of the fertilized ovum after day 13 of fertilization. Incidence: 1 in 50,000-100,000 births.

## **Conjunctiva**

An anatomical or cellular structure referred to as

conjunctiva. Its clinical importance depends on its location, function, and associated disease. the eyelids (palpebral conjunctiva) and covers the anterior surface of the sclera (bulbar conjunctiva), forming a continuous sheet that protects the eye and facilitates smooth eyelid movement.

## **Conjunctival Squamous-Cell Carcinoma**

A malignant tumor of the conjunctival epithelium, typically arising from the limbal area. It is associated with UV radiation exposure and can invade locally if not treated promptly.

## **Conjunctivitis**

Inflammation of the conjunctiva, the thin, transparent mucous membrane lining the inner surface of the eyelids and the anterior surface of the sclera. Conjunctivitis is the most common cause of red eye and is classified by etiology.

## **Conjunctivoplasty**

Plastic or reconstructive surgery of the conjunctiva, performed to repair defects, scarring, adhesions, or other abnormalities of the ocular surface.

## **Conn's Syndrome**

Primary hyperaldosteronism caused by autonomous secretion of aldosterone, leading to hypertension and often low serum potassium.

## **Connective Tissue**

A diverse type of tissue that supports, binds, protects, and insulates organs and structures throughout the body.

## **Connective Tissue Disease**

Autoimmune diseases affecting connective tissue. Examples: SLE, scleroderma, RA, Sjogren syndrome, mixed connective tissue disease. Overlap syndromes common.

## **Conscious Sedation**

A drug-induced depression of consciousness in which patients respond purposefully to verbal or tactile stimulation, maintain a patent airway, and retain

---

protective reflexes. Typical agents include midazolam, fentanyl, or low-dose propofol. Indications include endoscopic and minor surgical procedures.

### **Consolidation**

An area of lung in which air spaces are filled with fluid, cells, or other material, increasing its density on imaging. Causes include pneumonia, edema, hemorrhage, and tumor.

### **Consolidation Therapy**

Additional treatment given after remission to eliminate residual disease and reduce the risk of relapse.

### **Constipation**

Infrequent or difficult passage of stools, often with hard stools, straining, incomplete evacuation, or a sensation of blockage. Causes include diet, medicines, functional disorders, and structural or systemic disease.

#### **Synonyms:**

Constipation Home Remedies (Constipation)

### **Constitutional Delay In Puberty**

A normal variant in which pubertal development is delayed but eventually progresses normally; growth and bone age are typically delayed.

### **Constraint-Induced Movement Therapy**

Rehabilitation that limits use of a less-affected limb while providing structured practice with an affected limb to improve functional use in selected people.

### **Constrictive Pericarditis**

Thickening and fibrosis of the pericardium restricting diastolic ventricular filling. Presents with jugular venous distension, peripheral edema, hepatomegaly, and Kussmaul sign. Causes include idiopathic, post-viral, radiation, and tuberculosis. Pericardiectomy is the definitive treatment.

### **Consultation-Liaison Psychiatry**

The subspecialty of psychiatry focused on the interface between psychiatry and general medical illness. Psychiatrists provide consultation on medical-

surgical wards for patients with psychiatric symptoms arising from or coexisting with medical conditions.

### **Contact Allergen Testing**

Patch testing identifies allergens causing allergic contact dermatitis. Standard panel includes 35 common allergens (nickel, fragrance mix, balsam of Peru, formaldehyde, rubber accelerators, topical antibiotics, preservatives). Patches are applied to the back for 48 hours and read at 48, 72, and 96 hours.

### **Contact Dermatitis**

An inflammatory skin reaction caused by contact with an external substance. It may be allergic, involving delayed immune sensitization, or irritant, caused by direct chemical or physical injury.

#### **Synonyms:**

Dermatitis, Contact

### **Contact Precautions**

Infection control measures used for patients colonised or infected with multidrug-resistant organisms. Precautions include gown and glove use, patient placement in single rooms, and dedicated equipment. Contact precautions are used for MRSA, VRE, CRE, and other resistant organisms.

### **Contact Tracing**

Identifying and monitoring persons exposed to infectious disease. Critical for outbreak control. Examples: COVID-19, Ebola, TB.

### **Contagious Disease**

An infectious disease that can be transmitted directly or indirectly from one person, animal, or source to another.

### **Contamination**

Accidental presence of microorganisms in a specimen, on a surface, or in a normally sterile material without true infection of the host. Contamination can produce misleading culture results and must be distinguished from colonization and invasive disease.

---

### Continuing Medical Education

Postgraduate education that maintains and updates a clinician's knowledge, skills, and professional competence.

### Continuity Of Care

Consistent and coordinated care over time and across clinicians or settings, integrating the patient's history, current needs, treatment plan, and preferences. It supports safety, adherence, prevention, and chronic-disease outcomes.

### Continuous Electronic Fetal Monitoring

The continuous recording of fetal heart rate (FHR) and uterine contractions using external transducers (Doppler ultrasound and tocodynamometer) or internal devices (fetal scalp electrode and intrauterine pressure catheter). Used intrapartum to detect fetal hypoxia.

### Continuous Glucose Monitoring

Technology measuring interstitial glucose levels continuously providing real-time glucose data, trends, and alerts. Sensors are inserted subcutaneously typically in the abdomen or arm and measure glucose every five minutes. Devices include Dexcom, FreeStyle Libre, and Medtronic Guardian systems.

### Continuous Kidney Replacement Therapy

A prolonged extracorporeal blood-purification therapy, usually delivered continuously in an intensive-care setting. It provides gradual fluid and solute removal and is useful for hemodynamically unstable patients with severe AKI.

### Continuous Murmurs

Murmurs that persist throughout systole and diastole without interruption, produced by blood flowing continuously through an abnormal connection. The most common cause is patent ductus arteriosus (PDA), where blood flows from the aorta to pulmonary artery throughout the cardiac cycle.

### Continuous Positive Airway Pressure

Noninvasive respiratory support that delivers a constant positive pressure throughout the breathing

cycle to keep the upper airway or alveoli open.

### Contraception

Methods to prevent pregnancy.

### Contraception And Birth Control

Contraception encompasses methods used to prevent pregnancy, including hormonal options like oral contraceptives, patches, rings, injections, and implants, as well as non-hormonal methods like copper IUDs, barrier methods, diaphragms, and permanent sterilization.

### Contraception For Adolescents

Methods to prevent unintended pregnancy. Options: combined oral contraceptives, progestin-only pills, depot medroxyprogesterone acetate, contraceptive implant (Nexplanon), intrauterine devices (IUDs), condoms, and abstinence.

### Contracted Pelvis

A pelvis whose size or shape is reduced or abnormal enough to interfere with passage of the fetus during labor.

### Contraction Stress Test

An antepartum test that evaluates the fetal heart rate response to uterine contractions. Contractions are induced with oxytocin or nipple stimulation (until 3 contractions in 10 minutes). Negative (normal): no late or significant variable decelerations. Positive (abnormal): late decelerations with  $\geq 50\%$  of contractions.

### Contractions

Rhythmic uterine muscular contractions of labor that produce cervical dilation and effacement, driving descent of the fetus. Characterized by frequency, duration, and intensity; progress is monitored by partogram and tocography (CTG). Braxton Hicks contractions: irregular, non-progressive, painless prelabor contractions.

### Contracture

Permanent or semi-permanent limitation of pas-

---

sive joint range of motion caused by shortening or structural change in muscle, tendon, capsule, fascia, skin, or other periarticular tissue. Prevention and treatment depend on cause and stage.

### **Contracture Prevention**

Measures such as positioning, stretching, exercise, splinting, orthoses, and serial casting that help preserve joint movement in people at risk of fixed shortening.

### **Contraindication**

A clinical condition or finding involving contraindication. Its defining features, causes, evaluation, and management depend on the clinical context.

#### **Synonyms:**

Contraindications

### **Contralateral**

Located on the opposite side of the body.

### **Contrast Radiology (GI)**

Imaging of the gastrointestinal tract using contrast material, such as barium, to outline the esophagus, stomach, intestine, or colon on radiographs or fluoroscopy.

### **Contrast Agent**

Substance enhancing image visibility. X-ray/CT: iodine-based (positive contrast). MRI: gadolinium-based (shortens T1, bright on T1). Ultrasound: microbubble agents. Barium sulfate for GI studies.

### **Contrast Echocardiography**

Use of microbubble contrast agents to enhance endocardial border definition and assess myocardial perfusion. Indicated for suboptimal non-contrast echo images and assessment of myocardial viability. Microbubbles remain entirely within the intravascular space, making them ideal for perfusion assessment.

### **Contrast Reaction**

Adverse reaction to contrast agent. Mild: nausea, urticaria. Severe: anaphylaxis, bronchospasm. Pre-medication for prior reactions.

### **Contrast-Associated Acute Kidney Injury**

Acute worsening of kidney function occurring after administration of contrast, whether or not contrast is causal. Risk assessment includes baseline kidney function, hemodynamic status, diabetes, nephrotoxins, urgency, and the need to avoid unnecessary contrast exposure.

### **Contrast-Enhanced Ultrasound**

Ultrasound using microbubble contrast agents. Improves lesion characterization, perfusion assessment.

### **Contrast-Induced Nephropathy**

Acute kidney injury after iodinated contrast administration. Risk factors: pre-existing renal impairment, diabetes, dehydration. Prevention: hydration, lowest contrast volume, N-acetylcysteine controversial.

### **Contrecoup**

An injury occurring on the side of an organ opposite the site of impact, especially a brain injury produced when the brain moves within the skull after trauma.

### **Control Group**

The comparison group in a study, which may receive usual care, a placebo, or no intervention according to the study design.

### **Controlled Cord Traction**

A technique for active management of third-stage labor: gentle, steady traction on the umbilical cord with one hand while the other hand applies suprapubic counter-pressure (to prevent uterine inversion). Performed after signs of placental separation. The Brandt-Andrews maneuver and the Finocchietti technique are CCT methods.

### **Controlled Substance**

A drug or chemical whose manufacture, possession, and use are regulated by government authorities due to its potential for abuse, dependence, or harm.

### **Contusion**

A closed soft-tissue injury caused by blunt force,

---

producing bleeding into tissues without an open wound. It commonly causes pain, swelling, and ecchymosis; severe contusions may involve muscle necrosis, compartment syndrome, internal bleeding, or associated bone and organ injury.

### **Conus Medullaris Syndrome**

A clinical condition resulting from damage to the conus medullaris, the tapered, terminal end of the spinal cord located at approximately the L1-L2 vertebral level.

### **Convergence Insufficiency**

Inability to maintain binocular convergence on near objects, causing eyestrain, headaches, blurred near vision, and transient diplopia during reading. Common in children and young adults; treated with convergence exercises and base-in prism, with surgery rarely needed.

### **Coombs Test**

A laboratory test that detects antibodies or complement attached to red blood cells, or antibodies in serum that can react with red cells. It is used in evaluating immune hemolysis and blood compatibility.

### **Cooper's Ligament**

Fibrous connective-tissue septa extending from the deep surface of the breast toward the skin and pectoral fascia. Tumor invasion or fibrosis may cause skin retraction.

### **Coordination**

Smooth, efficient movement. Tests: finger-to-nose, heel-to-shin, rapid alternating movements.

### **COPD**

Chronic obstructive pulmonary disease is a progressive, largely irreversible airflow limitation caused by chronic bronchitis, emphysema, or both, most commonly due to cigarette smoking. It presents with chronic cough, sputum production, and exertional dyspnea. Spirometry shows a reduced FEV1/FVC ratio.

### **COPD Exacerbation**

Acute worsening of respiratory symptoms beyond normal day-to-day variation in a patient with COPD that leads to additional therapy. Common triggers include viral or bacterial infection, air pollution, and cardiopulmonary comorbidity.

### **COPD Rehabilitation**

Comprehensive intervention for COPD patients including exercise training, education, behavior change. Components: aerobic exercise, strength training, breathing techniques, nutrition, psychosocial support. Improves exercise capacity, quality of life, reduces hospitalizations.

### **Copper**

An essential trace element required for iron transport, connective-tissue cross-linking, energy metabolism, neurotransmitter synthesis, and antioxidant enzymes. Deficiency can cause anemia, neutropenia, impaired neurologic function, and bone abnormalities; excess is toxic and accumulates in Wilson disease.

### **Copy Number Variation**

Deletions or duplications of DNA segments >1 kb. Contribute to genetic diversity and disease. Examples: 22q11.2 deletion, Williams syndrome (7q11.23 deletion).

### **Cor Pulmonale**

Right ventricular hypertrophy and dilation from pulmonary hypertension due to lung disease. Features include peripheral edema, JVD, and hepatomegaly.

### **Cor Triatriatum**

A rare congenital heart defect where the left atrium is divided into two chambers by a fibromuscular membrane, separating the pulmonary venous chamber (posterior) from the true left atrium (anterior) containing the left atrial appendage and mitral valve. The membrane obstructs pulmonary venous return, mimicking mitral stenosis.

### **Coracoid Process**

Hook-like scapular projection extending anteriorly

---

and laterally. Attachment for 3 muscles (pectoralis minor, coracobrachialis, short head of biceps) and 3 ligaments. Important surgical landmark. Fractures uncommon but may occur with direct trauma or shoulder dislocations.

### **Cord Presentation**

The presence of the umbilical cord between the presenting fetal part and the cervix, with intact membranes. Risk factors: malpresentation, unstable lie, low-lying placenta, and long cord. If the membranes rupture, the cord may prolapse (umbilical cord prolapse).

### **Cordocentesis**

A prenatal diagnostic procedure in which fetal blood is sampled from the umbilical cord, usually under ultrasound guidance.

### **Cordotomy**

Surgical division of selected nerve fibers, especially a spinal cord tract, to interrupt transmission of severe chronic pain.

### **Core Biopsy**

Removal of a cylindrical sample of tissue with a hollow cutting needle for microscopic examination, commonly used for breast, liver, prostate, and other lesions.

### **Core Needle Biopsy**

Biopsy using core needle. CT, ultrasound, or MRI guidance.

### **Cori Cycle**

Lactate produced by muscles transported to liver, converted to glucose via gluconeogenesis, returned to muscles.

### **Cornea**

Transparent, avascular, dome-shaped anterior eye surface providing approximately two-thirds of total refractive power. Five layers: epithelium (stratified squamous, rapidly regenerating), Bowman's membrane, stroma (thickest, regular collagen), De-

scemet's membrane, endothelium (single cell layer maintaining transparency).

### **Corneal Abrasion**

Loss of corneal epithelium caused by mechanical trauma — contact with fingernail, makeup brush, foreign body, contact lens overwear, dry eye, sports injury, paper edge, or surgical instrumentation. Most common eye injury presenting to emergency departments.

### **Corneal Cross-Linking**

Corneal collagen cross-linking is a minimally invasive therapeutic procedure that strengthens the corneal stroma by creating additional chemical bonds between collagen fibrils, thereby stiffening the cornea and halting or slowing the progression of corneal ectatic disorders, particularly keratoconus and post-refractive surgery ectasia.

### **Corneal Edema**

Excess fluid within the corneal stroma or epithelium causing corneal thickening, reduced transparency, glare, and blurred vision. Causes include endothelial dysfunction, acute glaucoma, inflammation, trauma, and postoperative injury.

### **Corneal Implant**

An implanted device or tissue substitute placed in or on the cornea to restore vision, replace diseased tissue, or alter corneal shape.

### **Corneal Ulcer**

A corneal ulcer is a defect in the corneal epithelium with associated stromal inflammation and necrosis, typically caused by infectious or non-infectious mechanisms, and it is a sight-threatening condition that requires prompt diagnosis and treatment.

### **Corneitis**

Inflammation of the cornea, often producing pain, photophobia, tearing, and impaired vision. It may be infectious, immune-mediated, traumatic, or related to exposure.

---

### **Cornelia De Lange Syndrome**

A genetic disorder caused by mutations in genes of the cohesin complex (NIPBL 60%, SMC1A, SMC3, RAD21, HDAC8).

### **Corns And Calluses**

Corns (heloma) are focal areas of hyperkeratosis caused by pressure and friction, typically on toes. Hard corns (heloma durum) occur on dorsal toes; soft corns (heloma molle) occur between toes. Calluses (tyloma) are diffuse hyperkeratosis on weight-bearing surfaces.

### **Coronal Caries**

Caries on clinical crown. Smooth surface or pits/fissures.

### **Coronal Plane**

A vertical plane that divides the body or an organ into front (anterior) and back (posterior) portions.

### **Coronary Angiography**

Invasive imaging of the coronary arteries using catheter-delivered contrast and X-ray fluoroscopy. It shows coronary anatomy and stenosis and can support treatment planning; noninvasive tests may be appropriate in other clinical settings.

### **Coronary Arteries**

The right and left arteries arising from the aortic sinuses that supply the myocardium. Their branches include the right coronary, anterior interventricular, and circumflex arteries.

### **Coronary Artery**

One of the blood vessels branching from the aorta that supplies oxygen-rich blood directly to the heart muscle.

### **Coronary Artery Aneurysm**

A localized dilatation of a coronary artery exceeding the normal vessel diameter by approximately 1.5 times. It may be caused by atherosclerosis, Kawasaki disease, connective-tissue disorders, infection, trauma, or an iatrogenic procedure, and can

lead to thrombosis, distal embolization, myocardial ischemia, or rupture.

### **Coronary Artery Bypass**

A surgical procedure that creates a new route for blood flow around a narrowed or blocked coronary artery using a vascular graft.

### **Coronary Artery Bypass Grafting**

A surgical revascularization procedure for severe coronary artery disease (CAD). Grafts, most commonly the left internal mammary artery (LIMA) and saphenous vein grafts (SVG), are used to bypass stenotic coronary arterial segments. Indicated for multi-vessel CAD, left main coronary artery stenosis, or severe CAD in diabetic patients.

### **Coronary Artery Disease**

Narrowing or occlusion of coronary arteries, usually due to atherosclerosis, reducing blood flow to the myocardium. Risk factors include hypertension, diabetes, hyperlipidemia, smoking, family history, and obesity. CAD can present as stable angina, acute coronary syndromes (unstable angina, NSTEMI, STEMI), or sudden cardiac death.

### **Coronary Artery Spasm**

Transient intense constriction of an epicardial coronary artery that reduces myocardial blood flow. It may cause rest angina and transient ST-segment elevation and can be triggered by smoking, stimulants, or endothelial dysfunction; calcium-channel blockers and nitrates are commonly used for prevention and relief.

### **Coronary Calcium Score**

A CT-based measurement of coronary artery calcification, quantified as the Agatston score. A score of 0 indicates very low risk of cardiovascular events; >400 indicates high burden and significant atherosclerosis. It is used for cardiovascular risk stratification in asymptomatic individuals and may guide statin therapy decisions.

### **Coronary Calcium Scoring**

Non-contrast CT measuring calcified plaque in coro-

---

nary arteries. Agatston score predicts cardiovascular risk.

### Coronary Circulation

The vascular system supplying blood to the myocardium. The left coronary artery (LCA) divides into the left anterior descending (LAD) and circumflex (LCx) arteries. The right coronary artery (RCA) supplies the right ventricle, SA node (in 60% of people), and inferior left ventricular wall.

### Coronary Dominance

Determined by which artery gives rise to the posterior descending artery (PDA). Right coronary dominance (85% of people): RCA gives rise to PDA. Left coronary dominance (8%): LCx gives rise to PDA. Codominance (7%): both RCA and LCx contribute.

### Coronary Heart Disease

Disease caused by reduced blood flow through the coronary arteries, usually due to atherosclerotic plaque. It may cause angina, myocardial infarction, heart failure, or sudden cardiac death. Also called coronary artery disease.

#### Synonyms:

coronary artery disease.

### Coronary Insufficiency

Inadequate blood flow through the coronary circulation to meet myocardial oxygen demand, usually because of coronary artery disease.

### Coronary Microvascular Dysfunction

Impairment of the small coronary arteries and arterioles causing impaired coronary flow reserve despite normal epicardial coronary arteries. Common in women, patients with diabetes, and hypertension. Causes chest pain (angina equivalent) and may contribute to heart failure with preserved ejection fraction.

### Coronary Occlusion

Obstruction of a coronary artery, commonly by atherosclerotic plaque and thrombus, that can cause myocardial ischemia or infarction.

### Coronary Sinus

A large vein on the back of the heart that collects de-oxygenated blood from the heart muscle and drains it into the right atrium.

### Coronary Stent

Mesh tube keeping coronary artery open after angioplasty. Types: bare-metal (higher restenosis), drug-eluting (releases antiproliferative drug, lower restenosis but prolonged DAPT). Complications: stent thrombosis, restenosis, bleeding (from DAPT).

### Coronary Thrombosis

Formation of a blood clot in a coronary artery, potentially obstructing blood flow and causing myocardial infarction.

### Coronavirus Disease 2019

A respiratory and systemic infectious disease caused by SARS-CoV-2. Illness ranges from asymptomatic infection to pneumonia, respiratory failure, and multisystem complications.

### Corpse

The dead body of a human being; the subject of medicolegal examination. Forensic assessment of a corpse includes identification, determination of death and time of death (rigor mortis, livor mortis, algor mortis, vitreous potassium, gastric emptying), external and internal examination, and collection of evidence.

### Corpus Callosum

Brain's largest white matter tract with approximately 200 million axons connecting left and right hemispheres. Four parts: rostrum, genu, body, splenium. Facilitates interhemispheric communication for sensory, motor, and cognitive integration.

### Corrected Age

The age of a preterm infant calculated by subtracting the number of weeks born before 40 weeks of gestation from chronological age. Corrected age helps interpret growth and developmental milestones during early childhood, commonly until about 2 years of age.

---

### Corrigan Pulse

A forceful, rapidly rising and collapsing arterial pulse, classically associated with aortic regurgitation.

### Corrosive

Substance causing tissue destruction by chemical action. Acids: coagulation necrosis, eschar. Alkalis: liquefaction necrosis, deep penetration. Ingestion: avoid emesis, endoscopy, surgical consultation.

### Corti's Ganglion

The spiral ganglion of the cochlea, containing the cell bodies of sensory neurons that transmit auditory information from the organ of Corti.

### Cortical Cataract

A type of age-related lens opacity that begins in the peripheral lens cortex as wedge-shaped or spoke-like opacities that extend centripetally toward the visual axis, caused by disruption of the normally orderly arrangement of lens fibers and the accumulation of fluid between them.

### Corticobasal Degeneration

A rare, progressive neurodegenerative disorder characterized by asymmetric cortical and basal ganglia dysfunction. Presents with asymmetric parkinsonism (rigidity, bradykinesia), apraxia (loss of learned motor skills), alien limb phenomenon (involuntary, purposeless movements), cortical sensory loss, myoclonus, and dystonia.

### Corticosteroids

Synthetic glucocorticoids with potent anti-inflammatory and immunosuppressive effects. Examples include prednisone, prednisolone, methylprednisolone, dexamethasone, and hydrocortisone. They suppress inflammatory gene expression and inhibit immune cell function.

### Corticosteroids Mechanism

Corticosteroids exert their anti-inflammatory and immunosuppressive effects primarily by binding to intracellular glucocorticoid receptors, which then translocate to the nucleus and modulate gene tran-

scription.

### Cortisol

The primary glucocorticoid produced by the adrenal cortex (zona fasciculata) under ACTH control; essential for stress response, metabolism, and homeostasis. Functions: gluconeogenesis, glycogenolysis, protein catabolism, lipolysis, anti-inflammatory/immunosuppressive effects, and maintenance of vascular tone.

### Coryza

Acute inflammation of the nasal mucous membranes with nasal discharge and obstruction, commonly occurring in the common cold or other upper-respiratory infection.

### Cosmetic Dermatology

Cosmetic dermatology encompasses aesthetic procedures. Botulinum toxin injections (Botox, Dysport, Xeomin) relax facial muscles reducing wrinkles. Dermal fillers (hyaluronic acid, calcium hydroxylapatite, poly-L-lactic acid, polymethylmethacrylate) restore volume.

### Cost-Effectiveness

Comparison of costs and outcomes of interventions. Used for resource allocation.

### Costochondritis

Costochondritis is inflammation or irritation where ribs join the breastbone, causing localized chest pain often worse with movement or pressing the area.

#### Synonyms:

Chest Wall Pain Costosternal Chondrodynia Costosternal Syndrome

### Cot Death

Sudden infant death syndrome, the sudden unexplained death of an apparently healthy infant, usually during sleep, that remains unexplained after investigation.

### Cough

Cough is a protective reflex that clears the airways;

---

its duration, triggers, sputum, associated symptoms, and examination findings help distinguish infectious, inflammatory, cardiac, and other causes. foreign material from the tracheobronchial tree.

### **Cough Augmentation**

Techniques to improve cough effectiveness in patients with neuromuscular disease or chest wall weakness. Methods include manually assisted cough (abdominal thrust timed with cough), mechanical insufflation-exsufflation (CoughAssist device), and breath stacking with a resuscitation bag.

### **Count Rate**

Number of detected events per second. Dead time losses at high count rates.

### **Countercurrent Multiplication**

The renal medullary process in which opposing tubular fluid flow and selective permeability along the loop of Henle generate a corticomedullary osmotic gradient. This gradient permits collecting-duct water reabsorption when antidiuretic hormone is present.

### **Countertransference**

The therapist's emotional reactions to the patient, which may be influenced by the therapist's own unresolved conflicts or may be a response to the patient's transference. Awareness of countertransference is essential for effective therapy and can provide valuable clinical information about the patient's interpersonal style.

### **Coup-Contrecoup Injury**

Brain injury from acceleration-deceleration trauma. Coup: injury at site of impact. Contrecoup: injury on opposite side. Common in falls, motor vehicle accidents.

### **Courvoisier Sign**

Clinical finding of a palpable non-tender gallbladder in obstructive jaundice suggesting malignant biliary obstruction. In gallstone disease, the gallbladder is typically fibrotic and not palpable, whereas in malignant obstruction it is distended because the

wall is initially normal and compliant.

### **Covered Stent (Vascular)**

A vascular stent lined with a graft material that supports the vessel and excludes a leak or aneurysm from the bloodstream.

#### **Synonyms:**

Vascular

### **COVID Toe**

A chilblain-like skin lesion reported in association with COVID-19, usually affecting the toes or fingers and appearing red, purple, or swollen.

### **COVID-19 In Pregnancy**

Pregnant women with COVID-19 are at increased risk of severe illness (ICU admission, mechanical ventilation, death) compared to non-pregnant women. Risks to the fetus: preterm birth, cesarean delivery, and possibly stillbirth. Vertical transmission is rare but possible.

### **COVID-19 Test**

A test that detects SARS-CoV-2 infection. Nucleic acid amplification tests, including RT-PCR, detect viral genetic material, while rapid antigen tests detect viral proteins. Test performance depends on timing, specimen quality, and the amount of virus present.

### **Cowden Syndrome**

Autosomal dominant PTEN hamartoma tumor syndrome (PHTS), caused by loss-of-function mutations in PTEN (10q23) — a negative regulator of the PI3K/AKT/mTOR pathway. Multiple hamartomas and increased risk of benign and malignant tumors.

### **Cowper's Gland**

One of a pair of small male accessory sex glands below the prostate. Its secretion contributes mucus and fluid to the urethra before ejaculation.

### **Cowpox**

A zoonotic viral infection caused by cowpox virus or

---

related orthopoxviruses, producing localized pustular or ulcerative skin lesions and sometimes systemic illness.

### **COX Inhibitor**

A class of drugs that inhibit cyclooxygenase enzymes (COX-1 and COX-2), which catalyze the conversion of arachidonic acid to prostaglandins and thromboxanes. COX-1 is constitutively expressed in most tissues, producing prostaglandins that protect the gastric mucosa, maintain renal blood flow, and support platelet aggregation.

### **Coxa Vara**

A deformity in which the angle between the femoral neck and shaft is abnormally reduced, potentially causing a limp, shortened limb, or altered hip mechanics.

### **Coxalgia**

Pain in the hip or hip joint.

### **Coxiella Burnetii**

An obligate intracellular bacterium that causes Q fever, a zoonotic infection transmitted from animals to humans. The organism is transmitted through inhalation of contaminated aerosols or ingestion of contaminated dairy products. Acute Q fever presents with fever, headache, and pneumonia. Chronic Q fever can cause endocarditis.

### **Coxsackie Virus Type A16**

A member of the Enterovirus genus and the most common cause of hand, foot, and mouth disease, a mild, self-limited viral illness affecting children. It presents with fever, oral vesicles and ulcers, and a maculopapular or vesicular rash on the hands and feet. Complications are rare but may include aseptic meningitis.

### **Coxsackievirus**

A group of enteroviruses that cause a range of human diseases. Group A viruses commonly cause hand-foot-and-mouth disease and herpangina, whereas group B viruses are associated with myocarditis, pericarditis, pleurodynia, and aseptic meningitis.

### **CPAP**

Continuous positive airway pressure delivered through a mask to splint open the upper airway during sleep. It is commonly used for obstructive sleep apnea and can reduce apneas and related symptoms when used consistently.

### **CPAP Machine**

Continuous positive airway pressure for sleep apnea.

### **Cracked Tooth Syndrome**

Incomplete fracture of tooth causing pain on biting. Diagnosis difficult. Treatment: crown, root canal if pulpal involvement.

### **Crackles (Rales)**

Discontinuous, non-musical adventitious lung sounds produced by the sudden explosive opening of collapsed small airways and alveoli during inspiration or the bubbling of air through fluid in the bronchioles.

#### **Synonyms:**

Rales

### **Cradle Cap**

A common form of seborrheic dermatitis in infants, causing greasy or flaky scales on the scalp with mild redness. It is usually harmless and improves with gentle scalp care; persistent inflammation or signs of infection require assessment.

### **Cranial Arteritis**

Giant-cell arteritis, an inflammatory disease of medium and large arteries, especially branches of the external carotid artery, that can cause headache, visual loss, and systemic symptoms.

### **Cranial Cavity**

The hollow space inside the skull that contains and protects the brain.

### **Cranial Implant**

An artificial device placed in or on the skull or cranial cavity for reconstruction, protection, drainage, stimulation, or treatment.

---

## Cranial Nerve

Twelve paired nerves (CN I-XII) emerging directly from the brain/brainstem, primarily serving head and neck.

## Cranial Nerve Palsy

Weakness or paralysis of one or more cranial nerves, causing deficits such as impaired eye movement, facial weakness, hearing loss, swallowing difficulty, or tongue weakness. The cause may be vascular, traumatic, compressive, inflammatory, infectious, or metabolic.

## Craniectomy

Surgical removal of part of the skull without immediate replacement, performed to relieve intracranial pressure or provide access to the brain.

## Craniocerebral Injury

An injury involving the scalp, skull, brain, or more than one of these structures.

## Craniofacial Abnormalities

Abnormalities of the skull, face, or related tissues that may be present at birth or develop later. Causes include genetic conditions, disrupted development, trauma, infection, and tumors.

## Craniofacial Dysostosis

A congenital disorder involving premature fusion of cranial sutures and characteristic abnormalities of the face and skull, such as those seen in Crouzon syndrome.

## Craniopharyngioma

A clinical condition or finding involving craniopharyngioma. Its defining features, causes, evaluation, and management depend on the clinical context.

## Cranioplasty

Surgical repair or reconstruction of a skull defect using bone, an implant, or another suitable material.

## Craniosynostosis

Craniosynostosis is premature fusion of one or more skull sutures, altering head shape and sometimes increasing pressure on the developing brain.

### Synonyms:

Congenital Plagiocephaly

## Craniotomy

Surgical opening of the skull (bone flap) for access to intracranial contents. Indications: brain tumor resection (glioblastoma, meningioma, mets), hematoma evacuation (SDH, EDH, ICH), aneurysm clipping, AVM resection, and epilepsy surgery (lobectomy).

## Crazy Paving Pattern

A HRCT finding characterized by ground-glass opacification with superimposed interlobular septal thickening and intralobular lines. It is seen in pulmonary alveolar proteinosis, lipoid pneumonia, ARDS, pulmonary hemorrhage, and Pneumocystis pneumonia. Despite its name, it is not specific to any single diagnosis.

## CRE

Carbapenem-resistant Enterobacteriaceae, resistant to carbapenem antibiotics through production of carbapenemases including KPC, NDM, and OXA-48-like enzymes. CRE are a major public health threat due to limited treatment options. Infections are associated with high mortality rates.

## Cream

A semisolid emulsion (oil in water or water in oil) for topical application, containing a drug in an emulsion base. Creams are lighter, less greasy, and easier to spread than ointments, and are preferred for moist or oozing skin lesions. They penetrate less deeply than ointments and are cosmetically acceptable.

## Creatine Kinase

An enzyme found in muscle, brain, and heart. CK-MB: cardiac isoenzyme (used historically for MI diagnosis, largely replaced by troponin). CK-MM: skeletal muscle (elevated in rhabdomyolysis, trauma, statins, myopathy). Total CK: elevated in mus-

---

cle injury, myocardial infarction, seizures, hypothyroidism, and statin myopathy.

### **Creatinine**

A breakdown product of muscle creatine phosphate produced at a constant rate, filtered by the glomerulus and minimally reabsorbed; serum creatinine is the most used marker of kidney function.

### **CREST Syndrome**

A limited cutaneous form of systemic sclerosis characterized by calcinosis, Raynaud phenomenon, esophageal dysmotility, sclerodactyly, and telangiectasia. It may involve pulmonary vascular disease and other systemic complications.

### **Creutzfeld-Jakob Disease**

A rapidly progressive neurodegenerative disease caused by abnormal prion proteins, leading to cognitive decline, ataxia, myoclonus, and death.

### **Creutzfeldt Jakob Disease**

Creutzfeldt-Jakob disease (CJD) is a rare, fatal, transmissible spongiform encephalopathy caused by the accumulation of misfolded prion protein (PrP<sup>Sc</sup>) in the brain, leading to rapid, progressive dementia and myoclonus.

### **Creutzfeldt-Jakob Disease**

A rapidly progressive fatal neurodegenerative disease caused by abnormal prion protein, characterized by dementia, myoclonus, ataxia, and other neurologic signs.

#### **Synonyms:**

CJD Mad Cow Disease Variant CJD VCJD

### **Cri Du Chat Syndrome**

A congenital genetic disorder caused by deletion of part of the short arm of chromosome 5, characterized in infancy by a high-pitched cry, developmental delay, and characteristic facial features.

### **Cri-Du-Chat Syndrome**

A genetic disorder caused by a deletion of the short arm of chromosome 5 (5p-), with the size of the

deletion correlating with severity. Incidence 1 in 15,000-50,000.

### **Cricoid Cartilage**

The cricoid cartilage is a complete, ring-shaped cartilage located at the base of the larynx, directly above the trachea and below the thyroid cartilage, and it is the only complete cartilaginous ring in the airway, providing structural support and maintaining airway patency.

### **Cricoid Pressure**

Cricoid pressure (Sellick maneuver) applies posterior displacement of the cricoid cartilage against the cervical vertebrae, occluding the esophagus and reducing aspiration risk during rapid sequence intubation.

### **Cricothyrotomy**

An emergency airway procedure that creates an opening through the cricothyroid membrane to provide oxygenation and ventilation when a patient cannot be intubated and cannot be oxygenated by less invasive methods.

### **Criminal Abortion**

Abortion performed illegally, outside permitted legal indications and procedures (e.g., unsafe methods, unqualified practitioners, or non-medical settings), carrying high maternal risk.

### **CRISPR-Cas9**

Genome editing tool derived from bacterial immune system. Cas9 enzyme guided by RNA to specific DNA sequence, creating double-strand break. Repaired by non-homologous end joining (NHEJ) or homology-directed repair (HDR). Applications: research, therapy.

### **Critical Care**

Specialized care for people with life-threatening illness or injury who need close monitoring and support for failing organs.

---

## Critical Findings

Findings requiring immediate communication. Examples: pneumothorax, brain herniation, aortic dissection.

## Critical Limb Ischemia

Severe chronic reduction in limb blood flow causing ischemic rest pain, nonhealing wounds, or gangrene. It requires urgent vascular assessment.

## Critical Results

Test results indicating a potentially life-threatening condition that require prompt communication and clinical action.

## Critical Value

A laboratory result indicating a potentially life-threatening condition that requires prompt communication to a responsible clinician or care team. The threshold is test- and laboratory-specific and should be defined by institutional policy.

## Crohn Disease

Chronic transmural inflammatory condition that can affect any segment of the gastrointestinal tract from the oral cavity to the perianal region, though the terminal ileum and ileocolonic region are most commonly involved.

## Crohn Disease Cobblestoning

Endoscopic appearance of the colonic or small bowel mucosa in Crohn disease characterized by a bumpy, irregular surface resembling cobblestones. This distinctive appearance results from intersecting lines of deep linear and serpiginous ulceration that surround areas of relatively preserved or edematous but intact mucosa.

## Cross-Sectional Study

Measures exposure and outcome at same time. Prevalence study. Cannot establish temporality.

## Cross-Tolerance

Tolerance to one substance that extends to another substance with a similar mechanism of action. For

example, tolerance to one benzodiazepine extends to all benzodiazepines, and tolerance to alcohol extends partially to benzodiazepines due to shared GABA-A receptor mechanisms.

## Croup

A clinical condition or finding involving croup. Its defining features, causes, evaluation, and management depend on the clinical context.

### Synonyms:

Laryngotracheobronchitis (Croup)

## Crouzon Syndrome

An autosomal dominant craniosynostosis syndrome caused by mutations in the FGFR2 or FGFR3 genes, leading to premature fusion of multiple cranial sutures. Features: brachycephaly (short, broad head from bilateral coronal synostosis), proptosis (shallow orbits), hypertelorism, midface hypoplasia, beaked nose, and Class III malocclusion.

## Crown (Dental)

Cap covering damaged tooth. Materials: metal, porcelain-fused-to-metal, all-ceramic, zirconia. Indications: large caries, fractured tooth, root canal treated tooth.

### Synonyms:

Dental

## Crown Lengthening

Surgical procedure exposing more tooth structure. Involves gingivectomy and bone removal. For restorative or aesthetic purposes.

## Crown-Rump Length

The measurement from the top of the fetal head (crown) to the bottom of the buttocks (rump), the most accurate method for establishing gestational age in the first trimester. Measured at 7-13 weeks. Accuracy:  $\pm 3$ -5 days. The EDD is set using CRL if the difference from LMP dating exceeds 7 days. CRL growth: approximately 1 mm per day.

## Crowning

The stage of the second stage of labor when the

---

fetal head (widest diameter) distends the perineum and becomes visible at the introitus and is no longer receding between contractions.

### **CRP**

C-reactive protein. Acute phase reactant. Marker of inflammation.

### **Crush Syndrome**

Systemic manifestations of prolonged muscle crush injury (rhabdomyolysis) following trauma — typically from collapsed buildings, landslides, entrapment under debris, or excessive compression of limbs. Bywaters syndrome.

### **Crushing Injury**

Damage caused when a body part is compressed between heavy objects. It can produce fractures, nerve and blood-vessel injury, tissue death, and rhabdomyolysis. Severe limb compression or sudden release after prolonged entrapment requires emergency treatment.

### **Crusted Scabies**

A severe, highly contagious form of scabies (Norwegian scabies) characterised by thick, hyperkeratotic crusts teeming with enormous numbers of *Sarcoptes scabiei* mites, typically occurring in immunocompromised, elderly, or neurologically impaired individuals.

### **Crutches**

Walking aids. Types: axillary, forearm (Loftstrand). Axillary: under arm. Forearm: through loop.

### **Cryoablation**

A procedure that freezes and destroys selected tissue, often using imaging to guide the treatment.

### **Cryobiopsy**

A bronchoscopic technique using rapid freezing to obtain larger lung tissue samples than conventional transbronchial biopsy. It provides better histopathological specimens for diagnosing interstitial lung diseases. It requires general anesthesia and bron-

choscopic expertise. It is less invasive than surgical lung biopsy.

### **Cryoglobulinemic Vasculitis**

Systemic vasculitis caused by cryoglobulin-containing immune complexes that deposit in small and medium vessels, classically presenting with purpura, arthralgia, and glomerulonephritis. Most cases are associated with hepatitis C virus infection.

### **Cryoglobulins**

A clinical condition or finding involving cryoglobulins. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cryopexy**

A procedure that uses controlled freezing to destroy or seal abnormal tissue, especially retinal breaks or small retinal detachments.

### **Cryoprecipitate**

A plasma fraction rich in fibrinogen, factor VIII, von Willebrand factor, and factor XIII, used selectively to treat certain bleeding disorders.

### **Cryopreservation**

Preservation of cells, tissues, or embryos by cooling them to very low temperatures, usually with protective substances that limit ice-related injury.

### **Cryopyrin-Associated Periodic Syndromes**

Autosomal dominant autoinflammatory disorders (NLRP3 mutations, gain-of-function) causing constitutive inflammasome activation and IL-1 $\beta$  overproduction.

#### **Synonyms:**

Cryopyrin-Associated Autoinflammatory Syndromes

### **Cryosurgery**

Surgery that destroys abnormal tissue by controlled freezing, used in selected skin lesions, tumors, and other conditions.

---

## Cryotherapy

The therapeutic application of extreme cold (typically using liquid nitrogen at  $-196^{\circ}\text{C}$ ) to destroy abnormal or diseased tissue.

## Cryptitis

Inflammation of a crypt or small anatomical recess, especially inflammation of the anal glands and crypts.

## Cryptococcal Meningitis

Infection of the meninges by *Cryptococcus*, usually in people with impaired immunity, causing headache, fever, altered mental status, or other neurologic symptoms.

## Cryptococcosis

Cryptococcosis is fungal infection caused by *Cryptococcus*, often affecting the lungs or brain in people with immune suppression.

### Synonyms:

Infection *Cryptococcus* (Cryptococcosis)

## Cryptococcus Neoformans

An encapsulated yeast that can cause pulmonary or central nervous system infection, especially in people with impaired immunity.

## Cryptogenic Organizing Pneumonia

An inflammatory lung disease with granulation tissue within alveolar ducts. May be idiopathic or secondary to infection, drugs, or connective tissue disease. Responds well to corticosteroids.

## Cryptorchidism

Failure of one or both testes to descend into the scrotum, the most common congenital genitourinary anomaly in boys (3% at birth, 1% at 1 year). 70% of undescended testes are palpable (inguinal), 30% non-palpable (intra-abdominal, absent, or atrophic). Spontaneous descent by 6 months occurs in about one-third.

## Cryptosporidiosis

A diarrhoeal disease caused by the protozoan para-

site *Cryptosporidium parvum* (zoonotic) or *C. hominis* (anthroponotic), transmitted via contaminated water (chlorine-resistant oocysts), food, or direct contact. Presents with watery diarrhea, abdominal cramps, nausea, and low-grade fever, lasting 1-2 weeks.

## Crystal Arthropathy

Joint disease caused by crystal deposition. Gout (monosodium urate) and pseudogout (calcium pyrophosphate). Diagnosis by joint aspiration and polarized microscopy.

## Crystalloids

Aqueous solutions of mineral salts that distribute between intravascular and interstitial compartments. Normal saline (0.9 percent NaCl) has 154 mEq/L each of sodium and chloride, pH 5.4, and is associated with hyperchloremic metabolic acidosis at large volumes.

## Crystalluria

The presence of crystals in urine, which may reflect precipitation of salts, medication effects, metabolic disease, or a tendency to form urinary stones.

## CSF Analysis

Laboratory examination of cerebrospinal fluid obtained by lumbar puncture. Tests may assess cells, protein, glucose, microorganisms, and other markers of infection, inflammation, bleeding, or malignancy.

## CSF Rhinorrhea

Cerebrospinal fluid rhinorrhea is the leakage of cerebrospinal fluid from the subarachnoid space through a defect in the skull base into the nasal cavity or paranasal sinuses, resulting in a clear, watery nasal discharge that may be mistaken for allergic rhinitis or sinusitis.

## CT Angiography

CT imaging with IV contrast timed to visualize arteries. Coronary CTA: assesses coronary artery stenosis and plaque, calcium scoring (Agatston). CTA chest: pulmonary embolism (PE protocol), aortic dissection. CTA head/neck: stroke evalua-

---

tion, aneurysm, dissection, and vasculitis.

### **CT Chest**

Detailed lung and mediastinal imaging. High-resolution CT (HRCT) for interstitial lung disease. CT pulmonary angiography (CTPA) for pulmonary embolism. Lung cancer screening with low-dose CT.

### **CT Colonography**

CT imaging of the colon after bowel preparation and insufflation with air or carbon dioxide. Used for colorectal cancer screening in patients unable to undergo optical colonoscopy and for evaluating complete colonoscopy when the cecum was not reached. Detects polyps greater than six millimeters with high sensitivity.

### **CT Colonography (Virtual Colonoscopy)**

CT imaging of the colon after bowel preparation and air insufflation. Indications: colorectal cancer screening (alternative to colonoscopy), incomplete colonoscopy due to obstructing mass, and patients unable to undergo colonoscopy. Sensitivity >90% for polyps >10mm. Requires same bowel prep as colonoscopy.

#### **Synonyms:**

Virtual Colonoscopy

### **CT Contrast**

A substance administered during computed tomography to make selected tissues, vessels, or body spaces more visible.

### **CT Coronary Angiography**

CT imaging of coronary arteries after contrast. Detects stenosis, plaque. Alternative to invasive angiography in low-intermediate risk.

### **CT Dose-Length Product**

A CT dose metric calculated from the volume CT dose index and scan length. It estimates the total scanner output for an examination and is used for protocol optimization and dose monitoring, not as a direct patient-specific risk estimate.

### **CT Enterography**

CT imaging of the small bowel after administration of large volumes of neutral oral contrast distending the small bowel with IV contrast. Excellent for evaluating Crohn disease, small bowel tumors, and obscure gastrointestinal bleeding.

### **CT Perfusion**

A CT technique that estimates blood flow and related perfusion parameters in tissue, commonly to assess selected cases of acute stroke or tumors.

### **CT Pulmonary Angiography**

CT imaging performed after intravenous contrast to show the pulmonary arteries and evaluate suspected pulmonary embolism or other vascular abnormalities.

### **CT Scan**

Computed tomography, an imaging method that uses X-rays and computer processing to produce cross-sectional images of the body.

### **CT Scan (Computed Tomography)**

Cross-sectional imaging using X-rays and computer reconstruction. Non-contrast: evaluate hemorrhage, stones, and bone. IV contrast (iodinated): evaluate inflammation, infection, tumor, and vascular structures. Oral contrast: opacify bowel.

#### **Synonyms:**

Computed Tomography

### **Cubital Tunnel Syndrome**

Cubital tunnel syndrome: ulnar nerve compression at elbow (cubital tunnel: Osborne's ligament, FCU aponeurosis, medial epicondyle, olecranon). Clinical: paresthesias ulnar 1.5 digits, nocturnal, Tinel at elbow, Froment sign (IP flexion of thumb with key pinch), Wartenberg sign (abduction of small finger), thenar/hypothenar wasting late.

### **Cubitus Valgus**

An abnormal outward angulation of the forearm relative to the upper arm when the elbow is extended.

---

### **Cubitus Varus**

An abnormal inward angulation of the forearm relative to the upper arm when the elbow is extended, often developing after a childhood elbow fracture.

### **Cuboid**

Cube-shaped lateral foot tarsal bone articulating with calcaneus proximally and 4th/5th metatarsals distally. Attachment for the long plantar ligament and peroneus longus tendon. Keystone of the lateral longitudinal arch. Cuboid syndrome (subluxation) is a common lateral foot pain cause in athletes from excessive pronation.

### **Culdocentesis**

Surgical puncture of the posterior vaginal fornix to sample or drain fluid from the rectouterine pouch.

### **Cullen's Sign**

Bluish or violaceous periumbilical ecchymosis caused by blood tracking through the fascial planes to the umbilicus. It is a sign of intra-abdominal or retroperitoneal haemorrhage, classically severe haemorrhagic pancreatitis, and is associated with serious underlying disease.

### **Cultural Psychiatry**

The study and clinical practice of how cultural factors influence mental health, illness expression, diagnosis, and treatment. Cultural concepts of distress, idioms of distress, and cultural syndromes must be considered. The DSM-5 includes a Cultural Formulation Interview.

### **Culture And Sensitivity**

Microbiological culture of a clinical specimen (blood, urine, sputum, wound swab, CSF) to identify pathogens and determine antimicrobial susceptibility. Culture media: blood agar (most bacteria), MacConkey (Gram-negative), chocolate agar (fastidious: *N. gonorrhoeae*, *H. influenzae*), and selective media.

### **Culture Media**

Nutrient preparations used to grow microorganisms in the laboratory, classified by composition and

purpose.

### **Culture Swab**

Swab for microbial culture. Types: bacterial, viral, fungal.

### **Cumulative Dose**

Total amount of substance received over time. Important for carcinogens, teratogens, cumulative toxins.

### **Cumulative Trauma Disorder**

A disorder caused by repeated forceful or awkward movements that progressively injure muscles, tendons, nerves, or other soft tissues.

### **Cup-To-Disc Ratio**

The cup-to-disc ratio is a clinical measurement used to assess the severity of glaucomatous optic nerve damage, comparing the diameter of the optic cup (the central depression within the optic nerve head where neural tissue is absent) to the diameter of the optic disc (the entire optic nerve head).

### **CURB-65 Score**

One point each for: Confusion, Urea > 7 mmol/L, RR > 30, BP < 90/60, age ≥ 65. 0–1: outpatient. 2: consider hospitalization. 3–5: severe.

### **Curettage**

Removal of tissue from a body cavity or surface with a curette, used for diagnosis, treatment, or removal of abnormal tissue.

### **Curettage Specimen**

Tissue obtained by scraping or scooping a surface or cavity, such as the endometrium or a bone lesion, for histologic examination. The limited and fragmented nature of the specimen may restrict assessment of invasion or architecture.

### **Curette**

Spoon-shaped instrument for scraping tissue.

---

### **Curling Ulcer**

Stress ulceration of the stomach or duodenum associated with severe burns. Part of the Curling triad with hypovolemia and sepsis. The pathogenesis involves reduced mucosal blood flow during the systemic inflammatory response to burn injury.

### **Curling's Ulcer**

An acute peptic ulcer associated with severe burns, often occurring in the duodenum or stomach during physiologic stress.

### **Curvularia Alcornii**

A dematiaceous fungal species causing phaeohyphomycosis, an opportunistic infection of the skin, sinuses, and occasionally the central nervous system in immunocompromised patients. It produces dark, septate hyphae in tissue. Diagnosis is by culture and histopathology showing pigmented fungal elements.

### **Cushing Disease**

Cushing syndrome caused by an adrenocorticotrophic hormone (ACTH)-secreting pituitary tumor. Excess cortisol can cause central weight gain, rounded facial features, skin changes, muscle weakness, high blood pressure, high blood glucose, and menstrual or mood changes.

### **Cushing Syndrome**

Clinical state resulting from chronic exposure to excess glucocorticoids regardless of cause. Most common endogenous cause is Cushing disease from pituitary ACTH-secreting adenoma accounting for approximately seventy percent.

### **Cushing Syndrome Complications**

Untreated Cushing syndrome carries significant morbidity and mortality from cardiovascular disease, infections, thromboembolic events, and metabolic derangements. Cardiovascular complications include accelerated atherosclerosis, hypertension, and dyslipidemia. Infection risk is increased from immunosuppression.

### **Cushing Ulcer**

Stress ulceration associated with central nervous sys-

tem disease, trauma, or surgery. Caused by vagally mediated gastric acid hypersecretion, distinguishing it from Curling ulcer which results from mucosal ischemia. The ulcers are typically solitary, located in the stomach or duodenum, and present with gastrointestinal bleeding.

### **Cushing's Disease**

Hypercortisolism caused specifically by an adrenocorticotrophic-hormone-secreting pituitary adenoma.

### **Cushing's Syndrome**

A disorder caused by prolonged excessive exposure to cortisol, from endogenous overproduction or exogenous glucocorticoid use. Typical features include central weight gain, a round face, dorsocervical fat accumulation, thin skin with easy bruising or purple striae, hypertension, hyperglycaemia, and muscle weakness; untreated disease can cause serious cardiovascular, metabolic, infectious, and bone complications.

#### **Synonyms:**

Hypercortisolism; cortisol excess syndrome.

### **Cusp Fracture**

Breakage of tooth cusp. Often due to large restoration weakening tooth. Treatment: crown or onlay.

### **Cutaneous Diphtheria**

A skin infection caused by toxigenic or nontoxigenic *Corynebacterium diphtheriae*, producing chronic ulcers or a gray membrane.

### **Cutaneous Drug Eruptions**

a spectrum of reactions. Exanthematous (maculopapular) is the most common, appearing 4 to 14 days after drug initiation. Urticarial appears within hours. Photoallergic occurs at sun-exposed sites. Lichenoid resembles lichen planus.

### **Cutaneous Larva Migrans**

A creeping eruption caused by hookworm larvae (*Ancylostoma braziliense*, *A. caninum*) from dog/cat feces penetrating the skin, typically in tropical/subtropical regions (walking barefoot on con-

---

taminated sand). Larvae migrate erratically under the skin causing intensely pruritic, serpiginous, erythematous tracks.

### **Cutaneous Leishmaniasis**

A skin infection caused by *Leishmania* parasites transmitted by sandflies, usually producing one or more chronic ulcers.

### **Cutaneous Lupus**

A form of lupus erythematosus limited to the skin, manifesting as discoid lesions, subacute cutaneous plaques, or acute malar erythema. It may occur in isolation or as a feature of systemic lupus erythematosus.

### **Cutaneous Lupus Erythematosus**

Autoimmune skin disease associated with lupus-spectrum illness and characterized by inflammatory lesions that may scar, alter pigmentation, or cause photosensitivity. Subacute and chronic forms have different morphologies and systemic associations; evaluation may include biopsy, direct immunofluorescence, and autoimmune testing.

### **Cutaneous Lymphoma**

Cutaneous lymphomas are heterogeneous group of T-cell and B-cell malignancies primarily involving the skin. Primary cutaneous B-cell lymphomas include marginal zone lymphoma, follicle center lymphoma, and diffuse large B-cell lymphoma leg type. Primary cutaneous T-cell lymphomas include mycosis fungoides and Sézary syndrome.

### **Cutaneous Metastases**

Secondary deposits of cancer in the skin, originating from a primary tumor elsewhere in the body. They may present as nodules, plaques, or ulcers, and often indicate advanced or recurrent disease.

### **Cutaneous Small-Vessel Vasculitis**

Inflammation and destruction of small dermal blood vessels, commonly presenting as palpable purpura on dependent areas. Causes include infections, medications, autoimmune disease, and systemic vasculitis; skin biopsy with appropriate specimen handling is

central to diagnosis.

### **Cutaneous T-Cell Lymphoma**

A malignancy of skin-homing T lymphocytes. Mycosis fungoides is the most common subtype, presenting as patches, plaques, and tumors in a clothing distribution. Sézary syndrome is the leukemic variant with erythroderma, lymphadenopathy, and circulating malignant cells.

### **Cutting Balloon (Vascular)**

A balloon catheter with small blades or scoring elements that create controlled incisions in plaque during vessel dilation.

#### **Synonyms:**

Vascular

### **CVA**

An abbreviation for cerebrovascular accident, meaning a stroke caused by interruption of blood flow to the brain or bleeding within the brain. It may cause sudden neurologic deficits.

### **Cyanide Poisoning**

Toxicity from cyanide compounds (hydrogen cyanide, potassium/sodium cyanide) that inhibit cytochrome oxidase (complex IV), blocking oxidative phosphorylation and cellular respiration despite adequate oxygen—histotoxic hypoxia. Sources: smoke inhalation (fires—plastic/acrylic), ingestion (industrial, suicidal), occupational exposure.

### **Cyanosis**

A bluish discoloration of the skin and mucous membranes resulting from excessive amounts of deoxygenated hemoglobin in the capillary blood. It becomes clinically apparent when the concentration of deoxygenated hemoglobin exceeds 5 grams per deciliter, which corresponds to an oxygen saturation of approximately 85 percent.

### **Cephalgia**

Headache or pain in the head. It may result from primary headache disorders or from an underlying illness or injury.

---

## Cycle Time

Time for complete image acquisition. PET: minutes. SPECT: 20-30 minutes.

## Cyclothymic Disorder

A chronic mood disorder characterized by numerous periods of hypomanic symptoms and periods of depressive symptoms over at least two years (one year in children and adolescents). The hypomanic and depressive symptoms do not meet criteria for a hypomanic or major depressive episode.

## CYP2C19 Polymorphism

CYP2C19 is a cytochrome P450 enzyme involved in the metabolism of approximately 10 percent of drugs, including the antiplatelet agent clopidogrel, proton pump inhibitors, some antidepressants, and the antiepileptic drug phenytoin.

## CYP2D6 Polymorphism

CYP2D6 is a cytochrome P450 enzyme responsible for the metabolism of approximately 25 percent of commonly prescribed drugs, including codeine, tamoxifen, many antidepressants, and antipsychotics.

## CYP450 System

A family of enzymes, found mainly in the liver, that metabolize many medications and other foreign substances. Differences in these enzymes and their inhibition or induction can alter drug effects and toxicity.

## Cyst

A cyst is a closed sac containing fluid, air, cells, or semisolid material and may occur in skin, organs, glands, or other tissues.

## Cystadenoma

A usually benign glandular epithelial tumor that forms cystic spaces or cyst-like structures.

## Cystic Echinococcosis

Hydatid disease: infection with larval cysts of *Echinococcus granulosus* (dog tapeworm), transmitted by ingestion of eggs from dog feces. Cysts

grow slowly in liver (most common, 60-70 percent), lungs (20-30 percent), and other organs. Hepatic: RUQ pain, hepatomegaly, biliary obstruction. Pulmonary: cough, chest pain, hemoptysis.

## Cystic Fibrosis

Autosomal recessive disorder caused by CFTR gene mutations (most common: F508). Defective chloride channel causes thick mucus in lungs, pancreas, liver, reproductive tract. Symptoms: chronic sinusitis, bronchiectasis, pancreatic insufficiency, male infertility (absent vas deferens), meconium ileus.

### Synonyms:

CF

## Cystic Hygroma

Congenital lymphatic malformation composed of thin-walled lymphatic cysts, manifesting as a soft, fluid-filled, painless, translucent (transilluminates brilliantly) mass, typically in the posterior triangle of the neck (75%, left-sided), axilla (20%), mediastinum, retroperitoneum, or groin.

## Cysticercosis

Cysticercosis is tissue infection by larval *Taenia solium* after swallowing eggs, potentially causing cysts in muscle, skin, eyes, or brain.

## Cystine And Triple Phosphate (Struvite) Crystals

Crystalline substances that may be found in urine sediment. Hexagonal cystine crystals support cystinuria in the appropriate setting, while struvite crystals may occur in infection-related alkaline urine; microscopy is interpreted with clinical and laboratory findings.

### Synonyms:

struvite

## Cystine Stones

Rare stones from inherited cystinuria with defective cystine transport. Hexagonal crystals on urine microscopy. Difficult to dissolve. Treat with aggressive hydration, urine alkalization to pH greater than 7.5, and thiol agents including tiopronin and D-penicillamine that form soluble complexes with

---

cystine.

### **Cystinuria**

Cystinuria is an inherited kidney-transport disorder causing excess urinary cystine and recurrent cystine kidney stones.

### **Cystitis**

Inflammation of the urinary bladder, typically from bacterial infection, one of the most common bacterial infections in women.

#### **Synonyms:**

Bladder Infection

### **Cystocele**

Anterior vaginal wall prolapse: herniation of the bladder into the anterior vaginal wall due to weakening of the pubocervical fascia, most commonly after childbirth and menopause.

### **Cystography**

Contrast imaging of bladder. Evaluates trauma, fistulas, vesicoureteral reflux.

### **Cystometrogram**

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases. See urodynamic testing.

### **Cystometry**

A urodynamic test that measures bladder pressure and function during filling and emptying.

### **Cystoscopy**

Cystoscopy uses a camera passed through the urethra to inspect the bladder and urethra and may allow biopsy or treatment.

### **Cystostomy**

Surgical creation of an opening from the urinary bladder to the skin or another structure to permit drainage of urine.

### **Cystourethrography**

Radiographic imaging of the urinary bladder and urethra, usually during filling and voiding after contrast has been introduced.

### **Cytochrome C**

Mobile electron carrier between Complex III and IV. Also involved in apoptosis.

### **Cytochrome P450**

The cytochrome P450 system is a superfamily of heme-containing monooxygenase enzymes primarily located in the endoplasmic reticulum of hepatocytes, responsible for Phase I drug metabolism through oxidation, reduction, and hydrolysis reactions.

### **Cytogenetics**

Study of chromosomes. Detects abnormalities in cancer.

### **Cytogenetics (Karyotype)**

Visualization of chromosomes under light microscopy from dividing cells (bone marrow, blood, amniotic fluid, tissue). Staining: G-banding (Giemsa, light and dark bands). Resolution: 400-550 bands per haploid genome.

#### **Synonyms:**

Karyotype

### **Cytokine**

Small signaling proteins (5-25 kDa) mediating cell-to-cell communication in immunity, inflammation, and hematopoiesis.

### **Cytokine Release Syndrome**

CRS: systemic inflammatory response from massive cytokine release (IL-6, IFN-gamma, TNF, IL-10) after T cell engaging therapies (CAR-T, bispecific antibodies, TGN1412).

### **Cytokine Storm**

A severe, dysregulated systemic inflammatory response involving excessive cytokine release that can cause tissue injury, organ dysfunction, and shock.

---

## Cytology

The microscopic study of individual cells, distinct from histology in that tissue architecture is not examined, used for screening and diagnosis of neoplastic and infectious disease. Specimens are exfoliative (cervical smears, sputum) or aspirated (fine needle aspiration, body fluids), interpreted with Papanicolaou or special stains.

## Cytomegalovirus

A herpesvirus that causes significant disease in immunocompromised patients including transplant recipients and HIV-infected individuals. CMV infects a wide range of cell types and establishes latent infections in myeloid progenitor cells. Primary infection is usually asymptomatic in immunocompetent individuals.

## Cytomegalovirus Infection

A widespread herpesvirus infection. Primary infection in immunocompetent individuals is usually asymptomatic or causes mononucleosis-like syndrome. Congenital CMV: most common congenital infection, causes sensorineural hearing loss, microcephaly, and developmental delay.

## Cytopathology

The branch of pathology using cytologic examination of cells to diagnose disease, particularly neoplastic and infectious processes, built on standardized reporting systems that guide management.

## Cerebrospinal Fluid Cytology

Microscopic examination of cells in cerebrospinal fluid to evaluate suspected malignancy, infection, inflammation, or hemorrhage. It is especially useful for detecting leptomeningeal tumor involvement when interpreted with clinical and imaging findings.

## Serous Fluid Cytology

Cytologic examination of pleural, pericardial, or peritoneal fluid to assess for malignant cells, infection, and reactive inflammation. Cell-block preparation and ancillary tests may improve diagnostic accuracy.

## Cytopenia

A reduction in the number of one or more circulating blood-cell lineages: red cells, white cells, or platelets.

## Cytoreductive Surgery

Surgical removal of as much visible tumor as possible to reduce disease burden, a cornerstone of ovarian cancer management and combined with hyperthermic intraperitoneal chemotherapy for peritoneal carcinomatosis.

## Cytoskeleton

Dynamic protein filament network providing structural support, cell shape, intracellular transport, and cell division. Three main components: (1) Microfilaments (actin, 7 nm): cell cortex, stress fibers, contractile ring (cytokinesis), lamellipodia/filopodia (motility), myosin interaction (muscle contraction).

## Cytotoxic T Cell

The effector cells of cell-mediated immunity that kill virus-infected cells and tumor cells. Recognize antigenic peptides presented on MHC class I molecules via the T-cell receptor; co-stimulation by CD4+ helper cells and cytokines (IL-2) is needed for activation.

## Cytotoxicity

The capacity of an immune effector cell or immune mediator to injure or kill a target cell. T lymphocytes and natural killer cells commonly use perforin-granzyme pathways or death-receptor signaling to induce target-cell apoptosis.

## CADASIL Syndrome

An inherited disorder of small brain arteries that can cause migraine with aura, strokes, mood symptoms, and cognitive decline.

## Capnocytophaga Infection

An infection caused by *Capnocytophaga* bacteria, sometimes transmitted through dog or cat bites or scratches.

---

### **Carcinomatosis**

Widespread dissemination of carcinoma to multiple surfaces or organs.

### **Cardiac Ablation**

A procedure that destroys a small area of heart tissue causing an abnormal rhythm.

### **Cavernous Hemangioma**

A cluster of enlarged, thin-walled blood vessels that may occur in the skin, brain, or other tissues.

### **Cecostomy**

A surgically created opening from the cecum to the abdominal wall to allow decompression or stool removal.

### **Central Hypothyroidism**

An inadequate thyroid-hormone state caused by insufficient stimulation from the pituitary gland or hypothalamus.

### **Chemoradiotherapy**

Treatment that combines chemotherapy with radiation therapy, often to improve cancer control.

### **Chlamydial Disease**

Infection caused by bacteria of the genus *Chlamydia*, including sexually transmitted and respiratory infections.

### **Chronic Atrophic Gastritis**

Long-term inflammation of the stomach lining that causes loss of gastric glands and may impair vitamin B12 absorption.

### **Ciliary Dyskinesia**

Abnormal movement of cilia that impairs clearance of mucus from the airways and can cause recurrent respiratory infections.

### **Citrullinemia**

An inherited metabolic disorder in which citrulline and ammonia accumulate because of impaired urea-cycle function.

### **Cognitive Behavior Therapy**

A structured psychotherapy that identifies and changes unhelpful thoughts and behaviors.

### **Colonic Inertia**

Markedly slow movement of contents through the colon, causing severe or persistent constipation.

### **Colonic Stenosis**

Narrowing of the colon that may obstruct passage of intestinal contents.

### **Complement Deficiency**

Reduced or absent activity of one or more complement proteins, increasing susceptibility to some infections or autoimmune disease.

### **Complete Cystectomy**

Surgical removal of the entire urinary bladder.

### **Coronary Aneurysm**

Abnormal widening or ballooning of a coronary artery.

### **Crescentic Glomerulonephritis**

A rapidly progressive kidney inflammation in which crescent-shaped lesions form in the glomeruli.

### **Cryoglobulinemia**

Cryoglobulinemia occurs when abnormal proteins precipitate in the cold and can cause blood-vessel inflammation, rash, nerve disease, kidney injury, or hyperviscosity.

### **Cyclic Neutropenia**

Recurrent episodes of abnormally low neutrophil counts occurring at regular intervals.

### **Cyclooxygenase Inhibitor**

A medicine that reduces production of prostaglandins and may relieve pain and inflammation.

---

## **Callus**

A localized area of thickened, hardened skin caused by repeated pressure or friction.

## **Cancellous Bone**

Porous, trabecular bone found inside many bones, especially near joints and in the vertebrae.

## **Capillaries**

The smallest blood vessels, where oxygen, nutrients, and waste products move between blood and tissues.

## **Capsaicin**

A compound from chili peppers used in some topical medicines to reduce certain types of pain.

## **Carbon Monoxide**

A colorless, odorless gas that can prevent blood from carrying oxygen and cause life-threatening poisoning.

## **Carcinogenesis**

The process by which normal cells acquire changes that lead to cancer.

## **Cardiac Myocytes**

Muscle cells of the heart that generate force for cardiac contraction.

## **Cardiopulmonary Bypass**

A technique that temporarily circulates and oxygenates blood during some heart operations.

## **Cardiovascular**

A clinical condition or finding involving cardiovascular. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Carotid Duplex Doppler Scanning**

An ultrasound examination that assesses the structure and blood flow of the carotid arteries.

## **Cartilaginous Joint**

A joint in which bones are connected by cartilage

and allow limited movement.

## **Cataplexy**

Sudden temporary loss of muscle tone triggered by strong emotion, commonly associated with narcolepsy.

## **Celiac Plexus**

A network of nerves in the upper abdomen that supplies abdominal organs and may be targeted for pain treatment.

## **Chronic Pain Syndrome**

Persistent pain accompanied by significant physical, emotional, or social effects that interfere with daily life.

## **Cilia**

Small hair-like structures on cells that move fluid, particles, or mucus across a tissue surface.

## **Classic Migraine**

A migraine associated with an aura, such as temporary visual or sensory symptoms.

## **Clot Buster**

A medicine that dissolves a blood clot; the medical term is thrombolytic.

## **Cognitive Reserve**

The brain's ability to use alternative strategies or networks to maintain function despite injury or disease.

## **Colorectal Adenoma**

A gland-forming growth in the colon or rectum that may develop into colorectal cancer.

## **Complement System**

A group of blood proteins that supports immune defense by destroying microbes and promoting inflammation and phagocytosis.

## **Compression Fracture**

Collapse of a vertebra or other bone because of com-

---

pression, often related to osteoporosis or trauma.

### **Conception**

The beginning of pregnancy, usually referring to fertilization and the subsequent establishment of pregnancy.

### **Condyle**

A rounded projection at the end of a bone that contributes to a joint.

### **Crohn's Disease**

A chronic inflammatory bowel disease that can cause patchy, transmural inflammation anywhere from the mouth to the anus, most often involving the terminal ileum or colon. Common features include abdominal cramping or pain, persistent diarrhoea, weight loss, fatigue, fever, anaemia, and extraintestinal inflammation of the joints, eyes, or skin.

#### **Synonyms:**

Crohn Disease (Crohn's Disease) Ileitis (Crohn's Disease)

### **Crystalline Lens**

The transparent flexible structure inside the eye that focuses light onto the retina.

### **Cystoid Macular Edema**

Swelling of the macula caused by fluid collecting in small cyst-like spaces within the retina.

### **C. Difficile Infection**

Infection with *Clostridioides difficile* bacteria, often causing antibiotic-associated diarrhea and colitis.

#### **Synonyms:**

C. Diff

### **Carcinoma Of Unknown Primary**

Cancer that has spread but whose original site cannot be identified despite evaluation.

#### **Synonyms:**

Cancer Of Unknown Origin Occult Primary Cancer

### **Cavernous Malformations**

Abnormally enlarged, thin-walled blood-vessel clus-

ters that can bleed or cause neurological symptoms.

### **Cavities And Tooth Decay**

Progressive destruction of tooth enamel and deeper tooth tissues by acids produced by oral bacteria.

### **Central Nervous System Lymphoma**

A lymphoma that begins in the brain, spinal cord, eye, or cerebrospinal fluid.

### **Central Nervous System Vascular Malformations**

Abnormal blood-vessel formations in or around the brain or spinal cord.

### **Chronic Daily Headaches**

Headaches occurring on at least 15 days each month for more than three months.

### **Chronic Hives**

Recurrent itchy welts that occur on most days for more than six weeks.

### **Chronic Pelvic Pain**

Persistent or recurrent pain in the lower abdomen or pelvis lasting at least six months.

#### **Synonyms:**

Pelvic Pain, Chronic

### **Chronic Traumatic Encephalopathy**

A progressive brain disorder associated with repeated head impacts and characterized by cognitive, mood, or behavioral changes.

### **Cold Urticaria**

Hives or swelling triggered by exposure of the skin to cold.

#### **Synonyms:**

Cold Allergy

### **Colon Polyps**

Growths arising from the inner lining of the colon; some types can develop into colorectal cancer.

#### **Synonyms:**

---

Polyps, Colon Polyps Colon (Colon Polyps) Polyps  
Rectal (Colon Polyps)

### **Common Cold In Babies**

A viral infection of an infant's upper respiratory tract that commonly causes a runny nose, congestion, and cough.

### **Compulsive Sexual Behavior**

Recurrent sexual thoughts or behaviors that are difficult to control and cause significant distress or impairment.

#### **Synonyms:**

Sexual Obsession

### **Congenital Heart Defects**

Structural abnormalities of the heart or major blood vessels that are present at birth. They range from minor defects to critical conditions requiring early intervention.

### **Congenital Heart Defects In Children**

Structural abnormalities of the heart or major blood vessels present at birth.

### **Congenital Heart Disease In Adults**

A heart defect present from birth that persists into adulthood or causes complications later in life.

### **Congenital Mitral Valve Anomalies**

Structural abnormalities of the mitral valve that are present at birth and may impair blood flow.

### **Congenital Myasthenic Syndromes**

A group of inherited disorders that impair communication between nerves and muscles, causing fatigable weakness.

### **Constipation In Children**

Infrequent, hard, or painful bowel movements in a child.

### **Cough Headaches**

Headaches triggered by coughing, sneezing, straining, or other sudden increases in pressure in the

head.

### **Cutaneous B-Cell Lymphoma**

A type of non-Hodgkin lymphoma that primarily affects B lymphocytes in the skin.

### **Cyclic Vomiting Syndrome**

Recurrent episodes of severe vomiting separated by symptom-free intervals.

### **Cyclosporiasis**

An intestinal infection caused by the parasite *Cyclospora cayetanensis*, usually acquired by consuming contaminated food or water. It commonly causes prolonged or relapsing watery diarrhea, abdominal cramps, nausea, fatigue, loss of appetite, and weight loss; diagnosis requires specialized stool testing, and trimethoprim-sulfamethoxazole is the usual effective treatment when appropriate.

#### **Synonyms:**

Cyclospora Infection (Cyclosporiasis)

### **Cyclothymia**

A long-term mood disorder with repeated periods of hypomanic and depressive symptoms that do not meet criteria for full episodes.

### **Cholestasis Of Pregnancy**

A liver disorder of pregnancy in which impaired bile flow causes itching and elevated bile acids.

#### **Synonyms:**

Obstetric Cholestasis

### **Choroid Plexus Carcinoma**

A malignant tumor arising from the choroid plexus, the tissue that produces cerebrospinal fluid.

### **Chemo Brain**

Subjective difficulties with memory, attention, or thinking that occur during or after cancer treatment.

#### **Synonyms:**

Post-Chemotherapy Cognitive Impairment

### **Chest Tube**

A flexible tube inserted into the pleural space to

---

remove air, blood, or fluid and help the lung re-expand.

### **Culture**

A laboratory test in which a clinical specimen is placed in conditions that allow microorganisms to grow and be identified; susceptibility testing may help guide treatment.

### **Calvaria**

The dome-shaped upper portion of the skull that protects the brain.

### **Calyx**

A cup-shaped structure that collects fluid or supports an organ. In the kidney, renal calyces collect urine from the renal pyramids and convey it to the renal pelvis.

### **Cannula**

A hollow tube inserted into a blood vessel, body cavity, or tissue to deliver or remove fluids or to provide access for instruments.

### **Canthotomy**

A surgical incision through the outer canthus of the eyelids, usually performed urgently to relieve pressure in the orbit.

### **Canthus**

The angle where the upper and lower eyelids meet.

### **Carbon Dioxide**

A colorless gas produced by cellular metabolism and removed mainly by the lungs during exhalation.

### **Cardia**

The part of the stomach surrounding the opening where the esophagus joins the stomach.

### **Cast**

A rigid or semi-rigid device applied around an injured limb or joint to immobilize it while bone or soft tissue heals.

### **Cauterization**

The deliberate destruction or sealing of tissue using heat, electricity, chemicals, or another energy source to control bleeding or remove abnormal tissue.

### **Chlamydia Trachomatis**

A bacterium that commonly causes sexually transmitted infection of the urogenital tract and can also cause conjunctivitis or pneumonia.

### **Clamp**

A surgical instrument used to grasp, compress, occlude, or hold tissue, blood vessels, tubing, or other structures.

### **Clean-Catch Specimen**

A urine sample collected after cleansing the surrounding area and beginning urination, with the middle portion collected in a sterile container to reduce contamination.

### **Colposcope**

A lighted, magnifying instrument used to examine the cervix, vagina, or vulva in detail.

### **Continuous Bladder Irrigation**

Continuous instillation of sterile fluid through a urinary catheter to keep the bladder catheter patent and remove blood clots or debris.

### **Continuous Subcutaneous Insulin Infusion**

Delivery of rapid-acting insulin through a pump and a subcutaneous infusion set to provide basal insulin and mealtime doses.

### **Convergence**

The inward movement of both eyes so that they are directed toward the same nearby object.

### **Creatine**

A nitrogen-containing compound stored mainly in skeletal muscle that helps supply energy for short, high-intensity activity.

---

### **Cross-Matching**

A laboratory test that checks donor and recipient blood for compatibility before transfusion.

### **Cystoscope**

A thin, lighted instrument used to examine the urethra and bladder and, when needed, perform procedures.

### **Cystotome**

A surgical instrument used to make an incision in the capsule of the lens during selected eye procedures.

### **Cancer Grading**

Assessment of how abnormal cancer cells appear under a microscope and how aggressively the tumor is likely to behave. It differs from cancer staging, which describes the extent of spread.

### **C1 Esterase Inhibitor**

A plasma protein that regulates the complement, kallikrein-kinin, and coagulation pathways. Deficiency or dysfunction can cause hereditary angioedema.

### **C1Q Nephropathy**

A glomerular disease characterized by dominant or codominant deposits of the complement component C1q in glomeruli, with variable proteinuria and kidney dysfunction.

### **Café Coronary**

Sudden airway obstruction by food, usually occurring while eating and sometimes causing collapse or death if the airway is not rapidly cleared.

### **Calcific Tendinitis**

Deposition of calcium hydroxyapatite crystals within a tendon, most often the rotator cuff, causing acute pain and restricted movement.

### **Callosotomy**

Surgical division of the corpus callosum to reduce the spread of certain severe, treatment-resistant seizures between the cerebral hemispheres.

### **Candidal Vaginitis**

Inflammation of the vagina caused by overgrowth of *Candida* yeast, usually producing itching, soreness, and a thick white discharge.

### **Caffeine Intoxication**

A toxic state caused by excessive caffeine exposure, characterized by symptoms such as restlessness, nervousness, insomnia, rapid heartbeat, tremor, gastrointestinal upset, or agitation.

### **Café-Au-Lait Macules**

Flat, light-brown skin patches with relatively uniform pigmentation. Multiple lesions may be associated with genetic disorders such as neurofibromatosis type 1.

### **Cerebral Vasospasm**

Abnormal narrowing of cerebral arteries that can reduce brain perfusion and cause delayed cerebral ischemia, especially after aneurysmal subarachnoid hemorrhage.

### **Cervical Myelopathy**

Dysfunction of the spinal cord caused by compression in the cervical spine, often producing hand clumsiness, gait disturbance, weakness, sensory changes, or abnormal reflexes.

### **Cardiac Arrhythmias**

Abnormalities of the heart rate or rhythm caused by disturbances in impulse formation or conduction. They include tachycardia, bradycardia, and irregular rhythms.

### **Cerebral Thrombosis**

Formation of a blood clot within a cerebral artery, reducing blood flow and potentially causing an ischemic stroke.

### **Cervical Intraepithelial Neoplasia (CIN)**

Abnormal precancerous changes in the squamous cells of the cervix, usually associated with persistent high-risk human papillomavirus infection. CIN is graded by the severity of dysplasia.

---

**Synonyms:**  
CIN

### **Chilblains (Pernio)**

Itchy, painful, red or purplish inflammatory lesions caused by an abnormal response of small blood vessels to cold and subsequent rewarming.

**Synonyms:**  
Pernio

### **Cognition**

The mental processes involved in acquiring, storing, retrieving, and using information, including attention, memory, language, reasoning, and judgment.

### **Compound Fracture (Open Fracture)**

A fracture associated with a wound that communicates between the fracture site and the external environment. It carries increased risks of infection and tissue damage.

**Synonyms:**  
Open Fracture

### **Conversion Disorder (Functional Neurological Symptom Disorder)**

A condition in which neurological symptoms, such as weakness, abnormal movements, sensory loss, or seizures, are not explained by a recognized structural neurological disease and cause significant impairment.

**Synonyms:**  
Functional Neurological Symptom Disorder

### **Corneal Graft (Corneal Transplant)**

Surgical replacement of part or all of a diseased or damaged cornea with donor corneal tissue to restore vision or relieve pain.

**Synonyms:**  
Corneal Transplant

### **Coronary Care Unit (CCU)**

A specialized hospital unit providing continuous monitoring and treatment for patients with serious acute cardiac conditions.

**Synonyms:**

CCU

### **Crepitation (Crepitus)**

A crackling, grating, or popping sensation or sound produced by movement of tissues, air, or bone. Causes include fractures, joint disease, subcutaneous air, and lung disease.

**Synonyms:**  
Crepitus

### **CABG**

Coronary artery bypass grafting, a surgical procedure that creates a route around a narrowed or blocked coronary artery to improve blood flow to heart muscle.

**Synonyms:**  
Coronary artery bypass grafting; coronary bypass surgery.

### **Cardiac**

Relating to the heart.

**Synonyms:**  
Heart-related; cardiac-related.

### **Cardiopulmonary**

Relating to the heart and lungs or to their combined function.

**Synonyms:**  
Cardiorespiratory.

### **Cardiopulmonary Bypass Machine**

A machine that temporarily circulates and oxygenates blood during selected heart or major-vessel operations while the heart and lungs are not performing their usual functions.

**Synonyms:**  
Heart-lung machine; cardiopulmonary bypass pump.

### **Cardiorespiratory Endurance**

The ability of the heart, lungs, and circulation to deliver oxygen during sustained physical activity.

**Synonyms:**  
Cardiorespiratory fitness; aerobic endurance.

---

### **Carminative**

A substance traditionally used to reduce intestinal gas or discomfort by promoting passage of gas through the digestive tract.

#### **Synonyms:**

Antiflatulent; gas-relieving agent.

### **Carotenoids**

Plant pigments, including beta-carotene, that contribute yellow, orange, or red color and may have antioxidant or provitamin-A activity.

#### **Synonyms:**

Carotenoid pigments; provitamin-A pigments.

### **Catagen**

The transitional phase of the hair-growth cycle between active growth and resting.

#### **Synonyms:**

Catagen phase; regression phase of hair growth.

### **Catastrophic Reaction**

A disproportionately intense emotional or behavioral response to a situation that may appear minor to others, often occurring with cognitive impairment or neurologic disease.

#### **Synonyms:**

Catastrophic response; catastrophic emotional reaction.

### **Cathartic**

An agent that promotes bowel evacuation, usually by increasing stool water, intestinal motility, or both.

#### **Synonyms:**

Purgative; laxative.

### **Cation**

An ion with a positive electrical charge, such as sodium, potassium, calcium, or hydrogen.

#### **Synonyms:**

Positively charged ion.

### **Cauda Equina**

The bundle of lumbar, sacral, and coccygeal nerve roots below the end of the spinal cord.

#### **Synonyms:**

Cauda equina nerve roots; horse-tail nerve bundle.

### **Causalgia**

Severe persistent burning pain and sensory disturbance caused by injury to a peripheral nerve, now commonly classified within complex regional pain syndrome type II.

#### **Synonyms:**

Complex regional pain syndrome type II; causalgic pain.

### **Cavity**

A localized hole or structural defect in a tooth caused by dental caries.

#### **Synonyms:**

Dental cavity; carious lesion.

### **CBC**

A blood test that measures red cells, white cells, hemoglobin, hematocrit, and platelets.

#### **Synonyms:**

Complete blood count; full blood count.

### **CCU**

A hospital unit providing continuous monitoring and specialized treatment for people with serious acute cardiac disease.

#### **Synonyms:**

Coronary care unit; cardiac care unit.

### **Cell Senescence**

A state in which a cell remains metabolically active but permanently stops dividing, often in response to aging, stress, or cellular damage.

#### **Synonyms:**

Cellular senescence; replicative senescence.

### **Central (Brain) Fatigue**

A sense of reduced mental energy, concentration, alertness, or motivation arising primarily from central nervous-system processes.

#### **Synonyms:**

Central fatigue; mental fatigue.

---

### Cerebrovascular

Relating to the blood vessels and circulation of the brain.

**Synonyms:**

Brain-vascular; cerebral vascular.

### Cervicogenic Headache

A headache caused by a disorder of the cervical spine or its soft tissues, with pain referred from the neck to the head.

**Synonyms:**

Cervical headache; neck-related headache.

### CFS

Chronic fatigue syndrome, a condition involving substantial persistent fatigue with post-exertional worsening and associated symptoms that are not explained by another disorder.

**Synonyms:**

Chronic fatigue syndrome; myalgic encephalomyelitis/chronic fatigue syndrome.

### Challenge Testing

A controlled exposure to a suspected trigger, such as a food or medication, to assess whether it produces a reproducible reaction.

**Synonyms:**

Provocation testing; challenge test.

### Chemical Peel

Application of a chemical solution to the skin to produce controlled exfoliation and regeneration of superficial or deeper skin layers.

**Synonyms:**

Chemexfoliation; chemical resurfacing.

### Chemonucleolysis

An intradiscal treatment intended to dissolve part of a herniated intervertebral disk, historically using an enzyme preparation.

**Synonyms:**

Enzymatic disk dissolution; chemonucleolysis procedure.

### Chiropractor

A healthcare practitioner who provides manual or manipulative treatment, especially for musculoskeletal conditions, according to the practitioner's training and local regulation.

**Synonyms:**

Chiropractic practitioner; chiropractic clinician.

### Chlorophyllin

A water-soluble, copper-containing derivative of chlorophyll used in some products and studied for effects such as odor control; clinical uses depend on evidence and context.

**Synonyms:**

Chlorophyllin copper complex; sodium copper chlorophyllin.

### Cholagogue

A substance that promotes emptying of the gallbladder into the intestine.

**Synonyms:**

Gallbladder stimulant; biliary evacuant.

### Choleretic

A substance that promotes production or secretion of bile by the liver.

**Synonyms:**

Bile-secretory agent; bile-flow stimulant.

### Cholesterol

A lipid required for cell membranes and synthesis of steroid hormones and bile acids. Excess atherogenic cholesterol can contribute to arterial plaque.

**Synonyms:**

Serum cholesterol; blood cholesterol.

### Cholinergic Neuron

A nerve cell that releases acetylcholine as its principal neurotransmitter.

**Synonyms:**

Acetylcholine-releasing neuron; cholinergic nerve cell.

### Chondrocyte

A mature cartilage cell that produces and maintains

---

the cartilage extracellular matrix.

**Synonyms:**

Cartilage cell.

**Chronic Paroxysmal Hemicrania**

A primary headache disorder causing frequent, short-lasting, severe one-sided headaches with autonomic symptoms and a characteristic response to indomethacin.

**Synonyms:**

CPH; chronic paroxysmal hemicrania syndrome.

**Chyme**

A semifluid mixture of partially digested food and gastric or intestinal secretions that passes from the stomach into the small intestine.

**Synonyms:**

Digestive chyme; gastric chyme.

**Cicatricial Alopecia**

Hair loss caused by destruction and scarring of hair follicles, usually leading to permanent loss in affected areas.

**Synonyms:**

Scarring alopecia; cicatricial hair loss.

**CK**

Creatine kinase, an enzyme found in skeletal muscle, heart muscle, and brain whose blood level may rise after tissue injury.

**Synonyms:**

Creatine phosphokinase; creatine kinase enzyme.

**Clonal Expansion**

Rapid multiplication of genetically or immunologically related cells derived from a single precursor after activation.

**Synonyms:**

Clonal proliferation; clone expansion.

**Coagulate**

To change from a liquid to a semisolid or solid state, especially the formation of a blood clot through coagulation.

**Synonyms:**

Clot; clot formation.

**Cognitive Function**

The mental processes involved in attention, memory, language, reasoning, learning, judgment, and problem solving.

**Synonyms:**

Cognition; cognitive ability.

**Collagenase**

An enzyme that breaks down collagen in connective tissue.

**Synonyms:**

Collagen-digesting enzyme; collagen-degrading enzyme.

**Combined Hormone Therapy**

Hormone therapy containing both estrogen and a progestogen, generally used when endometrial protection is needed in a person with a uterus.

**Synonyms:**

Estrogen-progestogen therapy; combined menopausal hormone therapy.

**Combined Hyperlipidemia**

A lipid disorder characterized by elevated cholesterol and triglycerides, often with increased atherogenic lipoproteins.

**Synonyms:**

Mixed hyperlipidemia; combined hyperlipoproteinemia.

**Common Migraine**

A migraine without a preceding aura.

**Synonyms:**

Migraine without aura; migraine without neurologic aura.

**Compact Bone**

Dense outer bone tissue organized into osteons that provides strength and structural support.

**Synonyms:**

Cortical bone; dense bone.

---

### **Complicated Migraine**

An older, nonspecific term for migraine accompanied by prolonged or prominent neurologic symptoms; the specific syndrome should be identified when possible.

#### **Synonyms:**

Migraine with prolonged neurologic symptoms; complex migraine, historical usage.

### **Compounding Pharmacy**

A pharmacy that prepares customized formulations for an individual patient when a suitable commercially manufactured product is unavailable or unsuitable.

#### **Synonyms:**

Compounding pharmacy practice; extemporaneous pharmacy.

### **Cones**

Retinal photoreceptor cells responsible for color vision and detailed vision in relatively bright light.

#### **Synonyms:**

Cone photoreceptors; cone cells.

### **Conjugate Vaccine**

A vaccine in which a poorly immunogenic polysaccharide antigen is linked to a carrier protein to improve the immune response, especially in infants and young children.

#### **Synonyms:**

Protein-conjugate vaccine; conjugated polysaccharide vaccine.

### **Conjugated Equine Estrogens**

A mixture of estrogenic compounds historically derived from the urine of pregnant mares and used in some hormone-therapy formulations.

#### **Synonyms:**

CEE; conjugated estrogens.

### **Continuous Combined Hormone Therapy**

A hormone regimen in which estrogen and progesterone are taken continuously rather than sequentially.

#### **Synonyms:**

Continuous combined HRT; continuous estrogen-

progesterone therapy.

### **Contractile Proteins**

Proteins, especially actin and myosin, that interact to generate force and shorten muscle cells.

#### **Synonyms:**

Muscle contractile proteins; actomyosin proteins.

### **Contrast Medium**

A substance administered or placed in the body to make tissues, organs, or body spaces more visible during imaging.

#### **Synonyms:**

Contrast agent; radiographic contrast material.

### **Controllers**

Long-term asthma medicines taken regularly to reduce airway inflammation and prevent symptoms or exacerbations.

#### **Synonyms:**

Controller medicines; maintenance asthma therapy.

### **Convulsion**

A sudden episode of involuntary, often rhythmic muscle contractions that may occur with a seizure or other disturbance of brain function.

#### **Synonyms:**

Convulsive episode; seizure-related motor activity.

### **Corn**

A localized thickening of skin caused by repeated pressure or friction, often occurring on the toes or feet.

#### **Synonyms:**

Clavus; heloma.

### **Coronary**

Relating to the arteries or circulation that supply the heart muscle.

#### **Synonyms:**

Cardiac blood-vessel-related; heart-coronary.

### **Coronary Artery Bypass Surgery**

Surgery that uses a graft to route blood around a narrowed or blocked coronary artery.

---

**Synonyms:**

CABG; coronary bypass surgery.

**Coronary Endarterectomy**

Surgical removal of atherosclerotic plaque from the inner lining of a coronary artery.

**Synonyms:**

Coronary plaque endarterectomy; coronary endarterectomy procedure.

**Coronary Spasm**

Temporary contraction of a coronary artery that reduces blood flow to the heart muscle and may cause angina or infarction.

**Synonyms:**

Vasospastic angina mechanism; coronary artery spasm.

**Coronary Care Unit**

A hospital unit providing continuous monitoring and specialized care for acute cardiac illness.

**Synonyms:**

CCU; cardiac care unit.

**Corpus Cavernosum**

One of two columns of erectile tissue in the penis that fill with blood during erection.

**Synonyms:**

Cavernous body; penile corpus cavernosum.

**Corpus Luteum**

The temporary endocrine structure formed from an ovarian follicle after ovulation; it produces progesterone during the luteal phase and early pregnancy.

**Synonyms:**

Yellow body; luteal body.

**Corpus Spongiosum**

A column of erectile tissue surrounding the penile urethra and expanding distally to form the glans.

**Synonyms:**

Spongy body; corpus spongiosum penis.

**Corrugator Muscle**

A small facial muscle that draws the eyebrows down-

ward and inward, contributing to frowning.

**Synonyms:**

Corrugator supercilii; glabellar muscle.

**Cortex**

The outer layer of an organ or structure, such as the cerebral cortex, adrenal cortex, or outer layer of a hair shaft.

**Synonyms:**

Cortical layer; outer cortex.

**Cortical Bone**

Dense bone forming the outer shell of most bones and providing much of the skeleton's mechanical strength.

**Synonyms:**

Compact bone; cortical tissue.

**Corticotropin-Releasing Factor**

A hypothalamic hormone that stimulates the pituitary gland to release adrenocorticotrophic hormone and helps coordinate the stress response.

**Synonyms:**

Corticotropin-releasing hormone; CRH.

**COX-2 Inhibitors**

Medicines that inhibit cyclooxygenase-2, an enzyme involved in prostaglandin production and inflammation.

**Synonyms:**

Cyclooxygenase-2 inhibitors; selective COX-2 inhibitors.

**CPR**

CPR is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

**Craving**

A strong, often difficult-to-control desire for a substance, behavior, or experience, commonly seen in substance-use disorders.

**Synonyms:**

Strong urge; compulsive desire.

---

### **Creatinine Test**

A blood or urine test measuring creatinine to help assess kidney filtration and muscle-related creatinine production.

#### **Synonyms:**

Creatinine measurement; renal function creatinine test.

### **Crepitus**

A crackling, grating, or popping sensation or sound caused by movement of tissue, bone, joint surfaces, or air in soft tissue.

#### **Synonyms:**

Crepitation; crackling sensation.

### **Crown**

The visible part of a tooth above the gum line, or a dental restoration that covers and protects a damaged tooth.

#### **Synonyms:**

Dental crown; anatomic tooth crown.

### **CT**

Computed tomography, an imaging method that uses multiple X-ray measurements and computer reconstruction to produce cross-sectional images.

#### **Synonyms:**

Computed tomography; CAT scan.

### **Cupping**

An abnormal enlargement or depression of the optic-disc cup, often assessed in evaluating glaucoma.

#### **Synonyms:**

Optic-disc cupping; glaucomatous cupping.

### **Cuticle**

The thin outermost layer of a hair shaft formed by overlapping cells that protect the inner cortex.

#### **Synonyms:**

Hair cuticle; cuticular layer.

### **Cyclic Guanosine Monophosphate**

A cellular signaling molecule involved in smooth-muscle relaxation, phototransduction, and other physiologic processes.

#### **Synonyms:**

cGMP; cyclic GMP.

### **Cyclic Hormone Therapy**

Hormone therapy in which estrogen is given continuously or for part of a cycle and progestogen is added for a defined number of days.

#### **Synonyms:**

Sequential hormone therapy; cyclic estrogen-progestogen therapy.

### **Cyclooxygenase**

An enzyme family that helps convert arachidonic acid into prostaglandins and related mediators involved in pain, inflammation, and platelet function.

#### **Synonyms:**

COX enzyme; prostaglandin-endoperoxide synthase.

### **Cytokines**

Small signaling proteins released by immune and other cells that regulate inflammation, immunity, blood-cell production, and tissue responses.

#### **Synonyms:**

Immune signaling proteins; cytokine mediators.

### **Cytotoxic Alopecia**

Hair loss caused by exposure to a cytotoxic treatment or other toxic injury to actively growing hair follicles.

#### **Synonyms:**

Drug-induced alopecia; chemotherapy-related hair loss.

### **C Fiber**

A biological or biochemical term referring to c fiber. Its role depends on the relevant tissue, pathway, or clinical context.

### **Cabazitaxel**

A medicine or chemical compound identified by cabazitaxel. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Cabergoline**

A clinical condition or finding involving cabergo-

---

line. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cadherin**

A calcium-dependent cell-adhesion protein that links neighboring cells and helps organize tissues; abnormal cadherin expression can promote invasion and metastasis in cancer.

### **Cadmium**

A toxic heavy metal found in tobacco smoke, batteries, pigments, and contaminated food; chronic exposure can injure the kidneys, lungs, and bones and increases cancer risk.

### **Cadmium Chloride**

A medicine or chemical compound identified by cadmium chloride. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Cadusafos**

An organophosphate pesticide that inhibits acetylcholinesterase; exposure can cause cholinergic poisoning with sweating, salivation, vomiting, weakness, breathing difficulty, or seizures.

### **Caenorhabditis Elegans**

A biomedical term referring to *caenorhabditis elegans*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Cafe-Au-Lait Spot**

A flat, evenly pigmented light-brown skin macule; several lesions or characteristic size and distribution may suggest neurofibromatosis type 1 or another genetic disorder.

### **Caffeic Acid**

A plant-derived phenolic compound found in coffee, fruit, and vegetables; it participates in plant metabolism and is studied experimentally for antioxidant and other biologic effects.

### **Calbindin**

A calcium-binding protein that buffers intracellular calcium and supports signaling, especially in neurons and intestinal epithelial cells; it is also used as a tissue marker.

### **Calcifediol**

25-hydroxyvitamin D, the major circulating storage form of vitamin D measured to assess vitamin-D status before activation to calcitriol.

### **Calcineurin**

A calcium- and calmodulin-dependent phosphatase that activates NFAT transcription factors; calcineurin inhibitors such as cyclosporine suppress T-cell activation.

### **Calcitriol**

The hormonally active form of vitamin D, produced by renal and other tissues, that increases intestinal calcium and phosphate absorption and regulates parathyroid hormone and bone metabolism.

### **Calcium Carbonate**

A medicine or chemical compound identified by calcium carbonate. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Calcium Channel**

A biological or biochemical term referring to calcium channel. Its role depends on the relevant tissue, pathway, or clinical context.

### **Calcium Chloride**

A medicine or chemical compound identified by calcium chloride. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Calcium Citrate**

A medicine or chemical compound identified by calcium citrate. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Calcium Gluconate**

A medicine or chemical compound identified by

---

calcium gluconate. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Calcium Signaling**

A biological or biochemical term referring to calcium signaling. Its role depends on the relevant tissue, pathway, or clinical context.

### **Calculi**

Hardened mineral concretions, such as gallstones, kidney stones, or salivary stones, formed when dissolved substances precipitate and aggregate within a body organ or duct.

### **Calibration**

Calibration is used in relation to calibration during assessment, diagnosis, treatment, monitoring, or patient support.

### **Caliciviridae**

Caliciviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Calmodulin**

An intracellular calcium-binding messenger protein that changes shape when it binds calcium and regulates enzymes, ion channels, muscle contraction, and gene expression.

### **Calnexin**

An endoplasmic-reticulum chaperone that binds newly synthesized glycoproteins and helps them fold correctly before they are transported or degraded.

### **Calories**

Units used to express the energy supplied by food or expended by the body; food labels generally report kilocalories, commonly called calories.

### **Calorimetry**

Calorimetry is used in relation to calorimetry during assessment, diagnosis, treatment, monitoring, or patient support.

### **Calpain**

Calpain is used in relation to calpain during assessment, diagnosis, treatment, monitoring, or patient support.

### **Calponin**

An actin-associated protein in smooth muscle and other cells that modulates contraction and cytoskeletal organization; immunostaining can help identify myoid differentiation.

### **Calreticulin**

An endoplasmic-reticulum chaperone and calcium-binding protein involved in protein folding and immune signaling; CALR mutations are associated with some myeloproliferative neoplasms.

### **Calretinin**

A calcium-binding protein expressed in selected neurons, mesothelial cells, and other tissues; immunohistochemical staining helps distinguish mesothelioma from some carcinomas.

### **Calvarium**

The dome-like portion of the skull formed mainly by the frontal, parietal, and occipital bones that encloses and protects the cerebral hemispheres.

### **Campesterol**

A plant sterol structurally related to cholesterol that is absorbed in small amounts from food; elevated absorption can contribute to rare sitosterolemia.

### **Camphor**

A fragrant bicyclic compound used in topical products and some traditional remedies; ingestion can cause nausea, agitation, seizures, and potentially fatal toxicity.

### **Campomelic Dysplasia**

A disorder, malformation, or clinical finding involving the body structure or process named by the term; diagnosis uses its characteristic pattern, history, examination, and appropriate testing.

---

## Camptothecin

A plant-derived compound that inhibits topoisomerase I by stabilizing the enzyme–DNA cleavage complex; related drugs include irinotecan and topotecan.

## Camptothecin Analogue

A drug structurally related to camptothecin that inhibits topoisomerase I, disrupting DNA replication and causing cancer-cell death; toxicity commonly includes marrow or gastrointestinal effects.

## Campylobacter

Campylobacter is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Coli

Campylobacter coli is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Concisus

Campylobacter concisus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Curvus

Campylobacter curvus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Fetus

Campylobacter fetus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Gracilis

Campylobacter gracilis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Jejuni

Campylobacter jejuni is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Lari

Campylobacter lari is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Rectus

Campylobacter rectus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacter Upsaliensis

Campylobacter upsaliensis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Campylobacteraceae

Campylobacteraceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Canagliflozin

An SGLT2 inhibitor that lowers blood glucose by increasing urinary glucose excretion and also reduces selected heart-failure and kidney risks; adverse ef-

---

fects include genital infections and ketoacidosis.

### **Canarypox Virus**

Canarypox virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Cancell**

A shortened or misspelled form of cancellous, referring to the porous, trabecular interior of bone that contains marrow and helps distribute mechanical load.

### **Cancer Cluster**

A neoplastic process affecting cancer cluster; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cancer Immunotherapy**

Cancer immunotherapy is used in relation to cancer immunotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Cancer Prevention**

A neoplastic process affecting cancer prevention; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cancer Risk**

A neoplastic process affecting cancer risk; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Candela**

The SI unit of luminous intensity in a specified direction; it is used in photometry and is distinct from medical measures of light dose or illuminance.

### **Candida**

Candida is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Albicans**

Candida albicans is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Boidinii**

Candida boidinii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Dubliniensis**

Candida dubliniensis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Esophagitis**

Candida esophagitis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Famata**

Candida famata is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Glabrata**

Candida glabrata is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Inconspicua**

Candida inconspicua is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on

---

pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Intermedia**

Candida intermedia is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Orthopsilosis**

Candida orthopsilosis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Parapsilosis**

Candida parapsilosis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Sake**

Candida sake is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Tropicalis**

Candida tropicalis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Candida Zeylanoides**

Candida zeylanoides is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Canertinib Dihydrochloride**

A medicine or chemical compound identified by canertinib dihydrochloride. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Canfosfamide Hcl**

An investigational glutathione-S-transferase P1-1-activated anticancer prodrug studied for tumor-selective cytotoxicity; it is not a routine approved treatment.

### **Cannabidiol**

A nonintoxicating cannabinoid from Cannabis sativa that influences several signaling systems; purified cannabidiol is used for selected seizure disorders, while products vary in quality and interactions.

### **Cannabinoid**

A compound that acts on cannabinoid receptors or related targets, including plant cannabinoids, endogenous endocannabinoids, and synthetic agents; effects vary from analgesia and appetite change to intoxication.

### **Cannabinoid Receptor**

A G-protein-coupled receptor, chiefly CB1 or CB2, activated by endocannabinoids and some cannabis compounds to modulate pain, appetite, mood, memory, immunity, and inflammation.

### **Cannabinol**

A mildly psychoactive cannabinoid produced as THC oxidizes; its clinical effects and therapeutic usefulness remain less established than those of several other cannabinoids.

### **Cannula Hub**

The proximal connector of a cannula that joins it to tubing, a syringe, or another device and may contain a port or valve for access and fluid delivery.

### **Canola Oil**

A vegetable oil low in saturated fat and relatively rich in monounsaturated and polyunsaturated fatty

---

acids, commonly used as a cooking oil.

### **Canrenone**

An active metabolite and potassium-sparing antimineralocorticoid related to spironolactone that antagonizes aldosterone at the mineralocorticoid receptor.

### **Canthaxanthin**

A red-orange carotenoid pigment used as a color additive and formerly in tanning products; excessive ingestion can cause retinal crystal deposits and liver injury.

### **Cantuzumab Ravtansine**

A medicine or chemical compound identified by cantuzumab ravtansine. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Capecitabine**

An oral prodrug converted in tissues to 5-fluorouracil, used for selected solid tumors; important toxicities include diarrhea, mucositis, hand-foot syndrome, and cardiotoxicity.

### **Capillaria**

A microorganism or infectious condition associated with capillaria. Clinical effects depend on the organism, site of infection, and host factors.

### **Capillaria Philippinensis**

A microorganism or infectious condition associated with capillaria philippinensis. Clinical effects depend on the organism, site of infection, and host factors.

### **Capillary Electrophoresis**

A diagnostic test or assessment related to capillary electrophoresis. Results are interpreted with the clinical findings, test method, and reference range.

### **Capillary Plasma**

The liquid component of blood obtained from small vessels in skin or tissue, containing water, elec-

trolytes, proteins, hormones, nutrients, and waste products.

### **Capillary Vessel**

A microscopic vessel with a thin endothelial wall where blood exchanges oxygen, carbon dioxide, nutrients, fluid, and waste with surrounding tissue.

### **Capnocytophaga**

A biomedical term referring to capnocytophaga; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Capnocytophaga Gingivalis**

A biomedical term referring to capnocytophaga gingivalis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Capnocytophaga Ochracea**

A biomedical term referring to capnocytophaga ochracea; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Capnocytophaga Sputigena**

A biomedical term referring to capnocytophaga sputigena; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Capreomycin**

A medicine or chemical compound identified by capreomycin. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Capromab Pendetide**

A medicine or chemical compound identified by capromab pendetide. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Capsid**

The protein shell surrounding the genome of a virus, protecting nucleic acid and helping determine at-

---

tachment, entry, host range, and immune recognition.

### **Capsid Proteins**

Viral structural proteins that assemble around the genome to form the capsid and often participate in host-cell attachment, entry, and immune recognition.

### **Capsule**

A membrane, fibrous covering, or enclosed dosage form; in anatomy it may surround an organ or joint, while in pharmacology it contains medicine within a soluble shell.

### **Capsule Endoscope**

A swallowable camera-containing capsule that transmits images while passing through the gastrointestinal tract, especially useful for examining the small intestine.

### **Captopril**

A medicine or chemical compound identified by captopril. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Carbachol**

A cholinergic agonist that stimulates muscarinic receptors; ophthalmic carbachol can constrict the pupil and lower intraocular pressure during selected procedures.

### **Carbadox**

A quinoxaline antimicrobial growth-promoting drug formerly used in food-producing animals; safety concerns and carcinogenic potential have led to restrictions or bans.

### **Carbamate**

A chemical group found in pesticides and medicines; carbamate insecticides reversibly inhibit acetylcholinesterase and can cause a cholinergic toxidrome.

### **Carbamazepine**

A clinical condition or finding involving carbamazepine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Carbapenem**

A broad-spectrum beta-lactam antibiotic class that inhibits bacterial cell-wall synthesis and is reserved for serious infections, with resistance increasingly limiting use.

### **Carbaryl**

A carbamate insecticide that reversibly inhibits acetylcholinesterase; substantial exposure can cause sweating, salivation, vomiting, muscle weakness, and breathing problems.

### **Carbazilquinone**

An investigational quinone-containing anticancer compound studied for cytotoxic effects and bioreductive activity; it is not a routine clinical medicine.

### **Carbenicillin**

A medicine or chemical compound identified by carbenicillin. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Carbofuran**

A highly toxic carbamate pesticide that inhibits acetylcholinesterase and can cause rapid cholinergic poisoning after ingestion, inhalation, or skin exposure.

### **Carbogen**

A breathing mixture containing oxygen and carbon dioxide, used experimentally or in selected treatments to stimulate ventilation or modify tissue oxygenation.

### **Carbohydrate Metabolism**

Carbohydrate metabolism is used in relation to carbohydrate metabolism during assessment, diagnosis, treatment, monitoring, or patient support.

---

## Carbon

A biological or biochemical term referring to carbon. Its role depends on the relevant tissue, pathway, or clinical context.

## Carbon Tetrachloride

A medicine or chemical compound identified by carbon tetrachloride. Its uses, effects, and risks depend on the specific substance and clinical context.

## Carbonate

A medicine or chemical compound identified by carbonate. Its uses, effects, and risks depend on the specific substance and clinical context.

## Carbophenothion

An organophosphate insecticide that inhibits acetylcholinesterase; poisoning produces excessive cholinergic activity and may cause respiratory failure.

## Carboplatin

A platinum chemotherapy drug that cross-links DNA and prevents replication; common dose-limiting toxicity is thrombocytopenia, with nausea, anemia, and hypersensitivity also possible.

## Carboprost

A prostaglandin F2-alpha analogue that contracts uterine muscle and is used for selected cases of postpartum hemorrhage or pregnancy termination; asthma is an important precaution.

## Carbosulfan

A carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after significant exposure.

## Carboxyl Group

A biological or biochemical term referring to carboxyl group. Its role depends on the relevant tissue, pathway, or clinical context.

## Carboxylesterase

A clinical condition or finding involving carboxylesterase. Its defining features, causes, eval-

uation, and management depend on the clinical context.

## Carboxylic Acid

An organic compound containing a carboxyl group, which can donate a proton and form salts or esters; many biologically important fatty acids and metabolic intermediates are carboxylic acids.

## Carboxy-Lyases

A clinical condition or finding involving carboxy-lyases. Its defining features, causes, evaluation, and management depend on the clinical context.

## Carboxypeptidase H

A clinical condition or finding involving carboxypeptidase h. Its defining features, causes, evaluation, and management depend on the clinical context.

## Carcinoembryonal Antigen

The tumor marker carcinoembryonic antigen, or CEA, a glycoprotein that may be elevated in colorectal and other cancers but is not specific enough for general screening.

## Carcinogen Testing

Carcinogen testing is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

## Cardiac Care

Cardiac care refers to cardiac care, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Cardiac Catheter

Cardiac catheter refers to cardiac catheter, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Cardiac Fibroma

Cardiac fibroma refers to cardiac fibroma, an anatomical or physiologic concept used to describe

---

a body structure, process, or function.

### **Cardiac Glycoside**

Cardiac glycoside refers to cardiac glycoside, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Hemangioma**

Cardiac hemangioma refers to cardiac hemangioma, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Myocyte**

Cardiac myocyte refers to cardiac myocyte, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Perforation**

Cardiac perforation refers to cardiac perforation, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Rhabdomyoma**

Cardiac rhabdomyoma refers to cardiac rhabdomyoma, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Sarcoma**

A neoplastic process affecting cardiac sarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cardiac Ventriculography**

Cardiac ventriculography refers to cardiac ventriculography, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Volume**

Cardiac volume refers to cardiac volume, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardiac Wall**

Cardiac wall refers to cardiac wall, an anatomical or physiologic concept used to describe a body struc-

ture, process, or function.

### **Cardinal Body Part**

Cardinal body part refers to cardinal body part, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cardinal Cell Part**

A cellular process involving cardinal Cell Part; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cardiobacteriaceae**

Cardiobacteriaceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Cardiobacterium**

Cardiobacterium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Cardiobacterium Hominis**

Cardiobacterium hominis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Cardiolipin**

A distinctive phospholipid concentrated in the inner mitochondrial membrane; antibodies to cardiolipin are among the laboratory markers of antiphospholipid syndrome.

### **Cardiologist**

Physician specializing in diagnosis and treatment of heart and cardiovascular diseases; trained in internal medicine and cardiology.

---

### **Cardiotonic Agent**

A drug or substance that increases the force or efficiency of cardiac contraction, used selectively in heart failure or shock because benefits must be balanced against arrhythmia and other risks.

### **Cardiotoxin**

A clinical condition or finding involving cardiotoxin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cardiovascular Agents**

Medicines acting on the heart or blood vessels, including drugs for blood pressure, rhythm, angina, heart failure, thrombosis, and lipid disorders.

### **Cardiovascular Infection**

An infectious process or toxic exposure involving cardiovascular infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Cardiovascular Injury**

A clinical condition or finding involving cardiovascular injury. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cardiovascular Neoplasm**

A neoplastic process affecting cardiovascular neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cardiovascular Pharmacology**

The study of how medicines affect the heart, blood vessels, blood pressure, cardiac rhythm, coagulation, and lipid metabolism.

### **Cardiovascular Surgery**

Cardiovascular surgery is used in relation to cardiovascular surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### **Cardiovirus**

Cardiovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance

depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Carisoprodol**

A centrally acting skeletal-muscle relaxant metabolized partly to meprobamate and used short term for acute musculoskeletal pain; sedation, misuse, and dependence are important risks.

### **Carmine**

A red pigment derived from cochineal insects and used in foods, cosmetics, and medicines; it can rarely cause allergic reactions, including asthma or anaphylaxis.

### **Carmustine**

A medicine or chemical compound identified by carmustine. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Carney Triad**

A rare, usually nonhereditary association of gastric epithelioid leiomyosarcoma or gastrointestinal stromal tumor, pulmonary chondroma, and extra-adrenal paraganglioma.

### **Carnobacteriaceae**

Carnobacteriaceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Carnosine**

A dipeptide of beta-alanine and histidine found in muscle and nervous tissue that buffers acidity and may limit protein glycation; many proposed supplement benefits remain unproven.

### **Carnosinemia**

A rare inherited disorder of carnosinase deficiency causing elevated carnosine in blood and urine, usually with developmental or neurologic abnormalities of variable severity.

---

## **Carotene**

An orange-yellow plant pigment and provitamin-A carotenoid; beta-carotene can be converted to retinol, while excess dietary carotene may cause harmless yellow skin discoloration.

## **Carotenoid**

A family of lipid-soluble yellow, orange, or red pigments, including beta-carotene and lutein, that act in photosynthesis, antioxidant pathways, and sometimes vitamin-A production.

## **Carotid Body**

Carotid body refers to carotid body, an anatomical or physiologic concept used to describe a body structure, process, or function.

## **Carpal Bones**

An anatomical or cellular structure referred to as carpal bones. Its clinical importance depends on its location, function, and associated disease.

## **Carpal Joints**

The articulations among the eight carpal bones and between the carpus, radius, ulna, and metacarpals that permit coordinated wrist movement.

## **Carpometacarpal Joint**

A joint between a carpal bone and the base of a metacarpal; the thumb carpometacarpal joint is a highly mobile saddle joint commonly affected by osteoarthritis.

## **Carrageenan**

A sulfated polysaccharide extracted from red seaweed and used as a thickener or stabilizer in foods and pharmaceutical preparations; its inflammatory effects depend on form and exposure.

## **Carrier Excipient**

An inactive substance that carries or supports an active medicine in a formulation, helping control dose, stability, absorption, appearance, or delivery.

## **Carry-Over Effect**

Persistence of an intervention's effect into a later treatment period or measurement, potentially confounding a crossover study or subsequent clinical assessment.

## **Carteolol**

A medicine or chemical compound identified by carteolol. Its uses, effects, and risks depend on the specific substance and clinical context.

## **Cartilage Disease**

A disorder damaging cartilage, the resilient connective tissue covering joints or supporting structures, causing pain, stiffness, deformity, impaired growth, or loss of smooth movement.

## **Carubicin**

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

## **Carvedilol Phosphate**

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

## **Carzelesin**

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

## **Casanthranol**

A clinical condition or finding involving casanthranol. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Case Study**

Case study is used in relation to case study during assessment, diagnosis, treatment, monitoring, or patient support.

---

### Case-Control Studies

A clinical condition or finding involving case-control studies. Its defining features, causes, evaluation, and management depend on the clinical context.

### Casein

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

### Casein Kinase

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### Caspase

A biological or biochemical term referring to caspase. Its role depends on the relevant tissue, pathway, or clinical context.

### Caspase Activation

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### Caspase Inhibitor

A biological or biochemical term referring to caspase inhibitor. Its role depends on the relevant tissue, pathway, or clinical context.

### Caspofungin

Caspofungin is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### Caspofungin Acetate

Caspofungin acetate is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### Castor Oil

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

### Castration

A clinical condition or finding involving castration. Its defining features, causes, evaluation, and management depend on the clinical context.

### Catalase

A biological or biochemical term referring to catalase. Its role depends on the relevant tissue, pathway, or clinical context.

### Cataract Surgery

Cataract surgery is used in relation to cataract surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### Catechin

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

### Catechol

A clinical condition or finding involving catechol. Its defining features, causes, evaluation, and management depend on the clinical context.

### Catecholamine

A biological or biochemical term referring to catecholamine. Its role depends on the relevant tissue, pathway, or clinical context.

### Catenin

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### Cathepsin

A protein or enzyme involved in cell signaling, pro-

---

tein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsin D**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsin H**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsin K**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsin L**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsin Z**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cathepsins B**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Catheterization**

A medical procedure involving catheterization. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

### **Cathexis**

A clinical condition or finding involving cathexis. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Caudal Dysplasia**

A disorder, malformation, or clinical finding involving the body structure or process named by the term; diagnosis uses its characteristic pattern, history, examination, and appropriate testing.

### **Caudal Vein**

An anatomic structure or region related to caudal Vein; its location and function determine its normal relationships and clinical significance.

### **Caudate Nucleus**

An anatomic structure or region related to caudate Nucleus; its location and function determine its normal relationships and clinical significance.

### **Caulobacter**

Caulobacter is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Caulobacteraceae**

Caulobacteraceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Cautery Device**

An anatomic structure or region related to cautery Device; its location and function determine its normal relationships and clinical significance.

### **Caveola**

An anatomic structure or region related to caveola; its location and function determine its normal relationships and clinical significance.

---

### **Caveolins**

A protein or enzyme involved in cell signaling, protein processing, or tissue organization; its biologic role depends on where it is expressed and what substrates or partners it encounters.

### **Cd Antigens**

A biological or biochemical term referring to cd antigens. Its role depends on the relevant tissue, pathway, or clinical context.

### **CEA Assay**

CEA assay is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

### **Cebocephaly**

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

### **Cecal Hemorrhage**

A disorder, malformation, or clinical finding involving the body structure or process named by the term; diagnosis uses its characteristic pattern, history, examination, and appropriate testing.

### **Cecal Infection**

An infectious process or toxic exposure involving cecal infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Cecal Neoplasm**

A neoplastic process affecting cecal neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cedecea**

A microorganism or infectious condition associated with cedecea. Clinical effects depend on the organism, site of infection, and host factors.

### **Cedecea Davisae**

A microorganism or infectious condition associated with cedecea davisae. Clinical effects depend on the organism, site of infection, and host factors.

### **Cedecea Lapagei**

A microorganism or infectious condition associated with cedecea lapagei. Clinical effects depend on the organism, site of infection, and host factors.

### **Cedecea Neteri**

A microorganism or infectious condition associated with cedecea neteri. Clinical effects depend on the organism, site of infection, and host factors.

### **Cediranib Maleate**

A clinical condition or finding involving cediranib maleate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cefaclor**

A clinical condition or finding involving cefaclor. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cefadroxil**

A clinical condition or finding involving cefadroxil. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cefamandole**

A clinical condition or finding involving cefamandole. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cefatrizine**

A clinical condition or finding involving cefatrizine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cefazolin**

A clinical condition or finding involving cefazolin. Its defining features, causes, evaluation, and management depend on the clinical context.

---

**Cefdinir**

A clinical condition or finding involving cefdinir. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefepime**

A clinical condition or finding involving cefepime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefixime**

A clinical condition or finding involving cefixime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefmenoxime**

A clinical condition or finding involving cefmenoxime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefmetazole**

A medicine or chemical compound identified by cefmetazole. Its uses, effects, and risks depend on the specific substance and clinical context.

**Cefonicid**

A clinical condition or finding involving cefonicid. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefoperazone**

A clinical condition or finding involving cefoperazone. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefotaxime**

A clinical condition or finding involving cefotaxime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefotetan**

A clinical condition or finding involving cefotetan. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefotiam**

A clinical condition or finding involving cefotiam. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefoxitin**

A clinical condition or finding involving cefoxitin. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefsulodin**

A clinical condition or finding involving cefsulodin. Its defining features, causes, evaluation, and management depend on the clinical context.

**Ceftazidime**

A clinical condition or finding involving ceftazidime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Ceftibuten**

A clinical condition or finding involving ceftibuten. Its defining features, causes, evaluation, and management depend on the clinical context.

**Ceftizoxime**

A clinical condition or finding involving ceftizoxime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Ceftriaxone**

A clinical condition or finding involving ceftriaxone. Its defining features, causes, evaluation, and management depend on the clinical context.

**Cefuroxime**

A clinical condition or finding involving cefuroxime. Its defining features, causes, evaluation, and management depend on the clinical context.

**Celecoxib**

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

---

### **Cell Adhesion**

The binding of cells to one another or to the extracellular matrix, mediated by adhesion molecules and important for tissue structure, signaling, and cell migration.

### **Cell Aggregation**

A cellular process involving cell Aggregation; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Body**

A cellular process involving cell Body; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Count**

An anatomical or cellular structure referred to as cell count. Its clinical importance depends on its location, function, and associated disease.

### **Cell Culture**

Cell culture is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

### **Cell Cycle**

The ordered series of cellular phases through which a cell grows, duplicates its DNA, and divides.

### **Cell Death**

The regulated elimination of cells through programmed cellular pathways that help maintain tissue balance and remove damaged cells.

### **Cell Dedifferentiation**

A cellular process involving cell Dedifferentiation; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Density**

A cellular process involving cell Density; its effects depend on the cells, tissues, and biologic pathways

involved.

### **Cell Differentiation**

A cellular process involving cell Differentiation; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Division**

A cellular process involving cell Division; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Fusion**

A cellular process involving cell Fusion; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Growth**

A cellular process involving cell Growth; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Maturation**

A cellular process involving cell Maturation; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Migration**

A cellular process involving cell Migration; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Motility**

A cellular process involving cell Motility; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Movement**

A cellular process involving cell Movement; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Nucleus**

A cellular process involving cell Nucleus; its effects depend on the cells, tissues, and biologic pathways

---

involved.

### **Cell Pellet**

A cellular process involving cell Pellet; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Physiology**

A cellular process involving cell Physiology; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Polarity**

A cellular process involving cell Polarity; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Proliferation**

A cellular process involving cell Proliferation; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Secretion**

A cellular process involving cell Secretion; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Sorting**

A cellular process involving cell Sorting; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Structure**

A cellular process involving cell Structure; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Surface**

A cellular process involving cell Surface; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell Survival**

A cellular process involving cell Survival; its effects depend on the cells, tissues, and biologic pathways

involved.

### **Cell Therapy**

A medical procedure, treatment, device, or care topic related to cell therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Cell Transplantation**

A medical procedure, treatment, device, or care topic related to cell transplantation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Cell Wall**

A cellular process involving cell Wall; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell-Cell Junction**

A cellular process involving cell-Cell Junction; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell-Cell Signaling**

A cellular process involving cell-Cell Signaling; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell-Free System**

A cellular process involving cell-Free System; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cell-Matrix Junction**

A cellular process involving cell-Matrix Junction; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellular**

A cellular process involving cellular; its effects depend on the cells, tissues, and biologic pathways involved.

---

### **Cellular Immunity**

A cellular process involving cellular Immunity; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellular Metabolic Process**

A cellular process involving cellular Metabolic Process; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellular Respiration**

A cellular process involving cellular Respiration; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellular Vesicle**

A cellular process involving cellular Vesicle; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellulomonas**

A cellular process involving cellulomonas; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellulomonas Hominis**

A cellular process involving cellulomonas Hominis; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellulose**

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

### **Cellulosimicrobium**

A cellular process involving cellulosimicrobium; its effects depend on the cells, tissues, and biologic pathways involved.

### **Cellulosome**

A cellular process involving cellulosome; its effects depend on the cells, tissues, and biologic pathways involved.

### **Celosomy**

A clinical condition or finding involving celosomy. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cementoma**

A clinical condition or finding involving cementoma. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Centigram**

A metric unit of mass equal to one hundredth of a gram, or 10 milligrams, used for small quantities of medicines or specimens.

### **Centimeter**

Centimeter is used in relation to centimeter during assessment, diagnosis, treatment, monitoring, or patient support.

### **Centipoise**

A unit of dynamic viscosity equal to one millipascal-second, used to describe the flow resistance of blood, fluids, medicines, and other materials.

### **Central Apnea**

A pause in breathing caused by absent or reduced respiratory effort from impaired brainstem signaling, rather than upper-airway obstruction.

### **Centrifugation**

Spinning a specimen at high speed to separate components by density, such as cells from plasma or precipitated material from a liquid.

### **Centriole**

A cylindrical microtubule structure in the centrosome that helps organize the mitotic spindle and, in some cells, forms the basal body of a cilium or flagellum.

### **Centromere**

The constricted chromosome region where sister chromatids remain attached and the kinetochore forms for accurate chromosome segregation during

---

cell division.

### **Centrosome**

The main microtubule-organizing center of an animal cell, containing a pair of centrioles and coordinating the spindle during mitosis.

### **Cephacetrile**

An older first-generation cephalosporin antibiotic that inhibits bacterial cell-wall synthesis; it is not commonly used in current practice.

### **Cephalexin**

An oral first-generation cephalosporin that inhibits bacterial cell-wall synthesis and treats selected skin, respiratory, urinary, and other susceptible infections.

### **Cephalometry**

Measurement of the skull and facial structures, usually on standardized radiographs, used in orthodontic planning and assessment of craniofacial growth.

### **Cephaloridine**

An older injectable first-generation cephalosporin antibiotic whose use declined because of nephrotoxicity and the availability of safer alternatives.

### **Cephalothin**

An older injectable first-generation cephalosporin that inhibits bacterial cell-wall synthesis and was used for susceptible serious infections.

### **Cephapirin**

A first-generation cephalosporin antibiotic formerly used for susceptible bacterial infections; current availability and indications vary by country.

### **Cephradine**

A first-generation cephalosporin antibiotic related to cephalexin that inhibits bacterial cell-wall synthesis and treats selected susceptible infections.

### **Cerebellar Cortex**

The folded outer layer of the cerebellum containing

Purkinje and granular neurons that coordinates balance, posture, timing, and precision of movement.

### **Cerebellar Disease**

A disorder of the cerebellum causing impaired coordination, gait ataxia, dysmetria, tremor, abnormal eye movements, or speech changes.

### **Cerebellar Dysmetria**

Inability to control the range and force of a voluntary movement accurately, producing overshooting or undershooting from cerebellar dysfunction.

### **Cerebellar Hemangioblastoma**

A neoplastic process affecting cerebellar hemangioblastoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cerebellar Hypoplasia**

Underdevelopment of the cerebellum, usually beginning before birth, that may cause poor coordination, abnormal eye movements, seizures, and developmental impairment.

### **Cerebellar Neoplasm**

A neoplastic process affecting cerebellar neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cerebellar Nuclei**

Deep clusters of cerebellar neurons that receive processed signals from the cerebellar cortex and send coordinated motor output to the brainstem and thalamus.

### **Cerebellar Vermis**

The midline portion of the cerebellum that helps control trunk posture, gait, balance, and coordination of eye and head movements.

### **Cerebral Aqueduct**

Cerebral aqueduct refers to cerebral aqueduct, an anatomical or physiologic concept used to describe a body structure, process, or function.

---

### **Cerebral Artery**

An anatomical or cellular structure referred to as cerebral artery. Its clinical importance depends on its location, function, and associated disease.

### **Cerebral Atrophy**

Cerebral atrophy refers to cerebral atrophy, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Calcification**

Cerebral calcification refers to cerebral calcification, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Crus**

Cerebral crus refers to cerebral crus, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Hemisphere**

Cerebral hemisphere refers to cerebral hemisphere, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Ischemia**

Cerebral ischemia refers to cerebral ischemia, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Malaria**

Cerebral malaria refers to cerebral malaria, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Ventricle**

Cerebral ventricle refers to cerebral ventricle, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Ventriculography**

Cerebral ventriculography refers to cerebral ventriculography, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebral Ventriculomegaly**

Cerebral ventriculomegaly refers to cerebral ventriculomegaly, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Cerebrosides**

Glycosphingolipids composed of ceramide plus a single sugar, abundant in myelin and nervous tissue and involved in membrane structure.

### **Cerebrovascular Disorder**

A disorder of brain blood vessels or cerebral blood flow, including ischemia, hemorrhage, aneurysm, malformation, and venous thrombosis.

### **Cerium**

A rare-earth metal whose compounds have industrial and experimental medical uses; exposure to some forms can irritate tissues or cause toxicity.

### **Certification**

A formal process confirming that a person, service, laboratory, or facility meets specified training, quality, safety, or professional standards.

### **Certolizumab Pegol**

A medicine or chemical compound identified by certolizumab pegol. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Ceruminous Adenocarcinoma**

A neoplastic process affecting ceruminous adenocarcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cervical**

Relating either to the neck portion of the spine or to the cervix of the uterus; the intended meaning is determined by the surrounding anatomic context.

### **Cervical Arthritis**

Degenerative or inflammatory disease of the neck joints that can cause neck pain, stiffness, reduced motion, and sometimes nerve or spinal-cord com-

---

pression.

### **Cervical Atlas**

The first cervical vertebra, C1, a ring-shaped bone that supports the skull and rotates around the second cervical vertebra.

### **Cervical Change**

A change in the uterine cervix or cervical spine, depending on context; clinical significance is determined by the specific structural, inflammatory, or pregnancy-related finding.

### **Cervical Dislocation**

Abnormal displacement of one cervical vertebra relative to another, usually from trauma, that can destabilize the neck and injure the spinal cord.

### **Cervical Endometriosis**

Endometrial-like tissue in or on the cervix that may cause bleeding after sex, pelvic pain, or an abnormal cervical lesion.

### **Cervical Ganglion**

A cluster of nerve-cell bodies in the sympathetic chain of the neck that relays autonomic signals to the head, neck, and upper chest.

### **Cervical Insufficiency**

Painless shortening or opening of the cervix during pregnancy before term, increasing risk of second-trimester loss or spontaneous preterm birth.

### **Cervical Lymphadenopathy**

Enlarged lymph nodes in the neck, commonly caused by infection but sometimes reflecting malignancy, autoimmune disease, or other systemic illness.

### **Cervix Carcinoma**

A neoplastic process affecting cervix carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cervix Disease**

A disorder of the lower uterine cervix, ranging from

infection and benign polyps to precancer, cancer, scarring, or pregnancy-related change.

### **Cervix Neoplasm**

A neoplastic process affecting cervix neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Cesium**

A chemical element whose radioactive isotope cesium-137 can cause serious external or internal radiation injury after contamination or exposure.

### **Cestoda**

The tapeworm class of flatworms; human infection follows ingestion of eggs or larval tissue and can cause intestinal disease or tissue cysts.

### **Cetirizine**

A second-generation H1 antihistamine used for allergic rhinitis and urticaria; it is less sedating than older antihistamines but can still cause drowsiness.

### **Cetoleic Acid**

A long-chain monounsaturated fatty acid found mainly in marine oils and studied for effects on lipid metabolism and cellular membranes.

### **Cetrorelix**

A gonadotropin-releasing hormone antagonist used in controlled ovarian stimulation to prevent a premature luteinizing-hormone surge.

### **Cetuximab**

A medicine or chemical compound identified by cetuximab. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Cevimeline**

A muscarinic receptor agonist used to stimulate salivary secretion and relieve dry mouth, especially in selected patients with Sjögren syndrome.

### **Cevimeline Hydrochloride**

A medicine or chemical compound identified by ce-

---

vimeline hydrochloride. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Chaetomium**

A clinical condition or finding involving chaetomium. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chagas Cardiomyopathy**

Chronic heart disease caused by *Trypanosoma cruzi* infection, with conduction defects, arrhythmias, ventricular dilation, heart failure, or thromboembolism.

### **Challenge Agent**

A substance, organism, allergen, or physiologic stimulus deliberately administered in a controlled test to provoke and measure a response.

### **Chamomile Extract**

An extract of chamomile flowers used in traditional and complementary products; allergic reactions and medicine interactions are possible, while evidence varies by indication.

### **Chaplain**

A trained spiritual-care professional who supports patients and families with religious, existential, emotional, or ethical concerns in healthcare settings.

### **Cheek**

The facial region forming the side wall of the mouth, containing skin, muscle, fat, salivary structures, nerves, and blood vessels.

### **Cheek Pouch**

A distensible pocket inside the cheek found in some rodents and other animals, used to temporarily store and transport food.

### **Cheilodysplasia**

Pain of the lips, which may result from inflammation, infection, trauma, allergy, dryness, nerve pain, or another oral or dermatologic disorder.

### **Cheilognathopalatoschisis**

A congenital cleft involving the lip, jaw, and palate, caused by incomplete fusion of facial processes during embryonic development.

### **Cheilognathoschisis**

A congenital cleft of the lip and alveolar part of the upper jaw, with or without associated palatal involvement.

### **Cheirromegaly**

Abnormal enlargement of one or both hands, classically associated with excess growth hormone but also possible with local overgrowth or other disorders.

### **Chelating Agent**

A compound that binds a metal ion through multiple chemical sites, allowing the metal to be measured, mobilized, or removed in selected toxic exposures.

### **Chemexfoliation**

Application of a chemical solution to remove controlled layers of skin, improving selected scars, pigmentation, wrinkles, or superficial lesions.

### **Chemical**

A substance defined by its molecular composition and properties; medical effects depend on dose, route, exposure duration, metabolism, and biological target.

### **Chemical Ablation**

Destruction of unwanted tissue by injecting or applying a chemical irritant or sclerosant, used in selected lesions, vessels, cysts, or other conditions.

### **Chemical Burn**

Tissue injury caused by a corrosive acid, alkali, solvent, or other chemical, which may continue to penetrate until the substance is removed and neutralized appropriately.

### **Chemical Carcinogenesis**

Development of cancer after exposure to chemicals

---

that cause DNA damage, abnormal cell signaling, chronic tissue injury, or altered gene regulation.

### **Chemical Cleavage**

Breaking a chemical bond with a reagent, used in laboratory analysis, molecular biology, synthesis, or controlled degradation of a larger molecule.

### **Chemical Cofactor**

A nonprotein chemical helper required for an enzyme or biologic reaction, such as a metal ion, vitamin-derived coenzyme, or other small molecule.

### **Chemical Fractionation**

Separation of a mixture into fractions according to chemical or physical properties such as solubility, charge, size, or binding affinity.

### **Chemical Impurity**

An unintended chemical present in a medicine, specimen, or material, potentially affecting safety, stability, measurement accuracy, or biologic activity.

### **Chemistry**

The study of substances, their composition, properties, reactions, and transformations, forming the basis of biochemistry, pharmacology, toxicology, and laboratory medicine.

### **Chemokine Receptor**

A cell-surface receptor that binds chemokines and directs immune-cell movement; some also serve as entry cofactors for viruses such as HIV.

### **Chemoreceptor Cell**

A sensory cell that detects chemical changes such as oxygen, carbon dioxide, pH, taste molecules, or odorants and converts them into neural or physiologic signals.

### **Chemosensitivity Assay**

Chemosensitivity assay is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the

method and reference range.

### **Chemosensitization**

Increasing a tumor's or pathogen's susceptibility to a treatment by combining it with another agent that improves drug delivery, blocks resistance, or enhances cellular damage.

### **Chemotactic Factors**

Chemical signals that attract or repel cells, especially leukocytes, by creating directional concentration gradients during inflammation, infection, development, or repair.

### **Chemotherapy Regimen**

Chemotherapy regimen is used in relation to chemotherapy regimen during assessment, diagnosis, treatment, monitoring, or patient support.

### **Chest Tightness**

A sensation of pressure, constriction, or heaviness in the chest that may arise from heart, lung, gastrointestinal, musculoskeletal, or anxiety-related causes.

### **Chick Embryo**

The developing chicken embryo, widely used as an experimental model for embryology, organ development, virology, toxicology, and tissue growth.

### **Child Behavior**

Child behavior is used in relation to child behavior during assessment, diagnosis, treatment, monitoring, or patient support.

### **Child Care**

A medical procedure, treatment, device, or care topic related to child care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Child Development**

Progressive physical, cognitive, language, emotional, and social changes from infancy through adolescence, assessed against developmental milestones and individual variation.

---

## **Child Psychiatry**

The medical specialty concerned with assessment and treatment of emotional, behavioral, developmental, and psychiatric disorders in children and adolescents.

## **Child Psychology**

The study of children's cognitive, emotional, social, and behavioral development and the effects of relationships, learning, biology, and environment.

## **Child Welfare**

Services and policies intended to protect children from abuse or neglect and support safety, health, stable caregiving, development, and family well-being.

## **Childhood Angiosarcoma**

A neoplastic process affecting childhood angiosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Ependymoma**

A tumor arising from ependymal cells lining the brain ventricles or spinal canal in children; symptoms depend on location and obstruction of cerebrospinal-fluid flow.

## **Childhood Fibrosarcoma**

A neoplastic process affecting childhood fibrosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Ganglioglioma**

A usually slow-growing mixed neuronal and glial brain tumor in children or young adults, often presenting with long-standing focal seizures.

## **Childhood Leiomyosarcoma**

A neoplastic process affecting childhood leiomyosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Leukemia**

A neoplastic process affecting childhood leukemia;

diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Liposarcoma**

A neoplastic process affecting childhood liposarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Osteosarcoma**

A neoplastic process affecting childhood osteosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Childhood Rhabdomyosarcoma**

A neoplastic process affecting childhood rhabdomyosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## **Children**

Humans in the developmental period between infancy and adolescence; medical assessment must account for age-specific anatomy, physiology, growth, communication, and consent.

## **Chilomastix Mesnili**

A nonpathogenic intestinal flagellate protozoan that may be found in stool and indicates fecal exposure but usually does not require treatment.

## **Chimera**

An organism or tissue containing genetically distinct cell populations derived from different zygotes or embryos, or a laboratory construct combining genetic material from different sources.

## **Chin**

The lower facial prominence formed mainly by the mandible and overlying soft tissue, contributing to facial contour, speech, chewing, and airway anatomy.

## **Chironomidae**

The nonbiting midge family of insects; their larvae and body parts can act as environmental allergens

---

and rarely trigger respiratory or skin reactions.

### **Chiropractic**

A healthcare practice centered mainly on manual treatment of musculoskeletal disorders, especially spinal manipulation; benefits and risks vary by condition and technique.

### **Chitin**

A biological or biochemical term referring to chitin. Its role depends on the relevant tissue, pathway, or clinical context.

### **Chitosan**

A biodegradable polysaccharide derived from chitin, studied and used in wound dressings, drug delivery, hemostatic materials, and some nutritional products.

### **Chlamydiaceae**

Chlamydiaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Chlamydomona**

A microorganism or infectious condition associated with chlamydomona. Clinical effects depend on the organism, site of infection, and host factors.

### **Chlamydomphila**

A microorganism or infectious condition associated with chlamydomphila. Clinical effects depend on the organism, site of infection, and host factors.

### **Chlamydomphila Pneumoniae**

A microorganism or infectious condition associated with chlamydomphila pneumoniae. Clinical effects depend on the organism, site of infection, and host factors.

### **Chlamydomphila Psittaci**

A microorganism or infectious condition associated with chlamydomphila psittaci. Clinical effects depend on the organism, site of infection, and host factors.

### **Chloral Hydrate**

A clinical condition or finding involving chloral hydrate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorambucil**

A medicine or chemical compound identified by chlorambucil. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Chlordane**

A clinical condition or finding involving chlordane. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlordecone**

A clinical condition or finding involving chlordecone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlordiazepoxide**

Chlordiazepoxide is a defined chemical or biologic substance involved in chlordiazepoxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Chlorethoxyfos**

A clinical condition or finding involving chlorethoxyfos. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorfenvinphos**

A clinical condition or finding involving chlorfenvinphos. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorhexidine**

A clinical condition or finding involving chlorhexidine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chloride Channel**

A medicine or chemical compound identified by chloride channel. Its uses, effects, and risks depend on the specific substance and clinical context.

---

### Chloride Ion

The negatively charged form of chlorine and a major extracellular electrolyte that helps maintain fluid balance, osmotic pressure, acid–base status, and electrical neutrality.

### Chlorine

A clinical condition or finding involving chlorine. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlormadinone Acetate

A clinical condition or finding involving chlormadinone acetate. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlormerodrin

A clinical condition or finding involving chlormerodrin. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlorodeoxyadenosine

A clinical condition or finding involving chlorodeoxyadenosine. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloroform

A clinical condition or finding involving chloroform. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlorogenic Acid

Chlorogenic acid is a defined chemical or biologic substance involved in chlorogenic acid and studied in physiology, pharmacology, laboratory medicine, or treatment.

### Chlorophyll

A biological or biochemical term referring to chlorophyll. Its role depends on the relevant tissue, pathway, or clinical context.

### Chlorophyta

A clinical condition or finding involving chlorophyta. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloropicrin

A clinical condition or finding involving chloropicrin. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloroplast

A clinical condition or finding involving chloroplast. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloroplast DNA

A clinical condition or finding involving chloroplast dna. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloroprene

A clinical condition or finding involving chloroprene. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chloroquine

A clinical condition or finding involving chloroquine. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlorothiazide

A medicine or chemical compound identified by chlorothiazide. Its uses, effects, and risks depend on the specific substance and clinical context.

### Chlorotoxin

A clinical condition or finding involving chlorotoxin. Its defining features, causes, evaluation, and management depend on the clinical context.

### Chlorotrianisene

A clinical condition or finding involving chlorotrianisene. Its defining features, causes, evaluation, and management depend on the clinical context.

---

### **Chlorpheniramine**

A clinical condition or finding involving chlorpheniramine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorphentermine**

A clinical condition or finding involving chlorphentermine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorpromazine**

A clinical condition or finding involving chlorpromazine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorpropamide**

A clinical condition or finding involving chlorpropamide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorpyrifos**

A clinical condition or finding involving chlorpyrifos. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorthalidone**

A clinical condition or finding involving chlorthalidone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlorzoxazone**

A clinical condition or finding involving chlorzoxazone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **CHO Cell**

A Chinese hamster ovary cell line widely used to produce recombinant proteins, antibodies, vaccines, and other biologic medicines.

### **Choice Behavior**

Choice behavior is used in relation to choice behavior during assessment, diagnosis, treatment, monitoring, or patient support.

### **Choke**

Airway blockage by food or another object that prevents normal airflow and can rapidly cause inability to speak, cyanosis, loss of consciousness, or death.

### **Cholate**

The ionized form of cholic acid, a primary bile acid that helps emulsify dietary fat and is conjugated and secreted by the liver.

### **Cholecalciferol**

Vitamin D3, produced in skin by ultraviolet light and obtained from food or supplements, then converted to active metabolites that regulate calcium and phosphate.

### **Cold Hands**

Hands that feel unusually cold, which may result from environmental exposure, reduced blood flow, Raynaud phenomenon, anemia, thyroid disease, or other medical conditions.

### **Coughing Up Blood**

Expectoration of blood or blood-streaked sputum from the lower respiratory tract, called hemoptysis; heavy bleeding or breathing difficulty is an emergency.

### **Carcinoid Tumors**

Slow-growing neuroendocrine tumors that can release hormones and arise in organs such as the digestive tract or lungs.

#### **Synonyms:**

Cancer, Carcinoid Tumors

### **Childhood Apraxia Of Speech**

A speech-sound disorder in which a child has difficulty planning and coordinating the movements needed for clear speech.

#### **Synonyms:**

CAS

### **Cataracts**

Clouding of the eye's natural lens that causes blurred vision, glare, faded colors, or difficulty see-

---

ing at night.

### **Congenital Diaphragmatic Hernia (CDH)**

A birth defect in which an opening in the diaphragm allows abdominal organs to move into the chest and interfere with lung development.

### **Cellulite**

Cellulite refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Central Nervous System (CNS)**

#### **Lymphoma**

A lymphoma involving the brain, spinal cord, cerebrospinal fluid, or eye that can cause neurologic or visual symptoms.

### **CSF Leak (Cerebrospinal Fluid Leak)**

Escape of cerebrospinal fluid through a tear in the membranes surrounding the brain or spinal cord, often causing positional headache.

#### **Synonyms:**

Spinal Fluid Leak

### **Chilblains**

Painful, itchy, swollen skin lesions caused by an abnormal response to cold and damp conditions.

#### **Synonyms:**

Pernio

### **Chronic Exertional Compartment Syndrome**

Exercise-related increased pressure within a muscle compartment that causes predictable pain, tightness, or neurologic symptoms during activity.

#### **Synonyms:**

Chronic Compartment Syndrome

### **Cleft Lip And Cleft Palate**

Birth defects in which the lip, roof of the mouth, or both fail to fuse completely during development.

### **Common Warts**

Small, rough skin growths caused by infection with human papillomavirus, commonly affecting the hands and fingers.

#### **Synonyms:**

Warts, Common Warts (Common Warts)

### **Cyclosporiasis (Cyclospora)**

An intestinal infection caused by Cyclospora parasites, typically producing prolonged watery diarrhea, cramps, nausea, and fatigue.

### **Cyclothymia (Cyclothymic Disorder)**

A chronic mood disorder involving repeated periods of hypomanic and depressive symptoms that do not meet criteria for full episodes.

### **Cytomegalovirus (CMV) Infection**

Cytomegalovirus infection is caused by a herpesvirus that is often mild in healthy people but can cause congenital disease or severe organ infection in immunocompromised patients.

### **CA-125 Blood Test**

A diagnostic test used to evaluate ca-125. Results are interpreted with the clinical findings, test method, and reference range.

### **Caffeine Overdose**

Caffeine overdose can cause agitation, tremor, vomiting, rapid heartbeat, abnormal rhythm, seizures, and dangerous metabolic disturbances.

### **Caladium Plant Poisoning**

Poisoning caused by calcium oxalate crystals in the plant. Chewing may cause immediate burning and swelling of the mouth and throat; airway symptoms require emergency care.

### **Calcitonin Blood Test**

A diagnostic test used to evaluate calcitonin. Results are interpreted with the clinical findings, test method, and reference range.

---

### **Calcium - Ionized**

Ionized calcium is the biologically active, unbound portion of blood calcium involved in muscle contraction, nerve signaling, and clotting.

### **Calcium - Urine**

Urine calcium measures calcium excretion and helps evaluate kidney stones, parathyroid disorders, bone disease, and some metabolic conditions.

### **Calcium And Bones**

Calcium and bones refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Calcium Carbonate Overdose**

Overdose of calcium carbonate that may cause gastrointestinal symptoms, hypercalcemia, alkalosis, kidney injury, or kidney stones.

### **Calcium Carbonate With Magnesium Overdose**

Overdose of calcium and magnesium salts that may cause nausea, constipation, weakness, altered mental status, hypercalcemia, or kidney injury.

### **Calcium Hydroxide Poisoning**

Exposure to a caustic alkali that can burn the mouth, esophagus, skin, or eyes. Airway and gastrointestinal injury require urgent assessment.

### **Calla Lily Poisoning**

Poisoning caused by calcium oxalate crystals in the plant. Chewing may cause immediate burning and swelling of the mouth and throat; airway symptoms require emergency care.

### **Caloric Stimulation**

A vestibular test that introduces warm or cool air or water into the ear canal to create convection in the semicircular canal and assess each vestibular nerve.

### **Calorie Count - Alcoholic Beverages**

A clinical condition or finding involving calorie count - alcoholic beverages. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Calorie Count - Fast Food**

A clinical condition or finding involving calorie count - fast food. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Calorie Count - Sodas And Energy Drinks**

A clinical condition or finding involving calorie count - sodas and energy drinks. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Campho-Phenique Overdose**

Overdose of a topical product containing camphor and other ingredients. Toxicity may include gastrointestinal or neurologic symptoms, including seizures.

### **Camphor Overdose**

Overdose of camphor that can cause nausea, agitation, seizures, coma, and respiratory depression. Seizures may occur rapidly and require emergency treatment.

### **Campylobacter Serology Test**

A diagnostic test used to evaluate campylobacter serology. Results are interpreted with the clinical findings, test method, and reference range.

### **Can You Boost Your Metabolism?**

A health question about increasing energy expenditure; activity, muscle mass, sleep, diet, medicines, and endocrine disease influence metabolism, while quick “boosts” are usually modest.

### **Can'T Sleep? Try These Tips**

A patient-care topic concerning can't sleep? try these tips. It addresses the relevant purpose, risks, management, and follow-up.

---

## **Cancer - Resources**

A patient-care topic concerning cancer - resources. It addresses the relevant purpose, risks, management, and follow-up.

## **Cancer And Lymph Nodes**

A neoplastic condition involving cancer And Lymph Nodes; diagnosis establishes the tumor type, extent, and appropriate management.

## **Cancer Prevention: Take Charge Of Your Lifestyle**

A patient-care topic concerning cancer prevention: take charge of your lifestyle. It addresses the relevant purpose, risks, management, and follow-up.

## **Cancer Treatment - Dealing With Pain**

A neoplastic condition involving cancer Treatment - Dealing With Pain; diagnosis establishes the tumor type, extent, and appropriate management.

## **Cancer Treatment - Early Menopause**

A neoplastic condition involving cancer Treatment - Early Menopause; diagnosis establishes the tumor type, extent, and appropriate management.

## **Cancer Treatment - Preventing Infection**

A microorganism or infectious condition associated with cancer treatment - preventing infection. Clinical effects depend on the organism, site of infection, and host factors.

## **Cancer Treatment: Dealing With Hot Flashes And Night Sweats**

A neoplastic condition involving cancer Treatment: Dealing With Hot Flashes And Night Sweats; diagnosis establishes the tumor type, extent, and appropriate management.

## **Cancer Treatment: Fertility And Sexual Side Effects In Women**

A patient-care topic concerning cancer treatment: fertility and sexual side effects in women. It addresses the relevant purpose, risks, management, and follow-up.

## **Cancer Treatments**

A neoplastic condition involving cancer Treatments; diagnosis establishes the tumor type, extent, and appropriate management.

## **Candida Auris Infection**

Candida auris infection is an invasive or colonizing yeast infection notable for healthcare transmission and frequent resistance to antifungal medicines.

## **Candida Infection Of The Skin**

A microorganism or infectious condition associated with candida infection of the skin. Clinical effects depend on the organism, site of infection, and host factors.

## **Candles Poisoning**

Poisoning after ingestion of candle material or exposure to candle products. Effects are usually gastrointestinal, but product ingredients and aspiration risk determine severity.

## **Capillary Nail Refill Test**

A diagnostic test used to evaluate capillary nail refill. Results are interpreted with the clinical findings, test method, and reference range.

## **Capillary Sample**

A small blood specimen obtained by puncturing the skin, usually a finger or heel, for bedside glucose, hemoglobin, newborn screening, or other point-of-care tests.

## **Carbohydrates**

A clinical condition or finding involving carbohydrates. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Carbolic Acid Poisoning**

Exposure to phenol, a corrosive and systemically toxic chemical that can cause burns, altered consciousness, metabolic acidosis, and organ injury.

## **Cardiac Ablation Procedures**

A medical procedure involving cardiac ablation pro-

---

cedures. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Cardiac Catheterization - Discharge**

A medical procedure involving cardiac catheterization - discharge. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

### **Cardiac Event Monitors**

A clinical condition or finding involving cardiac event monitors. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cardiac Glycoside Overdose**

Overdose of a cardiac glycoside, such as digoxin, that may cause nausea, vomiting, visual changes, confusion, bradyarrhythmias, tachyarrhythmias, and hyperkalemia.

### **Cardiac Intravascular Ultrasound**

An ultrasound examination that uses sound waves to produce images of the specified body region and assess its structure.

### **Caregiving - Medication Management**

A patient-care topic concerning caregiving - medication management. It addresses the relevant purpose, risks, management, and follow-up.

### **Caregiving - Resources - Older Adults**

A patient-care topic concerning caregiving - resources - older adults. It addresses the relevant purpose, risks, management, and follow-up.

### **Caregiving - Taking Your Loved One To The Doctor**

A patient-care topic concerning caregiving - taking your loved one to the doctor. It addresses the relevant purpose, risks, management, and follow-up.

### **Caring For Muscle Spasticity Or Spasms**

Caring for muscle spasticity or spasms refers to a

defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Carotid Artery Stenosis - Self-Care**

An anatomical or cellular structure referred to as carotid artery stenosis - self-care. Its clinical importance depends on its location, function, and associated disease.

### **Carotid Artery Surgery - Discharge**

A medical procedure involving carotid artery surgery - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Carotid Artery Surgery - Open**

A medical procedure involving carotid artery surgery - open. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Carpal Tunnel Biopsy**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

### **Carpal Tunnel Release**

An anatomical or cellular structure referred to as carpal tunnel release. Its clinical importance depends on its location, function, and associated disease.

### **Castor Oil Overdose**

Excessive ingestion of castor oil that may cause abdominal cramping, nausea, vomiting, and diarrhea with fluid and electrolyte loss.

### **Cataract - Adult**

An adult cataract is clouding of the eye lens that progressively reduces visual acuity, contrast, or glare tolerance; definitive treatment is lens-replacement surgery when function is impaired.

---

## Cataract Removal

A medical procedure involving cataract removal. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

## Cataracts - What To Ask Your Doctor

A clinical condition or finding involving cataracts - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

## Catecholamine Blood Test

A diagnostic test used to evaluate catecholamine. Results are interpreted with the clinical findings, test method, and reference range.

## Catecholamines - Urine

A biological or biochemical term referring to catecholamines - urine. Its role depends on the relevant tissue, pathway, or clinical context.

## Caterpillars

The larval stage of butterflies and moths; contact with some species' hairs or spines can cause painful dermatitis, eye injury, or allergic reactions.

## Catheter-Related UTI

Catheter-related UTI is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

## Caulking Compound Poisoning

Exposure to caulking compounds that may irritate the skin, eyes, or airways; ingestion can cause gastrointestinal symptoms and aspiration risk depending on the product.

## Causes And Risks For Obesity In Children

Childhood obesity reflects interactions among inherited susceptibility, food and activity environments, sleep, medicines, endocrine disease, and social factors; risk is assessed using age- and sex-specific

growth charts.

## CBC Blood Test

A diagnostic test used to evaluate cbc. Results are interpreted with the clinical findings, test method, and reference range.

## CEA Blood Test

A diagnostic test used to evaluate cea. Results are interpreted with the clinical findings, test method, and reference range.

## Cedar Leaf Oil Poisoning

Ingestion or inhalation of cedar leaf oil, which may irritate tissues and cause gastrointestinal or neurologic toxicity depending on the dose.

## Celiac Disease - Nutritional Considerations

A patient-care topic concerning celiac disease - nutritional considerations. It addresses the relevant purpose, risks, management, and follow-up.

## Celiac Disease - Resources

A patient-care topic concerning celiac disease - resources. It addresses the relevant purpose, risks, management, and follow-up.

## Celiac Disease - Sprue

Celiac disease is an immune-mediated reaction to gluten that damages small-intestinal villi and can cause malabsorption, anemia, diarrhea, weight loss, or extraintestinal disease.

## Cell Phones And Cancer

Cell phones and cancer refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

## Centipede

A many-legged arthropod whose bite can inject venom and cause local pain, swelling, and redness; severe allergic reactions are uncommon but possible.

---

### **Central Line Infections - Hospitals**

A microorganism or infectious condition associated with central line infections - hospitals. Clinical effects depend on the organism, site of infection, and host factors.

### **Central Serous Choroidopathy**

Central serous chorioretinopathy is leakage beneath the retina causing localized fluid and blurred or distorted central vision, often resolving but sometimes recurring.

### **Central Venous Catheter - Dressing Change**

Central venous catheter - dressing change is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Central Venous Catheter - Flushing**

Central venous catheter - flushing is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Central Venous Catheters - Ports**

Central venous catheters - ports is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **Central Venous Line - Infants**

A catheter whose tip lies in a large central vein of an infant, used for irritant medicines, nutrition, fluids, blood sampling, or monitoring; infection and thrombosis are key risks.

### **Cerebral Palsy - Resources**

An anatomical or cellular structure referred to as cerebral palsy - resources. Its clinical importance depends on its location, function, and associated disease.

### **Cerebrospinal Fluid (CSF) Collection**

An anatomical or cellular structure referred to as

cerebrospinal fluid (csf) collection. Its clinical importance depends on its location, function, and associated disease.

### **Cerebrospinal Fluid (CSF) Culture**

A diagnostic test used to evaluate cerebrospinal fluid (csf). Results are interpreted with the clinical findings, test method, and reference range.

### **Certified Nurse-Midwife**

An advanced-practice nurse trained and credentialed to provide reproductive, pregnancy, birth, postpartum, and newborn care, including management of normal pregnancy and referral of complications.

### **Ceruloplasmin Blood Test**

A diagnostic test used to evaluate ceruloplasmin. Results are interpreted with the clinical findings, test method, and reference range.

### **Cervical Cancer - Screening And Prevention**

A patient-care topic concerning cervical cancer - screening and prevention. It addresses the relevant purpose, risks, management, and follow-up.

### **Cervical MRI Scan**

A magnetic resonance imaging study that produces detailed images of the specified body region using magnetic fields and radiofrequency energy.

### **Cervical Spine CT Scan**

A computed tomography study that produces cross-sectional X-ray images of the specified body region.

### **Cervix Cryosurgery**

A medical procedure involving cervix cryosurgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Chafing**

Skin irritation caused by repeated friction, moisture, heat, or tight clothing, producing redness, burning, tenderness, and sometimes erosions in opposing or

---

rubbing areas.

### **Changes In The Newborn At Birth**

The newborn transition from placental support to independent breathing and circulation, including lung aeration, closure of fetal shunts, temperature control, and adaptation of glucose and feeding.

### **Changing Your Ostomy Pouch**

Replacing the pouching system attached around a colostomy or ileostomy, including gentle removal, skin cleansing and measurement, barrier fitting, leak prevention, and disposal.

### **Changing Your Sleep Habits**

Behavioral changes that support regular restorative sleep, including a consistent schedule, a suitable dark environment, limiting late stimulants and screens, and addressing persistent insomnia or sleep apnea.

### **Changing Your Urostomy Pouch**

Replacing the pouching system that collects urine from a urostomy, with attention to skin protection, a secure seal, drainage, hydration, and warning signs of infection or obstruction.

### **Chapped Hands**

Dry, cracked, inflamed skin of the hands caused by irritants, cold, low humidity, frequent washing, eczema, or allergy; fissures can become painful or infected.

### **Chapped Lips**

Dry, scaling, fissured lips caused by weather, licking, dehydration, irritants, medicines, or cheilitis; persistent lesions need assessment for infection or another disorder.

### **Charley Horse**

A sudden painful involuntary contraction or spasm of a muscle, commonly in the calf or thigh, often related to exertion, dehydration, nerve disease, or medicines.

### **Chemical Burn Or Reaction**

A clinical condition or finding involving chemical burn or reaction. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chemical Dependence - Resources**

A patient-care topic concerning chemical dependence - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Chemotherapy - What To Ask Your Doctor**

A clinical condition or finding involving chemotherapy - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chest CT**

A clinical condition or finding involving chest ct. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chest MRI**

A clinical condition or finding involving chest mri. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chest Radiation - Discharge**

A patient-care topic concerning chest radiation - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Chicken Soup And Sickness**

A supportive-care topic concerning the use of warm fluids and nutrition during illness; chicken soup may ease hydration or congestion but does not replace diagnosis or treatment.

### **Chiggers**

Larval harvest mites whose bite causes intensely itchy grouped red papules or welts; symptoms result from skin irritation, not from the mite burrowing into human tissue.

---

### **Child Neglect And Emotional Abuse**

A clinical condition or finding involving child neglect and emotional abuse. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Child Physical Abuse**

Intentional physical injury or harm inflicted on a child by a caregiver or another person, including hitting, burning, shaking, or fractures; suspected abuse requires immediate safeguarding assessment.

### **Child Safety Seats**

A patient-care topic concerning child safety seats. It addresses the relevant purpose, risks, management, and follow-up.

### **Children And Grief**

The emotional and behavioral response of children to death or major loss, which varies by developmental stage and may include sadness, regression, anger, worry, or physical symptoms.

### **Children's Cancer Centers**

A neoplastic condition involving children's Cancer Centers; diagnosis establishes the tumor type, extent, and appropriate management.

### **Chin Augmentation**

A cosmetic procedure that increases chin projection with an implant, injectable filler, or bone surgery to change facial contour; risks include infection, asymmetry, nerve injury, and implant problems.

### **Chiropractic Care For Back Pain**

A patient-care topic concerning chiropractic care for back pain. It addresses the relevant purpose, risks, management, and follow-up.

### **Chiropractor Profession**

A clinical condition or finding involving chiropractor profession. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Chlamydia Infections In Women**

A microorganism or infectious condition associated with chlamydia infections in women. Clinical effects depend on the organism, site of infection, and host factors.

### **Chlamydial Infections - Male**

A microorganism or infectious condition associated with chlamydial infections - male. Clinical effects depend on the organism, site of infection, and host factors.

### **Chlordiazepoxide Overdose**

Overdose of chlordiazepoxide, a benzodiazepine, that can cause drowsiness, impaired coordination, respiratory depression, and coma, especially with other sedatives.

### **Chloride - Urine Test**

A diagnostic test used to evaluate chloride - urine. Results are interpreted with the clinical findings, test method, and reference range.

### **Chloride In Diet**

A medicine or chemical compound identified by chloride in diet. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Chloride Test - Blood**

A diagnostic test used to evaluate chloride test - blood. Results are interpreted with the clinical findings, test method, and reference range.

### **Chlorinated Lime Poisoning**

Exposure to chlorinated lime, a hypochlorite-containing corrosive that can injure the skin, eyes, airways, or gastrointestinal tract.

### **Chlorine Poisoning**

Inhalation or contact exposure to chlorine gas, which irritates the eyes and airways and can cause cough, bronchospasm, chemical pneumonitis, or pulmonary edema.

---

## **Chlorophyll Poisoning**

Ingestion of chlorophyll-containing products, which usually causes mild gastrointestinal effects; product ingredients and dose determine clinical risk.

## **Chlorpromazine Overdose**

Overdose of chlorpromazine that may cause sedation, hypotension, anticholinergic effects, seizures, cardiac conduction abnormalities, or neuroleptic malignant syndrome.

## **Choking - Adult Or Child Over 1 Year**

First aid for severe airway obstruction in a person older than one year, using back blows and abdominal thrusts when appropriate and CPR if the person becomes unresponsive.

## **Choking - Infant Under 1 Year**

First aid for severe airway obstruction in an infant, using alternating back slaps and chest thrusts and avoiding blind finger sweeps; unresponsiveness requires infant CPR.

## **Choking - Unconscious Adult Or Child Over 1 Year**

Resuscitation for an unresponsive person with suspected airway obstruction, combining emergency activation, airway inspection, CPR, and removal of a visible object without blind sweeping.

## **Cholesterol - Drug Treatment**

A medicine or chemical compound identified by cholesterol - drug treatment. Its uses, effects, and risks depend on the specific substance and clinical context.

## **Cholesterol - What To Ask Your Doctor**

A medicine or chemical compound identified by cholesterol - what to ask your doctor. Its uses, effects, and risks depend on the specific substance and clinical context.

## **Cholesterol And Lifestyle**

A medicine or chemical compound identified by cholesterol and lifestyle. Its uses, effects, and risks

depend on the specific substance and clinical context.

## **Cholesterol Testing And Results**

A diagnostic test used to evaluate cholesterol testing and results. Results are interpreted with the clinical findings, test method, and reference range.

## **Cholinesterase - Blood**

A blood test measuring acetylcholinesterase or butyrylcholinesterase activity, useful in selected pesticide exposures, inherited enzyme variants, and some liver-function assessments.

## **Choosing A Doctor And Hospital For Your Cancer Treatment**

A patient-care topic concerning choosing a doctor and hospital for your cancer treatment. It addresses the relevant purpose, risks, management, and follow-up.

## **Choosing A Primary Care Provider**

A medical procedure, treatment, device, or care topic related to choosing a primary care provider; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Choosing A Skilled Nursing And Rehabilitation Facility**

A medical procedure, treatment, device, or care topic related to choosing a skilled nursing and rehabilitation facility; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Choosing Effective Patient Education Materials**

A clinical condition or finding involving choosing effective patient education materials. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Choosing The Right Health Care Provider For Pregnancy And Childbirth**

A medical procedure, treatment, device, or care

---

topic related to choosing the right health care provider for pregnancy and childbirth; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Choroidal Dystrophies**

Inherited disorders causing progressive degeneration of the choroid, retinal pigment epithelium, and retina, leading to night blindness, visual-field loss, and eventual vision impairment.

### **Chromatography**

A laboratory separation method in which substances partition between a stationary phase and a moving phase, allowing identification or measurement of components in a mixture.

### **Chromium - Blood Test**

A diagnostic test used to evaluate chromium -. Results are interpreted with the clinical findings, test method, and reference range.

### **Chromium In Diet**

A patient-care topic concerning chromium in diet. It addresses the relevant purpose, risks, management, and follow-up.

### **Chronic Cholecystitis**

Chronic cholecystitis is repeated or persistent gallbladder inflammation, usually related to gallstones, causing episodic right-upper-abdominal pain or digestive symptoms.

### **Chronic Fatigue Syndrome - Resources**

A patient-care topic concerning chronic fatigue syndrome - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Chronic Lymphocytic Leukemia (CLL)**

CLL is a usually slow-growing cancer of mature B lymphocytes that can cause lymph-node enlargement, low blood counts, infections, or no symptoms for years.

### **Chronic Motor Or Vocal Tic Disorder**

A clinical condition involving chronic Motor Or Vocal Tic Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Chronic Myelogenous Leukemia (CML)**

CML is a blood and bone-marrow cancer driven by the BCR-ABL1 fusion, causing excess myeloid cells and treated mainly with tyrosine-kinase inhibitors.

### **Chronic Obstructive Pulmonary Disease - Adults - Discharge**

A patient-care topic concerning chronic obstructive pulmonary disease - adults - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Chronic Obstructive Pulmonary Disease (COPD)**

Chronic obstructive pulmonary disease is persistent airflow limitation from airway and alveolar injury, commonly causing exertional breathlessness, cough, sputum, and exacerbations.

### **Chronic Pain - Resources**

A patient-care topic concerning chronic pain - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Chronic Subdural Hematoma**

A collection of blood and breakdown products between the dura and arachnoid that develops over weeks, often after minor trauma in older adults, causing headache, confusion, weakness, or gait change.

### **Chronic Thyroiditis (Hashimoto Disease)**

A clinical condition involving chronic Thyroiditis (Hashimoto Disease); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Chylomicronemia Syndrome**

A clinical condition involving chylomicronemia Syndrome; its causes, manifestations, severity, and com-

---

plications guide diagnosis and management.

### **Cirrhosis - Discharge**

A patient-care topic concerning cirrhosis - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Citric Acid Urine Test**

A diagnostic test used to evaluate citric acid urine. Results are interpreted with the clinical findings, test method, and reference range.

### **Clean Catch Urine Sample**

A midstream urine specimen collected after cleaning the genital area to reduce contamination and improve interpretation of urinalysis or culture.

### **Cleaning Supplies And Equipment**

Materials and devices used to remove soil and microorganisms from surfaces or equipment; selection and disinfection level depend on the item and infection risk.

### **Cleaning To Prevent The Spread Of Germs**

Cleaning and disinfection practices that remove or inactivate infectious organisms on hands, surfaces, equipment, and shared objects to reduce transmission.

### **Clear Liquid Diet**

A patient-care topic concerning clear liquid diet. It addresses the relevant purpose, risks, management, and follow-up.

### **Cleft Lip And Palate Repair**

A medical procedure involving cleft lip and palate repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Cleft Lip And Palate Repair - Discharge**

A medical procedure involving cleft lip and palate repair - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition

and the specific procedure.

### **Cleft Palate - Resources**

A patient-care topic concerning cleft palate - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Cleidocranial Dysostosis**

Cleidocranial dysostosis is an inherited skeletal disorder with underdeveloped clavicles, delayed closure of skull sutures, short stature, and numerous unerupted teeth.

### **Closed Reduction Of A Fractured Bone**

An anatomical or cellular structure referred to as closed reduction of a fractured bone. Its clinical importance depends on its location, function, and associated disease.

### **Closed Reduction Of A Fractured Bone - Aftercare**

An anatomical or cellular structure referred to as closed reduction of a fractured bone - aftercare. Its clinical importance depends on its location, function, and associated disease.

### **Closed Suction Drain With Bulb**

A clinical condition or finding involving closed suction drain with bulb. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cloth Dye Poisoning**

Exposure to cloth dyes that may cause irritation, gastrointestinal symptoms, allergic reactions, or systemic toxicity depending on the chemical composition.

### **Cloudy Cornea**

Loss of corneal transparency from edema, scarring, infection, dystrophy, trauma, or deposits, potentially causing blurred vision, pain, photophobia, or glare.

---

### **Clubbing Of The Fingers Or Toes**

Bulbous enlargement of fingertip or toe soft tissue with increased nail curvature caused by chronic changes in the nail bed; it can accompany lung, heart, gastrointestinal, or other disease.

### **Clubfoot Repair**

A medical procedure involving clubfoot repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **CMV - Gastroenteritis/Colitis**

Cytomegalovirus gastroenteritis or colitis is tissue-invasive CMV infection causing pain, diarrhea, bleeding, or ulcers, especially during immune suppression.

### **CMV Blood Test**

A diagnostic test used to evaluate cmv. Results are interpreted with the clinical findings, test method, and reference range.

### **CMV Pneumonia**

A clinical condition involving cMV Pneumonia; its causes, manifestations, severity, and complications guide diagnosis and management.

### **CMV Retinitis**

CMV retinitis is sight-threatening inflammation and infection of the retina, occurring mainly with severe immune suppression and requiring urgent antiviral treatment.

### **CO2 Blood Test**

A diagnostic test used to evaluate co2. Results are interpreted with the clinical findings, test method, and reference range.

### **Cobalt Poisoning**

Toxic exposure to cobalt that may cause gastrointestinal, neurologic, thyroid, cardiac, or lung effects after significant or prolonged exposure.

### **Cocaine Intoxication**

Cocaine intoxication causing sympathetic stimulation, agitation, hyperthermia, seizures, hypertension, arrhythmias, myocardial ischemia, or stroke.

### **Cocaine Withdrawal**

A medicine or chemical compound identified by cocaine withdrawal. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Coccidioides Complement Fixation**

Coccidioides complement-fixation testing detects antibodies suggesting exposure or infection with Coccidioides, the fungus that causes coccidioidomycosis.

### **Coccidioides Precipitin Test**

A diagnostic test used to evaluate coccidioides precipitin. Results are interpreted with the clinical findings, test method, and reference range.

### **Codeine Overdose**

Overdose of codeine, an opioid, that can cause respiratory depression, impaired consciousness, pinpoint pupils, and coma. Naloxone may be required in emergency care.

### **Cognitive Behavioral Therapy For Back Pain**

A clinical condition involving cognitive Behavioral Therapy For Back Pain; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Cold Medicines And Children**

Safety guidance for giving medicines to children with cold symptoms; many combination products provide little benefit in young children and can cause dosing errors or serious adverse effects.

### **Cold Wave Lotion Poisoning**

Exposure to cold-wave lotion, which may contain thioglycolates or other irritants and can cause burns, gastrointestinal symptoms, or respiratory irritation.

---

### **Colds And Flu - Antibiotics**

An explanation that antibiotics treat susceptible bacterial infections, not uncomplicated viral colds or influenza; unnecessary use causes adverse effects and antimicrobial resistance.

### **Colds And The Flu - What To Ask Your Doctor - Adult**

A clinical condition or finding involving colds and the flu - what to ask your doctor - adult. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Colds And The Flu - What To Ask Your Doctor - Child**

A clinical condition or finding involving colds and the flu - what to ask your doctor - child. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Colic And Crying - Self-Care**

A patient-care topic concerning colic and crying - self-care. It addresses the relevant purpose, risks, management, and follow-up.

### **Collagen Vascular Disease**

A clinical condition involving collagen Vascular Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Collapsed Lung (Pneumothorax)**

A clinical finding or condition involving collapsed Lung (Pneumothorax); evaluation depends on its characteristic features, causes, severity, and complications.

### **Collateral Ligament (CL) Injury - Aftercare**

A patient-care topic concerning collateral ligament (cl) injury - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **College Students And The Flu**

Influenza prevention and care for college students, emphasizing vaccination, hand and respiratory hy-

giene, staying home when ill, and prompt assessment for severe symptoms or high-risk conditions.

### **Colles Wrist Fracture - Aftercare**

A patient-care topic concerning colles wrist fracture - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Coloboma Of The Iris**

A congenital keyhole- or notch-shaped defect in the iris caused by incomplete embryonic closure, sometimes associated with colobomas in the retina, optic nerve, or other organs.

### **Cologne Poisoning**

Ingestion of cologne containing alcohol and fragrances that may cause intoxication, hypoglycemia, respiratory depression, or gastrointestinal irritation.

### **Cologuard**

A stool-based colorectal-cancer screening test combining DNA-marker analysis with a fecal blood test; a positive result requires diagnostic colonoscopy.

### **Colon Cancer Screening**

A patient-care topic concerning colon cancer screening. It addresses the relevant purpose, risks, management, and follow-up.

### **Colonoscopy Discharge**

A patient-care topic concerning colonoscopy discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Color Vision Test**

A diagnostic test used to evaluate color vision. Results are interpreted with the clinical findings, test method, and reference range.

### **Colorectal Cancer - Resources**

A patient-care topic concerning colorectal cancer - resources. It addresses the relevant purpose, risks, management, and follow-up.

---

## Colorectal Polyps

A clinical condition or finding involving colorectal polyps. Its defining features, causes, evaluation, and management depend on the clinical context.

## Colposcopy - Directed Biopsy

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

## Comedones

Plugs of sebum and keratin within hair follicles, appearing as open blackheads or closed whiteheads and representing a primary lesion of acne.

## Common Peroneal Nerve Dysfunction

An anatomical or cellular structure referred to as common peroneal nerve dysfunction. Its clinical importance depends on its location, function, and associated disease.

## Common Symptoms During Pregnancy

Frequent pregnancy-related symptoms such as nausea, fatigue, breast tenderness, heartburn, constipation, and urinary frequency; severe, sudden, or unusual symptoms may signal complications.

## Communicating With Patients

The clinical exchange of information, concerns, preferences, and decisions between healthcare professionals and patients, using clear language, listening, empathy, and confirmation of understanding.

## Communicating With Someone With Aphasia

Communication strategies for a person with impaired language from brain injury or disease, including short sentences, extra time, visual cues, and supported conversation rather than assuming impaired intelligence.

## Communicating With Someone With Dysarthria

Communication strategies for a person whose speech muscles are weak or poorly coordinated, including re-

ducing background noise, confirming messages, and using writing or augmentative aids when needed.

## Community-Acquired Pneumonia In Adults

A clinical condition involving community-Acquired Pneumonia In Adults; its causes, manifestations, severity, and complications guide diagnosis and management.

## Complement

Complement is a system of blood proteins that enhances antibody and immune-cell defense by marking, inflaming, or directly damaging targets.

## Complement Component 3 (C3)

C3 is the central complement protein whose cleavage amplifies immune defense and whose level may fall with consumption in inflammatory or immune-complex disease.

## Complement Component 4

Complement component 4 is a protein of the classical and lectin complement pathways and may be reduced during immune-complex activation.

## Complement Fixation Test For C Burnetii

A diagnostic test used to evaluate complement fixation test for c burnetii. Results are interpreted with the clinical findings, test method, and reference range.

## Compression Fractures Of The Back

A clinical condition or finding involving compression fractures of the back. Its defining features, causes, evaluation, and management depend on the clinical context.

## Compression Stockings

Elastic garments that apply graduated pressure to the legs, supporting venous return and reducing swelling or selected risks of venous pooling; correct fit and arterial circulation matter.

---

## **Compulsive Gambling**

Persistent gambling with impaired control, preoccupation, chasing losses, and continued behavior despite financial, social, occupational, or emotional harm, also called gambling disorder.

### **Synonyms:**

Pathological Gambling

## **Concussion In Adults - Discharge**

A patient-care topic concerning concussion in adults - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## **Concussion In Adults - What To Ask Your Doctor**

A clinical condition or finding involving concussion in adults - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Concussion In Children - Discharge**

A patient-care topic concerning concussion in children - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## **Concussion In Children - What To Ask Your Doctor**

A clinical condition or finding involving concussion in children - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Condoms - Male**

A sheath placed over the penis during sexual activity to reduce exchange of semen and genital secretions and lower pregnancy and sexually transmitted infection risk when used correctly.

## **Cone Biopsy**

A procedure that removes a small tissue sample from the specified site for microscopic or laboratory examination.

## **Confusion**

Impaired ability to think clearly, orient, attend,

remember, or respond appropriately; sudden confusion is delirium and may indicate infection, medication effect, metabolic illness, stroke, or another emergency.

## **Congenital Antithrombin III Deficiency**

A clinical condition or finding involving congenital antithrombin iii deficiency. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Congenital Cytomegalovirus**

A medicine or chemical compound identified by congenital cytomegalovirus. Its uses, effects, and risks depend on the specific substance and clinical context.

## **Congenital Diaphragmatic Hernia Repair**

A medical procedure involving congenital diaphragmatic hernia repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

## **Congenital Fibrinogen Deficiency**

A clinical condition or finding involving congenital fibrinogen deficiency. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Congenital Heart Defect - Corrective Surgery**

A medical procedure involving congenital heart defect - corrective surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

## **Congenital Nephrotic Syndrome**

A clinical condition or finding involving congenital nephrotic syndrome. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Congenital Platelet Function Defects**

A clinical condition or finding involving congenital platelet function defects. Its defining features,

---

causes, evaluation, and management depend on the clinical context.

### **Congenital Protein C Or S Deficiency**

A biological or biochemical term referring to congenital protein c or s deficiency. Its role depends on the relevant tissue, pathway, or clinical context.

### **Congenital Rubella**

Fetal infection with rubella virus acquired during pregnancy, potentially causing hearing loss, cataracts, congenital heart disease, developmental impairment, and other findings.

### **Congenital Toxoplasmosis**

A clinical condition or finding involving congenital toxoplasmosis. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Conjunctivitis Or Pink Eye**

A clinical condition or finding involving conjunctivitis or pink eye. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Conscious Sedation For Surgical Procedures**

A medical procedure involving conscious sedation for surgical procedures. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

### **Considering Plastic Surgery After A Large Weight Loss**

A medical procedure involving considering plastic surgery after a large weight loss. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Constipation - Self-Care**

A patient-care topic concerning constipation - self-care. It addresses the relevant purpose, risks, management, and follow-up.

### **Constipation - What To Ask Your Doctor**

A clinical condition or finding involving constipation - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Constipation In Infants And Children**

Infrequent, hard, painful, or difficult passage of stool in a child, caused by stool withholding, diet, dehydration, illness, medicines, or structural and neurologic disorders.

### **Consumer Rights And Protections**

A clinical condition or finding involving consumer rights and protections. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Contac Overdose**

Overdose of a combination cold medicine that may cause acetaminophen toxicity, antihistamine or decongestant effects, sedation, seizures, or cardiac complications depending on ingredients.

### **Contracture Deformity**

A clinical condition or finding involving contracture deformity. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Controlling Your High Blood Pressure**

Long-term blood-pressure management using accurate measurement, lifestyle measures, prescribed medicines, adherence, and monitoring for complications and treatment adverse effects.

### **Cooking Utensils And Nutrition**

A patient-care topic concerning cooking utensils and nutrition. It addresses the relevant purpose, risks, management, and follow-up.

### **Cooking Without Salt**

Preparing food with little or no added sodium to reduce dietary sodium intake, often useful in blood-pressure or fluid-retention management when combined with an individualized eating plan.

---

## **COPD - Control Drugs**

A clinical condition or finding involving copd - control drugs. Its defining features, causes, evaluation, and management depend on the clinical context.

## **COPD - Managing Stress And Your Mood**

Support for anxiety, depression, and stress in chronic obstructive pulmonary disease through breathing strategies, activity, pulmonary rehabilitation, counseling, and treatment when indicated.

## **COPD - Quick-Relief Drugs**

A clinical condition or finding involving copd - quick-relief drugs. Its defining features, causes, evaluation, and management depend on the clinical context.

## **COPD - What To Ask Your Doctor**

A clinical condition or finding involving copd - what to ask your doctor. Its defining features, causes, evaluation, and management depend on the clinical context.

## **COPD And Other Health Problems**

The interaction between chronic obstructive pulmonary disease and conditions such as cardiovascular disease, osteoporosis, depression, diabetes, and lung cancer, which can complicate symptoms and care.

## **COPD Flare-Ups**

Acute worsening of breathlessness, cough, or sputum beyond usual daily variation in chronic obstructive pulmonary disease, often triggered by infection, pollution, or other irritants.

## **Coping With Cancer - Finding The Support You Need**

A clinical condition or finding involving coping with cancer - finding the support you need. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Coping With Cancer - Hair Loss**

A clinical condition or finding involving coping with

cancer - hair loss. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Coping With Cancer - Looking And Feeling Your Best**

A clinical condition or finding involving coping with cancer - looking and feeling your best. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Coping With Cancer - Managing Fatigue**

A clinical condition or finding involving coping with cancer - managing fatigue. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Copper In Diet**

A patient-care topic concerning copper in diet. It addresses the relevant purpose, risks, management, and follow-up.

## **Copper Poisoning**

Toxic exposure to copper or copper salts that may cause vomiting, abdominal pain, hemolysis, liver injury, kidney injury, or shock.

## **Cord Blood Testing**

A diagnostic test used to evaluate cord blood. Results are interpreted with the clinical findings, test method, and reference range.

## **Corneal Injury**

An anatomical or cellular structure referred to as corneal injury. Its clinical importance depends on its location, function, and associated disease.

## **Corneal Transplant**

A medical procedure involving corneal transplant. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

## **Corneal Transplant - Discharge**

A medical procedure involving corneal transplant

---

- discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Corneal Ulcers And Infections**

An anatomical or cellular structure referred to as corneal ulcers and infections. Its clinical importance depends on its location, function, and associated disease.

### **Coronary Artery Fistula**

An anatomical or cellular structure referred to as coronary artery fistula. Its clinical importance depends on its location, function, and associated disease.

### **Coronavirus**

A medicine or chemical compound identified by coronavirus. Its uses, effects, and risks depend on the specific substance and clinical context.

### **Corticosteroids Overdose**

Overdose of corticosteroids that may cause gastrointestinal symptoms, mood changes, hyperglycemia, fluid retention, infection risk, or adrenal suppression.

### **Cortisol Blood Test**

A diagnostic test used to evaluate cortisol. Results are interpreted with the clinical findings, test method, and reference range.

### **Cortisol Urine Test**

A diagnostic test used to evaluate cortisol urine. Results are interpreted with the clinical findings, test method, and reference range.

### **Cosmetic Breast Surgery - Discharge**

A medical procedure involving cosmetic breast surgery - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Cosmetic Ear Surgery**

A medical procedure involving cosmetic ear surgery.

Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Could You Have Low Testosterone?**

A diagnostic test or assessment related to could you have low testosterone?. Results are interpreted with the clinical findings, test method, and reference range.

### **Counting Carbohydrates**

A clinical condition or finding involving counting carbohydrates. Its defining features, causes, evaluation, and management depend on the clinical context.

### **COVID-19 – What To Do When You Are Sick**

Home-care and infection-control guidance for illness caused by SARS-CoV-2, including testing, staying away from others, hydration, symptom monitoring, and prompt care for breathing difficulty or high-risk disease.

### **COVID-19 Antibody Test**

A diagnostic test used to evaluate covid-19 antibody. Results are interpreted with the clinical findings, test method, and reference range.

### **COVID-19 Symptoms**

Symptoms of SARS-CoV-2 infection, which may include fever, cough, sore throat, congestion, fatigue, muscle aches, headache, loss of smell or taste, vomiting, or diarrhea.

### **COVID-19 Vaccine - What You Need To Know**

Information about vaccines that reduce the risk of severe COVID-19, including eligibility, updated formulations, expected reactions, rare adverse events, and the need for recommendations to change over time.

### **COVID-19 Vaccines**

Vaccines that prime immune responses against

---

SARS-CoV-2 and reduce severe disease, hospitalization, and death; products, schedules, effectiveness, and recommendations vary by age and risk.

### **COVID-19 Vaccines For Children Ages 6 Months And Older**

COVID-19 vaccination guidance for children at least six months old, with product and dose schedules determined by age, prior doses, immune status, and current public-health recommendations.

### **COVID-19 Virus Test**

A diagnostic test used to evaluate covid-19 virus. Results are interpreted with the clinical findings, test method, and reference range.

### **Cow's Milk - Infants**

Guidance on cow's milk in infancy: it should not replace breast milk or iron-fortified formula before 12 months because of low iron content and risks of renal solute load and intestinal blood loss.

### **Cow's Milk And Children**

Nutritional guidance on cow's milk for children, balancing protein, calcium, vitamin D, fat, iron, allergy, and total intake so milk does not displace a varied diet.

### **CPK Isoenzymes Test**

A diagnostic test used to evaluate cpk isoenzymes. Results are interpreted with the clinical findings, test method, and reference range.

### **CPR - Adult And Child After Onset Of Puberty**

CPR - adult and child after onset of puberty is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **CPR - Infant**

CPR - infant is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

### **CPR - Young Child (Age 1 Year To Onset Of Puberty)**

Cardiopulmonary resuscitation for a child from age one year until puberty who is unresponsive and not breathing normally, using emergency activation, compressions, breaths, and an AED as available.

### **Cranial Mononeuropathy III**

An anatomical or cellular structure referred to as cranial mononeuropathy iii. Its clinical importance depends on its location, function, and associated disease.

### **Cranial Mononeuropathy III - Diabetic Type**

An anatomical or cellular structure referred to as cranial mononeuropathy iii - diabetic type. Its clinical importance depends on its location, function, and associated disease.

### **Cranial Mononeuropathy VI**

An anatomical or cellular structure referred to as cranial mononeuropathy vi. Its clinical importance depends on its location, function, and associated disease.

### **Cranial Sutures**

Fibrous joints between skull bones that permit molding in infancy and accommodate brain growth before progressively fusing; premature fusion causes craniosynostosis.

### **Craniosynostosis Repair**

A medical procedure involving craniosynostosis repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

### **Craniosynostosis Repair - Discharge**

A medical procedure involving craniosynostosis repair - discharge. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

---

## **Craniotabes**

Soft, thin, or pliable areas of an infant's skull that indent under gentle pressure, commonly associated with normal newborn molding but also with rickets or other bone disease.

## **Creatine Phosphokinase Test**

A diagnostic test used to evaluate creatine phosphokinase. Results are interpreted with the clinical findings, test method, and reference range.

## **Creating A Family Health History**

Collecting a record of relatives' diseases, ages at diagnosis, ancestry, and causes of death to identify inherited risk and guide screening, prevention, and genetic counseling.

## **Creatinine Blood Test**

A diagnostic test used to evaluate creatinine. Results are interpreted with the clinical findings, test method, and reference range.

## **Creatinine Clearance Test**

A diagnostic test used to evaluate creatinine clearance. Results are interpreted with the clinical findings, test method, and reference range.

## **Creatinine Urine Test**

A diagnostic test used to evaluate creatinine urine. Results are interpreted with the clinical findings, test method, and reference range.

## **Creeping Eruption**

An intensely itchy winding skin track caused by larvae, usually hookworms from contaminated soil or sand, migrating within the superficial skin; it is also called cutaneous larva migrans.

## **Cribs And Crib Safety**

A patient-care topic concerning cribs and crib safety. It addresses the relevant purpose, risks, management, and follow-up.

## **Crigler-Najjar Syndrome**

A clinical condition or finding involving crigler-

najjar syndrome. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Crohn Disease - Children - Discharge**

A patient-care topic concerning crohn disease - children - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## **Crohn Disease - Discharge**

A patient-care topic concerning crohn disease - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## **Croup - Discharge**

A patient-care topic concerning croup - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## **Crush Injury**

A clinical condition or finding involving crush injury. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Crutches And Children - Proper Fit And Safety Tips**

A patient-care topic concerning crutches and children - proper fit and safety tips. It addresses the relevant purpose, risks, management, and follow-up.

## **Crutches And Children - Sitting And Getting Up From A Chair**

Instruction for a child using crutches to approach a chair, keep the injured limb protected as prescribed, reach for the armrests, and sit or stand safely without losing balance.

## **Crutches And Children - Stairs**

Instruction for safe stair use by a child with crutches, including handrail use, crutch placement, step sequencing, supervision, and adherence to weight-bearing restrictions.

## **Crutches And Children - Standing And**

---

## **Walking**

Instruction for fitting and using crutches in children, including posture, handgrip support, gait pattern, weight-bearing limits, turning, and fall prevention.

## **Crying In Childhood**

Vocal expression of distress or emotion in a child; persistent, inconsolable, unusual, or pain-associated crying may indicate illness, injury, abuse, or unmet developmental needs.

## **Crying In Infancy**

Crying is an infant's normal communication of hunger, discomfort, fatigue, or need for contact, but sudden inconsolable crying with lethargy, fever, vomiting, or injury needs urgent assessment.

## **Cryotherapy For Prostate Cancer**

A clinical condition or finding involving cryotherapy for prostate cancer. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Cryotherapy For The Skin**

A clinical condition or finding involving cryotherapy for the skin. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Cryptosporidium Enteritis**

A clinical condition or finding involving cryptosporidium enteritis. Its defining features, causes, evaluation, and management depend on the clinical context.

## **CSF Cell Count**

An anatomical or cellular structure referred to as csf cell count. Its clinical importance depends on its location, function, and associated disease.

## **CSF Coccidioides Complement Fixation Test**

A diagnostic test used to evaluate csf coccidioides complement fixation. Results are interpreted with the clinical findings, test method, and reference range.

## **CSF Glucose Test**

A diagnostic test used to evaluate csf glucose. Results are interpreted with the clinical findings, test method, and reference range.

## **CSF Leak**

Escape of cerebrospinal fluid through a defect in the skull base or spinal dura, causing positional headache, clear nasal or ear drainage, wound leakage, meningitis risk, or intracranial hypotension.

## **CSF Myelin Basic Protein**

CSF myelin basic protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

## **CSF Oligoclonal Banding**

An electrophoretic test for restricted immunoglobulin bands in cerebrospinal fluid, interpreted with serum bands to detect intrathecal antibody production such as in multiple sclerosis.

## **CSF Smear**

Microscopic examination of cerebrospinal fluid for cells, organisms, or abnormal material, supporting evaluation of meningitis, hemorrhage, malignancy, or inflammation.

## **CSF Total Protein**

CSF total protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

## **CSF-VDRL Test**

A diagnostic test used to evaluate csf-vdrl. Results are interpreted with the clinical findings, test method, and reference range.

## **CT Angiography – Chest**

An imaging study of blood vessels using contrast material to identify narrowing, blockage, aneurysm,

---

or abnormal blood flow.

### **CT Angiography - Abdomen And Pelvis**

An imaging study of blood vessels using contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

### **CT Angiography - Arms And Legs**

An imaging study of blood vessels using contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

### **CT Angiography - Head And Neck**

An imaging study of blood vessels using contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

### **Culture - Colonic Tissue**

A diagnostic test used to evaluate culture - colonic tissue. Results are interpreted with the clinical findings, test method, and reference range.

### **Culture - Duodenal Tissue**

A diagnostic test used to evaluate culture - duodenal tissue. Results are interpreted with the clinical findings, test method, and reference range.

### **Culture-Negative Endocarditis**

A diagnostic test used to evaluate culture-negative endocarditis. Results are interpreted with the clinical findings, test method, and reference range.

### **Curvature Of The Penis**

A bend of the erect or flaccid penis caused by congenital tissue asymmetry, scar tissue such as Peyronie disease, trauma, or other conditions; it may impair intercourse or cause pain.

#### **Synonyms:**

Peyronie's Disease (Curvature Of The Penis)

### **Cushing Syndrome Due To Adrenal Tumor**

A clinical condition or finding involving cushing syndrome due to adrenal tumor. Its defining features, causes, evaluation, and management depend on the

clinical context.

### **Cutaneous Skin Tag**

An anatomical or cellular structure referred to as cutaneous skin tag. Its clinical importance depends on its location, function, and associated disease.

### **Cuticle Remover Poisoning**

Exposure to cuticle-remover products, which may contain alkaline or acidic chemicals that can injure the skin, eyes, mouth, or gastrointestinal tract.

### **Cuts And Puncture Wounds**

A clinical condition or finding involving cuts and puncture wounds. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cyanoacrylates Poisoning**

Exposure to cyanoacrylate adhesives, commonly known as instant glue. Contact may bond tissues or irritate the skin, eyes, or airways; ingestion usually causes local adhesion or irritation.

### **Cyanotic Heart Disease**

A clinical condition or finding involving cyanotic heart disease. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cyproheptadine Overdose**

Overdose of cyproheptadine, an antihistamine, that may cause sedation, agitation, anticholinergic effects, seizures, respiratory depression, or cardiac effects.

### **Cystic Fibrosis - Nutrition**

A patient-care topic concerning cystic fibrosis - nutrition. It addresses the relevant purpose, risks, management, and follow-up.

### **Cystic Fibrosis - Resources**

A patient-care topic concerning cystic fibrosis - resources. It addresses the relevant purpose, risks, management, and follow-up.

---

### **Cystitis - Acute**

A clinical condition or finding involving cystitis - acute. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cystitis - Noninfectious**

A clinical condition or finding involving cystitis - noninfectious. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cystometric Study**

A diagnostic test or assessment related to cystometric study. Results are interpreted with the clinical findings, test method, and reference range.

### **Cytochrome B5 Reductase**

A clinical condition or finding involving cytochrome b5 reductase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Cytologic Evaluation**

Microscopic examination of individual cells or small cell groups from a fluid, brushing, scraping, or fine-needle sample to detect infection, inflammation, or malignancy.

### **Cytology Exam Of Pleural Fluid**

Microscopic examination of fluid around the lung for malignant cells and other cellular changes, performed with chemical and microbiologic testing when evaluating an effusion.

### **Cytology Exam Of Urine**

Microscopic examination of shed urinary-tract cells, used mainly to detect high-grade urothelial malignancy and selected abnormal cells; a negative result does not exclude cancer.

### **Calcific Bursitis**

Calcific bursitis occurs when calcium deposits form in or around a bursa, often near the shoulder, causing pain and restricted movement. Treatment may include activity modification, anti-inflammatory

care, physical therapy, aspiration, injection, or removal of deposits.

#### **Synonyms:**

Bursitis Calcific (Calcific Bursitis)

### **Calcium Elevated (Hypercalcemia)**

Alternate index label for Hypercalcemia.

### **Canalith Repositioning Maneuvers**

Canalith repositioning maneuvers move displaced inner-ear crystals from a semicircular canal back to the utricle. They are used for benign paroxysmal positional vertigo, with the maneuver selected according to the affected canal and side.

### **Cancer Causes**

Cancer develops when genetic and epigenetic changes allow cells to grow, survive, and invade abnormally. Causes and risks include inherited susceptibility, tobacco, alcohol, infections, radiation, ultraviolet exposure, carcinogens, chronic inflammation, and chance changes during cell division.

#### **Synonyms:**

Cancer Risk (Cancer Causes)

### **Cancer Contagious (Is Cancer Contagious)**

Alternate index label for Is Cancer Contagious.

### **Cancer In Lung (Lung Cancer)**

Alternate index label for Lung Cancer.

### **Cancer Inflammatory Breast (Breast Cancer (Facts, Stages))**

Alternate index label for Breast Cancer (Facts, Stages).

### **Cancer Risk (Cancer Causes)**

Alternate index label for Cancer Causes.

### **Candida Infection Children (Thrush And Other Yeast Infections In Children)**

Alternate index label for Thrush and Other Yeast Infections in Children.

---

### **Candidal Vulvovaginitis (Yeast Infection In Women And Men)**

Alternate index label for Yeast Infection in Women and Men.

### **Canker Sores**

Canker sores are painful, shallow ulcers on the moist lining of the mouth and are not contagious. Minor trauma, stress, nutritional deficiency, immune disease, medicines, or other triggers may contribute; persistent, severe, or recurrent ulcers need evaluation.

#### **Synonyms:**

Sores Canker (Canker Sores)

### **Carbapenem Resistant Enterobacteriaceae (CRE Infection)**

Alternate index label for CRE Infection.

### **Cardiomyopathy (Restrictive)**

Alternate index label for Restrictive.

### **Cardiospasm (Achalasia)**

Alternate index label for Achalasia.

### **Causes Symptoms Of Hormonal Imbalances Women**

Hormonal imbalance in women can reflect thyroid disease, polycystic ovary syndrome, menopause, pregnancy, adrenal or pituitary disorders, medicines, or changes in body weight. Symptoms may include irregular bleeding, acne, hair changes, infertility, hot flashes, fatigue, or mood changes.

### **Cavities**

A cavity is tooth decay caused by acids produced when oral bacteria metabolize dietary carbohydrates. The process can progress from enamel demineralization to dentin and pulp infection; fluoride, oral hygiene, diet, dental sealants, fillings, or root-canal treatment may be needed.

#### **Synonyms:**

Dental Caries (Cavities)

### **Celiac Disease (Gluten Enteropathy)**

Alternate index label for Gluten Enteropathy.

### **Cells Stem (Stem Cells)**

Alternate index label for Stem Cells.

### **Central Precocious Puberty**

Central precocious puberty begins when the hypothalamus and pituitary activate the normal puberty pathway unusually early. It causes early secondary sexual characteristics and accelerated bone maturation; evaluation identifies causes and treatment may delay progression when appropriate.

### **Cerebrovascular Accident (Stroke Symptoms And Treatment)**

Alternate index label for Stroke Symptoms and Treatment.

### **Cervical Intraepithelial Neoplasia Cervical (Cervical Dysplasia)**

Alternate index label for Cervical Dysplasia.

### **Cervical Pain (Neck Pain)**

Alternate index label for Neck Pain.

### **CFS (Chronic Fatigue Syndrome)**

Alternate index label for Chronic Fatigue Syndrome.

### **Chemotherapy Treatment**

Chemotherapy uses medicines that damage or inhibit rapidly dividing cancer cells. It may be given before or after local treatment, for advanced disease, or for symptom control; effects and monitoring depend on the drugs, cancer, treatment goal, and organ function.

### **Chest Pain On The Left Side Above A Female Breast**

Left-sided chest or breast-area pain can arise from muscle or rib injury, breast tissue, reflux, lung disease, anxiety, or heart disease. Pressure, exertional pain, shortness of breath, sweating, faintness, or pain spreading to the arm or jaw requires emergency assessment.

---

### **CHF (Congestive Heart Failure (CHF) Overview)**

Alternate index label for Congestive Heart Failure (CHF) Overview.

### **Chickenpox (Varicella)**

Alternate index label for Varicella.

### **Chickenpox Contagious (Is Chickenpox Contagious)**

Alternate index label for Is Chickenpox Contagious.

### **Chiggers (Bites)**

Alternate index label for Bites.

### **Chikungunya Virus Infection**

Chikungunya is a mosquito-borne viral infection that usually causes abrupt fever and severe joint pain, sometimes with rash, headache, or conjunctivitis. Joint symptoms can persist; care is supportive, mosquito exposure should be reduced, and severe illness requires assessment.

#### **Synonyms:**

Infection Chikungunya (Chikungunya Virus Infection)

### **Child Abuse Facts**

Child abuse includes physical or emotional harm, sexual abuse, exploitation, or neglect by a caregiver or other person. Possible signs include unexplained injuries, developmental change, fear, poor hygiene, or inconsistent explanations; suspected abuse should be reported through local protection services or emergency channels.

#### **Synonyms:**

Abuse Child (Child Abuse Facts)

### **Children Autism (Autism And Communication)**

Alternate index label for Autism and Communication.

### **Children Dementia (Dementia)**

Alternate index label for Dementia.

### **Children Night Sweats (Night Sweats)**

Alternate index label for Night Sweats.

### **Children Seizures (Febrile Seizures)**

Alternate index label for Febrile Seizures.

### **Children Separation Anxiety (Separation Anxiety)**

Alternate index label for Separation Anxiety.

### **Children Sleep (Sleep And Sleep Disorders In Children And Teens)**

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

### **Children's Cough Causes And Treatments**

Children cough with viral infection, asthma, allergies, reflux, airway irritation, or an inhaled object. Treatment depends on cause and age; breathing difficulty, stridor, blue color, dehydration, sudden onset, or a cough lasting beyond expected recovery needs medical evaluation.

### **Children's Health**

Children's health includes growth, development, nutrition, immunization, sleep, mental health, injury prevention, and management of acute or chronic illness. Care is guided by developmental stage, family context, preventive visits, and early recognition of concerning changes.

#### **Synonyms:**

Childrens Health (Children's Health)

### **Childrens Health (Children's Health)**

Alternate index label for Children's Health.

### **Chlamydia Bacteria Infection (Chlamydia In Women Overview)**

Alternate index label for Chlamydia in Women Overview.

### **Chlamydia In Women Overview**

Chlamydia is a sexually transmitted infection caused by Chlamydia trachomatis and may cause no symp-

---

toms. Untreated infection can lead to cervicitis, pelvic inflammatory disease, infertility, ectopic pregnancy, or infection in a newborn; testing and treatment of partners are important.

**Synonyms:**

Chlamydia Bacteria Infection (Chlamydia In Women Overview)

**Chloasma (Melasma)**

Alternate index label for Melasma.

**Cholangiocarcinoma (Bile Duct Cancer (Cholangiocarcinoma))**

Alternate index label for Bile Duct Cancer (Cholangiocarcinoma).

**Choledochal Cysts**

Choledochal cysts are congenital or acquired dilations of the bile ducts that can cause abdominal pain, jaundice, pancreatitis, cholangitis, or stones. Imaging establishes the anatomy, and surgical removal is often recommended because of recurrent complications and cancer risk.

**Synonyms:**

Cysts Choledochal (Choledochal Cysts)

**Cholelithiasis (Gallstones)**

Alternate index label for Gallstones.

**Cholera Contagious (Is Cholera Contagious)**

Alternate index label for Is Cholera Contagious.

**Cholesterol Lowering (Cholesterol Management)**

Alternate index label for Cholesterol Management.

**Cholesterol Management**

Cholesterol management combines cardiovascular-risk assessment with dietary pattern, physical activity, tobacco avoidance, weight care, and medicines when indicated. Statins and other agents lower atherogenic lipoproteins, with intensity chosen according to prior cardiovascular disease and overall risk.

**Synonyms:**

Cholesterol Lowering (Cholesterol Management)

**Chorioretinitis (Uveitis)**

Alternate index label for Uveitis.

**Chorioretinitis Toxoplasma (Toxoplasmosis)**

Alternate index label for Toxoplasmosis.

**Chronic Inflammatory Response Syndrome (CIRS)**

Alternate index label for CIRS.

**Churg Strauss Syndrome (Churg-Strauss Syndrome)**

Alternate index label for Churg-Strauss Syndrome.

**Ciguatera Poisoning**

Ciguatera poisoning follows eating reef fish containing ciguatoxins. Gastrointestinal symptoms may be followed by neurologic sensations such as temperature reversal, tingling, itching, weakness, or abnormal heart rate; treatment is supportive and prevention depends on avoiding high-risk fish.

**Synonyms:**

Poisoning Ciguatera (Ciguatera Poisoning) Toxin Ciguatera (Ciguatera Poisoning)

**Cirrhosis Primary Biliary (Primary Biliary Cirrhosis (PBC))**

Alternate index label for Primary Biliary Cirrhosis (PBC).

**Cleft Palate And Cleft Lip**

Cleft lip and cleft palate are congenital openings caused by incomplete fusion of facial structures during development. They can affect feeding, speech, hearing, teeth, and breathing and are managed by coordinated surgical, dental, speech, hearing, and nutritional care.

**Clinical Depression (Depression)**

Alternate index label for Depression.

---

### **Clostridium Difficile Colitis**

*Clostridioides difficile* colitis is antibiotic-associated inflammation of the colon caused by toxin-producing bacteria. It causes watery diarrhea, abdominal pain, fever, and sometimes severe colitis; diagnosis and treatment depend on symptoms, testing, recurrence, and severity.

#### **Synonyms:**

Difficile *Clostridium* (*Clostridium Difficile Colitis*)

### **Clot Blood (Blood Clots)**

Alternate index label for Blood Clots.

### **Club Drugs List And Side Effects**

Club drugs include substances such as MDMA, ketamine, GHB, and others used recreationally in social settings. Effects may include agitation, hallucinations, seizures, dangerous temperature elevation, respiratory depression, cardiovascular toxicity, impaired consent, and overdose.

### **Cluster Headaches**

Cluster headache causes repeated attacks of severe one-sided orbital or temporal pain with tearing, nasal symptoms, eyelid drooping, or restlessness. Attacks occur in bouts and require targeted acute and preventive treatment; a first sudden severe headache needs urgent evaluation.

### **CMV (Cytomegalovirus (CMV))**

Alternate index label for Cytomegalovirus (CMV).

### **Coats Disease (Coats' Disease)**

Alternate index label for Coats' Disease.

### **Cocaine And Crack Abuse**

Cocaine and crack use can cause dependence, agitation, paranoia, seizures, stroke, heart attack, dangerous arrhythmias, pregnancy complications, and nasal or lung injury. Treatment combines safety assessment, management of intoxication or withdrawal, behavioral care, and support for substance-use disorder.

### **Cold (Common Cold)**

Alternate index label for Common Cold.

### **Cold And Cough Medicine For Infants And Children**

Many nonprescription cold and cough medicines are unsafe or ineffective for young children and can cause sedation, agitation, abnormal heart rate, overdose, or breathing problems. Age-appropriate fluids, saline, humidification, and clinician-guided treatment are safer approaches.

### **Cold Flu Allergy Treatments (Cold, Flu, Allergy)**

Alternate index label for Cold, Flu, Allergy.

### **Cold Sore Vs. Pimple (Pimple Vs Cold Sore)**

Alternate index label for Pimple vs Cold Sore.

### **Cold, Flu, Allergy**

Colds, influenza, and allergies can all cause nasal symptoms and cough but differ in cause, fever pattern, duration, and contagiousness. Viral illness usually improves with supportive care, while allergies respond to trigger reduction and appropriate antihistamine or nasal treatment.

#### **Synonyms:**

Cold Flu Allergy Treatments (Cold, Flu, Allergy)

### **Colitis Collagenous (Lymphocytic Colitis)**

Alternate index label for Lymphocytic Colitis.

### **Colitis Contagious (Is Colitis Contagious)**

Alternate index label for Is Colitis Contagious.

### **Colitis Lymphocytic (Lymphocytic Colitis)**

Alternate index label for Lymphocytic Colitis.

### **Colitis Microscopic (Lymphocytic Colitis)**

Alternate index label for Lymphocytic Colitis.

### **Colitis Ulcerative (Ulcerative Colitis)**

Alternate index label for Ulcerative Colitis.

---

## Colon Cancer Prevention

Colorectal-cancer risk can be reduced through recommended screening, physical activity, healthy weight, limiting alcohol, avoiding tobacco, and a diet rich in fiber-containing plant foods. Screening can detect precancerous polyps and early cancer before symptoms develop.

## Colonic Diverticulitis (Diverticulosis)

Alternate index label for Diverticulosis.

## Colorectal Cancer (Colon Cancer)

Alternate index label for Colon Cancer.

## Coma Diabetic (Diabetic Ketoacidosis)

Alternate index label for Diabetic Ketoacidosis.

## Coma Myxedema (Myxedema Coma)

Alternate index label for Myxedema Coma.

## Common Cold Stages And Timeline Of Symptoms

The common cold often begins with sore throat, sneezing, or fatigue, followed by nasal congestion, runny nose, and cough. Symptoms usually peak within several days and improve over one to two weeks, although cough and fatigue may last longer.

## Common Early Symptoms Of Myasthenia Gravis

Early myasthenia gravis commonly causes fluctuating, fatigable weakness of the eyelids, eye movements, facial muscles, chewing, swallowing, speech, neck, or limbs. Symptoms worsen with use and improve with rest; breathing or swallowing difficulty is an emergency.

## Common Medical Abbreviations And Terms

Medical abbreviations and terms summarize diagnoses, tests, medicines, anatomy, and treatment instructions. Because abbreviations can be ambiguous or unsafe, patients should ask clinicians or pharmacists to explain unfamiliar wording rather than infer its meaning.

## Synonyms:

Abbreviations Medical Terms (Common Medical Abbreviations And Terms) Terms Medical Abbreviations (Common Medical Abbreviations And Terms)

## Compulsive Obsessive Disorder (Obsessive Compulsive Disorder (OCD))

Alternate index label for Obsessive Compulsive Disorder (OCD).

## Conditions Caused By Deletion Mutations

Deletion mutations remove DNA segments and can disrupt one gene or several neighboring genes. The clinical effect depends on size, location, inheritance, and whether the remaining copy compensates; genetic counseling and testing may clarify diagnosis and recurrence risk.

## Congenital Megacolon (Hirschsprung Disease)

Alternate index label for Hirschsprung Disease.

## Congestive Heart Failure (CHF) Overview

Alternate index label for CHF) Overvie.

## Conjunctivitis (Pink Eye)

Alternate index label for Pink Eye.

## Constipation (Laxatives For Constipation)

Alternate index label for Laxatives For Constipation.

## Constipation Foods To Avoid (Top Foods That Cause Constipation)

Alternate index label for Top Foods That Cause Constipation.

## Constipation Home Remedies (Constipation)

Alternate index label for Constipation.

---

**Consumption (Tuberculosis (TB) Facts)**

Alternate index label for Tuberculosis (TB) Facts.

**Contagious C. Diff Clostridium Difficile (Is C Diff Clostridium Difficile Contagious)**

Alternate index label for Is C diff Clostridium difficile Contagious.

**Contagious Canker Sores (Are Canker Sores Contagious)**

Alternate index label for Are Canker Sores Contagious.

**Contagious Cough (Is A Cough Contagious)**

Alternate index label for Is a Cough Contagious.

**Contagious Diverticulitis (Is Diverticulitis Contagious)**

Alternate index label for Is Diverticulitis Contagious.

**Contagious E. Coli (Is E Coli Contagious)**

Alternate index label for Is E coli Contagious.

**Contagious H. Pylori (Is H Pylori Contagious)**

Alternate index label for Is H pylori contagious.

**Contagious Hepatitis (Is Hepatitis Contagious)**

Alternate index label for Is Hepatitis Contagious.

**Contagious Hepatitis A (Is Hepatitis A Contagious)**

Alternate index label for Is Hepatitis A Contagious.

**Contagious Hepatitis B (Is Hepatitis B Contagious)**

Alternate index label for Is Hepatitis B Contagious.

**Contagious Hepatitis C (Is Hepatitis C****Contagious)**

Alternate index label for Is Hepatitis C Contagious.

**Contagious Sinus Infection (Is A Sinus Infection Contagious)**

Alternate index label for Is a Sinus Infection Contagious.

**Contagious Sore Throat (Is Sore Throat Pharyngitis Contagious)**

Alternate index label for Is Sore Throat Pharyngitis Contagious.

**Contagious Strep Throat (Is Strep Throat Contagious)**

Alternate index label for Is Strep Throat Contagious.

**Contagious Tonsillitis (Is Tonsillitis Contagious)**

Alternate index label for Is Tonsillitis Contagious.

**Contagious Yeast (Is A Yeast Infection Contagious)**

Alternate index label for Is a Yeast Infection Contagious.

**Contagious Yeast Infection (Is A Yeast Infection Contagious)**

Alternate index label for Is a Yeast Infection Contagious.

**Contractions Braxton-Hicks (Braxton Hicks Contractions)**

Alternate index label for Braxton Hicks Contractions.

**COPD (Chronic Obstructive Pulmonary Disease)**

Alternate index label for Chronic Obstructive Pulmonary Disease.

**COPD (COPD (Chronic Obstructive Pulmonary Disease))**

Alternate index label for COPD (Chronic Obstruc-

---

tive Pulmonary Disease).

### **COPD Vs. Asthma Differences And Similarities**

Asthma usually has variable, reversible airway narrowing, while chronic obstructive pulmonary disease causes persistent airflow limitation associated most often with smoking or long-term irritant exposure. Both can cause cough and wheeze, but testing, course, and treatment differ.

### **COPD Vs. Emphysema Differences Similarities**

Emphysema is structural destruction of alveoli and one component of chronic obstructive pulmonary disease. COPD may also include chronic bronchitis and small-airway disease; symptoms, spirometry, imaging, exposure history, and exacerbations guide distinction and care.

### **Corneal Disease**

Corneal disease affects the transparent front surface of the eye through infection, inflammation, trauma, dystrophy, degeneration, dryness, or abnormal shape. Pain, redness, light sensitivity, discharge, or reduced vision can signal urgent disease because scarring may impair sight.

### **Corneal Inflammation (Keratitis)**

Alternate index label for Keratitis.

### **Corns**

A corn is a localized thickening of skin caused by repeated pressure or friction, commonly on toes or other weight-bearing areas. Proper footwear, pressure relief, and treatment of the underlying deformity help; diabetes or poor circulation makes self-removal risky.

### **Correct Code For Diagnostic Dilation And Curettage**

Dilation and curettage is a procedure that opens the cervix and removes tissue from the uterus for diagnosis or treatment. Coding depends on the indication, setting, technique, pregnancy status, and tissue findings and should be assigned from the

documented procedure.

### **Cosmetic Allergies**

Cosmetic products can cause irritant dermatitis or allergic contact dermatitis, producing itching, redness, swelling, scaling, or blistering where applied. Stopping the suspected product and medical assessment, sometimes with patch testing, help identify the responsible ingredient.

### **Costochondritis (Costochondritis And Tietze Syndrome)**

Alternate index label for Costochondritis and Tietze Syndrome.

### **Costochondritis And Tietze Syndrome**

Costochondritis is inflammation or irritation at the junction of ribs and the breastbone, causing reproducible chest-wall pain. Tietze syndrome is a less common related condition with visible swelling at one or a few joints; heart and lung emergencies must still be excluded.

#### **Synonyms:**

Costochondritis (Costochondritis And Tietze Syndrome) Tietze Syndrome (Costochondritis And Tietze Syndrome)

### **Cough Chronic (Chronic Cough)**

Alternate index label for Chronic Cough.

### **Could A Stiff Neck Be A Sign Of Something Serious**

Neck stiffness commonly follows muscle strain, but stiffness with fever, severe headache, light sensitivity, confusion, rash, weakness, trauma, or neurologic change can signal meningitis, bleeding, spinal injury, or another emergency.

### **COVID-19 Prevention Tips**

COVID-19 prevention combines staying current with recommended vaccination, improving indoor ventilation, avoiding close exposure when ill, testing when indicated, masking in higher-risk settings, and hand or respiratory hygiene. Recommendations change with local transmission and individual risk.

---

### **COVID-19 Vs. Allergies**

COVID-19 may cause fever, sore throat, cough, fatigue, body aches, or loss of smell, while allergies more often cause itching, sneezing, watery eyes, and recurrent symptoms without fever. Testing and exposure history help distinguish them.

### **COVID-19 Vs. Flu Vs. Cold**

COVID-19, influenza, and common colds overlap in respiratory symptoms and cannot always be distinguished by symptoms alone. Testing, exposure, season, severity, and risk factors guide diagnosis; breathing difficulty, chest pain, confusion, or dehydration requires urgent care.

### **Coxsackie (Coxsackie Virus)**

Alternate index label for Coxsackie Virus.

### **CPT Code For Foreign Body Removal From The Ear**

Removal of an ear foreign body is coded according to the documented method, location, anesthesia, complications, and whether a separate evaluation was performed. Objects causing pain, bleeding, hearing loss, or suspected eardrum injury should be removed by a trained clinician.

### **Cramps But No Period**

Pelvic cramps without menstruation can result from ovulation, pregnancy, implantation, constipation, urinary disease, infection, endometriosis, cysts, or other pelvic conditions. Severe one-sided pain, faintness, fever, vomiting, or possible pregnancy requires urgent assessment.

### **Cramps Heat (Heat Cramps)**

Alternate index label for Heat Cramps.

### **Cramps Menstrual (Menstrual Cramps)**

Alternate index label for Menstrual Cramps.

### **CRE Infection**

Carbapenem-resistant Enterobacterales are bacteria resistant to important antibiotics and can cause urinary, bloodstream, abdominal, wound, or lung

infections. Infection-control precautions, culture-based treatment, and specialist advice are important because therapeutic options may be limited.

### **Synonyms:**

Carbapenem Resistant Enterobacteriaceae (CRE Infection)

### **Critical Limb Ischemia Vs. Acute Limb Ischemia**

Chronic limb-threatening ischemia develops gradually from severe arterial disease and causes rest pain, nonhealing wounds, or tissue loss. Acute limb ischemia occurs suddenly with pain, pallor, pulselessness, numbness, weakness, or coldness and requires emergency revascularization assessment.

### **Crohn Disease (Crohn's Disease)**

Alternate index label for Crohn's Disease.

### **Crohns Disease Vs Ulcerative Colitis UC**

Crohn disease can affect any part of the gastrointestinal tract and often involves patchy, full-thickness inflammation, while ulcerative colitis affects the colon continuously from the rectum with superficial mucosal inflammation. Symptoms overlap, but imaging, endoscopy, and biopsy help distinguish them.

### **Crohn's Disease Cause Dark Circles Around Eyes**

Crohn disease does not directly cause dark circles in every patient, but anemia, fatigue, dehydration, poor sleep, nutritional deficiency, steroid effects, or atopic skin may contribute. Persistent pallor, fatigue, weight loss, bleeding, or active bowel symptoms deserve clinical review.

### **Croup Contagious (Is Croup Contagious)**

Alternate index label for Is Croup Contagious.

### **Ctenocephalides FelFlea Bite (Flea Bites In Humans)**

Alternate index label for Flea Bites in Humans.

### **Cuts Wounds (Cuts, Scrapes And**

---

### **Puncture Wounds)**

Alternate index label for Cuts, Scrapes and Puncture Wounds.

### **Cuts, Scrapes And Puncture Wounds**

Cuts, scrapes, and puncture wounds damage the skin to varying depths and can introduce bacteria or foreign material. Clean minor wounds with running water, control bleeding, cover them, and seek care for deep or contaminated wounds, bites, impaired circulation, infection, or uncertain tetanus protection.

#### **Synonyms:**

Cuts Wounds (Cuts, Scrapes And Puncture Wounds)

### **CVA (Stroke Symptoms And Treatment)**

Alternate index label for Stroke Symptoms and Treatment.

### **Cyclic Vomiting Syndrome (CVS)**

Alternate index label for CVS.

### **Cyclospora Infection (Cyclosporiasis)**

Alternate index label for Cyclosporiasis.

### **Cyst Eyelid (Giardia Lamblia)**

Alternate index label for Giardia Lamblia.

### **Cystic Acne**

Cystic acne is severe inflammatory acne with deep painful nodules or cyst-like lesions that can scar. Treatment may require prescription retinoids, antimicrobial or hormonal therapy, or isotretinoin under specialist monitoring; squeezing lesions increases scarring.

### **Cystitis (Bladder Infection)**

Cystitis is inflammation of the bladder, most often from a bacterial urinary-tract infection. It causes burning urination, frequency, urgency, and lower-abdominal discomfort; fever, flank pain, vomiting, pregnancy, or recurrent infection requires prompt assessment.

### **Cysts Choledochal (Choledochal Cysts)**

Alternate index label for Choledochal Cysts.

### **Cysts Ovary (Ovarian Cysts)**

Alternate index label for Ovarian Cysts.

### **Cysts Pancreatic Inflammatory (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

### **Cysts True Pancreas (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

### **Cytomegalovirus (CMV)**

Alternate index label for CMV.

### **C-Reactive Protein Test (CRP)**

A blood test measuring C-reactive protein, an acute-phase protein that rises with inflammation; it is nonspecific and must be interpreted with symptoms and other findings.

### **C1-C7 (Cervical Vertebrae)**

The seven vertebrae of the neck, numbered C1 through C7; they support the head, protect the cervical spinal cord, and allow neck movement.

### **CA**

A medical abbreviation that may mean cancer, carcinoma, or calcium; the intended meaning depends on the surrounding clinical context.

### **CA 27-29**

A blood tumor-marker test measuring a form of the MUC1 antigen, used mainly to monitor some people with breast cancer rather than to screen for cancer by itself.

### **Cachectic**

Affected by cachexia, a severe wasting syndrome involving involuntary weight loss, muscle loss, weakness, and often reduced appetite in chronic disease.

---

## **Cachetic**

An alternate spelling of cachectic, meaning characterized by severe disease-related wasting and loss of muscle and body mass.

## **CAD**

Coronary artery disease, narrowing or blockage of the heart's arteries, usually from atherosclerotic plaque, that can cause angina or myocardial infarction.

## **Caduceus**

A staff with two entwined snakes and wings, traditionally associated with Hermes; it is often used as a medical symbol but is distinct from the single-snake Rod of Asclepius.

## **Caecal**

Relating to the cecum, the pouch at the beginning of the large intestine where the small intestine joins the colon.

## **Caecum**

The first pouch-like part of the large intestine, located where the ileum joins the colon and attached to the appendix.

## **Cal (Calorie)**

A unit of energy; in nutrition, a Calorie with a capital C is a kilocalorie equal to 1,000 small calories and is used to describe food energy.

## **Calcaneal Spur**

A bony outgrowth from the heel bone, often at the plantar fascia attachment or Achilles tendon attachment; it may be asymptomatic or associated with heel pain.

## **Calcified Granuloma**

A healed granulomatous inflammatory lesion in which calcium has been deposited, commonly seen as a small calcified focus in the lung or another organ.

## **Calcium Channel Blocker**

A drug that inhibits calcium entry through L-type calcium channels, relaxing vascular smooth muscle and, for some agents, slowing cardiac conduction and reducing contractility.

## **Calcium Deficiency**

Inadequate calcium intake or availability; severe deficiency can contribute to hypocalcemia, muscle spasms, impaired bone mineralization, and increased fracture risk.

## **Calculus, Renal**

A kidney stone, a hard mass of mineral crystals formed in the urinary tract that may cause colicky pain, hematuria, obstruction, or infection.

## **Calf**

The posterior portion of the lower leg between the knee and ankle, containing the gastrocnemius, soleus, and other muscles.

## **Calipers**

An instrument with opposing arms used to measure distance, thickness, or body dimensions, including skinfold thickness in nutritional assessment.

## **Calor**

Heat or increased warmth of a body part, one of the classic local signs of inflammation.

## **Calor, Dolor, Rubor, And Tumor**

The classic signs of inflammation: heat, pain, redness, and swelling; inflammation may also impair function.

## **Cannabinoid Hyperemesis Syndrome (CHS)**

A syndrome of recurrent severe nausea, vomiting, and abdominal pain associated with prolonged frequent cannabis use; symptoms often improve after sustained cannabis cessation.

## **Caps**

A prescription abbreviation for capsules, oral dosage

---

forms in which medicine is enclosed in a soluble shell.

### **Carboxyhemoglobinemia**

An abnormally high level of carboxyhemoglobin formed when carbon monoxide binds hemoglobin, reducing oxygen delivery and impairing oxygen release to tissues.

### **Carcinogenic**

Capable of causing or promoting cancer through genetic damage, altered cell regulation, or other mechanisms.

### **Cardiopathy**

Any disease or disorder of the heart, including diseases of the heart muscle, valves, coronary arteries, rhythm, or congenital structure.

### **Carotid**

Relating to either of the major arteries in the neck that carry blood from the heart toward the brain and head.

### **Cascade**

A sequence in which one activated reaction or event triggers the next, such as the coagulation, complement, or inflammatory cascade.

### **Caseous**

Having a cheese-like appearance or consistency, especially the necrotic material typical of some tuberculosis granulomas.

### **Cashew Allergy**

An immune reaction to cashew proteins that can cause hives, swelling, vomiting, wheezing, or life-threatening anaphylaxis.

### **Cassette**

A holder or container for recording or imaging material; in radiography, a cassette traditionally houses the film or image receptor during exposure.

### **CAT Scan**

Computed axial tomography, commonly called CT,

an imaging method that uses multiple X-ray measurements and computer processing to create cross-sectional body images.

### **Cataplasm**

A poultice: a soft, moist substance spread on cloth and applied to the body, historically for soothing, warming, or treating a local condition.

### **Category Five Hurricane**

A Saffir–Simpson hurricane with sustained winds of at least 157 miles per hour (252 km/h), capable of catastrophic damage and prolonged loss of habitability.

### **Category Three Hurricane**

A Saffir–Simpson hurricane with sustained winds of 111–129 miles per hour (178–208 km/h), capable of devastating damage.

### **Category Two Hurricane**

A Saffir–Simpson hurricane with sustained winds of 96–110 miles per hour (154–177 km/h), capable of extensive damage to structures and vegetation.

### **Catheter, Foley**

An indwelling urinary catheter with an inflatable balloon that holds it in the bladder, allowing continuous drainage of urine.

### **Caudad**

Toward the tail or lower end of the body; in humans, it generally means toward the feet or away from the head.

### **CCD (Cleidocranial Dysostosis)**

A usually inherited skeletal disorder, often caused by RUNX2 variants, characterized by hypoplastic or absent clavicles, delayed closure of skull sutures, short stature, and dental abnormalities.

### **CCP**

Cyclic citrullinated peptide; anti-CCP antibody testing supports diagnosis of rheumatoid arthritis and may help assess the likelihood of erosive disease.

---

## **CDC**

The Centers for Disease Control and Prevention, a U.S. public-health agency that conducts disease surveillance and issues health guidance.

## **Centimeter (Cm)**

A unit of length equal to one hundredth of a meter, or 10 millimeters.

## **Central Line**

A catheter inserted into a large vein with its tip in or near the heart, used to give medications or nutrition, draw blood, or monitor central venous pressures.

## **Central Nervous System (CNS)**

The brain and spinal cord, which receive, process, and coordinate sensory, motor, cognitive, and autonomic functions.

## **Central Venous Line**

A vascular catheter whose tip lies in a major central vein, commonly the superior vena cava, for reliable long-term or high-concentration intravenous access.

## **Central Vision**

Detailed vision directed at the point of gaze, provided primarily by the macula and fovea; it is needed for reading and recognizing faces.

## **Centric-Fusion Translocation**

A Robertsonian translocation in which the long arms of two acrocentric chromosomes fuse near their centromeres, leaving a combined chromosome and usually losing the short arms.

## **Cephal-**

A combining form meaning head.

## **Cephalic**

Relating to the head or toward the head; in obstetrics, a cephalic presentation means the fetus presents head first.

## **Cerebral**

Relating to the cerebrum or, more broadly, to the brain.

## **Cerebrovascular Accident (CVA) Prevention**

Measures to reduce the risk of stroke, including controlling blood pressure, diabetes, and lipids, avoiding tobacco, treating atrial fibrillation when indicated, and using appropriate antithrombotic therapy.

## **Cervical Dystocia**

Failure of the uterine cervix to dilate normally during labor, which can delay or prevent vaginal delivery.

## **Chain-Termination Codon**

A codon that signals the end of protein translation; the three standard stop codons are UAA, UAG, and UGA in messenger RNA.

## **Charcot-Wilbrand Syndrome**

A rare neuropsychiatric syndrome after brain injury characterized by loss of visual imagery and visual dreaming, sometimes with difficulty recognizing or interpreting visual information.

## **Chargaff Rule**

The observation that double-stranded DNA contains approximately equal amounts of adenine and thymine and of guanine and cytosine, reflecting complementary base pairing.

## **Chasing The Dragon**

Inhalation of vapor produced by heating heroin, a method of drug use that can cause dependence, overdose, toxic exposures, and neurological injury.

## **Chemo**

Informal shorthand for chemotherapy, treatment using drugs that destroy cancer cells, inhibit their growth, or suppress abnormal immune cells.

---

## **Chest**

The thorax, the region between the neck and abdomen containing the heart, lungs, major vessels, and other structures protected by the ribs and sternum.

## **CHF**

Congestive heart failure, a syndrome in which the heart cannot pump or fill adequately, causing symptoms such as breathlessness, fatigue, and fluid retention.

## **Child Health**

The physical, developmental, mental, and social well-being of children, including prevention, nutrition, immunization, safety, and treatment of illness.

## **Childbed Fever**

Puerperal fever, usually infection of the reproductive tract after childbirth or miscarriage, often involving postpartum endometritis and requiring prompt evaluation and treatment.

## **Childhood**

The developmental period between infancy and adolescence, during which physical growth, brain development, learning, and social skills progress.

## **Chinese Restaurant Syndrome**

An older, controversial term for short-lived symptoms such as headache, flushing, or palpitations attributed to eating restaurant food; evidence does not show that monosodium glutamate causes these symptoms in most people at usual dietary exposures.

## **Chloride**

The principal negatively charged electrolyte in extracellular fluid, important for fluid balance, electrical neutrality, and gastric acid formation.

## **Cholangi-**

A combining form meaning bile duct or bile vessel.

## **Cholecyst**

The gallbladder, a small sac beneath the liver that stores and concentrates bile.

## **Chondroitin Sulfate**

A sulfated glycosaminoglycan found in cartilage and other connective tissues; it is also marketed in supplements for osteoarthritis, with variable evidence of benefit.

## **Chromosome Complement**

The complete set of chromosomes in a cell, including their number and sex-chromosome composition, usually described by a karyotype.

## **Chromosome Duplication**

A structural chromosome abnormality in which a segment of genetic material is copied one or more additional times, potentially altering gene dosage and development.

## **Chronic Disease**

A disease or condition that persists for a prolonged period, often months or years, and may require continuing monitoring or management.

## **Chronic Glomerulonephritis**

Long-standing inflammation and scarring of the kidney glomeruli that can progressively reduce filtration and lead to chronic kidney disease or kidney failure.

## **Chronicity**

The duration or long-standing nature of a disease, symptom, or process.

## **Chyle**

Milky lymph from intestinal lymphatic vessels that is rich in absorbed dietary fat and transported through the thoracic duct.

## **Ci (Curie)**

A unit of radioactivity equal to 3.7 billion nuclear disintegrations per second; the SI unit is the becquerel.

---

**CIC**

Commonly, clean intermittent catheterization: periodic insertion of a catheter to empty the bladder, followed by removal; other expansions are possible by context.

**Cidal**

A suffix meaning killing or destroying, as in bactericidal or fungicidal.

**Cide**

A suffix meaning an agent or process that kills, as in pesticide, bactericide, or homicide.

**Cigarette**

A small cylinder of tobacco or other material wrapped in paper for smoking; smoke exposure delivers nicotine and many toxic and carcinogenic substances.

**Ciguatoxin**

A heat-stable toxin produced by marine microorganisms and accumulated in some reef fish, causing ciguatera poisoning with gastrointestinal, neurologic, and temperature-sensation symptoms.

**Ciliary Muscle**

A ring of smooth muscle in the eye that changes the lens shape for focusing at different distances and helps regulate aqueous humor outflow through ciliary-body structures.

**Ciliary Neuralgia**

Pain arising from or felt along the ciliary nerves around the eye, often described as deep orbital or eye pain; the cause requires clinical evaluation.

**Cinacalcet**

A calcimimetic drug that activates calcium-sensing receptors and lowers parathyroid hormone, used for selected forms of hyperparathyroidism and hypercalcemia.

**Circulation**

Continuous movement of blood through the heart

and blood vessels, or of lymph through lymphatic vessels, to transport oxygen, nutrients, hormones, and waste.

**Circulatory**

Relating to the movement of blood or lymph and to the organs and vessels that carry them.

**Circulatory System**

The heart and blood-vessel network that pumps and distributes blood through pulmonary and systemic circuits; broadly, the term may include the lymphatic system.

**Circum-**

A combining form meaning around or surrounding.

**Circumflex**

Curving around; the circumflex coronary artery is a branch of the left coronary artery that travels around the heart's lateral and posterior surface.

**Cisplatin**

A platinum-based chemotherapy drug that forms DNA cross-links and is used to treat several cancers; important toxicities include kidney injury, hearing loss, neuropathy, and nausea.

**Cl (Chloride)**

The chemical symbol for chloride, the negatively charged ion of chlorine and a major extracellular electrolyte.

**CLA**

An abbreviation that commonly means conjugated linoleic acid, a group of fatty-acid isomers; in other medical contexts it may have a different expansion.

**Clark Level Of Invasion**

A historical five-level system describing how deeply a melanoma has invaded skin layers; modern melanoma staging relies primarily on tumor thickness, ulceration, and other prognostic factors.

---

## **Clinical**

Relating to direct observation, examination, diagnosis, or treatment of a patient, rather than solely to laboratory or basic research findings.

## **Clinical Disease**

Disease that produces recognizable signs or symptoms or other findings detectable in a patient, as opposed to a silent or subclinical state.

## **Clinical Trials**

Research studies involving human participants that evaluate the safety, effectiveness, risks, or best use of medical interventions or health strategies.

## **Clinophobia**

An excessive or irrational fear of going to bed or being in bed, sometimes associated with fear of sleep or nighttime.

## **CLIP**

A device used to hold tissue or structures together; surgical clips can close blood vessels, mark tissue, or occlude structures such as the vas deferens.

## **Clitoral**

Relating to the clitoris, an erectile organ with a dense concentration of sensory nerves at the front of the vulva.

## **Clitorectomy**

Surgical removal of all or part of the clitoris, sometimes with removal of adjacent vulvar tissue; nonconsensual forms constitute female genital mutilation and can cause serious harm.

## **Cluster**

A group of similar events, findings, cells, or cases occurring together in space, time, or clinical pattern.

## **Cm (Centimeter)**

The abbreviation for centimeter, a unit of length equal to one hundredth of a meter or 10 millimeters.

## **CNS (Central Nervous System)**

The brain and spinal cord, which form the central processing and control system of the nervous system.

## **Coagulation**

The process by which blood changes from a liquid to a clot through platelet activity and activation of the coagulation proteins, producing a fibrin mesh.

## **Cobalamin**

Vitamin B12, a vitamin required for DNA synthesis, red-blood-cell formation, and normal neurologic function.

## **Cocaine**

A stimulant drug that blocks monoamine reuptake and can also act as a local anesthetic; use can cause dependence, cardiovascular complications, seizures, stroke, and overdose.

## **Coccus**

A spherical or approximately round bacterium; cocci may occur singly, in pairs, chains, or clusters.

## **Code Black**

A hospital emergency alert whose meaning varies by institution, often indicating a severe security threat, bomb threat, or other critical incident; local policy determines the response.

## **Code, Hospital**

A standardized hospital announcement used to summon a specialized response to an emergency; the meaning of each code depends on the hospital's policy.

## **Coenzyme Q10**

CoQ10, a lipid-soluble compound in mitochondrial electron transport and an antioxidant; it is also sold as a dietary supplement, although benefits vary by condition.

## **Cognitive**

Relating to mental processes such as attention, memory, learning, language, reasoning, perception, and

---

decision-making.

### **Cognitive Therapy**

A psychological treatment that helps a person identify and change unhelpful thoughts and beliefs and develop more adaptive behaviors; cognitive behavioral therapy combines it with behavioral methods.

### **Cohort**

A group of people who share a defined characteristic or experience during a specified period and are studied over time or compared with another group.

### **Coitophobia**

An excessive or irrational fear of sexual intercourse, which may cause avoidance, distress, or difficulty in intimate relationships.

### **Coitus**

Sexual intercourse, traditionally referring to penile-vaginal penetration; sexual activity is broader than this term.

### **Coitus Interruptus**

The withdrawal method of contraception, in which the penis is removed from the vagina before ejaculation; it is less reliable than many other contraceptive methods.

### **Coke**

Slang for cocaine, a stimulant drug; the word can also mean a carbon fuel product, so context is essential.

### **COLD (Chronic Obstructive Lung Disease)**

An older abbreviation for chronic obstructive lung disease, now usually called chronic obstructive pulmonary disease (COPD), characterized by persistent airflow limitation.

### **Coliform**

A group of generally gram-negative bacteria that ferment lactose with acid and gas production under defined laboratory conditions; their presence in wa-

ter can indicate fecal contamination, although not all coliforms are fecal pathogens.

### **Collateral**

Providing an alternative or parallel route, such as collateral blood vessels that supply tissue around an obstruction; in other contexts it means accompanying or secondary.

### **Colpo-**

A combining form meaning vagina.

### **Commensal**

Describing an organism that lives with another organism and benefits from the relationship without normally harming or helping the host; normal skin and intestinal flora may be commensal.

### **Complementary Medicine**

Health practices used together with conventional medical treatment, such as selected mind-body practices or acupuncture; it is distinct from alternative medicine, which replaces conventional care.

### **Complementary Sequence**

A nucleic-acid sequence whose bases pair with another sequence according to pairing rules, allowing hybridization between DNA or RNA strands.

### **Compound Heterozygote**

A person who has two different pathogenic variants in the two copies of the same gene, one inherited on each homologous chromosome.

### **Compress**

To press together or apply pressure, as with a bandage or device, or to reduce the volume of something.

### **Compression**

Pressure applied to tissue or a structure, which may reduce swelling or bleeding but can also impair nerves, blood vessels, or organs when excessive.

---

### **Computerized Axial Tomography (CAT)**

Computed tomography, an imaging method that uses X-rays and computer processing to produce cross-sectional images of the body; it is also called a CT or CAT scan.

### **Conditioning**

Learning in which repeated association or reinforcement changes a behavior or response; in medicine, conditioning can also mean preparing a patient or tissue for a treatment.

### **Condom**

A thin barrier sheath worn on the penis or inserted into the vagina that helps prevent pregnancy and reduces transmission of sexually transmitted infections when used correctly.

### **Condyloma**

A wart-like growth, often in the genital or anal area and commonly caused by human papillomavirus; condyloma lata are lesions of secondary syphilis.

### **Conformal Radiation Therapy**

Radiation treatment planned so that the high-dose region conforms closely to the tumor's three-dimensional shape while limiting exposure of nearby normal tissue.

### **Congenital**

Present at birth, whether inherited, caused by a developmental problem, or acquired before birth.

### **Congenital Malformation**

A structural abnormality that develops before birth and is present at birth, caused by genetic, environmental, developmental, or unknown factors.

### **Conjunctival**

Relating to the conjunctiva, the thin mucous membrane covering the front of the eye and lining the inner eyelids.

### **Consanguinity**

A biological relationship between people who share a

recent common ancestor; it can increase the chance that both parents carry the same recessive disease variant.

### **Consumption**

An older term for tuberculosis, especially wasting pulmonary tuberculosis; in general usage it also means the act or amount of using something.

### **Contraceptive Device, Intrauterine (IUD)**

A small device placed inside the uterus to prevent pregnancy; copper IUDs impair sperm function, while hormonal IUDs release levonorgestrel and thicken cervical mucus.

### **Contraceptive, Pill**

An oral hormonal contraceptive, usually a combined estrogen–progestin pill or a progestin-only pill, that prevents ovulation and/or changes cervical mucus and the uterine lining.

### **Contraction**

Shortening or tightening of a muscle; uterine contractions during labor thin and dilate the cervix and help deliver the fetus.

### **Contrast**

A difference that makes structures distinguishable; in imaging, contrast material is administered to improve visualization of organs, vessels, or tissues.

### **Control (Research)**

A comparison participant or group in a study that does not receive the experimental intervention, or receives standard care or a placebo, allowing the intervention's effects to be estimated.

### **Coprolalia**

Involuntary utterance of obscene, taboo, or socially inappropriate words, most often described as a complex vocal tic in Tourette syndrome.

### **Coprophobia**

An excessive or irrational fear of feces or defecation.

---

## CoQ10

Coenzyme Q10, a lipid-soluble mitochondrial electron-transport compound and antioxidant also sold as a dietary supplement.

## Cor

The Latin anatomical term for heart, used in medical names such as cor pulmonale.

## Cord

A long, narrow structure such as the spinal cord, which contains the central nervous tissue, or the umbilical cord, which connects a fetus to the placenta.

## Coronal

Relating to a plane that divides the body into front and back portions, or to the crown or top of a structure.

## Corporeal

Relating to the physical body rather than the mind or spirit.

## Corpus

Latin for body; in anatomy it refers to the main body of an organ or structure, such as the corpus callosum or corpus uteri.

## Cortical

Relating to the cortex, the outer layer of an organ such as the brain, kidney, or adrenal gland.

## Corticosteroid

A steroid hormone from the adrenal cortex or a synthetic analogue; glucocorticoids reduce inflammation and immune activity, while mineralocorticoids regulate salt and water balance.

## Cortisone

A corticosteroid that is converted in the body to cortisol and can be used to reduce inflammation or replace glucocorticoid activity.

## Cosmeceutical

A cosmetic product marketed as having biologically active, drug-like benefits; the term has no uniform formal regulatory category in many jurisdictions.

## Cough Suppressant

An antitussive medicine or measure that reduces the urge or reflex to cough; treatment should address the underlying cause and avoid suppressing a productive cough when clearance is needed.

## Counterpulsation

Timed inflation and deflation of a balloon or external cuffs in relation to the heartbeat to improve coronary perfusion or reduce cardiac workload, as in intra-aortic balloon counterpulsation.

## Cox-1 Inhibitor

A drug that inhibits cyclooxygenase-1 and reduces production of prostaglandins and thromboxanes; inhibition can contribute to analgesia but also gastrointestinal, renal, and platelet effects.

## Cox-2

Cyclooxygenase-2, an inducible enzyme that produces inflammatory prostaglandins; selective COX-2 inhibitors reduce pain and inflammation but may have cardiovascular, renal, and gastrointestinal risks.

## CpG

A DNA sequence in which cytosine is followed by guanine on the same strand, often occurring in regions whose methylation helps regulate gene expression.

## Crack (Drug)

A smokable, rapidly acting form of cocaine; it can cause dependence, severe cardiovascular effects, seizures, stroke, psychiatric symptoms, and overdose.

## Cramping Leg Pain

Pain caused by involuntary, often painful muscle contraction in the leg; contributors include exertion,

---

dehydration, electrolyte abnormalities, medications, nerve disease, and impaired circulation.

### **Cranial**

Relating to the skull or toward the head, as opposed to caudal or toward the lower end of the body.

### **Cranial Nerve X**

The vagus nerve, the tenth cranial nerve, which carries parasympathetic and sensory fibers and contributes to swallowing, voice, and regulation of thoracic and abdominal organs.

### **Cranial Nerves**

The 12 pairs of nerves arising from the brain or brainstem that provide sensory, motor, and autonomic functions to the head, neck, and parts of the trunk.

### **Cranio-**

A combining form meaning skull or cranium.

### **Cranium**

The part of the skull that encloses and protects the brain, consisting of the cranial bones and their joints.

### **Crapulence**

An unpleasant state of sickness or discomfort caused by excessive eating or drinking, especially excessive alcohol use.

### **CRC**

Colorectal cancer, malignant disease arising in the colon or rectum; screening and evaluation depend on age, risk, symptoms, and test results.

### **Crime Scene Investigation**

The systematic documentation, collection, preservation, and analysis of physical evidence from a suspected crime scene, often supporting forensic medical and legal conclusions.

### **Crocodile Tears Syndrome**

Gustatory lacrimation, in which eating or smelling

food triggers excessive tearing, usually after facial-nerve injury or aberrant regeneration following Bell palsy.

### **Cross-Section**

A slice or plane made through a structure, or an image showing that slice, such as a cross-sectional CT image.

### **Crotch**

The region where the inner thighs meet the trunk, including the groin and nearby perineal structures.

### **Cry For Help**

A verbal or behavioral expression of distress or need for assistance; in a mental-health setting it should be taken seriously and assessed for immediate safety concerns.

### **Cryophobia**

An excessive or irrational fear of cold, freezing temperatures, or cold objects.

### **Cryostat**

An instrument that maintains very low temperatures and cuts thin frozen sections of tissue for rapid microscopic examination.

### **Crypt**

A small cavity, gland, or recess, such as an intestinal crypt or tonsillar crypt.

### **Crypto**

Clinical shorthand that may refer to cryptococcosis or *Cryptosporidium* infection; the intended meaning depends on the clinical context.

### **CSF (Cerebrospinal Fluid)**

A clear fluid produced within the brain that surrounds and cushions the brain and spinal cord, helps regulate their chemical environment, and can be examined for disease.

### **CTL**

Cytotoxic T lymphocyte, an immune cell that rec-

---

ognizes and kills infected, abnormal, or target cells through antigen-specific mechanisms.

### **CTS**

Commonly, carpal tunnel syndrome: compression of the median nerve at the wrist causing numbness, tingling, pain, or weakness in the hand.

### **Cubital**

Relating to the elbow or the forearm, especially the area around the elbow.

### **Cubitus**

The elbow or the forearm; the term is also used in names of structures and conditions around the elbow.

### **Cul-De-Sac**

A blind-ending pouch or recess; in pelvic anatomy, the rectouterine pouch and rectovesical pouch are examples.

### **Cure**

Elimination or durable control of a disease so that it no longer causes active illness; the meaning and evidence for cure vary by condition.

### **Cushingoid**

Resembling the physical features of excess glucocorticoid exposure, such as a round face, central weight gain, thin skin, easy bruising, and muscle weakness.

### **Cusp**

A pointed projection, such as a projection of a tooth or one of the leaflets of a heart valve.

### **Cut**

A break or incision made in tissue, usually by a sharp object; the depth, contamination, and location determine the required care.

### **Cutaneous**

Relating to or affecting the skin.

### **Cutis Anserina**

Gooseflesh or piloerection, in which contraction of tiny muscles around hair follicles makes the skin appear rough or dimpled.

### **Cutting For The Stone**

An older term for surgically opening the urinary tract to remove a stone, historically called lithotomy.

### **CVC**

Central venous catheter, a catheter whose tip lies in a large central vein and provides intravenous access for medications, fluids, nutrition, or monitoring.

### **CVS**

An abbreviation that may mean cardiovascular system or chorionic-villus sampling, a prenatal diagnostic procedure; context determines the meaning.

#### **Synonyms:**

Cyclic Vomiting Syndrome (CVS)

### **Cyanide**

A highly toxic chemical ion or compound that inhibits cellular cytochrome oxidase, preventing tissues from using oxygen and potentially causing rapid fatal poisoning.

### **Cyanotic**

Having a bluish or slate-gray discoloration of skin or mucous membranes, usually reflecting increased deoxygenated hemoglobin or abnormal blood flow.

### **Cyclic Citrullinated Peptide**

A laboratory antigen used to detect anti-CCP antibodies, which are highly specific for rheumatoid arthritis but are interpreted with clinical findings.

### **Cyclooxygenase-2**

An inducible cyclooxygenase enzyme that generates prostaglandins involved in inflammation, pain, and fever and is inhibited by COX-2-selective medicines.

### **Cyclops**

A term that may refer to cyclopia, a rare severe congenital malformation with a single central eye,

---

or to a fibrous nodule causing loss of extension after knee surgery; context determines the meaning.

### **Cysts**

Closed sac-like structures containing fluid, air, semisolid material, or other contents; their causes range from benign developmental or obstructive processes to infection or neoplasia.

### **Cyte**

A suffix meaning cell, as in erythrocyte or leukocyte.

### **Cyto-**

A combining form meaning cell.

### **Cytoplasm**

The material inside a cell between the cell membrane and nucleus, consisting of cytosol, organelles, and other cellular components.

### **Cytosis**

A suffix or term indicating a condition involving cells or, in some contexts, an increase in the number of a particular type of cell.

### **Cytotoxic**

Toxic to cells or capable of killing cells, as with some chemotherapy drugs, toxins, or cytotoxic immune cells.

### **Childhood Schizophrenia**

A rare psychotic disorder beginning in childhood, involving disturbances in thinking, perception, behavior, and emotional functioning.

#### **Synonyms:**

Juvenile Schizophrenia Schizophrenia, Adolescent Schizophrenia, Childhood Schizophrenia, Juvenile

### **Childhood Asthma**

Asthma beginning during childhood, involving variable airway narrowing and inflammation that cause wheezing, cough, chest tightness, or shortness of breath.

### **Chigger Bites**

Itchy inflammatory skin reactions caused by the larvae of trombiculid mites. Small red bumps or blisters often occur around areas where clothing fits tightly and may itch intensely for several days. Washing the skin and clothing, topical antipruritics, and avoiding scratching can help; persistent or infected lesions require assessment.

### **Cholangiocarcinoma (Bile Duct Cancer)**

Cancer arising in the bile ducts, which may cause jaundice, itching, abdominal discomfort, weight loss, or impaired bile flow.

### **Cyclospora Infection**

An intestinal infection caused by the parasite *Cyclospora cayetanensis*, usually acquired from contaminated food or water. It commonly causes prolonged watery diarrhea, abdominal cramps, nausea, fatigue, and weight loss. Diagnosis requires specialized stool testing, and antimicrobial treatment is often effective.

### **Congenital Penile Curvature**

Curvature of the penis present from birth, usually caused by unequal development of the erectile tissues. Mild curvature may need no treatment; significant curvature causing functional difficulty may require specialist assessment.

### **Common Warts (Verruca Vulgaris)**

Benign, rough-surfaced skin growths caused by infection with human papillomavirus (HPV), commonly affecting the hands and fingers.

#### **Synonyms:**

Verruca Vulgaris

### **C And T Cells**

B cells produce antibodies, while T cells coordinate cellular immunity or destroy infected and abnormal cells; together they form major lymphocyte populations.

### **C-Reactive Protein (CRP)**

C-reactive protein is a liver-produced acute-phase

---

protein that rises with inflammation or infection but does not by itself identify the cause.

### **Caesarean Section**

A caesarean section is surgical delivery of a baby through incisions in the abdomen and uterus when vaginal birth is unsafe or not feasible.

### **Calamine**

Calamine is a topical preparation containing zinc compounds used to soothe itching and irritation from minor rashes, insect bites, and sunburn.

### **Calcaneum**

The calcaneum, or calcaneus, is the large heel bone that transfers load from the ankle and forms part of the hindfoot.

### **Calculus**

A calculus is a hard deposit formed from mineral salts, such as a kidney stone, gallstone, or dental tartar.

### **Callosal**

Callosal means relating to the corpus callosum, the major bundle of fibers connecting the cerebral hemispheres.

### **Callosity**

A callosity is a localized area of thickened skin caused by repeated pressure or friction.

### **Calprotectin**

Calprotectin is a protein released by activated neutrophils; fecal calprotectin helps detect intestinal inflammation, especially in inflammatory bowel disease.

### **Canaliculus**

A canaliculus is a small anatomical channel, such as a lacrimal canaliculus that drains tears from the eyelid into the lacrimal sac.

### **Canalization**

Canalization is formation or restoration of a channel

through tissue, a vessel, or an embryonic structure; in thrombosis it may describe reopening of an occluded vessel.

### **Canine Teeth**

Canine teeth are pointed teeth between the incisors and premolars that tear food and help guide jaw movement.

### **Canker**

Canker is a nontechnical term often referring to an aphthous mouth ulcer, a painful shallow ulcer of the oral mucosa.

### **Cannabis**

Cannabis is a plant containing cannabinoids such as THC and CBD; effects include altered perception, impaired coordination, therapeutic actions, and possible dependence or adverse effects.

### **Cantharides**

Cantharides are preparations made from blister beetles containing cantharidin, a potent irritant that can cause severe poisoning and urinary or gastrointestinal injury.

### **Capillary Microscope**

A capillary microscope magnifies small blood vessels, especially nail-fold capillaries, to assess structure and abnormalities in microcirculation.

### **Capitation**

Capitation is a healthcare payment arrangement in which a provider receives a fixed amount per enrolled person for defined services over a period.

### **Caplan's Syndrome**

Caplan's syndrome is pneumoconiosis with rheumatoid arthritis, producing lung nodules in people exposed to mineral or coal dust.

### **Captopril Renal Scan**

A captopril renal scan uses a radiotracer before and after captopril to assess renovascular hypertension by detecting impaired renal perfusion or function.

---

## **Carbamide**

Carbamide is urea, a nitrogen-containing compound produced by protein metabolism and excreted by the kidneys; it is also used in some topical preparations.

## **Carbimazole**

Carbimazole is an antithyroid drug converted to methimazole that reduces thyroid-hormone synthesis; rare serious adverse effects include agranulocytosis and liver injury.

## **Carboxyhaemoglobin**

Carboxyhaemoglobin is hemoglobin bound to carbon monoxide, reducing oxygen carriage and release; elevated levels indicate carbon-monoxide exposure.

## **Carcinoembryonic Antigen (CEA)**

CEA is a tumor-associated glycoprotein used mainly to monitor selected cancers, especially colorectal cancer; it is not sufficiently specific for screening alone.

## **Carcinoid**

A carcinoid is a usually slow-growing neuroendocrine tumor that may release hormones such as serotonin and occur in the gastrointestinal tract, appendix, or lungs.

## **Cardiac Failure**

Cardiac failure, or heart failure, is inability of the heart to pump or fill adequately, causing breathlessness, fatigue, fluid retention, or reduced organ perfusion.

## **Cardiac Massage**

Cardiac massage is manual compression of the heart, historically performed through the chest or during open surgery; modern cardiac arrest care uses chest compressions and advanced resuscitation.

## **Cardiac Pacemaker**

A cardiac pacemaker is an implanted or external device that delivers electrical impulses to maintain an adequate heart rate when intrinsic conduction is too slow or unreliable.

## **Cardiopulmonary Resuscitation (CPR)**

CPR combines chest compressions and rescue breaths or assisted ventilation to maintain circulation and oxygenation during cardiac arrest.

## **Cardiorespiratory**

Cardiorespiratory means relating to the heart, blood vessels, and respiratory system considered together, as in cardiorespiratory fitness or failure.

## **Carpus**

The carpus is the group of eight wrist bones connecting the forearm to the metacarpals.

## **Caruncles**

Caruncles are small fleshy anatomical projections, such as the lacrimal caruncle at the inner corner of the eye or urethral caruncle.

## **Cascara**

Cascara is a plant-derived stimulant laxative containing anthraquinones; prolonged or excessive use can cause diarrhea, electrolyte imbalance, and dependence.

## **Catatonia, Fatal**

Fatal catatonia is a severe, life-threatening catatonic state with marked motor and behavioral disturbance, fever, autonomic instability, and risk of organ failure.

## **Catbite**

A catbite is a puncture wound caused by a cat, with a high risk of bacterial infection, including *Pasteurella*, and possible tendon, joint, or bone involvement.

## **Cat-Bite Fever**

Cat-bite fever is an informal term for illness after a cat bite or scratch; possible causes include bacterial wound infection and cat-scratch disease.

## **Catecholamines**

Catecholamines include adrenaline, noradrenaline, and dopamine, hormones and neurotransmitters

---

involved in stress responses, blood pressure, heart function, and metabolism.

### **Caterpillar Dermatitis**

Caterpillar dermatitis is an itchy inflammatory skin reaction caused by contact with irritating or venomous caterpillar hairs or spines.

### **Catharsis**

Catharsis is emotional release or expression; it is a historical psychological concept and not a specific medical treatment or diagnosis.

### **Cat-Nap**

A cat-nap is a short period of sleep, usually during the day; frequent unintended sleep may warrant assessment for sleep deprivation or a sleep disorder.

### **Cat's Eye Reflex**

The cat's-eye reflex is a bright whitish reflection from the pupil, called leukocoria in humans, which can signal serious eye disease and requires urgent assessment.

### **Caustic**

Caustic describes a substance that chemically burns or destroys tissue, such as a strong acid or alkali; ingestion or contact can be a medical emergency.

### **Cautery**

Cautery destroys or seals tissue using heat, electricity, chemicals, or another energy source to control bleeding or remove abnormal tissue.

### **Cavernous Sinus**

The cavernous sinus is a venous channel beside the pituitary and sphenoid bone containing important cranial nerves and the internal carotid artery; thrombosis or infection can be life-threatening.

### **Cavum**

Cavum means a cavity or hollow space, such as the cavum septi pellucidi in the brain; the specific anatomical meaning depends on the term.

### **Cea**

CEA is an abbreviation for carcinoembryonic antigen, a tumor marker used mainly to monitor selected cancers.

### **Cellophane**

Cellophane is a thin transparent cellulose film; in medicine it may be used in dressings, packaging, or specialized laboratory techniques.

### **Cement**

Medical cement, especially bone cement, is a material used to fix prostheses or fill spaces; other cements may be dental or industrial and require context.

### **Cenesthesia**

Cenesthesia is the general sense of the condition and position of one's body; disturbance may occur in neurologic or psychiatric illness.

### **Center**

In anatomy or clinical measurement, a center is a central point, region, or facility organized around a function; the specific meaning depends on context.

### **Centrum**

Centrum means a central part, especially the main body of a vertebra around which the neural arch develops.

### **Cephalosporins**

Cephalosporins are beta-lactam antibiotics that inhibit bacterial cell-wall synthesis; generations differ in spectrum, and allergy, diarrhea, and resistance are important considerations.

### **Cercaria**

A cercaria is a free-swimming larval stage of a trematode parasite; contact with some species can cause swimmer's itch or other infection.

### **Cerebellar**

Cerebellar means relating to the cerebellum, which coordinates balance, posture, eye movements, and

---

skilled movement.

### **Cerebral Diplegia**

Cerebral diplegia is a form of cerebral palsy with predominant weakness and spasticity of both legs, often greater than in the arms.

### **Cerebral Haemorrhage**

Cerebral haemorrhage is bleeding within brain tissue or an adjacent intracranial space, causing pressure, tissue injury, and neurologic deficits.

### **Cerebral Tumours**

Cerebral tumours are abnormal growths in the cerebrum, which may be benign or malignant and cause seizures, headache, cognitive change, or focal deficits.

### **Cerebrospinal Fluid (CSF)**

Cerebrospinal fluid is clear fluid surrounding the brain and spinal cord that cushions the nervous system and supports chemical transport and waste clearance.

### **Cerebrovascular Accident (CVA)**

A cerebrovascular accident is a stroke caused by interrupted brain blood flow from ischemia or bleeding, producing sudden neurologic dysfunction.

### **Cervical Biopsy**

A cervical biopsy removes a small sample of cervix for microscopic examination, commonly to investigate abnormal screening or suspected precancer or cancer.

### **Cervical Cap**

A cervical cap is a flexible barrier placed over the cervix to reduce sperm entry; it is used with spermicide as a contraceptive method.

### **Cervix Uteri**

The cervix uteri is the lower portion of the uterus that projects into the vagina and forms the passage between the uterus and birth canal.

### **Cestode**

A cestode is a tapeworm, a segmented parasitic flatworm that can infect humans or animals through contaminated food, water, or intermediate hosts.

### **Cetrimide**

Cetrimide is a quaternary ammonium antiseptic and detergent used in some topical or laboratory preparations; concentrated exposure irritates tissue.

### **Charcot's Joints**

Charcot's joints are severely damaged, unstable joints caused by loss of protective sensation, classically in diabetic neuropathy or other neurologic disease.

### **Charcot's Triad**

Charcot's triad is fever, jaundice, and right-upper-quadrant pain, a classic but incomplete clinical pattern of acute ascending cholangitis.

### **Chaulmoogra Oil**

Chaulmoogra oil is a historical plant oil once used to treat leprosy and some skin diseases; it has largely been replaced by effective antimicrobial therapy.

### **Check-Up**

A check-up is a routine health evaluation used to review symptoms, risk factors, preventive care, examination findings, and appropriate screening.

### **Chelating Agents**

Chelating agents bind specific metal ions to form complexes that can facilitate their removal or reduce toxicity; examples include agents for lead, iron, or copper poisoning.

### **Chemoattractant**

A chemoattractant is a chemical signal that guides cells, especially immune cells, toward a source of the signal during inflammation or development.

### **Chemoreceptors**

Chemoreceptors detect chemical changes such as oxygen, carbon dioxide, pH, or odor molecules and

---

trigger neural or physiologic responses.

### **Chemosurgery**

Chemosurgery uses a chemical agent to destroy selected abnormal tissue, historically including chemical treatment of skin lesions; modern use is specialized.

### **Child Adoption**

Child adoption is the legal process by which parental rights and caregiving responsibility are transferred to adoptive parents; medical care includes records, consent, and family history.

### **Child Guidance**

Child guidance provides assessment and support for children's emotional, behavioral, developmental, and family difficulties.

### **Child Health Services**

Child health services provide preventive care, immunization, growth and developmental monitoring, screening, treatment, and support for children and families.

### **Chill**

A chill is a sensation of cold, often with shivering, that can accompany fever, infection, exposure, anxiety, or other illness.

### **Chiropody**

Chiropody is care of the feet, including assessment and treatment of skin, nail, pressure, and biomechanical problems; it is also called podiatry.

### **Chlorinated Lime**

Chlorinated lime, or bleaching powder, releases chlorine and is used as a disinfectant; concentrated exposure can burn skin, eyes, and airways.

### **Chlormethine**

Chlormethine, or mechlorethamine, is an alkylating anticancer drug used systemically or topically for selected cancers and cutaneous T-cell lymphoma.

### **Chlortalidone**

Chlortalidone, also called chlorthalidone, is a long-acting thiazide-like diuretic used mainly for hypertension and fluid retention.

### **Chocolate Cyst**

A chocolate cyst is an ovarian endometrioma filled with old blood from endometriosis, which can cause pelvic pain, infertility, or an adnexal mass.

### **Choleresis**

Choleresis is production and secretion of bile by liver cells.

### **Cholestyramine**

Cholestyramine is a bile-acid sequestrant used to lower LDL cholesterol and sometimes to treat bile-acid diarrhea or itching from cholestasis.

### **Choline**

Choline is an essential nutrient used to make cell membranes and acetylcholine and to support liver and nervous-system function.

### **Cholinergic**

Cholinergic means related to acetylcholine or receptors and pathways activated by it, including muscarinic and nicotinic signaling.

### **Cholinesterase**

Cholinesterase enzymes break down acetylcholine; inhibition increases cholinergic activity and is used therapeutically but can also cause poisoning.

### **Chondroblastoma**

A chondroblastoma is an uncommon usually benign cartilage-forming bone tumor, often arising near the end of a long bone in adolescents or young adults.

### **Chordee**

Chordee is abnormal downward or other curvature of the penis, commonly associated with hypospadias or scar tissue and sometimes requiring surgical correction.

---

### Choreoathetosis

Choreoathetosis combines irregular, dance-like chorea with slow twisting athetotic movements and may result from basal-ganglia injury or genetic disease.

### Chorion Villus Sampling (CVS)

Chorion villus sampling removes placental tissue for genetic or chromosomal testing, usually early in pregnancy; it carries a small procedure-related miscarriage risk.

### Chorionic Gonadotrophin

Chorionic gonadotrophin, especially hCG, is a placental hormone that maintains early pregnancy and is measured in pregnancy tests and selected tumor evaluations.

### Choroiditis

Choroiditis is inflammation of the choroid, the vascular layer behind the retina, often causing blurred vision, floaters, or visual-field disturbance.

### Choroideremia

Choroideremia is an X-linked inherited retinal degeneration causing progressive night blindness and loss of peripheral then central vision, mainly in males.

### Chromaffin

Chromaffin describes cells that stain with chromium salts because they contain catecholamine-rich granules, especially adrenal medullary cells and related neuroendocrine cells.

### Chromate

Chromate is a hexavalent chromium compound that can cause irritant or allergic dermatitis, nasal injury, respiratory disease, and cancer after occupational exposure.

### Chromatic

Chromatic means relating to color or wavelengths of light; chromatic vision depends on cone photoreceptors and neural processing.

### Chromatids

Chromatids are the two copies of a replicated chromosome joined at the centromere before separating during cell division.

### Chromium

Chromium is a metallic element; trivalent chromium is a trace nutrient, while hexavalent compounds can be toxic, corrosive, mutagenic, and carcinogenic.

### Chronic Fatigue Syndrome (CFS)

Chronic fatigue syndrome, also called myalgic encephalomyelitis, involves substantial persistent fatigue with post-exertional worsening, unrefreshing sleep, and cognitive or orthostatic symptoms.

### Chronobiology

Chronobiology studies biological timing and rhythms, including circadian sleep-wake cycles, seasonal rhythms, and their effects on health.

### Chronotropic

Chronotropic describes an influence on heart rate; a positive chronotropic effect increases rate, while a negative effect decreases it.

### Chrysarobin

Chrysarobin is a plant-derived anthracene compound formerly used topically for psoriasis and other skin disorders; it can irritate and stain skin.

### Chvostek's Sign

Chvostek's sign is twitching of facial muscles after tapping near the facial nerve, sometimes associated with hypocalcemia but neither sensitive nor specific.

### Chymotrypsin

Chymotrypsin is a pancreatic digestive enzyme that cleaves proteins in the small intestine; abnormal pancreatic release can contribute to tissue injury.

### Cicatrization

Cicatrization is healing by formation of a scar after tissue injury, with replacement of damaged tissue by fibrous connective tissue.

---

### Cidofovir

Cidofovir is an antiviral nucleotide analogue used for selected serious DNA-virus infections; kidney toxicity requires careful dosing and monitoring.

### Cimetidine

Cimetidine is an H<sub>2</sub>-receptor antagonist that reduces gastric acid secretion; it has numerous drug interactions and is used less often than newer agents.

### Cinnarizine

Cinnarizine is an antihistamine with calcium-channel-blocking properties used in some countries for motion sickness and vestibular symptoms.

### Ciprofloxacin

Ciprofloxacin is a fluoroquinolone antibiotic used for selected bacterial infections; tendon injury, nerve effects, QT effects, and resistance limit indiscriminate use.

### Circumvallate Papillae

Circumvallate papillae are large taste papillae arranged near the back of the tongue and surrounded by a trench containing taste buds and serous glands.

### Citalopram

Citalopram is a selective serotonin-reuptake inhibitor used to treat depression and some anxiety disorders; nausea, sexual effects, and QT prolongation are important considerations.

### Citrate

Citrate is a salt or ion of citric acid that participates in metabolism and binds calcium; it is used in anticoagulant blood collection and some stone-prevention treatments.

### Citric Acid Cycle

The citric acid cycle is a mitochondrial pathway that oxidizes acetyl-CoA and generates reducing equivalents for ATP production.

### Citrullinaemia

Citrullinaemia is an inherited urea-cycle disorder

causing accumulation of citrulline and potentially life-threatening hyperammonemia.

### Cladribine

Cladribine is a purine analogue used for selected blood cancers and multiple sclerosis; lymphocyte depletion and infection risk require monitoring.

### Clairvoyance

Clairvoyance is an alleged ability to perceive information beyond ordinary sensory means; it is not an established medical diagnostic finding.

### Clang Association

Clang association is speech in which word choice is driven by sound, rhyme, or pun rather than meaning, seen particularly in mania or psychosis.

### Clarithromycin

Clarithromycin is a macrolide antibiotic used for selected bacterial and mycobacterial infections; interactions and QT prolongation are important risks.

### Clavus

A clavus is a localized painful thickening of skin, or corn, caused by repeated pressure or friction.

### Clear Cell Carcinoma

Clear cell carcinoma is a cancer whose cells appear clear because of glycogen or lipid; it can arise in organs such as kidney, ovary, or endometrium.

### Clemastine

Clemastine is a first-generation antihistamine used for allergic symptoms; sedation, anticholinergic effects, and impaired driving are concerns.

### Clendamyacin

Clendamyacin is a misspelling of clindamycin, a lincosamide antibiotic that inhibits bacterial protein synthesis and can cause severe antibiotic-associated colitis.

### Climate

Climate is the long-term pattern of weather and envi-

---

ronmental conditions; climate affects infectious disease, heat illness, allergies, and population health.

### **Clindamycin**

Clindamycin is a lincosamide antibiotic used for selected infections; diarrhea and *Clostridioides difficile* colitis are important adverse effects.

### **Clinically Proven**

Clinically proven means supported by clinical evidence, but the strength, quality, population, and outcome of that evidence must be specified.

### **Clinistix**

Clinistix is a reagent-strip method historically used to detect glucose in urine through an enzymatic color reaction.

### **Clinitest**

Clinitest is a tablet-based copper-reduction test historically used to detect reducing substances in urine, including glucose; it is less specific than modern methods.

### **Clitoromegaly**

Clitoromegaly is enlargement of the clitoris, which may be congenital or acquired from androgen excess, endocrine disease, medication, or other causes.

### **Clodronate**

Clodronate is a bisphosphonate that reduces bone resorption and is used in selected bone and cancer-related conditions.

### **Clofazimine**

Clofazimine is a riminophenazine antimicrobial used mainly in multidrug treatment of leprosy and selected mycobacterial infections; skin discoloration is common.

### **Clomifene**

Clomifene, or clomiphene, is a selective estrogen-receptor modulator used to induce ovulation in selected infertility settings.

### **Clomipramine**

Clomipramine is a tricyclic antidepressant particularly effective for obsessive-compulsive disorder; anticholinergic, cardiac, and overdose toxicity are important.

### **Clonazepam**

Clonazepam is a benzodiazepine anticonvulsant and anxiolytic that enhances GABA activity; sedation, dependence, and respiratory depression can occur.

### **Clonidine**

Clonidine stimulates central alpha-2 receptors to reduce sympathetic outflow and is used for hypertension and selected other conditions; abrupt withdrawal can cause rebound hypertension.

### **Clopidogrel**

Clopidogrel is an antiplatelet drug that irreversibly blocks the platelet P2Y<sub>12</sub> receptor, reducing arterial thrombosis risk after selected cardiovascular events or procedures.

### **Closure**

Closure is the joining or sealing of a wound, opening, vessel, duct, or anatomical structure, either naturally or by treatment.

### **Clot**

A clot is a semisolid mass of coagulated blood; clots may stop bleeding or obstruct a vessel and cause thrombosis or embolism.

### **Clotrimazole**

Clotrimazole is an azole antifungal used topically or orally in selected formulations for fungal infections of skin, mouth, or vagina.

### **Clove Oil**

Clove oil contains eugenol and is used in some dental and topical products; concentrated ingestion or exposure can cause irritation, liver injury, or seizures.

### **Clozapine**

Clozapine is an atypical antipsychotic for treatment-

---

resistant schizophrenia and selected suicidality risk; neutropenia, myocarditis, seizures, constipation, and metabolic effects require monitoring.

### Clumping

Clumping is aggregation of cells, particles, or proteins into visible groups, as in red-cell agglutination or platelet aggregation.

### Clysis

Clysis is administration of fluid into the rectum, historically used for hydration, medication, or bowel treatment; modern use is limited.

### Coagulation Defects

Coagulation defects are abnormalities of clotting proteins, platelets, vessels, or regulation that cause excessive bleeding or inappropriate thrombosis.

### Coagulation Time

Coagulation time is the time required for a blood sample to form a clot under specified test conditions; modern tests usually measure particular pathways more precisely.

### Cobalt

Cobalt is a metal present in vitamin B12 and some industrial materials; excess exposure can injure the heart, thyroid, lungs, or skin.

### Coccarboxylase

Coccarboxylase is thiamine pyrophosphate, the active coenzyme form of vitamin B1 required for several oxidative carbohydrate and amino-acid reactions.

### Cardiac Enzymes

Historically used blood markers of myocardial injury, especially creatine kinase-MB; cardiac troponins are now the preferred biomarkers for detecting myocardial injury and must be interpreted with symptoms, ECG findings, and serial changes.

### Coronary Artery Anomaly

A congenital abnormality in the origin, course, struc-

ture, or termination of a coronary artery. Some anomalies are incidental, whereas others can impair myocardial perfusion or increase the risk of ischemia, arrhythmia, or sudden cardiac death.

### Cardiac Syncope

Transient loss of consciousness caused by a cardiac disorder that reduces cerebral perfusion, usually through bradyarrhythmia, tachyarrhythmia, structural obstruction, or severe cardiac dysfunction. Syncope during exertion, while supine, or with palpitations or known heart disease requires urgent cardiovascular evaluation because it may indicate a risk of sudden cardiac death.

### Coronary Microvascular Angina

Angina caused by impaired regulation or constriction of the small coronary vessels, often producing ischemic symptoms despite no flow-limiting epicardial coronary obstruction. Assessment may include evaluation for coronary microvascular dysfunction; management is individualized according to symptoms, cardiovascular risk, and the underlying mechanism.

### Crust

Dried serum, blood, pus, or other exudate on the skin surface, often covering an erosion, ulcer, vesicle, pustule, or inflamed lesion.

### Circadian Rhythms

Approximately 24-hour biological cycles that regulate sleep and wakefulness, hormone release, body temperature, metabolism, and other physiological functions in response chiefly to light and darkness.

### Coagulation Factor

A blood protein required for the coagulation cascade and formation of a stable fibrin clot; deficiencies or inhibitors can cause bleeding, while excessive activation can contribute to thrombosis.

### Cell-Mediated Immune Response

Alternate index label; see *Cell-mediated immunity*.

---

## Contraindications

Alternate index label; see *Contraindication*.

## Connective Tissue Disease-Related Interstitial Lung Disease

Interstitial lung disease associated with autoimmune connective-tissue disease such as systemic sclerosis, rheumatoid arthritis, polymyositis, dermatomyositis, or Sjogren syndrome; inflammation and fibrosis can impair gas exchange.

## Antinuclear Antibodies

Alternate index label; see *Antinuclear Antibody*.

## Calcium Pyrophosphate Deposition

Alternate index label; see *Calcium Pyrophosphate Deposition Disease*.

## Chronic Recurrent Multifocal Osteomyelitis

A rare autoinflammatory bone disorder, often beginning in children or adolescents, causing recurrent sterile inflammation and pain at multiple bone sites; it is also called CRMO.

## Cryopyrin-Associated Autoinflammatory Syndromes

Alternate index label; see *Cryopyrin-Associated Periodic Syndromes*; the group is also called CAPS.

## Cholinergic Toxidrome

A poisoning pattern caused by excessive acetylcholine activity, often producing salivation, tearing, urination, diarrhea, vomiting, bronchial secretions, slow heart rate, muscle fasciculations, weakness, or respiratory failure.

## Carrier Screening

Genetic testing offered to people without symptoms to determine whether they carry a pathogenic variant for a recessive or X-linked condition that could be passed to a child.

## Chromosomal Microarray

A genetic test that detects gains and losses of chro-

sosome material, including copy-number variants and some regions of homozygosity; it is commonly used for developmental delay, intellectual disability, congenital anomalies, or autism-spectrum presentations.

## Copy Number Variant

A deletion or duplication that changes the number of copies of a DNA segment; its clinical significance depends on the region, size, genes involved, inheritance, and available evidence.

## Carcinoma Erysipeloides

Cutaneous lymphatic spread of an internal carcinoma producing a sharply demarcated, erythematous, indurated plaque that may resemble erysipelas.

## Cylindroma

A usually benign adnexal tumor composed of basoid cells, often presenting as a firm pink or skin-coloured nodule on the scalp or face; multiple lesions may occur in Brooke-Spiegler syndrome.

## Cutaneous Angiosarcoma

An aggressive malignant vascular tumor of skin, typically affecting the scalp and face of older adults as a bruise-like or violaceous plaque that may ulcerate or metastasize.

## Cutaneous Metastasis

A deposit of malignant cells in the skin from a primary tumor elsewhere or, less often, another cutaneous site; it may present as a firm nodule, plaque, or inflammatory-appearing lesion.

## Adenocarcinoma In Situ Of Cervix

A noninvasive glandular precursor lesion of the cervix, usually associated with high-risk human papillomavirus; abnormal glandular cells remain confined to the epithelium but may progress to invasive adenocarcinoma.

## Adenoma Malignum

A rare, deceptively bland, deeply infiltrative gastric-type adenocarcinoma of the cervix with minimal

---

cytologic atypia; persistent watery discharge may occur and diagnosis requires expert histopathology.

### **Adenoid Basal Carcinoma**

A rare, usually indolent cervical carcinoma composed of small basaloid nests, often associated with squamous intraepithelial lesions and requiring distinction from more aggressive tumors.

### **Cervical Adenocarcinoma**

A malignant gland-forming tumor arising in the uterine cervix; it may be HPV-associated or HPV-independent and commonly presents with abnormal bleeding or discharge.

### **Cervical Squamous Cell Carcinoma**

A malignant squamous tumor of the cervix, most often caused by persistent high-risk human papillomavirus infection; it may present with abnormal bleeding, discharge, or an abnormal screening result.

### **Cervical Polyp**

A usually benign polypoid overgrowth of endocervical or ectocervical tissue that may cause intermenstrual or postcoital bleeding or may be found incidentally during examination.

### **Glassy Cell Carcinoma**

A rare poorly differentiated adenosquamous carcinoma of the cervix with distinctive glassy cytoplasm, prominent nucleoli, and aggressive clinical behavior.

### **Mesonephric Adenocarcinoma**

A rare HPV-independent cervical adenocarcinoma arising from mesonephric remnants, usually presenting as a cervical mass or abnormal bleeding and requiring histopathologic diagnosis.

### **Chondrosarcoma Of The Breast**

An exceptionally rare malignant mesenchymal breast tumor producing cartilage. It is distinguished from metaplastic carcinoma and other sarcomas by histology and is managed with sarcoma-oriented complete excision.

### **Cutaneous Polyarteritis Nodosa**

A skin-limited necrotizing vasculitis of small- and medium-sized arteries, typically causing tender subcutaneous nodules, livedo reticularis, and ulcers on the lower legs without systemic organ involvement.

### **Cutaneous Langerhans Cell Histiocytosis**

A clonal proliferation of Langerhans cells in the skin that may cause scaly papules, seborrheic dermatitis-like plaques, or purpura. Evaluation determines whether disease is skin-limited or involves other organs.

### **Cholesterosis**

Deposition of cholesterol esters in the gallbladder mucosa, producing yellow speckling or a "strawberry gallbladder." It is often incidental but may coexist with gallstones or chronic gallbladder inflammation.

### **Cranial Fasciitis**

A benign, rapidly growing fibroblastic proliferation of the scalp or cranial soft tissues, usually occurring in infants and young children and potentially mimicking a malignant tumor.

### **Cutaneous Leiomyoma**

A benign smooth-muscle tumor of the skin arising from arrector pili muscles, vascular smooth muscle, or the dartos. Multiple painful lesions may indicate hereditary leiomyomatosis and renal-cell cancer syndrome.

### **Giant Cell Tumor Of Soft Tissue**

A usually low-grade soft-tissue neoplasm containing numerous osteoclast-like giant cells, most often arising in the extremities of adults and generally having a favorable outcome after excision.

### **Extraskeletal Chondroma**

A benign hyaline-cartilage tumor occurring in soft tissue without attachment to bone, commonly in the hands or feet; it may calcify and resemble other cartilaginous lesions on imaging.

### **Extraskeletal Mesenchymal**

---

## **Chondrosarcoma**

A malignant small-cell sarcoma with islands of malignant cartilage arising in soft tissue or other extraskeletal sites. It requires specialist pathologic and oncologic evaluation.

## **CNS Lymphoma**

A lymphoma involving the central nervous system, most often diffuse large B-cell lymphoma. It may involve brain parenchyma, meninges, eyes, or cerebrospinal fluid and requires urgent hematologic and neurologic evaluation.

## **CNS Infection**

Infection of the brain, spinal cord, meninges, or cerebrospinal-fluid spaces caused by bacteria, viruses, fungi, parasites, or other organisms; presentation and treatment depend on the pathogen and anatomic site.

## **Congenital CNS Malformation**

A structural abnormality of the brain, spinal cord, or related developmental structures present from birth, caused by disturbed neural development or other prenatal factors; severity ranges from incidental to life-threatening.

## **Cerebral Cavernous Malformation**

A low-flow vascular malformation composed of dilated thin-walled vascular spaces in the brain or spinal cord. It may cause seizures, headaches, or hemorrhage, although some lesions remain asymptomatic.

## **Cardiac Myxoma**

The most common primary benign cardiac tumor, usually arising in the left atrium from the interatrial septum. It may cause positional obstruction, emboli, or constitutional symptoms and is generally treated by surgical excision.

## **Cardiac Transplantation**

Replacement of a failing heart with a donor heart for carefully selected patients with end-stage heart failure. Long-term care requires immunosuppression and surveillance for rejection, infection, and graft

vasculopathy.

## **Cardiac Allograft Vasculopathy**

A diffuse, progressive form of coronary arterial intimal thickening after heart transplantation that can cause silent ischemia, graft dysfunction, arrhythmia, or sudden death.

## **Chondromyxoid Fibroma**

A rare benign cartilage-forming bone tumor, usually arising in the metaphysis of a long bone and presenting with localized pain or an incidental radiographic lesion.

## **Benign Chondroblastoma**

A benign cartilage-producing bone tumor, usually arising in the epiphysis of adolescents and young adults and often causing joint-region pain.

## **Crystal-Induced Synovitis**

Acute or chronic joint inflammation caused by deposition of crystals such as monosodium urate, calcium pyrophosphate, or basic calcium phosphate in or around the joint.

## **Cardiovascular Risk Reduction**

Measures that lower the risk of myocardial infarction, stroke, heart failure, and vascular death through smoking cessation, blood-pressure and lipid control, diabetes management, physical activity, healthy diet, weight management, and indicated medicines.

## **Critical Care Nursing**

Specialized nursing care for critically ill patients requiring close monitoring, organ support, rapid assessment, complex therapies, and coordination with multidisciplinary intensive-care teams.

## D

### D And C

Dilation and curettage, a procedure that opens the cervix and removes tissue from the uterine lining for treatment or diagnosis.

### D And E

Dilation and evacuation, a surgical procedure in which the cervix is dilated and uterine contents are removed by suction and instruments.

### D-Dimer

A blood marker produced when cross-linked fibrin is broken down. It may be elevated in thrombosis and in many other conditions. A negative result can help exclude venous thromboembolism in appropriately selected patients with a low or intermediate pretest probability; the cutoff depends on the assay and clinical setting.

### D&C Instruments

Instruments used to dilate the cervix and remove tissue from the uterus during dilation and curettage.

### Dacrocytes (Teardrop Cells)

Teardrop-shaped red blood cells formed as erythrocytes are squeezed and deformed while exiting a fibrotic or infiltrated bone marrow space. Characteristic feature of Primary Myelofibrosis (JAK2 V617F mutation), bone marrow infiltration (myelophthisic anemia from metastatic cancer, granulomas, or leukemia), and severe thalassemia.

#### Synonyms:

Teardrop Cells

### Dacryoadenitis

Dacryoadenitis is inflammation of a tear-producing

lacrimal gland, causing painful swelling near the outer upper eyelid from infection, inflammation, or systemic disease. aspect of the upper eyelid with characteristic S-shaped ptosis. It can be acute or chronic in presentation.

### Dacryocystitis

Inflammation of the lacrimal sac, most commonly caused by obstruction of the nasolacrimal duct leading to stagnation of tears and secondary bacterial infection (*Staphylococcus aureus*, *Streptococcus pneumoniae*, *Haemophilus influenzae*).

### Dacryocystography

An imaging study in which contrast material is introduced into the lacrimal drainage system to identify narrowing or obstruction.

### Dacryocystorhinostomy

A surgical procedure creating a passage between the lacrimal sac and the nasal cavity to bypass an obstructed nasolacrimal duct.

### Dacryostenosis

Narrowing or obstruction of the lacrimal drainage passages, which can cause excessive tearing and recurrent infection of the lacrimal sac.

### Dactylitis

Inflammation of an entire digit (finger or toe), producing a diffuse, fusiform swelling often described as sausage-shaped.

### Dactylosymphysis

Abnormal fusion or webbing of adjacent digits, usually present from birth.

---

## Daltonism

Color-vision deficiency, especially difficulty distinguishing certain colors because of abnormal or absent retinal cone function.

## DALY

Disability-adjusted life year, a measure combining years of healthy life lost because of premature death and disability.

## Damage-Control Resuscitation

A trauma strategy prioritizing rapid hemorrhage control, permissive approaches to blood pressure when appropriate, prevention of hypothermia, correction of coagulopathy, and balanced blood-product resuscitation rather than large-volume crystalloid administration.

## Damage-Control Surgery

A staged operative strategy for critically ill or severely injured patients in whom definitive repair is unsafe because of hypothermia, acidosis, coagulopathy, or physiologic instability. Initial surgery controls hemorrhage and contamination, followed by resuscitation and later definitive reconstruction.

## Dandruff

Scaling and shedding of the scalp skin, commonly associated with seborrheic dermatitis or dry skin.

## Dandruff And Scalp Conditions

Dandruff is a common scalp condition presenting as flaking, itching, and mild inflammation caused by overgrowth of the yeast *Malassezia*, dry skin, or seborrheic dermatitis. Other scalp conditions include psoriasis, contact dermatitis, ringworm tinea capitis, and head lice.

## Dandy Fever

Dengue fever, an acute mosquito-borne viral illness causing fever, headache, severe muscle or joint pain, and sometimes hemorrhage or shock.

## Dandy-Walker Malformation

A congenital hindbrain malformation characterized

by hypoplasia or aplasia of the cerebellar vermis, cystic dilation of the fourth ventricle, and posterior fossa enlargement with upward displacement of the tentorium, transverse sinuses, and torcular herophili.

## Dandy-Walker Syndrome

A congenital abnormality involving the cerebellum and the fluid spaces around it, often causing hydrocephalus or developmental problems.

## Dane Particle

The complete infectious particle of hepatitis B virus, consisting of the viral core and envelope.

## Daptomycin Resistance

Resistance to daptomycin can develop through mutations in genes encoding cell membrane phospholipid synthesis. The mechanism involves changes in the bacterial cell membrane that reduce daptomycin binding. Resistance is more common in VRE than MRSA. Resistance can emerge during therapy, particularly in endocarditis and bacteremia.

## Darier's Disease

An inherited skin disorder characterized by abnormal keratinization, greasy crusted papules, and nail changes, often worsened by heat and sweating.

## Dark Adaptation

The process by which the eyes become increasingly sensitive to dim light after moving from bright illumination into darkness.

## Dartos

A layer of smooth muscle and connective tissue beneath the skin of the scrotum that wrinkles the scrotal skin in response to temperature and other stimuli.

## Darwin's Tubercle

A variable small thickening or projection on the rim of the external ear, regarded as a remnant of an ancestral mammalian ear form.

---

## **DASH Diet**

Dietary Approaches to Stop Hypertension. Emphasizes: fruits, vegetables, whole grains, low-fat dairy, reduced saturated fat, sodium <2300 mg/day. Lowers blood pressure effectively.

## **Daubenton's Plane**

An anatomical reference plane extending from the lower margin of the orbit to the upper margin of the external auditory opening, used in describing skull orientation.

## **Dawn Phenomenon**

Physiological increase in blood glucose occurring in the early morning hours between approximately three and eight AM driven by counter-regulatory hormone surges including growth hormone, cortisol, and catecholamines. More pronounced in patients with diabetes who lack the compensatory insulin response.

## **De Novo Variant**

A genetic variant present in an affected individual that was not detected in either biological parent, usually arising in a parental gamete or early embryogenesis. It may cause a dominant disorder and can have implications for recurrence risk in future pregnancies.

## **De Quervain Tendinitis**

Painful stenosing inflammation of the tendons of the abductor pollicis longus and extensor pollicis brevis in the first dorsal wrist compartment. It causes radial wrist pain worsened by thumb movement or grasping and is assessed clinically.

## **De Quervain Tenosynovitis**

De Quervain tenosynovitis: first dorsal compartment (APL, EPB) stenosis. Clinical: radial wrist pain, Finkelstein test (thumb in palm, ulnar deviation), swelling over radial styloid.

### **Synonyms:**

Tenosynovitis, De Quervain's

## **De-Escalation**

A set of verbal and nonverbal techniques used to reduce agitation and prevent violence while preserving dignity and safety. It includes calm communication, appropriate personal space, clear limits, environmental modification, and offering choices.

## **Dead Space**

The volume of ventilated air that does not participate in gas exchange. Anatomic dead space: the conducting airways (nose, pharynx, trachea, bronchi, terminal bronchioles) that warm, humidify, and filter inspired air but contain no alveoli for gas exchange. Approximately 150 mL in a 70 kg adult.

## **Dead Space Ventilation**

Ventilation of alveoli without perfusion ( $V/Q = \text{infinity}$ ). Anatomic dead space is the conducting airways (150 mL). Physiologic dead space includes alveoli without perfusion. Increased in PE, hypotension, and emphysema. Measured by the Bohr equation.

## **Dead Time**

The brief period after an event during which a detector or recording system cannot register another event, limiting the measured count rate.

## **Deafferentation**

Loss or interruption of sensory nerve input from a body region to the central nervous system, which may produce abnormal sensation or deafferentation pain.

## **Deafness**

Complete or severe loss of hearing. Hearing loss may be conductive, sensorineural, or mixed, depending on whether the problem affects sound transmission, the inner ear or auditory nerve, or both.

## **Death**

The permanent end of the functions that maintain a living organism.

---

### Deauville Criteria

A five-point visual scale that compares fluorodeoxyglucose uptake on PET with reference tissues to assess treatment response in lymphoma.

### Debridement

The surgical removal of dead, damaged, or infected tissue from a wound to promote healing and prevent infection.

### Debulking

Surgical removal of as much tumor as possible when complete resection is not feasible, aiming to reduce tumor burden (cytoreduction) and improve response to subsequent therapy; central to ovarian cancer management.

### Decapitation

Separation of the head from the body, seen in severe trauma (vehicle accidents, train injuries, explosions), industrial accidents, hanging with judicial execution, or homicide. Complete decapitation is almost always rapidly fatal due to exsanguination and brain ischemia.

### Decay Correction

Mathematical adjustment for radioactive decay during imaging. Essential for quantitative comparison between studies.

### Deceased Donor

Individual who has died (usually from brain death or cardiac death) and donated organs, tissues, or both for transplantation.

### Decerebrate Posture

Abnormal extension of the arms and legs caused by severe dysfunction of the brainstem below the red nucleus. It is a sign of serious neurologic injury and may occur with traumatic brain injury, hemorrhage, or raised intracranial pressure.

### Decerebrate Posturing

Abnormal extension of the arms and legs, often with inward rotation of the arms, caused by severe

dysfunction below the cerebral hemispheres. It indicates serious neurologic injury, but posture alone does not determine outcome.

### Decerebration

Severe loss of cerebral function, often with extension and rigid posturing of the limbs from brainstem dysfunction; it may result from major injury or increased intracranial pressure.

### Decibel

A logarithmic unit (dB) used to measure the intensity of sound. The decibel scale compares a given sound pressure level to a reference level (0 dB = 20 micropascals, the threshold of normal hearing at 1 kHz). The scale is logarithmic: an increase of 10 dB represents a tenfold increase in sound intensity. Normal conversation: 60 dB.

### Decidua

The transformed endometrium of pregnancy, shed after delivery. Three regions: decidua basalis (under the placenta, site of trophoblast invasion), decidua capsularis (over the gestational sac, covering the embryo), and decidua parietalis (the remainder of the uterine lining).

### Deciduitis

Inflammation of the decidua, the specialized uterine lining of pregnancy.

### Deciduosis

The presence of extensive or ectopic decidual tissue, usually associated with pregnancy and sometimes involving the cervix, peritoneum, or other sites.

### Decision-Making Capacity

The clinical ability to understand relevant information, appreciate its consequences, reason about options, and communicate a stable choice regarding a specific decision. Capacity is decision-specific and may fluctuate; it is distinct from legal competence.

### Decompensated Cirrhosis

Cirrhosis complicated by clinically significant liver

---

dysfunction or portal hypertension, commonly manifested by ascites, variceal hemorrhage, hepatic encephalopathy, or jaundice. It carries substantially higher mortality than compensated cirrhosis and warrants assessment for transplant and complication prevention.

### **Decomposition**

Postmortem breakdown of the body through autolysis and putrefaction. It begins within 24 to 72 hours at ambient temperature, producing green cecal discoloration, venous marbling, gas distension, skin slippage, and purge fluid.

### **Decompression Sickness**

A systemic illness caused by nitrogen bubble formation in tissues during rapid decompression, presenting with joint pain, skin mottling, and neurological deficits, treated with hyperbaric oxygen therapy.

### **Deconditioning**

Physiological decline from reduced activity or immobilization. Effects: muscle atrophy, weakness, decreased cardiorespiratory fitness, balance impairment, increased fall risk. Preventable with early mobilization, exercise. Reversible with rehabilitation.

### **Decontamination**

Measures that reduce continued absorption of a toxic substance from the skin, eyes, gastrointestinal tract, or clothing. Interventions are exposure-specific and may include removal from the source, irrigation, washing, activated charcoal, or specialist procedures.

### **Decorticate Posture**

Abnormal flexion of the arms with extension of the legs, indicating severe damage affecting the cerebral hemispheres, internal capsule, or thalamus. It is a sign of major brain injury and impaired consciousness.

### **Decorticate Posturing**

Abnormal flexion of the arms with extension of the legs, caused by severe dysfunction of the brain. It

indicates serious neurologic injury, but posture alone does not determine outcome.

### **Decreased Breath Sounds**

Diminished air movement heard on auscultation, indicating decreased ventilation. Causes include pneumothorax, pleural effusion, atelectasis, and mucus plugging. Unilateral decreased breath sounds may indicate tension pneumothorax or large effusion.

### **Decubitus Ulcer**

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences. See pressure injury.

### **Deep**

Located further inward from the surface of the body.

### **Deep Tendon Reflex**

The monosynaptic stretch reflex elicited by tapping a tendon with a reflex hammer, testing the integrity of the reflex arc (sensory afferent, spinal cord, motor efferent). Common reflexes: biceps (C5-6), triceps (C7), brachioradialis (C5-6), knee/patellar (L3-4), ankle/Achilles (S1). Graded 0 (absent) to 4+ (hyperactive, clonus).

### **Deep Vein Thrombosis**

A clot in a deep vein, usually of the lower limb, caused by a combination of reduced blood flow, increased clotting tendency, or vessel-wall injury. Anticoagulant treatment is used when indicated.

#### **Synonyms:**

DVT (Deep Vein Thrombosis)

### **Deep Vein Thrombosis Ultrasound**

Venous duplex ultrasound used to evaluate suspected deep-vein thrombosis. The test assesses vein compressibility and blood flow; an abnormal result is interpreted with the clinical probability and, when needed, repeat or additional testing.

---

## Deep Venous Reflux

Retrograde flow through incompetent venous valves in the deep venous system. It contributes to chronic venous hypertension, edema, skin changes, and venous ulcer formation.

## Deep Venous Thrombosis

Formation of a blood clot in a deep vein, most often in the leg.

## Defecation

The process of eliminating feces from the body. Filling of the rectum triggers stretch receptors that initiate the defecation reflex via the sacral spinal cord (S2-S4), causing contraction of the rectal wall and relaxation of the internal anal sphincter.

## Defecography

Dynamic imaging of the rectum and pelvic floor during defecation using fluoroscopy or MRI. The rectum is filled with contrast paste and the patient performs defecation while images are captured. Evaluates rectal prolapse, intussusception, rectocele, enterocele, and pelvic floor dyssynergia.

## Defense Mechanisms

Psychological processes, often outside conscious awareness, that help a person manage distress or conflict. Examples include denial, projection, repression, humor, and sublimation.

## Defense Mechanisms (Forensic)

Physical evidence patterns on a body demonstrating active resistance against an assailant prior to incapacitation.

### Synonyms:

Forensic

## Defense Wounds

Injuries sustained by a victim attempting to ward off an attack, typically found on the flexor surfaces of hands, palms, wrists, and forearms (incised/stab wounds from knives or contusions/abrasions from blunt force).

## Defense Wounds (Inscribed)

Cuts or other injuries on the hands or forearms that may occur when a person attempts to protect against an attack. The distribution and morphology of defensive injuries may help reconstruct an assault but are not independently proof of a particular event.

### Synonyms:

Inscribed

## Defibrillation

Delivery of an unsynchronized electrical shock to terminate ventricular fibrillation or pulseless ventricular tachycardia by depolarizing a critical mass of myocardium. It is distinct from synchronized cardioversion, which times the shock to the QRS complex.

## Defibrillator

Device delivering electric shock to heart. Types: external (AED, manual), internal (implantable). Used for ventricular fibrillation, pulseless ventricular tachycardia. Energy: biphasic 120-200 J.

## Defibrillator Implant

An implanted cardioverter-defibrillator that detects and treats dangerous ventricular rhythms with electrical pacing or shock.

## Degenerative Spine Disease

Lumbar spinal stenosis: central (neurogenic claudication: bilateral leg pain with walking, relieved by sitting/flexion), lateral recess, foraminal. Imaging: MRI (central canal AP diameter <10mm, cross-sectional area <70mm<sup>2</sup>).

## Dehydration

Dehydration occurs when body water loss exceeds intake, causing thirst, reduced urination, dizziness, tachycardia, electrolyte abnormalities, or shock when severe. proportional), hypotonic (sodium loss > water). Causes: vomiting, diarrhea, fever, inadequate intake, diabetes insipidus. Treatment: oral rehydration or IV fluids.

---

## Dehydration In Children

A deficit of total body water, usually caused by gastrointestinal losses, inadequate intake, fever, or renal losses. Clinical assessment includes mental status, heart rate, mucous membranes, tears, capillary refill, urine output, weight change, and perfusion rather than a single sign.

## Delayed Cord Clamping

The practice of delaying umbilical cord clamping for  $\geq 30$ –60 seconds after delivery, allowing placental transfusion of blood to the newborn. Benefits: increases neonatal blood volume by 30%, improves iron stores (ferritin, hemoglobin) for the first 6 months, reduces anemia, and improves transitional circulation.

## Delayed Ejaculation

A sexual dysfunction characterized by a persistent or recurrent delay in, infrequency of, or absence of ejaculation during partnered sexual activity, lasting  $\geq 6$  months and causing marked distress. Prevalence: 1-5% of men. Lifelong vs. acquired.

## Delayed Emergence

Prolonged time to regain consciousness after discontinuation of anesthetic agents. Failure to regain consciousness within 30-60 minutes of completing surgery.

## Delayed Hypersensitivity

A delayed immune reaction, usually mediated by T cells rather than antibodies, that develops hours to days after exposure. Examples include contact dermatitis, the tuberculin reaction, and some drug eruptions.

## Delayed Puberty

Failure to develop secondary sexual characteristics by age thirteen in girls and age fourteen in boys. Causes include constitutional delay which is the most common, chronic illness, malnutrition, hypogonadotropic hypogonadism from Kallmann syndrome or pituitary disease, and hypergonadotropic hypogonadism from gonadal failure.

## Deletion

Loss of chromosomal segment. Terminal deletion: loss from end. Interstitial deletion: loss from middle. Microdeletion syndromes: 22q11.2 deletion (DiGeorge), 5p deletion (Cri-du-chat).

## Delirium

Delirium is an acute fluctuating disturbance of attention and awareness caused by an underlying medical, medication-related, toxic, or environmental factor.

## Delirium In Anesthesia

Delirium is an acute confusional state characterized by fluctuating consciousness, inattention, disorganized thinking, and altered level of awareness. Postoperative delirium occurs in 15 to 50 percent of elderly surgical patients, with higher rates in hip fracture and cardiac surgery.

## Delirium Tremens

A severe, potentially life-threatening form of alcohol withdrawal characterized by fluctuating confusion, agitation, hallucinations, and marked autonomic overactivity. It usually occurs after cessation or major reduction of prolonged heavy alcohol use and requires urgent medical treatment.

## Delivery

The process of childbirth: vaginal delivery (spontaneous vertex most common; assisted—vacuum, forceps) or cesarean delivery (abdominal). Stages of labor culminate in delivery of the infant and placenta.

## Delivery Of Posterior Arm

A shoulder dystocia maneuver: the operator's hand enters the posterior vagina along the fetal chest, finds the fetal hand, grasps the forearm, sweeps it across the chest and face, and delivers the posterior arm and hand over the perineum. This reduces the bisacromial diameter by 20% and is often highly effective.

## Deltoid Muscle

Large triangular muscle forming the shoulder contour, from lateral clavicle, acromion, and scapular

---

spine to the deltoid tuberosity. Innervated by the axillary nerve (C5-C6). Anterior fibers flex/medially rotate, middle fibers abduct (primary abductor beyond 15 degrees), posterior fibers extend/laterally rotate.

### **Delusion**

A fixed belief that is not consistent with available evidence or the person's sociocultural context and is not readily changed by reasoned discussion. Delusions may be persecutory, grandiose, referential, somatic, nihilistic, or erotomanic.

### **Delusional Disorder**

A disorder characterized by the presence of one or more delusions lasting one month or more in the context of relatively preserved functioning. The delusions are non-bizarre (involving real-life situations that could conceivably occur, such as being followed, infected, loved from afar, or conspired against).

### **Dementia**

Dementia is acquired decline in one or more cognitive domains that interferes with independent function; causes include neurodegenerative, vascular, metabolic, infectious, and other disorders. Alzheimer disease, vascular disease, Lewy body disease, frontotemporal disorders, and other conditions. Evaluation is important because some causes of cognitive decline may be treatable.

#### **Synonyms:**

Children Dementia (Dementia) Pugilistica Dementia (Dementia)

### **Dementia (Major Neurocognitive Disorder)**

Dementia is the common clinical term for an acquired syndrome of decline in one or more cognitive domains that interferes with independence in daily activities. Major neurocognitive disorder is the preferred diagnostic classification term.

#### **Synonyms:**

Major Neurocognitive Disorder

### **Demyelinating Disease**

A disease in which the myelin sheath surrounding nerve fibres is damaged, slowing or blocking neural conduction.

### **Dendrite**

The branched, tapering neuronal processes that receive synaptic input from other neurons and conduct graded potentials toward the cell body. Dendrites contain receptors, ion channels, and postsynaptic densities.

### **Dendritic Cell**

The most potent professional antigen-presenting cell, capturing antigens in tissues and migrating to lymph nodes to present peptides on MHC molecules to T cells, initiating adaptive immunity.

### **Dendritic Ulcer**

A branching epithelial ulcer of the cornea, classically caused by herpes simplex virus. It may cause a red eye, pain, light sensitivity, tearing, or reduced vision and requires ophthalmic assessment.

### **Denervate**

Loss of nerve supply to a tissue or organ; may occur surgically, traumatically, or through disease processes.

### **Dengue**

A mosquito-borne viral infection that commonly causes fever, headache, muscle pain, joint pain, and rash. Severe disease can cause bleeding or shock.

### **Dengue Fever**

Dengue fever is a mosquito-borne viral illness causing fever, headache, muscle and joint pain, rash, and sometimes plasma leakage, bleeding, or shock. flavivirus transmitted primarily by *Aedes aegypti* mosquitoes.

#### **Synonyms:**

Dengue Hemorrhagic Fever

### **Dengue Virus**

A positive-sense RNA virus belonging to the Fla-

---

viviridae family that causes dengue fever. The virus has four serotypes, and infection with one serotype provides lifelong immunity to that serotype but only temporary cross-protection against others.

### **Denial**

A defense mechanism in which a person refuses to accept an unpleasant reality. It is a common initial response to traumatic events and terminal illness diagnoses. While adaptive in the short term, chronic denial can prevent appropriate medical treatment and psychological processing.

### **Denosumab For Osteoporosis**

Fully human monoclonal antibody targeting RANK ligand preventing osteoclast formation activation and survival. Reduces fracture risk at the spine hip and non-vertebral sites. Administered as subcutaneous injection every six months. Advantages include no renal dose adjustment and effectiveness even with oral bisphosphonate intolerance.

### **Dens**

The tooth-like projection of the second cervical vertebra that forms a pivot for rotation of the first vertebra.

### **Dens Evaginatus**

An extra cusp or tubercle on a tooth, most often a premolar. It may contain an extension of the dental pulp and may fracture or become affected by caries.

### **Dens Invaginatus**

An inward folding of enamel and dentin that may extend toward or into the dental pulp, allowing debris to collect and increasing the risk of caries and pulpal infection.

### **Dental Abscess**

A localized collection of pus arising from infection of a tooth or the surrounding periodontal tissues. It may cause toothache, percussion tenderness, gingival swelling, facial swelling, fever, trismus, or regional lymphadenopathy; spread into deep facial spaces can threaten the airway and requires urgent assessment.

### **Dental Age**

An estimate of developmental age based on the formation, mineralization, and eruption of the teeth. It is useful in children but is not an exact measure of chronological age.

### **Dental Anesthesia**

The use of local anesthetic, sedation, or, when necessary, general anesthesia to control pain and anxiety during dental care.

### **Dental Caries**

A disease in which bacterial acids progressively demineralize and damage the teeth. See Dental Cavities.

### **Dental Cavities**

Permanent areas of tooth decay caused by acid-producing bacteria acting on dietary carbohydrates. Cavities progress from enamel demineralization to dentin and pulp involvement, causing sensitivity, pain, or infection.

### **Dental Ceramic**

A ceramic material used to make dental restorations such as crowns, veneers, and bridges. Examples include feldspathic ceramic, lithium disilicate, and zirconia.

### **Dental Disease**

Disorders affecting the teeth, gums, or supporting tissues, including tooth decay, gum disease, oral infections, and tooth loss. Prevention includes fluoride, regular brushing and flossing, limiting frequent sugar exposure, and routine dental examinations.

### **Dental Extraction**

Removal of a tooth from its alveolar socket. Indications include unrestorable disease, advanced periodontal destruction, impaction, orthodontic treatment, or selected prosthodontic needs; risks include bleeding, infection, nerve injury, fracture, and alveolar osteitis.

### **Dental Implant**

A biocompatible fixture placed in the jawbone to

---

support a replacement tooth. The fixture may become integrated with surrounding bone and is restored with a crown, bridge, or denture.

### **Dental Plaque**

Biofilm of bacteria on tooth surfaces. Initiated by acquired pellicle. Maturation leads to disease if not removed. Disrupted by mechanical cleaning.

### **Dental Pulp Necrosis**

Death of the dental pulp, usually following untreated inflammation, trauma, or loss of blood supply. The tooth generally fails sensibility testing and may develop apical periodontitis or a periapical abscess.

### **Dental Pulpitis**

Inflammation of the dental pulp caused by caries, trauma, restorative procedures, cracks, or other irritation. Reversible pulpitis produces brief provoked pain, whereas irreversible pulpitis causes spontaneous or lingering pain and may require pulpal treatment or extraction.

### **Dental Radiographs**

Imaging for dental diagnosis. Intraoral: periapical (tooth root and surrounding bone), bitewing (interproximal caries detection, crestal bone level), and occlusal (larger area, localization).

### **Dental Radiography**

Imaging techniques for dental diagnosis: bitewing (caries, bone levels), periapical (root, periapical tissues), panoramic (full mouth overview), CBCT (3D imaging). Radiation dose: dental radiography low exposure. ALARA principle applies.

### **Dental Restorative Materials**

Materials used to restore teeth: amalgam, composite resin, glass ionomer, ceramic, gold alloy. Selection based on location, aesthetics, strength, cost, patient factors. Composite: tooth-colored, adhesive, conservative preparation. Ceramic: excellent aesthetics, brittle, expensive. Gold: durable, biocompatible, aesthetic concern.

### **Dental Screening**

Examination of the teeth, gums, and mouth to identify dental disease or risk before serious symptoms develop.

### **Dental Sealant**

Thin protective coating applied to chewing surfaces of molars. Prevents caries by sealing pits and fissures.

### **Dental Traumatology**

Management of dental injuries. Types: enamel fractures, enamel-dentin fractures, pulp exposure, root fractures, avulsion. Immediate care critical for avulsed teeth.

### **Dentin**

Calcified tissue beneath enamel forming bulk of tooth. Contains dentinal tubules with fluid and processes. Sensitive to stimuli when exposed. Reparative dentin formed in response to irritation.

### **Dentinogenesis Imperfecta**

An inherited disorder of dentin formation that can cause translucent blue-gray or amber teeth that fracture, wear, or become discolored easily. Some forms occur with osteogenesis imperfecta.

### **Dentistry (Geriatric)**

Oral health challenges in elderly: xerostomia, root caries, periodontal disease, denture problems, oral cancer, medication side effects. Assessment: complete oral exam, cancer screening, denture fit, caries risk. Prevention: fluoride, oral hygiene, regular dental visits. Adaptations: handholds, magnification, positioning.

### **Synonyms:**

Geriatric

### **Dentition**

The teeth present in the mouth, including their number, arrangement, development, and eruption.

### **Denture**

A removable dental prosthesis that replaces some or

---

all missing teeth and associated oral tissues. Partial dentures replace selected teeth while complete dentures replace an entire dental arch; fit, oral hygiene, tissue health, and regular review are important for function and prevention of mucosal injury.

### **Dependence**

A state in which repeated exposure to a substance produces physiologic adaptation, so that stopping or reducing it may cause withdrawal. In substance-use disorders, dependence may occur with or without addiction.

### **Dependent Personality Disorder**

A pattern of submissive and clinging behavior related to an excessive need to be taken care of.

### **Depersonalization-Derealization Disorder**

A disorder involving persistent or recurrent feelings of detachment from one's thoughts, feelings, body, or surroundings, while reality testing remains intact. Symptoms cause clinically significant distress or impairment.

### **Depolarization**

The change in membrane potential toward a less negative (more positive) value, typically caused by inward sodium or calcium current. In neurons, depolarization to threshold triggers an action potential.

### **Depot Implant**

An implant designed to release a medicine gradually over an extended period after placement in the body.

### **Deprescribing**

A planned, supervised process of reducing the dose or stopping a medication for which harms, burden, or lack of benefit outweigh expected benefit. It requires review of indication, withdrawal risk, disease recurrence, and patient goals.

### **Depression**

Depression is a mood disorder involving persistent depressed mood or loss of interest with cognitive, physical, and behavioral symptoms that impair func-

tioning. persistent sadness and loss of interest or pleasure in activities, affecting approximately 7 percent of adults worldwide annually.

#### **Synonyms:**

Clinical Depression (Depression)

### **Depression (Geriatric)**

Mood disorder common in elderly, often underdiagnosed. Symptoms: sad mood, anhedonia, sleep/appetite changes, fatigue, guilt, concentration difficulty, suicidal ideation. May present as cognitive impairment ("pseudodementia"). Risk factors: chronic illness, social isolation, bereavement, medications.

#### **Synonyms:**

Geriatric

### **Depression Screening**

Major depressive disorder is a common, disabling mood disorder characterized by persistent sadness and loss of interest or pleasure in activities, affecting approximately 7 percent of adults worldwide annually. See depression.

### **Dermal Structure**

The dermis has two layers: papillary dermis (superficial, thin, containing capillaries, lymphatics, and Meissner corpuscles) and reticular dermis (deep, thick, containing dense irregular connective tissue, collagen, elastin, hair follicles, sweat glands, and sebaceous glands).

### **Dermatitis**

Inflammation of the skin, often used interchangeably with eczema. Atopic dermatitis: chronic pruritic inflammation in flexural areas, associated with asthma and allergies, driven by skin barrier dysfunction and type 2 inflammation. Contact dermatitis: allergic (type IV hypersensitivity) or irritant (direct toxicity).

### **Dermatitis Herpetiformis**

A chronic, intensely pruritic, autoimmune blistering skin condition characterized by grouped, symmetric erythematous papules, urticarial plaques, and vesicles occurring primarily on extensor surfaces

---

(elbows, knees, buttocks, scalp). It is a cutaneous manifestation of gluten-sensitive enteropathy (celiac disease).

### **Dermatofibroma**

A common benign dermal nodule, typically on the lower extremities of young adults. It presents as a firm, hyperpigmented papule that dimples when pinched (Fitzpatrick sign). It is thought to result from reactive fibrosis following minor trauma or insect bites. Dermatofibromas are asymptomatic and require no treatment.

### **Dermatofibrosarcoma**

Dermatofibrosarcoma protuberans is a locally aggressive fibrohistiocytic tumor of the skin. It typically presents as a slowly enlarging, indurated plaque on the trunk, which may develop nodules over time. It has a high local recurrence rate (up to 50 percent with simple excision) but low metastatic potential.

### **Dermatofibrosarcoma Protuberans**

A rare locally aggressive cutaneous sarcoma arising from dermal fibroblasts. It presents as a slow-growing, firm, reddish-purple plaque or nodule, typically on the trunk. It has a high local recurrence rate but low metastatic potential. Treatment is wide local excision with Mohs micrographic surgery or imatinib for unresectable disease.

#### **Synonyms:**

DFSP

### **Dermatographism**

Urticaria factitia: the development of linear wheals (hives) within minutes of stroking or scratching the skin, the most common form of physical urticaria. Mast cell hyper-reactivity releases histamine after minor mechanical pressure. Associated with chronic spontaneous urticaria and atopy.

### **Dermatomyositis**

Dermatomyositis is an autoimmune inflammatory myopathy characterized by proximal muscle weakness and distinctive skin findings, with possible lung, swallowing, or cancer associations. (knuckles),

heliotrope rash (purple periorbital), shawl/V sign erythema, and proximal muscle weakness; associated with interstitial lung disease, and in adults an increased risk of malignancy (ovary, lung, GI).

### **Dermatopathology**

The study of skin disease through examination of tissue specimens, usually with microscopy and related laboratory methods. It helps identify inflammatory, infectious, benign, and malignant skin disorders.

### **Dermatophytosis**

A superficial infection of keratinized skin, hair, or nails caused by dermatophyte fungi, producing conditions such as tinea corporis, tinea pedis, and onychomycosis.

### **Dermis**

Thick connective tissue layer beneath the epidermis providing structural support, elasticity, and nourishment. Two layers: papillary (superficial, loose connective tissue with dermal papillae interdigitating with epidermal ridges) and reticular (deep, dense irregular connective tissue).

### **Dermoid**

A benign cystic teratoma containing elements derived from ectoderm, including skin, hair follicles, sebaceous glands, and sometimes teeth. Ovarian dermoid cysts are the most common germ cell tumor of the ovary, typically occurring in young women. They are usually asymptomatic but may cause torsion, rupture, or malignant transformation.

### **Dermoid Cyst**

A usually benign cyst lined by tissue resembling skin and sometimes containing hair, glands, or other skin structures.

### **Dermoscopy**

Noninvasive examination of skin lesions with magnification and polarized or nonpolarized illumination that reveals structures not visible to the unaided eye. It improves assessment of pigmented lesions and selected inflammatory or infectious conditions but does not replace biopsy when malignancy is

---

suspected.

### **Descending Colon**

From the splenic flexure to the left iliac fossa, approximately 25-30 cm, and mostly retroperitoneal and fixed to the posterior abdominal wall. The phrenicocolic ligament supports the splenic flexure. Anteriorly it is related to small intestine; posteriorly to the left kidney. It absorbs water and electrolytes and compacts fecal matter.

### **Descending Thoracic Aorta**

The portion of the aorta extending from the aortic arch to the diaphragm. It lies in the posterior mediastinum and gives branches to the thoracic wall and organs.

### **Desmoid Tumor**

A locally aggressive but non-metastasizing fibrous tumor (fibromatosis), associated with familial adenomatous polyposis. Treatment includes surgery, radiation, and systemic therapy; recurrence after resection is common.

### **Desquamative Interstitial Pneumonia**

A rare ILD characterized by uniform filling of alveoli with macrophages containing brown pigment (hemosiderin-laden). It is strongly associated with smoking. HRCT shows bilateral ground-glass opacities with lower lobe predominance. Smoking cessation and corticosteroids are the main treatments.

### **Detached Retina**

Separation of the neurosensory retina from the underlying retinal pigment epithelium (RPE), a medical emergency requiring prompt surgical repair to prevent permanent vision loss.

### **Deterministic Effects**

Tissue reactions caused by radiation that generally occur only above a threshold dose, with severity increasing as the dose rises. Examples include skin injury, cataracts, and tissue damage after substantial exposure.

### **Detoxification**

Removal of toxic substance from body. Methods: activated charcoal, gastric lavage (rarely used), whole bowel irrigation, hemodialysis, hemoperfusion, chelation, supportive care.

### **Developmental Dysplasia Of The Hip**

A spectrum of hip abnormalities in infants and children, ranging from mild acetabular dysplasia to complete hip dislocation. The femoral head is partially or completely displaced from the acetabulum due to capsular laxity and acetabular underdevelopment.

### **Developmental Milestones**

Skills and abilities that children typically acquire at predictable ages. Examples: social smile at 2 months, rolling over at 4-6 months, sitting independently at 6-8 months, walking at 12 months, and speaking two-word phrases at 2 years. Delays in reaching milestones may indicate developmental delay, autism, or neurologic impairment.

### **Developmental Regression**

Loss of previously acquired developmental skills. Regression is a neurologic red flag requiring prompt evaluation for genetic, metabolic, neurodegenerative, epileptic, infectious, or structural causes.

### **Developmental Surveillance**

The ongoing process of eliciting caregiver concerns, observing the child, documenting developmental history, and monitoring milestones during routine care. It differs from formal developmental screening, which uses standardized instruments at specified ages.

### **Deviated Septum**

Displacement of the nasal septum from the midline, congenital or acquired from trauma, and present to some degree in most adults. Significant deviation narrows one nasal cavity, impairing airflow and sinus drainage and producing obstruction, congestion, recurrent sinusitis, epistaxis, and sleep disturbance.

#### **Synonyms:**

Septum Deviated (Deviated Septum)

---

## Devic Disease

Neuromyelitis optica spectrum disorder, an autoimmune disease that primarily affects the optic nerves and spinal cord.

## DEXA (Dual-Energy X-Ray Absorptiometry)

Measures bone mineral density (BMD) at spine and hip. T-score compares to young adult reference. Osteoporosis: T-score  $\leq -2.5$ . Osteopenia: -1.0 to -2.5. Low radiation dose.

### Synonyms:

Dual-Energy X-ray Absorptiometry

## Dexamethasone Suppression Test

A dynamic test used to assess cortisol regulation. In normal physiology, dexamethasone suppresses ACTH and cortisol; failure of suppression supports endogenous hypercortisolism but requires interpretation with medication, absorption, and comorbidity considerations.

## Dextrocardia

A congenital position in which the heart lies predominantly on the right side of the chest, sometimes with reversed internal organs or associated heart defects.

## Diabetes

Diabetes is chronic hyperglycemia caused by inadequate insulin secretion, insulin resistance, or both, with long-term risks to the eyes, kidneys, nerves, heart, and blood vessels. inadequate insulin secretion, impaired insulin action, or both. Chronic hyperglycemia can damage the eyes, kidneys, nerves, heart, and blood vessels. Major forms include type 1, type 2, and gestational diabetes.

## Diabetes And Metabolic Health

Closely linked through insulin resistance, obesity, dyslipidemia, and hypertension, collectively known as the metabolic syndrome. Poor metabolic health increases the risk of developing type 2 diabetes and worsens glycemic control in existing diabetes.

## Diabetes Complications

Diabetes complications arise from chronic hyperglycemia damaging blood vessels and nerves over time. Microvascular complications include diabetic retinopathy leading to vision loss, nephropathy progressing to kidney failure, and neuropathy causing pain and loss of sensation.

## Diabetes Insipidus

A disorder of water balance caused by deficient vasopressin action, leading to excessive dilute urine and thirst. hours) and polydipsia due to deficient secretion of antidiuretic hormone (ADH, vasopressin) from the posterior pituitary (central diabetes insipidus) or renal resistance to ADH action (nephrogenic diabetes insipidus).

## Diabetes Management

The coordinated use of nutrition, physical activity, medicines when indicated, glucose monitoring, and screening for complications to maintain health and reduce diabetes-related risk.

## Diabetes Medications

Diabetes medications lower blood glucose through various mechanisms: metformin reduces hepatic glucose production; sulfonylureas stimulate insulin secretion; SGLT2 inhibitors increase urinary glucose excretion; GLP-1 receptor agonists enhance incretin effects; and insulin replaces deficient hormone.

## Diabetes Mellitus

A metabolic disorder characterized by chronic hyperglycemia resulting from insufficient insulin production, insulin resistance, or both. Type 1 diabetes results from autoimmune destruction of pancreatic beta cells, while type 2 is driven by genetic and lifestyle factors leading to insulin resistance.

### Synonyms:

Diabetes (Diabetes Mellitus)

## Diabetes Mellitus Type 1

An autoimmune disease characterized by destruction of pancreatic beta cells leading to absolute insulin deficiency. Usually presents in childhood or young adulthood with acute onset of polyuria, polydipsia,

---

weight loss, and diabetic ketoacidosis (DKA) at diagnosis in many.

### **Diabetes Mellitus Type 2**

A progressive metabolic disorder characterized by insulin resistance and relative insulin deficiency, strongly associated with obesity and physical inactivity. Typically presents in adults but increasingly seen in younger populations. Diagnosis: fasting glucose  $\geq 126$  mg/dL, HbA1c  $\geq 6.5\%$ , or OGTT  $\geq 200$  mg/dL.

### **Diabetes Prevention**

Preventing diabetes focuses on reducing the risk of developing type 2 diabetes through lifestyle interventions and risk factor management. Maintaining a healthy body weight, engaging in regular physical activity, and following a balanced diet low in refined sugars and saturated fats are cornerstone strategies.

### **Diabetic Autonomic Neuropathy**

Dysfunction of autonomic nerves caused by diabetes, affecting cardiovascular, gastrointestinal, genitourinary, sudomotor, and pupillary systems. Manifestations include orthostatic hypotension, resting tachycardia, gastroparesis, bladder dysfunction, erectile dysfunction, and impaired hypoglycemia awareness.

### **Diabetic Cardiomyopathy**

Damage to the heart muscle associated with diabetes that occurs independently of coronary artery disease or hypertension. It may cause impaired relaxation, reduced pumping function, heart failure, and rhythm problems; glucose and cardiovascular risk control can reduce risk.

### **Diabetic Complications**

The chronic and acute consequences of diabetes mellitus. Microvascular: retinopathy (leading cause of blindness), nephropathy (leading cause of ESRD—albuminuria, declining GFR), neuropathy (peripheral—stocking-glove, autonomic—gastroparesis, erectile dysfunction, postural hypotension, cardiac autonomic).

### **Diabetic Diet**

An individualized eating plan that considers carbohydrate amount and timing, overall nutrition, cultural preferences, and treatment goals to support blood-glucose control.

#### **Synonyms:**

Diet Diabetes (Diabetic Diet)

### **Diabetic Foot**

Foot problems associated with diabetes, including neuropathy, deformity, ulcers, infection, and impaired healing.

### **Diabetic Foot Disease**

Complex multifactorial condition resulting from the combination of peripheral neuropathy, peripheral arterial disease, and impaired immune function in diabetes. Neuropathy leads to loss of protective sensation and foot deformities. Peripheral arterial disease impairs healing. Minor trauma progresses to ulceration and infection.

### **Diabetic Foot Ulcer**

A chronic wound of the foot in a patient with diabetes, resulting from peripheral neuropathy, peripheral artery disease, and impaired wound healing. Neuropathic ulcers: painless, at pressure points (plantar metatarsal heads, heel), punched-out appearance, surrounded by callus.

### **Diabetic Hyperosmolar Hyperglycemic State**

A severe complication of diabetes marked by extreme hyperglycemia, increased serum osmolality, and dehydration with little or no ketoacidosis. It can cause altered consciousness and requires urgent hospital treatment.

### **Diabetic Ketoacidosis**

An acute, life-threatening diabetes complication characterized by ketone production and metabolic acidosis, usually with elevated blood glucose. It may be triggered by infection, insufficient insulin, myocardial infarction, pancreatitis, or other physiologic stress.

#### **Synonyms:**

---

Coma Diabetic (Diabetic Ketoacidosis) Ketoacidosis, Diabetic Ketoacidosis Diabetic (Diabetic Ketoacidosis)

### Diabetic Ketoacidosis Monitoring

Monitoring during DKA management includes hourly blood glucose measurement, serum electrolytes every two to four hours, venous blood gas assessment, beta-hydroxybutyrate levels, and fluid balance.

### Diabetic Macular Edema

The accumulation of fluid within the macula due to breakdown of the blood-retinal barrier in diabetic retinopathy, resulting in thickening of the macula and central vision loss, and it can occur at any stage of diabetic retinopathy, from mild non-proliferative to proliferative disease.

### Diabetic Nephropathy

Kidney disease caused by diabetes mellitus, the leading cause of ESRD worldwide.

Pathophysiology: hyperglycemia-induced glomerular hyperfiltration, basement membrane thickening, mesangial expansion, and glomerulosclerosis. Presents with progressive albuminuria (microalbuminuria macroalbuminuria) and declining GFR.

**Synonyms:**

DKD

### Diabetic Neuropathy

Nerve dysfunction caused by diabetes. It may cause distal sensory loss and pain or affect autonomic functions such as digestion, blood pressure, sweating, bladder function, or sexual function.

**Synonyms:**

Autonomic Neuropathy Diabetic (Diabetic Neuropathy) Neuropathy, Diabetic Neuropathy Autonomic Diabetic (Diabetic Neuropathy) Neuropathy Diabetic (Diabetic Neuropathy) Neuropathy Diabetic Peripheral (Diabetic Neuropathy) Neuropathy Focal Diabetic (Diabetic Neuropathy) Neuropathy Proximal Diabetic (Diabetic Neuropathy) Peripheral Neuropathy Diabetic (Diabetic Neuropathy) Proximal Neuropathy Diabetic (Diabetic Neuropathy)

### Diabetic Peripheral Neuropathy

The most common complication of diabetes mellitus, affecting approximately fifty percent of patients with long-standing disease. It is a length-dependent, sensorimotor polyneuropathy that affects the distal lower extremities first, in a glove-and-stocking distribution, and progresses proximally over time.

### Diabetic Retinopathy

A microvascular complication of diabetes mellitus and a leading cause of blindness in working-age adults. Non-proliferative DR (NPDR): microaneurysms, dot-blot hemorrhages, exudates (hard and cotton-wool spots), and venous beading. Proliferative DR (PDR): retinal neovascularization, vitreous hemorrhage, and tractional retinal detachment.

**Synonyms:**

Retinopathy, Diabetic

### Diagnosis

The identification of a disease or other health condition through clinical history, examination, and appropriate investigations. A differential diagnosis considers alternative explanations for the findings.

### Diagnostic Microbiology

The laboratory identification of microorganisms causing disease. Methods include microscopy, culture, biochemical testing, serology, and molecular methods. Rapid diagnostic tests provide same-day results. MALDI-TOF mass spectrometry revolutionized bacterial identification.

### Diagnostic Radiology

The medical specialty that uses imaging methods to diagnose and characterize disease, including X-ray, ultrasound, computed tomography, magnetic resonance imaging, and nuclear medicine.

### Diagnostic Test

A test used to evaluate a person with symptoms, signs, or an abnormal screening result to establish, exclude, or characterize a disease. Its usefulness depends on analytic validity, clinical performance, and the consequences of the result.

---

## Diagnostic Uncertainty

The state in which available information does not establish a single diagnosis with sufficient confidence. It should be communicated transparently and managed with safety-netting, planned reassessment, and targeted additional evaluation.

## Dialectical Behavior Therapy

A comprehensive cognitive-behavioral treatment originally developed for borderline personality disorder. It combines cognitive-behavioral techniques with mindfulness and acceptance strategies. Core modules include mindfulness, distress tolerance, emotion regulation, and interpersonal effectiveness.

## Dialysis

Removal of excess fluid and waste products from the blood when kidney function is inadequate, using hemodialysis or peritoneal dialysis.

## Dialysis Access

A vascular route used for hemodialysis, such as an arteriovenous fistula, arteriovenous graft, or central venous catheter. Each option has different benefits and risks.

## Dialysis Adequacy

The degree to which a dialysis prescription removes uremic solutes and controls fluid, electrolyte, and acid-base balance while meeting patient-centered treatment goals. Measures such as Kt/V and urea reduction ratio are used for hemodialysis, but clinical status remains essential.

## Dialysis Disequilibrium Syndrome

Neurological complications during hemodialysis in severely uremic patients. Headache, nausea, confusion, seizures, and coma. Results from rapid solute removal causing cerebral edema. Prevent with gradual dialysis initiation and shorter initial sessions.

## Diaper Rash

Irritant inflammation of the skin covered by a diaper, commonly caused by prolonged contact with urine or stool, friction, moisture, or *Candida* infection. It causes redness and soreness; persistent, severe, or

spreading rash requires evaluation for infection or another skin condition.

## Diaphragm

Dome-shaped musculotendinous partition separating thoracic/abdominal cavities, primary inspiration muscle. Central tendon with muscular periphery from xiphoid, lower six costal cartilages, and lumbar vertebrae via crura and arcuate ligaments. Innervated by phrenic nerves (C3-C5). Contraction flattens the dome increasing thoracic volume.

## Diaphragmatic Hernia

Protrusion of abdominal contents through a defect or opening in the diaphragm into the thoracic cavity. It may be congenital or acquired after trauma and can cause respiratory compromise, bowel obstruction, or strangulation; diagnosis is based on imaging and management depends on symptoms, contents, and the risk of organ compromise.

## Diaphragmatic Rupture

A tear in the diaphragm most commonly caused by blunt or penetrating thoracoabdominal trauma, with the left side affected in approximately 75 percent of cases due to the protective effect of the liver on the right. Herniation of abdominal viscera into the thorax may cause respiratory distress, bowel obstruction, or strangulation.

## Diaphysis

The shaft of a long bone, comprising thick cortical (compact) bone surrounding the medullary cavity, which contains bone marrow in children and is largely yellow (fatty) marrow in adults. Enclosed by periosteum; the nutrient artery enters here. Fractures of the diaphysis heal by callus formation (enchondral and intramembranous).

## Diarrhea

Diarrhea is passage of loose or watery stools more frequently than usual; duration, blood, fever, dehydration, exposures, and associated symptoms guide evaluation. medicines, dietary factors, inflammation, malabsorption, or other conditions. Associated symptoms and the need for testing or treatment de-

---

pend on severity, duration, and the person's clinical features.

### **Diarrhea, Constipation, Gas, And Bloating**

These common gastrointestinal symptoms arise from disruptions in normal digestive function caused by diet, infections, medications, or underlying conditions like irritable bowel syndrome. Diarrhea involves increased stool frequency and water content, while constipation involves infrequent or difficult passage of stool.

### **Diastasis Recti**

Separation and thinning of the linea alba between the two rectus abdominis muscles, commonly occurring during or after pregnancy. It produces a midline abdominal bulge that becomes prominent with raised intra-abdominal pressure.

### **Diastole**

The phase of the cardiac cycle when the heart muscle relaxes, allowing the chambers to fill with blood.

### **Diastolic Dysfunction**

Impaired relaxation, compliance, or filling of the left or right ventricle during diastole. It can raise filling pressures and cause exertional dyspnoea, pulmonary congestion, or heart failure with preserved ejection fraction; echocardiography assesses relaxation, chamber structure, and estimated filling pressure.

### **Diathermy**

The use of high-frequency electrical current to generate heat for surgical purposes, including cutting tissue, coagulating blood vessels to stop bleeding (hemostasis), and destroying abnormal tissue (electrocautery, electrocoagulation).

### **Diatom Test**

Forensic technique used to support the diagnosis of drowning; microscopic silica-shelled diatoms present in drowning water enter lungs, penetrate alveolar capillaries, and circulate to distant closed organs (femur bone marrow, brain) only if active circulation

was present at time of submersion.

### **Dichorionic Twins**

Twins that each have a separate chorion and amnion. All dizygotic twins are dichorionic, and some monozygotic twins are as well. Each fetus usually has a separate placental circulation, although the placentas may appear fused; complications include preterm birth and growth disturbance.

### **DICOM**

Digital Imaging and Communications in Medicine. Standard for medical image exchange.

### **Dietary Assessment**

The systematic evaluation of a person's food and nutrient intake, using methods such as a food diary, 24-hour recall, or food-frequency questionnaire.

### **Dietary Fat**

A macronutrient composed mainly of triglycerides and fatty acids that provides approximately 9 kcal per gram. Fat supports cell membranes, energy storage, absorption of vitamins A, D, E, and K, and synthesis of signaling molecules; the type of fat affects cardiometabolic risk.

### **Dietary Reference Intakes**

Reference values for nutrient intake: RDA (Recommended Dietary Allowance), AI (Adequate Intake), UL (Tolerable Upper Intake Level), EAR (Estimated Average Requirement).

### **Dieulafoy Lesion**

Large caliber persistent submucosal artery in the stomach wall that can cause massive gastrointestinal bleeding. The artery is abnormally large and superficial, lacking the normal tapering into smaller arterioles. Presents with hematemesis or melena without a visible ulcer.

### **Differential Diagnosis**

The process of distinguishing a particular disease or condition from others that present with similar symptoms. Systematic approach: consider life-

---

threatening conditions first, use pretest probability, apply diagnostic criteria, and order targeted tests.

### **Differentiation**

The process by which cells develop specialized structures and functions. In pathology, the term also describes how closely tumor cells resemble the normal tissue from which they arose.

### **Difficult Airway**

A clinical situation in which a trained clinician has difficulty with oxygenation, ventilation, supraglottic airway placement, laryngoscopy, or tracheal intubation. It may result from anatomical features, illness, trauma, or limited equipment and requires an appropriate airway plan.

### **Difficult Intubation**

Difficulty placing an endotracheal tube despite appropriate technique and equipment. Risk may be increased by limited mouth opening or neck movement, abnormal airway anatomy, facial trauma, obesity, or a previous difficult airway. Preparation includes assessment, preoxygenation, and backup airway plans.

### **Diffuse Axonal Injury**

Widespread injury to nerve fibers caused by acceleration or deceleration of the brain. It may produce prolonged impaired consciousness, and MRI can show characteristic lesions.

### **Diffuse Esophageal Spasm**

A motility disorder characterised by premature, uncoordinated esophageal contractions, causing intermittent chest pain and dysphagia for liquids and solids. Endoscopy excludes structural disease; high-resolution manometry confirms premature contractions.

### **Diffusing Capacity**

Ability of lungs to transfer gas from alveoli to blood. Reduced in emphysema, ILD, and anemia. Increased in pulmonary hemorrhage and left-to-right shunts.

### **Diffusing Capacity Of The Lung**

The capacity of the respiratory membrane to transfer gas from alveolar air into pulmonary capillary blood. It depends on surface area, membrane thickness, gas properties, hemoglobin, and pulmonary capillary blood volume and is commonly measured with carbon monoxide as DLCO.

### **Diffusion**

The net movement of molecules from an area of higher concentration to lower concentration due to random thermal motion (Brownian motion).

### **Diffusion Restriction**

Reduced movement of water molecules detected by diffusion-sensitive MRI sequences, usually appearing bright on DWI with corresponding low ADC. It may indicate acute ischemia but can also occur with abscess, hypercellular tumor, seizure, and other processes.

### **Diffusion-Weighted Imaging**

An MRI technique that detects differences in the movement of water molecules within tissue. Restricted diffusion may occur in acute stroke, abscess, hypercellular tumors, and other conditions.

### **DiGeorge Syndrome**

A disorder usually caused by a deletion of part of chromosome 22 that can affect development of the thymus, parathyroid glands, heart, palate, and immune system. It is also called 22q11.2 deletion syndrome.

#### **Synonyms:**

22q11.

### **Digestion**

The process by which the body breaks down ingested food into smaller molecules that can be absorbed and utilized. Digestion begins in the mouth (mechanical–mastication; enzymatic–salivary amylase for starch, lingual lipase).

### **Digestive Health**

The efficient functioning of the gastrointestinal tract

---

in breaking down food, absorbing nutrients, and eliminating waste. Digestive health depends on factors such as diet, hydration, gut microbiome balance, and the integrity of the digestive mucosa.

### Digital Clubbing

Bulbous enlargement of distal phalanges with loss of nail-bed angle ( $> 180$  degrees). Associated with lung cancer, ILD, bronchiectasis, and cyanotic heart disease.

### Digital Ischemia

Reduced arterial blood flow to the fingers causing pain, pallor, coolness, and potential tissue necrosis. Causes include Raynaud phenomenon, thromboangiitis obliterans, cholesterol emboli, and arterial thrombosis. Severe cases may require amputation of affected digits.

### Digital Mucous Cyst

A benign ganglion cyst arising from the distal interphalangeal joint, presenting as a translucent, dome-shaped nodule on the dorsal aspect of the finger near the nail fold. It is associated with osteoarthritis of the DIP joint.

### Digital Subtraction Angiography

An imaging technique that subtracts precontrast images from contrast-enhanced images to show blood vessels more clearly. It can also guide selected vascular procedures.

### Digitalis (Digoxin) Toxicity

Nausea, vomiting, visual changes (yellow halos), arrhythmias. Risk: narrow therapeutic index, renal impairment, hypokalemia. Treatment: digoxin immune Fab, cardiac monitoring, correct electrolytes.

#### Synonyms:

Digoxin

### Digitalis Toxicity

Toxicity from digitalis or related cardiac glycosides, causing gastrointestinal symptoms, visual changes, confusion, bradyarrhythmias, tachyarrhythmias, or hyperkalemia. digitoxin) characterized by a narrow therapeutic index (0.5-2.0 ng/mL for digoxin).

### Digoxin Immune Fab

Antibody fragments that bind free digoxin and related cardiac glycosides, reducing their tissue activity. Indications include life-threatening dysrhythmia, severe hyperkalemia from acute toxicity, or a potentially massive ingestion.

### Dilated Cardiomyopathy

A disease of the heart muscle in which one or more chambers enlarge and contract poorly, usually causing reduced ejection fraction. Causes include inherited disease, infection, toxins, medicines, pregnancy, and ischemic or inflammatory injury.

#### Synonyms:

Cardiomyopathy, Dilated

### Dilated Cardiomyopathy Prognosis

Prognosis varies widely and depends on ventricular function, symptoms, cause, arrhythmias, comorbidities, and response to treatment. Guideline-directed therapy can improve cardiac function in some people, while severe disease may lead to heart failure, arrhythmia, or the need for advanced therapies.

### Dilation And Curettage

Surgical dilation of the cervix and curettage (scraping) of the uterine lining. Indications: incomplete or missed abortion (miscarriage management), therapeutic abortion, endometrial sampling (abnormal uterine bleeding, postmenopausal bleeding, endometrial hyperplasia/cancer), and removal of retained products of conception (RPOC).

### Dilator

An instrument or device used to gradually widen a body opening or passage.

### Dilute Russell Viper Venom Time

A phospholipid-dependent clotting assay used mainly to detect lupus anticoagulant. It is commonly performed as part of laboratory evaluation for antiphospholipid syndrome, with confirmatory testing required because anticoagulants and other factor abnormalities can affect the result.

---

### **Dimercaprol**

Chelating agent for arsenic, mercury, gold. Given IM. Side effects: hypertension, tachycardia, nausea, pain at injection site.

### **Dinoprostone (Cervidil, Prepidil)**

A prostaglandin E2 medicine used to soften the cervix and help initiate labor. It is available in several formulations, and administration requires obstetric monitoring because it can cause excessive uterine activity or fetal effects.

#### **Synonyms:**

Cervidil, Prepidil

### **Dipeptidyl Peptidase-4 Inhibitors**

Oral glucose-lowering medications including sitagliptin, saxagliptin, linagliptin, and alogliptin that inhibit the enzyme degrading incretin hormones GLP-1 and GIP. Resulting increase in active incretin levels enhances glucose-dependent insulin secretion and suppresses glucagon. Neutral effect on weight and low hypoglycemia risk.

### **Diphtheria**

Diphtheria is a toxin-producing *Corynebacterium* infection that can form a pharyngeal pseudomembrane and cause airway obstruction, myocarditis, and neuropathy. gram-positive aerobic bacillus that produces a potent exotoxin that inhibits protein synthesis via ADP-ribosylation of elongation factor 2, causing local tissue necrosis and systemic toxicity.

### **Diphtheria Vaccine**

Toxoid vaccine containing formalin-inactivated diphtheria toxin, providing immunity against the exotoxin produced by *Corynebacterium diphtheriae* rather than the bacterium itself.

### **Dipyllobothrium Latum**

The fish tapeworm, a large cestode infecting humans through consumption of raw or undercooked freshwater fish. It can grow up to 10 meters in length and absorbs vitamin B12 in the intestine, potentially causing megaloblastic anemia. Diagnosis is by identification of eggs or proglottids in stool. Treatment is with praziquantel.

### **Diplopia**

Double vision, in which one object is perceived as two. It may result from ocular misalignment, nerve disease, muscle disease, or a brain disorder.

### **Diplopia (Double Vision)**

The perception of two images of a single object, classified by onset, duration, and whether it resolves with covering one eye. Monocular diplopia (persists with one eye covered): caused by ocular surface abnormalities (dry eye, irregular astigmatism, cataract, corneal scar, lens dislocation)—usually benign.

#### **Synonyms:**

Double Vision

### **Direct Antiglobulin Test**

An immunohematologic test that detects immunoglobulin and/or complement bound to the surface of a patient's erythrocytes. A positive result supports in-vivo red-cell coating, as in autoimmune hemolytic anemia, hemolytic transfusion reactions, and hemolytic disease of the fetus and newborn.

### **Direct Coombs Test**

Direct antiglobulin test: detects antibodies or complement (C3) bound to the surface of RBCs in vivo. Positive in: autoimmune hemolytic anemia (warm: IgG, cold: C3), drug-induced hemolytic anemia, hemolytic transfusion reaction, and hemolytic disease of the newborn (HDN). Grading: 1+ to 4+.

### **Direct Oral Anticoagulants**

DOACs directly inhibit specific coagulation factors. Direct thrombin inhibitors: dabigatran. Factor Xa inhibitors: rivaroxaban, apixaban, edoxaban, betrixaban. They have predictable pharmacokinetics, fixed dosing, and routine monitoring is not required. They have fewer drug interactions than warfarin.

### **Direct Veneer**

Composite restoration placed chairside for aesthetic improvement. Conservative alternative to laboratory veneer.

---

### **Directly Observed Therapy**

Supervision of medication ingestion to ensure adherence. Standard of care for TB treatment. Ensures completion of the full treatment course and reduces development of drug resistance.

### **Dirofilaria Repens**

A filarial nematode transmitted by mosquitoes that causes subcutaneous or ocular dirofilariasis in humans, an accidental dead-end host. It presents as a solitary, migratory subcutaneous nodule, often on the trunk or extremities, or as a conjunctival or periorbital mass.

### **Disability**

A limitation in body function or structure, activity, or participation that results from a health condition and interaction with the person's environment.

### **Disability Evaluation**

Assessment of functional limitations for legal, insurance, or benefits purposes. Objective measures, standardized tests.

### **Disability-Adjusted Life Year**

A population-health measure combining years of life lost because of premature mortality with years lived with disability. One DALY represents one lost year of healthy life under the chosen methods and disability weights.

### **Disaster Preparedness**

Planning and organizing resources, training, and procedures to reduce harm and support effective response and recovery during disasters.

### **Discectomy**

Surgical removal of a herniated intervertebral disc fragment compressing a nerve root. Microscopic discectomy (most common): small incision, microscope, minimal muscle dissection.

### **Discharge Planning**

A multidisciplinary process that prepares a patient for safe transition from hospital or facility care to

the next setting. It includes medication review, follow-up, education, equipment, self-management support, and communication of pending results.

### **Discitis**

Inflammation or infection of an intervertebral disc, often involving adjacent vertebral endplates. It may cause severe localized back or neck pain, stiffness, fever, and reduced mobility; causes include haematogenous infection, postoperative infection, and inflammatory disease, with MRI being the preferred imaging study.

### **Discography**

An imaging procedure in which contrast material is injected into an intervertebral disc to assess disc structure and reproduce pain. Its diagnostic value is limited and its use is selective.

### **Disease**

Abnormal condition affecting body. Can be infectious, degenerative, neoplastic, etc.

### **Disease Reporting**

Mandatory notification of specified diseases or health events to public-health authorities.

### **Disease-Free Survival**

The length of time after treatment during which a patient remains alive without detectable evidence of the disease. The precise definition depends on the cancer and the study protocol.

### **Disease-Modifying Antirheumatic Drug**

A medication that reduces inflammatory disease activity and helps prevent structural damage or disability rather than providing only symptomatic relief. Conventional synthetic, biologic, and targeted synthetic DMARDs are used according to disease and patient factors.

### **Disinfection**

The elimination of most pathogenic microorganisms on inanimate surfaces. Disinfection does not eliminate all forms of microbial life, particularly spores.

---

High-level disinfection eliminates all microorganisms except spores. Intermediate-level disinfection eliminates mycobacteria, most viruses, and bacteria.

### **Disk Diffusion Susceptibility Test**

A standardized method in which antimicrobial-impregnated disks are placed on an inoculated agar surface and zones of growth inhibition are measured. Zone diameters are interpreted using validated organism- and drug-specific breakpoints.

### **Diskectomy**

A surgical procedure that removes part or all of a spinal disc to relieve pressure on a spinal nerve or the spinal cord, causing radiculopathy or myelopathy. Indicated in severe disk herniation causing unremitting pain, progressive motor weakness, or cauda equina syndrome.

### **Diskitis**

Inflammation or infection of an intervertebral disc and adjacent vertebral endplates, often causing severe localized back pain and sometimes fever. usually caused by bacterial infection. It causes localized back pain, stiffness, fever, and reluctance to move, particularly in children.

### **Dislocation**

Complete loss of normal contact between the surfaces of a joint, usually caused by trauma or structural disease and potentially accompanied by fracture, nerve, or blood-vessel injury.

### **Dislocation Of The Lens**

Partial or complete displacement of the crystalline lens from its normal position within the pupillary axis due to disruption or weakness of the zonular fibers. Causes include Marfan syndrome, homocystinuria, trauma, and prior intraocular surgery; it may cause acute angle-closure glaucoma or blurred vision.

### **Disofenin Scan**

Hepatobiliary imaging using Tc-99m disofenin. Similar to mebrofenin scan.

### **Disorder**

A disturbance of normal structure or function that causes symptoms, impairment, or clinically important risk. The term does not necessarily indicate a particular level of severity.

### **Disorientation**

Difficulty knowing one's time, place, situation, or identity. It may occur with delirium, infection, metabolic disturbances, intoxication or withdrawal, brain injury, or dementia. Sudden disorientation is an urgent medical symptom.

### **Dissection**

A tear in the inner layer of a blood vessel that allows blood to track between the vessel-wall layers and create a false channel. In the aorta, this is called aortic dissection.

### **Disseminated Coccidioidomycosis**

Coccidioides infection that spreads beyond the lungs to skin, bone, meninges, or other organs.

### **Disseminated Cutaneous Blastomycosis**

Blastomyces infection involving multiple areas of skin, usually after spread from a pulmonary infection.

### **Disseminated Intravascular Coagulation**

A pathological state of simultaneous systemic activation of coagulation and fibrinolysis, leading to widespread microvascular thrombosis that causes organ ischemia and dysfunction, paradoxically accompanied by consumptive coagulopathy and increased bleeding risk.

### **Disseminated Mycobacterium Avium–Intracellulare Infection**

Widespread infection with Mycobacterium avium complex, usually occurring in people with severe immune suppression.

### **Disseminated Varicella Infection**

Varicella-zoster virus infection that spreads beyond the skin and may involve the lungs, brain, liver, or

---

other organs.

### **Dissociation**

A disruption in the normal integration of consciousness, memory, identity, emotion, perception, behavior, and sense of self. It exists on a spectrum from normal (daydreaming) to pathological (DID, depersonalization-derealization).

### **Dissociative Amnesia**

Inability to recall important autobiographical information, usually of a traumatic or stressful nature, that is inconsistent with ordinary forgetting. The amnesia may be localized, selective, generalized, or continuous.

### **Dissociative Disorder**

DSM-5 category comprising disruption of the normally integrated functions of consciousness, memory, identity, perception, and behaviour, including dissociative amnesia, dissociative identity disorder, and depersonalization-derealization disorder. Strongly associated with severe early-life trauma.

### **Dissociative Identity Disorder**

The presence of two or more distinct personality states or an experience of possession involving marked discontinuity in sense of self, agency, affect, behavior, memory, perception, cognition, and/or sensory-motor functioning.

### **Distal**

Farther from the point of attachment or origin of a structure, or farther from the centre of the body; the opposite directional term is proximal.

### **Distal Radius Fractures**

The most common upper extremity fracture. Classification: AO/OTA: A (extra-articular), B (partial articular), C (complete articular); Frykman. Colles fracture: dorsal angulation/displacement (fall on outstretched hand). Smith fracture: volar angulation (fall on flexed wrist).

### **Distal Tubule**

Segment of the nephron extending from the thick ascending limb of the loop of Henle to the collecting duct. The early distal tubule reabsorbs sodium and chloride through the NCC cotransporter, which is the target of thiazide diuretics.

### **Distraction Osteogenesis**

Surgical bone lengthening by gradual distraction. Used for jaw deformities, trauma.

### **Distributive Shock**

Shock caused by pathologic vasodilation and maldistribution of blood flow, producing inadequate effective circulating volume despite variable cardiac output. Causes include sepsis, anaphylaxis, neurogenic shock, and some toxic syndromes.

### **Diuresis**

Increased urine production. Can be physiological (fluid overload) or pharmacological (diuretics). Osmotic diuresis (hyperglycemia), water diuresis (DI), saline diuresis (hypertonic saline).

### **Diuretic**

A drug that increases urine production, used for edema (heart failure, cirrhosis, renal disease), hypertension, and electrolyte disorders.

### **Diverticular Disease**

Condition characterized by the presence of diverticula, which are outpouchings of the colonic mucosa and submucosa through defects in the muscularis propria at sites where vasa recta penetrate the bowel wall.

### **Diverticulitis**

Diverticulitis is inflammation or infection of a diverticulum, usually in the colon, causing localized abdominal pain, fever, altered bowel habits, or complications such as abscess. diverticulosis affecting 10-25 percent of individuals with diverticula. The pathophysiology involves microperforation of a diverticulum with fecal contents entering the pericolic tissues, inciting inflammation and potential abscess formation.

---

## Diverticulosis

The presence of diverticula, usually small pouches in the colon wall; it may be asymptomatic or cause bleeding and can coexist with diverticulitis.

### Synonyms:

Colonic Diverticulitis (Diverticulosis) Diverticula (Diverticulosis)

## Diverticula (Diverticulosis)

Alternate index label; see *Diverticulosis*. sites of vascular penetration, most commonly in the sigmoid colon (90 percent of cases). Prevalence increases with age, affecting over 50 percent of individuals older than 60 years and nearly 70 percent by age 85.

## Diverticulosis And Diverticulitis

Diverticulosis is a condition in which small, bulging pouches (diverticula) form in the lining of the digestive tract, most commonly in the colon. Diverticulitis occurs when these pouches become inflamed or infected, causing abdominal pain, fever, and changes in bowel habits.

## Dix-Hallpike Maneuver

The Dix-Hallpike maneuver is a diagnostic test used to identify benign paroxysmal positional vertigo by detecting the characteristic nystagmus and vertigo that occur when displaced otoconia within the posterior semicircular canal move in response to gravity during specific head positioning.

## Dizziness

Dizziness is a subjective sensation that may represent vertigo, lightheadedness, imbalance, or nonspecific disequilibrium; history and examination distinguish vestibular, cardiovascular, neurologic, and other causes. include disorders of the vestibular system, cardiovascular system, nervous system, vision, medications, or metabolism.

## DMFT Index

An epidemiologic index recording the number of permanent teeth that are decayed, missing because of caries, or filled. It estimates cumulative caries experience but does not measure current lesion activity

or distinguish all causes of tooth loss.

## DMSA Scan

A nuclear-medicine study using technetium-labeled dimercaptosuccinic acid to show renal cortical function and areas of cortical injury or scarring.

## DNA

Deoxyribonucleic acid, the hereditary material in humans and most organisms. Double helix of two antiparallel strands (sugar-phosphate backbone, nitrogenous bases: A-T, G-C). Human genome: 3 billion base pairs, 20,000 protein-coding genes.

## DNA (Deoxyribonucleic Acid)

Double-stranded helical molecule carrying genetic information. Composed of nucleotides (sugar-phosphate backbone with bases adenine, thymine, guanine, cytosine). Replication is semi-conservative. Genes are specific sequences encoding proteins or functional RNAs. Chromosomes are highly condensed DNA-protein complexes.

### Synonyms:

Deoxyribonucleic Acid

## DNA Double Helix

The molecular structure of DNA described by Watson and Crick in 1953, consisting of two antiparallel polynucleotide chains wound around each other in a right-handed helix. The sugar-phosphate backbone is on the exterior; nitrogenous bases project inward.

## DNA Profiling

Analysis of polymorphic DNA markers, commonly short tandem repeats, to compare biological samples for human identification or kinship assessment. Results are statistical associations and require validated laboratory procedures, appropriate controls, and documented sample integrity.

## DNA Repair

The cellular processes that detect and correct damage or copying errors in DNA. Major pathways include base-excision, nucleotide-excision, mismatch, and double-strand-break repair.

---

## DNA Repair Mechanisms

Cellular processes that correct DNA damage caused by replication errors, chemicals, radiation, and reactive oxygen species. Mismatch repair (MMR): corrects base-base mismatches and insertion-deletion loops that escape proofreading during replication.

## DNA Replication

The semi-conservative process by which DNA duplicates before cell division, producing two identical daughter molecules each containing one original and one new strand.

## DNA Sequencing

Determination of the nucleotide order in DNA. Sanger sequencing uses chain termination and is useful for selected small targets. Next-generation sequencing (NGS) uses massively parallel sequencing, whole genome, whole exome, targeted panels.

## Do Not Resuscitate

DNR: order not to perform CPR. Can be combined with DNI (do not intubate).

## DOACs

Direct oral anticoagulants are a class of anticoagulant drugs that directly inhibit specific coagulation factors, providing an alternative to warfarin with more predictable pharmacokinetics and no routine monitoring.

## Dobutamine Stress Echocardiography

Pharmacological stress test using dobutamine (beta-1 agonist) to increase heart rate, contractility, and myocardial oxygen demand. New or worsening wall motion abnormalities indicate ischemia. Preferred when patients cannot exercise. Beta-blockers should be held before testing.

## Docusate

A stool softener (surfactant laxative) that increases water and fat incorporation into stool by lowering surface tension, facilitating defecation in patients who should avoid straining (post-MI, post-surgery, hemorrhoids) and for opioid-related constipation. Onset 12-72 hours.

## Domestic Violence

A pattern of coercive control and physical, sexual, psychological, or economic abuse by one intimate partner or household member against another. Forensic evaluation documents patterned injuries, defensive wounds, strangulation signs, burns, and injuries of differing ages.

## Dominant

Allele whose phenotype is expressed in heterozygotes. Autosomal dominant disorders: Huntington disease, marfan syndrome, achondroplasia. Requires only one copy for expression.

## Donor Insemination

A fertility treatment in which sperm from a donor (anonymous or known) is placed into a woman's vagina, cervix, or uterus to achieve pregnancy. Indications: male factor infertility (azoospermia, severe oligospermia), genetic disorders in the male partner, single women, and same-sex female couples.

## Donor Suitability Assessment

Comprehensive evaluation of a potential organ donor including medical history, laboratory testing, and organ function assessment to determine transplant eligibility.

## Donor Testing

Laboratory and clinical evaluation of potential organ donors for infectious diseases, malignancy, and organ function.

## Donovanosis

A chronic, progressive, ulcerative genital infection caused by the intracellular gram-negative bacterium *Klebsiella granulomatis* (formerly *Calymmatobacterium granulomatis*). Also known as granuloma inguinale.

### Synonyms:

granuloma inguinale.

## Dopamine Agonist

A class of medications that stimulate dopamine receptors (D1-D5), mimicking the effects of endoge-

---

nous dopamine.

### **Doppler Ultrasound**

Ultrasound technique using the Doppler effect to evaluate blood flow. Color Doppler: direction and velocity of flow (red = toward transducer, blue = away). Spectral Doppler: waveform analysis (arterial: pulsatile; venous: continuous). Pulsed-wave: measures flow at a specific depth.

### **Doppler Velocimetry**

Ultrasound measuring blood flow velocity in umbilical and fetal vessels. Assesses fetal well-being.

### **Doravirine**

A non-nucleoside reverse transcriptase inhibitor (NNRTI) used in combination antiretroviral therapy for HIV-1 infection. Doravirine binds to the HIV reverse transcriptase enzyme and inhibits its activity through a unique mechanism that maintains activity against strains resistant to first-generation NNRTIs.

### **Dorsal**

Relating to the back side of the body; synonym for posterior in human anatomy.

### **Dorsal Root Ganglion**

A swelling on the dorsal root of a spinal nerve containing the cell bodies of primary sensory neurons. Its pseudounipolar neurons convey peripheral sensory information to the spinal cord.

### **Dosage**

The amount and frequency of a drug administered to achieve a therapeutic effect while minimizing toxicity. Components: dose (amount, e.g., mg), dosing interval (frequency), route, and duration.

### **Dose**

Amount of substance administered. Factors: weight, age, renal/hepatic function, drug interactions. Toxic dose varies by substance and individual.

### **Dose-Limiting Toxicity**

An adverse effect of an anticancer treatment severe

enough to prevent further dose escalation or require dose reduction according to a predefined protocol. DLTs are used in early-phase clinical trials to estimate a tolerable dose.

### **Dose-Response Curve**

A graphical representation of the relationship between the dose of a drug and the magnitude of its biological effect. The x-axis represents dose (typically on a logarithmic scale), and the y-axis represents the response (as percentage of maximum effect).

### **Dose-Response Relationship**

The dose-response relationship describes the quantitative relationship between the dose of a drug and the magnitude of the pharmacological response it produces. This relationship is typically represented as a sigmoidal curve when response is plotted against the log of the dose.

### **Dosimetry**

Measurement and calculation of radiation dose. Patient dosimetry for therapy.

### **DOTATATE**

Somatostatin analog labeled with Ga-68 for PET imaging of neuroendocrine tumors.

### **Double Outlet Right Ventricle**

A congenital heart defect where more than 50% of both great arteries arise from the right ventricle, with a VSD as the only outlet from the left ventricle.

### **Double-Balloon Enteroscopy**

Advanced endoscopic technique using an enteroscope equipped with balloons at the tip of both the endoscope and an overtube allowing systematic advancement and visualization of the entire small bowel. The balloons are alternately inflated and deflated to anchor the bowel wall and advance the endoscope.

### **Douche**

A stream of water or solution directed into a body cavity, most commonly the vagina, for cleansing,

---

therapeutic, or contraceptive purposes.

### **Down Syndrome**

Trisomy 21, most common viable trisomy. Features: intellectual disability, characteristic facies (flat face, upslanting palpebral fissures), hypotonia, heart defects, increased risk of leukemia, Alzheimer disease. Maternal age is major risk factor.

#### **Synonyms:**

Trisomy 21 Syndrome

### **DPP-4 Inhibitors**

Dipeptidyl peptidase-4 inhibitors that prevent degradation of endogenous GLP-1 and GIP, enhancing incretin effects on insulin secretion. Examples include sitagliptin, saxagliptin, linagliptin, and alogliptin. They are well-tolerated with low hypoglycemia risk and weight neutrality. They have modest glucose-lowering effects.

### **Drain (Surgical)**

Tube for fluid evacuation. Types: closed suction (Jackson-Pratt, Hemovac), open (Penrose), pigtail. Indications: abscess, hematoma, seroma, biliary, urinary. Complications: infection, blockage, migration.

#### **Synonyms:**

Surgical

### **Drainage Procedures**

Image-guided drainage of fluid collections. Abscess, hematoma, biloma, urinoma. CT or ultrasound guidance.

### **Dreams (Geriatric)**

Sleep disturbances common. Nightmares, insomnia. Evaluate for delirium, depression, medications.

#### **Synonyms:**

Geriatric

### **DRESS Syndrome**

Drug Reaction with Eosinophilia and Systemic Symptoms, a severe, potentially life-threatening adverse drug reaction. Typically occurs 2-8 weeks after drug initiation (latency longer than SJS/TEN).

Causative drugs: anticonvulsants (phenytoin, carbamazepine, lamotrigine), allopurinol, sulfonamides, dapsone, minocycline.

### **Dressler Syndrome**

A delayed pericarditis occurring 2-10 weeks after myocardial infarction or cardiac surgery. It is an autoimmune-mediated inflammation caused by antibodies against myocardial antigens released during tissue injury. Symptoms include fever, pleuritic chest pain, and pericardial friction rub. ECG may show diffuse ST elevation.

#### **Synonyms:**

Post-Cardiac Injury Syndrome Postmyocardial Infarction Syndrome

### **Drift (Sit-To-Stand)**

A functional assessment of lower-limb strength, balance, and mobility. Timed sit-to-stand, chair-rise, and timed-up-and-go tests may be used; results are interpreted according to the person's age, baseline function, assistive devices, and clinical purpose.

#### **Synonyms:**

Sit-to-Stand

### **Driving Evaluation**

Assess driving fitness after neurological, musculoskeletal conditions. On-road testing, vehicle modifications.

### **Driving Rehabilitation**

Training for adaptive driving: hand controls, left-foot accelerator, other modifications.

### **Drooling**

Unintentional escape of saliva from the mouth caused by excess production, impaired swallowing, poor lip closure, or neurologic and developmental disorders.

### **Droplet Precautions**

Infection control measures used for pathogens transmitted through respiratory droplets. Precautions include surgical masks, patient placement in single rooms, and spatial separation. Droplet precautions

---

are used for influenza, pertussis, and meningococcal infections. The distance for spatial separation is typically 3-6 feet.

### **Drowning**

Respiratory impairment from submersion/immersion in liquid. Drowning can be fatal or non-fatal. Pathophysiology: laryngospasm followed by aspiration of fluid, surfactant washout, pulmonary edema, and hypoxemia. Fresh water: washes out surfactant, causes alveolar collapse. Salt water: draws fluid into alveoli (pulmonary edema).

#### **Synonyms:**

Wet Dry Drowning (Drowning)

### **Drowning (Dry/Wet Signs)**

Respiratory impairment caused by submersion or immersion in liquid. So-called dry and wet signs are unreliable for determining the cause of death.

#### **Synonyms:**

Dry/Wet Signs

### **Drowsiness**

An abnormally strong tendency to fall asleep or reduced alertness, caused by insufficient sleep, medicines, substances, metabolic illness, sleep disorders, or neurologic disease.

### **Drug Allergy**

An adverse immune-mediated reaction to a medication, representing a hypersensitivity response that is distinct from side effects, toxicities, and idiosyncratic reactions.

### **Drug Antagonism**

An interaction where one drug blocks or decreases the effectiveness of another, such as when an antidote blocks a poison.

### **Drug Bioavailability**

The fraction of an administered drug that reaches systemic circulation unchanged. Oral bioavailability is affected by first-pass metabolism, absorption, and drug formulation. IV administration has 100% bioavailability. Bioavailability influences drug dos-

ing and route selection.

### **Drug Classification Systems**

Systems that group medicines according to properties such as their chemical structure, mechanism of action, therapeutic use, or effects on the body.

### **Drug Clearance**

The volume of plasma completely cleared of drug per unit time. Hepatic clearance depends on hepatic blood flow and enzyme activity; renal clearance depends on glomerular filtration, tubular secretion, and reabsorption. Total clearance determines maintenance dose.

### **Drug Dependence**

A state of physiological or psychological adaptation to a drug, characterized by a withdrawal syndrome upon discontinuation or dose reduction. Physical dependence: the body has adapted to the presence of the drug, and abrupt cessation produces a predictable withdrawal syndrome specific to the drug class.

### **Drug Hypersensitivity Reactions**

Immune-mediated adverse reactions to medicines. They may be immediate or delayed and can range from a mild rash to severe systemic illness.

### **Drug Hypersensitivity Syndrome**

A severe delayed drug reaction occurring 2 to 8 weeks after drug initiation. It presents with fever, rash (morbilliform, facial edema, exfoliative dermatitis), lymphadenopathy, eosinophilia, and internal organ involvement (hepatitis most common, also nephritis, pneumonitis, myocarditis).

### **Drug Interaction**

A change in the effect or concentration of one medicine caused by another medicine, food, substance, or disease.

### **Drug Metabolism Pharmacogenomics**

Pharmacogenomics of drug metabolism examines how genetic variations affect individual responses to

---

drugs, enabling personalized medicine approaches to prescribing.

### **Drug Overdose**

Excessive ingestion of medication. Common: opioids, benzodiazepines, acetaminophen, salicylates, tricyclic antidepressants. Management: ABCs, activated charcoal, specific antidotes (naloxone, flumazenil, N-acetylcysteine), supportive care.

### **Drug Overdose Management**

Management of poisoning begins with assessment and support of airway, breathing, circulation, and neurologic status. Decontamination, enhanced elimination, and specific antidotes are considered only when appropriate for the substance, timing, and patient.

### **Drug Reaction With Eosinophilia And Systemic Symptoms**

A severe hypersensitivity syndrome characterized by fever, rash, lymphadenopathy, and multiorgan involvement triggered by medications, requiring prompt drug cessation and systemic corticosteroids.

### **Drug Resistance**

The ability of microorganisms, cancer cells, or parasites to survive and proliferate despite exposure to drugs that were previously effective.

### **Drug Screening**

Urine, blood, hair testing for substances of abuse. Panels: opiates, cocaine, amphetamines, cannabinoids, PCP, benzodiazepines, barbiturates. False positives possible. Confirmation by GC/MS or LC-MS/MS.

### **Drug Testing**

Laboratory analysis of biological specimens to detect drugs, metabolites, or poisons, used in clinical, workplace, sports, and forensic contexts. Specimens include blood, urine, oral fluid, hair, and postmortem tissues.

### **Drug Therapeutics**

The use of medicines to prevent, diagnose, or treat disease while balancing expected benefit and potential harm.

### **Drug Tolerance**

A decreased pharmacological response to a drug after repeated administration, requiring dose escalation to achieve the same effect.

### **Drug Toxicity**

Harmful effects caused by a medicine or its metabolites. Toxicity may result from excessive exposure, accumulation, interactions, or an unpredictable individual reaction.

### **Drug Withdrawal**

A clinically significant syndrome or return of symptoms caused by abrupt reduction or cessation of a drug after physiologic adaptation or dependence has developed. Tapering is required for some medications to reduce withdrawal and rebound effects.

### **Drug-Drug Interactions**

When one drug alters the pharmacokinetics or pharmacodynamics of another. Pharmacokinetic interactions affect absorption, distribution, metabolism, or excretion (e.g., CYP inhibitors increasing warfarin levels).

### **Drug-Eluting Balloon (Vascular)**

A vascular balloon catheter that delivers a medicine to the vessel wall during dilation, without leaving a permanent implant.

**Synonyms:**

Vascular

### **Drug-Eluting Stent**

A vascular stent that slowly releases a medicine to reduce tissue growth and the risk of restenosis after angioplasty.

### **Drug-Eluting Stent (Vascular)**

A vascular stent coated with medicine that is released gradually to reduce tissue growth and recur-

---

rent narrowing.

**Synonyms:**

Vascular

### **Drug-Facilitated Sexual Assault**

Sexual contact occurring when a person's capacity to consent or resist is impaired by alcohol, medication, or another drug, whether administered covertly or knowingly consumed. Medical care includes urgent safety assessment, treatment of injuries, toxicology sampling when indicated, prophylaxis, and trauma-informed support.

### **Drug-Induced Autoimmunity**

Drug-induced lupus (DIL): procainamide, hydralazine, isoniazid, minocycline, TNF inhibitors, anti-TNF; anti-histone antibodies, positive ANA, negative anti-dsDNA/anti-Sm; symptoms resolve after drug cessation.

### **Drug-Induced Liver Injury**

Liver damage caused by a medicine, herbal product, or dietary supplement. It may produce abnormal liver tests, hepatitis, cholestasis, or liver failure; evaluation requires considering the exposure, timing, competing causes, and severity.

### **Drusen**

Yellowish-white deposits of extracellular material that accumulate beneath the retinal pigment epithelium between the retinal pigment epithelium basement membrane and Bruch membrane, and they are the hallmark clinical finding in dry age-related macular degeneration.

### **Dry Eye Disease**

Dry eye disease, also known as keratoconjunctivitis sicca, is a multifactorial disorder of the ocular surface characterized by loss of homeostasis of the tear film, resulting in symptoms of ocular discomfort, visual disturbance, and tear film instability, with potential damage to the ocular surface.

**Synonyms:**

keratoconjunctivitis sicca, is a multifactorial disorder.

### **Dry Eye Syndrome**

A multifactorial disease of the ocular surface characterized by tear film instability, hyperosmolarity, and inflammation. Aqueous-deficient dry eye: Sjogren syndrome (autoimmune), non-Sjogren (lacrimal gland dysfunction, age). Evaporative dry eye: meibomian gland dysfunction (most common), incomplete blink, environmental factors.

### **Dry Powder Inhaler**

A breath-actuated inhaler delivering powdered medication. Does not require hand-breath coordination. Requires adequate inspiratory flow. Examples include Advair Diskus and Spiriva HandiHaler.

### **Dry Skin**

Abnormally dry, rough, or scaly skin caused by reduced moisture and disruption of the skin barrier. It is common with aging, low humidity, frequent washing, and eczema and may cause itching or fissuring.

### **Dry Socket (Alveolar Osteitis)**

A painful postoperative complication of tooth extraction, most commonly occurring after the removal of mandibular third molars (wisdom teeth). It is caused by the premature dissolution or loss of the blood clot in the extraction socket, exposing the underlying alveolar bone and nerve endings to the oral cavity.

**Synonyms:**

Alveolar Osteitis

### **DTaP Vaccine**

Diphtheria, Tetanus, and acellular Pertussis vaccine given at 2, 4, 6, and 15-18 months, and 4-6 years. Protects against three serious bacterial diseases. Diphtheria causes respiratory and cardiac complications. Tetanus causes lockjaw and muscle rigidity. Pertussis causes whooping cough, most severe in young infants.

### **Dual Antiplatelet Therapy**

The combination of aspirin and a P2Y<sub>12</sub> inhibitor (clopidogrel, prasugrel, or ticagrelor) for prevention of thrombotic events after acute coronary syndrome

---

and percutaneous coronary intervention. Duration varies: 1 month after bare-metal stent, 6-12 months after drug-eluting stent, and 12 months after ACS.

### **Dual-Energy CT**

CT using two different energy spectra. Material differentiation, virtual non-contrast images, gout detection.

### **Dubin-Johnson Syndrome**

An inherited disorder of bilirubin excretion causing predominantly conjugated hyperbilirubinemia and intermittent mild jaundice, usually without major liver dysfunction. mutations in the ABCC2 gene encoding the multidrug resistance-associated protein 2 (MRP2), which transports conjugated bilirubin from hepatocytes into bile.

### **Duchenne Muscular Dystrophy**

An X-linked recessive neuromuscular disorder caused by mutations in the dystrophin gene (DMD gene) on chromosome Xp21.2, resulting in absent or severely reduced dystrophin protein, which is essential for maintaining the structural integrity of the sarcolemma during muscle contraction.

### **Ductal-Dependent Lesions**

Congenital heart defects that require the ductus arteriosus to remain patent for adequate systemic or pulmonary blood flow. Includes pulmonary atresia, critical aortic stenosis, coarctation, hypoplastic left heart syndrome, and transposition of the great arteries.

### **Ductus Arteriosus**

A fetal blood vessel connecting the pulmonary artery to the descending aorta, allowing blood to bypass the non-functioning fetal lungs. In utero, the ductus arteriosus is kept patent by prostaglandin E2 and low oxygen tension.

### **Dumping Syndrome**

Rapid gastric emptying of hypertonic contents into the small bowel after gastrectomy or gastric bypass surgery. Early dumping occurs within thirty minutes with vasomotor symptoms including flushing,

palpitations, diarrhea, and dizziness from fluid shifts into the intestinal lumen.

### **Duodenal Atresia**

A congenital obstruction of the duodenum caused by failure of recanalization during the 8th-10th week of gestation. Associated with Down syndrome (30%), polyhydramnios (due to impaired fetal swallowing of amniotic fluid), and other anomalies (VACTERL, congenital heart disease, annular pancreas, malrotation).

### **Duodenal Perforation**

Full-thickness breach of the duodenal wall, most commonly caused by penetrating peptic ulcer disease, trauma, or iatrogenic injury during endoscopy. Presents with sudden severe epigastric pain, board-like abdominal rigidity, and peritonitis. Free air under the diaphragm on upright chest radiograph is diagnostic.

### **Duodenal Ulcer**

Peptic ulcer in the duodenal mucosa strongly associated with *H. pylori* infection. Presents with epigastric pain relieved by food typically occurring several hours after meals and at night. Complications include hemorrhage, perforation, and gastric outlet obstruction. Diagnosis is by upper endoscopy.

### **Duodenitis**

Inflammation of the duodenal mucosa, caused by *Helicobacter pylori* infection, acid-related disease, non-steroidal anti-inflammatory drugs, infection, coeliac disease, or inflammatory bowel disease. Symptoms may include epigastric pain, nausea, vomiting, and gastrointestinal bleeding.

### **Duodenum**

The first part of the small intestine, extending from the pylorus to the jejunum; it receives bile and pancreatic secretions and is a common site of peptic ulcer disease.

### **Duplex Surveillance**

Scheduled clinical and ultrasound monitoring of an artery, vein, graft, stent, aneurysm, or dialysis

---

access to detect restenosis, thrombosis, endoleak, or other failure before symptoms or limb threat develop.

### **Duplex Ultrasound**

An ultrasound examination that combines grayscale imaging of anatomy with Doppler assessment of blood flow. It can evaluate vessels, organs, and selected soft tissues.

### **Duplication**

Presence of extra copy of chromosomal segment. Can cause gene dosage effects. Examples: Charcot-Marie-Tooth disease type 1A (PMP22 duplication).

### **Dupuyten's Contracture**

A fibrosing disorder of the palm that causes progressive flexion contractures of one or more fingers.

### **Dupuytren Contracture**

Dupuytren contracture is progressive shortening of palmar fascia that pulls one or more fingers into flexion and can limit hand function. cords, and contractures of the fingers, most commonly affecting the ring and small fingers.

#### **Synonyms:**

Dupuytren's Contracture (Dupuytren Contracture)

### **Dura Mater**

The outermost, thickest meningeal layer, a tough fibrous membrane. In the cranium it is two layers: periosteal (outer, adherent to skull) and meningeal (inner), which separate to form dural venous sinuses (e.g., superior sagittal, cavernous). Dural folds: falx cerebri, tentorium cerebelli, falx cerebelli.

### **Durable Power Of Attorney**

A legal authorization allowing a designated person to act or make decisions for another person when specified conditions are met. In healthcare, it may appoint a healthcare proxy.

### **Dural Venous Sinuses**

Venous channels between dural layers, draining brain blood and CSF from the subarachnoid space

into the internal jugular veins. Major sinuses: superior sagittal, transverse, sigmoid, cavernous, straight. Valveless with bidirectional flow possible.

### **DVT**

Deep venous thrombosis, the formation of a blood clot in a deep vein, most commonly in the lower extremities.

### **DVT Prevention**

Measures used to reduce the risk of deep venous thrombosis, such as early movement, mechanical compression, and anticoagulant medicine when clinically appropriate.

### **Dwarfism**

Short stature resulting from a medical condition, most commonly achondroplasia (the most common form of skeletal dysplasia, caused by gain-of-function mutation in FGFR3, presenting with rhizomelic limb shortening, macrocephaly, frontal bossing, and trident hands).

### **DWI FLAIR Mismatch**

Diffusion-weighted imaging (DWI) and fluid-attenuated inversion recovery (FLAIR) MRI sequences are used together to estimate the age of an ischemic stroke lesion and guide treatment decisions.

### **Dx**

A common abbreviation for diagnosis or diagnostic assessment.

### **DXA Scan (Dual-Energy X-Ray Absorptiometry)**

An imaging test that estimates bone mineral density, commonly at the lumbar spine and hip. It is used to assess fracture risk and osteoporosis. T-scores are generally used for postmenopausal women and older men, whereas Z-scores and clinical context are important in younger people.

#### **Synonyms:**

Dual-Energy X-ray Absorptiometry

---

## Dying

The process of progressive physical decline that occurs as a person approaches death, often accompanied by psychological, social, and spiritual changes.

## Dysarthria

Impaired clarity, strength, or coordination of speech caused by dysfunction of the muscles or nervous pathways used for speaking. components of speech production, including the lips, tongue, palate, vocal cords, and respiratory muscles.

## Dysautonomia

Dysfunction of the autonomic nervous system that can affect blood pressure, heart rate, sweating, temperature regulation, digestion, bladder function, or sexual function. It may be primary or secondary to another disease, medication, or injury.

## Dysbiosis

An alteration in microbiome composition, diversity, or function relative to a healthy state, permitting overgrowth of pathobionts or loss of beneficial microbes. Causes include antibiotics, dietary change, stress, and infection. It is associated with inflammatory bowel disease, obesity, allergy, and *Clostridioides difficile* colitis.

## Dyscalculia

A persistent difficulty with understanding or manipulating numerical quantities and performing arithmetic that is not explained by inadequate instruction alone. It may occur as a developmental learning disorder or result from acquired brain injury, particularly involving dominant parietal networks.

## Dyscrasia

An historic term broadly referring to any abnormal condition of the blood or bone marrow, now used primarily in the context of plasma cell dyscrasias (also called monoclonal gammopathies).

### Synonyms:

monoclonal gammopathies).

## Dysentery

Severe diarrheal illness with blood and mucus in stool, typically caused by *Shigella*, *Salmonella*, *Campylobacter*, or *Entamoeba histolytica*. Presents with frequent bloody stools, abdominal cramps, tenesmus, and fever. Diagnosis: stool culture, microscopy, PCR.

## Dysesthesia

An unpleasant, abnormal sensation produced by a normally non-painful stimulus, or an unpleasant, exaggerated response to a normal stimulus. It is distinguished from paresthesia (which is simply an abnormal sensation that may or may not be unpleasant) by its consistently unpleasant quality.

## Dysgeusia

Distortion, reduction, or loss of the normal sense of taste. It may result from oral or nasal disease, viral infection, neurological injury, nutritional deficiency, systemic illness, or medication exposure and may occur with altered smell, dry mouth, or mucosal inflammation.

## Dysgraphia

A learning disorder involving persistent difficulty with handwriting, spelling, written expression, or the motor and language skills required for writing. spelling, written composition, or the motor and language processes required for writing. It may occur alone or with other learning, language, attention, or neurological disorders.

## Dyslexia

A specific learning disorder with neurobiological origin, characterized by difficulties with accurate and fluent word recognition, spelling, and decoding ability, despite adequate intelligence, motivation, and educational opportunity. Affects approximately 5–10% of the population.

### Synonyms:

Reading Disability, Specific Reading Disability

## Dyslipidemia

An abnormal concentration or composition of circu-

---

lating lipoproteins, including elevated low-density lipoprotein cholesterol, elevated triglycerides, reduced high-density lipoprotein cholesterol, or mixed abnormalities.

### **Dysmenorrhea**

Painful menstruation, often causing cramping pelvic pain. See Menstrual Cramps.

### **Dactylomegaly**

Abnormal enlargement of a finger or toe, which may occur as an isolated finding or as part of an endocrine, skeletal, vascular, or inflammatory disorder.

### **Dracunculosis**

Infection caused by the parasitic nematode *Dracunculus medinensis*, acquired by drinking water containing infected copepods. It classically produces a painful blister and emergence of a long adult worm through the skin.

### **Diapedesis**

Movement of blood cells, especially leukocytes, through intact vessel walls into surrounding tissue.

### **Dorsal Blocking Splint**

A hand splint that holds the wrist and fingers in a protective position, often used after flexor-tendon repair to limit extension and protect healing tendons.

### **Dysmenorrhoea**

Painful menstruation, classified as primary (no identifiable pelvic pathology) or secondary (underlying structural or inflammatory condition).

### **Dyspareunia**

Painful sexual intercourse.

### **Dyspepsia**

Chronic or recurrent pain or discomfort centered in the upper abdomen. Organic causes: peptic ulcer disease, GERD, gastritis, gastric cancer. Functional dyspepsia is diagnosed after exclusion of organic

pathology with normal upper endoscopy. Rome IV criteria define subtypes: epigastric pain syndrome and postprandial distress syndrome.

### **Dysphagia**

Difficulty swallowing, classified as oropharyngeal (difficulty initiating a swallow, choking, coughing, nasal regurgitation) or esophageal (sensation of food sticking retrosternally).

#### **Synonyms:**

Difficulty Swallowing Trouble Swallowing

### **Dysphagia (Geriatric)**

Difficulty swallowing, common in elderly. Causes: neurological (stroke, Parkinson's), structural (cancer, stricture), muscular (presbyesophagus), medications. Symptoms: coughing with eating, choking, pocketing food, weight loss, aspiration. Assessment: clinical exam, videofluoroscopy, endoscopy.

#### **Synonyms:**

Geriatric

### **Dysphagia Diet**

A texture- and consistency-modified diet prescribed after assessment of swallowing safety. Liquids and foods may be thickened or altered to reduce aspiration risk while maintaining adequate energy, protein, hydration, and patient acceptability.

### **Dysphagia Rehabilitation**

Therapy to improve safe swallowing and nutrition in a person with dysphagia. It may include swallow exercises, compensatory techniques, diet modification, and education based on the cause and swallowing assessment.

### **Dysphasia**

A language disorder caused by damage to the language-dominant hemisphere of the brain (typically left), involving difficulty with expression, comprehension, reading, or writing. Dysphasia (often used interchangeably with aphasia): partial loss of language function.

---

## Dysphonia

An abnormal voice quality encompassing hoarseness, breathiness, roughness, vocal fatigue, pitch breaks, and strained or whispered speech. It is organic when due to structural laryngeal pathology (nodules, polyps, laryngitis, laryngeal cancer) and functional when due to voice misuse, muscle tension dysphonia, or psychogenic causes.

## Dysplasia

Disordered cellular growth and maturation characterized by structural abnormalities within a tissue, representing a pre-neoplastic condition that may progress to invasive carcinoma. The changes may include variation in cell size and shape, nuclear atypia, abnormal maturation, and architectural disorganization. Clinical significance depends on the organ, grade, persistence of the causative stimulus, and evidence of invasion.

## Desmoplasia

Formation of dense fibrous connective tissue in response to invasive neoplasia, chronic inflammation, or tissue injury. The reaction is produced by activated stromal cells and extracellular-matrix deposition surrounding or infiltrating a lesion. Desmoplasia is especially common around invasive carcinomas and may make a tumor firm, tethered, or difficult to distinguish from scar tissue. Its presence is interpreted with the cellular morphology, location, and clinical findings to determine whether it represents a tumor-associated stromal response.

## Dysplastic Nevus

Atypical nevus: a melanocytic lesion with clinical and histologic atypia, larger (>5-6 mm), with irregular borders, variable color (pink-tan-brown), and a macular/papular component; often multiple in the dysplastic nevus syndrome (familial atypical mole-melanoma, FAMMM).

## Dyspnea

The subjective sensation of difficult or uncomfortable breathing. See Shortness of Breath. It may result from cardiopulmonary, metabolic, neuromuscular, or psychological causes.

## Dyspnea On Exertion

Shortness of breath precipitated by physical activity, a cardinal symptom of cardiac and pulmonary disease. Cardiac causes: heart failure, coronary artery disease (angina equivalent), valvular disease; pulmonary: COPD, asthma, ILD, anemia, deconditioning. Quantified by NYHA functional class (heart failure) and mMRC scale (dyspnea).

## Dyspnoea

The subjective sensation of difficult or labored breathing. See Shortness of Breath.

## Dysthymia (Persistent Depressive Disorder)

A chronic form of depression with depressed mood for most of the day, more days than not, for  $\geq 2$  years ( $\geq 1$  year in children/adolescents). Symptoms: poor appetite or overeating, insomnia or hypersomnia, low energy, low self-esteem, poor concentration, and hopelessness.

### Synonyms:

Persistent Depressive Disorder

## Dystonia

A movement disorder characterized by sustained or intermittent muscle contractions causing abnormal, often repetitive, movements and postures.

## Dystrophic Calcification

The deposition of calcium phosphate salts in damaged, necrotic, or degenerating tissues despite normal serum calcium levels. It occurs in areas of tissue injury, inflammation, or chronic degeneration where the local tissue environment favors calcium precipitation.

## Dysuria

Painful, burning, or uncomfortable sensation experienced during urination. Most commonly indicates inflammation or infection of the lower urinary tract. Causes in females: acute cystitis, urethritis (Chlamydia trachomatis, Neisseria gonorrhoeae), vaginitis (Candida, Trichomonas), and vulvar atrophy.

---

### **Dacryocystocele**

A cystic swelling caused by blockage and dilation of the tear-duct system, usually near the inner corner of the eye.

### **Demyelination**

Loss or damage of the myelin sheath that normally insulates nerve fibers and speeds nerve signaling.

### **Dental Calculus**

Hardened dental plaque formed when mineral salts accumulate on teeth.

### **Denys-Drash Syndrome**

A rare genetic disorder associated with abnormal kidney development, nephropathy, and an increased risk of Wilms tumor.

### **Dermatographic Urticaria**

A form of hives in which scratching or pressure causes raised, itchy lines on the skin.

### **Deuteranopia**

Red-green color blindness caused by absence or severe dysfunction of green-sensitive cone photopigments.

### **Diabetic Angiopathy**

Blood-vessel damage caused by diabetes, affecting small or large vessels.

### **Diastolic Murmur**

A heart murmur heard while the heart relaxes between contractions.

### **Distal Pancreatectomy**

Surgical removal of the body or tail of the pancreas, usually with preservation of the pancreatic head.

### **DNA Damage**

A chemical or structural change in DNA that can interfere with gene function or replication.

### **Duane Retraction Syndrome**

A congenital eye-movement disorder in which abnormal eye-muscle innervation limits horizontal movement and may cause the eye to retract.

### **Duodenal Obstruction**

Partial or complete blockage that prevents contents from passing through the duodenum.

### **Dysfibrinogenemia**

An inherited or acquired disorder in which fibrinogen is abnormal and blood clotting may be impaired or excessive.

### **D2 Receptor**

A dopamine receptor involved in movement, motivation, reward, and some psychiatric disorders.

### **De Quervain's Tendonitis**

Painful inflammation or narrowing of the tendons on the thumb side of the wrist.

### **Declarative Memory**

Memory for facts and events that can be consciously recalled.

### **Decongestant**

A medicine that reduces swelling of the nasal lining and relieves nasal congestion.

### **Deep Sleep**

The deepest stage of non-rapid-eye-movement sleep, during which arousal is difficult and physical restoration occurs.

### **Delayed Sleep Phase Syndrome**

A circadian-rhythm disorder in which sleep and waking occur substantially later than desired.

### **Dementia Pugilistica**

A progressive brain disorder associated with repeated head trauma, historically described in some professional boxers.

---

### **Demineralization**

Loss of mineral from a tissue, such as tooth enamel or bone, which may weaken the tissue.

### **Dermal Papilla**

A structure at the base of a hair follicle that supplies signals and nutrients important for hair growth.

### **Detrusor Instability**

Involuntary bladder-muscle contractions that can cause urgency and urge incontinence.

### **Detrusor Muscle**

The smooth muscle in the bladder wall that contracts to expel urine.

### **Detumescence**

The return of an erectile tissue to its non-erect state.

### **Diastolic Blood Pressure**

The pressure in the arteries while the heart relaxes between contractions.

### **Diastolic Heart Failure**

Heart failure in which impaired ventricular relaxation or increased stiffness limits filling of the heart.

### **Dietary Fiber**

Plant material that is not fully digested and supports bowel function and other aspects of health.

### **Digital Rectal Examination**

Examination of the rectum and nearby structures using a lubricated, gloved finger.

### **Digitalis**

A group of cardiac glycosides, including digoxin, that can increase cardiac contraction and affect heart rhythm.

### **Dihydrotestosterone**

A potent androgen formed from testosterone that contributes to prostate growth and male sexual development.

### **Direct Transmission**

Spread of an infectious organism through immediate contact or short-range respiratory droplets from an infected source.

### **Discoid Lupus Erythematosus**

A chronic form of cutaneous lupus that causes persistent, inflamed skin plaques that may scar.

### **Diverticulum**

A pouch-like projection from the wall of a hollow organ, especially the intestine.

### **Dorsal Kyphosis**

Excessive forward curvature of the upper spine, often associated with vertebral fractures or degenerative change.

### **Double-Blind Study**

A clinical study in which neither participants nor the investigators assessing outcomes know the assigned treatment group.

### **Dry-Powder Inhaler**

A device that delivers powdered medicine to the lungs when the user inhales through it.

### **Dual-Energy X-Ray Absorptiometry**

An imaging test that measures bone mineral density, commonly abbreviated DEXA or DXA.

### **Dupuytren's Disease**

Thickening and shortening of tissue in the palm that progressively bends one or more fingers toward the palm.

### **Delayed Sleep Phase**

A circadian-rhythm disorder in which a person falls asleep and wakes later than desired; also called delayed sleep-wake phase disorder.

#### **Synonyms:**

delayed sleep-wake phase disorder. Delayed Sleep-Wake Phase Sleep Disorder DSPS DSWPD

---

### **Dermatographia**

A form of physical urticaria in which scratching or pressure causes raised, red, itchy lines on the skin.

### **Desmoplastic Small Round Cell Tumors**

Rare aggressive tumors that usually arise in the abdomen or pelvis and primarily affect children and young adults.

#### **Synonyms:**

DSRCT

### **Diabetic Coma**

A state of profound unconsciousness caused by a severe diabetes-related disturbance in blood glucose or metabolism.

### **Diabetic Hypoglycemia**

An abnormally low blood glucose level in a person with diabetes, often caused by insulin or other glucose-lowering medicines.

### **Diffuse Large B-Cell Lymphoma**

A fast-growing cancer of B lymphocytes and the most common type of non-Hodgkin lymphoma.

### **Diffuse Midline Glioma**

An aggressive brain or spinal-cord tumor arising in midline structures, often in children.

### **Dislocated Shoulder**

Displacement of the upper arm bone from the shoulder joint.

### **Double Uterus**

A congenital condition in which the uterus develops as two separate cavities or two uteruses.

### **Double-Outlet Right Ventricle**

A congenital heart defect in which both major arteries arise mainly from the right ventricle.

### **Dry Macular Degeneration**

The more common form of age-related macular degeneration, involving gradual damage to the macula without abnormal blood-vessel growth.

#### **Synonyms:**

Dry Age-Related Macular Degeneration Dry AMD Macular Degeneration, Dry

### **Dry Eyes**

Irritation or discomfort caused by inadequate tear production or excessive tear evaporation.

#### **Synonyms:**

Decreased Tear Production Keratoconjunctivitis Sicca (Dry Eyes) Tears, Decreased Production

### **Dry Mouth**

A condition in which the mouth does not produce enough saliva; also called xerostomia.

#### **Synonyms:**

xerostomia.

### **Dural Arteriovenous Fistulas**

Abnormal connections between arteries and veins in the dura mater surrounding the brain or spinal cord.

### **Dyshidrosis**

A skin disorder causing small, intensely itchy blisters on the palms, sides of the fingers, or soles.

#### **Synonyms:**

Eczema, Dyshidrotic

### **Ductal Carcinoma In Situ**

A noninvasive breast cancer in which abnormal cells remain within the milk ducts; commonly abbreviated DCIS.

### **Dermabrasion**

A procedure that mechanically removes superficial layers of skin to improve selected scars, wrinkles, pigment changes, or lesions.

### **Dermatology**

The medical specialty concerned with the diagnosis and treatment of diseases of the skin, hair, nails, and mucous membranes.

### **Dermatome**

A surgical instrument used to remove a thin layer

---

of skin for grafting. The term also describes a band of skin supplied by one spinal nerve.

### **Dermatoplasty**

Surgical repair or reconstruction of the skin, often using tissue rearrangement or a skin graft.

### **Desensitization**

A treatment that gradually reduces an abnormal immune response by giving increasing or controlled exposure to a specific allergen.

### **Diaphoresis**

Excessive sweating, which may occur with heat, exertion, fever, pain, low blood sugar, or other medical conditions.

### **Diarthrosis**

A freely movable joint, usually a synovial joint, in which the bones are separated by a joint cavity.

### **Diencephalon**

The part of the brain between the cerebrum and brainstem that includes the thalamus and hypothalamus.

### **Digestive System**

The organs that digest food, absorb nutrients and water, and eliminate solid waste, including the gastrointestinal tract and accessory organs.

### **Digit**

A finger or toe.

### **Dilation And Evacuation**

A procedure in which the cervix is dilated and pregnancy tissue is removed from the uterus using suction and surgical instruments.

### **Diopter**

A unit of optical power equal to the reciprocal of the focal length in meters.

### **Doppler Echocardiography**

Echocardiographic imaging that uses Doppler ultra-

sound to assess the direction and speed of blood flow through the heart and great vessels.

### **Duodenal Bulb**

The first, expanded portion of the duodenum immediately beyond the pylorus.

### **Duodenal Papilla**

A mucosal projection in the duodenum where the bile duct and pancreatic duct, usually through the major papilla, empty into the intestine.

### **Dukes Classification**

An older staging system for colorectal cancer based mainly on how far the tumor has extended through the bowel wall and into lymph nodes or distant sites.

### **Dynamometer**

An instrument used to measure force, commonly hand-grip strength or muscle strength.

### **Dysmetria**

Inability to control the range, force, or speed of a voluntary movement, commonly caused by cerebellar dysfunction.

### **Dacryolithiasis**

Formation of a stone or concretion within the lacrimal drainage system, which may cause excessive tearing, discharge, recurrent dacryocystitis, or obstruction.

### **Dakin Solution**

A dilute sodium hypochlorite solution used as a topical antiseptic for selected contaminated or infected wounds. Concentration and exposure time must be controlled because stronger solutions can injure viable tissue.

### **Danon Disease**

A rare X-linked lysosomal storage disorder caused by LAMP2 mutations, characterized by cardiomyopathy, skeletal-muscle weakness, and variable intellectual or retinal involvement.

---

## Decannulation

Removal of a cannula or tube, especially a tracheostomy tube, after the patient can maintain a safe airway and adequate breathing, secretion clearance, and oxygenation.

## Deep Brain Stimulation

A treatment in which implanted electrodes deliver controlled electrical impulses to selected brain regions. It is used for conditions such as Parkinson disease, essential tremor, and some forms of dystonia.

## Deiodinase

An enzyme that removes iodine atoms from thyroid hormones, thereby activating or inactivating thyroxine and triiodothyronine and regulating local thyroid-hormone action.

## Dejerine-Roussy Syndrome

Central post-stroke pain caused by a lesion of the thalamus or related sensory pathways. It may produce persistent contralateral pain, burning, abnormal sensation, or pain from normally nonpainful stimuli.

## De Lange Syndrome

A congenital developmental disorder, also called Cornelia de Lange syndrome, involving characteristic facial features, growth and developmental delay, limb abnormalities of variable severity, and intellectual disability.

### Synonyms:

Cornelia de Lange syndrome, involving characteristic facial features, growth and developmental delay, limb abnormalities of variable severity, and intellectual disability.

## Dry Socket

Painful inflammation of a tooth socket caused by loss or failure of the blood clot after tooth extraction. Also called alveolar osteitis.

### Synonyms:

alveolar osteitis.

## Death Rattle

Noisy, rattling breathing caused by secretions accumulating in the throat or upper airways, often occurring near the end of life when swallowing and coughing weaken.

## Decalcification

Loss of calcium salts from bone, teeth, or other mineralized tissue. In teeth it may weaken enamel; in bone it can contribute to reduced strength.

## Deglutition (Swallowing)

The coordinated process of moving food, liquid, or saliva from the mouth through the pharynx and esophagus into the stomach.

### Synonyms:

Swallowing

## Dehiscence

Separation or reopening of the edges of a wound or surgical closure. Wound dehiscence may be superficial or involve deeper tissues and requires clinical assessment.

## Diathesis

A predisposition or susceptibility to developing a particular disease, symptom, or physiological response, such as a bleeding diathesis.

## Diplegia

Paralysis or marked weakness affecting corresponding parts on both sides of the body, classically the legs more than the arms in spastic diplegia.

## Disarticulation

Amputation performed through a joint rather than by cutting through the shaft of a bone.

## Dressing

Material applied to a wound to protect it, absorb exudate, maintain a suitable healing environment, or deliver local treatment.

## Drip (Intravenous Infusion)

Controlled administration of fluid, blood, nutrients,

---

or other substances directly into a vein through a cannula or catheter.

**Synonyms:**

Intravenous Infusion

**Dyskinesia**

Abnormal, often involuntary movement that may be excessive, repetitive, irregular, or purposeless. Causes include neurological disease and medication effects.

**Dyspraxia (Developmental Coordination Disorder)**

Difficulty planning and coordinating voluntary movements that interferes with daily activities, learning, or motor skills and is not explained by a primary muscle or sensory disorder.

**Synonyms:**

Developmental Coordination Disorder

**Dysreflexia (Autonomic Dysreflexia)**

A potentially life-threatening episode of uncontrolled autonomic activity, usually in people with spinal-cord injury above T6, triggered by stimuli such as bladder or bowel distension.

**Synonyms:**

Autonomic Dysreflexia

**Dystocia**

Difficult or abnormal labor caused by problems with uterine contractions, the fetus, or the maternal pelvis and soft tissues.

**Dystrophy**

Abnormal development, growth, maintenance, or degeneration of a tissue or organ, often reflecting an inherited or metabolic disorder. The term is used in conditions such as muscular dystrophy, corneal dystrophy, retinal dystrophy, and nail dystrophy. Clinical effects depend on the affected tissue and may include progressive weakness, visual impairment, structural fragility, or loss of function. Diagnosis generally combines clinical examination with laboratory, imaging, electrophysiologic, genetic, or histopathologic studies as appropriate.

**Dating Ultrasound**

An ultrasound examination, usually performed in early pregnancy, used to estimate gestational age and calculate the expected date of delivery. First-trimester crown-rump length is generally the most accurate ultrasound measurement for dating.

**Synonyms:**

Pregnancy dating scan; gestational-age ultrasound.

**Daidzein**

A naturally occurring isoflavone found in soy and other legumes that can be converted by intestinal bacteria into related compounds.

**Debility**

A state of weakness or loss of strength, often associated with illness, aging, or prolonged inactivity.

**Synonyms:**

Weakness

**Decoction**

A preparation made by simmering plant material in water to extract soluble substances.

**Defenses**

The body's protective mechanisms against infection, injury, and other threats, including physical barriers and immune responses.

**Synonyms:**

Body defenses

**Degenerative Disease**

A disorder in which the structure or function of tissues progressively deteriorates.

**Synonyms:**

Degenerative disorder

**Degenerative Disk Disease**

Age-related or injury-related deterioration of an intervertebral disk that may cause back or neck pain.

**Synonyms:**

Degenerative disc disease

---

### Degenerative Joint Disease

Progressive loss of cartilage and changes in a joint, commonly referring to osteoarthritis.

**Synonyms:**

Osteoarthritis

### Degenerative Spondylolisthesis

Forward displacement of one vertebra over another caused by degenerative changes in the spine.

### Delta Waves

Large, slow brain waves associated with deep non-REM sleep.

**Synonyms:**

Delta rhythm

### Demulcent

A substance that soothes irritated or inflamed mucous membranes by forming a protective coating.

### Dendrites

Branching extensions of nerve cells that receive signals from other neurons or sensory receptors.

### Dendritic Cells

Immune cells that capture foreign material and present antigens to T cells, helping initiate an adaptive immune response.

### Deoxyribonucleic Acid

The molecule that stores hereditary genetic information in cells.

**Synonyms:**

DNA

### Desiccated Thyroid

A thyroid-hormone preparation made from dried animal thyroid tissue and containing thyroid hormones.

**Synonyms:**

Desiccated thyroid extract; natural desiccated thyroid

### Dietary Supplements

Products such as vitamins, minerals, herbs, or other substances taken to supplement the diet.

**Synonyms:**

Nutritional supplements

### Digestive Tract

The continuous hollow passage from the mouth through the throat, esophagus, stomach, intestines, and anus.

**Synonyms:**

Gastrointestinal tract; alimentary canal

### Dilate

To become wider or cause a passage, vessel, or opening to become wider.

**Synonyms:**

Expand; enlarge

### Disk

A flat, round structure; in the spine, an intervertebral disk separates adjacent vertebrae and cushions movement.

**Synonyms:**

Disc

### Dithiolethione

A sulfur-containing compound studied for its ability to activate cellular protective and detoxification pathways.

### D-Limonene

A citrus-derived compound found in the oils of orange, lemon, and other citrus fruits.

**Synonyms:**

Limonene

### DNR

An abbreviation for do-not-resuscitate, indicating that cardiopulmonary resuscitation should not be attempted if breathing or heartbeat stops.

**Synonyms:**

Do-not-resuscitate

---

### **Do-Not-Resuscitate Order**

A medical order instructing clinicians not to perform CPR if a person's breathing or heartbeat stops.

**Synonyms:**

DNR order

### **Dopamine**

A neurotransmitter involved in movement, motivation, reward, attention, and regulation of several hormonal functions.

### **Double Blind**

A study design in which neither participants nor the researchers assessing outcomes know who receives each intervention during the blinded phase.

**Synonyms:**

Double-masked

### **Double-Contrast Barium Enema**

An imaging examination of the colon using barium and air to outline the bowel wall on X-rays.

**Synonyms:**

Air-contrast barium enema

### **Dowager's Hump**

An exaggerated upper-back curvature, usually caused by vertebral compression fractures or osteoporosis.

**Synonyms:**

Kyphosis

### **Doxazosin**

An alpha-1 blocker used to relax smooth muscle and treat high blood pressure or urinary symptoms from an enlarged prostate.

### **Dressler's Syndrome**

Inflammation of the pericardium that develops weeks after heart-muscle injury, such as a heart attack or cardiac surgery.

**Synonyms:**

Post-myocardial-infarction syndrome

### **DRI**

A set of nutrient reference values used to plan and

assess dietary intake for healthy people.

**Synonyms:**

Dietary Reference Intakes

### **Dry Eye**

A condition in which the eyes do not produce enough tears or tears evaporate too quickly, causing irritation and visual discomfort.

**Synonyms:**

Dry-eye disease; keratoconjunctivitis sicca

### **Dual Energy X-Ray Absorptiometry**

A low-dose imaging test that measures bone mineral density and can help assess fracture risk.

**Synonyms:**

DXA; DEXA

### **Dual-Photon Absorptiometry**

An older bone-density measurement technique that uses two photon energies to estimate bone mineral content.

### **Duct**

A tube or channel that carries a fluid, such as bile, pancreatic juice, or secretions from a gland.

### **Duplex Doppler Ultrasound Scanning**

An ultrasound test that combines structural imaging with Doppler measurement of blood flow through vessels.

**Synonyms:**

Duplex ultrasound

### **Dacarbazine**

An alkylating chemotherapy medicine used for Hodgkin lymphoma, melanoma, and selected other cancers; important toxicities include severe nausea, bone-marrow suppression, and liver injury.

### **Dacetuzumab**

A medicine called dacetuzumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

---

### **Daclizumab**

A medicine called daclizumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dacomitinib**

A medicine called dacomitinib. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dacryocyte Analysis**

Dacryocyte analysis is used in relation to dacryocyte analysis during assessment, diagnosis, treatment, monitoring, or patient support.

### **Dactinomycin**

A medicine called dactinomycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dalotuzumab**

A medicine called dalotuzumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dalteparin**

A low-molecular-weight heparin that enhances antithrombin activity against factor Xa and is used to prevent or treat venous thromboembolism; bleeding and dose adjustment in severe kidney disease are important considerations.

### **Dalteparin Sodium**

The sodium salt of dalteparin, a low-molecular-weight heparin used to prevent or treat venous thromboembolism; bleeding is the principal serious adverse effect.

### **Danazol**

A synthetic androgen with antigonadotropic effects, used selectively for endometriosis, hereditary angioedema, or other conditions; androgenic, lipid, liver, and thrombotic adverse effects limit use.

### **Dantrolene**

A skeletal-muscle relaxant that reduces calcium release from the sarcoplasmic reticulum; it is the specific treatment for malignant hyperthermia and may cause weakness or liver injury.

### **Danuserib**

An investigational aurora-kinase inhibitor studied as an anticancer drug; it is not an established routine treatment.

### **Dapsone**

A sulfone antimicrobial used for leprosy, selected dermatitis, and other infections; haemolysis, especially with G6PD deficiency, methaemoglobinaemia, agranulocytosis, and severe skin reactions are important risks.

### **Daptomycin**

A medicine called daptomycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Darbepoetin Alfa**

A clinical condition or finding involving darbepoetin alfa. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Darunavir**

A medicine called darunavir. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dasatinib**

A medicine called dasatinib. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Daunorubicin**

A clinical condition or finding involving daunorubicin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Daunorubicin Hydrochloride**

A clinical condition or finding involving daunoru-

---

bicin hydrochloride. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dav Regimen**

The term is ambiguous without its source context; it may refer to a named treatment regimen, so the full regimen and indication must be specified before clinical use.

### **Dcc Gene**

A gene encoding the netrin-1 receptor DCC, which guides developing axons and may act as a tumor suppressor; pathogenic variants can cause developmental or cancer-related phenotypes.

### **Dcmp Deaminase**

An abbreviation or enzyme name requiring source confirmation; the full molecular name and clinical context should be verified before interpretation.

### **De Novo**

Newly arising in an individual rather than inherited from either parent; the term is commonly used for genetic variants or disease presentations.

### **Debrisoquin**

An antihypertensive drug formerly used to reduce sympathetic nerve activity; it is now mainly relevant as a probe of CYP2D6 drug metabolism.

### **Decanoic Acid**

A ten-carbon saturated fatty acid, also called capric acid, found in some fats and studied for antimicrobial, metabolic, and antiseizure effects.

### **Decenoic Acid**

An unsaturated ten-carbon fatty acid; its biologic effects depend on the position and geometry of its double bond and on tissue and dietary context.

### **Decerebrate State**

Decerebrate state is used in relation to decerebrate state during assessment, diagnosis, treatment, monitoring, or patient support.

### **Deciduoma**

Deciduoma is an old term for a decidual reaction or mass-like overgrowth of pregnancy-related uterine lining, not a true tumor.

### **Deciduous Tooth**

A primary or baby tooth that is eventually shed and replaced by a permanent tooth.

### **Decision Making**

The process of comparing information, options, benefits, risks, and preferences to choose an action or plan, including shared decision-making in health-care.

### **Decitabine**

A cytidine-analog antineoplastic agent that inhibits DNA methyltransferase and is used for selected myelodysplastic syndromes and acute myeloid leukemia.

### **Declopramide**

Not a standard generic drug name in common medical use; it may be a misspelling of metoclopramide and should be verified against the original source.

### **Decorin**

A small proteoglycan of the extracellular matrix that binds collagen and influences tissue structure, growth-factor signaling, and fibrosis.

### **Decreased Concentration**

Reduced ability to sustain attention or mental focus; causes include sleep loss, stress, medications, mood disorders, substance use, and neurologic or medical illness.

### **Decreased Dentin**

Reduced thickness or formation of dentin, the mineralized tissue beneath tooth enamel; causes include developmental defects, wear, erosion, caries, or dental treatment.

### **Decreased Libido**

Reduced sexual desire that may be related to re-

---

relationships, mood, stress, medications, hormones, chronic illness, pain, or other health factors.

### **Defective Virus**

Defective virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Defense Mechanism**

A psychological process, often unconscious, that helps a person manage conflict, anxiety, or distress; its usefulness depends on context and flexibility.

### **Defensin**

An antimicrobial peptide produced by epithelial cells and immune cells that disrupts microbial membranes and contributes to innate immunity.

### **Deferasirox**

An oral iron-chelating medicine used to reduce chronic iron overload when clinically indicated; kidney, liver, hearing, and gastrointestinal toxicity require monitoring.

### **Deferiprone**

An oral iron chelator used for transfusional iron overload; neutropenia or agranulocytosis is an important adverse effect requiring blood-count monitoring.

### **Deferoxamine**

A parenteral iron chelator used for severe or chronic iron overload and sometimes aluminum toxicity; treatment requires monitoring for ocular, auditory, renal, and infectious complications.

### **Defined Observation**

An observation recorded using a specified definition, measurement method, time point, or assessment rule so that it can be interpreted consistently.

### **Deformity**

A deformity is an abnormal shape, alignment, or structure of a body part caused by development, injury, disease, or growth.

### **Degarelix**

A clinical condition or finding involving degarelix. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Degenerative Disorder**

A disease in which progressive cellular or tissue deterioration causes loss of structure or function, as in neurodegenerative, joint, retinal, or muscle disorders.

### **Deglutition**

Deglutition is swallowing, the coordinated movement of food or liquid from the mouth through the pharynx and esophagus into the stomach.

### **Degranulation**

Release of stored granule contents from cells such as mast cells, basophils, neutrophils, and cytotoxic lymphocytes during immune or inflammatory responses.

### **Degrees Fahrenheit**

A temperature measurement expressed on the Fahrenheit scale; 32 degrees Fahrenheit is the freezing point of water and 212 degrees is its boiling point at standard pressure.

### **Dehydroascorbic Acid**

The oxidized form of vitamin C that can be transported into cells and reduced back to ascorbate, contributing to redox and antioxidant chemistry.

### **Dehydroepiandrosterone**

An adrenal steroid precursor that can be converted to androgens and estrogens; levels vary with age, adrenal disorders, medicines, and supplements.

### **Deinstitutionalize**

To move a person from long-term institutional care toward community-based living and support, when safe and appropriate.

### **Deja Vu**

A feeling that a current situation has been experi-

---

enced before, despite recognizing that it is probably new; frequent or distressing episodes may warrant evaluation.

### **Delavirdine**

A non-nucleoside reverse-transcriptase inhibitor formerly used in combination antiretroviral therapy for HIV; interactions and resistance limit its use.

### **Delayed Orgasm**

Persistent difficulty reaching orgasm despite adequate sexual stimulation, potentially related to medications, health conditions, psychological factors, or relationship context.

### **Deletion Mutation**

A genetic variant in which one or more DNA bases are absent; its effect depends on the location, size, and whether it alters a gene or regulatory region.

### **Delftia**

A genus of aerobic Gram-negative bacteria found in soil and water; human infection is uncommon but has been reported, especially in people with significant underlying illness.

### **Delftia Acidovorans**

An environmental gram-negative bacterium that rarely causes bloodstream or other opportunistic infection, particularly in people with devices or impaired immunity.

### **Delphi Technique**

A structured research method that uses repeated anonymous surveys and feedback to develop expert consensus.

### **Deltacoronavirus**

Deltacoronavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Deltaretrovirus**

Deltaretrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Delta-Tocopherol**

One naturally occurring form of vitamin E; its biological and antioxidant effects differ from those of alpha-tocopherol, the principal form used to assess human vitamin E status.

### **Deltoid**

The deltoid is the large shoulder muscle that lifts the arm and helps stabilize the shoulder joint.

### **Demeclocycline**

A medicine called demeclocycline. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Demecolcine**

A colchicine-related antimitotic compound that disrupts microtubules; it has limited medical use and can be toxic.

### **Demethylation**

Demethylation is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Demographics Domain**

The demographic characteristics of a population or study group, such as age, sex, ethnicity, location, education, or socioeconomic measures.

### **Denaturant**

Denaturant is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dendrimer**

Dendrimer is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process

---

involved in biology; its significance depends on the tissue and context.

### **Dendritic Spine**

A small protrusion on a neuronal dendrite that receives many excitatory synaptic inputs and can change with learning and disease.

### **Denervation**

Denervation is loss of nerve supply to a muscle or tissue, causing weakness, atrophy, altered sensation, or autonomic dysfunction.

### **Denileukin Difitox**

An infectious process or toxic exposure involving denileukin difitox; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Denominator**

The number below the line in a fraction; in a rate or proportion it identifies the population or total against which the numerator is compared.

### **Denosumab**

A medicine called denosumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Densitometry**

A clinical condition or finding involving densitometry. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Density**

Density is used in relation to density during assessment, diagnosis, treatment, monitoring, or patient support.

### **Dent Disease**

An inherited X-linked proximal renal-tubule disorder causing low-molecular-weight proteinuria, hypercalciuria, kidney stones or nephrocalcinosis, and progressive kidney impairment.

### **Dental Alloy**

Dental alloy refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Alveolus**

Dental alveolus refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Amalgam**

Dental amalgam refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Anxiety**

Dental anxiety refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Arch**

Dental arch refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Articulator**

Dental articulator refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Cement**

Dental cement refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Clasp**

Dental clasp refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Deposit**

Dental deposit refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

---

### **Dental Dysplasia**

Dental dysplasia refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Fissure**

Dental fissure refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Hygiene**

Dental hygiene refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Impression Material**

Dental impression material refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Inlay**

Dental inlay refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Material**

Dental material refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Occlusion**

Dental occlusion refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Overjet**

Dental overjet refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Papilla**

Dental papilla refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Pellicle**

Dental pellicle refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Porcelain**

Dental porcelain refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Procedure**

A medical procedure, treatment, device, or care topic related to dental procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Dental Prosthesis**

Dental prosthesis refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Pulp**

Dental pulp refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dental Sac**

Dental sac refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dentate Gyrus**

Dentate gyrus refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dentifrice**

Dentifrice refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

### **Dentigerous Cyst**

Dentigerous cyst refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

---

## Dentin Sensitivity

Dentin sensitivity refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

## Dentinogenesis

The formation of dentin by odontoblasts during tooth development and repair; inherited defects can cause abnormal tooth color, weakness, and rapid wear.

## Dentist

Dentist refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

## Dentistry

Dentistry refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

## Denture Base

The part of a denture that rests on the oral tissues and supports the artificial teeth.

## Denturist

A dental professional authorized in some jurisdictions to provide, fit, and maintain removable dentures within the local scope of practice.

## Deoxycoformycin

A medicine called deoxycoformycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

## Deoxycytidine

Deoxycytidine is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxycytidine Kinase

Deoxycytidine kinase is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance

depends on the tissue and context.

## Deoxyglucose

Deoxyglucose is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxyguanosine

Deoxyguanosine is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxyribonuclease

Deoxyribonuclease is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxyribonucleosides

Deoxyribonucleosides is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxyribonucleotides

Deoxyribonucleotides is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Deoxyuridine

Deoxyuridine is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Dependovirus

Dependovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

---

## Depersonalization

Depersonalization is a feeling of detachment or unreality regarding one's own body, thoughts, or self, often occurring with anxiety, trauma, or dissociation.

## Dephosphorylation

Dephosphorylation is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Depressive Disorder

A mood disorder with persistent depressed mood or loss of interest plus cognitive, physical, and functional symptoms; severity, duration, and suicide risk guide care.

## Depth Perception

Depth perception is the ability to judge distance and three-dimensional relationships using binocular vision, motion, perspective, and other cues.

## Depurination

Loss of a purine base from DNA, leaving an abasic site that can contribute to mutation if not repaired.

## Derealization

Derealization is a feeling that the external world is unreal, dreamlike, distant, or visually altered, often associated with anxiety, trauma, dissociation, or substances.

## Dermabacter

Dermabacter is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Dermabacter Hominis

Dermabacter hominis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and an-

timicrobial susceptibility.

## Dermatan Sulfate

A sulfated glycosaminoglycan found in connective tissue and involved in extracellular-matrix structure and coagulation-related biology.

## Dermatologic Disorder

A disease affecting skin, hair, nails, or cutaneous glands, producing findings such as rash, scale, pigment change, ulcers, pain, or itching.

## Dermatologist

A physician specializing in diagnosis and treatment of disorders of the skin, hair, nails, and related mucous membranes.

## Dermatomycosis

A fungal infection of the skin, hair, or nails.

## Desflurane

Desflurane is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Desipramine

Desipramine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Deslorelin

Deslorelin is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Desmin

Desmin is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

---

## Desmoid Tumors

A neoplastic process affecting desmoid tumors; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Desmoplastic

Desmoplastic is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Desmoplastic Fibroma

A rare benign but locally aggressive fibrous tumor of bone.

## Desmopressin

Desmopressin is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Desmosine

Desmosine is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Desmosome

Desmosome is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Desogestrel

Desogestrel is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Desonide

Desonide is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Desoximetasone

A topical corticosteroid used to reduce inflammation and itching in steroid-responsive dermatitis; potency, site, duration, and skin absorption determine risk.

## Desoxycorticosterone

A mineralocorticoid steroid that promotes renal sodium retention and potassium loss, influencing extracellular fluid volume and blood pressure.

## Desulfovibrio

A genus of anaerobic sulfate-reducing bacteria found in the environment and gut; invasive infection is uncommon and usually requires compatible clinical findings.

## Desulfovibrio Desulfuricans

A sulfate-reducing anaerobic bacterium found mainly in environmental and gastrointestinal habitats; human disease is rare.

## Desulfovibrio Piger

A sulfate-reducing anaerobic bacterium associated with the human intestinal microbiota; its clinical significance depends on the specimen and patient context.

## Desulfovibrionaceae

A family of anaerobic sulfate-reducing bacteria that includes *Desulfovibrio* species.

## Desvenlafaxine Succinate

Desvenlafaxine succinate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Detached

Detached means separated or no longer connected, as in a detached retina, tissue, device, or emotional state.

## Detergent

Detergent is a chemical, environmental, or toxicol-

---

ogy term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Deubiquitinating Enzymes**

Enzymes that remove ubiquitin from proteins, thereby regulating protein stability, trafficking, signaling, DNA repair, and immune responses.

### **Deubiquitination**

Deubiquitination is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Deuterium**

Deuterium is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Deuterium Oxide**

Water in which some or all hydrogen atoms are the heavy isotope deuterium; it is also called heavy water and is used in research.

### **Developmental Disabilities**

A group of lifelong conditions beginning during development that affect physical, intellectual, language, learning, or adaptive functioning.

### **Developmental Process**

The biological and psychological changes through which an organism, organ, or ability grows, differentiates, and acquires function.

### **Developmental Psychology**

The study of cognitive, emotional, social, and behavioral change across the lifespan.

### **Developmental Stage**

A period of characteristic physical, cognitive, emotional, or social development used to describe progression over time.

### **Device Embolisation**

Migration of a medical device or device fragment

through the bloodstream, potentially obstructing a vessel and requiring urgent assessment.

### **Dexamethasone**

A potent, long-acting glucocorticoid used to suppress inflammation, cerebral oedema, allergic reactions, and selected malignancy-related or endocrine conditions; infection, hyperglycaemia, and adrenal suppression may occur.

### **Dexlansoprazole**

A medicine called dexlansoprazole. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dexmedetomidine**

Dexmedetomidine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dexmethylphenidate**

Dexmethylphenidate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dexrazoxane**

Dexrazoxane is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dexrazoxane Hydrochloride**

Dexrazoxane hydrochloride is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dextroamphetamine**

Dextroamphetamine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

---

### **Dextromethorphan**

Dextromethorphan is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dextrothyroxine**

Dextrothyroxine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Diabetic Cardiomyopathies**

Structural or functional heart-muscle disease associated with diabetes, after considering other causes such as coronary artery disease and hypertension.

### **Diacetoxyscirpenol**

An infectious process or toxic exposure involving diacetoxyscirpenol; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Diacylglycerol**

Diacylglycerol is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Diagnostic Procedure**

A medical procedure, treatment, device, or care topic related to diagnostic procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Diagnostic Service**

A healthcare service that obtains or interprets information to detect, characterize, or monitor a disease or health condition.

### **Diagnostic Trial**

A clinical study evaluating how well a test identifies or excludes a disease or predicts a clinically relevant outcome.

### **Diakinesis**

Diakinesis is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Dialister Microaerophilus**

A microaerophilic anaerobic bacterium associated with the oral and genital microbiota; clinical significance depends on isolation from a compatible infection.

### **Dialister Pneumosintes**

An anaerobic bacterium found in the oral cavity and respiratory tract that may contribute to polymicrobial infection in appropriate clinical settings.

### **Dialysis Solutions**

Specially formulated fluids used in hemodialysis or peritoneal dialysis to exchange solutes and remove excess water from the body.

### **Dialysis Therapy**

Dialysis therapy is used in relation to dialysis therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Diamine**

A molecule containing two amino groups; diamines occur in metabolism and are used in biochemical and industrial chemistry.

### **Dianhydrogalactitol**

Dianhydrogalactitol is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Dianisidine**

Dianisidine is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

---

## Diapause

Diapause is a period of suspended or slowed development in some animals, allowing survival during unfavorable environmental conditions.

## Diaphoretic

Causing or relating to sweating.

## Diaphragmatic Eventration

Abnormal thinning and elevation of part or all of the diaphragm due to muscle weakness or defective development.

## Diastematomyelia

Diastematomyelia is a congenital spinal-cord malformation in which the cord is split into two portions, often with vertebral or skin abnormalities.

## Diastolic Murmurs

Heart sounds heard during diastole, often caused by abnormal blood flow through a valve or great vessel and requiring clinical evaluation.

## Diatomaceous Earth

Diatomaceous earth is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

## Diatrizoate Meglumine

Diatrizoate meglumine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Diazepam

A benzodiazepine that enhances GABA-A receptor activity and is used for anxiety, muscle spasm, seizures, and alcohol withdrawal; sedation, respiratory depression, dependence, and withdrawal are important risks.

## Diazinon

Diazinon is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, inter-

actions, and adverse effects depend on the specific agent and clinical use.

## Diaziquone

Diaziquone is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Diazonium Compounds

A clinical condition or finding involving diazonium compounds. Its defining features, causes, evaluation, and management depend on the clinical context.

## Diazooxonorleucine

Diazooxonorleucine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Diazoxide

Diazoxide is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Dibekacin

Dibekacin is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Dibucaine

A medicine called dibucaine. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

## Dicarboxylic Acid

An organic molecule containing two carboxyl groups; dicarboxylic acids participate in metabolism and can accumulate in selected inherited or acquired metabolic disorders.

## Dichlorophen

Dichlorophen is a chemical, environmental, or toxicology term.

---

cology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dichlorvos**

Dichlorvos is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dickeya Dadantii**

A plant-pathogenic bacterium that causes soft rot and wilt in plants; it is not a usual human pathogen.

### **Diclofenac**

A clinical condition or finding involving diclofenac. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diclofenac Sodium**

A clinical condition or finding involving diclofenac sodium. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dicloxacillin**

A medicine called dicloxacillin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dicrotophos**

Dicrotophos is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dictyostelium**

A genus of social amoebae used in cell and developmental biology research; it is not a usual human pathogen.

### **Dicyclomine**

Dicyclomine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Didanosine**

Didanosine is a medicine, drug candidate, or pharmaceutical

formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dientamoeba**

Dientamoeba is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

### **Dientamoeba Fragilis**

Dientamoeba fragilis is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

### **Diestrus**

The phase of the reproductive cycle in many mammals between estrus periods, characterized by activity of the corpus luteum or its regression.

### **Diet**

A diet is the pattern of foods and beverages a person consumes, shaped by nutritional needs, culture, health, access, and preference.

### **Diet Therapy**

Diet therapy is used in relation to diet therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Dietary Calcium**

Dietary calcium is a healthcare or clinical-care term; its appropriate use depends on the patient's condition, goals, risks, available evidence, and professional assessment.

### **Dietary Carbohydrate**

Dietary carbohydrate is used in relation to dietary carbohydrate during assessment, diagnosis, treatment, monitoring, or patient support.

### **Dietary Fats**

Dietary fats provide energy and essential fatty acids and help absorb fat-soluble vitamins; health effects

---

depend on type, amount, and overall diet.

### **Dietary Iron**

Dietary iron supports hemoglobin, myoglobin, and enzymes and is obtained as heme iron from animal foods or nonheme iron from plants and fortified foods.

### **Dietary Phospholipid**

A food-derived amphipathic lipid containing phosphate, used in cell membranes and lipoproteins and metabolized according to diet, absorption, and liver function.

### **Dietary Phosphorus**

A biological substance or process involving dietary Phosphorus; its medical significance depends on its function, location, amount, and clinical context.

### **Dietary Protein**

Protein consumed in food and digested into amino acids and peptides needed for tissue maintenance, enzymes, hormones, immunity, and energy when required.

### **Dietary Steroid**

A dietary steroid is a steroid compound consumed in food or supplements; sterols and hormones can affect metabolism or interact with medicines.

### **Dietary Sterol**

A dietary sterol is a cholesterol-like molecule in food, including plant sterols that can reduce intestinal cholesterol absorption.

### **Dietary Supplement**

A dietary supplement is a product intended to add nutrients or other substances to the diet; contents, evidence, quality, and interactions vary.

### **Dietary Supplementation**

Dietary supplementation is deliberate addition of nutrients or other substances to food intake to address deficiency, support a goal, or alter health.

### **Dietetics**

Dietetics is the applied science and professional practice of using nutrition and diet to promote health and manage disease.

### **Diethylhexylphthalate**

Diethylhexyl phthalate is a plasticizer used in some products; exposure can affect endocrine and reproductive systems and is regulated in many settings.

### **Diethylnitrosamine**

Diethylnitrosamine is a chemical carcinogen used in research models and capable of causing liver and other organ injury.

### **Diethylpropion**

Diethylpropion is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Diethylstilbestrol**

Diethylstilbestrol is a synthetic estrogen formerly given during pregnancy; prenatal exposure is associated with reproductive-tract abnormalities and certain cancers.

### **Dietitian**

A dietitian is a nutrition professional who assesses dietary needs and provides individualized nutrition counseling within the scope of local licensing.

### **Differentiation Antigens**

Differentiation antigens is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Difficulty Walking**

Impaired gait or mobility that may result from pain, weakness, balance problems, sensory loss, joint disease, neurologic illness, or cardiopulmonary limitation.

---

## **Diffuse**

Diffuse means spread broadly or throughout an area rather than confined to a small, well-defined focus.

## **Diffuse Astrocytoma**

Diffuse astrocytoma is an infiltrating tumor of astrocytic glial cells; modern classification uses molecular features and many formerly defined low-grade types have been reclassified.

## **Diffuse Scleroderma**

Diffuse scleroderma is a systemic-sclerosis pattern with widespread skin thickening and possible internal-organ fibrosis affecting the lungs, kidneys, heart, or gastrointestinal tract.

## **Diffusion Anisotropy**

Direction-dependent movement of water molecules in tissue, especially along white-matter fibers; it is measured with diffusion MRI.

## **Diffunisal**

Diffunisal is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## **Digastric Muscle**

Digastric muscle refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

## **Digestive Disorder**

A disease affecting the gastrointestinal tract or digestion, causing symptoms such as pain, nausea, reflux, diarrhea, constipation, bleeding, or malabsorption.

## **Digital Mammography**

A clinical condition or finding involving digital mammography. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Digitalis Preparation**

A preparation containing cardiac glycosides such

as digoxin or digitoxin that can increase cardiac contractility and slow atrioventricular conduction; toxicity can cause arrhythmias and visual or gastrointestinal symptoms.

## **Digitonin**

A steroidal saponin used mainly in laboratory work to permeabilize cell membranes by binding membrane cholesterol.

## **Digitoxin**

A clinical condition or finding involving digitoxin. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Digoxin**

A clinical condition or finding involving digoxin. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Dihydroxyacetone**

A three-carbon sugar used in metabolism; its derivative dihydroxyacetone phosphate is an intermediate in glycolysis and gluconeogenesis.

## **Dilatation**

Dilatation is widening or expansion of a hollow organ, vessel, duct, or other structure.

## **Dilation**

Dilation is widening or expansion of a hollow organ, vessel, duct, pupil, or other structure, whether normal, induced, or disease-related.

## **Diltiazem**

A clinical condition or finding involving diltiazem. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Dimenhydrinate**

An antihistamine used to prevent or treat motion sickness and nausea; drowsiness and anticholinergic effects are common concerns.

---

### **Dimesna**

Dimesna is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dimethoate**

Dimethoate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dimethoxon**

Dimethoxon is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dimethyl Fumarate**

A clinical condition or finding involving dimethyl fumarate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dimethyl Sulfoxide**

Dimethyl sulfoxide is a defined chemical or biologic substance involved in dimethyl sulfoxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Dimethylbenzanthracene**

A clinical condition or finding involving dimethylbenzanthracene. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dimethylhydrazines**

A clinical condition or finding involving dimethylhydrazines. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dimethylnitrosamine**

A clinical condition or finding involving dimethylnitrosamine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dimetilan**

Dimetilan is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dinaciclib**

Dinaciclib is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dinitrochlorobenzene**

Dinitrochlorobenzene is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dinitrofluorobenzene**

Dinitrofluorobenzene is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dinophyceae**

The class containing dinoflagellates, aquatic microorganisms that can produce toxins or harmful algal blooms affecting human health.

### **Dinoprost**

A clinical condition or finding involving dinoprost. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dinoprostone**

Dinoprostone is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dinucleoside Phosphates**

Dinucleoside phosphates is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

---

### **Dinutuximab**

A medicine called dinutuximab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dioxin**

Dioxin is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dipeptide**

Dipeptide is a defined chemical or biologic substance involved in dipeptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Dipetalonema**

A genus of filarial nematodes; some species infect animals and rarely humans, with significance depending on species and exposure.

### **Dipetalonema Infection**

An infectious process or toxic exposure involving dipetalonema infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Diphenoxylate**

Diphenoxylate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Diphenylhydramine**

Diphenylhydramine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Diphosphate**

Diphosphate is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Diphosphonate**

Diphosphonate is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Diphtheria Toxin**

Diphtheria toxin is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

### **Diphyllbothriasis**

Intestinal infection caused by fish tapeworms, especially Diphyllbothrium or related Dibothriocephalus species; it may cause abdominal symptoms or vitamin B12 deficiency.

### **Diploid Cell**

A cell containing two complete sets of chromosomes, one inherited from each parent; most human somatic cells are diploid.

### **Diploidy**

Diploidy is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Dipstick Device**

A clinical condition or finding involving dipstick device. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diptera**

The insect order containing flies and mosquitoes; some members transmit infections or cause myiasis.

### **Diphtheroid Bacillus**

Diphtheroid bacillus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

---

### **Dipylidium Caninum**

A dog and cat tapeworm that can occasionally infect people, especially children, after swallowing an infected flea.

### **Dipyridamole**

Dipyridamole is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dirty Necrosis**

Tumor necrosis containing abundant nuclear debris and neutrophils, classically seen in some high-grade carcinomas such as colorectal adenocarcinoma.

### **Disaccharide**

Disaccharide is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

### **Disclosure**

A clinical condition or finding involving disclosure. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Discriminant Analysis**

Discriminant analysis is used in relation to discriminant analysis during assessment, diagnosis, treatment, monitoring, or patient support.

### **Discrimination Learning**

A clinical condition or finding involving discrimination learning. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Disease Progression**

The change and usually worsening of a disease over time, assessed through symptoms, examination, biomarkers, imaging, function, complications, or treatment response.

### **Disease Reservoir**

A person, animal, environmental site, or material in which an infectious agent normally lives and from which it can spread to a susceptible host.

### **Disease Response**

The biologic or clinical reaction to a disease or its treatment, measured by symptoms, signs, laboratory results, imaging, function, or survival.

### **Disease Susceptibility**

Increased likelihood of developing a disease because of genetic traits, immune status, age, exposures, behavior, comorbidities, or other risk factors.

### **Disease Vector**

A living carrier, commonly a mosquito, tick, flea, or other arthropod, that transmits an infectious agent between hosts without necessarily becoming ill.

### **Disfigurement**

Disfigurement is a visible change that substantially alters appearance, caused by injury, disease, surgery, congenital difference, or scarring.

### **Disinfectant**

A clinical condition or finding involving disinfectant. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Disopyramide**

A class IA antiarrhythmic drug used selectively for certain rhythm disorders; anticholinergic effects, negative inotropy, and proarrhythmia limit its use.

### **Dispensed Amount**

The quantity of a medicine supplied to a patient, determined by the prescription, dose, duration, formulation, and applicable dispensing rules.

### **Disruption**

Disruption is interruption or breakdown of normal structure, function, continuity, or process.

---

## Disseminate

To disseminate means to spread widely, as an infection, cancer, inflammation, or information.

## Disseminated Neuroblastoma

A neoplastic process affecting disseminated neuroblastoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Distamycins

A medicine called distamycins. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

## Distant

Distant means far from a reference point or primary site; in cancer, distant disease indicates spread to remote organs or lymph nodes.

## Distended

Distended means abnormally stretched, swollen, or enlarged by fluid, gas, blood, tissue, or pressure.

## Distress

Distress is significant physical or emotional suffering, discomfort, or strain that may accompany illness, injury, treatment, or difficult circumstances.

## Disulfiram

A medicine used as an adjunct for alcohol-use disorder that inhibits aldehyde dehydrogenase and can cause an unpleasant reaction if alcohol is consumed.

## Disulfoton

Disulfoton is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

## Diterpenes

A class of compounds built from four isoprene units; they occur in plants, fungi, and some animal products and have diverse biological effects.

## Ditiocarb

A chemical term for dithiocarbamate compounds, which can act as chelators or pesticides and may have toxic effects depending on the agent and exposure.

## Diutina Rugosa

A yeast species that is an uncommon opportunistic human pathogen, mainly reported in people with underlying illness or immunosuppression.

## Divorce

Divorce is legal dissolution of a marriage and can affect health through stress, finances, housing, caregiving, social support, and access to care.

## Dizygotic Twin

One of a pair of fraternal twins formed when two ova are fertilized by two sperm; the twins share about half their segregating genes on average.

## DNA Adduct

A chemical group covalently attached to DNA after exposure to a reactive compound; unrepaired adducts can distort replication and create mutations or cancer risk.

## DNA Alkylation

Addition of an alkyl group to DNA bases or the phosphate backbone, which can alter base pairing, block replication, and cause mutations or cell death.

## DNA Binding

A clinical condition or finding involving dna binding. Its defining features, causes, evaluation, and management depend on the clinical context.

## DNA Demethylation

Removal or loss of methyl groups from DNA, changing chromatin accessibility and gene expression during development, reprogramming, or disease.

## DNA Fingerprinting

Analysis of variable DNA regions to distinguish individuals or establish biological relationships, used

---

in forensic identification, paternity testing, and some research applications.

### **DNA Footprinting**

A molecular method that identifies the DNA sequence protected by a bound protein because that region is less susceptible to enzymatic or chemical cleavage.

### **DNA Fragmentation**

Breaking of DNA strands into smaller pieces, occurring during apoptosis, injury, radiation, or laboratory analysis; excessive or abnormal fragmentation can impair genome integrity.

### **DNA Gyrase**

A clinical condition or finding involving dna gyrase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DNA Integration**

Insertion of foreign or copied DNA into a host genome, occurring in evolution, gene therapy, or viral infection and potentially altering nearby gene activity.

### **DNA Ligases**

A clinical condition or finding involving dna ligases. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DNA Ligation**

Joining of DNA fragments by forming a phosphodiester bond, catalyzed by DNA ligase during replication, repair, recombination, and molecular cloning.

### **DNA Methylation**

Addition of methyl groups to DNA, usually at cytosine bases, that can alter chromatin and gene expression without changing the DNA sequence.

### **DNA Packaging**

A clinical condition or finding involving dna packaging. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DNA Primase**

A clinical condition or finding involving dna primase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DNA Primers**

A clinical condition or finding involving dna primers. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DNA Probe**

A labeled single-stranded nucleic-acid sequence that binds a complementary target and allows a specific gene, organism, mutation, or chromosome region to be detected.

### **DNA Virus**

DNA virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Dobutamine**

An intravenous beta-1-adrenergic agonist that increases cardiac contractility and is used short term for selected cases of acute low-output heart failure or shock.

### **Docetaxel**

A medicine or chemical compound called docetaxel. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Doconexent**

A pharmaceutical name for docosahexaenoic acid, an omega-3 fatty acid found in fish oils and cellular membranes.

### **Docosadienoic Acid**

A 22-carbon fatty acid with two double bonds, present in some lipids and studied for effects on membranes and metabolism.

### **Docosahexaenoic Acid**

The omega-3 fatty acid DHA, a major structural

---

lipid in brain and retina obtained from marine foods or synthesized from precursors.

### **Docosapentaenoic Acid**

A 22-carbon polyunsaturated fatty acid with five double bonds, occurring as omega-3 or omega-6 forms in tissues and diet.

### **Docosatrienoic Acid**

A 22-carbon fatty acid containing three double bonds, present in small amounts in lipids and involved in experimental studies of metabolism.

### **Dodecenoic Acid**

An unsaturated 12-carbon fatty acid whose biologic properties depend on the position and configuration of its double bond.

### **Dolasetron**

A medicine or chemical compound called dolasetron. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Dolasetron Mesylate**

Dolasetron mesylate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Dolichol**

A long-chain lipid alcohol involved in assembling sugar chains for protein glycosylation in the endoplasmic reticulum.

### **Dolosigranulum Pigrum**

A Gram-positive bacterium commonly found in the upper respiratory tract; it is usually a commensal, though rare infections have been reported.

### **Domperidone**

Domperidone is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

### **Donepezil**

A clinical condition or finding involving donepezil. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Donohue Syndrome**

A severe inherited insulin-resistance disorder caused by pathogenic INSR variants, characterized by poor growth, loss of body fat, abnormal facial features, and early metabolic complications.

### **Dopa**

A precursor of dopamine; levodopa crosses the blood–brain barrier and is used with an aromatic L-amino-acid decarboxylase inhibitor to treat Parkinson disease.

### **Dopamine Antagonist**

A clinical condition or finding involving dopamine antagonist. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dopamine Receptor**

Dopamine receptor is a defined chemical or biologic substance involved in dopamine receptor and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Dopamine Transporter**

A clinical condition or finding involving dopamine transporter. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dopaminergic Neuron**

A clinical condition or finding involving dopaminergic neuron. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dorea**

A genus of anaerobic bacteria commonly found in the human intestine; detection generally reflects microbiota unless recovered from a compatible sterile-site infection.

---

## **Doripenem**

A clinical condition or finding involving doripenem. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Dorsal Funiculus**

The dorsal funiculus is the posterior white-matter column of the spinal cord carrying vibration, fine touch, and position signals upward to the brain.

## **Dorsolateral**

Dorsolateral means located toward the back and side of a body structure or region.

## **Dosage Forms**

A clinical condition or finding involving dosage forms. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Dose Rate**

Dose rate is used in relation to dose rate during assessment, diagnosis, treatment, monitoring, or patient support.

## **Double-Blind Method**

A clinical condition or finding involving double-blind method. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Doxapram**

Doxapram is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## **Doxazosin Mesylate**

Doxazosin mesylate is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## **Doxepin**

Doxepin is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific

agent and clinical use.

## **Doxercalciferol**

Doxercalciferol is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## **Doxorubicin**

A clinical condition or finding involving doxorubicin. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Doxorubicin Hydrochloride**

A clinical condition or finding involving doxorubicin hydrochloride. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Doxycycline**

A medicine called doxycycline. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

## **Doxycycline Hyclate**

A medicine called doxycycline hyclate. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

## **Doxylamine**

Doxylamine is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## **Dracunculiasis**

Guinea-worm disease, a parasitic infection caused by *Dracunculus medinensis* and acquired by drinking water containing infected copepods.

## **Dracunculus Medinensis**

The Guinea-worm parasite that causes dracunculiasis after ingestion of infected copepods in unsafe drinking water.

---

## Drainage

Removal of fluid, pus, blood, or air from a body site or wound, either naturally or using a procedure or drain.

## Dream

A dream is a sequence of perceptions, thoughts, or emotions during sleep, often most vivid during REM sleep.

## Dried Specimen

A clinical condition or finding involving dried specimen. Its defining features, causes, evaluation, and management depend on the clinical context.

## Drinking Water

Water intended for human consumption; it should meet local safety standards and be treated when contamination with pathogens or chemicals is possible.

## Dronabinol

A synthetic form of delta-9-tetrahydrocannabinol used for selected cases of chemotherapy-related nausea or appetite loss; central nervous-system effects and interactions are important.

## Drool

Excess saliva escaping from the mouth, which may result from increased production, impaired swallowing, poor oral closure, or neurologic disease.

## Droperidol

A butyrophenone dopamine antagonist used in selected settings for nausea or agitation; QT prolongation and arrhythmia risk require appropriate precautions.

## Dropper Bottle

A container fitted with a dropper for delivering a liquid in drops; the prescribed product, concentration, and number of drops must be followed carefully.

## Drosophila Proteins

Proteins produced by fruit flies and used as experi-

mental models of development, signaling, genetics, immunity, and human disease mechanisms.

## Drosophilidae

The family of insects commonly called fruit flies or vinegar flies; they are important in genetics research and are not typical human parasites.

## Drug Abuse

A nonpreferred term for harmful or nonmedical use of a drug; current clinical language generally uses substance use, misuse, or substance use disorder according to the situation.

## Drug Administration Route

The pathway by which a medicine enters the body, such as oral, intravenous, intramuscular, inhaled, topical, or subcutaneous administration.

## Drug Emulsion

A pharmaceutical preparation in which one liquid is dispersed as droplets within another immiscible liquid, often stabilized with an emulsifier.

## Drug Eruption

A skin eruption caused by a medication, ranging from a mild morbilliform rash to severe reactions such as Stevens–Johnson syndrome or toxic epidermal necrolysis.

## Drug Implant

A solid or device-based dosage form placed in tissue to release a medicine locally or systemically over an extended period.

## Drug Implants

Implantable dosage forms or devices that release a medicine over time; selection and monitoring depend on the product and clinical indication.

## Drug Metabolism

The enzymatic conversion of medicines into metabolites, mainly in the liver but also in the intestine, kidneys, lungs, and other tissues.

---

## Drug Packaging

The container, labeling, and protective materials used to preserve a medicine and support correct identification, storage, and use.

## Drug Vehicle

An inactive substance or carrier used to deliver an active drug ingredient in a formulation.

## Dry Cough

A cough that produces little or no sputum; causes include viral illness, asthma, reflux, medications such as ACE inhibitors, and other airway or lung disease.

## Dry Ice

Dry ice is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

## Dubowitz Syndrome

A rare developmental disorder associated with growth restriction, characteristic facial features, microcephaly, intellectual or behavioral differences, and variable immune or skin findings.

## Dull Pain

Dull pain is used in relation to dull pain during assessment, diagnosis, treatment, monitoring, or patient support.

## Duloxetine Hydrochloride

A clinical condition or finding involving duloxetine hydrochloride. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dumbbell Ossification

Bone formation or a bony lesion with a dumbbell shape, often describing extension through a neural foramen or across adjacent anatomical compartments.

## Duocarmycins

A medicine called duocarmycins. Its uses, dosing,

adverse effects, and contraindications depend on the specific indication and patient.

## Duodenal Adenocarcinoma

A neoplastic process affecting duodenal adenocarcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Duodenal Disease

A disorder of the first part of the small intestine, including inflammation, ulceration, obstruction, infection, bleeding, malabsorption, or neoplasia.

## Duodenal Fistula

A clinical condition or finding involving duodenal fistula. Its defining features, causes, evaluation, and management depend on the clinical context.

## Duodenal Hemorrhage

Duodenal hemorrhage refers to duodenal hemorrhage, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Duodenal Infection

An infectious process or toxic exposure involving duodenal infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

## Duodenal Neoplasm

A neoplastic process affecting duodenal neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Duodenal Stenosis

Duodenal stenosis refers to duodenal stenosis, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Duodenoscope

A flexible endoscope designed to examine the duodenum and access the bile and pancreatic ducts, commonly during ERCP.

---

## Duodenostomy

A surgically created opening from the duodenum to the skin or another bowel segment, usually for drainage or feeding in selected circumstances.

## Durapatite

Hydroxyapatite, the calcium-phosphate mineral that gives bone and teeth much of their hardness.

## Dust

Dust is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

## Dutasteride

A clinical condition or finding involving dutasteride. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dye

A clinical condition or finding involving dye. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dye Lasers

A clinical condition or finding involving dye lasers. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dynamin Gtpase

Dynamin gtpase is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Dynein Atpase

Dynein atpase is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the tissue and context.

## Dynorphin

Dynorphin is a biochemical, genetic, or cellular term describing a molecule, reaction, structure, or process involved in biology; its significance depends on the

tissue and context.

## Dyphylline

Dyphylline is a medicine, drug candidate, or pharmaceutical formulation; its indication, dose, interactions, and adverse effects depend on the specific agent and clinical use.

## Dysbarism

Illness caused by changes in ambient pressure, including decompression sickness and barotrauma during diving, flying, or hyperbaric exposure.

## Dysgammaglobulinemia

Dysgammaglobulinemia concerns dysgammaglobulinemia, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Dysgerminoma

Dysgerminoma is a malignant germ-cell tumor of the ovary, analogous to seminoma of the testis, and often occurs in adolescents or young adults.

## Dyskeratosis Congenita

Dyskeratosis congenita is an inherited telomere-biology disorder causing abnormal nails, skin pigmentation, oral leukoplakia, marrow failure, and cancer risk.

## Dyslipidemias

Abnormal blood-lipid concentrations, such as high LDL cholesterol, high triglycerides, or low HDL cholesterol, that can increase atherosclerotic and pancreatitis risk.

## Dysostoses

Inherited or developmental disorders in which one or more bones form abnormally.

## Dyssomnias

Sleep disorders involving difficulty initiating or maintaining sleep, excessive sleepiness, or abnormal regulation of the sleep–wake cycle.

---

## Dystonia Disorder

A movement disorder causing sustained or intermittent involuntary muscle contractions that produce twisting movements, repetitive actions, or abnormal postures.

## Dystonin

A clinical condition or finding involving dystonin. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dystrophia Unguium

Abnormal nail growth or structure, which may result from trauma, infection, inflammatory disease, nutritional deficiency, medication, or an inherited disorder.

## Dystrophin

A clinical condition or finding involving dystrophin. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dangerous Abbreviations

Abbreviations that can be misread and cause medication or clinical errors; safer practice is to write the complete term when an abbreviation is ambiguous.

## Ductal Carcinoma In Situ (DCIS)

A noninvasive breast cancer in which abnormal cells are confined to the milk ducts and have not spread into surrounding breast tissue.

### Synonyms:

DCIS Intraductal Carcinoma

## Deep Vein Thrombosis (DVT)

A blood clot in a deep vein, usually in the leg, that can cause swelling and pain and may travel to the lungs as a pulmonary embolism.

## Dermatographia (Dermatographism)

A condition in which light scratching or pressure causes temporary raised red lines or welts on the skin.

### Synonyms:

Skin Writing

## Diabetic Nephropathy (Kidney Disease)

Kidney damage caused by diabetes, often beginning with protein in the urine and potentially progressing to chronic kidney disease.

## Diffuse Midline Glioma (DMG)

An aggressive central nervous system tumor arising in midline brain structures, most often affecting children.

### Synonyms:

DMG

## DiGeorge Syndrome (22Q11.2 Deletion Syndrome)

A genetic disorder caused by deletion of part of chromosome 22, potentially affecting the heart, immune system, calcium regulation, palate, and development.

### Synonyms:

Velocardiofacial Syndrome

## Dissociative Disorders

Mental health disorders involving disruption in the normal integration of identity, memory, consciousness, emotion, perception, or behavior.

## DCIS

Alternate index label; see *Ductal carcinoma in situ (DCIS)*.

## DDH

Alternate index label; see *Hip dysplasia*.

## Decreased Tear Production

Alternate index label; see *Dry eyes*.

## Deficient Color Vision

Alternate index label; see *Color blindness*.

## Degenerative Arthritis

Alternate index label; see *Osteoarthritis*.

## Delayed Gastric Emptying

Alternate index label; see *Gastroparesis*.

---

**Delayed Sleep-Wake Phase Sleep Disorder**

Alternate index label; see *Delayed sleep phase*.

**Dementia, Frontotemporal**

Alternate index label; see *Frontotemporal dementia*.

**Dementia, Lewy Body**

Alternate index label; see *Lewy body dementia*.

**Dementia, Vascular**

Alternate index label; see *Vascular dementia*.

**Dengue Hemorrhagic Fever**

Alternate index label; see *Dengue fever*.

**Dependence, Nicotine**

Alternate index label; see *Nicotine dependence*.

**Depression, Postpartum**

Alternate index label; see *Postpartum depression*.

**Depression, Teen**

Alternate index label; see *Teen depression*.

**Dermatitis, Atopic**

Alternate index label; see *Atopic dermatitis (eczema)*.

**Dermatitis, Cercarial**

Alternate index label; see *Swimmer's itch*.

**Dermatitis, Contact**

Alternate index label; see *Contact dermatitis*.

**Dermatitis, Scratch**

Alternate index label; see *Neurodermatitis*.

**Dermatitis, Seborrheic**

Alternate index label; see *Seborrheic dermatitis*.

**Devic's Disease**

Alternate index label; see *Neuromyelitis optica*.

**DFSP**

Alternate index label; see *Dermatofibrosarcoma protuberans*.

**Diabetes, Gestational**

Alternate index label; see *Gestational diabetes*.

**Diabetes, Type 1**

Alternate index label; see *Type 1 diabetes*.

**Diabetes, Type 1 In Children**

Alternate index label; see *Type 1 diabetes in children*.

**Diabetes, Type 2**

Alternate index label; see *Type 2 diabetes*.

**Diabetes, Type 2 In Children**

Alternate index label; see *Type 2 diabetes in children*.

**Diarrhea, Antibiotic-Associated**

Alternate index label; see *Antibiotic-associated diarrhea*.

**Diarrhea, Traveler's**

Alternate index label; see *Traveler's diarrhea*.

**Difficulty Speaking**

Alternate index label; see *Voice disorders*.

**Difficulty Swallowing**

Alternate index label; see *Dysphagia*.

**DMG**

Alternate index label; see *Diffuse midline glioma (DMG)*.

**Dissecting Aneurysm**

Alternate index label; see *Aortic dissection*.

**Drop Foot**

Alternate index label; see *Foot drop*.

---

### **Dry Age-Related Macular Degeneration**

Alternate index label; see *Dry macular degeneration*.

### **Dry AMD**

Alternate index label; see *Dry macular degeneration*.

### **DSPS**

Alternate index label; see *Delayed sleep phase*.

### **DSRCT**

Alternate index label; see *Desmoplastic small round cell tumors*.

### **DSWPD**

Alternate index label; see *Delayed sleep phase*.

### **Dunbar Syndrome**

Alternate index label; see *Median arcuate ligament syndrome (MALS)*.

### **Dysrhythmias**

Alternate index label; see *Heart arrhythmia*.

### **Dystonia, Cervical**

Alternate index label; see *Cervical dystonia*.

### **D-Dimer Test**

D-dimer testing measures a fibrin-degradation product; an elevated result can support evaluation for thrombosis but is nonspecific and must be interpreted with pretest probability.

### **D-Xylose Absorption**

A test of intestinal absorption that measures the handling of orally administered D-xylose.

### **Daily Bowel Care Program**

A planned routine for preventing and treating constipation or fecal incontinence, often including timing, fluids, diet, activity, medication, and rectal measures when prescribed.

### **DASH Diet To Lower High Blood**

### **Pressure**

A patient-care topic concerning dash diet to lower high blood pressure. It addresses the relevant purpose, risks, management, and follow-up.

### **Deciding About An IUD**

A clinical condition or finding involving deciding about an iud. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deciding About Hormone Therapy**

A shared clinical decision that weighs symptoms, goals, benefits, contraindications, risks, alternatives, and the person's medical history before hormone therapy.

### **Deciding About Treatments That Prolong Life**

A medical procedure, treatment, device, or care topic related to deciding about treatments that prolong life; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Deciding To Have Knee Or Hip Replacement**

A decision based on pain, functional limitation, imaging, nonoperative treatment response, surgical risk, expectations, and shared discussion with an orthopedic clinician.

### **Deciding To Quit Drinking Alcohol**

A clinical condition or finding involving deciding to quit drinking alcohol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Decreased Alertness**

Decreased alertness is reduced awareness or responsiveness that may result from metabolic illness, intoxication, infection, seizure, stroke, trauma, or sleep-related causes.

### **Deep Breathing After Surgery**

Breathing exercises used after surgery to improve

---

lung expansion and reduce atelectasis; technique and need depend on the operation and patient condition.

### **Deep Vein Thrombosis - Discharge**

A patient-care topic concerning deep vein thrombosis - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Defining Overweight And Obesity In Children**

Classification of excess body mass in children using age- and sex-specific body-mass-index percentiles, growth patterns, health effects, and clinical context rather than adult cutoffs.

### **Delayed Growth**

Slower-than-expected increase in height, weight, or head size compared with standardized growth patterns, caused by nutrition, chronic disease, endocrine disorders, genetics, or normal variation.

### **Delayed Puberty In Boys**

Failure of testicular enlargement and other pubertal changes to begin by the expected age in a boy, caused by constitutional delay, chronic illness, hypogonadism, or hypothalamic-pituitary disease.

### **Delayed Puberty In Girls**

Absence or inadequate progression of breast development or menstruation beyond expected age, caused by constitutional delay, low energy availability, chronic illness, ovarian failure, or hypothalamic-pituitary disease.

### **Delivery Presentations**

The part of the fetus that is positioned to enter the birth canal first, such as vertex, breech, or shoulder presentation; presentation affects obstetric planning.

### **Delta-ALA Urine Test**

A urine test measuring delta-aminolevulinic acid, used in evaluation of porphyria and selected toxic exposures.

### **Dementia - Behavior And Sleep Problems**

Behavioral and sleep changes that can occur in dementia, including agitation, wandering, apathy, hallucinations, or altered sleep-wake timing; causes and reversible contributors should be assessed.

### **Dementia - Daily Care**

A patient-care topic concerning dementia - daily care. It addresses the relevant purpose, risks, management, and follow-up.

### **Dementia - Home Care**

A patient-care topic concerning dementia - home care. It addresses the relevant purpose, risks, management, and follow-up.

### **Dementia - Keeping Safe In The Home**

Home-safety planning for a person with dementia, including supervision, fall and fire prevention, medication management, driving review, wandering precautions, and caregiver support.

### **Dementia - What To Ask Your Doctor**

A clinical test or examination related to dementia - what to ask your doctor. Results are interpreted with the clinical findings, test method, and reference range.

### **Dementia And Driving**

A clinical condition or finding involving dementia and driving. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dementia Due To Metabolic Causes**

Cognitive impairment caused or worsened by metabolic problems such as thyroid disease, vitamin deficiency, organ failure, electrolyte disturbance, or medication toxicity; some causes are treatable.

### **Dental Care - Adult**

A patient-care topic concerning dental care - adult. It addresses the relevant purpose, risks, management, and follow-up.

---

### **Dental Care - Child**

A patient-care topic concerning dental care - child. It addresses the relevant purpose, risks, management, and follow-up.

### **Dental Crowns**

A clinical condition or finding involving dental crowns. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dental Plaque Identification At Home**

Home inspection for the sticky bacterial biofilm on teeth, often using disclosing tablets that stain plaque and show areas missed by brushing.

### **Dental Sealants**

A clinical condition or finding involving dental sealants. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dental X-Rays**

Radiographic images of the teeth and jaws used to assess caries, bone loss, infection, trauma, and developing teeth.

### **Denture Problems**

A clinical condition or finding involving denture problems. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deodorant Poisoning**

Exposure to deodorant, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

### **Depilatory Poisoning**

Exposure to depilatory, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

### **Depression - Resources**

A patient-care topic concerning depression - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Depression - Stopping Your Medicines**

Antidepressants should generally be tapered with a clinician when appropriate; abrupt stopping can cause discontinuation symptoms and relapse, while suicidal thoughts require urgent help.

### **Depression In Older Adults**

Depression in later life may include sadness, loss of interest, sleep or appetite change, slowed thinking, physical complaints, or cognitive symptoms and should be assessed for medical and medication contributors.

### **Dermal Melanocytosis**

A usually benign blue-gray patch caused by melanocytes located deeper than usual in the skin, often present at birth and commonly seen over the lower back or buttocks.

### **Dermatoses - Systemic**

Skin manifestations of a disease affecting multiple organs, such as autoimmune, endocrine, infectious, nutritional, or malignant disease; the skin finding may provide a diagnostic clue.

### **Desipramine Hydrochloride Overdose**

Overdose of desipramine hydrochloride, a tricyclic antidepressant that may cause coma, seizures, hypotension, and life-threatening cardiac conduction abnormalities.

### **Detergent Poisoning**

Exposure to detergent, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

### **Developmental Coordination Disorder**

A clinical condition involving developmental Coordination Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Developmental Differences Of The Female Genital Tract**

Congenital or developmental abnormalities of the female genital tract that may affect anatomy, men-

---

struation, fertility, pregnancy, or urinary function.

### **Developmental Expressive Language Disorder**

A clinical condition involving developmental Expressive Language Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Developmental Milestones Record**

A record of age-related motor, language, cognitive, social, and self-care skills used to follow a child's development and identify possible delay.

### **Developmental Milestones Record - 12 Months**

Expected developmental skills around one year, including pulling to stand, cruising, pointing, simple gestures, and interactive communication; individual variation exists.

### **Developmental Milestones Record - 18 Months**

Expected developmental skills around 18 months, including walking, using several words, following simple directions, and beginning pretend or imitative play.

### **Developmental Milestones Record - 2 Months**

Expected early-infant skills around two months, including social smiling, visual tracking, responding to sound, and improved head control.

### **Developmental Milestones Record - 2 Years**

Expected skills around two years, including running, using two-word phrases, following two-step directions, and beginning parallel play.

### **Developmental Milestones Record - 3 Years**

Expected skills around three years, including three-word speech, climbing stairs with support, drawing simple shapes, and cooperative social interaction.

### **Developmental Milestones Record - 4 Months**

Expected skills around four months, including steady head control, rolling, reaching for objects, laughing, and responding to caregivers.

### **Developmental Milestones Record - 4 Years**

Expected skills around four years, including understandable sentences, hopping, drawing a person with several parts, and imaginative cooperative play.

### **Developmental Milestones Record - 5 Years**

Expected skills around five years, including running and jumping well, telling a simple story, counting, dressing with limited help, and following game rules.

### **Developmental Milestones Record - 6 Months**

Expected skills around six months, including sitting with support, rolling, reaching and transferring objects, babbling, and recognizing familiar people.

### **Developmental Milestones Record - 9 Months**

Expected skills around nine months, including sitting independently, crawling or moving purposefully, babbling, responding to name, and using a pincer-like grasp.

### **Developmental Reading Disorder**

A clinical condition involving developmental Reading Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Devices For Hearing Loss**

Assistive technologies such as hearing aids, cochlear implants, bone-conduction devices, alerting systems, and communication accessories that improve access to sound.

### **Dextromethorphan Overdose**

Overdose of dextromethorphan that may cause drowsiness, agitation, hallucinations, seizures, respi-

---

ratory depression, or serotonin toxicity.

### **DHEA-Sulfate Test**

A blood test measuring dehydroepiandrosterone sulfate, an adrenal androgen, to evaluate selected adrenal or androgen disorders.

### **Diabetes - Foot Ulcers**

Open sores of the foot associated with diabetes, often involving neuropathy, pressure, deformity, or poor circulation; prompt wound and infection assessment helps prevent amputation.

### **Diabetes - Insulin Therapy**

Treatment with injected or infused insulin to replace deficient insulin or improve glucose control; dosing must be individualized and balanced against hypoglycemia risk.

### **Diabetes - Keeping Active**

Regular physical activity supports glucose control and cardiovascular health in diabetes; activity should be individualized to treatment and complications.

### **Diabetes - Preventing Heart Attack And Stroke**

Cardiovascular risk reduction in diabetes includes glucose management, blood-pressure and lipid control, smoking cessation, physical activity, nutrition, and indicated medicines.

### **Diabetes - Resources**

A patient-care topic concerning diabetes - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Diabetes - Taking Care Of Your Feet**

A patient-care topic concerning diabetes - taking care of your feet. It addresses the relevant purpose, risks, management, and follow-up.

### **Diabetes - When You Are Sick**

Sick-day diabetes care includes more frequent glucose checks, hydration, continuation or adjustment

of medicines as instructed, and ketone monitoring when indicated; severe symptoms need urgent care.

### **Diabetes And Alcohol**

Alcohol can cause delayed hypoglycemia, interact with medicines, and complicate glucose control; risks depend on the amount, timing, food intake, diabetes type, and treatment.

### **Diabetes And Exercise**

A clinical condition or finding involving diabetes and exercise. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diabetes And Eye Disease**

A clinical condition involving diabetes And Eye Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Diabetes And Kidney Disease**

A clinical condition involving diabetes And Kidney Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Diabetes And Nerve Damage**

Diabetic neuropathy is nerve injury associated with chronic metabolic disease and may cause pain, numbness, weakness, autonomic symptoms, or loss of protective sensation.

### **Diabetes Eye Care**

A patient-care topic concerning diabetes eye care. It addresses the relevant purpose, risks, management, and follow-up.

### **Diabetes Eye Exams**

Eye examinations for diabetes screen for retinopathy, macular edema, cataracts, glaucoma, and other vision-threatening complications.

### **Diabetes Myths And Facts**

An educational topic distinguishing evidence-based information about diabetes from common inaccurate claims.

---

## Diabetes Tests And Checkups

Diabetes testing and checkups assess glucose control and screen for complications involving the kidneys, eyes, nerves, cardiovascular system, and feet.

## Diabetes Type 2 - Meal Planning

Meal planning for type 2 diabetes emphasizes appropriate portions, fiber-rich foods, carbohydrate awareness, adequate protein, and a pattern compatible with medicines, health goals, and preferences.

## Diabetic Hyperglycemic Hyperosmolar Syndrome

A clinical condition involving diabetic Hyperglycemic Hyperosmolar Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

## Diagnostic Laparoscopy

A minimally invasive procedure using a camera inserted through abdominal incisions to inspect pelvic or abdominal organs and sometimes obtain biopsies or perform treatment.

## Dialysis - Hemodialysis

Blood is circulated through a dialyzer to remove waste and excess fluid when kidney function is inadequate; treatment requires vascular access and monitoring.

## Dialysis - Peritoneal

The peritoneal membrane is used as a filter by instilling and draining dialysis solution through a catheter; infection and fluid-management problems require prompt attention.

## Dialysis Centers - What To Expect

Information about dialysis-center care, including hemodialysis procedures, access care, scheduling, monitoring, and infection prevention.

## Diarrhea - What To Ask Your Doctor - Child

A patient discussion topic about childhood diarrhea, including hydration, warning signs, possible causes,

and when medical review is needed.

## Diarrhea - What To Ask Your Health Care Provider - Adult

A patient-care topic concerning diarrhea - what to ask your health care provider - adult. It addresses the relevant purpose, risks, management, and follow-up.

## Diarrhea In Infants

Frequent loose or watery stools in a baby; dehydration, blood, fever, poor feeding, lethargy, or reduced urination require prompt assessment.

## Diazepam Overdose

Overdose of diazepam, a benzodiazepine, that may cause sedation, impaired coordination, respiratory depression, or coma, especially with other depressants.

## Diazinon Poisoning

Organophosphate poisoning that can cause salivation, sweating, vomiting, diarrhea, bronchospasm, bradycardia, seizures, and respiratory failure.

## Diclofenac Sodium Overdose

Overdose of diclofenac, a nonsteroidal anti-inflammatory drug, that may cause gastrointestinal bleeding, kidney injury, seizures, or metabolic abnormalities.

## Dieffenbachia Poisoning

Poisoning caused by calcium oxalate crystals in Dieffenbachia, producing burning and swelling of the mouth and throat after chewing.

## Diesel Oil

Toxic effects caused by excessive exposure to diesel oil. Severity depends on the dose, route, timing, and clinical findings; suspected poisoning requires prompt assessment.

## Diet - Chronic Kidney Disease

A patient-care topic concerning diet - chronic kidney disease. It addresses the relevant purpose, risks,

---

management, and follow-up.

### **Diet - Liver Disease**

A patient-care topic concerning diet - liver disease. It addresses the relevant purpose, risks, management, and follow-up.

### **Diet After Gastric Banding**

A patient-care topic concerning diet after gastric banding. It addresses the relevant purpose, risks, management, and follow-up.

### **Diet And Cancer**

A patient-care topic concerning diet and cancer. It addresses the relevant purpose, risks, management, and follow-up.

### **Diet And Eating After Esophagectomy**

Diet after esophagectomy is advanced gradually according to swallowing function, tolerance, nutrition needs, and surgical follow-up.

### **Diet For Rapid Weight Loss**

A patient-care topic concerning diet for rapid weight loss. It addresses the relevant purpose, risks, management, and follow-up.

### **Diet Myths And Facts**

An educational topic distinguishing evidence-based nutrition information from common inaccurate diet claims.

### **Diet-Boosting Foods**

A patient-care topic concerning diet-boosting foods. It addresses the relevant purpose, risks, management, and follow-up.

### **Diet-Busting Foods**

A patient-care topic concerning diet-busting foods. It addresses the relevant purpose, risks, management, and follow-up.

### **Dietary Fat And Children**

A patient-care topic concerning dietary fat and children. It addresses the relevant purpose, risks, management, and follow-up.

agement, and follow-up.

### **Dietary Fats Explained**

A patient-care topic concerning dietary fats explained. It addresses the relevant purpose, risks, management, and follow-up.

### **Dietary Guidelines For Americans 2025 - 2030**

A patient-care topic concerning dietary guidelines for americans 2025 - 2030. It addresses the relevant purpose, risks, management, and follow-up.

### **Differences Of Sex Development**

Congenital variations in chromosomal, gonadal, hormonal, or internal or external genital development that do not fit typical male or female patterns.

### **Digestive Diseases**

A clinical finding or condition involving digestive Diseases; evaluation depends on its characteristic features, causes, severity, and complications.

### **Digital Anorectal Exam - DARE**

A physical examination using a gloved finger to assess the anal canal, rectum, and nearby structures.

### **Digital Rectal Exam**

A physical examination using a gloved finger to assess the anal canal, rectum, and nearby structures.

### **Digoxin Test**

A blood test measuring digoxin concentration to assess therapeutic exposure or suspected toxicity.

### **Dilantin Overdose**

Overdose of phenytoin, also called Dilantin, that may cause nystagmus, ataxia, slurred speech, altered consciousness, hypotension, or cardiac toxicity.

### **Dimenhydrinate Overdose**

Overdose of dimenhydrinate, an antihistamine that may cause sedation, agitation, anticholinergic effects, seizures, arrhythmias, or respiratory depression.

---

sion.

### **Diphenhydramine Overdose**

Overdose of diphenhydramine, an antihistamine that may cause sedation, agitation, anticholinergic effects, seizures, arrhythmias, or respiratory depression.

### **Dirt - Swallowing**

A clinical term concerning dirt - swallowing. Its definition and clinical management depend on the context.

### **Discipline In Children**

A clinical condition or finding involving discipline in children. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Disk Replacement - Lumbar Spine**

Surgery replacing a damaged lumbar intervertebral disc with an artificial disc in selected patients; benefits, risks, and suitability require specialist assessment.

### **Dislocated Shoulder - Aftercare**

A patient-care topic concerning dislocated shoulder - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Dissect**

To dissect is to separate tissue layers or structures by cutting or careful blunt separation for examination, surgery, or anatomical study.

### **Disseminated Intravascular Coagulation (DIC)**

Disseminated intravascular coagulation is uncontrolled systemic coagulation activation with consumption of platelets and clotting factors, producing simultaneous thrombosis and bleeding.

### **Disseminated Tuberculosis**

A clinical finding or condition involving disseminated Tuberculosis; evaluation depends on its characteristic features, causes, severity, and complica-

tions.

### **Distal Median Nerve Dysfunction**

Distal median nerve dysfunction causes sensory loss, pain, or weakness in the hand supplied by the median nerve and may result from compression or injury.

### **Distal Renal Tubular Acidosis**

A disorder in which the distal nephron cannot excrete acid effectively, causing non-anion-gap metabolic acidosis and sometimes low potassium, kidney stones, or bone disease.

### **Distal Splenorenal Shunt**

A clinical condition or finding involving distal splenorenal shunt. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Distracted Driving**

Driving while attention is diverted from vehicle control by a visual, manual, or cognitive task, increasing crash risk.

### **Diverticulitis - What To Ask Your Doctor**

A patient discussion topic about diverticulitis, including symptoms, testing, treatment, recurrence prevention, and warning signs.

### **Diverticulitis And Diverticulosis - Discharge**

A patient-care topic concerning diverticulitis and diverticulosis - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Dizziness And Vertigo - Aftercare**

A patient-care topic concerning dizziness and vertigo - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Do You Have A Drinking Problem?**

A screening question about alcohol use, control, cravings, consequences, and withdrawal that can identify possible alcohol use disorder and prompt

---

confidential assessment.

### **Doctor Of Medicine Profession (MD)**

The Doctor of Medicine degree is a professional qualification awarded after medical education and training; a physician's scope of practice depends on licensure and jurisdiction.

### **Doctor Of Osteopathic Medicine**

The Doctor of Osteopathic Medicine degree is a professional medical qualification that includes training in comprehensive patient care and osteopathic principles.

### **Donath-Landsteiner Test**

A laboratory test for biphasic hemolysin antibodies associated with paroxysmal cold hemoglobinuria.

### **Donovanosis (Granuloma Inguinale)**

A sexually transmitted infection caused by *Klebsiella granulomatis* that produces slowly progressive, usually painless genital ulcers; diagnosis and antibiotic treatment require clinical evaluation.

### **Doppler Ultrasound Exam Of An Arm Or Leg**

An ultrasound examination that measures blood flow in the arteries and veins of an arm or leg.

### **Double Aortic Arch**

A congenital vascular ring in which two aortic arches surround the trachea and esophagus, potentially causing noisy breathing, feeding difficulty, cough, or swallowing problems.

### **Double Inlet Left Ventricle**

A rare congenital heart defect in which both atria connect predominantly to one morphologic left ventricle, producing single-ventricle circulation and mixing of oxygenated blood.

### **Doxepin Overdose**

Overdose of doxepin, a tricyclic antidepressant that may cause coma, seizures, hypotension, and life-threatening cardiac conduction abnormalities.

### **Drain Cleaner Poisoning**

Exposure to a caustic drain-cleaning product that can cause severe burns of the skin, eyes, airway, or gastrointestinal tract.

### **Drain Opener Poisoning**

Exposure to a caustic drain-cleaning product that can cause severe burns of the skin, eyes, airway, or gastrointestinal tract.

### **Drainpipe Cleaners**

A clinical term concerning drainpipe cleaners. Its definition and clinical management depend on the context.

### **Drawing Medicine Out Of A Vial**

A clinical condition or finding involving drawing medicine out of a vial. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Drinking Water Safely During Cancer Treatment**

Food and water precautions during cancer treatment aim to reduce infection risk, especially when immunity is suppressed; advice should follow the oncology team and local water guidance.

### **Driving And Older Adults**

A clinical condition or finding involving driving and older adults. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Drug Allergies**

Drug allergies are immune-mediated reactions to a medicine, ranging from rash to anaphylaxis; they must be distinguished from predictable side effects and nonimmune intolerance.

### **Drug Use First Aid**

Immediate care for suspected drug intoxication, including assessment of breathing and responsiveness, emergency activation, overdose-specific support, and naloxone when opioid toxicity is suspected.

---

## Drug-Induced Diarrhea

Diarrhea caused by a medicine or drug interaction. Common causes include antibiotics, laxatives, metformin, and medicines that alter intestinal motility.

## Drug-Induced Immune Hemolytic Anemia

An uncommon immune-mediated destruction of red blood cells triggered by a medication; evaluation includes blood tests and review of exposures, with specialist management.

## Drug-Induced Low Blood Sugar

Low blood glucose caused by a medicine, most often insulin or an insulin secretagogue. Symptoms may include sweating, tremor, confusion, seizure, or loss of consciousness.

## Drug-Induced Lupus Erythematosus

A lupus-like autoimmune syndrome caused by certain medicines. Symptoms commonly include joint pain, muscle pain, and fever and usually improve after the causative medicine is stopped.

## Drug-Induced Pulmonary Disease

A pharmacologic agent associated with drug-Induced Pulmonary Disease; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

## Drug-Induced Thrombocytopenia

A low platelet count caused by a medicine through immune destruction, reduced production, or other mechanisms, increasing bleeding risk.

## Drug-Induced Tremor

Tremor caused or worsened by a medicine, stimulant, or toxin. Assessment considers timing, dose, other causes, and whether the medicine can be changed.

## Drugs That May Cause Erection Problems

Medicines that may impair erection include some antihypertensives, antidepressants, antipsychotics, antiandrogens, and other drugs; review should be

clinician-guided.

## Dry Cell Battery Poisoning

Ingestion or exposure to a dry-cell battery. Leakage or retention can cause corrosive tissue injury and requires urgent assessment.

## Dry Hair

Hair that lacks moisture or appears rough, brittle, dull, or frizzy because of weather, heat or chemical damage, infrequent conditioning, nutritional disease, or an endocrine disorder.

## Dry Mouth During Cancer Treatment

Reduced saliva during or after cancer treatment, often from head-and-neck radiation or medicines, increasing discomfort, dental caries, swallowing difficulty, and oral infection risk.

## Dry Skin - Self-Care

A patient-care topic concerning dry skin - self-care. It addresses the relevant purpose, risks, management, and follow-up.

## DTaP (Diphtheria, Tetanus, And Pertussis) Vaccine - What You Need To Know

A clinical condition or finding involving dtap (diphtheria, tetanus, and pertussis) vaccine - what you need to know. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dye Remover Poisoning

Exposure to dye remover, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

## Dyscrasias

Dyscrasias is an older broad term for abnormal blood or body-fluid composition, often referring to hematologic disorders or abnormal blood cells.

## Damage To The Amygdala

Damage to the amygdala can affect fear processing,

---

emotional learning, memory, threat recognition, and social behavior. Causes include trauma, stroke, infection, tumor, epilepsy, or degenerative disease, and effects depend on the side and extent of injury.

### **DDD (Degenerative Disc)**

Alternate index label for Degenerative Disc.

### **De Quervain's Tenosynovitis**

De Quervain tenosynovitis is painful inflammation or thickening of the thumb-side wrist tendons, often aggravated by gripping, lifting, or repetitive wrist motion. Rest, splinting, activity changes, injections, or surgery may be used according to severity.

#### **Synonyms:**

DeQuervains Tenosynovitis (De Quervain's Tenosynovitis)

### **Death Sudden Cardiac (Sudden Cardiac Death)**

Alternate index label for Sudden Cardiac Death.

### **Deficiency Primary Immunodeficiency (Primary Immunodeficiency Disease PIDD)**

Alternate index label for Primary Immunodeficiency Disease PIDD.

### **Degenerative Disc**

Degenerative disc disease describes age- or wear-related changes in spinal discs that may cause neck or back pain, stiffness, or nerve compression. Imaging changes can occur without symptoms; treatment usually begins with activity, exercise-based rehabilitation, and pain management.

#### **Synonyms:**

DDD (Degenerative Disc)

### **Dehydration: Causes And Prevention**

Dehydration occurs when fluid loss exceeds intake through vomiting, diarrhea, fever, sweating, urination, or inadequate access to fluids. Prevention includes regular intake and replacement of electrolytes when needed; confusion, fainting, minimal urine, or severe weakness requires urgent care.

### **Delayed Gastric Emptying (Gastroparesis)**

Alternate index label for Gastroparesis.

### **Dengue Fever Vs. Dengue Hemorrhagic Fever**

Dengue fever commonly causes abrupt fever, headache, muscle and joint pain, nausea, and rash. Severe dengue can cause plasma leakage, bleeding, shock, or organ injury, often around the time fever falls, and requires close monitoring and urgent treatment.

### **Dental Braces**

Dental braces apply controlled force to move teeth and align the bite over time. Treatment requires oral hygiene, dietary care, periodic adjustments, and retention afterward; risks include temporary soreness, enamel decalcification, gum problems, and root changes.

#### **Synonyms:**

Braces And Retainers (Dental Braces)

### **Dental Caries (Cavities)**

Alternate index label for Cavities.

### **Dental Injuries**

Dental injuries include fractures, displacement, loosening, or loss of teeth and damage to gums or jaw after trauma. Prompt dental assessment can preserve injured teeth; uncontrolled bleeding, jaw deformity, airway problems, or head injury requires emergency care.

#### **Synonyms:**

Dental Trauma (Dental Injuries)

### **Dental Trauma (Dental Injuries)**

Alternate index label for Dental Injuries.

### **Depression In Children**

Depression in children may present as persistent sadness, irritability, loss of interest, withdrawal, school decline, sleep or appetite change, physical complaints, guilt, or thoughts of death. Assessment considers development, family context, medi-

---

cal causes, safety, and treatment response.

**Synonyms:**

Kids Depression (Depression In Children)

**DeQuervains Tenosynovitis (De Quervain's Tenosynovitis)**

Alternate index label for De Quervain's Tenosynovitis.

**Desynchronosis (Jet Lag)**

Alternate index label for Jet Lag.

**Diabetes (Diabetes Mellitus)**

Alternate index label for Diabetes Mellitus.

**Diabetes And Eye Problems**

Diabetes can damage retinal blood vessels, causing diabetic retinopathy, macular edema, cataracts, glaucoma, and vision loss. Blood-glucose and blood-pressure control, regular dilated eye examinations, and timely laser, injection, or surgical treatment reduce risk.

**Diabetes During Pregnancy (Gestational Diabetes)**

Alternate index label for Gestational Diabetes.

**Diabetes Pre (Prediabetes)**

Alternate index label for Prediabetes.

**Diabetes Symptoms In Men**

Diabetes in men may cause thirst, frequent urination, fatigue, blurred vision, slow wound healing, recurrent infections, erectile dysfunction, or loss of sensation. Some people have no symptoms, so risk-based blood testing is important.

**Diabetes Symptoms In Women**

Diabetes in women may cause thirst, frequent urination, fatigue, blurred vision, recurrent vaginal or urinary infections, slow wound healing, or pregnancy complications. Symptoms can be absent, and screening depends on age, risk factors, and pregnancy status.

**Diabetes Treatment**

Diabetes treatment combines nutrition, physical activity, glucose monitoring, education, and medicines chosen for the type of diabetes and individual risks. Care also addresses blood pressure, lipids, kidneys, eyes, nerves, feet, vaccines, and cardiovascular health.

**Diabetes Type 1 (Type 1 Diabetes)**

Alternate index label for Type 1 Diabetes.

**Diabetes Type 2 (Type 2 Diabetes)**

Alternate index label for Type 2 Diabetes.

**Diabetic Diet For Type 2 Diabetes**

A type 2 diabetes eating plan emphasizes consistent carbohydrate awareness, fiber-rich foods, adequate protein, unsaturated fats, and portions that support glucose and weight goals. There is no single diabetic diet; medicines, kidney function, culture, and preferences guide the plan.

**Diabetic Home Care And Monitoring**

Home diabetes care may include checking glucose, taking medicines, inspecting feet, recognizing low or high glucose, recording results, and attending eye, kidney, dental, and cardiovascular follow-up. Sick-day plans and ketone guidance are important for people at risk of ketoacidosis.

**Diarrhea IBS (IBS-D Irritable Bowel Syndrome With Diarrhea)**

Alternate index label for IBS-D Irritable Bowel Syndrome with Diarrhea.

**Diarrhea Travelers (Traveler's Diarrhea)**

Alternate index label for Traveler's Diarrhea.

**Diet Diabetes (Diabetic Diet)**

Alternate index label for Diabetic Diet.

**Diet IBS (Irritable Bowel Syndrome (IBS) Triggers, Prevention)**

Alternate index label for Irritable Bowel Syndrome (IBS) Triggers, Prevention.

---

### **Diet Ulcerative Colitis (Ulcerative Colitis Diet)**

Alternate index label for Ulcerative Colitis Diet.

### **Difficile C. Contagious (Is C Diff Clostridium Difficile Contagious)**

Alternate index label for Is C diff Clostridium difficile Contagious.

### **Difficile Clostridium (Clostridium Difficile Colitis)**

Alternate index label for Clostridium Difficile Colitis.

### **Difficulty Swallowing (Swallowing)**

Alternate index label for Swallowing.

### **Diffuse Idiopathic Skeletal Hyperostosis**

Diffuse idiopathic skeletal hyperostosis causes flowing calcification and ossification along spinal ligaments and may affect peripheral entheses. It can produce stiffness, pain, swallowing difficulty, or fractures after minor trauma; management is symptom-focused and addresses associated metabolic risks.

#### **Synonyms:**

DISH (Diffuse Idiopathic Skeletal Hyperostosis)

### **Diphtheria Facts**

Diphtheria is a toxin-producing infection, usually of the throat or skin, caused by *Corynebacterium diphtheriae*. A gray membrane, neck swelling, nerve injury, heart inflammation, and airway obstruction can occur; vaccination, isolation, antitoxin, and antibiotics are central to treatment.

### **Direct Vs Indirect Hernia**

A direct inguinal hernia pushes through a weak area of the abdominal wall medial to the inferior epigastric vessels, while an indirect hernia follows the inguinal canal through the deep ring. Both may cause a groin bulge and can become incarcerated or strangulated.

#### **Synonyms:**

Indirect Vs. Direct Hernia (Direct Vs Indirect Hernia)

### **DISH (Diffuse Idiopathic Skeletal Hyperostosis)**

Alternate index label for Diffuse Idiopathic Skeletal Hyperostosis.

### **Dislocated Ankle (Ankle Dislocation)**

Alternate index label for Ankle Dislocation.

### **Dislocated Elbow**

An elbow dislocation occurs when the joint surfaces lose alignment, usually after a fall or collision. It causes severe pain, deformity, and limited movement and requires urgent reduction with assessment of nerves, blood vessels, fractures, and later stiffness.

### **Dislocated Hip**

A hip dislocation is displacement of the femoral head from the acetabulum, usually after major trauma or around a prosthetic joint. It is an emergency because blood supply to the femoral head and nearby nerves can be compromised.

### **Dislocated Knee**

A knee dislocation is loss of alignment between the femur and tibia, often after high-energy trauma. Artery and nerve injury may be occult, so urgent reduction and vascular assessment are required even when the joint spontaneously relocates.

### **Disorder Antisocial Personality (Antisocial Personality Disorder)**

Alternate index label for Antisocial Personality Disorder.

### **Disorder Asperger (Asperger Syndrome)**

Alternate index label for Asperger Syndrome.

### **Disorders Sleep (Sleep)**

Alternate index label for Sleep.

### **Disorders Sleep In Children (Sleep And Sleep Disorders In Children And Teens)**

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

---

## Disorders Sleep In Teenagers (Sleep And Sleep Disorders In Children And Teens)

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

## Dissection Aorta (Aortic Dissection)

Alternate index label for Aortic Dissection.

## Diverticulosis Vs Diverticulitis

Diverticulosis is the presence of pouches in the colon wall and may cause no symptoms or bleeding. Diverticulitis occurs when a pouch becomes inflamed or infected, causing localized pain, fever, bowel changes, or complications such as abscess or perforation.

## Divisum Pancreas (Pancreas Divisum)

Alternate index label for Pancreas Divisum.

## Dizziness (Dizzy)

Alternate index label for Dizzy.

## Dizziness: Causes, Symptoms, And Treatment

Dizziness may mean vertigo, lightheadedness, imbalance, or a floating sensation. Causes include inner-ear disease, dehydration, medication, anemia, heart rhythm problems, migraine, anxiety, or neurologic disease; treatment depends on the pattern and examination.

## Dizziness: When To See A Doctor?

Dizziness needs urgent assessment when it begins suddenly or occurs with weakness, numbness, trouble speaking, severe headache, chest pain, fainting, inability to walk, persistent vomiting, or new hearing loss. Recurrent or unexplained dizziness also merits evaluation.

## Dog Bite Treatment

Dog-bite care includes thorough wound cleaning, assessment of tissue and tendon injury, tetanus review, rabies-risk evaluation, and antibiotics when indicated. Deep punctures, bites to the hand or face, uncontrolled bleeding, infection, or immune compromise require prompt medical care.

## Synonyms:

Bite Dog (Dog Bite Treatment)

## Dog Bite

An injury caused by a dog's teeth. Care includes prompt wound cleansing, assessment for tissue damage and infection, tetanus review, and evaluation of rabies exposure when relevant.

## Synonyms:

Dog bite injury

## Dos And Donts During First Trimester Of Pregnancy

First-trimester care includes prenatal visits, recommended folic acid, avoidance of alcohol and tobacco, medication review, food-safety precautions, and appropriate activity. Severe pain, heavy bleeding, fainting, fever, or persistent vomiting needs urgent obstetric evaluation.

## Double Vision

Double vision may arise from an eye alignment problem, corneal or lens disease, muscle or nerve dysfunction, medication, migraine, or brain disease. Sudden double vision, especially with weakness, speech change, severe headache, or eye pain, is an emergency.

## Doula Vs. Midwife

A doula provides nonmedical emotional, informational, and physical support during pregnancy, birth, and postpartum care. A midwife is a licensed clinician who provides medical maternity care within training and local scope, including assessment and management of normal pregnancy and birth.

## Down Syndrome Overview

Down syndrome is a genetic condition caused by an extra chromosome 21 and is associated with characteristic features, developmental differences, hypotonia, and variable heart, hearing, vision, thyroid, gastrointestinal, and sleep conditions. Lifelong individualized health and developmental support is beneficial.

## Synonyms:

Trisomy 21 (Down Syndrome Overview)

---

### Drug Induced Liver Disease

Drug-induced liver injury occurs when a medicine, supplement, or toxin damages liver cells or bile flow. It may cause fatigue, nausea, itching, dark urine, jaundice, or no symptoms; identifying and stopping the responsible exposure under medical guidance is central to care.

### Dry Scalp Vs. Dandruff (Dandruff Vs Dry Scalp)

Alternate index label for Dandruff vs Dry Scalp.

### Dry Socket Overview

Dry socket is painful inflammation after a tooth extraction when the protective blood clot is lost or breaks down before healing. Pain often worsens several days after extraction and may radiate to the ear; dental cleaning, medicated dressing, and analgesia provide relief.

#### Synonyms:

Alveolar Osteitis (Dry Socket Overview)

### Dryness Vaginal (Vaginal Dryness And Vaginal Atrophy)

Alternate index label for Vaginal Dryness and Vaginal Atrophy.

### Duck Syndrome

Duck syndrome is an informal term for appearing successful while privately experiencing severe stress, anxiety, exhaustion, or depression. It is not a formal diagnosis; persistent distress, impaired functioning, or self-harm thoughts warrant mental-health evaluation and support.

### Duodenal Diverticulum

A duodenal diverticulum is an outpouching of the duodenal wall, often found incidentally near the ampulla. It can rarely cause pain, bleeding, inflammation, obstruction, pancreatitis, or bile-duct infection and is treated according to symptoms and complications.

### Dupuytren's Contracture (Dupuytren

### Contracture)

Alternate index label for Dupuytren Contracture.

### DVT (Deep Vein Thrombosis)

Alternate index label for Deep Vein Thrombosis.

### Dwarfism (Achondroplasia)

Alternate index label for Achondroplasia.

### Dysplasia Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

### D & C

Dilation and curettage, a procedure in which the cervix is widened and tissue is removed from the uterine cavity for treatment or diagnosis.

### D.O.

Doctor of Osteopathic Medicine, a physician degree whose graduates are licensed to practice medicine and surgery like MD graduates in the United States.

### Dacryo-

A combining form meaning tear or tear duct.

### Dactyl-, -Dactyl

A combining form or suffix meaning finger or toe.

### Daily Value

A reference amount used on U.S. Nutrition Facts labels to show how much a nutrient in one serving contributes to a typical daily diet.

### Daw

An abbreviation meaning dispense as written, indicating that the pharmacist should dispense the prescribed product rather than automatically substitute a generic equivalent when permitted by law.

### De Musset Sign

Rhythmic head bobbing with the heartbeat, classically associated with severe aortic regurgitation.

---

## **DEA**

The U.S. Drug Enforcement Administration, which enforces controlled-substance laws and assigns registration numbers to authorized prescribers and dispensers.

## **Debride**

To remove dead, damaged, infected, or contaminated tissue from a wound or body site to support healing and control infection.

## **Debulk**

To reduce the size or amount of a tumor or other abnormal tissue, usually by surgery or another treatment, without necessarily removing every abnormal cell.

## **Decompression**

Reduction of pressure on a tissue or body compartment, such as removing pressure from a spinal nerve, draining an obstructed organ, or treating pressure changes after diving.

## **Decubitus**

A lying or reclining position; the term also appears in decubitus ulcer, a pressure injury caused by prolonged pressure and shear.

## **Defecation Syncope**

Fainting during or immediately after defecation, usually a situational reflex involving straining, reduced venous return, and a temporary fall in blood pressure.

## **Deficiency, FAO**

Fatty-acid oxidation deficiency, an inherited metabolic disorder in which cells cannot properly use fatty acids for energy, potentially causing fasting- or illness-triggered hypoglycemia, muscle injury, or cardiomyopathy.

## **Deficiency, Iron**

Inadequate iron stores or availability, which can impair hemoglobin production and cause iron-deficiency anemia, fatigue, pallor, and reduced ex-

ercise tolerance.

## **Deficiency, UDP-Glucuronosyltransferase**

Reduced activity of the enzyme that conjugates bilirubin in the liver; inherited forms include Gilbert syndrome and the more severe Crigler–Najjar syndromes.

## **Deformation**

An alteration in the shape or structure of a body part, tissue, or material caused by developmental forces, injury, disease, pressure, or mechanical stress.

## **DEHP**

Di(2-ethylhexyl) phthalate, a plasticizer used in some medical and consumer products; exposure is monitored because of potential reproductive, developmental, and endocrine effects.

## **Demarcation**

A clear boundary separating one area, tissue, process, or condition from another, such as the line between viable and necrotic tissue.

## **Demonophobia**

An excessive or irrational fear of demons or supernatural beings.

## **Dengue Hemorrhagic Fever (DHF)**

A severe form of dengue characterized by increased vascular permeability, thrombocytopenia, bleeding manifestations, and potential plasma leakage; current classifications generally use the term severe dengue.

## **Dengue Shock Syndrome**

Life-threatening circulatory shock caused by severe dengue with plasma leakage and reduced effective blood volume, often accompanied by bleeding or organ dysfunction.

## **Dental Braces (Orthodontics)**

Fixed or removable orthodontic appliances that apply controlled forces to move teeth and correct malocclusion or jaw-related alignment problems.

---

### **Dental Pain (Toothache)**

Pain arising from a tooth or nearby tissues, commonly due to dental caries, pulp inflammation, infection, trauma, cracked teeth, or gum disease.

### **Denver Developmental Screening Test**

A developmental screening tool for young children that assesses personal-social, fine-motor, language, and gross-motor skills; it screens for possible delay and is not a diagnostic test.

### **Deoxyhemoglobin**

Hemoglobin that is not bound to oxygen; increased levels in superficial blood can contribute to bluish cyanotic coloration.

### **Department Of Health And Human Services**

The U.S. federal department responsible for major public-health, human-services, biomedical research, and health-insurance programs.

### **Depigmentation**

Loss or reduction of normal pigment, especially melanin in the skin, hair, or mucosa, caused by conditions such as vitiligo, inflammation, injury, or treatment.

### **Dermal**

Relating to the dermis, the connective-tissue layer of skin beneath the epidermis.

### **Dermatologic**

Relating to the skin, hair, nails, or the medical specialty of dermatology.

### **Dermatosis**

A disease or disorder of the skin, including inflammatory, infectious, allergic, genetic, and neoplastic conditions.

### **Dermoid Cyst Of The Ovary**

A usually benign mature cystic teratoma arising from germ cells in the ovary and containing tissues such as skin, hair, fat, or teeth.

### **DES**

An abbreviation that may mean diethylstilbestrol, a synthetic estrogen, or drug-eluting stent; diethylstilbestrol exposure during pregnancy is associated with later reproductive and cancer risks.

### **Desiccate**

To dry out or remove moisture from a tissue, substance, or environment.

### **Designer Steroid**

A chemically modified anabolic-androgenic steroid created to produce performance-enhancing effects or evade detection; products may be unapproved, contaminated, and medically dangerous.

### **Desmoplastic Reaction**

Formation of dense fibrous connective tissue in response to tissue injury or, commonly, invasion by a carcinoma.

### **Desmoplastic Trichoepithelioma**

A rare benign follicular adnexal tumor, usually a small solitary facial papule or annular lesion, that can resemble morpheaform basal-cell carcinoma and is distinguished by histopathologic examination.

### **Desmoplastic Melanoma**

A rare spindle-cell melanoma with prominent fibrous stroma, usually arising on chronically sun-damaged skin; it may be amelanotic and can be difficult to recognize clinically and histologically.

### **Digital Papillary Adenocarcinoma**

A rare malignant sweat-gland tumor, usually arising on a finger, hand, or foot as a slow-growing nodule; it can recur locally and metastasize.

### **Desquamation**

Shedding or peeling of the outer layers of skin or another epithelial surface.

### **Development**

The progressive process by which an organism, organ, or ability grows, differentiates, and acquires

---

structure or function.

### **Developmental Disorder**

A condition beginning during the developmental period that affects physical, intellectual, language, learning, behavioral, or social functioning.

### **Dextro-**

A combining form meaning right, toward the right, or sometimes clockwise.

### **Dextroposition Of The Heart**

Displacement of the heart toward the right side of the chest, usually because of an external shift such as lung disease or abnormal anatomy; it is distinct from dextrocardia.

### **Dextrose**

D-glucose, a simple sugar used by cells for energy and given medically in oral or intravenous solutions to treat or prevent low blood glucose.

### **DHA**

Docosahexaenoic acid, an omega-3 polyunsaturated fatty acid important in neural and retinal membranes and obtained from seafood or supplements.

### **DHEA**

Dehydroepiandrosterone, an adrenal steroid precursor that can be converted into androgens and estrogens; its levels vary with age and disease.

### **DHF (Dengue Hemorrhagic Fever)**

An abbreviation for dengue hemorrhagic fever, a severe dengue presentation involving vascular leakage, thrombocytopenia, bleeding, and possible shock.

### **DHHS**

The abbreviation for the U.S. Department of Health and Human Services.

### **Di-**

A combining form meaning two, twice, or double.

### **Dia-**

A combining form with meanings including through, across, apart, or complete, depending on the word.

### **Dialysis Machine**

Equipment that circulates blood or dialysis fluid across a semipermeable membrane to remove waste, excess fluid, and electrolytes when kidney function is inadequate.

### **Diaphragm (Muscle)**

A dome-shaped skeletal muscle separating the chest from the abdomen; contraction enlarges the thoracic cavity and drives inhalation.

### **Diastolic**

Relating to diastole, the phase when the heart muscle relaxes and the chambers fill; diastolic blood pressure is the lower number in a blood-pressure reading.

### **Diff Dx**

Abbreviation for differential diagnosis, the reasoned comparison of possible causes of a patient's signs, symptoms, or test findings.

### **Differentiated Cancer**

A cancer whose cells retain recognizable structural or functional features of the tissue from which they arose; the degree of differentiation helps describe tumor grade.

### **Difficult Urination**

Trouble starting or maintaining urine flow, painful urination, weak stream, or incomplete emptying; causes include infection, obstruction, neurologic disease, and pelvic or prostate disorders.

### **Dioscorides**

A first-century Greek physician and pharmacologist whose work *De materia medica* described medicinal plants and substances and influenced pharmacology for centuries.

---

## **Diphallia**

A rare congenital condition in which a person has duplication of the penis, sometimes accompanied by abnormalities of the urinary or digestive tract.

## **Dipper**

A person whose blood pressure falls normally during sleep, usually by about 10

## **Diprosopus**

A rare congenital craniofacial duplication in which parts or all of the face are duplicated, usually associated with severe developmental abnormalities.

## **Dipsophobia**

An excessive or irrational fear of drinking alcohol or of becoming intoxicated.

## **Dipsosis**

Excessive thirst, which may result from dehydration, increased blood osmolality, diabetes, medication effects, or disorders of thirst regulation.

## **Disc**

A thin, round structure; in the spine, an intervertebral disc is a fibrocartilaginous cushion between adjacent vertebral bodies.

## **Discharge**

Fluid released from a body site, such as a wound or vagina, or the release of a patient from medical care; the color, amount, and context determine significance.

## **Discoïd Lupus**

A chronic form of cutaneous lupus causing round, inflamed, scaly plaques that may scar, alter pigmentation, and cause permanent hair loss on the scalp.

## **Discordance**

Lack of agreement or correspondence between findings, measurements, genetic results, or the conditions of two related people.

## **Discordant**

Not agreeing, matching, or corresponding; in medicine it may describe conflicting test results or differing conditions in related individuals.

## **Discordant Couple**

A couple in which partners differ in a relevant medical status, such as one partner having HIV infection and the other not having it.

## **Disease Nomenclature**

The system of names and classification terms used to identify, describe, and organize diseases and related clinical conditions.

## **Disease Surveillance**

Ongoing, systematic collection, analysis, interpretation, and reporting of health data to detect, monitor, and respond to disease patterns.

## **Disease, Osgood-Schlatter**

Overuse-related traction injury of the tibial tubercle growth area in growing children or adolescents, causing activity-related pain and swelling below the knee.

## **Disease, Subclinical**

Disease that produces no obvious symptoms or signs but can be detected by laboratory tests, imaging, or other evaluation.

## **Disordered Thinking**

A disturbance in the organization, coherence, logic, or flow of thought that may occur with psychiatric illness, neurologic disease, substances, delirium, or other medical conditions.

## **Distention**

Enlargement or stretching of an organ, cavity, or body part, as in abdominal distention from gas, fluid, obstruction, or swelling.

## **Disto-**

A combining form meaning distal, distant, or away from a point of attachment or origin.

---

### **Disulfaram-Like Reaction**

An unpleasant reaction after alcohol is consumed with disulfiram or another interacting substance, potentially causing flushing, headache, nausea, vomiting, low blood pressure, or palpitations.

### **Diurnal**

Relating to daytime or occurring within a 24-hour daily cycle.

### **DLI**

Donor lymphocyte infusion, administration of lymphocytes from a stem-cell donor after transplantation to enhance graft-versus-leukemia effects or treat relapse; it can cause graft-versus-host disease.

### **DM**

Most commonly diabetes mellitus, a group of disorders with chronically elevated blood glucose; in other contexts it may have another expansion.

### **DM2**

Type 2 diabetes mellitus, a disorder characterized by insulin resistance and progressive impairment of insulin secretion.

### **DNA Amplification**

Production of many copies of a DNA sequence, naturally or through laboratory methods such as polymerase chain reaction, for detection, analysis, or research.

### **DNS**

An abbreviation that may mean deviated nasal septum or dextrose in normal saline; the intended expansion depends on the clinical context.

### **DOB**

Date of birth, the calendar date on which a person was born.

### **Doc**

Informal shorthand for doctor, a person with a professional qualification to practice medicine or another health profession.

### **Doctor**

A person who has completed an appropriate professional program and is licensed or authorized to practice medicine; the title may also be used for other doctoral-level professionals.

### **Doctors' Symbol**

The Rod of Asclepius, a single snake around a staff, is the traditional symbol of medicine; it is often confused with the two-snake caduceus.

### **Dol**

A historical unit intended to quantify subjective pain intensity; modern clinical practice uses validated pain scales rather than the dol.

### **Dolor**

Latin for pain; it is one of the classic signs of inflammation.

### **Domain**

A defined region or area of function; in biology, a protein domain is a structural or functional part of a protein, while in genetics it may mean a genomic or regulatory region.

### **Dopa-Responsive Dystonia (DRD)**

An inherited movement disorder with dystonia and sometimes parkinsonism that improves markedly with low-dose levodopa.

### **Doraphobia**

An excessive or irrational fear of animal fur, skin, or contact with hairy surfaces.

### **Dorsum**

The back or upper surface of a body part, such as the dorsum of the hand, foot, or tongue.

### **DOTS**

Directly observed treatment, short-course, a tuberculosis-control strategy in which health workers observe medication doses and monitor treatment response and adherence.

---

## **Douglas, Pouch Of**

The rectouterine pouch, a peritoneal recess between the uterus and rectum; in people without a uterus, the related rectovesical pouch lies between the bladder and rectum.

## **Downregulation**

A decrease in the number, sensitivity, or activity of receptors, genes, or signaling pathways in response to sustained stimulation or other regulation.

## **DPT**

An older abbreviation for the combined diphtheria, pertussis, and tetanus vaccine; current formulations include DTaP and Tdap.

## **DPT Immunization**

Immunization against diphtheria, pertussis, and tetanus, now generally given in age-appropriate DTaP or Tdap formulations.

## **DR Syndrome**

An abbreviation that may refer to diabetic retinopathy syndrome or another context-specific disorder; the full clinical term should be specified.

## **Drain**

A tube or other device used to remove blood, pus, fluid, or air from a wound, body cavity, or organ; drain can also mean the act of removing it.

## **DRE (Digital Rectal Exam)**

An examination in which a gloved, lubricated finger is inserted into the rectum to assess the rectal wall, stool, prostate, tenderness, masses, or bleeding.

## **Dreams**

Subjective experiences, images, thoughts, or emotions occurring during sleep, especially during rapid-eye-movement sleep.

## **Drip**

A drop-by-drop flow of liquid or an intravenous infusion delivered at a controlled rate through tubing and a catheter.

## **Drop Hand Syndrome**

Weakness or paralysis of wrist and finger extension, usually from radial-nerve injury or compression, causing the hand to hang in flexion.

## **Drug Enforcement Administration (DEA)**

The U.S. agency responsible for enforcing controlled-substance laws and regulating aspects of their manufacture, distribution, and prescribing.

## **Drug, Prescription**

A medicine legally supplied under the order of an authorized prescriber, with its indication, dose, duration, interactions, and risks specified for the patient.

## **Drug, Sulfa**

A sulfonamide drug; some are antibacterial medicines, while others are used as diuretics or for other indications, and sulfonamide reactions vary by drug and patient.

## **Drugs, Statin**

Medicines that inhibit HMG-CoA reductase and lower LDL cholesterol, reducing the risk of atherosclerotic cardiovascular events.

## **DSM**

The Diagnostic and Statistical Manual of Mental Disorders, a classification and diagnostic reference published by the American Psychiatric Association.

## **DT**

An abbreviation that may mean delirium tremens or diphtheria–tetanus vaccine; the intended meaning depends on context.

## **DTaP**

A childhood vaccine protecting against diphtheria, tetanus, and pertussis, containing diphtheria and tetanus toxoids and acellular pertussis components.

## **DTC**

An abbreviation that may mean differentiated thyroid carcinoma or direct-to-consumer, such as direct-

---

to-consumer genetic testing; the intended meaning depends on context.

### **DTP**

An older abbreviation for diphtheria, tetanus, and pertussis vaccine; current childhood formulations are generally called DTaP.

### **Duloxetine**

A serotonin–norepinephrine reuptake inhibitor used for depression, anxiety, diabetic peripheral neuropathic pain, fibromyalgia, and some chronic musculoskeletal pain.

### **Dumdum Fever**

An older name for visceral leishmaniasis, a parasitic disease that can cause prolonged fever, enlarged spleen and liver, low blood counts, and weight loss.

### **Duodenal**

Relating to the duodenum, the first portion of the small intestine immediately beyond the stomach.

### **Dupuytren, Guillaume**

A French surgeon whose name is associated with Dupuytren contracture, progressive thickening and shortening of palmar fascia that bends the fingers toward the palm.

### **Dura**

The dura mater, the tough outermost membrane surrounding the brain and spinal cord.

### **Dural Sac**

The tubular sleeve of dura mater surrounding the spinal cord, cerebrospinal fluid, and spinal nerve roots within the vertebral canal.

### **DV**

An abbreviation that may mean domestic violence, ductus venosus, or another context-specific term; the full expression should be specified.

### **Dyad**

A pair of related people, structures, cells, or vari-

ables considered together.

### **DYS**

An abbreviation or word root related to dysplasia, dystonia, dyslexia, or another condition beginning with dys-; the intended meaning depends on context.

### **Dys-**

A prefix meaning abnormal, difficult, painful, or impaired, as in dysphagia (difficulty swallowing) and dysuria (painful urination).

### **Dysfunction**

Abnormal, impaired, or inadequate function of an organ, tissue, system, or process.

### **Dyspeptic**

Relating to dyspepsia, symptoms such as upper-abdominal discomfort, fullness, early satiety, belching, or nausea.

### **Dysphoria**

A state of marked unease, dissatisfaction, or emotional distress; gender dysphoria specifically refers to distress related to incongruence between experienced gender and assigned sex.

### **Dust Mite Allergy**

An allergic reaction to proteins from household dust mites, commonly causing sneezing, congestion, itchy eyes, or asthma symptoms.

### **Drug Addiction (Substance Use Disorder)**

A chronic disorder involving compulsive substance use despite harmful consequences, with impaired control, cravings, tolerance, or withdrawal.

#### **Synonyms:**

Chemical Dependency Substance Abuse Disorder

### **Depression (Major Depressive Disorder)**

A mood disorder causing persistent depressed mood or loss of interest along with cognitive, physical, and functional symptoms.

---

### **Dry Gangrene**

Tissue death caused mainly by loss of arterial blood supply, producing dry, shrunken, dark tissue with a relatively clear boundary from viable tissue.

### **Digitate Warts (Verruca Digitata)**

Filiform or finger-like warts, usually arising on the face or neck and caused by HPV infection.

#### **Synonyms:**

Verruca Digitata

### **Da Costa's Syndrome**

Da Costa's Syndrome is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Day Hospital**

A clinical care, prevention, behavioral, or public-health concept concerning day hospital; its use depends on the patient, setting, and clinical goal.

### **Day-Blindness**

A biomedical term referring to day-blindness; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Day-Sickness**

A clinical condition or finding involving day-sickness. Its defining features, causes, evaluation, and management depend on the clinical context.

### **DDAVP**

A clinical condition or finding involving ddavp. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deaf-Mutism**

A clinical condition or finding involving deaf-mutism. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deaner**

A clinical condition or finding involving deaner. Its

defining features, causes, evaluation, and management depend on the clinical context.

### **Death Certificate**

A clinical condition or finding involving death certificate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Death Rate**

A clinical condition or finding involving death rate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Decerebrate Rigidity**

A clinical condition or finding involving decerebrate rigidity. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deciduous Teeth**

Deciduous Teeth is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

### **Defaecation**

Defaecation is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

### **Defence Mechanisms**

A clinical care, prevention, behavioral, or public-health concept concerning defence mechanisms; its use depends on the patient, setting, and clinical goal.

### **Deficiency Diseases**

Deficiency Diseases is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Definition Of Health**

A clinical care, prevention, behavioral, or public-health concept concerning definition of health; its use depends on the patient, setting, and clinical goal.

---

## Degeneration

Degeneration is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## Déjà Vu

A clinical condition or finding involving déjà vu. Its defining features, causes, evaluation, and management depend on the clinical context.

## Delta Agent

A clinical condition or finding involving delta agent. Its defining features, causes, evaluation, and management depend on the clinical context.

## Dental Floss

Dental Floss is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

## Deodorant

A clinical care, prevention, behavioral, or public-health concept concerning deodorant; its use depends on the patient, setting, and clinical goal.

## Deoxyribonucleic Acid (DNA)

Deoxyribonucleic Acid (DNA) is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## Depilación

A clinical condition or finding involving depilación. Its defining features, causes, evaluation, and management depend on the clinical context.

## Depot Injection

A medical procedure, treatment, device, or care topic related to depot injection; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Depressed Fracture

A biomedical term referring to depressed fracture; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Depressive Illness

A clinical condition or finding involving depressive illness. Its defining features, causes, evaluation, and management depend on the clinical context.

## Deprivation

A clinical care, prevention, behavioral, or public-health concept concerning deprivation; its use depends on the patient, setting, and clinical goal.

## Derbyshire Neck

Derbyshire Neck is an anatomical or physiologic term describing a body structure or function; its clinical meaning depends on its location, role, and associated findings.

## Dercum's Disease

Dercum's Disease is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

## Dermatoglyphics

Dermatoglyphics is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

## Dermatophyte

Dermatophyte is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

## Desferrioxamine

Desferrioxamine is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

---

### **Desmoid Tumour**

A clinical condition or finding involving desmoid tumour. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Developmental Disorders**

Developmental Disorders is a developmental, psychological, or behavioral concept; assessment considers age, duration, functional impact, medical causes, and social context.

### **Developmental Milestone**

A clinical condition or finding involving developmental milestone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Deviation**

Deviation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Dexamphetamine**

Dexamphetamine is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Dexibuprofen**

A medicine called dexibuprofen. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Dexketoprofen**

A clinical condition or finding involving dexketoprofen. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dextrin**

A clinical condition or finding involving dextrin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dextropropoxyphene**

A clinical condition or finding involving dextropropoxyphene. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diabetogenic**

A clinical condition or finding involving diabetogenic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diabrosis**

A biomedical term referring to diabrosis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Diacritics**

A clinical condition or finding involving diacritics. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diagnostic Imaging**

A diagnostic test or examination used to assess diagnostic imaging. Results are interpreted with the clinical findings, method, and reference range.

### **Diamorphine**

A medicine called diamorphine. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

### **Diarrhoea**

A clinical condition or finding involving diarrhoea. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diastase**

A clinical condition or finding involving diastase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diastasis**

Diastasis is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

---

### **Dibenzepin**

A clinical condition or finding involving dibenzepin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dichloralphenazone**

A clinical condition or finding involving dichloralphenazone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dicoumarol**

A clinical condition or finding involving dicoumarol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dicrotic**

A clinical condition or finding involving dicrotic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dictation Machine**

A clinical condition or finding involving dictation machine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dicumarol**

A clinical condition or finding involving dicumarol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dienoestrol**

A clinical condition or finding involving dienioestrol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dietary Fibre**

A clinical care, prevention, behavioral, or public-health concept concerning dietary fibre; its use depends on the patient, setting, and clinical goal.

### **Diethylcarbamazine**

Diethylcarbamazine is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the

specific agent and patient.

### **Diethylstilbestrol Dipropionate**

Diethylstilbestrol Dipropionate is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Dieting**

A clinical care, prevention, behavioral, or public-health concept concerning dieting; its use depends on the patient, setting, and clinical goal.

### **Difference Threshold**

A clinical condition or finding involving difference threshold. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Differential Blood Count**

A clinical condition or finding involving differential blood count. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dihydrocodeine**

A clinical condition or finding involving dihydrocodeine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dihydroergotamine**

A clinical condition or finding involving dihydroergotamine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dilatation And Curettage (D & C)**

Dilatation and Curettage (D & C) is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

### **Dilution**

Dilution is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

---

### **Dimethyl Sulphoxide (DMSO)**

A clinical condition or finding involving dimethyl sulphoxide (dmso). Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dimocillin**

Dimocillin is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Dimorphic**

A clinical condition or finding involving dimorphic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diethyl Sodium Sulphosuccinate**

A clinical condition or finding involving diethyl sodium sulphosuccinate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diodone**

A clinical condition or finding involving diodone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dioecious**

A clinical condition or finding involving dioecious. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dionin**

Dionin is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Diplacuis**

A clinical condition or finding involving diplacuis. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Diplococcus**

Diplococcus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Dipole**

A clinical condition or finding involving dipole. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dipsomania**

A biomedical term referring to dipsomania; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Direct Action**

Direct Action is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Direct Hernia**

A clinical condition or finding involving direct hernia. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dirt-Eating**

A clinical condition or finding involving dirt-eating. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Disaccharidase**

A clinical condition or finding involving disaccharidase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Discolysis**

Discolysis is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Discoloration**

Discoloration is a medical or biological term de-

---

scribing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Discomfort**

Discomfort is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Disinfestation**

Disinfestation is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Disorganized Schizophrenia**

Disorganized Schizophrenia is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

### **Dispensary**

A clinical care, prevention, behavioral, or public-health concept concerning dispensary; its use depends on the patient, setting, and clinical goal.

### **Dispensing**

A clinical care, prevention, behavioral, or public-health concept concerning dispensing; its use depends on the patient, setting, and clinical goal.

### **Dispersal**

Dispersal is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Displacement**

Displacement is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Disseminated Sclerosis**

Disseminated Sclerosis is an anatomical structure,

body position, physical finding, or physiological process; its clinical meaning depends on the examination and surrounding findings.

### **Distemper**

A clinical condition or finding involving distemper. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Distension**

Distension is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Distichia**

Distichia is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Distilling**

Distilling is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Distortion**

Distortion is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **District Nurse**

A clinical care, prevention, behavioral, or public-health concept concerning district nurse; its use depends on the patient, setting, and clinical goal.

### **Dizygotic Twins**

Dizygotic Twins is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

---

### **Doctor-Patient Relationship**

A clinical care, prevention, behavioral, or public-health concept concerning doctor-patient relationship; its use depends on the patient, setting, and clinical goal.

### **Dolichocephalic**

Dolichocephalic is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Donnan Equilibrium**

Donnan Equilibrium is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Donor**

A clinical care, prevention, behavioral, or public-health concept concerning donor; its use depends on the patient, setting, and clinical goal.

### **Dopamine Agonists**

Dopamine Agonists is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Dormant**

Dormant is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Dorsiflexion**

Dorsiflexion is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

### **Dorzolamide**

Dorzolamide is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

### **Dosimeter**

A clinical condition or finding involving dosimeter. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Dotage**

Dotage is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Double Blind Trial**

A clinical condition or finding involving double blind trial. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Down's Syndrome**

Down's Syndrome is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Draft**

A clinical care, prevention, behavioral, or public-health concept concerning draft; its use depends on the patient, setting, and clinical goal.

### **Drastic**

Drastic is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Draw-Sheet**

A clinical care, prevention, behavioral, or public-health concept concerning draw-sheet; its use depends on the patient, setting, and clinical goal.

### **Dreamy State**

Dreamy State is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

---

## **Drepanocytosis**

Drepanocytosis is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Dressler's Syndrome**

Dressler's Syndrome is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

## **Drift**

Drift is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Drops**

Drops is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Dropsy**

A clinical condition or finding involving dropsy. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Drug**

Drug is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

## **Drug Addiction**

Drug Addiction is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

## **Drug Safety**

Drug Safety is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and

patient.

## **Dry Cupping**

Dry Cupping is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Duboisin**

Duboisin is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

## **Duck Embryo Vaccine**

Duck Embryo Vaccine is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Ductal Carcinoma**

A clinical condition or finding involving ductal carcinoma. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Ductless Glands**

Ductless Glands is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

## **Ductus Venosus**

Ductus Venosus is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

## **Dupuytren's Contracture**

Dupuytren's Contracture is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

## **Duramorph**

Duramorph is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and

---

patient.

### **Durules**

Durules is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

### **Dust Disease**

Dust Disease is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

### **Dynamic**

A clinical care, prevention, behavioral, or public-health concept concerning dynamic; its use depends on the patient, setting, and clinical goal.

### **Dysaesthesia**

Dysaesthesia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dyschezia**

Dyschezia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dysfunctional Uterine Bleeding**

Dysfunctional Uterine Bleeding is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dysorexia**

Dysorexia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dyspraxia**

Dyspraxia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on

the history, examination, and appropriate investigations.

### **Dysraphism**

Dysraphism is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dysrhythmia**

Dysrhythmia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dysthymia**

Dysthymia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Dystociais**

Dystociais is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

### **Discoïd**

Coin-shaped or round, describing the morphology of a lesion or rash; the term may also refer to discoïd lupus erythematosus in the appropriate clinical context.

### **Distribution**

The anatomical pattern and sites affected by a skin lesion or rash, including whether involvement is localized, generalized, symmetrical, flexural, extensor, dermatomal, or otherwise characteristic.

### **DPP-4 Inhibitor**

An oral glucose-lowering drug that inhibits dipeptidyl peptidase-4, prolonging the action of incretin hormones and increasing glucose-dependent insulin release while reducing glucagon secretion. It is used mainly in type 2 diabetes.

---

### Diabetologist

A physician who specializes in the prevention, diagnosis, and treatment of diabetes and its complications, including glucose management, cardiovascular risk, kidney disease, neuropathy, and retinopathy.

### DKD

Alternate index label; see *Diabetic Nephropathy*.

### Diffuse Parenchymal Lung Diseases

Alternate index label; see *Interstitial Lung Disease*.

### Diffusion Capacity

A measure of how efficiently oxygen and other gases pass from the air sacs into the pulmonary capillary blood; commonly reported as DLCO and reduced in many interstitial and vascular lung disorders.

### DIEP Flap

A deep inferior epigastric perforator flap used for breast or other reconstruction, consisting of skin and fat supplied by perforating vessels from the lower abdomen while preserving most of the rectus muscle.

### Dermatofibrosarcoma Protuberans Of The Breast

A rare, usually slow-growing cutaneous sarcoma involving breast skin or superficial tissue. It is locally infiltrative, has a high risk of local recurrence if incompletely removed, and typically shows COL1A1-PDGFB fusion.

### Desmoplastic Fibroblastoma

A rare benign collagen-rich fibroblastic tumor, also called collagenous fibroma, presenting as a slow-growing painless mass in superficial or deep soft tissue.

### Desmoplastic Infantile Ganglioglioma

A rare low-grade tumor of infancy containing astrocytic and neuronal components in a desmoplastic stroma, usually presenting as a large superficial cerebral mass with seizures or increased intracranial pressure.

### Dysembryoplastic Neuroepithelial Tumor

A benign or very low-grade glioneuronal tumor, usually in the cerebral cortex of children or young adults, classically causing long-standing drug-resistant focal seizures.

### Demyelinating Disease Of The Central Nervous System

A disorder in which myelin is damaged within the brain, spinal cord, or optic pathways, impairing nerve conduction. Causes include autoimmune, infectious, genetic, toxic, and metabolic processes.

### Dichorionic Diamniotic Twin Placenta

A twin-placentation pattern in which each fetus has its own chorion and amniotic sac. It is usually associated with the lowest placental complication risk among twin pregnancies, although maternal and fetal monitoring remains necessary.

### Detritic Synovitis

A synovial inflammatory reaction to particulate debris, such as cartilage, bone, blood, crystals, or implant wear material, producing joint swelling and pain.

### Diabetic Microvascular Complications

Small-vessel complications of diabetes, principally retinopathy, nephropathy, and neuropathy, caused by chronic metabolic and vascular injury; risk is reduced by glycemic, blood-pressure, and lipid control.

## E

### E Coli Enteritis

Intestinal infection caused by pathogenic strains of *Escherichia coli*. Depending on the strain, it may cause watery or bloody diarrhea, abdominal cramps, vomiting, or systemic complications such as hemolytic uremic syndrome.

### EBCT

Electron-beam computed tomography, a rapid imaging method used especially to assess the heart and calcium in coronary arteries.

#### Synonyms:

Electron-beam computed tomography

### Eccentric Action

Muscle action in which a muscle produces force while lengthening.

#### Synonyms:

Eccentric contraction

### ECG

A recording of the heart's electrical activity used to evaluate rhythm and other cardiac problems.

#### Synonyms:

Electrocardiogram; EKG

### ED

Erectile dysfunction: inability to obtain or maintain an erection adequate for sexual activity.

#### Synonyms:

Erectile dysfunction

### EEG

An EEG records electrical activity generated by the brain through scalp electrodes and helps evalu-

ate seizures, encephalopathy, and selected sleep or neurologic disorders.

#### Synonyms:

Electroencephalogram

### Eighth Cranial Nerve

The vestibulocochlear nerve, which carries hearing and balance signals from the inner ear to the brain.

#### Synonyms:

Vestibulocochlear nerve; auditory nerve

### EKG

A recording of the heart's electrical activity.

#### Synonyms:

Electrocardiogram; ECG

### Elastin

A flexible connective-tissue protein that allows skin, blood vessels, and other tissues to stretch and recoil.

### Electrolysis

Permanent hair removal using electrical energy delivered through a fine probe into a hair follicle.

### Electrolyte

A mineral that carries an electrical charge in body fluids, such as sodium, potassium, or calcium.

### Electron-Beam Computed Tomography

A rapid computed-tomography technique used to image the heart and detect calcium deposits in arteries.

#### Synonyms:

EBCT

---

### **Elimination Diets**

Diets in which suspected foods are removed and later reintroduced to help identify food-related symptoms.

**Synonyms:**

Elimination diet

### **Ellagic Acid**

A plant-derived polyphenol found in foods such as berries and nuts.

### **Emetic**

A substance that induces vomiting.

### **EMG**

A test that evaluates muscle activity and the nerves controlling muscles.

**Synonyms:**

Electromyography

### **Emmenagogue**

A substance traditionally used to stimulate menstrual flow.

### **Encoding**

The process by which sensory or cognitive information is converted into a form that can be stored in memory.

### **Endogenous Opioids**

Pain-relieving opioid peptides produced naturally by the body.

**Synonyms:**

Endogenous opioid peptides

### **Endorphins**

Natural opioid peptides that reduce pain and can contribute to feelings of well-being.

**Synonyms:**

Endogenous opioids

### **Endothelins**

Peptides made by vascular endothelium that constrict blood vessels and can raise blood pressure.

### **Endothelium-Derived Relaxing Factor**

A substance released by the endothelium that relaxes blood vessels; it is largely identified with nitric oxide.

**Synonyms:**

EDRF; Nitric oxide

### **Enkephalin**

An endogenous opioid peptide involved in reducing pain.

**Synonyms:**

Endogenous opioid

### **Enteropathic**

Relating to disease of the intestine.

### **Eosinophils**

White blood cells involved in allergic inflammation and defense against some parasites.

**Synonyms:**

Eosinophil granulocytes

### **Epicondylitis**

Painful inflammation or degeneration of a tendon attachment near a joint epicondyle, commonly at the elbow.

**Synonyms:**

Tennis elbow; golfer's elbow

### **Epidemiological Study**

A population-based investigation of disease occurrence, causes, risks, or health outcomes.

**Synonyms:**

Epidemiologic study

### **Epinephrine**

A hormone and neurotransmitter that increases heart activity and narrows many blood vessels during stress.

**Synonyms:**

Adrenaline

### **Epithelial Cells**

Cells that cover body surfaces and line organs, cav-

---

ities, and glands.

**Synonyms:**

Epithelial tissue cells

**Erector Spinae**

A group of muscles running along the back that extend and stabilize the spine.

**Synonyms:**

Erector spinae muscles

**Ergots**

Compounds derived from a fungus and used in some treatments, including certain headache disorders.

**Eructation**

The release of swallowed or stomach gas through the mouth.

**Synonyms:**

Belching; burping

**Essential Fats**

Fatty acids that the body cannot make in sufficient amounts and must obtain from food.

**Synonyms:**

Essential fatty acids

**Esterified Estrogens**

Estrogen compounds used in some hormone treatments.

**Esthetician**

A person trained in nonmedical skin-care and cosmetic treatments.

**Synonyms:**

Aesthetician

**Estradiol**

The principal biologically active estrogen hormone during the reproductive years.

**Synonyms:**

17 $\beta$ -estradiol

**Estrogen Receptor**

A cellular protein that binds estrogen and mediates

its effects on target tissues.

**Estrogen-Replacement Therapy**

Treatment using estrogen to replace hormone lost during menopause or because of ovarian failure.

**Synonyms:**

Estrogen therapy

**Etidronate**

A bisphosphonate used in selected conditions involving abnormal bone remodeling.

**Euthyroid**

Having normal thyroid function.

**Exceptional Release**

Regulatory process allowing use of an organ that does not meet standard criteria but is deemed acceptable for a specific recipient after informed consent.

**Excitatory Neurotransmitter**

A chemical messenger that increases the likelihood that a receiving neuron will generate a signal.

**Excitotoxin**

A substance that overstimulates neurons and can injure or kill them.

**Executive Functions**

Mental abilities used to plan, organize, make decisions, control impulses, and adapt behavior.

**Synonyms:**

Executive control

**Exercise**

Planned physical activity performed to improve or maintain fitness and health.

**Synonyms:**

Physical exercise

**Exostosis**

A benign bony growth; in the ear canal, repeated cold-water exposure can cause surfer's ear.

---

**Synonyms:**  
Surfer's ear

### Experience Sampling

A research method that collects brief reports about a person's activities or feelings at randomly selected times.

**Synonyms:**  
Ecological momentary assessment

### Expression Hopping

A shift from one manifestation of an addiction to another, such as from substance use to compulsive gambling.

### Expression Of Addiction

The particular behavior or substance through which an addiction is manifested.

### Extend

To straighten a joint or increase the angle between bones.

**Synonyms:**  
Extension

### Extracapsular Cataract Surgery

Cataract surgery that removes the cloudy lens while leaving the lens capsule largely in place.

### Extract

A concentrated preparation made by drawing active substances from a plant, herb, or other source.

**Synonyms:**  
Extractive

### Extrinsic Factor

An outside influence that affects a person, tissue, or biological process.

**Synonyms:**  
External factor

### E Coli Infection

Infections caused by *Escherichia coli*, a gram-negative enteric bacillus. Causes: UTI (most common—cystitis, pyelonephritis), diarrhea (enterotoxi-

genic ETEC—traveler's diarrhea; enteropathogenic; enterohemorrhagic EHEC O157:H7—bloody diarrhea, HUS; enteroinvasive), neonatal meningitis, sepsis, and intra-abdominal infections.

### Ear

Organ of hearing and balance, divided into external, middle, and inner ear. External: auricle (pinna), external auditory canal, tympanic membrane. Middle: air-filled cavity in temporal bone, auditory ossicles (malleus, incus, stapes), Eustachian tube (to nasopharynx).

### Ear Barotrauma

Injury to the ear caused by a pressure difference between the middle ear and the surrounding environment, commonly during air travel or diving. It may cause ear pain, fullness, hearing loss, tinnitus, vertigo, or tympanic-membrane rupture.

### Ear Canal

A tube leading from the eardrum to the outer ear.

### Ear Diseases

Any disorder affecting the structures of the ear—external ear (pinna, ear canal), middle ear (tympanic membrane, ossicles, Eustachian tube), or inner ear (cochlea, vestibular apparatus).

### Ear Infection

Infection or inflammation of the ear, commonly involving the external canal or middle ear. It may cause ear pain, fever, reduced hearing, discharge, or irritability in children. Also called otitis.

**Synonyms:**  
otitis. Otitis (Ear Infection)

### Ear Wax

Cerumen, a mixture of secretions and shed skin that protects and cleans the ear canal. Impacted wax may cause hearing loss, fullness, tinnitus, itching, or discomfort. Cotton swabs and inserted objects can worsen impaction or injure the ear; removal should use safe clinician-recommended methods, particularly when an eardrum perforation is possible.

---

**Synonyms:**

Earwax (Ear Wax)

**Ear, Nose, And Throat**

A medical specialty (otolaryngology) focused on the diagnosis and treatment of disorders affecting the ears, nose, throat, head, and neck. Conditions managed include hearing loss, sinusitis, tonsillitis, voice disorders, and head and neck cancers.

**Earache**

Earache (otalgia) is pain perceived in or around the ear. Causes include ear infection, ear-canal blockage or injury, dental or jaw disorders, and referred throat disease; persistent, severe, or discharge-associated pain requires evaluation.

**Earache (Otalgia)**

Pain originating from the ear, a common symptom with diverse causes. Otalgia is classified as primary (originating within the ear itself) or secondary/referred (pain perceived in the ear but arising from another site).

**Synonyms:**

Otalgia

**Eardrum**

A thin membrane separating the ear canal and middle ear.

**Ear Foreign Body**

An object lodged in the external auditory canal, commonly occurring in children. It may cause pain, hearing reduction, discharge, or canal injury and should be removed with appropriate visualization and technique.

**Synonyms:**

External auditory-canal foreign body; ear-canal foreign body.

**Early Decelerations**

A fetal heart-rate pattern with a gradual decrease and recovery that mirrors the uterine contraction, usually caused by fetal head compression. It is generally benign when isolated, but the complete

tracing and clinical situation determine whether any action is needed.

**Early Detection**

Identification of a disease at an early stage, when treatment may be more effective. It may result from screening or prompt evaluation of symptoms.

**Early Intervention**

Services provided to infants and young children with developmental delays or disabilities to support development, function, and participation.

**Earwax**

Cerumen, a waxy secretion produced by the ceruminous glands in the outer third of the external auditory canal. Earwax lubricates and protects the skin of the ear canal, trapping dust, debris, and microorganisms to prevent them from reaching the tympanic membrane.

**Eating Disorder**

A group of conditions characterized by abnormal eating habits and distorted body image, including anorexia nervosa, bulimia nervosa, binge eating disorder, and avoidant/restrictive food intake disorder (ARFID). Anorexia: severe calorie restriction, intense fear of weight gain, and body image disturbance with dangerously low weight.

**Ebola**

Ebola virus disease (EVD): a severe, often fatal viral hemorrhagic fever caused by Ebola virus (Filoviridae, RNA), transmitted by direct contact with blood/body fluids of infected humans/animals. Incubation 2-21 days.

**Ebola Virus**

A filovirus that causes Ebola virus disease, a severe hemorrhagic fever. The virus is transmitted through contact with infected body fluids. The incubation period is 2-21 days. Symptoms include fever, headache, myalgia, and hemorrhage. Diagnosis is made by PCR and antigen detection.

---

## **Ebola Virus Disease**

A severe viral infection caused by Ebola viruses, characterized by fever and systemic illness that may progress to bleeding, shock, or organ failure.

## **Ebstein Anomaly**

A rare congenital heart defect accounting for less than 1 percent of all congenital heart disease, characterized by apical displacement of the septal and posterior leaflets of the tricuspid valve into the right ventricle, resulting in atrialization of the proximal right ventricle and a small functional right ventricular chamber.

## **Ecchymosis**

A flat purple, blue, or brown area caused by blood leaking into skin or subcutaneous tissue, commonly after trauma but also with platelet disorders, anticoagulants, clotting disorders, or fragile blood vessels. Size alone does not determine the cause.

## **Eccrine Gland**

A coiled sweat gland distributed throughout the skin that secretes a watery fluid directly onto the skin surface through a duct. Eccrine sweating supports thermoregulation and is stimulated by sympathetic cholinergic fibres; the glands are especially numerous on the palms, soles, and forehead.

## **ECG/EKG Machine**

Records electrical activity of heart. 12-lead ECG standard. Components: electrodes, leads, amplifier, recorder. Essential for cardiac diagnosis.

## **Echinocandins**

A class of antifungal agents that inhibit beta-1,3-glucan synthase, an enzyme essential for synthesis of beta-1,3-glucan, a major component of the fungal cell wall. This unique mechanism targets a structure absent in mammalian cells, resulting in favorable toxicity profiles.

## **Echinococcal Cysts**

Fluid-filled parasitic cysts caused by larval *Echinococcus* tapeworms, usually occurring in the liver or lungs.

## **Echinococcosis**

A parasitic infection caused by *Echinococcus* tapeworms. Cystic disease commonly affects the liver or lungs, while alveolar disease can invade the liver and spread to other organs; diagnosis and treatment require specialist assessment.

## **Echinococcus Granulosus**

A tapeworm that causes hydatid disease (cystic echinococcosis). The adult worm infects dogs, and humans are accidental intermediate hosts. Infection occurs through ingestion of eggs from dog feces. Larval cysts form in the liver and lungs, causing space-occupying lesions.

## **Echinocytes (Burr Cells)**

Red blood cells with uniform, small, evenly spaced serrated or spiky membrane projections along the entire erythrocyte circumference. Most commonly caused by End-Stage Renal Disease (Uremia), pyruvate kinase deficiency, severe hypokalemia, or in vitro artifact (crenation due to glass slides or prolonged storage).

### **Synonyms:**

Burr Cells

## **Echo**

A common abbreviation for echocardiography, an ultrasound examination used to assess the heart's structure and function.

## **Echocardiogram**

An echocardiogram uses ultrasound to assess cardiac chambers, valves, wall motion, blood flow, and ventricular function without ionizing radiation. It helps evaluate heart failure, valve disease, congenital defects, and other cardiac disorders.

## **Echocardiography**

Ultrasound imaging of the heart, the primary modality for assessing cardiac structure and function. Transthoracic echocardiography (TTE) is the most common approach; transesophageal echocardiography (TEE) provides better views of posterior structures (left atrium, mitral valve, aorta).

---

### **Echogenic Bowel**

An ultrasound finding in which the fetal bowel appears unusually bright, sometimes as bright as nearby bone. It may be a normal variant or may be associated with infection, chromosomal conditions, cystic fibrosis, or other fetal abnormalities.

### **Echogenic Intracardiac Focus**

A small bright area, usually in a papillary muscle of the fetal heart, seen on ultrasound. It is commonly an incidental variant when isolated and the remainder of the examination is normal. Its significance depends on prior screening, other ultrasound findings, and the clinical context.

### **Echolalia**

The involuntary, automatic repetition of words or phrases spoken by another person, a speech phenomenon observed in various neurologic and psychiatric conditions. Immediate echolalia involves repeating sounds immediately after hearing them; delayed echolalia involves repeating phrases heard hours, days, or weeks earlier.

### **Echovirus**

A group of enteroviruses that commonly cause asymptomatic or mild infection but may also cause aseptic meningitis, encephalitis, rash, respiratory illness, myocarditis, or neonatal sepsis. Transmission is mainly faecal-oral or respiratory, and diagnosis is usually by nucleic-acid testing or viral culture in selected cases.

### **Eclampsia**

Eclampsia is a new-onset seizure during pregnancy or the postpartum period associated with preeclampsia or pregnancy-related hypertension. It is an emergency requiring airway and blood-pressure management, magnesium sulfate for seizure prevention or treatment, and urgent obstetric planning.

### **ECOG Performance Status**

A five-point scale describing functional impairment, from 0 for fully active to 5 for death. It is widely used in clinical trials, prognostic assessment, and decisions about systemic anticancer treatment.

### **Ecthyma Gangrenosum**

A severe cutaneous infection caused by *Pseudomonas aeruginosa*, characterized by painless, hemorrhagic vesicles that rapidly progress to necrotic ulcers with black eschars. It occurs almost exclusively in immunocompromised or neutropenic patients and results from bacterial invasion of blood vessel walls.

### **Ectoderm**

The outermost of the three primary germ layers in an embryo, which develops into the skin, nervous system, and sensory organs.

### **Ectodermal Dysplasia**

A group of inherited disorders affecting tissues derived from the embryonic ectoderm, including hair, teeth, nails, skin, and sweat glands. Findings vary but may include sparse hair, abnormal teeth, reduced sweating, heat intolerance, and recurrent infections.

### **Ectopia Lentis**

Displacement or malposition of the crystalline lens from its normal position, most commonly due to trauma but also associated with systemic conditions including Marfan syndrome (superior displacement), homocystinuria (inferior displacement), and Weill-Marchesani syndrome.

### **Ectopic ACTH Syndrome**

Adrenocorticotrophic hormone secretion by non-pituitary tumors causing Cushing syndrome. Most commonly caused by small cell lung cancer and bronchial carcinoid tumors. Other sources include thymic carcinoid, pancreatic neuroendocrine tumors, and medullary thyroid carcinoma.

### **Ectopic Cushing Syndrome**

Hypercortisolism caused by an extrapituitary tumor producing adrenocorticotrophic hormone or, rarely, corticotropin-releasing hormone. It may cause hypertension, diabetes, hypokalemia, muscle weakness, infection risk, and rapid features of cortisol excess.

### **Ectopic Heartbeat**

A heartbeat originating outside the normal

---

sinoatrial-node rhythm. Premature atrial or ventricular beats may feel like a skipped beat, flutter, or sudden thump and can occur in healthy people or with structural heart disease.

### **Ectopic Pregnancy**

Implantation of a fertilized ovum outside the uterine cavity, most commonly in the fallopian tube (95%). Risk factors: prior ectopic, PID, tubal surgery, IUD, smoking, and assisted reproductive technology. Presents with lower abdominal pain, amenorrhea, and vaginal bleeding. Rupture causes hemodynamic instability.

#### **Synonyms:**

Pregnancy Ectopic (Ectopic Pregnancy) Pregnancy Tubal (Ectopic Pregnancy)

### **Ectopic Thyroid**

Thyroid tissue located outside its normal pretracheal position, most commonly along the path of thyroid descent from the foramen cecum to the normal cervical location. The most common site is the base of the tongue (lingual thyroid).

### **Ectopic Thyroid Tissue**

Thyroid tissue located outside the normal pretracheal position resulting from failure of normal thyroid descent during embryological development. Most commonly found at the base of the tongue termed lingual thyroid. May be the only functioning thyroid tissue. Symptoms include dysphagia, dysphonia, and upper airway obstruction.

### **Ectrodactyly**

A congenital limb malformation characterized by a deep median cleft of the hand or foot with missing central digits, resulting in a claw-like or lobster-claw appearance. Also known as split hand/foot malformation (SHFM). Most cases are autosomal dominant with incomplete penetrance, linked to mutations in TP63, DLX5, or WNT10B genes.

### **Ectropion**

Ectropion is outward turning of an eyelid, usually the lower lid, causing tearing, irritation, dryness, and incomplete eyelid closure. It may be involu-

tional, paralytic, cicatricial, or mechanical; persistent corneal exposure can damage vision.

### **Eczema**

A group of inflammatory skin conditions characterized by pruritic, erythematous, scaly patches. Atopic dermatitis is the most common form. Nummular eczema presents as coin-shaped lesions. Dyshidrotic eczema affects palms and soles with vesicles. Eczema herpeticum is a disseminated HSV infection in eczema patients, a medical emergency.

### **Eczema (Atopic Dermatitis)**

A chronic inflammatory skin condition characterized by dry, itchy, and inflamed patches of skin. It is driven by a combination of genetic predisposition, immune system dysfunction, and environmental triggers.

#### **Synonyms:**

Atopic Dermatitis

### **Eczema Herpeticum**

A widespread viral skin infection caused by herpes simplex virus occurring in patients with pre-existing skin barrier defects, most commonly atopic dermatitis. It presents with monomorphic, umbilicated vesicles, pustules, and hemorrhagic crusted erosions, often with fever and lymphadenopathy.

### **Edema**

Swelling caused by excess fluid trapped in body tissues. Types: pitting (press leaves indentation), non-pitting (myxedema, lymphedema). Causes: heart failure, kidney disease, liver cirrhosis, venous insufficiency, lymphatic obstruction, medications (calcium channel blockers, NSAIDs).

### **Edema (Historically Dropsy)**

An historic term for edema, referring to the abnormal accumulation of serous fluid in the tissues or body cavities.

#### **Synonyms:**

historically Dropsy

---

## Edentulism

Complete or partial absence of natural teeth. It can impair mastication, speech, nutrition, facial support, and quality of life and may be managed with removable, fixed, or implant-supported prostheses.

## Edward Syndrome

Trisomy 18, a chromosomal condition associated with severe developmental impairment, characteristic hand and foot findings, congenital heart defects, growth restriction, and feeding difficulties. Survival and severity vary, but mortality in infancy is high.

## Edwards Syndrome

Trisomy 18, caused by an extra chromosome 18 in all or some cells or by an unbalanced rearrangement. It is associated with multiple congenital anomalies, severe developmental impairment, and high infant mortality.

### Synonyms:

Trisomy 18 (Edwards Syndrome)

## EFAST Examination

Extended focused assessment with sonography in trauma, a bedside ultrasound examination for intraperitoneal or pericardial free fluid and pneumothorax or hemothorax. It rapidly informs trauma resuscitation but does not exclude all internal injuries when negative.

## Effacement

Thinning (shortening) of the cervix during labor, expressed as a percentage (0-100 percent), as the cervix is taken up into the lower uterine segment, enabling dilation. Occurs with cervical dilation in the first stage of labor, driven by contractions and the presenting part.

## Effective Dose

A radiation-protection quantity that estimates the population-averaged stochastic health risk from nonuniform exposure by weighting absorbed doses to different organs and tissues. It is not a patient-specific prediction of cancer risk.

## Effective Half-Life

The time required for the activity of a radionuclide in a tissue or body to fall by one half through both physical radioactive decay and biologic elimination. It determines the duration of radiation exposure in that compartment.

## Effective Reproduction Number (Rt)

The average number of secondary infections caused by an infectious person at a particular time, accounting for existing immunity, behavior, interventions, and population structure. Sustained transmission generally requires Rt above 1.

### Synonyms:

Rt

## Efficacy

The maximum therapeutic effect a drug or intervention can produce under ideal conditions (e.g., in a clinical trial). Efficacy is determined by the drug's mechanism of action and the receptor-effector system; it is measured by the Emax (maximal effect) on the dose-response curve.

## EGD

Esophagogastroduodenoscopy is an examination of the esophagus, stomach, and duodenum with a flexible endoscope. It can evaluate symptoms or bleeding, obtain biopsies, and provide selected treatments such as hemostasis or removal of a lesion.

## EGFR Inhibition

A targeted cancer therapy using monoclonal antibodies or small-molecule tyrosine kinase inhibitors that block the epidermal growth factor receptor signaling pathway, inhibiting tumor cell proliferation, survival, and metastasis. Used in colorectal cancer, non-small cell lung cancer, and head and neck squamous cell carcinoma.

## Eggshell Nail

A nail that becomes unusually thin, soft, flexible, and sometimes whitish or concave. It may be associated with nutritional deficiency, chronic illness, aging, or repeated trauma; persistent nail changes should be evaluated with the skin and other symp-

---

toms in mind.

### **Egophony**

An abnormal vocal sound heard during auscultation in which spoken “E” sounds are heard as “A” (the “E-to-A” change). It is a sign of lung consolidation, as in lobar pneumonia. The consolidated lung tissue conducts high-frequency sounds better than air-filled lung.

### **Ehlers-Danlos Syndrome**

A group of hereditary connective tissue disorders caused by defects in collagen synthesis or processing.

#### **Synonyms:**

EDS (Ehlers-Danlos Syndrome) Elastic Skin (Ehlers-Danlos Syndrome)

### **EHR**

Electronic health record, a digital record of a person’s health information that can include data from multiple clinicians and care settings.

### **Ehrlichia And Anaplasma**

Obligate intracellular bacteria transmitted by ticks that cause ehrlichiosis and anaplasmosis. Ehrlichia chaffeensis causes human monocytic ehrlichiosis. Anaplasma phagocytophilum causes human granulocytic anaplasmosis. The organisms infect white blood cells (Ehrlichia) or granulocytes (Anaplasma).

### **Ehrlichiosis**

Ehrlichiosis is a tick-borne infection caused by Ehrlichia bacteria, commonly producing fever, headache, malaise, low blood counts, and elevated liver enzymes. ehrlichiosis) and E. ewingii (granulocytic). Endemic in the southeastern and south-central US. Presents with fever, headache, myalgia, malaise, and thrombocytopenia/leukopenia.

### **Eisenmenger Syndrome**

Reversal of a left-to-right cardiac shunt due to irreversible pulmonary hypertension, resulting in right-to-left shunting and cyanosis. It occurs in untreated congenital heart defects with large left-to-right shunts (VSD, ASD, PDA) that cause progressive pulmonary vascular disease.

### **Eisenmenger’s Syndrome**

Pulmonary vascular disease caused by a long-standing congenital heart shunt, eventually reversing the shunt and causing cyanosis.

### **Ejaculation**

The expulsion of seminal fluid from the male urethra during sexual climax, a reflex coordinated by the sympathetic nervous system (T10-L2) and involving contraction of the epididymis, vas deferens, seminal vesicles, prostate, and bulbospongiosus muscle.

### **Ejection Click**

A high-pitched sound occurring at the beginning of systole, caused by opening of a stenotic semilunar valve. Aortic ejection click is heard in bicuspid aortic valve and aortic stenosis with pliable leaflets. Pulmonary ejection click is heard in pulmonary stenosis and disappears as the valve becomes more calcified and immobile.

### **Ejection Fraction**

The percentage of blood in a ventricle that is ejected during contraction, calculated from stroke volume and end-diastolic volume. It is used to describe cardiac function, but interpretation depends on the imaging method, clinical findings, and applicable heart-failure definitions.

### **Elastic Cartilage**

Flexible cartilage containing abundant elastic fibers in its matrix. It supports structures that require shape retention with flexibility, including the external ear, epiglottis, and auditory tube.

### **Elastography**

Imaging tissue stiffness. Used for liver fibrosis assessment, breast lesion characterization, thyroid nodule evaluation.

### **Elbow Joint**

A synovial hinge complex comprising the humeroulnar and humeroradial joints. It primarily permits flexion and extension, while the proximal radioulnar component permits forearm rotation.

---

## Elder Abuse

Intentional or neglectful act causing harm to older person. Types: physical, emotional, sexual, financial, neglect. Risk factors: social isolation, caregiver stress, cognitive impairment, dependency. Mandatory reporting required. Assessment: direct question, observation, collateral history.

## Elderly

Person aged 65 or older. Divisions: young-old (65-74), middle-old (75-84), old-old (85+). Heterogeneous population with varying health status, needs, preferences.

## Electrical Cardioversion

Delivery of a synchronized electrical shock timed to the R wave to terminate selected tachyarrhythmias, such as atrial fibrillation, atrial flutter, or certain supraventricular tachycardias. Sedation, thromboembolic risk, and the patient's hemodynamic status must be assessed.

## Electrical Injury

Tissue damage caused by passage of electrical current through the body. Severity depends on voltage, current (alternating vs. direct), pathway, duration, and resistance. High-voltage (>1000V): extensive internal tissue damage (muscle necrosis, compartment syndrome, rhabdomyolysis) with relatively small skin burns (entry/exit wounds).

## Electrical Stimulation

The therapeutic application of controlled electrical currents to nerves or muscles. Examples include transcutaneous electrical nerve stimulation for pain and neuromuscular stimulation for selected muscle or movement problems.

## Electrocardiogram

An electrocardiogram records the heart's electrical signals and helps identify rhythm disturbances, conduction disease, ischemia, infarction, and chamber strain.

### Synonyms:

ECG or EKG.

## Electrocardiography

The process of recording the heart's electrical activity from skin electrodes, usually as a 12-lead ECG or EKG. It evaluates heart rate and rhythm, conduction, chamber enlargement, ischemia, infarction, and some electrolyte or drug effects.

## Electrocoagulation

A surgical technique using high-frequency electrical current to destroy tissue or stop bleeding by coagulating proteins, also known as diathermy or cauterization.

### Synonyms:

diathermy or cauterization.

## Electroconvulsive Therapy

A neuromodulation treatment involving the induction of a generalized seizure under general anesthesia using electrical current applied to the scalp. It is the most effective treatment for severe depression, especially with psychotic features, catatonia, or suicidal ideation.

## Electrocution

Injury from electrical current. Types: low voltage (<1000V), high voltage (>1000V). Effects: cardiac arrhythmias, muscle contractions, burns, neurological damage. Management: ABCs, cardiac monitoring, tetanus prophylaxis, wound care, check for compartment syndrome.

## Electroencephalogram

EEG: a recording of electrical activity of the brain via scalp electrodes, reflecting cortical neuronal activity. Uses: diagnosis and classification of seizures/epilepsy (interictal epileptiform discharges, spikes/waves), status epilepticus monitoring, assessment of encephalopathy, sleep disorders, and determination of brain death.

## Electroencephalography

A non-invasive neurophysiological test that records the electrical activity of the brain using electrodes placed on the scalp according to the international 10-20 system.

---

## Electrolyte Balance

Homeostasis of sodium, potassium, calcium, magnesium, chloride, phosphate. Regulated by kidneys, hormones (aldosterone, ADH, PTH). Imbalance causes neuromuscular, cardiac, metabolic dysfunction.

## Electrolyte Imbalance

Abnormal serum concentration of electrolytes (sodium, potassium, calcium, magnesium, phosphate, chloride). Hyponatremia ( $<135$  mEq/L): most common electrolyte disorder; causes include SIADH, heart failure, hypovolemia, and polydipsia. Hypernatremia ( $>145$  mEq/L): free water deficit from poor intake, diabetes insipidus, or diuretics.

## Electrolytes

Electrically charged minerals in body fluids, including sodium, potassium, chloride, bicarbonate, calcium, magnesium, and phosphate. They support nerve conduction, muscle contraction, fluid balance, and acid-base regulation.

## Electromagnetic Navigation Bronchoscopy

A guidance system for bronchoscopy that uses electromagnetic fields to navigate to peripheral lung lesions. It allows biopsy of lesions not visible on standard bronchoscopy. It is more accurate than conventional transbronchial biopsy for peripheral lesions. It may reduce the need for CT-guided biopsy.

## Electromyography

A test that records the electrical activity of skeletal muscles, often together with nerve-conduction studies, to evaluate peripheral nerve, nerve-root, neuromuscular-junction, and muscle disorders.

## Electron Transport Chain

Series of protein complexes (I-IV) and mobile carriers (ubiquinone, cytochrome c) in the inner mitochondrial membrane that transfer electrons from NADH and FADH<sub>2</sub> to oxygen, pumping protons to create electrochemical gradient used by ATP synthase. Complex I (NADH dehydrogenase): NADH  $\rightarrow$  ubiquinone.

## Electrophysiology Study

Invasive cardiac catheterization with multielectrode catheters placed in the heart to map the cardiac conduction system. Measures: sinus node function (SNRT, SACT), AV node function (AH interval, HV interval), and inducibility of arrhythmias (programmed electrical stimulation).

## Electrosurgical Unit

A generator that delivers high-frequency electrical energy through an active electrode to cut tissue or achieve hemostasis. Monopolar and bipolar configurations differ in current pathway and safety considerations; burns, unintended tissue injury, and interference with implanted devices are possible complications.

## Elephantiasis

Massive enlargement of a body part, typically a limb or the scrotum, caused by chronic lymphedema from obstruction of lymphatic vessels. The most common cause worldwide is lymphatic filariasis, a mosquito-borne parasitic infection by *Wuchereria bancrofti*, *Brugia malayi*, or *Brugia timori*.

## Elevation

Superior movement of a body part, such as raising the mandible or shoulder girdle.

## Elimination Half-Life

Time for plasma concentration to decrease by 50%. Determines dosing interval, accumulation, withdrawal from exposure. Affected by renal/hepatic function, age, drug interactions.

## Embolectomy

Surgical removal of embolus from blood vessel. Indications: acute arterial occlusion, pulmonary embolism. Techniques: Fogarty catheter, open surgical extraction. Often combined with thrombolysis.

## Embolectomy (Vascular)

Removal of an embolus from a blood vessel by surgery or a catheter-based procedure.

**Synonyms:**

---

Vascular

### **Embolism**

An embolism is the occlusion of a blood vessel by a detached mass that has traveled through the bloodstream from its site of origin. The most common form is thromboembolism, where a fragment of a thrombus dislodges and travels to a distant site through the venous or arterial circulation.

### **Embolization**

Deliberate occlusion of a blood vessel or vascular malformation using materials such as coils, particles, glue, or plugs. It is used to control hemorrhage, treat aneurysms or malformations, reduce tumor vascularity, or induce organ infarction in selected therapies.

### **Embolization (Vascular)**

Intentional blockage of a blood vessel using a catheter-delivered material to control bleeding, reduce blood flow, or treat a vascular lesion.

**Synonyms:**

Vascular

### **Embolization Therapy**

Image-guided occlusion of vessels. Used for hemorrhage control, tumor devascularization, aneurysm treatment, varices.

### **Embryo**

The developing human organism from fertilization through the end of the eighth week after fertilization. From the ninth week after fertilization, it is termed a fetus.

### **Emergence Agitation**

A state of confusion, restlessness, and inconsolable crying during emergence from anesthesia, occurring in 10 to 80 percent of pediatric patients and 5 to 10 percent of adults. Risk factors include sevoflurane induction, short procedures, parental separation, and preexisting behavioral disorders.

### **Emergency Contraception**

Contraception used after unprotected intercourse or contraceptive failure to reduce the chance of pregnancy. Options include oral medicines and a copper intrauterine device; effectiveness depends on the method, timing, medical history, and access to care.

### **Emergency Department**

Hospital department providing immediate medical care for acute illnesses and injuries. Staffed by emergency physicians and supported by specialists. Key principles: triage (prioritize by severity), stabilization, diagnosis, treatment, disposition.

### **Emergency Procedures**

Planned actions for responding to urgent events such as spills, contamination, equipment failure, or radiation exposure while protecting patients and staff.

### **Emerging Infectious Disease**

New or reemerging infectious diseases. Examples: COVID-19, Zika, Ebola, MERS.

### **Emesis**

The forceful expulsion of gastric contents through the mouth, a complex reflex coordinated by the vomiting center in the medulla oblongata.

### **Emetics**

Substances that induce vomiting. They are generally not used to treat poisoning because vomiting may cause aspiration or additional injury.

### **Emission**

The discharge or release of a substance, usually a fluid. In male reproduction, emission refers to the movement of semen into the posterior urethra in preparation for ejaculation.

### **Emotional Eating**

Eating in response to emotions such as stress, boredom, or sadness rather than primarily in response to physical hunger. Cognitive behavioral therapy

---

may help.

### **Emphysema**

A form of COPD characterized by permanent, abnormal enlargement of airspaces distal to the terminal bronchioles, accompanied by destruction of their walls. Centriacinar emphysema affects the respiratory bronchioles and is associated with smoking.

### **Emphysematous Aortitis Due To Clostridium Septicum**

A rare, life-threatening infection of the aortic wall by *Clostridium septicum*, characterized by gas formation within the aortic wall visible on imaging. It typically occurs in immunocompromised patients and may present with sepsis, back pain, or aortoenteric fistula.

### **Emphysematous Cholecystitis**

A severe, gas-forming infection of the gallbladder wall caused by anaerobic organisms, most commonly *Clostridium* species and *Escherichia coli*, occurring predominantly in diabetic men. Gas within the gallbladder wall or lumen is visible on imaging. It is a surgical emergency requiring urgent cholecystectomy and broad-spectrum antibiotics.

### **Emphysematous Hepatitis**

A rare, life-threatening gas-forming infection of the liver parenchyma, most commonly caused by *Clostridium* species or mixed enteric organisms in immunocompromised or diabetic patients. Imaging reveals gas within the liver parenchyma.

### **Emphysematous Prostatitis**

A rare, severe gas-forming infection of the prostate gland, most commonly caused by *Escherichia coli* in diabetic or immunocompromised patients. It presents with fever, perineal pain, urinary retention, and sepsis. Imaging shows gas within the prostatic parenchyma.

### **Emphysematous Pyelonephritis**

Severe necrotizing infection of renal parenchyma with gas formation. Almost exclusively in diabetic patients. Presents with high fever, flank pain, and

sepsis. CT shows gas within renal parenchyma. A urological emergency requiring aggressive antibiotics and usually nephrectomy.

### **Empty Calories**

A nontechnical term for foods or drinks that provide substantial energy but relatively few vitamins, minerals, fiber, or other beneficial nutrients.

### **Empty Sella Syndrome**

Herniation of subarachnoid space into the sella turcica, compressing the pituitary gland and flattening it against the sellar floor. Primary: due to congenital weakness of the diaphragma sella. Secondary: post-surgery, post-radiation, or pituitary apoplexy (Sheehan syndrome). Most are asymptomatic.

### **Empyema**

A collection of pus in a normally sterile body cavity, most often infected pleural fluid around the lung, causing fever, chest pain, cough, and breathlessness.

### **Empyema Necessitans**

Extension of pleural empyema through the chest wall. Presents as a painful, fluctuant mass. Requires drainage and antibiotics.

### **EMR**

Electronic medical record, a digital record of health information maintained within a particular health-care organization or practice.

### **Enamel**

Hard, highly mineralized outer layer of tooth crown. Avascular, aneural, cannot regenerate. Enamel hypoplasia causes defects. Dental caries begins in enamel. Fluoride strengthens enamel.

### **Enamel Hypoplasia**

Defective enamel quantity due to systemic disturbance during development. Pits, grooves, or thin enamel.

### **Enamel Pearl**

Small mound of enamel on root surface. Usually

---

bifurcation area of molars. May interfere with periodontal attachment.

### **Encapsulating Peritoneal Sclerosis**

Rare condition characterized by a thick fibrocollagenous membrane encasing the small intestine, leading to recurrent bowel obstruction. Most commonly associated with long-term peritoneal dialysis but also seen after abdominal surgery, radiation, and beta-blocker use.

### **Encephalitis**

Encephalitis is inflammation of brain tissue, often infectious or autoimmune, causing altered mental status, seizures, fever, focal deficits, or movement abnormalities. fever, headache, altered mental status, seizures, or focal neurologic deficits and requires urgent medical evaluation.

### **Encephalocele**

A neural tube defect where brain tissue and meninges herniate through a skull defect, most commonly in the occipital region. The herniated sac contains cerebrospinal fluid, meninges, and often brain tissue. Associated with other CNS anomalies including hydrocephalus and Chiari malformation. Presents as a visible, pulsatile midline mass.

### **Encephalopathy**

Any diffuse disease of the brain that alters its structure or function, presenting with a global change in mental status (confusion, lethargy, personality change, coma) rather than focal neurologic deficits.

### **Encopresis**

Repeated passage of stool into inappropriate places by a child beyond the expected toilet-training age, usually associated with chronic constipation and fecal retention.

#### **Synonyms:**

Stool Holding

### **End-Of-Life Care**

Care focused on comfort, symptom control, communication, and support for a person with advanced illness and for their family or caregivers.

### **End-Stage Kidney Disease**

The advanced stage of chronic kidney disease in which the kidneys can no longer adequately maintain fluid, electrolyte, and waste balance. Treatment requires dialysis or kidney transplantation, together with management of complications.

### **End-Stage Renal Disease**

The final stage of chronic kidney disease (CKD stage 5), defined by GFR  $<15$  mL/min/1.73

m<sup>2</sup> or the need for renal replacement therapy. Uremia develops with accumulation of toxins causing nausea, anorexia, pruritus, pericarditis, encephalopathy, and bleeding diathesis.

#### **Synonyms:**

ESRD

### **Endemic**

Regular presence of a disease or infectious agent in a particular population or geographic area at an expected baseline level.

### **Endemic Fungi**

Fungi that occur naturally in particular geographic regions and can cause infection in people who inhale their spores.

### **Endobronchial Foreign Body**

A foreign object lodged in a bronchus, causing partial or complete airway obstruction. It may cause localized wheezing, atelectasis, and post-obstructive pneumonia. It is most common in children and may be initially misdiagnosed as asthma. Bronchoscopy is both diagnostic and therapeutic.

### **Endobronchial Tumor**

A tumor growing within the bronchial lumen, causing obstruction, atelectasis, and post-obstructive pneumonia. It may be malignant (lung cancer, carcinoid tumor) or benign (hamartoma, papilloma). Symptoms include cough, hemoptysis, and wheezing. Treatment is bronchoscopic removal or debulking plus definitive therapy.

---

## Endobronchial Ultrasound

Bronchoscopy with ultrasound guidance for trans-bronchial needle aspiration of mediastinal and hilar lymph nodes. Essential for lung cancer staging. Less invasive than mediastinoscopy.

## Endobronchial Valve

A one-way valve placed bronchoscopically in a target airway to achieve lobar atelectasis in emphysema. It allows air and secretions to exit but prevents air from entering. It is used for bronchoscopic lung volume reduction in selected patients with heterogeneous emphysema and intact fissures.

## Endocardial Cushion Defect

A congenital heart defect caused by abnormal development of the atrioventricular cushions, producing an atrioventricular septal defect with abnormal atrioventricular valves. It is strongly associated with Down syndrome and may cause heart failure and pulmonary hypertension.

## Endocarditis

Endocarditis is infection or inflammation of the endocardium, usually involving heart valves, and may cause fever, emboli, valve destruction, and heart failure. Acute bacterial endocarditis: *Staph aureus* (most common in IV drug users and prosthetic valves), rapid destruction. Subacute: viridans group streptococci (pre-existing valve disease).

### Synonyms:

Inflammation Of The Heart Valve (Endocarditis)

## Endocarditis Prophylaxis

Infective endocarditis prophylaxis with antibiotics is recommended for patients at highest risk of adverse outcomes from endocarditis who are undergoing dental procedures that involve manipulation of gingival tissue, the periapical region of teeth, or perforation of the oral mucosa.

## Endocarditis Surgical Indications

Surgery indicated for: heart failure from valve dysfunction, uncontrolled infection (abscess, fistula, vegetation >10 mm with persistent emboli), fungal endocarditis, prosthetic valve dehiscence, and large

vegetations (>15 mm) with embolic events.

## Endocardium

The innermost layer of the heart wall, a thin membrane of endothelial cells and underlying connective tissue that lines the cardiac chambers and covers the heart valves. The endocardium is continuous with the endothelium of blood vessels and provides a smooth, non-thrombogenic surface.

## Endocrine Disrupting Chemicals

Environmental chemicals that interfere with endocrine function including bisphenol A, phthalates, pesticides, and polychlorinated biphenyls. Potential associations with diabetes, obesity, thyroid dysfunction, reproductive disorders, and hormone-sensitive cancers. Evidence is strongest for associations with type two diabetes and obesity.

## Endocrine Disruptor

Chemical interfering with hormone systems. Examples: BPA, phthalates, DDT, PCBs. Effects: reproductive disorders, developmental problems, cancer.

## Endocrine Glands

Ductless glands that secrete hormones directly into the bloodstream to regulate distant target organs.

## Endocrine Therapy

Systemic treatment that manipulates hormones or their receptors in hormone-sensitive cancers, including tamoxifen, aromatase inhibitors, luteinizing hormone-releasing hormone agonists, and antiandrogens.

## Endocrinology

The branch of medicine concerned with the study, diagnosis, and treatment of disorders of the endocrine system—the network of glands that secrete hormones regulating metabolism, growth and development, tissue function, sexual function, reproduction, sleep, and mood.

## Endocytosis

Process by which cells internalize extracellular mate-

---

rial by engulfing it with the cell membrane, forming intracellular vesicles. Phagocytosis ("cell eating") involves engulfing large particles (>0.5 micrometers) such as bacteria or debris, forming a phagosome that fuses with lysosomes for digestion.

### **Endoderm**

The innermost germ layer in an embryo, which develops into the linings of the digestive and respiratory tracts, as well as the liver and pancreas.

### **Endodontic Therapy (Root Canal)**

Treatment of dental pulp disease or necrosis. Indications: irreversible pulpitis, pulp necrosis, periapical abscess. Procedure: access cavity, locate canals, clean and shape, obturate with gutta-percha, seal. Success rate: >90%. Alternative: extraction.

#### **Synonyms:**

Root Canal

### **Endoleak**

Persistent blood flow into an aneurysm sac after endovascular aneurysm repair. Type I and III endoleaks reflect inadequate sealing or device failure and generally require urgent correction; other types are managed according to sac expansion and risk.

### **Endometrial Cancer**

The most common gynecologic malignancy in developed countries, arising from the lining of the uterine cavity, typically in postmenopausal women.

#### **Synonyms:**

Cancer, Endometrial Cancer, Uterine

### **Endometrial Hyperplasia**

Abnormal overgrowth of the lining of the uterus, often related to prolonged estrogen exposure without enough progesterone. It may cause heavy, irregular, or postmenopausal bleeding; atypical forms can precede endometrial cancer and require gynecologic evaluation, often including endometrial sampling.

### **Endometrioma**

A chocolate cyst of the ovary formed by ectopic endometrial tissue that hemorrhages cyclically, ap-

pearing as a homogenous low-level echo mass on ultrasound and associated with chronic pelvic pain and infertility.

### **Endometriosis**

Endometriosis is growth of endometrial-like tissue outside the uterus, commonly causing pelvic pain, painful periods, pain with intercourse, infertility, or bowel and bladder symptoms. endometrial-like tissue (glands and stroma) outside the uterine cavity, most commonly implanted on the pelvic peritoneum, ovaries, uterosacral ligaments, and rectovaginal septum.

#### **Synonyms:**

Implants Endometrial (Endometriosis)

### **Endometritis**

Inflammation or infection of the uterine lining, often associated with childbirth, miscarriage, abortion, or uterine instrumentation.

### **Acute Endometritis**

Acute inflammation of the endometrium, usually caused by ascending infection or retained tissue after pregnancy-related events or uterine instrumentation; fever, pelvic pain, and abnormal bleeding may occur.

### **Chronic Endometritis**

Persistent low-grade inflammation of the endometrium, often associated with infection, retained products, intrauterine devices, or reproductive failure; plasma cells support the diagnosis histologically. Risk factors include prolonged labor, multiple vaginal examinations, premature rupture of membranes, and cesarean section. Presents with fever, uterine tenderness, foul-smelling lochia, and leukocytosis.

### **Endometrium**

The lining of the uterus.

### **Endophthalmitis**

A severe inflammation, usually infectious, inside the eye that can rapidly threaten vision and requires urgent ophthalmic treatment. aqueous humor, and adjacent structures, representing an ophthalmologic

---

emergency.

### **Endoplasmic Reticulum**

Interconnected network of membranous tubules and sacs continuous with the nuclear envelope. Rough ER: studded with ribosomes, site of synthesis of secretory, membrane, and lysosomal proteins; co-translational insertion into ER lumen.

### **Endoprosthesis**

Internal prosthetic device. Vascular stent-grafts, airway stents.

### **Endorphin**

Endogenous opioid peptides (beta-endorphin, enkephalins, dynorphins) produced by the pituitary, hypothalamus, and immune cells that bind opioid receptors (mu, delta, kappa) to produce analgesia, euphoria, and modulation of pain perception and stress responses.

### **Endoscope**

A flexible or rigid instrument with a light and camera used to inspect an internal body passage or cavity and sometimes perform procedures. bronchoscope, colonoscope, gastroscope, arthroscope, cystoscope. Essential for diagnosis and intervention.

### **Endoscopic Mucosal Resection**

Advanced endoscopic technique for removal of superficial gastrointestinal neoplasms by lifting the lesion through submucosal injection and resecting with an electrosurgical snare.

### **Endoscopic Retrograde Cholangiopancreatography**

Combined endoscopic and fluoroscopic procedure used to visualize and treat disorders of the biliary and pancreatic ducts. A duodenoscope is advanced to the second portion of the duodenum and the ampulla of Vater is cannulated. Contrast dye is injected under fluoroscopic guidance creating cholangiograms and pancreatograms.

### **Endoscopic Submucosal Dissection**

Advanced endoscopic technique for en bloc resection of large gastrointestinal neoplasms using specialized electrosurgical knives to dissect through the submucosa. The technique allows complete histological assessment and is particularly valuable for early gastric and colorectal cancers.

### **Endoscopic Ultrasound**

Combined endoscopy and ultrasound for high-resolution imaging of the GI wall and adjacent structures. Linear echoendoscope: allows FNA of mediastinal, pancreatic, and peripancreatic lesions. Radial echoendoscope: 360-degree view for staging GI cancers (TNM staging).

### **Endoscopy**

Examination of an internal body passage or cavity with an endoscope; tissue sampling and treatment may be performed during the procedure. endoscopes. Upper endoscopy examines the esophagus, stomach, and duodenum. Colonoscopy examines the colon and terminal ileum. Both allow direct visualization, biopsy, and therapeutic interventions including polypectomy, hemostasis, and dilation.

### **Endosteum**

The thin connective tissue membrane lining the inner surface of bone, including the medullary cavity, Haversian canals, and trabeculae. Contains osteoprogenitor cells and osteoblasts, contributing to bone formation, remodeling, and repair (fracture healing).

### **Endothelin Receptor Antagonists**

Medications that block endothelin-1, a potent vasoconstrictor implicated in pulmonary arterial hypertension. Bosentan (dual ERA), ambrisentan (selective ETA), and macitentan are used for PAH. Side effects include hepatotoxicity (bosentan), anemia, and teratogenicity.

### **Endotracheal Intubation**

Placement of a cuffed tube through the mouth or nose into the trachea to maintain airway patency, deliver positive-pressure ventilation, administer in-

---

haled anesthetics, and protect the airway in selected patients. Correct position must be confirmed clinically and with exhaled carbon dioxide when circulation is present.

### **Endotracheal Tube**

A tube placed through the mouth or nose into the trachea to maintain an airway and support ventilation. A cuff may seal the airway around the tube.

### **Endovascular**

Located within or performed through the interior of a blood vessel, usually using a catheter-based technique.

### **Endovascular Aneurysm Repair**

Minimally invasive technique for abdominal aortic aneurysm repair using stent graft. Accessed via femoral arteries. Advantages: lower perioperative mortality, faster recovery. Disadvantages: need for surveillance, endoleak risk, may require reintervention.

### **Endovascular Graft**

A fabric-covered vascular prosthesis placed through a catheter to reinforce a diseased vessel or exclude an aneurysm. It is used in selected aortic and peripheral vascular conditions; anatomy, symptoms, operative risk, and imaging surveillance determine suitability and follow-up.

### **Endovascular Repair**

A minimally invasive procedure that uses a catheter-delivered graft or other device to repair a blood vessel from inside its lumen.

### **Endurance**

Aerobic capacity, muscular endurance. Cardiorespiratory fitness testing.

### **Enema**

The introduction of fluid into the rectum and colon through the anus for diagnostic or therapeutic purposes.

### **Energy Conservation**

Strategies that reduce unnecessary energy expenditure and fatigue during daily activities, such as pacing, prioritizing, planning, positioning, and using adaptive equipment.

### **Energy Resolution**

The ability of a radiation detector to distinguish photons with different energies, commonly expressed as the width of a photopeak relative to its energy.

### **Energy Window**

The selected range of photon energies accepted by a gamma camera or other radiation detector for image formation. Appropriate selection helps limit scattered radiation.

### **Engagement**

The descent of the fetal presenting part into the pelvis, typically occurring 2-3 weeks before labor in nulliparas or at the onset of labor in multiparas.

### **Enhanced Recovery After Surgery**

A multimodal, evidence-based perioperative pathway that reduces surgical stress and supports early recovery through preoperative counseling, appropriate fasting, opioid-sparing analgesia, early mobilization, early nutrition, and prevention of complications.

### **Enhancement Artifact**

Ultrasound artifact from fluid-filled structures. Enhanced by harmonic imaging.

### **Enhancer**

DNA sequence increasing transcription of target gene, can be distant from gene, orientation-independent. Binds activator proteins. Examples: LCR (locus control region) for beta-globin.

### **Enrichment**

Restoration of nutrients lost during processing. Examples: enriched flour, restored B vitamins.

---

## Entamoeba Histolytica

A protozoan parasite that causes amoebiasis, a gastrointestinal and extra-intestinal infection transmitted via the fecal-oral route. The organism exists in two forms: the infectious cyst (transmitted in contaminated food or water) and the invasive trophozoite.

## Enteral Formula

A nutritionally complete or modular liquid preparation delivered into the gastrointestinal tract. Formulas may be polymeric, semi-elemental, or elemental and are selected according to digestion, absorption, fluid, renal, hepatic, and metabolic requirements.

## Enteral Nutrition

Delivery of nutrients via gastrointestinal tract. Routes: nasogastric, nasoduodenal, gastrostomy (PEG), jejunostomy. Indications: dysphagia, neurological disease, head/neck cancer, prolonged inability to eat. Complications: aspiration, diarrhea, tube displacement, sinusitis.

## Enteric Duplication Cyst

A congenital, smooth-muscle-lined cyst arising from the gastrointestinal tract, most commonly in the ileum, containing ectopic gastric or intestinal mucosa. It may present in childhood with abdominal pain, obstruction, or gastrointestinal bleeding from ectopic gastric acid secretion.

## Enteritis

Inflammation of the small intestine caused by infection, inflammatory disease, radiation, reduced blood flow, or other injury. (bacterial, or parasitic). Viral enteritis (norovirus, rotavirus, adenovirus, astrovirus) presents with acute onset of watery diarrhea, nausea, vomiting, and abdominal cramps, typically self-limited over 2–7 days.

## Enterobacteriaceae Carbapenem Resistance

Resistance to carbapenem antibiotics in Enterobacteriaceae, primarily through production of carbapenemases. The most important carbapenemases include KPC, NDM, and OXA-48-like enzymes.

Carbapenem-resistant Enterobacteriaceae (CRE) are a major public health threat due to limited treatment options.

## Enterobiasis

Intestinal infection with the pinworm *Enterobius vermicularis*, commonly causing nighttime itching around the anus.

## Enterobius Vermicularis

A small intestinal nematode commonly called the pinworm or threadworm.

### Synonyms:

the pinworm or threadworm.

## Enterocolitis

Inflammation of both the small intestine and colon, caused by infection, immune-mediated disease, reduced blood flow, toxins, or other injury. It may produce abdominal pain, diarrhoea, fever, vomiting, bleeding, dehydration, or systemic illness; diagnosis and management depend on the cause and severity.

## Enterohepatic Circulation

Recycling of toxins between liver and intestine via bile. Prolonged exposure, increased toxicity. Interrupted by activated charcoal, cholestyramine. Examples: morphine, digoxin, estrogen, thyroxine.

## Enteropathic Arthritis

Inflammatory arthritis associated with inflammatory bowel disease, including Crohn disease and ulcerative colitis. It may affect the spine, sacroiliac joints, or peripheral joints.

## Enterovirus D68

An enterovirus that usually causes respiratory illness but can rarely cause severe pneumonia or acute flaccid myelitis, especially in children; spread occurs through respiratory secretions.

## Enthesis

The site at which a tendon, ligament, or joint capsule attaches to bone.

---

## Enthesitis

Inflammation at the site where a tendon, ligament, or joint capsule inserts into bone (enthesitis), a hallmark of spondyloarthritis (ankylosing spondylitis, psoriatic arthritis, reactive arthritis, IBD-associated). Affects Achilles tendon, plantar fascia, patellar, and costochondral junctions.

## Entrance Wound

A skin defect created where a projectile enters the body, distinguished from an exit wound by smaller size, rounded shape, and abraded inward margin. Contact wounds show a muzzle imprint and soot; close-range wounds show soot and powder tattooing; intermediate-range wounds show stippling; distant wounds show a clean abrasion ring.

## Entropion

Inward turning of an eyelid margin, causing eyelashes to rub the eye and produce irritation, tearing, corneal injury, or infection.

## Enuresis

Repeated involuntary urination, usually during sleep in a child who is developmentally expected to remain dry. It may be primary or secondary and requires assessment for constipation, urinary infection, diabetes, sleep or developmental disorders, psychosocial stressors, and lower-urinary-tract dysfunction when clinically indicated.

## Enuresis (Bedwetting)

Repeated involuntary urination during sleep in a child who is developmentally expected to remain dry. It may be primary or secondary; assessment considers constipation, urinary infection, diabetes, sleep disorders, and developmental or psychosocial factors.

### Synonyms:

Bedwetting

## Environmental Health

Study of environmental factors affecting health. Examples: air pollution, water quality, occupational hazards, climate change.

## Enzyme

A protein, or occasionally an RNA molecule, that catalyses a specific biochemical reaction without being consumed; enzyme activity measurements help assess tissue injury, metabolic disease, and drug effects. activation energy. Specificity: lock-and-key or induced fit models. Kinetics: Michaelis-Menten equation ( $V_{max}$ ,  $K_m$ ). Regulation: allosteric control, covalent modification (phosphorylation), proteolytic activation, feedback inhibition.

## Enzyme Induction

A process by which a drug or xenobiotic increases the synthesis or activity of drug-metabolizing enzymes, primarily cytochrome P450 enzymes in the liver, accelerating the metabolism of itself (autoinduction) or other drugs. Enzyme induction typically occurs over days to weeks as it requires new protein synthesis.

## Enzyme Inhibition

A process by which a drug inhibits the activity of drug-metabolizing enzymes, leading to increased plasma concentrations of co-administered drugs that are metabolized by the same enzyme. Enzyme inhibition occurs rapidly (hours to days) as it does not require new protein synthesis.

## Enzyme Kinetics

The study of enzyme-catalyzed reaction rates and the factors that affect them. Important concepts include substrate concentration, maximum reaction rate, binding affinity, inhibitors, and the relationship between enzyme activity and temperature or pH.

## Enzyme-Linked Immunosorbent Assay

An immunoassay that uses an enzyme-labeled antibody or antigen and a substrate-generated signal to detect or quantify a target analyte. It is used for measurement of antibodies, antigens, hormones, cytokines, and infectious disease markers.

## Eosinophil

A granulocyte (1-4 percent of leukocytes) with bilobed nucleus and eosinophilic granules containing major basic protein, eosinophil cationic protein,

---

and peroxidase. Roles: defense against parasitic (helminth) infections and modulation of allergic inflammation; contain histaminase and aryl sulfatase.

### **Eosinophilia**

An absolute eosinophil count exceeding 500 cells per microliter in peripheral blood, most commonly caused by parasitic infections, allergic disorders, drug reactions, and autoimmune diseases. Hypereosinophilia, with counts above 1500 per microliter, may cause end-organ damage to the heart, lungs, skin, and nervous system.

### **Eosinophilic Bronchitis**

A cause of chronic cough in which eosinophilic inflammation affects the airways without the variable airflow obstruction typical of asthma. Cough-variant asthma and reflux may mimic it; diagnosis relies on clinical assessment and airway inflammation testing.

### **Eosinophilic Esophagitis**

Chronic immune-mediated condition characterized by dense eosinophilic infiltration of the esophageal mucosa defined as fifteen or more eosinophils per high-power field, in the absence of other causes of esophageal eosinophilia.

### **Eosinophilic Fasciitis**

A rare inflammatory disorder causing painful swelling and progressive thickening of fascia and skin, often with increased blood eosinophils. thickening of the deep fascia and adjacent muscle, presenting with painful swelling and induration of the extremities and a peau d'orange skin appearance. Peripheral eosinophilia and elevated inflammatory markers are typical.

#### **Synonyms:**

Shulmans Syndrome (Eosinophilic Fasciitis)

### **Eosinophilic Gastroenteritis**

Rare chronic inflammatory condition characterized by eosinophilic infiltration of the gastrointestinal tract beyond the esophagus involving any segment from stomach to rectum and extending beyond the mucosa to involve the muscularis propria or serosa.

### **Eosinophilic Granulomatosis With Polyangiitis**

EGPA (formerly Churg-Strauss syndrome): an ANCA-associated vasculitis characterized by asthma, peripheral and tissue eosinophilia, and necrotizing vasculitis.

### **Ependymoma**

A glioma arising from the ependymal cells lining the ventricles and spinal canal; more common in children and frequently associated with hydrocephalus.

### **Epicardium**

The outermost layer of the heart wall, which is the visceral layer of the serous pericardium. It consists of a single layer of mesothelial cells and underlying connective tissue containing blood vessels, nerves, and adipose tissue. The epicardium produces pericardial fluid that lubricates the heart surface.

### **Epidemic**

Sudden increase in disease cases above expected level. Examples: cholera outbreak, measles outbreak.

### **Epidemiology**

Study of distribution and determinants of health-related states in populations. Branches: descriptive (who, when, where), analytic (why, how), experimental (intervention trials). Measures: incidence, prevalence, mortality rates, case-fatality rate.

### **Epidermal Inclusion Cyst**

A common benign cyst lined by stratified squamous epithelium with keratin debris. It presents as a firm, mobile, subcutaneous nodule, typically on the face, neck, and back. A central punctum is characteristic. It may become inflamed or infected. Treatment includes complete excision (including the cyst wall) to prevent recurrence.

### **Epidermal Layers**

From deep to superficial, the epidermis consists of the basal, spinous, granular, lucid, and cornified layers. The lucid layer is present mainly in thick skin such as the palms and soles.

---

## **Epidermis**

Outermost skin layer, stratified squamous keratinized epithelium approximately 0.1 mm thick, with five layers (superficial to deep): stratum corneum (dead keratinized cells), lucidum (clear layer, thick skin only), granulosum (keratinization begins), spinosum (spiny layer, Langerhans cells), basale (stem cells, melanocytes, Merkel cells).

## **Epidermoid Cyst**

A benign, slow-growing cyst lined by squamous epithelium and filled with keratin, usually presenting as a firm subcutaneous nodule. Rupture can cause inflammation, tenderness, and a foul-smelling discharge.

## **Epidermolysis Bullosa**

A group of genetic disorders causing skin fragility and blistering with minimal trauma. Simplex (intraepidermal blistering), junctional (blistering at lamina lucida), dystrophic (sublamina densa blistering), and Kindler syndrome (mixed). Dystrophic EB can cause scarring, contractures, and squamous cell carcinoma.

## **Epididymal Cyst**

A usually benign, fluid-filled cyst arising in the epididymis. It may be painless and may require treatment only if it causes significant symptoms or complications.

## **Epididymis**

Coiled duct approximately 6 meters long on the posterolateral aspect of each testis, divided into head (caput, receiving efferent tubules from the testis), body (corpus), and tail (cauda, continuing as the vas deferens). Functions include sperm maturation (gaining motility over approximately 12 days), storage (in the tail), and transport.

## **Epididymitis**

Inflammation of the epididymis, commonly caused by infection and presenting with gradual unilateral scrotal pain and swelling. typically resulting from infection. In sexually active men under 35 years, the most common pathogens are sexually transmit-

ted: *Chlamydia trachomatis* (most common) and *Neisseria gonorrhoeae*, with epididymitis often accompanied by urethritis.

## **Epidural**

Regional analgesia (or anesthesia) delivering local anesthetic/opioid via a catheter in the epidural space (lumbar), used for pain relief during labor and for cesarean (higher dose) anesthesia. Provides excellent analgesia while allowing maternal mobility and pushing; reduces catecholamine stress.

## **Epidural Abscess**

A collection of infected material between the dura mater and the skull or vertebral canal, capable of compressing the brain, spinal cord, or nerve roots. Spinal epidural abscess may cause severe focal back pain, fever, neurological deficit, or sphincter dysfunction and requires urgent imaging and specialist assessment.

## **Epidural Analgesia**

Segmental pain relief produced by delivering a local anesthetic, sometimes with an opioid, through a catheter into the epidural space. It may be used during labor or selected operations; the medicines and concentrations depend on the patient and clinical setting.

## **Epidural Analgesia For Labor**

A neuraxial technique for labor analgesia: a catheter is placed in the epidural space (L3-L4 or L2-L3 interspace) and local anesthetic (bupivacaine 0.0625-0.125%) with opioid (fentanyl 2 µg/mL) is infused continuously or in patient-controlled epidural analgesia (PCEA) boluses.

## **Epidural Anesthesia**

A regional anesthetic technique involving injection of local anesthetic and/or opioid into the epidural space (the potential space between the dura mater and the ligamentum flavum within the spinal canal), producing segmental analgesia and sympathetic blockade.

---

## Epidural Blood Patch

A minimally invasive procedure used to treat post-dural puncture headache (PDPH) resulting from accidental dural puncture during epidural placement or spinal anesthesia. It involves injecting a small volume of the patient's autologous blood (typically 15-20 mL) into the epidural space at or near the site of the previous puncture.

## Epidural Hematoma

Accumulation of blood between the skull and the dura mater, typically from arterial bleeding (middle meningeal artery) following temporal bone fracture. Presents with loss of consciousness, then a lucid interval (hours), followed by rapid neurological deterioration due to mass effect.

## Epigastric Region

Central superior region between the hypochondriac regions and above the umbilical region. Overlies the stomach, duodenum, pancreas, and portions of the liver. The aorta and inferior vena cava pass through it. Epigastric pain associates with gastric ulcers, pancreatitis, GERD, and aortic aneurysms.

## Epigenetics

Heritable changes in gene expression without DNA sequence alteration. Mechanisms: DNA methylation, histone modification, non-coding RNA. Influenced by environment, diet, stress. Reversible.

## Epiglottitis

A leaf-shaped elastic cartilage at the base of the tongue that covers the laryngeal inlet during swallowing, directing food and liquid into the esophagus and preventing aspiration into the airway. Elevates during swallowing (with the larynx) under glossopharyngeal/vagal innervation.

## Epiglottitis

Epiglottitis is potentially life-threatening inflammation and swelling around the epiglottis that can rapidly obstruct the airway, especially in children. Haemophilus influenzae type b (now rare due to vaccination). Presents with high fever, drooling, dysphagia, tripod position, and rapid progression

to airway obstruction. Do not examine the throat.

## Epilepsy

Epilepsy is a disorder of recurrent unprovoked seizures caused by abnormal brain electrical activity; classification guides medication, safety counseling, and other treatment. electrical activity in the brain. Classification includes focal, generalized, and unknown onset seizures. Etiology: genetic, structural, metabolic, infectious, immune. Diagnosis: clinical history, EEG, neuroimaging.

### Synonyms:

Seizure Disorder

## Epilepsy Surgery

Indicated for patients with drug-resistant epilepsy who have a concordant, resectable seizure focus identified on comprehensive presurgical evaluation. Failure of two or more appropriately chosen and adequately dosed antiepileptic drugs to achieve sustained seizure freedom.

## Epinephrin (Adrenaline)

An alternate spelling of epinephrine, a catecholamine hormone and medicine that increases heart rate and airway diameter and constricts blood vessels.

### Synonyms:

Adrenaline

## Epinephrine (Adrenaline)

A catecholamine hormone and neurotransmitter produced by the adrenal medulla and sympathetic nerve terminals, acting on alpha-1, alpha-2, beta-1, beta-2, and beta-3 adrenergic receptors.

### Synonyms:

Adrenaline

## Epiphora

Excessive tearing caused by impaired tear drainage or reflex hypersecretion. Causes: nasolacrimal duct obstruction (most common in infants and elderly), punctal stenosis, eyelid malposition (ectropion, entropion), and reflex tearing from dry eye or ocular surface irritation.

---

## Epiphyseal Plate

A layer of hyaline cartilage, also called the growth plate or physis, located between the epiphysis and metaphysis of a growing long bone. It permits longitudinal bone growth through endochondral ossification, progressing from resting cartilage through proliferation and hypertrophy to calcification and replacement by bone.

### Synonyms:

the growth plate or physis, located between.

## Epiphysis

The expanded end of a long bone, usually covered by articular cartilage where it forms a synovial joint. It contains spongy (trabecular) bone with a thin outer shell of compact bone and contributes to the shape and function of the joint.

## Episcleritis

Usually self-limited inflammation of the thin tissue overlying the white of the eye, causing localized redness and mild discomfort. connective tissue between the sclera and conjunctiva.

## Episiotomy

A clinical condition or finding involving episiotomy. Its defining features, causes, evaluation, and management depend on the clinical context.

## Episiotomy Repair

Surgical repair of an episiotomy incision after delivery. Technique: continuous suturing of the vaginal mucosa (2-0 chromic), interrupted sutures for the perineal muscles, and subcuticular closure of the perineal skin. The rectum should be examined after repair (suture inadvertently through the rectal mucosa).

## Epispadias

A congenital defect in which the urethral opening is on the upper surface of the penis or in an abnormal position in females, often associated with bladder-exstrophy spectrum.

## Epistasis

Interaction between genes where one gene masks or modifies expression of another. Examples: coat color in mice, ABO blood group modifications.

## Epistaxis

Bleeding from the nasal mucosa that may range from minor bleeding to a medical emergency. See Nosebleed.

## Epithelial Tissue

The tissue that covers external body surfaces, lines internal cavities and pathways, and forms glands.

## Epithelium

Sheets of closely packed cells covering body surfaces, lining cavities and ducts, or forming glands; epithelial injury, dysplasia, and carcinoma are important clinical concepts. body (skin, mucous membranes, serous membranes) and form glands.

## Epley Maneuver

A sequence of head and body movements used to move displaced otoconia from the posterior semicircular canal into the utricle. It is commonly used to treat posterior-canal benign paroxysmal positional vertigo.

## Epstein Pearls

Small, white keratin-filled cysts on the palate of a newborn that usually disappear without treatment.

## Epstein-Barr Virus

EBV (human herpesvirus 4): ubiquitous virus causing infectious mononucleosis, transmitted via saliva ('kissing disease').

## Erb's Palsy

Upper brachial plexus injury (C5-C6) causing weakness or paralysis of the shoulder and arm muscles. Presents with the characteristic waiter's tip position: arm adducted, elbow extended, forearm pronated, wrist flexed. Most commonly caused by shoulder dystocia during delivery. See also Brachial Plexus Injury.

---

### **Erdheim–Chester Disease**

A rare, non-Langerhans cell histiocytosis characterized by xanthogranulomatous infiltration of multiple organ systems, most commonly the long bones, retroperitoneum, and cardiovascular system. It causes symmetric osteosclerosis of the diaphyses and metaphyses of long bones, exophthalmos, and xanthelasma.

### **Erectile Disorder**

A sexual dysfunction characterized by persistent or recurrent difficulty achieving or maintaining an erection sufficient for sexual activity, or a marked decrease in erectile rigidity, lasting  $\geq 6$  months and causing marked distress. Prevalence: 10-20% of men under 60, rising to 40-70% over age 70.

### **Erectile Dysfunction**

The persistent inability to achieve or maintain an erection sufficient for satisfactory sexual performance. Affects up to 50% of men aged 40-70. Etiology: organic (vascular disease, diabetes, hypogonadism, neurological disorders, medications, Peyronie disease) and psychogenic (anxiety, depression, relationship issues).

### **Ergonomics**

The design of tasks, tools, and environments to fit human capabilities and reduce discomfort, error, and injury.

### **Ergotism**

A toxidrome caused by prolonged exposure to ergot alkaloids from the fungus *Claviceps purpurea* contaminating rye and other grains, or from ergot-derived medications.

### **Erosion**

A superficial loss of skin or mucosal epithelium that does not extend through the full thickness of the tissue, caused by friction, inflammation, infection, trauma, or chemical injury.

### **Erosion (Tooth)**

Chemical wear without bacterial involvement. Causes: acidic foods/drinks, gastric acid (GERD,

bulimia), environmental acids. Management: dietary modification, fluoride, restoration.

### **Synonyms:**

Tooth

### **Erosive Gastritis**

Inflammation of the stomach lining with superficial erosions but no full-thickness ulceration. Commonly caused by NSAIDs, alcohol, or critical illness. May present with epigastric pain or gastrointestinal bleeding. Diagnosis is by upper endoscopy showing erosions and erythema.

### **Eruption Cyst**

A fluid-filled swelling over a tooth that is about to erupt, often appearing blue or purple and usually resolving when the tooth emerges.

### **Eruptive Xanthomas**

Sudden eruption of numerous small, yellow-orange papules with an erythematous halo, typically on the buttocks, elbows, knees, and trunk, caused by severe hypertriglyceridemia. They represent lipid-laden macrophages in the dermis and are a marker of significantly elevated serum triglycerides, often exceeding 1000 mg/dL.

### **Erysipelas**

An acute superficial bacterial skin infection, usually caused by beta-haemolytic streptococci, producing a sharply demarcated, raised, tender, bright-red plaque with fever.

### **Erythema**

Redness of the skin or mucous membranes caused by increased blood flow to dilated superficial capillaries, often associated with inflammation, infection, or another underlying condition. It commonly blanches with pressure, unlike purpura.

### **Erythema Ab Igne**

A reticulated, hyperpigmented erythematous patch caused by chronic, repeated exposure to moderate heat or infrared radiation, such as from heating pads, laptops, or fireplaces. Histologically it shows increased melanin and dermal amyloid deposition.

---

### Erythema Gyrratum Repens

A distinctive, rapidly moving, concentric erythematous eruption with a wood-grain or serpiginous pattern. It is often associated with an underlying malignancy, especially lung cancer, and should prompt an appropriate evaluation while other causes are considered.

### Erythema Infectiosum

A common childhood exanthem caused by parvovirus B19, also called fifth disease. A mild prodrome is followed by a slapped-cheek facial eruption and a lacy rash on the trunk and limbs.

**Synonyms:**  
fifth disease.

### Erythema Marginatum

A migratory, non-pruritic, erythematous rash with a serpiginous or annular pattern that blanches centrally, occurring as a major Jones criterion in acute rheumatic fever. It typically appears on the trunk and proximal extremities and may come and go over days or weeks.

### Erythema Migrans

The expanding annular skin lesion of early Lyme disease, appearing days to weeks after infection with *Borrelia* transmitted by Ixodes ticks. It may be uniformly erythematous rather than a classic bull's-eye lesion and is usually diagnosed clinically.

### Erythema Multiforme

An acute, self-limited immune-mediated reaction, most commonly triggered by herpes simplex virus (90 percent of cases) and *Mycoplasma pneumoniae*. It presents as target lesions (iris lesions with three zones: central dusky, middle pale edematous ring, outer erythematous halo) on extremities.

### Erythema Nodosum

The most common form of panniculitis, characterized by painful, erythematous, tender nodules and plaques on the bilateral shins, representing an inflammatory reaction of the subcutaneous fat.

### Erythrasma

A superficial skin infection caused by *Corynebacterium minutissimum*, producing sharply demarcated reddish-brown patches in skin folds that fluoresce coral-red under Wood lamp.

### Erythrocyte

A mature red blood cell specialized to transport oxygen and carbon dioxide through the circulation. Its biconcave, anucleate form maximizes surface area and flexibility; haemoglobin provides the principal oxygen-binding capacity.

### Erythrocyte Sedimentation Rate

A non-specific inflammatory marker measuring the rate at which erythrocytes settle in 1 hour. Normals: males age/2, females (age+10)/2. Markedly elevated >100 mm/hr: suggests infection (endocarditis), autoimmune (giant cell arteritis, polymyalgia rheumatica, SLE, RA), malignancy (multiple myeloma), and chronic kidney disease.

### Erythrocytosis

An increased red-cell mass, usually reflected by elevated haemoglobin and haematocrit. It may be relative because of reduced plasma volume or absolute because of increased erythropoiesis, which can be primary from a marrow disorder or secondary to hypoxia, erythropoietin production, or other causes.

### Erythrodermic Psoriasis

A severe, life-threatening variant of psoriasis characterised by widespread erythema and scaling involving more than 90% of the body surface area, often with systemic symptoms including fever, chills, and hemodynamic instability.

### Erythromelalgia

Episodic burning pain, redness, and warmth of the extremities triggered by warmth or exercise and relieved by cooling, caused by arteriolar inflammation and platelet-mediated microvascular occlusion.

### Erythromycin Ophthalmic Prophylaxis

Application of ophthalmic erythromycin to a newborn soon after birth to reduce the risk of gonococcal

---

ophthalmia neonatorum. Use, timing, and alternatives depend on local policy, availability, and the mother's infection-risk assessment.

### **Erythroplakia**

A persistent red patch of mucosa, especially in the mouth, that may represent a premalignant or malignant lesion and requires clinical evaluation, often including biopsy.

### **Erythropoiesis**

The process by which haematopoietic stem and progenitor cells develop into mature red blood cells. It occurs primarily in adult bone marrow and is regulated chiefly by erythropoietin in response to tissue oxygenation; maturation requires iron, vitamin B12, folate, and appropriate marrow function.

### **Erythropoiesis-Stimulating Agents**

Medicines such as epoetin alfa and darbepoetin alfa that stimulate red-cell production, often used for selected forms of anemia in chronic kidney disease or cancer treatment. Use requires appropriate assessment of iron status, risks, and treatment targets.

### **Erythropoietin**

A glycoprotein hormone (EPO) that regulates erythropoiesis—the production of red blood cells in the bone marrow. Produced primarily by interstitial peritubular cells in the kidney ( 90%) and hepatocytes ( 10%) in response to tissue hypoxia.

### **ESBL**

Extended-spectrum beta-lactamase, enzymes that hydrolyse penicillins, cephalosporins, and monobactams. ESBLs are common in Enterobacteriaceae, particularly *Klebsiella pneumoniae* and *E. coli*. ESBL production confers resistance to most beta-lactam antibiotics except carbapenems.

### **ESBL-Producing Organisms**

Bacteria that produce extended-spectrum beta-lactamases (ESBLs), enzymes that hydrolyze penicillins, cephalosporins, and monobactams. ESBLs are common in Enterobacteriaceae, particularly *Klebsiella pneumoniae* and *E. coli*. ESBL produc-

tion confers resistance to most beta-lactam antibiotics except carbapenems.

### **Escherichia Coli**

A gram-negative bacterium that normally lives in the intestine but can cause urinary, intestinal, bloodstream, and other infections. Different strains produce different clinical syndromes, including traveler's diarrhea, bloody diarrhea, and hemolytic uremic syndrome.

### **Escherichia Coli O157:H7 Infection**

Infection with a Shiga-toxin-producing strain of *E. coli*, usually acquired from contaminated food, water, or contact with infected animals or people. It commonly causes severe abdominal cramps and bloody diarrhea and can lead to hemolytic uremic syndrome, especially in children. Medical advice is important; antibiotics and antidiarrheal medicines may be inappropriate in suspected cases.

### **ESKD**

End-stage kidney disease defined as GFR less than 15 or need for dialysis. Medicare eligibility at GFR less than 15 or on dialysis. Palliative care option for those not wanting renal replacement therapy. Comprehensive advance care planning essential.

### **Esophageal Achalasia**

Primary esophageal motility disorder characterized by failure of the lower esophageal sphincter to relax during swallowing and absent peristalsis in the distal esophagus, resulting from selective loss of inhibitory neurons in the myenteric plexus.

### **Esophageal Atresia**

A congenital anomaly where the esophagus ends in a blind pouch, often with a tracheoesophageal fistula connecting the distal esophagus to the trachea. Presents with drooling, inability to pass a nasogastric tube, and choking with feedings. The 3 Es association: Esophageal atresia, Esophageal anomalies, and Extremity anomalies.

### **Esophageal Cancer**

Malignant tumor of the esophagus. Squamous

---

cell carcinoma predominates in the upper and middle third (smoking, alcohol); adenocarcinoma of the lower third arises from Barrett esophagus. Presents with progressive dysphagia and weight loss; treatment depends on stage and includes surgery, chemoradiation, and systemic therapy.

**Synonyms:**

Cancer, Esophageal

### **Esophageal Candidiasis**

Fungal infection of the esophagus caused by *Candida* species common in immunocompromised patients including those with HIV, organ transplant recipients, and patients on inhaled corticosteroids. Presents with odynophagia and dysphagia. Diagnosed by endoscopy showing white adherent plaques and biopsy confirming fungal hyphae.

### **Esophageal Dilation**

Endoscopic passage of bougies or balloons to widen esophageal strictures. Used for symptomatic strictures from peptic disease, radiation, caustic injury, or eosinophilic esophagitis. Savary bougies are passed over a guidewire with progressive dilation. Through-the-scope balloons allow controlled radial dilation under direct visualization.

### **Esophageal Diverticulum**

Outpouching of the esophageal wall classified by location. Zenker diverticulum occurs in the hypopharynx and is the most common esophageal diverticulum. Mid-esophageal diverticula are traction diverticula caused by extrinsic inflammatory disease including tuberculosis and histoplasmosis.

### **Esophageal Foreign Body**

An object or food bolus lodged in the esophagus, causing difficulty swallowing, pain, drooling, or breathing symptoms. Batteries, sharp objects, complete obstruction, and perforation require urgent assessment and removal.

### **Esophageal Intramural Pseudodiverticulosis**

Condition characterized by multiple small outpouchings of the esophageal submucosal glands seen on

barium swallow as flask-shaped contrast collections oriented longitudinally along the esophagus. The pseudodiverticula are not true diverticula but rather dilated excretory ducts of submucosal glands.

### **Esophageal Leukoplakia**

White plaques on the esophageal mucosa representing squamous cell hyperplasia with hyperkeratosis. Similar to oral leukoplakia it is considered a potentially premalignant condition. Associated with chronic irritation from smoking, alcohol, and gastroesophageal reflux.

### **Esophageal Manometry**

Diagnostic test measuring esophageal motor function by recording intraluminal pressures during swallowing. A catheter with pressure sensors is passed through the nose into the stomach and withdrawn to record pressures at multiple levels. High-resolution manometry using closely spaced sensors provides a spatiotemporal color plot.

### **Esophageal Perforation**

Full-thickness rupture of the esophageal wall, most commonly Boerhaave syndrome from forceful vomiting occurring on the left posterolateral distal esophagus. Iatrogenic perforation during endoscopy is another common cause. Presents with chest pain, subcutaneous emphysema, and mediastinitis.

### **Esophageal PH Monitoring**

24-hour ambulatory monitoring of esophageal acid exposure. Catheter-based (transnasal pH probe placed 5 cm above LES) or wireless (Bravo capsule endoscopically attached to esophageal mucosa). Measures: % time pH <4 (total, upright, supine), DeMeester score (>14.7 abnormal), and symptom-reflux correlation.

### **Esophageal Spasm**

Esophageal motility disorder characterized by uncoordinated or excessive contractions impairing bolus transport. Diffuse esophageal spasm shows simultaneous contractions on manometry. Jackhammer esophagus features extremely high-amplitude peristaltic contractions.

---

## Esophageal Stent

Self-expanding metal stent for esophageal obstruction. Palliative for malignancy. Migration, tumor ingrowth common complications.

## Esophageal Stricture

Narrowing of the esophageal lumen from chronic gastroesophageal reflux disease, caustic ingestion, or eosinophilic esophagitis. Presents with progressive dysphagia initially to solids then liquids. Diagnosed by upper endoscopy and barium swallow.

## Esophageal Surgery

Operations on the esophagus or its junction with the stomach, including procedures for reflux, stricture, cancer, perforation, or motility disorders. The operation is selected according to the disease, anatomy, symptoms, and surgical risk.

## Esophageal Varices

Dilated, tortuous submucosal veins in the lower esophagus, most commonly caused by portal hypertension (cirrhosis—hepatic fibrosis with increased portal venous pressure >10 mmHg). They develop as portosystemic collaterals connecting the portal venous system (left gastric vein) to the systemic venous system (azygos vein).

### Synonyms:

Varices, Esophageal

## Esophageal Web

Thin mucosal fold protruding into the esophageal lumen most commonly in the postcricoid region or upper esophagus. Webs may be asymptomatic or cause dysphagia particularly to solids. Multiple webs can occur in association with iron deficiency anemia as part of Plummer-Vinson syndrome or Paterson-Kelly syndrome.

## Esophagitis

Esophagitis is inflammation or injury of the esophageal lining caused by reflux, infection, medication, allergy, radiation, or other mechanisms.

## Esophagogastric Bypass

Surgical creation of a conduit between the esophagus and stomach to restore gastrointestinal continuity, most commonly performed as part of esophagectomy or to palliate unresectable esophageal malignancy. Techniques include gastric pull-up with esophagogastrostomy and jejunal interposition.

## Esophagogastroduodenoscopy

Upper endoscopy: flexible endoscopic examination of the esophagus, stomach, and duodenum.

## Esophagus

A muscular tube that transports food and liquids from the pharynx (throat) to the stomach.

## Esophagus (Esophagus)

A muscular tube approximately 25 cm long connecting the pharynx to the stomach, extending from the cricopharyngeus muscle (at the level of C6) to the gastroesophageal junction (T11).

### Synonyms:

esophagus

## Esotropia

A type of strabismus in which one eye deviates inward (toward the nose). Congenital/infantile esotropia: large-angle, constant, onset before 6 months; requires early surgical correction. Accommodative esotropia: associated with hyperopia, onset age 2-3 years; treatment with corrective glasses improves alignment.

## ESR

The erythrocyte sedimentation rate, a nonspecific blood test measuring how quickly red cells settle in a tube; it can reflect inflammation but cannot identify its cause.

## Essential Hypertension

Persistent elevation of systemic arterial blood pressure without an identifiable single secondary cause. It results from interacting genetic, vascular, renal, metabolic, and environmental factors and increases the risk of stroke, coronary disease, heart failure,

---

kidney disease, and retinopathy.

### **Essential Medicines**

Drugs that satisfy the priority healthcare needs of a population, as defined by the WHO Model List of Essential Medicines. Selection criteria include efficacy, safety, comparative cost-effectiveness, and suitability for use in resource-limited settings.

### **Essential Mixed Cryoglobulinemia**

A disorder in which circulating immunoglobulins precipitate in cooler temperatures and deposit in small blood vessels, causing vasculitis. Symptoms may include purpura, joint pain, weakness, nerve problems, kidney disease, and cold sensitivity. Evaluation includes cryoglobulin testing and assessment for infections, autoimmune disease, and lymphoproliferative disorders.

### **Essential Nutrient**

Nutrient that cannot be synthesized by body, must be obtained from diet. Essential amino acids, fatty acids, vitamins, minerals.

### **Essential Thrombocythemia**

A chronic myeloproliferative neoplasm characterized by sustained platelet count elevation (greater than 450,000 per microliter) due to clonal megakaryocytic proliferation, with a risk of both thrombotic and hemorrhagic complications.

### **Essential Tremor**

The most common movement disorder, characterized by a bilateral, symmetrical, postural and kinetic tremor predominantly affecting the upper extremities, with a frequency of four to twelve hertz. It typically begins insidiously in the second or third decade of life and slowly progresses over years.

### **Estimated Due Date**

The expected date of delivery, calculated as 40 weeks (280 days) from the first day of the last menstrual period. Confirmed or adjusted by first-trimester ultrasound crown-rump length measurement (most accurate  $\pm 5$ -7 days). Second-trimester ultrasound is less accurate ( $\pm 10$ -14 days). Third-trimester is

least accurate ( $\pm 21$ -30 days).

### **Estimated Fetal Weight**

An ultrasound-derived estimate of fetal weight, calculated using formulas that combine BPD, HC, AC, and FL. The Hadlock formula (using HC, AC, FL) is the most commonly used. Accuracy:  $\pm 10$ -15%. Indications: assess fetal growth, determine size for gestational age, and plan delivery. EFW <10th percentile: SGA/IUGR.

### **Estimated Glomerular Filtration Rate**

An estimate of glomerular filtration derived from serum creatinine and, depending on the validated equation, age and sex. It is used to stage chronic kidney disease and guide medication dosing, but is less reliable when creatinine is changing rapidly or in unusual body composition.

### **Estrogen**

A group of steroid hormones involved in reproductive development, menstrual regulation, bone health, and other physiologic functions.

### **Ethmoid Bone**

Delicate bone between the orbits forming parts of the nasal septum and orbital/nasal roofs. Has the cribriform plate (olfactory nerve filaments), perpendicular plate (superior nasal septum), and labyrinths (nasal conchae, ethmoid air cells). The crista galli provides falx cerebri attachment.

### **Ethmoidal Air Cells**

Air-filled spaces in the ethmoid bone that form part of the paranasal sinus system.

### **Ethmoidal Sinus**

The ethmoidal sinuses, also known as ethmoidal air cells, are a collection of multiple small, thin-walled, air-containing cavities within the ethmoid bone between the orbits and above the nasal cavity, and they are divided into anterior and posterior groups based on their drainage sites.

#### **Synonyms:**

ethmoidal air cells, are a collection of multiple.

---

## Ethylene Glycol

A toxic alcohol found in some antifreeze and industrial products. Ingestion can cause severe metabolic acidosis, neurologic impairment, kidney injury, and death.

## Ethylene Glycol Poisoning

Toxicity from ingestion of ethylene glycol, often found in antifreeze. Its metabolites can cause severe metabolic acidosis, neurologic impairment, kidney injury, and calcium-oxalate deposition. It requires urgent toxicology assessment and antidotal or extracorporeal treatment when indicated.

## Etiology

The cause or set of causes of a disease or health condition, including genetic, infectious, environmental, immune, traumatic, and behavioural factors.

## Euphoria

An intense feeling of well-being, elation, or happiness, which can be a normal emotional response or a pathologic symptom.

## Eustachian Tube

Auditory/pharyngotympanic tube connecting the middle ear to the nasopharynx, approximately 36 mm long in adults. Cartilaginous medial two-thirds and bony lateral third. Functions: equalizing middle ear/atmospheric pressure, draining middle ear secretions, and protecting from nasopharyngeal pathogens.

## Eustachian-Tube Dysfunction

Failure of the auditory tube to equalize middle-ear pressure or clear secretions. It can cause aural fullness, popping, conductive hearing loss, and retracted tympanic membrane and is common with upper-respiratory infection, allergic rhinitis, or craniofacial disorders.

## Euthanasia

The deliberate act of ending a person's life to relieve suffering, typically performed by a physician. Active euthanasia involves directly administering a lethal substance (e.g., barbiturate overdose followed by

neuromuscular blockade) at the patient's explicit request.

## Euthanasia And Assisted Dying

Ethical and legal concepts regarding intentional termination of life to relieve intractable pain and suffering. Active Euthanasia: deliberate administration of a lethal agent (e.g., lethal dose of barbiturates) by a physician to terminate a patient's life upon their explicit request.

## Euthyroid Sick Syndrome

Abnormal thyroid function tests in patients with non-thyroidal illness (critical illness, starvation, major surgery) without intrinsic thyroid disease. Pattern: low T3 (most common), low T4, reverse T3 elevated, normal or low TSH. The severity correlates with illness severity.

## Event Monitor

A portable device that records heart rhythm intermittently or when activated during symptoms over an extended period.

## Event-Free Survival

The time from randomization or treatment start to a specified event such as disease progression, relapse, or death from any cause.

## Eversion

Turning the sole of the foot laterally, so that it faces away from the median plane.

## Evidence-Based Medicine

Integration of best research evidence with clinical expertise and patient values. Foundation for clinical guidelines.

## Evidence-Based Practice

Integration of best research evidence, clinical expertise, patient values. Rehabilitation guidelines based on systematic reviews.

## Evisceration

Protrusion of viscera through a dehiscence abdominal

---

wound, typically occurring 5-8 days postoperatively and constituting a surgical emergency. Risk factors include obesity, wound infection, and inadequate fascial closure. Management requires sterile coverage, broad-spectrum antibiotics, and emergent operative reclosure.

### **Evoked Potentials (VEP, BAER, SSEP)**

Electrophysiologic tests measuring the CNS electrical response to specific sensory stimuli. Visual evoked potentials (VEP): checkboard pattern reversal, measures P100 latency; delayed in optic neuritis/MS. Brainstem auditory evoked responses (BAER): click stimuli, waves I-V; delayed in acoustic neuroma, MS, brainstem stroke.

#### **Synonyms:**

VEP, BAER, SSEP

### **Ewart Sign**

Dullness to percussion, decreased breath sounds, and bronchial breathing at the left infrascapular region caused by compressive atelectasis from a large pericardial effusion. It is a physical examination finding of pericardial effusion. The effusion compresses the adjacent left lower lobe, creating a zone of consolidation.

### **Ewing Sarcoma**

A highly malignant small round blue cell tumor of bone and soft tissue, representing the second most common primary bone malignancy in children and adolescents (peak age 10-20 years), with a strong predilection for males and Caucasian populations.

### **Exacerbation Of COPD**

An acute worsening of respiratory symptoms beyond normal day-to-day variations, requiring change in medication. It is commonly triggered by respiratory infections (viral, bacterial), air pollution, or non-compliance. Treatment includes increased bronchodilators, systemic corticosteroids, antibiotics if indicated, and oxygen therapy.

### **Examination**

Systematic assessment of a patient's health status. Components: inspection, palpation, percussion, aus-

cultation (IPPA). General survey: appearance, posture, gait, vital signs. Focused examination based on chief complaint.

### **Exanthema**

A widespread skin eruption, usually macular or papular, associated with an acute systemic illness. Viral infections are common causes, but drug reactions, bacterial disease, immune disorders, and other systemic conditions may also produce exanthema; fever, mucosal involvement, blistering, or skin pain may indicate a severe process.

### **Exanthematous Pustulosis**

An acute drug-related skin eruption with numerous small, sterile, non-follicular pustules on reddened skin. Fever and neutrophilia may occur. It often improves after the causative medicine is withdrawn, but severe cases require medical assessment.

### **Exchange Transfusion**

Emergent procedure to rapidly lower severe hyperbilirubinemia by removing small volumes of the infant's blood and replacing with compatible donor blood. Used when phototherapy fails or bilirubin approaches toxic levels (greater than 25 mg/dL in term infants or above exchange threshold on Bhutani curve).

### **Excision**

The surgical removal of a piece of tissue, an organ, or a lesion. Excisional biopsy removes the entire lesion with a margin of normal tissue, used for definitive diagnosis and treatment of small tumors (suspected melanoma, breast lump, lymph node).

### **Excisional Biopsy**

Surgical removal of entire lesion. Diagnosis and treatment.

### **Excitation-Contraction Coupling**

The sequence of events linking an action potential to muscle contraction. In skeletal muscle: the action potential travels down the T-tubule, triggering calcium release from the sarcoplasmic reticulum via ryanodine receptors (calcium-induced calcium

---

release mediated by voltage-gated dihydropyridine receptors).

### **Excoriation Disorder**

Recurrent skin picking resulting in skin lesions. The individual has made repeated attempts to decrease or stop the skin picking. The skin picking causes clinically significant distress or impairment. It is not attributable to a medical condition or substance. Common sites include face, arms, and hands.

### **Excretion**

Removal of substance from body. Routes: renal (urine), hepatic (bile), pulmonary (gas), sweat, breast milk. Important for toxicity and drug clearance.

### **Exercise Intolerance**

Reduced ability to perform physical activity at the expected level because of exertional fatigue, breathlessness, chest discomfort, leg pain, or other symptoms. Causes include cardiac, pulmonary, vascular, metabolic, neuromuscular, haematological, and deconditioning states.

### **Exercise Stress Test**

A noninvasive cardiac diagnostic test that evaluates the cardiovascular response to graded physical exertion, primarily used to diagnose coronary artery disease, assess functional capacity, and guide prognosis.

### **Exercise-Induced Arrhythmias**

Catecholamine-sensitive ventricular tachycardia and right ventricular outflow tract VT can be triggered by exercise. HCM-related sudden death risk increases during vigorous exercise. Exercise-induced myocardial ischemia may trigger ventricular arrhythmias in CAD.

### **Exercise-Induced Asthma**

Bronchoconstriction occurring during or shortly after physical exertion, causing cough, wheezing, chest tightness, or shortness of breath. It is associated with airway hyperresponsiveness and may occur in people with or without persistent asthma.

### **Exercise-Induced Bronchoconstriction**

Airway narrowing during or after exercise, presenting with cough, wheeze, and dyspnea. It occurs in up to 90% of asthmatics and is triggered by heat and water loss from the airways. Prevention includes pre-exercise SABA.

### **Exhaled Nitric Oxide**

A non-invasive measure of airway eosinophilic inflammation. FeNO > 25 ppb in adults suggests eosinophilic airway inflammation and predicts response to inhaled corticosteroids. It is useful for diagnosing eosinophilic asthma, monitoring treatment response, and differentiating asthma from other causes of cough.

### **Exhibitionistic Disorder**

A paraphilic disorder involving recurrent, intense sexual arousal from exposing one's genitals to an unsuspecting person. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration  $\geq 6$  months. Onset typically before age 18. Treatment: CBT and SSRIs.

### **Exhumation**

The lawful disinterment and removal of a buried body or remains for re-examination, re-testing, or identification. Indications: new evidence, suspicion of poisoning or foul play, DNA testing, paternity/maternity testing, exhumation of a wrongly buried body, or repatriation.

### **Existential Distress**

Emotional suffering related to questions of meaning, identity, freedom, mortality, or purpose, often occurring during serious illness.

### **Exit Wound**

A skin defect produced where a projectile leaves the body, typically larger, irregular, and stellate, with everted edges, no abrasion ring or soot. Size depends on deformation, yaw, and fragmentation; small non-deformed bullets may produce shored exits, and an exit may be absent if the projectile is retained.

---

## Exocytosis

Process by which intracellular vesicles fuse with the plasma membrane, releasing their contents into the extracellular space and incorporating membrane proteins/lipids into the cell membrane. The SNARE complex (v-SNARE on vesicles and t-SNARE on target membrane) mediates vesicle docking and fusion.

## Exon

A segment of a DNA or RNA molecule containing information coding for a protein or peptide sequence.

## Exophthalmos

Abnormal protrusion of the eyeball (globe) from the orbit, most commonly caused by thyroid eye disease (Graves ophthalmopathy—an autoimmune condition associated with hyperthyroidism). The proptosis results from inflammation, edema, and fibrosis of the extraocular muscles and proliferation of orbital fat within the fixed bony orbit.

## Exotropia

A type of strabismus in which one eye deviates outward (toward the temple). Intermittent exotropia: most common type, often noticed when tired or daydreaming, can be controlled with fusion. Constant exotropia: requires treatment to prevent amblyopia. Congenital exotropia: rare, requires early evaluation.

## Expectorants

Medications that promote the clearance of mucus from the respiratory tract by increasing sputum volume and reducing its viscosity, facilitating productive cough. The most common expectorant is guaifenesin (glyceryl guaiacolate), which increases respiratory tract fluid secretion and reduces sputum adhesiveness.

## Expectoration

The act of coughing up and spitting out mucus, sputum, or phlegm from the respiratory tract; sputum production.

## Expiratory Grunting

A forced exhalation against a partially closed glottis, creating an audible sound. It is an end-expiratory maneuver that generates intrinsic PEEP, helping to maintain alveolar recruitment and improve oxygenation. It is commonly seen in children with respiratory distress.

## Explantation

Surgical removal of an implanted device or prosthesis. It may be required for infection, malfunction, intolerance, migration, fracture, tissue injury, or completion of a temporary therapy.

## Exploratory Laparotomy

Open surgical entry into the abdominal cavity to diagnose or treat suspected intra-abdominal pathology, such as hemorrhage, perforation, ischemia, or obstruction, when less invasive evaluation is inadequate or inappropriate.

## Exposure Route

Path by which substance enters body. Routes: inhalation, ingestion, dermal, injection, ocular. Determines absorption rate and toxicity.

## Expressivity

Degree to which a genotype is expressed in phenotype. Variable expressivity: same genotype produces different phenotypic severity in different individuals. Examples: neurofibromatosis type 1, Marfan syndrome.

## Extension

Movement that increases the angle between two bones or straightens a joint.

## Extensively Drug-Resistant TB

TB resistant to isoniazid, rifampin, fluoroquinolones, and at least one injectable agent. Very limited treatment options and poor outcomes.

## Extensor Digitorum

Posterior forearm muscle from lateral epicondyle via the common extensor tendon, dividing into 4 ten-

---

dons inserting on extensor expansions of digits 2-5. Innervated by posterior interosseous nerve (C7-C8). Extends MCP joints, assists PIP/DIP extension. Lateral epicondylitis (tennis elbow) is an overuse injury of its common origin.

### **External Auditory Canal**

Tube from the concha to the tympanic membrane, approximately 2.5 cm long in adults. Lateral third is cartilaginous; medial two-thirds are bony (temporal bone). Skin-lined with ceruminous glands (producing cerumen/earwax) and hair follicles. Cerumen has antimicrobial and insect-repellent properties.

### **External Beam Radiation Therapy**

Radiation delivered from a machine outside the body to a planned treatment area. Techniques include three-dimensional conformal therapy, intensity-modulated therapy, and stereotactic therapy.

### **External Cephalic Version**

A procedure that uses external pressure to turn a breech or transverse fetus into a head-down position. Timing, eligibility, monitoring, and contraindications depend on gestational age, placental and fetal factors, and the clinical setting.

### **External Fixation**

Stabilization of a fracture or limb using pins or wires attached to an external frame. It may provide temporary damage-control stabilization or definitive treatment, particularly when soft-tissue injury or contamination limits internal fixation.

### **External Iliac Artery**

Larger common iliac terminal branch, continuing as the femoral artery below the inguinal ligament. Gives off inferior epigastric and deep circumflex iliac arteries. Related to external iliac vein medially and ureter anteriorly. Commonly used for cardiac catheterization and endovascular access.

### **External Jugular Vein**

Formed by posterior auricular and retromandibular vein divisions, crossing the sternocleidomastoid superficially to drain into the subclavian vein. Visi-

ble through the skin; used for peripheral IV access when other sites are unavailable. Distended in right heart failure and SVC obstruction. A useful physical examination landmark.

### **External Oblique Muscle**

Most superficial flat abdominal muscle from outer lower eight ribs to linea alba, pubic tubercle, and iliac crest. Innervated by T7-T12. Contralateral trunk rotation and flexion; compresses abdomen. Forms the inguinal ligament from its free inferior border. Superficial inguinal ring is an opening in its aponeurosis.

### **External Resorption**

Loss of tooth structure from outside. Inflammatory, replacement, surface, cervical resorption. Treatment depends on type and extent.

### **Extracellular Fluid**

The fluid outside cells, including plasma and interstitial fluid. Sodium, chloride, and bicarbonate are its principal effective solutes; ECF volume and composition are regulated by the kidneys, cardiovascular system, and endocrine mechanisms.

### **Extracellular Matrix**

A complex network of proteins and carbohydrates secreted by cells that provides structural and chemical support to surrounding cells.

### **Extracellular Pathogens**

Microorganisms that survive and replicate outside host cells. Extracellular bacteria include *Streptococcus*, *Staphylococcus*, and *Escherichia coli*. These pathogens are typically killed by antibodies and complement. They produce toxins and enzymes to damage host tissues.

### **Extracorporeal Membrane Oxygenation**

A temporary mechanical circulatory support system that provides cardiac and/or respiratory support. VA-ECMO (veno-arterial) provides both cardiac and respiratory support; VV-ECMO (veno-venous) provides respiratory support only.

---

### **Extracorporeal Shock Wave Lithotripsy**

Non-invasive treatment method for urinary calculi that uses focused acoustic shock waves generated outside the body to fragment kidney or ureteral stones into smaller gravel-like pieces (dust/sand) that pass spontaneously in urine.

### **Extranodal Natural Killer T-Cell Lymphoma**

An aggressive lymphoma arising from natural killer cells, most commonly involving the nasal cavity and upper aerodigestive tract. It is strongly associated with Epstein-Barr virus infection.

### **Extraocular Muscle Function Testing**

Assessment of the six extraocular muscles innervated by CN III (medial rectus: adduction; superior rectus: elevation; inferior rectus: depression; inferior oblique: extorsion), CN IV (superior oblique: intorsion and depression), and CN VI (lateral rectus: abduction).

### **Extraocular Muscles**

Six muscles controlling eye movement: four rectus (superior, inferior, medial, lateral) and two oblique (superior, inferior).

### **Extrapulmonary Manifestation Of Tuberculosis**

Tuberculosis occurring outside the lungs, such as in lymph nodes, bone, kidneys, meninges, or the abdomen.

### **Extrapyramidal Symptoms**

Drug-induced movement disorders caused by D2 receptor blockade in the nigrostriatal pathway.

### **Extrauterine Pregnancy**

A pregnancy in which the fertilized ovum implants outside the uterine cavity, an alternative term for ectopic pregnancy. By far the most common site is the fallopian tube (ampulla 70%, isthmus 12%, fimbria 11%, cornual/interstitial 2–4%).

### **Extravasation**

Leakage of urine outside urinary tract. Causes: trauma, surgery, obstruction. Pseudovesical extravasation (rectus sheath), extraperitoneal, intraperitoneal. Treatment: catheter drainage, surgical repair.

### **Extubate**

Removal of an endotracheal tube after restoration of adequate spontaneous breathing and airway protection.

### **Extubation Criteria**

Clinical findings used to determine whether a patient can safely have an endotracheal tube removed. They include adequate spontaneous breathing, oxygenation, airway protection, cough, neuromuscular recovery, and hemodynamic stability.

### **Exudate**

Protein-rich fluid that escapes from inflamed or injured blood vessels into tissues or body cavities; unlike a transudate, it usually reflects increased vascular permeability.

### **Exudative Pleural Effusion**

From local pleural disease. Causes include pneumonia, malignancy, TB, and PE. Elevated protein, LDH, and cell count.

### **Eye**

The organ of vision, a spherical structure (approximately 24 mm diameter) in the bony orbit. Three layers: fibrous (sclera, cornea), vascular/uveal (choroid, ciliary body, iris), neural (retina). Anterior segment: cornea, anterior chamber (aqueous humor), iris/pupil, lens.

### **Eye Disorders**

The sensory ability to perceive light and interpret visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. See Vision.

---

## Eye Floaters

Spots, threads, or cobweb-like shapes that move across the visual field, usually caused by opacities in the vitreous. Sudden new floaters, flashes, or a curtain-like shadow require urgent evaluation for retinal tear or detachment. See also Floaters.

## Eye Health

The maintenance of optimal vision and prevention of ocular disease through regular eye examinations, protective measures, and timely treatment. Common conditions affecting eye health include refractive errors, cataracts, glaucoma, diabetic retinopathy, and age-related macular degeneration.

## Eye Irritation

Chemical injury to eye. Immediate irrigation with water or saline for 15-20 minutes. Alkali burns more dangerous than acid. Ophthalmology consultation.

## Eyelid Swelling

Swelling of one or both eyelids caused by allergy, infection, inflammation, trauma, a blocked gland, or angioedema. Pain, fever, impaired eye movement, proptosis, or vision change may indicate an urgent orbital or systemic condition.

## Tearing

Excessive production or inadequate drainage of tears, commonly caused by irritation, allergy, dry-eye reflex tearing, infection, eyelid malposition, or lacrimal-duct obstruction.

## Eye Pain

Pain in or around the eye caused by surface irritation, infection, trauma, inflammation, glaucoma, or orbital disease. Severe pain with vision loss, photophobia, trauma, or nausea requires urgent assessment.

## Eye Redness

Red discoloration of the eye caused by dilation or inflammation of conjunctival or deeper ocular blood vessels. Causes range from irritation and conjunctivitis to keratitis, uveitis, and acute glaucoma.

## Eye Trauma

Ocular injuries ranging from corneal abrasions to globe rupture. Chemical burns: irrigate immediately with saline or water for 30 minutes. Penetrating injuries: shield eye, no pressure, emergent ophthalmology consultation. Foreign bodies: remove superficial items; embedded objects require surgical removal.

## Ectopia Cordis

A rare congenital defect in which the heart is located partly or completely outside the chest.

## Eisenmenger Complex

Severe pulmonary hypertension caused by a long-standing congenital heart defect with abnormal blood flow between the heart chambers or vessels.

## Electroretinography

A clinical condition or finding involving electroretinography. Its defining features, causes, evaluation, and management depend on the clinical context.

## Elliptocytosis

A condition in which many red blood cells have an oval or elliptical shape.

## Encephalomalacia

Softening or loss of brain tissue, usually after an injury, stroke, or infection.

## Encephalomyelitis

Inflammation of the brain and spinal cord.

## Endocardial Fibroelastosis

Abnormal thickening of the inner lining of the heart caused by excess fibrous and elastic tissue, usually in infants or children.

## Endometrial Biopsy

Removal of a small sample of uterine lining for microscopic examination.

---

**Endomyocardial Fibrosis**

Scarring and thickening of the inner heart lining and underlying heart muscle that can impair filling.

**Enophthalmos**

Abnormal backward displacement of an eyeball within the eye socket.

**Enterovesical Fistula**

An abnormal connection between the intestine and urinary bladder.

**Eosinophilic Granuloma**

A localized form of Langerhans cell histiocytosis that commonly affects bone or skin.

**Epiretinal Membrane**

A thin layer of scar-like tissue that forms on the surface of the retina and may distort vision.

**Episodic Ataxia**

An inherited disorder causing recurrent brief attacks of impaired coordination and balance.

**Erythroblastosis Fetalis**

Fetal or newborn red-cell destruction caused by maternal antibodies against fetal blood-cell antigens.

**Esophagectomy**

Surgical removal of part or all of the esophagus.

**Esophagram**

An imaging study of the esophagus performed after the patient swallows a contrast material.

**Euthyroid Goiter**

An enlarged thyroid gland with thyroid-hormone levels that remain within the normal range.

**Evans Syndrome**

An autoimmune disorder in which antibodies destroy red blood cells and platelets, separately or together.

**Evoked Potential**

An electrical response recorded from the nervous system after a specific sensory stimulus.

**Excessive Tearing**

Abnormally increased production or inadequate drainage of tears, causing watery eyes.

**Exfoliative Dermatitis**

Widespread redness, scaling, and shedding of the skin.

**Exsanguination**

Life-threatening loss of blood from severe bleeding.

**Extrahepatic Cholestasis**

Impaired bile flow caused by blockage or disease outside the liver.

**Extrapyramidal Disorder**

A movement disorder caused by dysfunction of brain circuits that regulate posture and involuntary movement.

**Effusion**

Abnormal accumulation of fluid in a body space, such as a joint, pleural cavity, or pericardial sac.

**Electrophysiologic Testing**

A procedure that records or provokes electrical activity in the heart to investigate suspected arrhythmias.

**Embolic Stroke**

An ischemic stroke caused by a clot or other material that travels from elsewhere and blocks a brain artery.

**Enteric Nervous System**

The network of nerve cells in the gastrointestinal tract that regulates movement, secretion, and local blood flow.

---

## **Epidural Space**

The space outside the dura mater around the spinal cord, where local anesthetic may be injected.

## **External Otitis**

Inflammation or infection of the outer ear canal, commonly called swimmer's ear.

### **Synonyms:**

swimmer's ear.

## **E. Coli Infection**

An infection caused by *Escherichia coli* bacteria, which may cause diarrhea, urinary infection, or more serious illness.

## **Earwax Blockage**

A buildup of earwax that blocks the ear canal and may cause hearing loss, pain, or ringing.

## **Egg Allergy**

An immune reaction to proteins in eggs that may cause skin, digestive, or breathing symptoms.

## **Exercise Headaches**

Headaches triggered by strenuous physical activity.

## **Eye Melanoma**

A cancer that develops in the pigment-producing cells of the eye.

### **Synonyms:**

Cancer, Eye Melanoma

## **Eyestrain**

Eye discomfort, fatigue, or blurred vision caused by prolonged visual effort.

## **Electrocautery**

Use of heat produced by an electrical current to cut tissue or control bleeding.

## **Ejaculatory Duct**

A duct formed by the union of the vas deferens and the duct of a seminal vesicle. It passes through the prostate and opens into the urethra.

## **Electronystagmography**

A clinical condition or finding involving electronystagmography. Its defining features, causes, evaluation, and management depend on the clinical context.

## **Electrophoresis**

A laboratory method that separates charged molecules according to their movement through a medium in an electric field.

## **Elevator**

A surgical instrument used to lift, separate, or strip tissue, bone, or a tooth from surrounding structures.

## **Emmetropia**

The normal refractive state of the eye, in which parallel light focuses on the retina without accommodation.

## **Endocrine System**

The network of glands and hormone-producing tissues that regulate body functions by releasing hormones into the blood.

## **Endocrine Tissues**

Cells or groups of cells that produce and release hormones into the blood or nearby tissues.

## **Endometrial Ablation**

A procedure that destroys the uterine lining to reduce heavy menstrual bleeding. It is not a method of contraception and is not intended for people planning pregnancy.

## **Enucleation**

Surgical removal of the eyeball while leaving the eyelid, eye muscles, and most orbital tissues in place.

## **Epicondyle**

A bony projection near a condyle that provides attachment for muscles and ligaments.

## **Epigastrium**

The upper middle region of the abdomen, located

---

between the right and left hypochondriac regions.

### **Equilibrium Receptors**

Sensory receptors in the vestibular system that detect head position and movement and help maintain balance.

### **Erosive Esophagitis**

Inflammation of the esophagus with visible breaks or erosions in its lining, most commonly caused by gastroesophageal reflux.

### **Escharotomy**

An incision through rigid eschar from a deep circumferential burn to relieve constriction and restore chest expansion or blood flow.

### **Expiration**

The movement of air out of the lungs, usually caused by relaxation of the diaphragm and elastic recoil of the lungs.

### **Excoriation**

A superficial loss of skin caused by scratching, rubbing, or another form of mechanical trauma.

### **Extubation**

Removal of an endotracheal tube after the patient can maintain an open airway and adequate spontaneous breathing.

### **Ependyma**

A specialized epithelial lining of the brain ventricles and spinal-cord central canal that is involved in cerebrospinal-fluid circulation and, in some regions, production.

### **Erythroderma**

Generalized redness and scaling involving most of the skin surface, caused by psoriasis, eczema, drug reactions, lymphoma, or other disease and potentially causing fluid and temperature loss.

### **Eschar**

A firm, usually black or brown layer of dead tissue

over a wound, burn, pressure injury, infection, or vascular lesion that may conceal deeper damage.

### **Eales Disease**

An uncommon retinal vasculopathy characterized by inflammation and obliteration of peripheral retinal veins, often followed by retinal ischemia, neovascularization, and recurrent vitreous hemorrhage.

### **Ecthyma**

A clinical condition or finding involving ecthyma. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Efferent Neuron**

A nerve cell that carries motor or autonomic signals away from the central nervous system to muscles, glands, or other target tissues.

### **Erdheim-Chester Disease**

A rare non-Langerhans-cell histiocytosis caused by clonal histiocyte proliferation, commonly producing symmetrical long-bone pain or sclerosis and possible cardiovascular, renal, neurologic, or retroperitoneal involvement.

### **Edentulousness**

Complete or partial absence of natural teeth. It may result from dental disease, trauma, developmental abnormalities, or tooth extraction and can impair chewing, speech, and oral function.

### **Eustachian Tube Dysfunction**

Failure of the eustachian tube to open or close normally, causing ear pressure, muffled hearing, pain, or recurrent middle-ear fluid. It may follow an upper-respiratory infection, allergy, or rapid pressure changes.

### **Exocrine Pancreatic Insufficiency**

Inadequate secretion of pancreatic digestive enzymes, causing maldigestion and malabsorption, often with weight loss, bloating, and greasy or difficult-to-flush stools. Common causes include chronic pancreatitis, cystic fibrosis, and pancreatic

---

surgery.

### **Ectasia**

Abnormal widening or dilation of a tubular structure, vessel, duct, or organ. The term is used in conditions such as vascular ectasia and duct ectasia.

### **Emaciation**

Extreme wasting and loss of body mass, especially muscle and fat, caused by severe illness, malnutrition, or other chronic conditions.

### **Embolus**

A detached intravascular mass, such as a blood clot, fat droplet, air bubble, or other material, that travels through the circulation and may obstruct a vessel.

### **Embryology**

The study of development from fertilization through the embryonic and fetal stages, including the formation of organs and body structures.

### **Emollient**

A substance applied to the skin to soften and moisturize it by reducing water loss and improving the skin barrier. Emollients are commonly used in eczema and dry skin.

### **Endarterectomy**

Surgical removal of atherosclerotic plaque and diseased inner lining from an artery to improve blood flow, commonly performed in the carotid arteries.

### **Enteropathy**

A disease or disorder affecting the intestine. Causes include infection, inflammation, gluten sensitivity, impaired blood flow, toxins, and inherited conditions.

### **Exhalation**

The process of breathing air out of the lungs. It is normally passive at rest but becomes active during exercise or respiratory distress.

### **Extrapyramidal System**

Neural pathways and brain structures, including the basal ganglia, that help regulate movement, muscle tone, posture, and automatic motor activity.

### **Extremity**

A limb of the body, including the upper extremity (shoulder, arm, forearm, wrist, and hand) or lower extremity (hip, thigh, leg, ankle, and foot).

### **Extrinsic Allergic Alveolitis (Hypersensitivity Pneumonitis)**

An immune-mediated inflammation of the lung caused by repeated inhalation of sensitizing organic particles, such as moulds, animal proteins, or contaminated agricultural dust.

#### **Synonyms:**

Hypersensitivity Pneumonitis

### **Eyeball (Globe)**

The roughly spherical organ of vision, consisting of the cornea, sclera, uveal tract, lens, retina, and internal chambers and fluids.

#### **Synonyms:**

Globe

### **Eyebrow**

A strip of hair above the orbit that helps protect the eye from sweat, moisture, and particles.

### **Eye Drops**

Liquid preparations instilled into the conjunctival sac for diagnosis, lubrication, or treatment of eye conditions. They should be used according to clinical or product instructions.

### **Eyelashes**

Short, curved hairs arising from the eyelid margins that help protect the ocular surface from foreign particles and excessive light.

### **Eyelids**

Mobile folds of skin and muscle that protect the eyes, spread the tear film, and help regulate the amount of light entering the eye.

---

## Eyesight (Vision)

The ability to perceive and interpret light, form, color, movement, and detail through the eyes and visual pathways of the nervous system.

### Synonyms:

Vision

## Ear Cartilage

Ear cartilage denotes ear cartilage, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Ear Disease

A disorder of the outer, middle, or inner ear causing pain, drainage, hearing loss, tinnitus, dizziness, infection, or balance disturbance.

## Ear Neoplasm

A neoplastic process affecting ear neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Early Diagnosis

Early diagnosis refers to early diagnosis, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Early Endosome

Early endosome refers to early endosome, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eat

To consume food; nutritional needs and safe intake depend on age, health conditions, swallowing ability, and dietary requirements.

## Ebolavirus

Ebolavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## Eccentrocyte Count

Eccentrocyte count is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

## Eccrine Porocarcinoma

A rare malignant skin adnexal tumor arising from eccrine sweat-gland ducts; it usually presents as a slowly enlarging nodule or plaque and may recur or metastasize, so biopsy and complete excision are important.

## Eccrine Poroma

A usually benign tumor arising from the eccrine sweat-gland duct, commonly presenting as a flesh-colored or reddish nodule on the hands or feet.

## Ecdysone

A steroid hormone in insects and other arthropods that triggers moulting and metamorphosis; it is relevant mainly to entomology and experimental biology, not routine human therapy.

## Echinacea

Echinacea is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Echinococcus Multilocularis

Echinococcus multilocularis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Echinococcus Vogeli

Echinococcus vogeli is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Echinodermata

Echinodermata is a medical term whose precise

---

meaning depends on the clinical context, associated findings, and source definition.

### **Echinomycin**

A medicine or chemical compound called echinomycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Echolocation**

Echolocation is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Echothiophate Iodide**

An irreversible cholinesterase inhibitor formerly used topically to reduce intraocular pressure in glaucoma or produce prolonged miosis; systemic cholinergic toxicity is a major risk.

### **Econazole**

A topical imidazole antifungal that inhibits fungal ergosterol synthesis and treats dermatophyte or Candida skin infections; local irritation or contact dermatitis may occur.

### **Ecotoxicology**

An infectious process or toxic exposure involving ecotoxicology; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Ectomesenchymoma**

Ectomesenchymoma is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ectopic Tissue**

Ectopic tissue denotes ectopic tissue, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Ectoplasm**

Ectoplasm is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ectromelia**

Ectromelia is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eculizumab**

A medicine or chemical compound called eculizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Edatrexate**

An investigational antifolate related to methotrexate, studied as an anticancer drug by disrupting folate-dependent DNA synthesis.

### **Edema Trunk**

Abnormal accumulation of fluid in the soft tissues of the chest or abdomen, producing swelling from heart, kidney, liver, lymphatic, venous, inflammatory, or medication-related causes.

### **Edetic Acid**

EDTA, a compound that binds metal ions; it is used as a laboratory anticoagulant, preservative, chelating agent, and component of selected medical treatments.

### **Edodekin Alfa**

A clinical condition or finding involving edodekin alfa. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Edotecarin**

A clinical condition or finding involving edotecarin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Edrecolomab**

A medicine or chemical compound called edrecolomab. Its uses, effects, interactions, and risks

---

depend on the specific substance and clinical indication.

### **Edwardsiella**

Edwardsiella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Edwardsiella Hoshinae**

A biomedical term referring to edwardsiella hoshinae; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Edwardsiella Ictaluri**

A biomedical term referring to edwardsiella ictaluri; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Edwardsiella Tarda**

A biomedical term referring to edwardsiella tarda; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Efalizumab**

A medicine or chemical compound called efalizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Efaproxiral**

A clinical condition or finding involving efaproxiral. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Efavirenz**

A medicine or chemical compound called efavirenz. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Effectiveness**

The degree to which an intervention produces its intended outcome in routine practice, as distinct

from efficacy under ideal study conditions.

### **Efferent Nerve**

Efferent nerve is a nerve pathway or nerve-related structure that carries signals between the nervous system and its target; symptoms depend on the site of involvement.

### **Efferent Pathway**

Efferent pathway is a nerve pathway or nerve-related structure that carries signals between the nervous system and its target; symptoms depend on the site of involvement.

### **Eflornithine**

A medicine that inhibits ornithine decarboxylase; topical use reduces unwanted facial hair, while intravenous use has been used against selected trypanosome infections.

### **Egg Shell**

Egg shell is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eggerthella**

Eggerthella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Eggerthella Lenta**

A biomedical term referring to eggerthella lenta; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Ehrlichia**

A biomedical term referring to ehrlichia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Eicosadienoic Acid**

A 20-carbon polyunsaturated fatty acid with two double bonds, present in membrane lipids and stud-

---

ied as a precursor in inflammatory and metabolic pathways.

### **Eicosanoid**

Eicosanoid is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eicosanoid Degradation**

Eicosanoid degradation is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eicosanoid Metabolism**

Eicosanoid metabolism is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eicosanoid Receptor**

A cell-surface or nuclear receptor that responds to prostaglandins, leukotrienes, thromboxanes, or related lipid mediators and regulates inflammation, vascular tone, or smooth muscle.

### **Eicosapentaenoic Acid**

The omega-3 fatty acid EPA, found in oily fish and supplements, incorporated into membranes and used to produce signaling mediators with generally less inflammatory activity than arachidonic-acid products.

### **Eicosatetraenoic Acid**

A 20-carbon fatty acid with four double bonds; the best-known form is arachidonic acid, a membrane precursor of prostaglandins, leukotrienes, and other eicosanoids.

### **Eicosatrienoic Acid**

A 20-carbon fatty acid with three double bonds that can serve as a membrane lipid or precursor for biologically active lipid mediators.

### **Eicosenoic Acid**

A 20-carbon monounsaturated fatty acid found in some plant and marine oils and incorporated into

cellular and dietary lipids.

### **Eikenella**

Eikenella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Eikenella Corrodens**

A biomedical term referring to eikenella corrodens; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Elastic Fiber**

Elastic fiber is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Elastic Tissue**

Elastic tissue denotes elastic tissue, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Elasticity**

Elasticity is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Elastics**

Elastics is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Elastofibroma**

Elastofibroma is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Elastomer**

Elastomer is a medical term whose precise meaning depends on the clinical context, associated findings,

---

and source definition.

### **Elastosis**

Elastosis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Elbow**

Elbow refers to elbow, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Elbow Extensor**

Elbow extensor refers to elbow extensor, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Elbow Flexors**

Elbow flexors refers to elbow flexors, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Elective Abortion**

A planned termination of pregnancy, performed with medication or a procedure according to gestational age, patient preference, and local clinical requirements.

### **Electric Impedance**

Electric impedance is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Electric Organ**

Electric organ denotes electric organ, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Electrical Alternans**

Beat-to-beat variation in ECG QRS amplitude or axis, classically caused by a swinging heart in a large pericardial effusion and potentially indicating tamponade.

### **Electrical Conductance**

Electrical conductance refers to electrical conductance, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Electrical Synapse**

Electrical synapse is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Element**

Element is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Elesclomol Sodium**

A clinical condition or finding involving elesclomol sodium. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eligible**

Eligible is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Elinafide**

A clinical condition or finding involving elinafide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Elixir**

Elixir is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Elizabethkingia**

A biomedical term referring to elizabethkingia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

---

### **Elliptocyte Count**

Elliptocyte count is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Elongin**

Elongin is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Elotuzumab**

A medicine or chemical compound called elotuzumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Eltrombopag**

A clinical condition or finding involving eltrombopag. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eltrombopag Olamine**

A clinical condition or finding involving eltrombopag olamine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Embryo Neoplasm**

A neoplastic process affecting embryo neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Embryogenesis**

The sequence of fertilization, cell division, differentiation, migration, and organ formation through which an embryo develops.

### **Embryonal Carcinoma**

A neoplastic process affecting embryonal carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Embryonal Rhabdomyosarcoma**

A neoplastic process affecting embryonal rhabdomyosarcoma; diagnosis establishes the tumor

type, extent, biologic behavior, and appropriate management.

### **Embryonic**

Embryonic is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

### **Embryonic Cell**

A cell of an early embryo capable of division and differentiation into specialized tissues; embryonic stem cells have broad developmental potential.

### **Embryonic Induction**

Embryonic induction refers to embryonic induction, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Embryonic Mosaic**

Embryonic mosaic is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

### **Embryonic Stage**

Embryonic stage is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

### **Emergency Care**

Immediate assessment and treatment for a potentially serious or time-sensitive illness or injury.

### **Emitefur**

A clinical condition or finding involving emitefur. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Emodin**

Emodin is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

---

## Emotion

Emotion is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Emotional Adjustment

Emotional adjustment is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Emotional Dependency

Emotional dependency is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Empathy

Empathy is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Empedobacter

Empedobacter is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Empedobacter Brevis

Empedobacter brevis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Empedobacter Falsenii

Empedobacter falsenii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Employee

Employee is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Employment Status

Employment status is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Emtricitabine

A clinical condition or finding involving emtricitabine. Its defining features, causes, evaluation, and management depend on the clinical context.

## Emulsion

Emulsion is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

## Enalapril

A medicine or chemical compound called enalapril. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

## Enalaprilat

A medicine or chemical compound called enalaprilat. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

## Enamel Organ

Enamel organ denotes enamel organ, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

## Enanthema

Enanthema is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

## Encephalitis Virus

Encephalitis virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

---

### **Encephalitozoon**

A biomedical term referring to encephalitozoon; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Enchondroma**

Enchondroma is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Enchondromatosis**

Enchondromatosis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Enclomiphene**

A clinical condition or finding involving enclomiphene. Its defining features, causes, evaluation, and management depend on the clinical context.

### **End Point**

End point is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endarteritis**

Endarteritis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endemic Diseases**

Diseases that persist at a predictable baseline in a defined population or region, including infections shaped by local ecology, immunity, behavior, and healthcare access.

### **Endemic Goiter**

Enlargement of the thyroid occurring commonly in a population, classically from insufficient iodine intake and sometimes associated with thyroid dysfunction.

### **Endocannabinoid**

Endocannabinoid is a medical term whose precise

meaning depends on the clinical context, associated findings, and source definition.

### **Endocervical**

Endocervical is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endocrine**

Endocrine is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endocrine Disease**

A disorder of hormone-producing glands or hormone action, causing abnormal growth, metabolism, reproduction, stress responses, or fluid and electrolyte regulation.

### **Endocrine Finding**

Endocrine finding is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endocrine Function**

Endocrine function is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endocrine Gland**

Endocrine gland denotes endocrine gland, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Endocrine Neoplasm**

A neoplastic process affecting endocrine neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

---

### **Endocrinologists**

Endocrinologists is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endodontics**

Endodontics is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endodontist**

Endodontist is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endogenous Opiates**

Endogenous opiates is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endogenous Retrovirus**

Endogenous retrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Endolimax**

Endolimax is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Endolimax Nana**

Endolimax nana is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Endolymph**

Endolymph is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endometrial**

Endometrial is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Endometrial Adenocarcinoma**

A neoplastic process affecting endometrial adenocarcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Endometrial Carcinoma**

A neoplastic process affecting endometrial carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Endometrial Disorder**

A disorder of the uterine lining, including abnormal growth, inflammation, polyps, endometriosis-related change, hyperplasia, or cancer, often causing abnormal bleeding or infertility.

### **Endometrial Neoplasm**

A neoplastic process affecting endometrial neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Endometrial Polyp**

Endometrial polyp is an anatomical, embryological, cellular, or physiological term; its clinical meaning depends on the structure, function, and surrounding findings.

### **Endopeptidase**

Endopeptidase is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endoribonuclease**

Endoribonuclease is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endosome**

Endosome is a tissue, cell, or body structure whose

---

location and function help explain its role in normal physiology and disease.

### **Endothelial Cell**

A cell lining blood and lymphatic vessels that regulates permeability, clotting, inflammation, vascular tone, and new-vessel formation.

### **Endothelin**

Endothelin concerns endothelin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Endothelium**

Endothelium is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Endotoxin**

Endotoxin concerns endotoxin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Energy Increased**

Energy increased is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Energy Intake**

Energy intake is a nutrition or dietary term; appropriate use depends on age, health status, allergies, intake, and medical treatment.

### **Energy Metabolism**

Energy metabolism is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Enflurane**

A clinical condition or finding involving enflurane. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Enfuvirtide**

A medicine or chemical compound called enfuvirtide.

Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Enhanced Pause**

Enhanced pause is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eniluracil**

A clinical condition or finding involving eniluracil. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Enoxaparin**

A medicine or chemical compound called enoxaparin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Enrollment**

Enrollment is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Entamoeba**

Entamoeba is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

### **Entamoeba Coli**

Entamoeba coli is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

### **Entamoeba Hartmanni**

Entamoeba hartmanni is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

### **Entamoeba Polecki**

Entamoeba polecki is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or

---

tissue involvement.

### **Enteric Bacteria**

Enteric bacteria is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter**

Enterobacter is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter Aerogenes**

Enterobacter aerogenes is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter Asburiae**

Enterobacter asburiae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter Cancerogenus**

Enterobacter cancerogenus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter Cloacae**

Enterobacter cloacae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacter Hormaechei**

Enterobacter hormaechei is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobacteriaceae**

Enterobacteriaceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterobius**

Enterobius is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Enterococcaceae**

Enterococcaceae is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Enterococcus**

Enterococcus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Avium**

Enterococcus avium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Dispar**

Enterococcus dispar is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

---

### **Enterococcus Durans**

*Enterococcus durans* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Faecalis**

*Enterococcus faecalis* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Faecium**

*Enterococcus faecium* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Gallinarum**

*Enterococcus gallinarum* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Hirae**

*Enterococcus hirae* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Malodoratus**

*Enterococcus malodoratus* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Mundtii**

*Enterococcus mundtii* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on

pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Pseudoavium**

*Enterococcus pseudoavium* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Raffinosus**

*Enterococcus raffinosus* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterococcus Thailandicus**

*Enterococcus thailandicus* is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Enterocyte**

Enterocyte is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Enterocytozoon**

Enterocytozoon is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Enteroendocrine Cell**

A specialized intestinal epithelial cell that senses nutrients and releases hormones such as GLP-1, GIP, secretin, or CCK to regulate digestion, appetite, and glucose metabolism.

### **Enteromonas Hominis**

*Enteromonas hominis* is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection

---

or colonization.

### **Enterostomy Procedure**

A medical procedure, treatment, device, or care topic related to enterostomy procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Enterotoxin**

A clinical condition or finding involving enterotoxin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Enterovirus**

Enterovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Entinostat**

Entinostat is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Entorhinal Cortex**

Entorhinal cortex is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Enucleation Procedure**

A medical procedure, treatment, device, or care topic related to enucleation procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Environment**

Environment is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Environmental Exposure**

Environmental exposure is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, dura-

tion, and exposure circumstances.

### **Environmental Illness**

Illness caused or worsened by environmental exposures; evaluation requires attention to timing, dose, setting, and alternative explanations.

### **Enzyme Activity**

The rate at which an enzyme catalyzes a reaction under defined conditions, influenced by substrate, temperature, pH, inhibitors, cofactors, and enzyme concentration.

### **Enzyme Deficiency**

Reduced or absent activity of an enzyme, often inherited or acquired, causing accumulation of substrates, lack of products, and characteristic metabolic or cellular disease.

### **Enzyme Inhibitor**

A substance that reduces enzyme activity by binding the active site or another regulatory site, thereby altering a biochemical pathway or therapeutic target.

### **Enzyme Precursors**

Inactive or less-active precursor proteins, also called zymogens, that are converted by cleavage or other modification into functional enzymes.

### **Enzyme Therapy**

A medical procedure, treatment, device, or care topic related to enzyme therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Eosine Yellowish**

Eosine yellowish is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ependymal Cell**

A glial cell lining brain ventricles and the spinal central canal that contributes to cerebrospinal-fluid

---

circulation and the ventricular barrier.

### **Ependymal Tumor**

A neoplastic process affecting ependymal tumor; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Ependymoblastoma**

A neoplastic process affecting ependymoblastoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Ephedrine**

A sympathomimetic amine that increases noradrenergic activity and can raise blood pressure and heart rate; it has limited clinical uses and may cause palpitations, insomnia, hypertension, or misuse.

### **Ephrins**

Ephrins is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epiblast**

Epiblast is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Epichlorohydrin**

Epichlorohydrin is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Epidemiologic Method**

A method for measuring disease occurrence or investigating associations between exposures and health outcomes in populations.

### **Epidemiologic Studies**

Research that examines the distribution, causes, risk factors, prevention, or outcomes of health events in populations.

### **Epidemiologist**

Epidemiologist is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epidermal Acanthosis**

Epidermal acanthosis is an anatomical, embryological, cellular, or physiological term; its clinical meaning depends on the structure, function, and surrounding findings.

### **Epidermal Cells**

Cells forming the outer layer of skin, chiefly keratinocytes, which create a protective barrier; melanocytes, immune cells, and touch-associated cells are also present.

### **Epidermal Growth Factor**

Epidermal growth factor is an anatomical, embryological, cellular, or physiological term; its clinical meaning depends on the structure, function, and surrounding findings.

### **Epidermophyton**

A biomedical term referring to epidermophyton; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Epidermophyton Floccosum**

A biomedical term referring to epidermophyton floccosum; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Epididymal Neoplasm**

A neoplastic process affecting epididymal neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Epidural Neoplasm**

A neoplastic process affecting epidural neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

---

### **Epigallocatechin Gallate**

Epigallocatechin gallate is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epigastric**

Epigastric is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Epigastric Artery**

Epigastric artery denotes epigastric artery, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Epigenome**

Epigenome is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epigenomics**

Epigenomics is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epipodophyllotoxin**

Epipodophyllotoxin concerns epipodophyllotoxin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Epirubicin**

A clinical condition or finding involving epirubicin. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epirubicin Hydrochloride**

A clinical condition or finding involving epirubicin hydrochloride. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epithalamic**

Epithalamic is a defined medical, biological, or re-

search term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Epithelial**

Epithelial is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Epithelial Cyst**

Epithelial cyst is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Epithelioid Cell**

A rounded or polygonal cell resembling epithelial cells, often describing activated macrophages in granulomas or the appearance of selected tumors.

### **Epithelioma**

Epithelioma is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epitope**

Epitope concerns epitope, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Epitope Mapping**

Epitope mapping concerns epitope mapping, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Eplerenone**

A clinical condition or finding involving eplerenone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epoetin Alfa**

A clinical condition or finding involving epoetin alfa. Its defining features, causes, evaluation, and management depend on the clinical context.

---

### **Epoetin Beta**

A clinical condition or finding involving epoetin beta. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epoprostenol**

A clinical condition or finding involving epoprostenol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epothilon**

Epothilon is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Epothilone B**

A clinical condition or finding involving epothilone b. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epothilone D**

A clinical condition or finding involving epothilone d. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epoxide Hydrolase**

A clinical condition or finding involving epoxide hydrolase. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epoxy Compounds**

Epoxy compounds concerns epoxy compounds, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Eptifibatide**

A clinical condition or finding involving eptifibatide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Equilin**

Equilin is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Equine Morbillivirus**

Equine morbillivirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Equinovarus Deformity**

A foot deformity combining downward pointing and inward turning, often congenital or neuromuscular and commonly called clubfoot when present at birth.

### **Equipment Safety**

Practices that reduce injury, infection, malfunction, and misuse of medical equipment through selection, inspection, cleaning, maintenance, and training.

### **Equivalence Trial**

Equivalence trial is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **ErbB Receptors**

A family of receptor tyrosine kinases, including EGFR/HER1 and HER2, that respond to growth factors and regulate proliferation, survival, and differentiation; abnormal signaling drives some cancers.

### **Erbium**

Erbium is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ergocalciferol**

Ergocalciferol is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ergolines**

Ergolines is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

---

### **Ergosterol**

Ergosterol is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ergotamine**

A clinical condition or finding involving ergotamine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eribulin Mesylate**

A clinical condition or finding involving eribulin mesylate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erlotinib Hydrochloride**

A clinical condition or finding involving erlotinib hydrochloride. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erosion Lesion**

A superficial epithelial defect caused by loss of the surface layer of skin or mucosa, without the deep tissue loss of an ulcer.

### **Erratic Results**

Erratic results is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ertapenem**

A clinical condition or finding involving ertapenem. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erucic Acid**

A 22-carbon monounsaturated fatty acid found in mustard and rapeseed oils; high exposure has raised cardiac safety concerns in some animal studies.

### **Erucic Acids**

Long-chain monounsaturated fatty acids of the erucic-acid family, found mainly in certain plant oils and metabolized according to chain length and dietary exposure.

### **Eryptosis**

Eryptosis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Erysipelothrix**

Erysipelothrix is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Erythroblast**

Erythroblast is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Erythrocyte Membrane**

Erythrocyte membrane denotes erythrocyte membrane, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Erythrodysplasia**

Abnormal development or maturation of red blood cells, usually referring to ineffective erythropoiesis in marrow or a dysplastic blood disorder.

### **Erythroid Hyperplasia**

Erythroid hyperplasia is an anatomical, embryological, cellular, or physiological term; its clinical meaning depends on the structure, function, and surrounding findings.

### **Erythroleukoplakia**

A mixed red-and-white oral mucosal lesion with a high risk of severe dysplasia or cancer, requiring specialist examination and often biopsy.

### **Erythromycin**

A medicine or chemical compound called erythromycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

---

### **Erythromycin Estolate**

A medicine or chemical compound called erythromycin estolate. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Erythroplasia**

A sharply demarcated red lesion of skin or mucosa; persistent oral or genital erythroplasia can represent severe dysplasia or carcinoma in situ.

### **Erythropoietin Receptor**

A cell-surface receptor on erythroid precursor cells that responds to erythropoietin and promotes red-cell survival, proliferation, and maturation.

### **Erythrosine**

A clinical condition or finding involving erythrosine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Escape Reaction**

Escape reaction is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Escherichia**

Escherichia is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Albertii**

Escherichia albertii is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Blattae**

Escherichia blattae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Coli Infection**

Escherichia coli infection is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Fergusonii**

Escherichia fergusonii is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Hermannii**

Escherichia hermannii is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escherichia Vulneris**

Escherichia vulneris is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Escitalopram**

A clinical condition or finding involving escitalopram. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Esomeprazole**

A medicine or chemical compound called esomeprazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Esomeprazole Magnesium**

A medicine or chemical compound called esomeprazole magnesium. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Esophageal**

Relating to the esophagus, the muscular tube that transports swallowed food and liquid from the pharynx to the stomach.

---

## Esophageal Bleeding

Hemorrhage arising from the esophagus, commonly from varices, erosive inflammation, ulceration, tears, or cancer, and potentially presenting as vomiting blood or black stool.

## Esophageal Carcinoma

A neoplastic process affecting esophageal carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Esophageal Duplication

A rare congenital cyst or duplicated segment alongside the esophagus that may compress the airway or esophagus and cause respiratory or swallowing symptoms.

## Esophageal Fistula

An abnormal passage between the esophagus and another organ, most often the airway, causing coughing with swallowing, aspiration, infection, or severe illness.

## Esophageal Infection

An infectious process or toxic exposure involving esophageal infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

## Esophageal Necrosis

Death of esophageal lining, classically producing a black-appearing esophagus in severe ischemia, shock, reflux, or caustic injury and carrying a risk of perforation.

## Esophageal Stenosis

Narrowing of the esophageal lumen from scar, inflammation, tumor, radiation, or congenital disease, causing progressive difficulty swallowing.

## Esophageal Ulceration

A break in the esophageal lining caused by reflux, infection, medicines, caustic injury, inflammation, or cancer and capable of causing pain or bleeding.

## Esophagogastric Junction

The transition where the esophagus meets the stomach, including the lower esophageal sphincter and anatomic structures that help prevent reflux.

## Esophagoscope

A flexible or rigid instrument with a light and viewing system used to inspect the esophageal lining and obtain samples or perform treatment.

## Esophagoscopy

Endoscopic examination of the esophagus, usually to investigate dysphagia, bleeding, reflux complications, strictures, foreign bodies, or suspected tumors.

## Esophagus Disease

A disorder of the esophagus causing swallowing difficulty, pain, reflux, regurgitation, bleeding, obstruction, inflammation, motility disturbance, or cancer.

## Esophagus Neoplasm

A neoplastic process affecting esophagus neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Essiac

Essiac is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

## Estazolam

A clinical condition or finding involving estazolam. Its defining features, causes, evaluation, and management depend on the clinical context.

## Ester

Ester is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

## Esterase

Esterase is a chemical, toxicology, laboratory, or

---

environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Esterification**

Esterification is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Esthesia**

Esthesia is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Esthesiometer**

Esthesiometer is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Estivation**

Estivation is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Estramustine**

A medicine or chemical compound called estramustine. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Estriol**

A clinical condition or finding involving estriol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Estrogen Inhibitor**

Estrogen inhibitor is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Estrone**

A clinical condition or finding involving estrone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Estrous Cycle**

Estrous cycle is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Estrus**

Estrus is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Eszopiclone**

A clinical condition or finding involving eszopiclone. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etanercept**

A clinical condition or finding involving etanercept. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etanidazole**

A medicine or chemical compound called etanidazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Etaracizumab**

A medicine or chemical compound called etaracizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

### **Ethacrynic Acid**

A loop diuretic that blocks sodium and chloride reabsorption in the kidney; it can cause substantial fluid loss, low electrolytes, and dose-related ototoxicity.

### **Ethambutol**

A clinical condition or finding involving ethambutol. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethane**

Ethane is a chemical, toxicology, laboratory, or environmental term; significance depends on the sub-

---

stance, concentration, route, duration, and exposure circumstances.

### **Ethanol**

Ethanol is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethanol Metabolism**

Ethanol metabolism is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethanolamine**

Ethanolamine is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethchlorvynol**

Ethchlorvynol is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethers**

Ethers is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethics**

Principles used to evaluate what is right, fair, respectful, and responsible in healthcare, research, and professional practice.

### **Ethidium**

Ethidium is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethinyl Estradiol**

Ethinyl estradiol is a medical term whose precise

meaning depends on the clinical context, associated findings, and source definition.

### **Ethiodized Oil**

Ethiodized oil is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethion**

Ethion is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethionamide**

Ethionamide is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Ethmocephaly**

Ethmocephaly is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethmoid Sinus**

Ethmoid sinus is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethmoid Sinusitis**

Ethmoid sinusitis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethnicity**

Ethnicity is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethoglucid**

Ethoglucid is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

---

### **Ethosuximide**

A clinical condition or finding involving ethosuximide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethoxzolamide**

A clinical condition or finding involving ethoxzolamide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethyl Ether**

Ethyl ether is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethyl Methanesulfonate**

Ethyl methanesulfonate is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylene**

Ethylene is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylene Chlorohydrin**

Ethylene chlorohydrin is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylene Dibromide**

Ethylene dibromide is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylene Oxide**

Ethylene oxide is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylenethiourea**

Ethylenethiourea is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Ethylnitrosourea**

Ethylnitrosourea is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethynodiol Diacetate**

A clinical condition or finding involving ethynodiol diacetate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etidronic Acid**

A bisphosphonate that binds bone mineral and inhibits osteoclast-mediated bone resorption; it is also used as a chelating or scale-control agent in other settings.

### **Etilefrine**

A clinical condition or finding involving etilefrine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etiocholanolone**

Etiocholanolone is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Etioplast**

Etioplast is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Etodolac**

A clinical condition or finding involving etodolac. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etomidate**

A clinical condition or finding involving etomidate. Its defining features, causes, evaluation, and management depend on the clinical context.

---

agement depend on the clinical context.

### **Etoposide**

A clinical condition or finding involving etoposide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etoposide Phosphate**

A clinical condition or finding involving etoposide phosphate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etoricoxib**

A clinical condition or finding involving etoricoxib. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etretinate**

A clinical condition or finding involving etretinate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eubacterium**

Eubacterium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Eubacterium Limosum**

Eubacterium limosum is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Eubacterium Rectale**

Eubacterium rectale is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Eubacterium Ventriosum**

Eubacterium ventriosum is a microorganism or mi-

crobial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Eucalyptus Oil**

An essential oil containing compounds such as eucalyptol; ingestion can be toxic, and concentrated oil should not be used internally without appropriate medical guidance.

### **Euchromatin**

Euchromatin concerns euchromatin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

### **Euglena**

Euglena is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Eukaryote**

Eukaryote is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Eukaryotic Cell**

A cell with a membrane-bound nucleus and specialized organelles, including the cells of animals, plants, fungi, and protists.

### **Europium**

Europium is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

### **Eurotium**

Eurotium is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Everolimus**

A clinical condition or finding involving everolimus. Its defining features, causes, evaluation, and man-

---

agement depend on the clinical context.

### **Evolution**

Evolution is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ewingella**

Ewingella is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Ewingella Americana**

A rare Gram-negative environmental bacterium that can occasionally cause opportunistic infection, mainly in people with underlying illness.

### **Ewings Sarcoma**

A neoplastic process affecting ewings sarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Exacerbation**

A worsening or flare of a disease or its symptoms, sometimes triggered by infection, exposure, treatment interruption, or another stressor.

### **Examination Table**

A table designed to support a patient during a physical examination or clinical procedure.

### **Exatecan Mesylate**

A clinical condition or finding involving exatecan mesylate. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Excessive Bruising**

Bruising that is unusually frequent, large, spontaneous, or prolonged and may reflect trauma, medications, low platelets, clotting disorders, or another illness.

### **Excision Biopsy**

Removal of an entire lesion or abnormal area for microscopic examination, when complete removal is

appropriate and feasible.

### **Excitatory Synapse**

Excitatory synapse is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Executive Function**

Executive function is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

### **Exemestane**

A clinical condition or finding involving exemestane. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exenatide**

A clinical condition or finding involving exenatide. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exencephaly**

Exencephaly is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exenteration**

Exenteration is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exercise Tolerance**

The ability to perform physical activity before symptoms such as breathlessness, fatigue, chest discomfort, or pain limit activity.

### **Exfoliation Syndrome**

An age-related disorder in which abnormal fibrillar material accumulates in the anterior eye, increasing risk of glaucoma, zonular weakness, and surgical complications.

---

### **Exhibitionism**

Exhibitionism is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exiguobacterium**

Exiguobacterium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Exocervix**

Exocervix refers to exocervix, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Exocrine Gland**

Exocrine gland denotes exocrine gland, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

### **Exocrine Pancreas**

Exocrine pancreas is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Exodeoxyribonuclease**

Exodeoxyribonuclease is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exonuclease**

Exonuclease is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exopeptidase**

Exopeptidase is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exophiala**

Exophiala is a microorganism or biological taxon;

its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Exophiala Dermatitidis**

Exophiala dermatitidis is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Expectorant**

A medicine intended to help loosen or mobilize respiratory mucus so it can be coughed up; benefit varies by cause and product.

### **Experience**

Experience is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exposure**

Contact with a physical, chemical, biological, or psychological agent at a particular intensity and duration; risk depends on the agent and circumstances.

### **Exserohilum**

Exserohilum is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

### **Extent**

Extent is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **External Capsule**

A thin white-matter tract lateral to the putamen that carries connections among the cerebral cortex, thalamus, basal ganglia, and other regions.

### **External Ear**

The visible auricle and external auditory canal that collect and conduct sound toward the tympanic membrane and help protect the middle ear.

---

### **External Nose**

The projecting nasal structure formed by bone, cartilage, skin, and soft tissue that shapes the nasal airway and supports smell and facial appearance.

### **Extraamniotic**

Extraamniotic is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Extracellular Exosome**

A small membrane vesicle released by cells that carries proteins, lipids, and nucleic acids to other cells and participates in intercellular signaling.

### **Extracellular Region**

The space outside cells containing extracellular matrix, signaling molecules, ions, fluid, and other substances that influence tissue structure and cell behavior.

### **Extracellular Space**

The fluid-filled and matrix-containing environment outside cells through which nutrients, waste, hormones, and signals move.

### **Extracellular Vesicle**

A membrane-bound particle released by a cell that transfers molecular cargo between cells and is studied in physiology, disease, biomarkers, and drug delivery.

### **Extracorporeal Circulation**

A medical procedure, treatment, device, or care topic related to extracorporeal circulation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Extraction**

Removal of a substance, tissue, tooth, foreign body, or other structure from the body, usually by a defined procedure.

### **Extranodal**

Extranodal is a medical term whose precise meaning

depends on the clinical context, associated findings, and source definition.

### **Extraocular**

Extraocular is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Extraocular Muscle**

Extraocular muscle is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

### **Extraskkeletal Osteosarcoma**

A neoplastic process affecting extraskkeletal osteosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

### **Extrinsic**

Extrinsic is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Eye Development**

Eye development refers to eye development, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Eye Disorder**

A disease of the eye or visual pathways causing altered vision, pain, redness, discharge, double vision, field loss, or other ocular findings.

### **Eye Hemorrhage**

Eye hemorrhage refers to eye hemorrhage, an anatomical or physiologic concept used to describe a body structure, process, or function.

### **Eye Infection**

An infectious process or toxic exposure involving eye infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

---

## Eye Injury

Eye injury refers to eye injury, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eye Movement

Eye movement refers to eye movement, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eye Neoplasm

A neoplastic process affecting eye neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Eye Prosthesis

Eye prosthesis refers to eye prosthesis, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eyeglass

Eyeglass refers to eyeglass, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eyelash

Eyelash refers to eyelash, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eyelid

Eyelid refers to eyelid, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eyelid Coloboma

Eyelid coloboma refers to eyelid coloboma, an anatomical or physiologic concept used to describe a body structure, process, or function.

## Eyelid Disorder

A disease or structural problem of the eyelid, such as inflammation, infection, malposition, tumor, or gland blockage, that can affect comfort or protect the eye.

## Eyelid Neoplasm

A neoplastic process affecting eyelid neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

## Ezetimibe

A clinical condition or finding involving ezetimibe. Its defining features, causes, evaluation, and management depend on the clinical context.

## Elbow Pain

Elbow pain is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### Synonyms:

Pain Elbow (Elbow Pain)

## Excessive Sweating

Sweating more than needed for temperature control, either generally or in specific areas; causes include hyperhidrosis, medicines, infection, hormonal changes, or other medical conditions.

## Eye Twitching

Repeated involuntary spasms of an eyelid or muscles around the eye, commonly associated with fatigue, stress, caffeine, irritation, or eye strain.

## E. Coli

A group of bacteria that normally inhabit the intestines, some strains of which cause diarrheal illness, urinary infections, or other infections.

## Ear Infection (Middle Ear)

Infection or inflammation in the space behind the eardrum, often causing ear pain, fever, hearing changes, or irritability in children.

## Eating Disorders

Serious mental and physical health conditions involving disturbed eating behaviors, body image, and relationships with food and weight.

## Ehrlichiosis And Anaplasmosis

Tick-borne bacterial infections that commonly cause

---

fever, headache, muscle aches, and low blood-cell counts.

### **Elevated Blood Pressure**

Blood pressure consistently above the healthy range, increasing long-term risk of heart, brain, kidney, and vascular disease.

### **Embryonal Tumors**

Cancers that arise from cells resembling developing embryonic tissue, often occurring in children and commonly affecting the nervous system.

### **Enlarged Breasts In Men (Gynecomastia)**

Enlargement of male breast tissue caused by hormonal imbalance, medicines, substance use, or an underlying illness.

### **Enlarged Liver**

Enlarged liver concerns enlarged liver, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

#### **Synonyms:**

Liver, Enlarged

### **Enlarged Heart**

An increase in the size of the heart, which may result from high blood pressure, valve disease, cardiomyopathy, anemia, or other conditions and requires evaluation of the underlying cause.

#### **Synonyms:**

Cardiomegaly

### **Enlarged Spleen (Splenomegaly)**

An increase in spleen size associated with infection, liver disease, blood disorders, inflammation, or malignancy.

### **Extranodal Marginal Zone Lymphoma Of Mucosa-Associated Lymphoid Tissue (MALT)**

A usually slow-growing B-cell lymphoma arising in mucosal tissues such as the stomach, salivary glands, thyroid, or lungs.

#### **Synonyms:**

Extranodal Marginal Zone Lymphoma MALT Lymphoma Mucosa-Assisted Lymphoid Tissue Lymphoma

### **Epithelioid Sarcoma**

A rare soft-tissue cancer that often begins in the skin or tissues of the hands, forearms, or lower limbs.

### **Esophageal Spasms**

Uncoordinated or forceful contractions of the esophagus that can cause chest pain and difficulty swallowing.

### **Esthesioneuroblastoma**

A rare cancer arising from specialized nerve tissue in the upper nasal cavity, potentially causing nasal obstruction, bleeding, or loss of smell.

### **Ear Infection, Outer Ear**

Alternate index label; see *Swimmer's ear*.

### **Eardrum, Ruptured**

Alternate index label; see *Ruptured eardrum (perforated eardrum)*.

### **Early Puberty**

Alternate index label; see *Precocious puberty*.

### **Eating Disorders, Anorexia**

Alternate index label; see *Anorexia nervosa*.

### **Eating Disorders, Binge Eating**

Alternate index label; see *Binge-eating disorder*.

### **Eating Disorders, Bulimia**

Alternate index label; see *Bulimia nervosa*.

### **Eczema, Dyshidrotic**

Alternate index label; see *Dyshidrosis*.

### **Edema, Pulmonary**

Alternate index label; see *Pulmonary edema*.

---

### **Epicondylitis, Lateral**

Alternate index label; see *Tennis elbow*.

### **Epilepsy, Frontal Lobe**

Alternate index label; see *Frontal lobe seizures*.

### **Excess Facial Hair In Women**

Alternate index label; see *Hirsutism*.

### **Excessive Daytime Sleepiness**

Alternate index label; see *Narcolepsy*.

### **Excessive Menstrual Bleeding**

Alternate index label; see *Heavy menstrual bleeding*.

### **Extrahepatic Biliary Atresia**

Alternate index label; see *Biliary atresia*.

### **Extranodal Marginal Zone Lymphoma**

Alternate index label; see *Extranodal marginal zone lymphoma of mucosa-associated lymphoid tissue (MALT)*.

### **Extrasystole**

Alternate index label; see *Premature ventricular contractions (PVCs)*.

### **Eyelid Inflammation**

Alternate index label; see *Blepharitis*.

### **E-Cigarettes And E-Hookahs**

Electronic nicotine-delivery devices that heat a liquid aerosol; they can cause nicotine dependence and expose users and bystanders to irritants and toxic chemicals.

### **Ear - Blocked At High Altitudes**

Ear - blocked at high altitudes concerns ear - blocked at high altitudes, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Ear Discharge**

A patient-care topic concerning ear discharge. It

addresses the relevant purpose, risks, management, and follow-up.

### **Ear Drainage Culture**

A diagnostic test or examination used to assess ear drainage culture. Results are interpreted with the clinical findings, method, and reference range.

### **Ear Emergencies**

Ear emergencies concerns ear emergencies, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Ear Examination**

A diagnostic test or examination used to assess ear examination. Results are interpreted with the clinical findings, method, and reference range.

### **Ear Infection - Acute**

A clinical condition or finding involving ear infection - acute. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ear Infection - Chronic**

A clinical condition or finding involving ear infection - chronic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ear Tag**

Ear tag concerns ear tag, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Ear Tube Insertion**

A medical procedure, treatment, device, or care topic related to ear tube insertion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Ear Tube Surgery - What To Ask Your Doctor**

A medical procedure involving ear tube surgery - what to ask your doctor. Indications, risks, preparation, and follow-up depend on the patient and the

---

specific procedure.

### **Eardrum Repair**

A medical procedure, treatment, device, or care topic related to eardrum repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Earlobe Creases**

Earlobe creases concerns earlobe creases, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Eating Disorders - Resources**

A patient-care topic concerning eating disorders - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Eating Extra Calories When Sick - Adults**

A clinical condition or finding involving eating extra calories when sick - adults. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eating Extra Calories When Sick - Children**

A clinical condition or finding involving eating extra calories when sick - children. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eating Habits And Behaviors**

A clinical condition or finding involving eating habits and behaviors. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eating Out**

A clinical condition or finding involving eating out. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eating Right During Pregnancy**

A clinical condition or finding involving eating right

during pregnancy. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Echocardiogram - Children**

A clinical condition or finding involving echocardiogram - children. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ectodermal Dysplasias**

A clinical condition or finding involving ectodermal dysplasias. Its defining features, causes, evaluation, and management depend on the clinical context.

### **EGD - Esophagogastroduodenoscopy**

An upper endoscopy using a flexible camera to inspect the esophagus, stomach, and duodenum and to obtain biopsies or treat selected lesions.

### **EGD Discharge**

A patient-care topic concerning egd discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Eight Ways To Cut Your Health Care Costs**

A patient-care topic concerning eight ways to cut your health care costs. It addresses the relevant purpose, risks, management, and follow-up.

### **Elbow Replacement**

A medical procedure, treatment, device, or care topic related to elbow replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Elbow Replacement - Discharge**

A medical procedure, treatment, device, or care topic related to elbow replacement - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Elbow Sprain - Aftercare**

A patient-care topic concerning elbow sprain - af-

---

tercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Elder Care - Resources**

A patient-care topic concerning elder care - resources. It addresses the relevant purpose, risks, management, and follow-up.

### **Electrocauterization**

A clinical condition or finding involving electrocauterization. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electrolytes - Urine**

A clinical condition or finding involving electrolytes - urine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Elephant Ear Poisoning**

A clinical condition or finding involving elephant ear poisoning. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Elimination Patterns**

The frequency, timing, amount, and characteristics of urination and bowel movements, which help assess hydration, gastrointestinal function, continence, and disease.

### **ELISA Blood Test**

A diagnostic test or examination used to assess elisa blood test. Results are interpreted with the clinical findings, method, and reference range.

### **Ellis-Van Creveld Syndrome**

Ellis-van Creveld syndrome is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Emergency Airway Puncture**

A clinical condition or finding involving emergency airway puncture. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ending Pregnancy With Medicines**

A medical procedure, treatment, device, or care topic related to ending pregnancy with medicines; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Endocarditis - Children**

Endocarditis - children is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Endocervical Culture**

A diagnostic test or examination used to assess endocervical culture. Results are interpreted with the clinical findings, method, and reference range.

### **Endocervical Gram Stain**

Endocervical Gram stain is a diagnostic or laboratory method used to evaluate a clinical question; interpretation depends on the specimen or body site, method, reference range, and patient context.

### **Endometrial Polyps**

Localized overgrowths of endometrial tissue projecting into the uterine cavity that may cause irregular bleeding, infertility, or no symptoms.

### **Endoscopic Thoracic Sympathectomy**

A clinical condition or finding involving endoscopic thoracic sympathectomy. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Endovascular Embolization**

A medical procedure, treatment, device, or care topic related to endovascular embolization; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Enlarged Adenoids**

Overgrowth of lymphoid tissue behind the nose that can obstruct nasal breathing, cause mouth breathing, snoring, ear-fluid problems, or sleep-disordered breathing.

---

## Enlarged Prostate

Increase in prostate size, usually benign prostatic hyperplasia, that can obstruct urine flow and cause hesitancy, weak stream, frequency, urgency, or retention.

### Enlarged Prostate - After Care

A patient-care topic concerning enlarged prostate - after care. It addresses the relevant purpose, risks, management, and follow-up.

### Enlarged Prostate - What To Ask Your Doctor

A patient-care topic concerning enlarged prostate - what to ask your doctor. It addresses the relevant purpose, risks, management, and follow-up.

## Enteral Nutrition - Child - Managing Problems

A patient-care topic concerning enteral nutrition - child - managing problems. It addresses the relevant purpose, risks, management, and follow-up.

## Enteroclysis

A contrast-imaging study in which material is delivered directly into the small intestine through a tube to evaluate mucosal disease, narrowing, or obstruction.

## Enteroscopy

Endoscopic examination of the small intestine, allowing visualization, biopsy, bleeding treatment, or removal of selected lesions beyond the reach of standard upper endoscopy.

## Enzyme Markers

Enzyme markers concerns enzyme markers, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## Eosinophil Count - Absolute

A clinical condition or finding involving eosinophil count - absolute. Its defining features, causes, evaluation, and management depend on the clinical

context.

## Epicanthal Folds

Skin folds of the upper eyelid that partly cover the inner canthus, common in some populations and sometimes associated with chromosomal or developmental syndromes.

## Epidural Block - Pregnancy

A medical procedure, treatment, device, or care topic related to epidural block - pregnancy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Epidural Injections For Back Pain

A medical procedure involving epidural injections for back pain. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

## Epilepsy - Resources

A patient-care topic concerning epilepsy - resources. It addresses the relevant purpose, risks, management, and follow-up.

## Epilepsy In Adults - What To Ask Your Doctor

A patient-care topic concerning epilepsy in adults - what to ask your doctor. It addresses the relevant purpose, risks, management, and follow-up.

## Epilepsy In Children

A neurologic disorder in which a child has recurrent unprovoked seizures or a seizure syndrome, with causes, seizure types, development, and treatment varying widely.

## Epilepsy In Children - Discharge

A patient-care topic concerning epilepsy in children - discharge. It addresses the relevant purpose, risks, management, and follow-up.

## Epilepsy In Children - What To Ask Your Doctor

A patient-care topic concerning epilepsy in children

---

- what to ask your doctor. It addresses the relevant purpose, risks, management, and follow-up.

### **Epilepsy Or Seizures - Discharge**

A patient-care topic concerning epilepsy or seizures - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Episiotomy - Aftercare**

A patient-care topic concerning episiotomy - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Epstein-Barr Virus Antibody Test**

A diagnostic test or examination used to assess epstein-barr virus antibody test. Results are interpreted with the clinical findings, method, and reference range.

### **ERCP**

Endoscopic retrograde cholangiopancreatography, a procedure combining endoscopy and contrast imaging to diagnose or treat bile-duct and pancreatic-duct obstruction, stones, leaks, or strictures.

### **Erection Problems**

A clinical condition or finding involving erection problems. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erection Problems - Aftercare**

A patient-care topic concerning erection problems - aftercare. It addresses the relevant purpose, risks, management, and follow-up.

### **Eruptive Xanthomatosis**

Eruptive xanthomatosis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Erysipeloid**

A clinical condition or finding involving erysipeloid. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erythema Toxicum**

A clinical condition or finding involving erythema toxicum. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Erythroplasia Of Queyrat**

Squamous-cell carcinoma in situ of the glans penis or prepuce, appearing as a persistent well-demarcated red velvety plaque.

### **Erythropoietin Test**

A diagnostic test or examination used to assess erythropoietin test. Results are interpreted with the clinical findings, method, and reference range.

### **Esophageal Culture**

A diagnostic test or examination used to assess esophageal culture. Results are interpreted with the clinical findings, method, and reference range.

### **Esophageal Stricture - Benign**

A clinical condition or finding involving esophageal stricture - benign. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Esophagectomy - Discharge**

A patient-care topic concerning esophagectomy - discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Esophagectomy - Minimally Invasive**

A clinical condition or finding involving esophagectomy - minimally invasive. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Esophagectomy - Open**

A clinical condition or finding involving esophagectomy - open. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Estimated Average Glucose (EAG)**

An estimate of mean blood glucose calculated from

---

the hemoglobin A1c result and reported in glucose units that correspond roughly to daily readings.

### **Estradiol Blood Test**

A diagnostic test or examination used to assess estradiol blood test. Results are interpreted with the clinical findings, method, and reference range.

### **Estrogen Overdose**

A clinical condition or finding involving estrogen overdose. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethanol Poisoning**

A clinical condition or finding involving ethanol poisoning. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethmoiditis**

Ethmoiditis is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Ethylene Glycol Blood Test**

A diagnostic test or examination used to assess ethylene glycol blood test. Results are interpreted with the clinical findings, method, and reference range.

### **Eucalyptus Oil Overdose**

A clinical condition or finding involving eucalyptus oil overdose. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eugenol Oil Overdose**

A clinical condition or finding involving eugenol oil overdose. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eustachian Tube Patency**

The ability of the auditory tube to open and equalize pressure between the middle ear and nasopharynx; blockage causes pressure, muffled hearing, or effusion.

### **Excessive Carrying Angle Of The Elbow**

Excessive carrying angle of the elbow concerns excessive carrying angle of the elbow, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Excessive Crying In Infants**

Crying that is unusually prolonged, frequent, or difficult to soothe; it may reflect normal colic but can also signal illness, injury, feeding problems, or unsafe caregiving stress.

### **Excessive Or Unwanted Hair In Women**

Increased hair growth that is cosmetically unwanted or hormonally patterned, including hirsutism from androgen excess and generalized hypertrichosis from other causes.

### **Exercise And Activity - Children**

A clinical condition or finding involving exercise and activity - children. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exercise And Activity For Weight Loss**

A clinical condition or finding involving exercise and activity for weight loss. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exercise And Age**

A clinical condition or finding involving exercise and age. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exercise And Immunity**

A clinical condition or finding involving exercise and immunity. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exercise Clothing And Shoes**

A clinical condition or finding involving exercise clothing and shoes. Its defining features, causes, evaluation, and management depend on the clinical context.

---

### **Exercise, Lifestyle, And Your Bones**

A biological or anatomical term referring to exercise, lifestyle, and your bones. Its role depends on the relevant tissue, function, and clinical context.

### **Exercises To Help Prevent Falls**

A clinical condition or finding involving exercises to help prevent falls. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exercising And Asthma At School**

Exercising and asthma at school is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **Exercising On A Budget**

Planning safe physical activity with low-cost options such as walking, home exercises, stairs, or community facilities, adapted to health status and fitness goals.

### **Exogenous Cushing Syndrome**

Exogenous Cushing syndrome is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

### **External Incontinence Devices**

A clinical condition or finding involving external incontinence devices. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Extremity Angiography**

A clinical condition or finding involving extremity angiography. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Extremity X-Ray**

Extremity x-ray is a diagnostic or laboratory method used to evaluate a clinical question; interpretation depends on the specimen or body site, method, reference range, and patient context.

### **Eye - Foreign Object In**

A clinical condition or finding involving eye - foreign object in. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eye And Orbit Ultrasound**

A clinical condition or finding involving eye and orbit ultrasound. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eye Burning - Itching And Discharge**

A patient-care topic concerning eye burning - itching and discharge. It addresses the relevant purpose, risks, management, and follow-up.

### **Eye Emergencies**

Eye emergencies include acute vision loss, chemical injury, penetrating trauma, severe pain, and selected infections or pressure disorders requiring immediate assessment.

### **Eye Muscle Repair**

A medical procedure, treatment, device, or care topic related to eye muscle repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Eye Muscle Repair - Discharge**

A medical procedure, treatment, device, or care topic related to eye muscle repair - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Eyelid Bump**

Eyelid bump concerns eyelid bump, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Eyelid Drooping**

Eyelid drooping concerns eyelid drooping, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

---

### **Eyelid Lift**

Eyelid lift concerns eyelid lift, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Eyelid Twitch**

Eyelid twitch concerns eyelid twitch, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Eyes - Bulging**

Eyes - bulging concerns eyes - bulging, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **E. Coli 0157:H7**

E. coli O157:H7 is a Shiga-toxin-producing strain that can cause severe diarrhea, abdominal cramps, and bloody stool. It may lead to hemolytic uremic syndrome, especially in children; antibiotics and antidiarrheals require careful medical guidance.

### **E. Coli (E. Coli 0157:H7)**

Alternate index label for E. Coli 0157:H7.

### **Ear Object In (Objects Or Insects In Ear)**

Alternate index label for Objects Or Insects In Ear.

### **Earliest Signs Of Increased Intracranial Pressure**

Early increased intracranial pressure may cause worsening headache, vomiting, visual changes, drowsiness, slowed thinking, or a change in behavior. It can result from bleeding, tumor, swelling, infection, or hydrocephalus and requires prompt evaluation when progressive.

### **Earwax (Ear Wax)**

Alternate index label for Ear Wax.

### **EB (Epidermolysis Bullosa (EB))**

Alternate index label for Epidermolysis Bullosa (EB).

### **Ebola Hemorrhagic Fever (Ebola**

### **Hemorrhagic Fever (Ebola HF))**

Alternate index label for Ebola Hemorrhagic Fever (Ebola HF).

### **Ebola Hemorrhagic Fever (Ebola HF)**

Alternate index label for Ebola HF.

### **Ebola Virus Contagious (Is The Ebola Virus Contagious)**

Alternate index label for Is the Ebola Virus Contagious.

### **EBV (Epstein-Barr Virus (EBV))**

Alternate index label for Epstein-Barr Virus (EBV).

### **Eclampsia Pregnancy (Pregnancy: Preeclampsia And Eclampsia)**

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

### **Eczema Facts**

Eczema is a group of itchy inflammatory skin disorders involving barrier dysfunction, dryness, redness, scaling, or oozing. Triggers and subtypes vary, and care combines moisturization, trigger reduction, topical treatment, and management of infection when present.

### **ED (Erectile Dysfunction (ED, Impotence))**

Alternate index label for Erectile Dysfunction (ED, Impotence).

### **Edema Pulmonary (Pulmonary Edema)**

Alternate index label for Pulmonary Edema.

### **EDS (Ehlers-Danlos Syndrome)**

Alternate index label for Ehlers-Danlos Syndrome.

### **EEC (Enterovirulent E. Coli (EEC))**

Alternate index label for Enterovirulent E. Coli (EEC).

### **Effusion Pleural (Pleural Effusion (Fluid**

---

### **In The Chest Or On Lung))**

Alternate index label for Pleural Effusion (Fluid In the Chest or On Lung).

### **Elastic Skin (Ehlers-Danlos Syndrome)**

Alternate index label for Ehlers-Danlos Syndrome.

### **Embolism Pulmonary (Pulmonary Embolism)**

Alternate index label for Pulmonary Embolism.

### **Emotional Dysregulation Disorder (Borderline Personality Disorder)**

Alternate index label for Borderline Personality Disorder.

### **Emphysema (Lung Condition)**

Alternate index label for Lung Condition.

### **Emphysema Vs. COPD (COPD Vs. Emphysema Differences Similarities)**

Alternate index label for COPD vs. Emphysema Differences Similarities.

### **End-Stage COPD: Signs, Symptoms, And Prognosis**

Advanced COPD may cause severe persistent breathlessness, low exercise tolerance, frequent exacerbations, weight loss, oxygen dependence, and respiratory failure. Prognosis varies; pulmonary rehabilitation, inhaled treatment, oxygen when indicated, advance care planning, and palliative support are important.

### **Enlarged Spleen**

An enlarged spleen, or splenomegaly, may result from infection, liver or blood disease, cancer, inflammation, or congestion. It can cause fullness or pain and increases vulnerability to rupture; the cause and blood counts guide evaluation.

#### **Synonyms:**

Spleen Enlarged (Enlarged Spleen)

### **Enteric Fever (Typhoid Fever)**

Alternate index label for Typhoid Fever.

### **Enterovirulent E. Coli (EEC)**

Alternate index label for EEC.

### **Enterovirus (Non-Polio Enterovirus Infection)**

Alternate index label for Non-Polio Enterovirus Infection.

### **Enthesitand Enthesopathy (Enthesitis And Enthesopathy)**

Alternate index label for Enthesitis and Enthesopathy.

### **Enthesitis And Enthesopathy**

Enthesitis is inflammation where a tendon, ligament, or fascia attaches to bone; enthesopathy includes degenerative and other disorders at that site. It is associated with overuse, arthritis, and spondyloarthritis and causes localized pain and stiffness.

#### **Synonyms:**

Enthesitand Enthesopathy (Enthesitis And Enthesopathy)

### **Epidermolysis Bullosa (EB)**

Alternate index label for EB.

### **Epilepsy And Seizures: How To Treat**

Epilepsy is a tendency to recurrent unprovoked seizures caused by abnormal electrical activity in the brain. Treatment may include antiseizure medicine, surgery, dietary therapy, or neuromodulation according to seizure type, cause, risks, and response.

### **Epstein-Barr Virus (EBV)**

Alternate index label for EBV.

### **Erectile Dysfunction (ED, Impotence)**

Alternate index label for ED, Impotence.

### **Erythema Infectiosum (Fifth Disease)**

Alternate index label for Fifth Disease.

### **Eustachian Tube Problems**

Eustachian-tube dysfunction prevents normal pressure equalization and middle-ear drainage, causing

---

fullness, popping, muffled hearing, pain, or recurrent infection. Allergies, infection, inflammation, and structural factors contribute; persistent hearing loss or severe pain needs examination.

**Synonyms:**

Tubes Ear Problems (Eustachian Tube Problems)

**Exhaustion Heat (Heat Exhaustion)**

Alternate index label for Heat Exhaustion.

**Exocrine Pancreatic Insufficiency  
(Exocrine Pancreatic Insufficiency EPI)**

Alternate index label for Exocrine Pancreatic Insufficiency EPI.

**Exocrine Pancreatic Insufficiency EPI**

Exocrine pancreatic insufficiency occurs when the pancreas does not release enough digestive enzymes, causing greasy stools, bloating, weight loss, and deficiencies of fat-soluble vitamins. Pancreatic enzyme replacement and nutritional monitoring are central to treatment.

**Synonyms:**

Exocrine Pancreatic Insufficiency (Exocrine Pancreatic Insufficiency EPI)

**Exocrine Pancreatic Insufficiency (EPI)**

Inadequate pancreatic enzyme secretion causing impaired digestion and absorption, often with greasy stools, weight loss, bloating, and fat-soluble vitamin deficiency.

**Synonyms:**

EPI

**Extrasystole (Premature Ventricular Contractions)**

Alternate index label for Premature Ventricular Contractions.

**Eye Allergy**

An eye allergy is an immune reaction to airborne or contact allergens that causes itching, redness, tearing, and swollen eyelids. Avoidance, cool compresses, lubricants, and appropriate antiallergic drops help; pain or vision loss suggests a different urgent condi-

tion.

**Synonyms:**

Allergy Eye (Eye Allergy)

**Eye Black (Black Eye)**

Alternate index label for Black Eye.

**Eye Care**

Eye care includes protective eyewear, regular examination based on age and risk, control of diabetes and blood pressure, safe contact-lens hygiene, and prompt attention to vision changes. Sudden vision loss, severe pain, flashes, or a curtain-like shadow is urgent.

**Synonyms:**

Eye Care Eye Disorder (Eye Care)

**Eye Care Eye Disorder (Eye Care)**

Alternate index label for Eye Care.

**Eyeglasses, Sunglasses, And Magnifiers**

Eyeglasses correct refractive errors, sunglasses reduce glare and ultraviolet exposure, and magnifiers enlarge near targets for selected visual impairment. Prescription, fit, lens protection, and the underlying eye condition determine the appropriate aid.

**Synonyms:**

Eyeglasses, Sunglasses, And Magnifying Glasses (Eyeglasses, Sunglasses, And Magnifiers)

**Eyeglasses, Sunglasses, And Magnifying Glasses (Eyeglasses, Sunglasses, And Magnifiers)**

Alternate index label for Eyeglasses, Sunglasses, and Magnifiers.

**Eyelid Inflammation (Blepharitis)**

Alternate index label for Blepharitis.

**Ear Cleaning (By A Doctor)**

Professional removal of excess or impacted earwax by a clinician using instruments, suction, irrigation when appropriate, or other safe methods after examining the ear.

---

### **Ear Thermometer**

A thermometer that estimates body temperature by detecting infrared radiation from the tympanic membrane and ear canal.

### **Ear, Low-Set**

An ear positioned lower on the head than usual; it may be a normal familial feature or one finding among others in a congenital syndrome.

### **EB (Epidermolysis Bullosa)**

A group of inherited disorders in which skin and sometimes mucous membranes are unusually fragile and blister or erode after minor friction or trauma.

### **EBCT (Electron Beam Computerized Tomography)**

A rapid CT imaging technique using an electron beam to produce images, historically used especially to detect and quantify coronary-artery calcium.

### **EC**

An abbreviation that may mean enteric-coated, emergency contraception, or endothelial cell; the intended meaning depends on context.

### **Echopraxia**

Involuntary imitation or repetition of another person's movements, seen in some neurologic and psychiatric disorders.

### **Eclosion**

Emergence from a protective covering or developmental stage, such as hatching from an egg or emerging from a pupa.

### **Economy Class Syndrome**

A colloquial term for travel-associated deep-vein thrombosis or pulmonary embolism after prolonged immobility, not limited to economy-class travel.

### **Ecstasy**

A common street name for MDMA, a psychoactive stimulant and empathogen that can cause dangerous overheating, dehydration or hyponatremia, cardio-

vascular stress, and neuropsychiatric effects.

### **Ectomy**

A suffix meaning surgical removal or excision, as in appendectomy or mastectomy.

### **Ectoparasite**

A parasite that lives on the external surface of a host, such as a louse, flea, tick, or mite.

### **Ectopic**

Located or occurring in an abnormal position; an ectopic pregnancy implants outside the uterine cavity, most often in a fallopian tube.

### **Edentulous**

Lacking some or all natural teeth.

### **Efferent**

Carrying signals away from a central structure, especially motor or autonomic signals from the central nervous system to muscles or glands.

### **EGFR**

Epidermal growth factor receptor, a cell-surface signaling protein; activating EGFR variants can drive some cancers and may guide targeted treatment.

### **Eisoptrophobia**

An excessive or irrational fear of mirrors, reflections, or seeing oneself in a mirror.

### **Elbow, Cellulitis Of The**

A bacterial infection of the skin and soft tissues around the elbow, causing redness, warmth, swelling, and tenderness and sometimes spreading rapidly.

### **Elbow, Tip Of The**

The olecranon, the bony prominence at the back of the elbow formed by the proximal ulna.

### **Elective**

Planned in advance rather than required urgently; an elective procedure may be scheduled after considering its benefits, risks, and alternatives.

---

### **Elective Surgery**

Surgery planned in advance because it is not required immediately to prevent serious harm; it may still be medically necessary.

### **Electrogastrogram**

A recording of the stomach's electrical activity, usually obtained from electrodes on the abdominal skin to assess gastric slow waves and rhythm.

### **Electrophysiology**

The study of electrical activity in living cells and tissues; in clinical medicine it includes tests of heart rhythm and nerve or muscle function.

### **Elevated Hemidiaphragm**

An abnormally high position of one side of the diaphragm on imaging, which can result from volume loss, nerve or muscle dysfunction, abdominal disease, or other causes.

### **Emboli**

Plural of embolus: particles or material carried through the bloodstream that can lodge in a smaller vessel and obstruct blood flow, such as a clot, fat, air, or infected material.

### **Emergency Code**

A hospital alert used to summon a designated response to an urgent event; the meaning of a specific code varies by institution.

### **Emia**

A suffix meaning a condition of the blood or a substance present in the blood, as in anemia or bacteremia.

### **Empiric Risk**

A risk estimate based on observed population or clinical data rather than solely on a theoretical model; the estimate depends on the population and outcome studied.

### **Empirical**

Based on observation, measurement, or experience

rather than only on theory; empirical treatment may begin before a specific cause is confirmed.

### **Enanthem**

A rash or lesion on a mucous membrane, especially inside the mouth; it may occur with infections, inflammatory disorders, or medication reactions.

### **Encapsulated**

Enclosed by a capsule or well-defined layer of tissue; the term may describe an organ, cyst, infection, or tumor and does not by itself establish whether a lesion is benign or malignant.

### **End Stage**

The advanced phase of a disease in which normal function is severely impaired; the exact criteria and treatment options depend on the disease, such as end-stage kidney or liver disease.

### **Endocrinopathy**

A disorder of an endocrine gland or hormone system, causing excessive, deficient, or otherwise abnormal hormone action.

### **Endogenous**

Originating within the body or produced by its cells or tissues, rather than introduced from outside.

### **Endothelial**

Relating to the endothelium, the thin layer of cells lining blood and lymphatic vessels and forming part of other internal surfaces.

### **Endourologist**

A urologist who specializes in minimally invasive procedures performed through the urinary tract or small access sites, such as stone removal or ureteroscopy.

### **Endovaginal Ultrasound**

Ultrasound imaging performed with a probe placed in the vagina to examine pelvic organs, including the uterus, endometrium, ovaries, and early pregnancy.

---

## **Enervate**

To weaken, exhaust, or reduce strength and energy; it is a descriptive verb rather than a specific diagnosis.

## **ENT**

Abbreviation for ear, nose, and throat; it commonly refers to the otolaryngology specialty or an otolaryngologist.

## **ENT Physician**

An otolaryngologist, a physician who diagnoses and treats disorders of the ear, nose, throat, and related head and neck structures.

## **Enteral**

Relating to or delivered through the gastrointestinal tract; enteral nutrition provides food through the mouth or a feeding tube into the stomach or intestine.

## **Enteric**

Relating to the intestine or gastrointestinal tract; the term can also describe organisms or infections associated with the intestines.

## **Enteric-Coated**

Covered with a coating designed to resist breakdown in the stomach and dissolve in the less-acidic small intestine.

## **Entero-**

A combining form meaning intestine or bowel, as in enteropathy and enteroscopy.

## **Enterospasm**

A spasm or involuntary contraction of the intestine, which may cause cramping, pain, or altered movement of intestinal contents.

## **Enterostomy**

A surgically created opening from the intestine to the abdominal surface, such as an ileostomy or colostomy, to divert intestinal contents.

## **Entomophobia**

An intense fear of insects that is excessive, persistent, or causes significant distress or avoidance.

## **Enzootic**

Regularly present or persistently maintained in an animal population or geographic area; it is the animal-population counterpart of endemic disease.

## **EOS**

Commonly an abbreviation for eosinophils or an eosinophil count in laboratory reports; the intended meaning should be confirmed from the report's context.

## **EPA**

Abbreviation for eicosapentaenoic acid, an omega-3 polyunsaturated fatty acid found in oily fish and fish-oil supplements.

## **Epi-**

A prefix meaning on, upon, over, or above, as in epidermis and epigastric.

## **Epidermal**

Relating to the epidermis, the outermost layer of the skin.

## **Epidermodysplasia Verruciformis (EV)**

A rare inherited disorder of skin immunity associated with susceptibility to certain human papillomavirus infections, widespread wart-like lesions, and increased risk of some skin cancers.

## **Epizootic**

An outbreak of disease affecting many animals in a population or area at the same time; it is analogous to an epidemic in humans.

## **EPO Test**

A blood test that measures erythropoietin, a hormone that stimulates red-blood-cell production; it may help evaluate anemia or erythrocytosis.

---

## Eponym

A name derived from a person, place, or other proper name and used for a disease, sign, procedure, or anatomical structure.

## EPR

Abbreviation for electrophrenic respiration, also called diaphragm pacing, in which electrical stimulation helps activate the diaphragm in selected patients with respiratory muscle paralysis.

## EPT

Abbreviation for estrogen/progestin therapy, treatment using both an estrogen and a progestin, commonly discussed in menopausal hormone therapy when the uterus is present.

## ER

Abbreviation for emergency room or emergency department, the hospital service that evaluates and treats urgent illness and injury.

## Ergophobia

An intense fear of work or of the workplace that is excessive, persistent, or causes significant distress or avoidance.

## Ergot

A fungus, especially *Claviceps purpurea*, that infects grains such as rye and produces alkaloids; ingestion can cause ergotism, with vascular, neurologic, or uterine effects.

## ERT (Estrogen Replacement Therapy)

Treatment with estrogen to relieve menopausal symptoms or replace deficient estrogen; when the uterus is present, a progestogen is generally added to reduce endometrial cancer risk.

## Erythema Chronicum Migrans

The expanding skin lesion of early Lyme disease, usually developing days to weeks after infection with *Borrelia* following a tick bite; it may have central clearing but is not always a classic bull's-eye.

## Erythema Dose

The amount of ultraviolet or other radiation that produces visible redness of the skin; the minimal erythema dose is the lowest amount causing a defined erythematous response.

## Esophagogastric Tamponade

Temporary control of bleeding from esophageal or gastric varices by inflating a balloon device to apply pressure; it is a rescue measure with serious airway and aspiration risks.

## Essential

Necessary or fundamental; in a diagnosis such as essential hypertension, it indicates that no single secondary cause has been identified.

## Essential Fatty Acid

A fatty acid the body cannot make in sufficient amounts and therefore must obtain from food; the main human examples are linoleic acid and alpha-linolenic acid.

## EST (Expressed Sequence Tag)

A short DNA sequence obtained from a transcribed messenger-RNA copy and used as a marker for identifying or locating an expressed gene.

## Estimated Date Of Confinement (EDC)

The estimated date when a pregnancy is expected to reach delivery, also called the estimated due date; it is commonly calculated from the last menstrual period or early ultrasound.

## Estrogens

A group of steroid hormones, including estradiol, that regulate reproductive development, the menstrual cycle, bone, and other tissues; they are produced mainly by the ovaries before menopause and by other tissues at other times.

## Event

An occurrence relevant to health or care, such as a symptom, diagnosis, treatment, complication, or measurable outcome; its precise meaning depends

---

on the clinical context.

### **Evolutionarily Conserved Gene**

A gene whose sequence or function has remained similar across species over evolutionary time, suggesting that it performs an important biological function.

### **Exacerbate**

To make a disease, symptom, or other medical problem more severe or troublesome.

### **Exanthem**

A widespread skin eruption, often caused by an infection or medication; measles and drug eruptions are examples.

### **Excise**

To remove tissue or a lesion surgically by cutting it out.

### **Exclamation Point Hair**

A short, broken hair that is narrower at the end away from the scalp and wider near the scalp, classically seen in alopecia areata.

### **Excoriate**

To scratch, abrade, or strip away the surface of the skin; an excoriation is the resulting superficial injury.

### **Exocrine**

Relating to glands that release secretions through ducts onto an epithelial surface or into a body cavity, such as sweat glands or the exocrine pancreas.

### **Exogenous**

Originating outside the body or introduced from an external source, such as an exogenous medication or hormone.

### **Explant**

To remove an implanted device or tissue; an explant can also be a piece of tissue removed from an organism and maintained in laboratory culture.

### **Expulsion, Stage Of**

The second stage of labor, beginning with complete cervical dilation and ending with delivery of the baby.

### **Extracorporeal**

Occurring or performed outside the body; extracorporeal circulation and hemodialysis route blood through an external machine.

### **Extracranial**

Located or occurring outside the skull or cranial cavity.

### **Extracranial Hematoma**

A collection of blood outside the skull or cranial cavity, usually caused by bleeding into soft tissues after injury.

### **Eye Bleed**

Bleeding in or around the eye; a subconjunctival hemorrhage is blood beneath the clear surface membrane and often appears as a painless bright-red patch, while bleeding inside the eye can impair vision and requires medical assessment.

### **Eye Color**

The apparent color of the iris, determined mainly by the amount and distribution of melanin and the way light is scattered; a new or uneven color change can indicate disease or injury.

### **Eyes, Flashing Lights In The**

Brief flashes or streaks of light, called photopsias, often caused by traction on the vitreous or retina; sudden new flashes, especially with floaters or a curtain-like loss of vision, require urgent eye evaluation for a retinal tear or detachment.

### **Epididymides**

The paired coiled ducts on the posterior surface of the testes where sperm mature and are stored before entering the vasa deferentia.

### **Synonyms:**

epididymis

---

## Elevated Liver Enzymes

Higher-than-expected blood levels of enzymes released by injured or stressed liver cells, commonly including ALT and AST. Causes range from fatty liver disease and medicines to viral hepatitis, alcohol-related injury, and biliary obstruction; interpretation depends on the pattern and clinical context.

### Synonyms:

Abnormal liver enzymes; elevated hepatic enzymes.

## EGPA (Formerly Churg-Strauss Syndrome)

Eosinophilic granulomatosis with polyangiitis, an autoimmune vasculitis associated with asthma, eosinophilia, and inflammation of small and medium blood vessels.

## Epidermoid Cysts

Slow-growing benign cysts beneath the skin filled with keratin, commonly presenting as a movable lump.

### Synonyms:

Cysts, Epidermoid Cysts, Sebaceous Sebaceous Cysts

## Embolic Stroke (Brain Embolism)

A stroke caused by a clot or other material traveling to and blocking an artery supplying the brain.

### Synonyms:

Brain Embolism Cerebral Embolism

## Ear, Diseases Of

Ear, Diseases of is an ear-related disease or condition; symptoms, examination findings, causes, and treatment depend on the affected structure.

## Ear-Trumpet

Ear-Trumpet is an ear-related disease or condition; symptoms, examination findings, causes, and treatment depend on the affected structure.

## Ebstein's Anomaly

Ebstein's Anomaly is a cardiovascular or circulatory condition, structure, rhythm, or measurement; its clinical meaning depends on cardiac function, blood

flow, and associated findings.

## Ecbolics

A clinical condition or finding involving ecbolics. Its defining features, causes, evaluation, and management depend on the clinical context.

## Eccentric

Eccentric is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

## Eccrine Glands

Eccrine Glands is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

## Echinococcus

Echinococcus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Echoencephalography

A clinical condition or finding involving echoencephalography. Its defining features, causes, evaluation, and management depend on the clinical context.

## Echography

A clinical condition or finding involving echography. Its defining features, causes, evaluation, and management depend on the clinical context.

## Ectopistes

A clinical condition or finding involving ectopistes. Its defining features, causes, evaluation, and management depend on the clinical context.

## Ectop Parasite

A clinical disorder or finding related to ectop parasite; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

---

### **Ectopic Beat**

Ectopic Beat is a cardiovascular or circulatory condition, structure, rhythm, or measurement; its clinical meaning depends on cardiac function, blood flow, and associated findings.

### **Ectopion**

Ectopion is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Edrophonium**

A clinical condition or finding involving edrophonium. Its defining features, causes, evaluation, and management depend on the clinical context.

### **EDTA**

A clinical condition or finding involving edta. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Effector**

A clinical condition or finding involving effector. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Effervescent Tablets**

A clinical condition or finding involving effervescent tablets. Its defining features, causes, evaluation, and management depend on the clinical context.

### **EFT**

A clinical condition or finding involving eft. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Egg**

Egg is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Egg-Cell**

Egg-Cell is an anatomical structure, tissue, cell, or body process; its location and function explain its

role in normal physiology and disease.

### **Ego**

Ego is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Ejaculatory Ducts**

Ejaculatory Ducts is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Electric Shock**

A clinical condition or finding involving electric shock. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electrocardiogram (ECG)**

Electrocardiogram (ECG) is a cardiovascular or circulatory condition, structure, rhythm, or measurement; its clinical meaning depends on cardiac function, blood flow, and associated findings.

### **Electroconvulsive Therapy (ECT)**

A clinical condition or finding involving electroconvulsive therapy (ect). Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electrode**

A clinical condition or finding involving electrode. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electroencephalogram (EEG)**

A clinical condition or finding involving electroencephalogram (eeg). Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electromyography (EMG)**

A clinical condition or finding involving electromyography (emg). Its defining features, causes, evaluation, and management depend on the clinical context.

---

### **Electronic Fetal Monitoring**

A clinical condition or finding involving electronic fetal monitoring. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electron Microscope**

A clinical condition or finding involving electron microscope. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Electrosurgery**

A medical procedure involving electrosurgery. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

### **Elimination**

Elimination is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Embryoma**

Embryoma is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Emergency Medicine**

Emergency Medicine is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Emetine**

A clinical condition or finding involving emetine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eminentia**

A clinical condition or finding involving eminentia. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Emotional Disorders**

A clinical disorder or finding related to emotional disorders; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

tions.

### **Empirical Treatment**

A medical procedure, treatment, device, or care topic related to empirical treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Enarthrosis**

A biomedical term referring to enarthrosis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Endamoeba**

A clinical disorder or finding related to endamoeba; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Endangiitis**

A clinical disorder or finding related to endangiitis; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Endergonic**

A clinical condition or finding involving endergonic. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Endomorph**

A clinical condition or finding involving endomorph. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Endoparasite**

A clinical disorder or finding related to endoparasite; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Endostosis**

Endostosis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Endotoxins**

A clinical condition or finding involving endotox-

---

ins. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Energy**

Energy is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Ephelides**

A clinical condition or finding involving ephelides. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ephedrinum**

A clinical condition or finding involving ephedrinum. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epidural Anaesthesia**

Epidural Anaesthesia is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Epilepticus, Status**

A clinical disorder or finding related to epilepticus, status; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Epileptiform**

A clinical condition or finding involving epileptiform. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epiphysitis**

Epiphysitis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Epsom Salts**

A clinical condition or finding involving epsom salts. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Epulis**

Epulis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Eradication**

Eradication is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Erection**

Erection is a cardiovascular or circulatory condition, structure, rhythm, or measurement; its clinical meaning depends on cardiac function, blood flow, and associated findings.

### **Ergometrine**

A clinical condition or finding involving ergometrine. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eruptive Fever**

A clinical disorder or finding related to eruptive fever; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Erythroblastosis Foetalis**

A clinical disorder or finding related to erythroblastosis foetalis; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Erythropoietin (EPO)**

A clinical condition or finding involving erythropoietin (epo). Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eskimo Lung**

Eskimo Lung is an anatomical or physiologic term describing a body structure or function; its clinical meaning depends on its location, role, and associated findings.

---

### **Etacrynic Acid**

Etacrynic Acid is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Ether**

A clinical condition or finding involving ether. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Ethyl Chloride**

A clinical condition or finding involving ethyl chloride. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Etonogestrel**

A clinical condition or finding involving etonogestrel. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eugenicist**

Eugenicist is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Eugenics**

Eugenics is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Eunuch**

A clinical condition or finding involving eunuch. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Eutocia**

A clinical condition or finding involving eutocia. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Evacuation**

Evacuation is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Evacuation Of Uterus**

Evacuation of Uterus is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Ewing's Tumour**

A clinical disorder or finding related to ewing's tumour; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Excavation**

Excavation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Excitation**

Excitation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Exclusion Diet**

Exclusion Diet is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Excreta**

A clinical condition or finding involving excreta. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exfoliative Cytology**

A clinical condition or finding involving exfoliative cytology. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exhaustion**

Exhaustion is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Exocrine Glands**

Exocrine Glands is an anatomical structure, tis-

---

sue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Exomphalos**

A clinical condition or finding involving exomphalos. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Exophthalmic Goitre**

A clinical disorder or finding related to exophthalmic goitre; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Exotoxins**

A clinical disorder or finding related to exotoxins; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

### **Expectant Treatment**

A medical procedure, treatment, device, or care topic related to expectant treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Exploratory Operation**

Exploratory Operation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Expression**

Expression is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Extensor**

Extensor is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Extinction**

Extinction is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

### **Extirpation**

Extirpation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Extra-**

A clinical condition or finding involving extra-. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Extracellular**

Extracellular is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Extra-Dural**

A clinical condition or finding involving extra-dural. Its defining features, causes, evaluation, and management depend on the clinical context.

### **Extrapyramidal Tracts**

Extrapyramidal Tracts is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Extremities**

Extremities is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Extroversion**

Extroversion is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Eye Bank**

Eye Bank is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Eye, Diseases Of**

Eye, Diseases of is an anatomical structure, tissue,

---

cell, or body process; its location and function explain its role in normal physiology and disease.

### **Eyesight**

Eyesight is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

### **Endocrinologist**

A physician who specializes in diagnosing and treating disorders of hormones, endocrine glands, metabolism, and related conditions such as diabetes and thyroid disease.

### **ESRD**

Alternate index label; see *End-Stage Renal Disease*.

### **Enhanced Elimination**

Methods used to increase removal of a toxin from the body after absorption, including urinary alkalization, hemodialysis, hemoperfusion, or other extracorporeal treatments when indicated.

### **Epidermolysis Bullosa Acquisita**

An autoimmune subepidermal blistering disease caused by antibodies against type VII collagen in anchoring fibrils; it commonly causes skin fragility and trauma-induced blisters and may scar.

### **Extramammary Paget Disease**

An intraepithelial adenocarcinoma usually affecting apocrine-rich skin such as the vulva, perianal region, or scrotum; it often presents as a persistent eczematous or erythematous plaque and requires biopsy.

### **Erythema Induratum**

A nodular lobular panniculitis, classically associated with tuberculosis but also caused by other conditions, producing recurrent tender nodules and ulcers on the backs of the lower legs.

### **Extra-Gastrointestinal Stromal Tumor**

A gastrointestinal-stromal-tumor-type neoplasm arising outside the gastrointestinal tract, most often

in the mesentery, retroperitoneum, or omentum. Diagnosis uses morphology, KIT or DOG1 expression, and molecular testing.

### **Embryonal Tumor Of The Central Nervous System**

A highly cellular malignant pediatric CNS tumor with primitive or embryonal morphology. Diagnosis depends on integrated histologic and molecular classification, and treatment usually combines surgery, radiation when appropriate, and chemotherapy.

### **Endometrioid Carcinoma Of The Vulva**

A rare vulvar adenocarcinoma showing endometrioid differentiation, sometimes arising in ectopic or specialized Müllerian-type tissue; diagnosis requires exclusion of a metastasis from the endometrium or ovary.

### **Esophageal Adenocarcinoma**

A malignant gland-forming tumor of the esophagus, most often arising in the distal esophagus in the setting of Barrett Esophagus. It is associated with chronic gastroesophageal reflux, obesity, smoking, and other risk factors. Progressive dysphagia, weight loss, bleeding, or chest discomfort may occur, although early disease can be asymptomatic. Diagnosis requires endoscopic biopsy, followed by staging to guide multimodal oncologic treatment.

## F

### False Negative

A test result that indicates a condition is absent when it is actually present.

### Familial Combined Hyperlipidemia

An inherited disorder causing elevated cholesterol, triglycerides, or both.

### Fasting Lipid Profile

A blood test measuring cholesterol and triglyceride levels, usually after fasting.

#### Synonyms:

Lipid panel

### Fast-Twitch Fiber

A skeletal-muscle fiber specialized for rapid, powerful contractions.

#### Synonyms:

Type II muscle fiber

### Fat

A nutrient and energy source composed mainly of lipids.

#### Synonyms:

Lipid

### Fatty Acids

Organic components of fats used for energy and for building cell membranes and signaling molecules.

### Fatty Streak

An early atherosclerotic lesion formed by lipid accumulation in an artery wall.

### Fibrin

A threadlike protein that forms the structural mesh of a blood clot.

### Fibroblast

A connective-tissue cell that produces collagen and other extracellular-matrix components.

### Fibroid

A benign smooth-muscle tumor, most often arising in the uterus.

#### Synonyms:

Uterine leiomyoma

### Fibrous Plaque

A raised arterial lesion containing fibrous tissue and lipid that can narrow the vessel.

#### Synonyms:

Atherosclerotic plaque

### Finasteride

A 5-alpha-reductase inhibitor used for benign prostatic enlargement and some types of hair loss.

### Fixed Joint

A joint with little or no movement, often because bones are joined by dense tissue.

#### Synonyms:

Synarthrosis

### Flaccid

Relaxed, soft, or lacking normal muscle tone or erection.

---

**Flare**

A temporary worsening or recurrence of symptoms.

**Synonyms:**

Exacerbation

**Flatus**

Gas passed through the anus.

**Synonyms:**

Intestinal gas

**Flavonoids**

Plant polyphenols found in many fruits, vegetables, teas, and other foods.

**Flex**

To bend a joint and decrease the angle between its bones.

**Synonyms:**

Flexion

**Flight-Or-Fight Response**

The coordinated stress response that prepares the body to confront or escape a perceived threat.

**Synonyms:**

Fight-or-flight response; stress response

**Flow**

A state of highly focused, effortless involvement in an activity, often with reduced awareness of time.

**Foam Cells**

Lipid-filled cells, usually macrophages, that contribute to atherosclerotic plaque.

**Focal Neuropathy**

Damage to a single peripheral nerve or a small group of nerves.

**Synonyms:**

Mononeuropathy

**Focus Words**

Calming words or phrases used to anchor attention during relaxation or stress-management exercises.

**Follicle**

A small sac or tissue structure, such as a hair follicle or ovarian follicle.

**Follicle-Stimulating Hormone**

A pituitary hormone that supports ovarian follicle development and sperm production.

**Synonyms:**

FSH

**Follicular Unit**

A natural hair-growth unit containing one or more follicles and associated structures.

**Follicular Unit Transplantation**

Hair-restoration surgery that transplants individual follicular units to thinning areas.

**Synonyms:**

FUT

**Food Allergies**
