Ortataxel is an investigational taxane-like antineoplastic drug studied for its ability to disrupt microtubules and inhibit cancer-cell division.

## Orthobunyavirus

orthobunyavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## Orthodontic Appliance

A medical term referring to orthodontic appliance. Its clinical meaning depends on the context in which it is used.

## Orthodontic Wires

A medical term referring to orthodontic wires. Its clinical meaning depends on the context in which it is used.

## Orthohepadnavirus

orthohepadnavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## Orthokeratosis

Orthokeratosis is thickening of the outer skin layer with mature keratin cells lacking nuclei, occurring normally or in several skin disorders.

## Orthomyxoviridae

orthomyxoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause

---

disease.

### **Orthopoxvirus**

orthopoxvirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Orthoptera**

A medical term referring to orthoptera. Its clinical meaning depends on the context in which it is used.

### **Orthoreovirus**

orthoreovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Orthotic Devices**

A medical procedure, device, or treatment involving orthotic devices. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Os Odontoideum**

Os odontoideum is a separate ossicle near the second cervical vertebra's odontoid process that can cause atlantoaxial instability or spinal-cord risk.

### **Oscillometry**

A medical term referring to oscillometry. Its clinical meaning depends on the context in which it is used.

### **Oseltamivir**

A medicine or pharmacologic agent called oseltamivir. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Oseltamivir Phosphate**

A medicine or pharmacologic agent called oseltamivir phosphate. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Osmium Tetroxide**

A medical term referring to osmium tetroxide. Its clinical meaning depends on the context in which it is used.

### **Osmoregulation**

A biological or biochemical term involving osmoregulation. Its role depends on the relevant cells, molecules, and physiological process.

### **Osseous Metaplasia**

Osseous metaplasia is formation of mature bone in tissue where bone is not normally present, sometimes after injury, inflammation, or within a lesion.

### **Ossifying Fibroma**

An ossifying fibroma is a usually benign fibro-osseous tumor that replaces normal bone with fibrous tissue and mineralized material, often in the jaw.

### **Osteitis Deformans**

Osteitis deformans is Paget disease of bone, in which abnormal remodeling produces enlarged, weakened, or deformed bones.

### **Osteoblastoma**

A medical term referring to osteoblastoma. Its clinical meaning depends on the context in which it is used.

### **Osteocalcin**

A medical term referring to osteocalcin. Its clinical meaning depends on the context in which it is used.

### **Osteocalcin Assay**

A diagnostic or laboratory method related to osteocalcin assay. Results are interpreted with the method, reference range, and clinical findings.

### **Osteochondromatosis**

Osteochondromatosis is formation of multiple cartilage-capped bony outgrowths, usually around growth plates, that can cause deformity, pain, or nerve and vessel compression.

---

### **Osteolysis**

Osteolysis is progressive destruction or resorption of bone caused by tumors, inflammation, prosthesis reactions, infection, metabolic disease, or other processes.

### **Osteoma Cutis**

Osteoma cutis is formation of bone within the skin or subcutaneous tissue, occurring as a primary disorder or secondary to acne, trauma, or another condition.

### **Osteon**

An osteon, or Haversian system, is the cylindrical structural unit of compact bone surrounding a central blood-vessel and nerve canal.

### **Osteonectin**

A medical term referring to osteonectin. Its clinical meaning depends on the context in which it is used.

### **Osteopoikilosis**

Osteopoikilosis is an inherited benign bone condition with multiple small dense spots on imaging, usually asymptomatic and discovered incidentally.

### **Osteopontin**

A medical term referring to osteopontin. Its clinical meaning depends on the context in which it is used.

### **Osteoporotic Fracture**

A clinical condition or finding involving osteoporotic fracture. Its features, causes, evaluation, and management depend on the clinical context.

### **Osteoprotegerin Test**

A diagnostic or laboratory method related to osteoprotegerin test. Results are interpreted with the method, reference range, and clinical findings.

### **Osteoradionecrosis**

A biological or biochemical term involving osteoradionecrosis. Its role depends on the relevant cells, molecules, and physiological process.

### **Osteosclerosis**

Osteosclerosis is abnormal increased bone density caused by defective remodeling, inherited disease, chronic stress, inflammation, medicines, or malignancy.

### **Other**

Other indicates a category or finding not fitting the listed alternatives; its medical meaning depends on the surrounding classification or clinical context.

### **Other Race**

Other race is a demographic category for a person who does not select or fit the available listed race categories; classification varies by system and should not be treated as a biological diagnosis.

### **Otic Ointment**

A medical term referring to otic ointment. Its clinical meaning depends on the context in which it is used.

### **Otolaryngologist**

An otolaryngologist is a physician specializing in disorders of the ear, nose, throat, head, neck, voice, swallowing, and related surgery.

### **Ounce**

An ounce is a unit of mass or fluid volume whose exact conversion depends on the measurement system; medication instructions should use unambiguous units.

### **Outcomes Research**

Outcomes research studies how healthcare interventions, services, and policies affect survival, function, quality of life, safety, cost, and patient experience.

### **Ovalbumin**

A medical term referring to ovalbumin. Its clinical meaning depends on the context in which it is used.

### **Ovalocyte Count**

ovalocyte count is a diagnostic or laboratory method used to evaluate a clinical question; interpretation

---

depends on the specimen or body site, method, reference range, and patient context.

### **Ovarian Failure**

Ovarian failure is inadequate ovarian hormone production or ovulation, causing irregular or absent periods, infertility, and low-estrogen symptoms.

### **Ovarian Fibromata**

Ovarian fibromata are usually benign fibrous tumors of the ovary that may be incidental or cause pelvic pressure, pain, or fluid in the abdomen.

### **Ovarian Follicle**

An ovarian follicle is a fluid-containing structure holding an immature egg and supporting cells; one usually matures and ovulates during each cycle.

### **Ovarian Gonadoblastoma**

A medical term referring to ovarian gonadoblastoma. Its clinical meaning depends on the context in which it is used.

### **Ovarian Hemorrhage**

A clinical condition or finding involving ovarian hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Ovarian Infection**

An infectious process or toxic exposure involving ovarian infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Ovarian Rupture**

Ovarian rupture is tearing of an ovary or ovarian cyst, which may cause sudden pelvic pain and internal bleeding and sometimes requires urgent treatment.

### **Ovarian Teratoma**

An ovarian teratoma is a germ-cell tumor containing tissues from one or more embryonic layers; mature teratomas are usually benign, while immature forms can be malignant.

### **Ovarian Thecoma**

An ovarian thecoma is a usually benign sex-cord stromal tumor that may produce estrogen and cause abnormal uterine bleeding or other hormonal effects.

### **Ovary Disease**

A clinical condition or finding involving ovary disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Ovary Neoplasm**

A neoplasm involving ovary neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Overbite**

A medical term referring to overbite. Its clinical meaning depends on the context in which it is used.

### **Overlay Denture**

A medical term referring to overlay denture. Its clinical meaning depends on the context in which it is used.

### **Oversedate**

A medical term referring to oversedate. Its clinical meaning depends on the context in which it is used.

### **Oviposition**

A biological or biochemical term involving oviposition. Its role depends on the relevant cells, molecules, and physiological process.

### **Ovomucin**

A medical term referring to ovomucin. Its clinical meaning depends on the context in which it is used.

### **Ovotestis**

A diagnostic or laboratory method related to ovotestis. Results are interpreted with the method, reference range, and clinical findings.

### **Ownership**

Ownership is legal or practical control of property, data, decisions, or responsibilities; healthcare deci-

---

sions remain with the patient or authorized surrogate.

### **Oxacillin**

A medical term referring to oxacillin. Its clinical meaning depends on the context in which it is used.

### **Oxalates**

Oxalates are salts or esters of oxalic acid that can bind calcium and form calcium-oxalate kidney stones; excess dietary absorption or inherited hyperoxaluria can cause renal injury.

### **Oxaliplatin**

Oxaliplatin is a platinum chemotherapy drug that forms DNA cross-links and is used especially in colorectal cancer regimens; acute cold-triggered neuropathy and cumulative sensory neuropathy are characteristic toxicities.

### **Oxandrolone**

A medical term referring to oxandrolone. Its clinical meaning depends on the context in which it is used.

### **Oxaprozin**

A medical term referring to oxaprozin. Its clinical meaning depends on the context in which it is used.

### **Oxazole**

A medicine or pharmacologic agent called oxazole. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Oxcarbazepine**

Oxcarbazepine is an antiseizure medicine that blocks voltage-gated sodium channels and treats focal seizures; dizziness, ataxia, rash, and clinically important hyponatraemia may occur.

### **Oxidants**

A medical term referring to oxidants. Its clinical meaning depends on the context in which it is used.

### **Oxidation-Reduction**

oxidation-reduction is a biological, genetic, biochem-

ical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Oxidopamine**

A medical term referring to oxidopamine. Its clinical meaning depends on the context in which it is used.

### **Oxidoreductase**

An oxidoreductase is an enzyme that catalyzes transfer of electrons or hydrogen between molecules during oxidation-reduction reactions.

### **Oxime**

A medical term referring to oxime. Its clinical meaning depends on the context in which it is used.

### **Oximetry**

oximetry is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

### **Oxonic Acid**

A biological or biochemical term involving oxonic acid. Its role depends on the relevant cells, molecules, and physiological process.

### **Oxprenolol**

A medicine or pharmacologic agent called oxprenolol. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Oxycodone**

Oxycodone is an opioid analgesic used for moderate-to-severe pain; sedation, constipation, respiratory depression, tolerance, dependence, and overdose risk increase with alcohol or other sedatives.

### **Oxycodone Hydrochloride**

A medical term referring to oxycodone hydrochloride. Its clinical meaning depends on the context in which it is used.

---

### Oxygen Pulse

A medical term referring to oxygen pulse. Its clinical meaning depends on the context in which it is used.

### Oxygen Transport

A medical term referring to oxygen transport. Its clinical meaning depends on the context in which it is used.

### Oxygenases

A medical term referring to oxygenases. Its clinical meaning depends on the context in which it is used.

### Oxygenator

A medical term referring to oxygenator. Its clinical meaning depends on the context in which it is used.

### Oxyhemoglobin

Oxyhemoglobin is hemoglobin bound to oxygen, formed mainly in the lungs and carrying oxygen through arterial blood to tissues.

### Oxylipins

Oxylipins are oxygenated fatty-acid derivatives that act as local mediators of inflammation, vascular tone, pain, and other physiologic responses.

### Oxymetholone

A medicine or pharmacologic agent called oxymetholone. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### Oxymorphone

A medical term referring to oxymorphone. Its clinical meaning depends on the context in which it is used.

### Oxyphil Cell

oxyphil cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### Oxyphilic Adenoma

An oxyphilic adenoma is a usually benign glandular tumor composed of cells rich in mitochondria, such as an oncocytic parathyroid or salivary-gland tumor.

### Ozone

Ozone is a reactive form of oxygen that can irritate and injure the airways and lungs when inhaled, despite useful atmospheric and disinfecting roles.

### OAB

Alternate index label; see *Overactive bladder*.

### Obesity, Childhood

Alternate index label; see *Childhood obesity*.

### Obstetric Cholestasis

Alternate index label; see *Cholestasis of pregnancy*.

### Obstructive Sleep Apnea In Children

Alternate index label; see *Pediatric obstructive sleep apnea*.

### Occult Primary Cancer

Alternate index label; see *Carcinoma of unknown primary*.

### Oculocutaneous Albinism

Alternate index label; see *Albinism*.

### Oculosympathetic Palsy

Alternate index label; see *Horner syndrome*.

### ODD

Alternate index label; see *Oppositional defiant disorder (ODD)*.

### Odontogenic Tumors And Cysts

Alternate index label; see *Jaw tumors and cysts*.

### OHSS

Alternate index label; see *Ovarian hyperstimulation syndrome*.

---

## **OLP**

Alternate index label; see *Oral lichen planus*.

## **Optic Nerve Glioma**

Alternate index label; see *Optic glioma*.

## **Optic Pathway Glioma**

Alternate index label; see *Optic glioma*.

## **Osteoarthritis, Cervical**

Alternate index label; see *Cervical spondylosis*.

## **Osteonecrosis**

Osteonecrosis is death of bone tissue from inadequate blood supply, causing pain, collapse, and joint damage, commonly in the hip or knee.

## **Osteophytes**

Alternate index label; see *Bone spurs*.

## **Outer Ear Infection**

Alternate index label; see *Swimmer's ear*.

## **Overactive Thyroid**

Alternate index label; see *Hyperthyroidism (overactive thyroid)*.

## **Oxyphil Cell Carcinoma**

Alternate index label; see *Hurthle cell cancer*.

## **Obesity Hypoventilation Syndrome (OHS)**

Obesity hypoventilation syndrome is awake alveolar hypoventilation in a person with obesity after other causes are excluded, commonly accompanied by obstructive sleep apnea and pulmonary hypertension.

## **Obesity In Children**

A clinical condition involving obesity In Children; its causes, manifestations, severity, and complications guide diagnosis and management.

## **Obstructive Sleep Apnea - Adults**

Obstructive sleep apnea is repeated upper-airway

collapse during sleep, causing pauses in breathing, oxygen fluctuation, snoring, fragmented sleep, and daytime impairment.

## **Oculoplastic Procedures**

A medical procedure, treatment, device, or care topic related to oculoplastic procedures; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Oil-Based Paint Poisoning**

Oil-based paint poisoning involves toxic or environmental exposure to oil-based paint poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Oily Hair**

Oily hair involves toxic or environmental exposure to oily hair; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Oily Skin**

Oily skin involves toxic or environmental exposure to oily skin; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Oleander Poisoning**

Oleander poisoning involves toxic or environmental exposure to oleander poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Omega-3 Fats - Good For Your Heart**

Omega-3 fats - Good for your heart concerns omega-3 fats - good for your heart, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Omphalocele Repair**

A medical procedure, treatment, device, or care topic related to omphalocele repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Online Health Information - What Can**

---

## **You Trust?**

Online health information - what can you trust? addresses care related to online health information - what can you trust?, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Open Gallbladder Removal**

A medical procedure, treatment, device, or care topic related to open gallbladder removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Open Lung Biopsy**

Open lung biopsy examines open lung biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Open Pleural Biopsy**

Open pleural biopsy examines open pleural biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Open Spleen Removal In Adults - Discharge**

A medical procedure, treatment, device, or care topic related to open spleen removal in adults - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Opiate And Opioid Withdrawal**

Opioid withdrawal is a predictable syndrome after reducing or stopping opioid exposure, producing anxiety, sweating, muscle aches, diarrhea, abdominal cramps, nausea, and autonomic symptoms.

## **Opioid Intoxication**

Opioid intoxication can cause euphoria, drowsiness, slowed breathing, pinpoint pupils, impaired coordination, coma, and death; respiratory depression requires immediate emergency treatment.

## **Oral Human Papillomavirus Infection**

Oral human papillomavirus infection examines oral

human papillomavirus infection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Oral Hypoglycemics Overdose**

Oral hypoglycemics overdose involves toxic or environmental exposure to oral hypoglycemics overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Oral Mucositis - Self-Care**

A medical procedure, treatment, device, or care topic related to oral mucositis - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Oral Mucous Cyst**

An oral mucous cyst is a mucus-filled lesion caused by salivary-gland duct injury or blockage, often appearing on the lower lip or floor of the mouth.

## **Orbit CT Scan**

Orbit CT scan examines orbit ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Orgasmic Dysfunction In Women**

Orgasmic dysfunction in women examines orgasmic dysfunction in women; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Oropharynx Lesion Biopsy**

Oropharynx lesion biopsy examines oropharynx lesion biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Orthopedic Services**

Orthopedic services addresses care related to orthopedic services, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

---

### **Osmolality Blood Test**

Osmolality blood test examines osmolality blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Osmolality Urine Test**

Osmolality urine test examines osmolality urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Osmotic Diuresis**

A medical term referring to osmotic diuresis. Its clinical meaning depends on the context in which it is used.

### **Osteitis Fibrosa**

Osteitis fibrosa is fibrous replacement and weakening of bone caused by prolonged excess parathyroid hormone, usually in severe hyperparathyroidism.

### **Osteomyelitis - Discharge**

A medical procedure, treatment, device, or care topic related to osteomyelitis - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Osteomyelitis In Children**

Childhood osteomyelitis is infection of bone, often caused by bacteria entering through blood or trauma, producing pain, fever, swelling, and impaired movement.

### **Osteopenia - Premature Infants**

Osteopenia of prematurity is reduced bone mineralization in premature infants due to immature mineral stores, limited intake, illness, or prolonged intensive care.

### **Osteotomy Of The Knee**

A medical term referring to osteotomy of the knee. Its clinical meaning depends on the context in which it is used.

### **Ostomy - Resources**

Ostomy - resources addresses care related to ostomy - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Outdoor Fitness Routine**

A medical term referring to outdoor fitness routine. Its clinical meaning depends on the context in which it is used.

### **Ovarian Overproduction Of Androgens**

Ovarian overproduction of androgens examines ovarian overproduction of androgens; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Oven Cleaner Poisoning**

Oven cleaner poisoning involves toxic or environmental exposure to oven cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Over-The-Counter Medicines**

Over-the-counter medicines examines over-the-counter medicines; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Over-The-Counter Pain Relievers**

Over-the-counter pain relievers examines over-the-counter pain relievers; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Overcoming Breastfeeding Problems**

Breastfeeding problems such as pain, poor latch, low supply, engorgement, or blocked ducts can often improve with feeding assessment, positioning help, and timely lactation or medical support.

### **Overcoming Job Stress**

Overcoming job stress examines overcoming job stress; interpretation depends on the specimen or body region, test method, reference range, and clin-

---

ical question.

### **Ovulation Home Test**

Ovulation home test examines ovulation home test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Oxalic Acid Poisoning**

Oxalic acid poisoning involves toxic or environmental exposure to oxalic acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Oxazepam Overdose**

Oxazepam overdose involves toxic or environmental exposure to oxazepam overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Oxygen Safety**

A medical term referring to oxygen safety. Its clinical meaning depends on the context in which it is used.

### **Oxygen Therapy In Infants**

Oxygen therapy in infants supplements inspired oxygen when gas exchange is inadequate, while careful monitoring limits complications from both hypoxemia and excessive oxygen exposure.

### **Ozena**

Ozena is a chronic form of atrophic rhinitis with widened nasal passages, crusting, foul odor, and impaired mucosal function.

### **OAB (Overactive Bladder)**

Alternate index label for Overactive Bladder.

### **Obesity (Weight Loss)**

Alternate index label for Weight Loss.

### **Objects Or Insects In Ear**

An object or insect in the ear canal can cause pain, hearing loss, bleeding, discharge, or a sensation of

movement. Do not insert tools or liquids; removal by a clinician is safest when the object is deep, sharp, chemical, or near the eardrum.

#### **Synonyms:**

Ear Object In (Objects Or Insects In Ear)

### **Obsessive Compulsive Disorder (OCD)**

Alternate index label for OCD.

### **Onychocryptosis (Ingrown Toenail)**

Alternate index label for Ingrown Toenail.

### **Onychomycosis (Fungal Nails)**

Alternate index label for Fungal Nails.

### **Oral Candidiasis Children (Thrush And Other Yeast Infections In Children)**

Alternate index label for Thrush and Other Yeast Infections in Children.

### **Oral Health Problems In Children**

Children can develop tooth decay, gum inflammation, mouth trauma, ulcers, malocclusion, infections, and developmental dental problems. Fluoride, brushing with supervision, dental visits, injury prevention, and prompt care for pain, swelling, fever, or trauma protect oral health.

### **Oral Moniliasis Children (Thrush And Other Yeast Infections In Children)**

Alternate index label for Thrush and Other Yeast Infections in Children.

### **Orgasm Male (Sexual (Sex) Problems In Men)**

Alternate index label for Sexual (Sex) Problems in Men.

### **Osteitis Deformans (Paget's Disease)**

Alternate index label for Paget's Disease.

### **Osteogenesis Imperfecta Brittle Bone Disease**

Osteogenesis imperfecta is an inherited collagen disorder causing fragile bones, recurrent fractures,

---

short stature, dentin abnormalities, hearing loss, and variable skeletal deformity. Care may include fracture prevention, rehabilitation, medicines, surgery, and monitoring of hearing and breathing.

**Synonyms:**

Brittle Bone Disease (Osteogenesis Imperfecta Brittle Bone Disease)

**Osteomalacia (Rickets)**

Alternate index label for Rickets.

**Otitis (Ear Infection)**

Alternate index label for Ear Infection.

**Overactive Thyroid (Hyperthyroidism)**

Alternate index label for Hyperthyroidism.

**Overload Iron (Iron Overload)**

Alternate index label for Iron Overload.

**Overuse Syndrome (Repetitive Motion Disorders (RMDs))**

Alternate index label for Repetitive Motion Disorders (RMDs).

**Oath Of Maimonides**

The Oath of Maimonides is a historical ethical prayer emphasizing compassion, dedication, humility, and responsibility in the practice of medicine.

**OB**

OB is an abbreviation commonly meaning obstetrics, the care of pregnancy, labor, birth, and the postpartum period, but it may have other meanings.

**OB/GYN**

OB/GYN refers to obstetrics and gynecology, the medical specialties concerned with pregnancy and reproductive-system health.

**Obese**

Obese describes a body-mass index of 30 or higher in adults, though BMI is an imperfect measure and health assessment should include overall risk and function.

**Obesity, Exogenous**

A clinical condition involving obesity, Exogenous; its causes, manifestations, severity, and complications guide diagnosis and management.

**OBS**

OBS is a context-dependent abbreviation that may mean observation, obstetric service, or organic brain syndrome; the intended term should be written out.

**Observer Variation**

A biological or biochemical term involving observer variation. Its role depends on the relevant cells, molecules, and physiological process.

**Obtunded**

A medical term referring to obtunded. Its clinical meaning depends on the context in which it is used.

**Occam's Razor**

Occam's razor is the reasoning principle favoring the simplest explanation that accounts for the findings, while recognizing that patients can have multiple conditions.

**Occipital Hematoma**

A clinical condition involving occipital Hematoma; its causes, manifestations, severity, and complications guide diagnosis and management.

**Occlude**

To occlude means to block or close a passage, vessel, airway, duct, or opening.

**Occupational Therapist**

A biological or biochemical term involving occupational therapist. Its role depends on the relevant cells, molecules, and physiological process.

**OCG**

OCG is a context-dependent abbreviation that may refer to oral contraceptive guidance, oculo-cardiac testing, or another clinical term; the full term should be specified.

---

## OCP

OCP commonly means oral contraceptive pill, a medicine containing estrogen, progestin, or both to prevent pregnancy and sometimes treat menstrual disorders.

## OD (Lens Prescription)

OD in an eyeglass prescription means the right eye, from the Latin *oculus dexter*.

## Oligo- (Prefix)

Oligo- is a prefix meaning few, scanty, or small in number or amount.

## Oma

-oma is a suffix commonly indicating a tumor or mass, although some words ending in -oma describe non-neoplastic conditions.

## OMS

OMS is a context-dependent abbreviation that may mean oral and maxillofacial surgery or another organization or medical term.

## OMS (World Health Organization)

WHO is the World Health Organization, the United Nations agency coordinating international public-health work; OMS is its acronym in some languages.

## On Call

On call means available and responsible to respond to clinical or operational needs during a designated period outside routine scheduled activity.

## Oneirophrenia

A medical term referring to oneirophrenia. Its clinical meaning depends on the context in which it is used.

## Onset

Onset is the time or manner in which a symptom, disease, or physiologic change begins, such as sudden, gradual, acute, or insidious onset.

## Onycho- (Prefix)

Onycho- is a prefix meaning relating to a nail or claw.

## Onychocryptosis

Onychocryptosis is an ingrown nail, usually at the great toe, in which the nail edge penetrates surrounding skin and causes pain or inflammation.

## Ophthalmitis

Ophthalmitis is inflammation of the eye and can result from infection, immune disease, trauma, or surgery.

## OR (Abbreviation)

OR commonly means operating room or odds ratio; the intended meaning depends on clinical or statistical context.

## Oral Cholecystogram

Oral cholecystogram is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

## Oral Moniliasis

Oral moniliasis is oral candidiasis, a *Candida* yeast infection causing white plaques, soreness, burning, or altered taste.

## Oral Rehydration Salts

A biological or biochemical term involving oral rehydration salts. Its role depends on the relevant cells, molecules, and physiological process.

## Organ Failure

Organ failure refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

## Organic Brain Syndrome

A clinical condition involving organic Brain Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

---

### **Oriental Medicine (Traditional)**

A biological or biochemical term involving oriental medicine (traditional). Its role depends on the relevant cells, molecules, and physiological process.

### **Ornithine Transcarbamylase (OTC) Deficiency**

OTC deficiency is an inherited urea-cycle disorder causing ammonia accumulation, vomiting, confusion, seizures, or coma, especially during metabolic stress.

### **Orphan Disease**

A clinical condition involving orphan Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Ortho- (Prefix)**

Ortho- is a prefix meaning straight, correct, upright, or related to orthopedic care depending on the term.

### **Orthodontic Treatment (Dental Braces)**

Orthodontic treatment (dental braces) is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Orthopod**

Orthopod is an informal term for an orthopedic physician who diagnoses and treats disorders of bones, joints, muscles, and related tissues.

### **Orthoscopic**

Orthoscopic means providing a straight or undistorted view, as in an optical instrument or examination.

### **Orthotic**

Orthotic means relating to a brace, splint, insert, or device that supports, aligns, protects, or improves function of a body part.

### **OS (Lens Prescription)**

OS in an eyeglass prescription means the left eye, from the Latin oculus sinister.

### **Oscitation**

A biological or biochemical term involving oscitation. Its role depends on the relevant cells, molecules, and physiological process.

### **OSHA**

OSHA is the U.S. Occupational Safety and Health Administration, which sets and enforces workplace safety and health standards.

### **Osmolar**

A medical term referring to osmolar. Its clinical meaning depends on the context in which it is used.

### **Osmole**

A medical term referring to osmole. Its clinical meaning depends on the context in which it is used.

### **Osseous**

Osseous means relating to or composed of bone.

### **Osteo- (Prefix)**

Osteo- is a prefix meaning relating to bone.

### **Osteoarthropathy**

Osteoarthropathy is disease affecting bones and joints, often describing degenerative, hypertrophic, metabolic, or systemic-associated changes.

### **Osteoclasia**

Osteoclasia is surgical or mechanical breaking of bone, historically used to correct deformity.

### **Osteoclasia**

Osteoclasia is deliberate fracture or manipulation of bone, usually to correct deformity or restore alignment.

### **Osteolytic**

Osteolytic means causing or characterized by breakdown and loss of bone tissue.

### **Osteosynthesis**

A medical term referring to osteosynthesis. Its clin-

---

ical meaning depends on the context in which it is used.

### **Ot-**

The term Ot- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **OTC (Over-The-Counter)**

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### **Othello Syndrome**

A clinical condition involving othello Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Oto-**

The term Oto- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Over-The-Counter (OTC) Drug**

A pharmacologic agent associated with over-The-Counter (OTC) Drug; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Oxter**

Oxter is an anatomical term for the armpit or axilla.

### **Oxy**

Oxy- is a prefix relating to oxygen, sharpness, or acidity depending on the medical or chemical term.

### **OxyContin**

OxyContin is an extended-release oxycodone opioid formulation used for selected severe persistent pain and carrying risks of misuse, dependence, and respiratory depression.

### **Oxygen Tent**

A medical term referring to oxygen tent. Its clinical

meaning depends on the context in which it is used.

### **Oxygenation**

A biological or biochemical term involving oxygenation. Its role depends on the relevant cells, molecules, and physiological process.

### **Oz.**

Oz. is an abbreviation for ounce, a unit of mass or fluid volume whose exact conversion depends on the measurement system.

### **Ovaries**

The paired female gonads that produce oocytes and secrete sex hormones, mainly estrogen and progesterone. They are located on either side of the uterus and participate in the menstrual cycle and reproduction.

#### **Synonyms:**

ovary

### **Oral Thrush**

A fungal infection of the mouth, usually caused by Candida, producing creamy white patches, soreness, or altered taste.

#### **Synonyms:**

Candidiasis, Oral Thrush, Oral

### **Obstructed Labour**

Failure of the fetus to pass through the birth canal despite adequate uterine contractions, commonly because of disproportion, abnormal presentation, or an obstructing lesion.

### **Oral Appliance Therapy**

Treatment using a removable dental appliance during sleep, commonly to advance the mandible or retain the tongue and reduce upper-airway collapse in selected obstructive sleep apnea.

### **Oxygen Desaturation Index**

The average number of oxygen desaturation events per hour of sleep, usually reported from a sleep study as the ODI; interpretation depends on the recording method and clinical context.

---

### **Opioid Toxidrome**

A poisoning pattern caused by opioid excess, characterized by respiratory depression, reduced consciousness, and small pupils; naloxone and ventilatory support may be required.

### **Otoplasty**

Surgery to alter the shape, position, or proportion of the external ear, commonly to correct prominent or congenital ear differences.

### **Endometrioid Ovarian Carcinoma**

A malignant ovarian epithelial tumor resembling endometrial glands, sometimes associated with endometriosis and often showing alterations in the PI3K or mismatch-repair pathways.

### **High-Grade Serous Ovarian Carcinoma**

A high-grade tubo-ovarian epithelial carcinoma characterized by marked nuclear atypia and nearly universal abnormality of the TP53 pathway; many arise from the fimbrial fallopian tube.

### **Immature Ovarian Teratoma**

A malignant germ-cell tumor containing immature embryonal tissues, usually diagnosed in adolescents or young adults and graded by the amount of immature neuroepithelium.

### **Mucinous Borderline Ovarian Tumor**

An ovarian mucinous epithelial tumor with cellular proliferation and atypia but without destructive stromal invasion; it may be large and unilateral.

### **Mucinous Ovarian Carcinoma**

A malignant ovarian epithelial tumor composed of invasive mucin-producing cells; metastatic gastrointestinal or pancreatobiliary carcinoma must be excluded.

### **Ovarian Metastasis**

Secondary involvement of the ovary by a malignant tumor arising elsewhere, commonly from the gastrointestinal tract, breast, or gynecologic tract; the distinction from a primary ovarian tumor guides

treatment.

### **Serous Borderline Ovarian Tumor**

An ovarian serous epithelial tumor with hierarchical papillae and cellular atypia but no destructive stromal invasion; extraovarian implants may occur.

### **Small Cell Carcinoma Of The Ovary, Hypercalcemic Type**

A rare, highly aggressive ovarian tumor in young patients, often associated with alterations in SMARCA4 and sometimes presenting with hypercalcemia.

### **Struma Ovarii**

A specialized mature ovarian teratoma composed predominantly of thyroid tissue; it may be hormonally active or develop malignant thyroid-type transformation.

### **Thecoma**

A usually benign ovarian sex-cord stromal tumor composed of theca-like cells, often producing estrogen and presenting with abnormal uterine bleeding or an incidental adnexal mass.

### **Yolk Sac Tumor**

A malignant ovarian germ-cell tumor that often occurs in children or young adults and produces alpha-fetoprotein; it requires prompt treatment.

### **Osteosarcoma, Secondary**

An osteogenic sarcoma arising in previously abnormal or treated bone, such as bone affected by Paget disease, prior radiation, or chronic bone lesions; prognosis and treatment depend on stage and resectability.

## P

### **P Wave**

The first deflection on the ECG, representing atrial depolarization. Normal P waves are upright in leads I and II, inverted in aVR, and less than 0.12 seconds (3 small boxes) in duration and 2.5 mm in amplitude.

### **Pacemaker, Artificial**

An implanted device that sends electrical impulses to maintain an appropriate heart rhythm.

### **Paediatrician**

A physician specializing in the medical care of infants, children, and adolescents.

### **Paediatrics**

The medical specialty concerned with health and disease in infants, children, and adolescents.

### **Pain Clinic**

A service providing assessment and multidisciplinary treatment for acute, chronic, or complex pain.

### **Palate**

The roof of the mouth, consisting of a bony hard palate and muscular soft palate.

### **Palatine**

Relating to the palate or palatine bone.

### **Paliperidone**

An atypical antipsychotic medicine used to treat schizophrenia and schizoaffective disorder.

### **Pallesthesia**

The ability to perceive vibration, tested with a tun-

ing fork and mediated by large sensory fibers.

### **Palliative Surgery**

Surgery intended to relieve symptoms or improve function without necessarily curing the underlying disease.

### **Pallidotomy**

A neurosurgical procedure creating a lesion in the globus pallidus to reduce selected symptoms of advanced Parkinson disease.

### **Pallor**

Unusual paleness of skin or mucous membranes, often due to reduced blood flow, anemia, or other illness.

### **Palm**

The inner surface of the hand between the wrist and fingers.

### **Palmar**

Relating to the palm of the hand.

### **Palpebra**

An eyelid.

### **Palsy**

Weakness or paralysis, often involving a specific nerve or muscle group.

### **Panacea**

A supposed remedy for all diseases; it is not a recognized medical treatment.

---

## **Pancreas, Diseases Of**

Disorders affecting the pancreas, including pancreatitis, cysts, tumors, diabetes, and exocrine insufficiency.

## **Pancreazymine**

An older name for cholecystokinin, a hormone that stimulates pancreatic enzyme secretion and gallbladder contraction.

## **Panendoscopy**

Endoscopic examination of several connected parts of the upper aerodigestive tract, often the pharynx, larynx, and oesophagus.

## **Panmyelopathy**

Disease affecting multiple cell lines or functions of the bone marrow and spinal cord; the term is uncommon and context-dependent.

## **Panophthalmitis**

Severe inflammation involving all coats and internal contents of the eye, usually due to infection and threatening vision.

## **Pantothenic Acid**

Vitamin B5, a component of coenzyme A required for fatty-acid and energy metabolism.

## **Papain**

A proteolytic enzyme from papaya latex used in some food and historical medicinal preparations.

## **Papanicolaou (Pap) Test**

A screening test in which cervical cells are examined for precancerous changes and cancer.

## **Papillectomy**

Surgical removal of a papilla or papillary lesion, such as an ampullary tumor.

## **Papilloedema**

Swelling of the optic discs caused by raised intracranial pressure.

## **Papillomavirus**

A papillomavirus, especially human papillomavirus, which can cause warts and some anogenital, oropharyngeal, and other cancers.

## **Papule**

A small, solid, raised skin lesion, usually less than 1 centimeter in diameter.

## **Para-**

A combining form meaning beside, beyond, abnormal, or closely related, depending on the word.

## **Paracusia**

A disorder of hearing in which sounds are perceived abnormally or inaccurately.

## **Paraesthesia**

An abnormal sensation such as tingling, pins and needles, burning, or numbness.

## **Paraffin**

A mixture of hydrocarbons used in laboratory tissue processing, topical preparations, and other applications; some forms are flammable.

## **Parageusia**

An altered or unpleasant sense of taste.

## **Paragraphia**

A language disorder involving incorrect or unintended words or written symbols.

## **Paraldehyde**

An older sedative and anticonvulsant medicine with limited current use.

## **Paralysis**

Loss of voluntary muscle movement in part or all of the body due to nervous-system or muscle disease.

## **Paralysis Agitans**

An older name for Parkinson disease, characterized by tremor, rigidity, and bradykinesia.

---

### **Paralytic Ileus**

Failure of intestinal peristalsis without a mechanical blockage, causing abdominal distension, pain, vomiting, and absent or reduced bowel sounds.

### **Paramedical**

Relating to healthcare professionals or services that support medical practice, such as physiotherapy, radiography, or emergency medical care.

### **Parametritis**

Inflammation of the connective tissue beside the uterus, often following pelvic infection or childbirth.

### **Paramnesia**

A memory disturbance involving false, distorted, or inaccurately familiar recollections.

### **Paranoid**

Marked by persistent or excessive suspiciousness and distrust.

### **Paranoid Psychosis**

An older term for psychosis dominated by delusions of persecution, reference, or grandeur.

### **Paranoid Schizophrenia**

An obsolete subtype label for schizophrenia with prominent delusions and hallucinations; current classification uses symptom dimensions.

### **Paraparesis**

Weakness affecting both legs, usually due to spinal-cord, brain, nerve, or muscle disease.

### **Paraphasia**

Substitution, omission, or distortion of sounds or words during speech, usually due to aphasia.

### **Paraplegia**

Paralysis of both legs and often part of the trunk, usually from spinal-cord or neurologic disease.

### **Paratyphoid Fever**

An enteric fever caused by *Salmonella Paratyphi*, transmitted mainly through contaminated food or water.

### **Parenchyma**

The functional tissue of an organ, distinguished from its supporting connective tissue or stroma.

### **Paresis**

Partial weakness or incomplete paralysis.

### **Paresthesia**

An abnormal sensation such as tingling, prickling, burning, or pins and needles.

### **Parietal**

Relating to a wall of a body cavity or to the parietal bone or lobe of the skull and brain.

### **Parietal Bone**

One of two bones forming much of the sides and roof of the skull.

### **Parotitis**

Inflammation of the parotid salivary gland.

### **Paroxysm**

A sudden attack or burst of symptoms or physiologic activity.

### **Paroxysmal Nocturnal Haemoglobinuria**

An acquired clonal stem-cell disorder causing complement-mediated hemolysis, thrombosis, and variable bone-marrow failure.

### **Pars**

A part or portion of an anatomical structure, used in names such as *pars interarticularis*.

### **Passive Immunity**

Protection produced by transferred antibodies rather than by the person's own immune response, such as maternal antibodies or immunoglobulin

---

treatment.

### **Pasteurella**

A genus of bacteria carried by animals that can cause wound infections after bites and other human disease.

### **Pathognomonic**

So characteristic of a disease that it strongly identifies that disease when present.

### **Patient-Controlled Analgesia (PCA)**

A system allowing a patient to self-administer preset doses of analgesic through a programmed pump with safety limits.

### **Peak Flow Meter**

A handheld device measuring peak expiratory flow, useful for monitoring variable airflow obstruction such as asthma.

### **Pectoral**

Relating to the chest or breast.

### **Pectoralis**

A muscle of the chest, chiefly pectoralis major or pectoralis minor.

### **Pediculosis**

Infestation by lice.

### **Pedigree**

A diagram showing family relationships and inheritance of traits or disease.

### **Pedodontics**

The branch of dentistry concerned with infants, children, and adolescents.

### **Pellagra**

A disease caused by niacin deficiency, classically producing dermatitis, diarrhea, and neuropsychiatric changes.

### **Pelvimeter**

An instrument used to measure pelvic dimensions.

### **Pelvis**

The bony ring and associated soft tissues at the base of the trunk, connecting the spine with the lower limbs.

### **Pemphigoid**

A group of autoimmune subepidermal blistering disorders, including bullous pemphigoid.

### **Pemphigus**

A group of autoimmune intraepidermal blistering disorders caused by antibodies against desmosomal proteins.

### **Pendular**

Moving or swinging freely like a pendulum; pendular nystagmus has a similar speed in both directions.

### **Penetrating Wounds**

Wounds caused by an object entering tissue and potentially damaging deeper structures.

### **Penicillamine**

A chelating and immunomodulatory medicine used in selected copper overload and autoimmune disorders.

### **Penicillin**

A beta-lactam antibiotic group that inhibits bacterial cell-wall synthesis.

### **Penis**

The male external genital organ used for urination and sexual reproduction.

### **Pentaerythritol Tetranitrate**

An organic nitrate with vasodilator activity, mainly of historical or specialized pharmaceutical interest.

### **Pentamidine**

An antiprotozoal and antimicrobial medicine used

---

for selected leishmaniasis, trypanosomiasis, and Pneumocystis infections.

### **Pentazocine**

An opioid analgesic with mixed agonist-antagonist activity.

### **Pentobarbital**

A barbiturate sedative and anticonvulsant with substantial respiratory-depression and overdose risk.

### **Peppermint**

Mentha piperita, used as a flavoring and in some preparations for dyspeptic symptoms; concentrated oil can be hazardous.

### **Pepsinogen**

An inactive precursor released by gastric chief cells and converted to pepsin in acidic conditions.

### **Peptic Ulcer**

A break in the lining of the stomach or duodenum caused commonly by Helicobacter pylori or NSAIDs.

#### **Synonyms:**

Stomach Ulcer (Peptic Ulcer) Ulcer, Peptic

### **Peptidase**

An enzyme that breaks peptide bonds in proteins or peptides.

### **Peptide**

A short chain of amino acids linked by peptide bonds.

### **Perceptual**

Relating to the process of detecting and interpreting sensory information.

### **Percussion**

Tapping the body surface to assess the underlying tissue by its sound and transmitted vibration.

### **Percutaneous**

Performed through the skin, usually with a needle,

catheter, or other instrument.

### **Perforation**

A hole or rupture through the wall of an organ or tissue.

### **Perfusion**

Passage of blood or another fluid through a tissue or organ.

### **Pericardial Effusion**

Excess fluid in the pericardial sac surrounding the heart; rapid accumulation can cause tamponade.

### **Pericarditis**

Inflammation of the pericardium, with or without fluid accumulation. Acute pericarditis commonly causes sharp chest pain that worsens with breathing and improves when sitting up or leaning forward. Diagnosis is based on clinical findings, such as a pericardial friction rub, characteristic electrocardiographic changes, or a new pericardial effusion. Causes include infection, autoimmune disease, myocardial injury, kidney failure, cancer, trauma, and some medicines. Complications include cardiac tamponade, recurrence, and constrictive pericarditis.

#### **Synonyms:**

Inflamed Pericardium Pericardial Inflammation Pericardial Disease (Pericarditis)

### **Pericardium**

The double-layered sac surrounding the heart and the roots of the great vessels.

### **Perichondrium**

The connective-tissue covering surrounding most cartilage.

### **Perineum**

The region between the external genitalia and anus.

### **Periodontal Disease**

Inflammatory or infectious disease of the tissues supporting the teeth, including gingivitis and periodontitis.

---

### **Periodontics**

The dental specialty concerned with the gums and supporting tissues of the teeth.

### **Periodontitis**

A chronic inflammatory disease caused by dysbiotic dental plaque that destroys the periodontal ligament and alveolar bone supporting the teeth. It can cause bleeding gums, periodontal pockets, tooth mobility, recession, bad breath, and tooth loss; severity and progression vary and require dental evaluation.

#### **Synonyms:**

Periodontal Disease, Periodontitis

### **Periodontium**

The tissues supporting a tooth: gingiva, periodontal ligament, cementum, and alveolar bone.

### **Periosteum**

A vascular connective-tissue membrane covering the outer surface of bone except at articular cartilage.

### **Periostitis**

Inflammation of the periosteum.

### **Periurethral**

Situated around the urethra.

### **Perleche**

Angular cheilitis, inflammation and cracking at the corners of the mouth.

### **Permanent Teeth**

The adult set of teeth that replaces the deciduous teeth.

### **Permethrin**

A topical pyrethroid medicine used mainly to treat scabies and head lice.

### **Pernicious Anaemia**

An autoimmune cause of vitamin B12 deficiency due to impaired intrinsic-factor-mediated absorption.

### **Peroneal**

Relating to the fibula or the muscles and nerve on the outer side of the lower leg.

### **Perphenazine**

A phenothiazine antipsychotic and antiemetic medicine.

### **Perspiration**

Sweat produced by eccrine and apocrine glands.

### **Pertussis**

Whooping cough, a contagious respiratory infection caused by *Bordetella pertussis*.

### **Pervasive Developmental Disorders**

An obsolete group term for disorders involving social communication and restricted repetitive behavior, including autism-spectrum conditions.

### **Pessary**

A device placed in the vagina to support pelvic organs or deliver medication.

### **Pesticide**

A substance used to control insects, weeds, fungi, or other pests; exposure can cause poisoning.

### **PET Scan**

An imaging study using a positron-emitting tracer to measure metabolism, receptor activity, or tissue function.

### **Petechiae**

Tiny nonblanching red or purple spots caused by small areas of bleeding into the skin or mucosa.

### **Petit Mal**

An older term for absence seizures, brief episodes of impaired awareness with characteristic generalized EEG activity.

### **Petrissage**

A massage technique involving kneading or lifting

---

soft tissues.

### **Petrolatum**

A semisolid mixture of hydrocarbons used as a protective skin ointment and moisture barrier.

### **Petrous**

Dense and rock-like; usually referring to the petrous part of the temporal bone.

### **Phagocyte**

A cell that engulfs and digests microorganisms, dead cells, or foreign particles.

### **Phagocytosis**

The process by which a cell surrounds, ingests, and digests a particle or microorganism.

### **Phalanges**

The bones of the fingers and toes.

### **Phalanx**

One of the bones of a finger or toe.

### **Phallic Stage**

A historical psychoanalytic developmental stage centered on genital awareness; it is not a modern disease classification.

### **Pharmaceutical**

Relating to medicines or the preparation and manufacture of medicines.

### **Pharmacist**

A healthcare professional trained in medicines, including their preparation, dispensing, safety, and use.

### **Pharmacodynamics**

The study of what a drug does to the body, including its molecular targets, mechanism of action, dose-response relationship, therapeutic effects, and adverse effects.

### **Pharmacokinetics**

The study of what the body does to a drug, including absorption, distribution, metabolism, and excretion (ADME), and how drug concentrations change over time.

### **Pharmacology**

The study of drugs, their actions, uses, adverse effects, and interactions.

### **Pharmacy**

The science and practice of preparing, supplying, and advising on medicines.

### **Pharyngeal**

Relating to the pharynx.

### **Pharyngitis**

Inflammation of the pharynx, commonly causing sore throat and pain on swallowing.

#### **Synonyms:**

Sore Throat (Pharyngitis)

### **Pharynx**

The muscular throat passage behind the nose and mouth that leads to the larynx and oesophagus.

### **Phenelzine**

A monoamine oxidase inhibitor antidepressant requiring attention to interactions and dietary precautions.

### **Phenindione**

An older oral anticoagulant that interferes with vitamin-K-dependent clotting factors.

### **Phenobarbitone**

The British name for phenobarbital, a barbiturate anticonvulsant and sedative.

### **Phenol**

A corrosive aromatic compound used in chemical and laboratory applications and in some medical preparations.

---

**Phenomenon**

An observable event, sign, or process.

**Phenothiazines**

A class of medicines including antipsychotic and antiemetic drugs.

**Phenoxybenzamine**

An irreversible alpha-adrenergic blocker used mainly before surgery for pheochromocytoma.

**Phenoxymethylpenicillin**

Penicillin V, an oral penicillin used for selected susceptible infections.

**Pentermine**

A sympathomimetic appetite suppressant used short term in selected weight-management plans.

**Phenylbutazone**

An older NSAID with serious blood, kidney, gastrointestinal, and other toxicity risks.

**Phenylephrine**

An alpha-adrenergic agonist used as a decongestant, vasopressor, or pupil dilator.

**Phenylketonuria (PKU)**

An inherited deficiency of phenylalanine hydroxylase causing phenylalanine accumulation and neurologic injury without early treatment.

**Synonyms:**

PKU

**Phenytoin**

An anticonvulsant that blocks voltage-gated sodium channels and treats selected seizures.

**Pheochromocytoma**

A catecholamine-producing tumor of chromaffin cells, usually in the adrenal medulla, causing episodic or sustained hypertension.

**Synonyms:**

Tumor Adrenal Gland (Pheochromocytoma)

**Phimosis**

Inability to retract the foreskin behind the glans; pathologic cases may cause pain, infection, or urinary difficulty.

**Phlebitis**

Inflammation of a vein, sometimes associated with thrombosis.

**Phlegm**

Thick mucus coughed up from the lower respiratory tract.

**Phobia**

An excessive, persistent fear of a specific object or situation that leads to avoidance or distress.

**Phobic Disorder**

A disorder characterized by clinically significant fear and avoidance of a particular object or situation.

**Phocomelia**

A rare congenital limb-development defect in which hands or feet are attached close to the trunk because of absent or severely shortened long bones.

**Phonocardiogram**

A graphic recording of heart sounds and murmurs.

**Phosphate**

A salt or ester of phosphoric acid; phosphate is important in bone, energy metabolism, and cellular signaling.

**Phospholipid**

A lipid containing phosphate that forms a major component of cell membranes.

**Phosphorus**

An essential element in bone, nucleic acids, phospholipids, and ATP.

**Phosphorylation**

Addition of a phosphate group to a molecule, often

---

regulating protein activity or energy transfer.

### **Photophobia**

Abnormal sensitivity or intolerance to light.

### **Phototherapy**

Treatment using controlled light, such as for neonatal jaundice, psoriasis, or seasonal affective disorder.

### **Phrenic**

Relating to the diaphragm or the phrenic nerve.

### **Phrenic Nerve**

The nerve arising mainly from C3-C5 that supplies the diaphragm and carries sensory fibers from nearby structures.

### **Phthiriasis**

Infestation by lice, especially the pubic louse.

### **Phthisis**

An obsolete term for wasting or shrinkage of an organ, especially a severely damaged eye or lung.

### **Physical Medicine**

The medical specialty focused on function, rehabilitation, pain, and restoration of independence after illness or injury.

### **Physician**

A licensed medical doctor who diagnoses, treats, and prevents disease.

### **Physiotherapy**

Assessment and treatment using movement, exercise, manual techniques, education, and physical modalities to improve function.

### **Physiology**

The study of normal functions and processes of living organisms and their parts.

### **Pia Mater**

The delicate innermost membrane closely covering

the brain and spinal cord.

### **Pica**

Persistent eating of nonnutritive substances inappropriate for developmental level or culture.

### **Pick's Disease**

An older term for frontotemporal dementia associated with characteristic Pick bodies; current classification uses specific frontotemporal dementia syndromes.

### **Pickwickian Syndrome**

An older name for obesity hypoventilation syndrome, involving obesity, daytime hypercapnia, and sleep-disordered breathing.

### **Pilocarpine**

A muscarinic agonist used to constrict the pupil, lower intraocular pressure, or stimulate salivation.

### **Pimozide**

An antipsychotic medicine used in selected disorders, with important cardiac and neurologic adverse effects.

### **Pimple**

A common lay term for a small inflamed or blocked skin lesion, often an acne papule or pustule.

### **Pineal Gland**

An endocrine gland in the brain that secretes melatonin and helps regulate circadian timing.

### **Pink Eye**

A lay term for conjunctivitis, inflammation of the conjunctiva causing redness and discharge.

#### **Synonyms:**

Conjunctivitis (Pink Eye)

### **Pinna**

The visible external part of the ear that collects sound.

---

### **Pinocytosis**

Cellular uptake of extracellular fluid and dissolved substances in small vesicles.

### **Pint**

A unit of volume; its exact value varies by measurement system and country.

### **Pinta**

A chronic skin infection caused by *Treponema carateum*, producing changing stages of pigmentary lesions.

### **Pinworm**

The intestinal nematode *Enterobius vermicularis*, which commonly causes nocturnal perianal itching.

### **Piperazine**

An older anthelmintic used against selected intestinal worms.

### **Pipotiazine**

A long-acting phenothiazine antipsychotic administered in selected settings.

### **Pipradrol**

An older central nervous system stimulant with limited current use.

### **Piracetam**

A nootropic compound used in some countries for selected neurologic indications; evidence and approval vary.

### **Piroplasmosis**

An animal disease caused by *Babesia* or *Theileria* parasites; human babesiosis is a related infection.

### **Pits**

Small depressions or holes; in dermatology, pits may occur in nails or skin lesions.

### **Pituitary Gland**

An endocrine gland at the base of the brain that

regulates growth, thyroid, adrenal, reproductive, lactation, and water-balance hormones.

### **Pityriasis**

A group of skin disorders characterized by fine scaling, including pityriasis rosea and versicolor.

### **Placebo**

An inactive or nonspecific treatment used as a comparison or whose effects arise from expectation and care context.

### **Placenta**

The temporary organ connecting mother and fetus, allowing exchange of oxygen, nutrients, wastes, and hormones.

### **Placenta Praevia**

Placental implantation over or near the cervical opening, causing risk of painless late-pregnancy bleeding.

### **Plague**

A serious infection caused by *Yersinia pestis*, transmitted mainly by infected fleas or respiratory droplets in pneumonic disease.

### **Planar**

Flat or lying in a single plane; planar imaging produces a two-dimensional projection.

### **Plantar**

Relating to the sole of the foot.

### **Plantar Reflex**

The response produced by stroking the sole of the foot; an extensor response in an adult suggests corticospinal-tract dysfunction.

### **Plantar Wart**

A wart caused by human papillomavirus on the sole of the foot, often painful with pressure.

### **Plaque**

A flat, raised, or deposited area of material or tissue;

---

examples include dental plaque, arterial plaque, and skin plaques.

### **Plasma Expanders**

Intravenous fluids intended to increase circulating volume, including crystalloids and selected colloids.

### **Plasmacytoma**

A localized tumor of abnormal plasma cells, occurring in bone or soft tissue and sometimes progressing to multiple myeloma.

### **Plasmapheresis**

Removal of plasma from blood, with return of cellular components and replacement fluid, to remove pathogenic antibodies or substances.

### **Plasmodium**

A genus of parasites transmitted by Anopheles mosquitoes and responsible for malaria.

### **Plaster Of Paris**

Calcium sulfate hemihydrate that sets into a hard material, used for casts, splints, and models.

### **Plastic Surgery**

Surgery that reconstructs, restores, or alters body tissues for functional or cosmetic reasons.

### **Platelet**

A small blood cell fragment that helps form the initial plug in hemostasis.

### **Platelet Count**

The number of platelets in a given volume of blood, used to assess bleeding or clotting risk.

### **Platybasia**

Flattening of the skull base, measured by an increased basal angle and sometimes associated with neurologic compression.

### **Platysma**

A thin superficial muscle of the neck that tenses the skin and assists lower-jaw and lower-lip movement.

### **Pleat**

A fold of tissue or material; in anatomy it may describe a fold of mucosa or serosa.

### **Pleura**

The double-layered membrane surrounding each lung and lining the inner chest wall.

### **Pleural Effusion**

Excess fluid in the pleural space between the lung and chest wall.

### **Pleurisy**

Inflammation of the pleura, often causing sharp pain worsened by breathing.

#### **Synonyms:**

Pleuritis (Pleurisy)

### **Pleurodynia**

Severe, often episodic chest or upper-abdominal muscle pain associated with viral infection, especially coxsackievirus.

### **Plexus**

A network of intersecting nerves, vessels, or other structures.

### **Plica**

A fold of tissue, especially a synovial fold within a joint.

### **Plummer-Vinson Syndrome**

Iron-deficiency anemia with dysphagia and esophageal webs, associated with increased upper gastrointestinal cancer risk.

### **Pluripotentia**

Capable of differentiating into many, but not all, cell types.

### **Plutonium**

A radioactive heavy metal whose inhalation or ingestion can cause internal radiation exposure and toxicity.

---

## **Pm**

An abbreviation that may mean afternoon, post-mortem, or picometer; meaning depends on clinical context.

## **Pneumatic**

Operating by air or gas pressure.

## **Pneumatic Tourniquet**

An inflatable cuff used to temporarily reduce blood flow to a limb during surgery or selected procedures.

## **Pneumatocele**

A thin-walled, air-filled cavity in the lung, often developing after infection or trauma.

## **Pneumatosis**

Presence of gas within a tissue or organ wall, such as pneumatosis intestinalis.

## **Pneumoconiosis**

A group of occupational lung diseases caused by inhalation of mineral or industrial dusts.

## **Pneumocystis Carinii Pneumonia**

The historical name for *Pneumocystis jirovecii* pneumonia, an opportunistic lung infection in immunocompromised people.

## **Pneumocyte**

An epithelial cell lining the alveoli; type I cells exchange gases and type II cells produce surfactant.

## **Pneumoencephalography**

An obsolete imaging procedure that replaced cerebrospinal fluid with air to outline the brain on X-ray.

## **Pneumolysis**

Surgical separation or freeing of lung tissue or pleural adhesions.

## **Pneumomediastinum**

Air within the mediastinum, caused by trauma, rupture, barotrauma, or air tracking from the lungs or

neck.

## **Pneumonectomy**

Surgical removal of an entire lung.

## **Pneumonia**

Infection or inflammation of lung tissue causing symptoms such as cough, fever, breathlessness, and abnormal imaging.

## **Pneumonitis**

Inflammation of lung tissue, often from immune, drug, radiation, aspiration, or environmental causes rather than infection.

## **Pneumoperitoneum**

Air or gas within the peritoneal cavity, commonly from perforated bowel or abdominal surgery.

## **Pneumothorax**

Air in the pleural space causing partial or complete lung collapse.

## **Podagra**

Acute gout affecting the first metatarsophalangeal joint, causing severe pain, redness, and swelling.

## **Podiatrist**

A healthcare professional specializing in disorders of the feet and lower limbs.

## **Podiatry**

The healthcare field concerned with the feet, ankles, and related lower-limb disorders.

## **Podophyllum**

A plant genus containing podophyllotoxin, used in some topical wart treatments but toxic if misused.

## **Poikilocytosis**

Variation in the shape of red blood cells.

## **Poikilotherm**

An organism whose body temperature varies sub-

---

stantially with environmental temperature; humans are homeothermic.

### **Point**

A specific location, spot, or value; in medicine it may refer to a tender point, pressure point, or measurement point.

### **Poison**

A substance capable of causing injury, illness, or death when absorbed in sufficient amount.

### **Poisoning**

Harmful effects caused by exposure to a toxic substance.

### **Poisson Distribution**

A probability distribution modeling the number of events occurring in a fixed interval when events occur independently at a stable average rate.

### **Polar**

Relating to a pole, direction, or molecule with separated electrical charges.

### **Polarity**

The distribution or orientation of positive and negative electrical or biological properties.

### **Poliomyelitis**

An infection caused by poliovirus, usually spread by the fecal-oral route. Most infections are asymptomatic or cause a mild febrile illness, but some cause meningitis or damage to anterior-horn motor neurons, resulting in acute asymmetric flaccid paralysis and sometimes permanent weakness.

### **Politzerization**

A historical method of inflating the middle ear through the nose during swallowing to improve Eustachian-tube ventilation.

### **Pollakiuria**

Abnormally frequent urination, often in small amounts.

### **Pollen**

Fine grains released by plants that can trigger allergic rhinitis, asthma, or conjunctivitis.

### **Pollex**

The thumb.

### **Pollution**

Contamination of air, water, soil, or surroundings by substances that may harm health or ecosystems.

### **Poly-**

A combining form meaning many or much.

### **Polyarthrititis**

Inflammation or disease affecting multiple joints.

### **Polyarteritis**

Inflammation of multiple arteries; polyarteritis nodosa is a systemic necrotizing vasculitis.

### **Polychromasia**

Presence of immature, bluish red blood cells in peripheral blood, reflecting increased marrow release.

### **Polycystic Kidney Disease**

An inherited disorder in which numerous kidney cysts enlarge the kidneys and may cause hypertension and renal failure.

#### **Synonyms:**

PKD

### **Polycystic Ovary Syndrome (PCOS)**

A common endocrine disorder involving ovulatory dysfunction, androgen excess, and polycystic ovarian morphology in varying combinations.

### **Polycythaemia**

An increased red-cell mass or concentration, which may be primary or secondary to another condition.

### **Polydactyly**

Presence of extra fingers or toes.

---

**Polydipsia**

Excessive thirst or drinking.

**Polyethylene Glycol**

A polymer used as an osmotic laxative, excipient, and in various medical products.

**Polygenic**

Influenced by or caused by variants in multiple genes.

**Polymerase Chain Reaction (PCR)**

A laboratory method that amplifies selected DNA sequences for detecting organisms or genetic variants.

**Polymagia**

Excessive hunger or eating.

**Polymastia**

The presence of extra breast tissue or additional nipples.

**Polymenorrhoea**

Menstrual bleeding occurring at unusually short intervals.

**Polymorphism**

The occurrence of two or more genetic forms or phenotypes in a population.

**Polymyxin**

A group of antibiotics that disrupt bacterial cell membranes, used mainly for selected gram-negative infections.

**Polymyalgia Rheumatica**

An inflammatory disorder causing aching and morning stiffness around the shoulders and hips in older adults.

**Synonyms:**

PMR (Polymyalgia Rheumatica)

**Polymyositis**

An autoimmune inflammatory muscle disease causing symmetric proximal muscle weakness.

**Synonyms:**

PM (Polymyositis)

**Polypeptide**

A chain of amino acids linked by peptide bonds.

**Polyposis**

A condition in which numerous polyps develop, especially in the gastrointestinal tract.

**Polyradiculitis**

Inflammation or disease affecting multiple spinal nerve roots.

**Polysaccharide**

A carbohydrate composed of many linked monosaccharide units.

**Polysomia**

The presence of extra copies of one or more chromosomes or, in developmental terminology, multiple body structures.

**Polythelia**

The presence of one or more additional nipples.

**Polyuria**

Excessive urine production, commonly more than about 3 liters per day in an adult.

**Polyvalent**

Effective against or involving multiple types, strains, antigens, or targets.

**Pompholyx**

A form of dyshidrotic eczema causing intensely itchy small blisters on the hands or feet.

**Pons**

The middle part of the brainstem, containing pathways and nuclei involved in movement, sensation,

---

breathing, and cranial-nerve function.

### **Pontine**

Relating to the pons.

### **Popliteal**

Relating to the back of the knee.

### **Pore**

A small opening in the skin or another surface, often associated with a gland or follicle.

### **Porencephaly**

A cavity or cyst within the brain, usually caused by developmental abnormality or prenatal or acquired injury.

### **Pork Tapeworm**

*Taenia solium*, a tapeworm acquired from undercooked pork; its larvae can cause cysticercosis.

### **Porphria**

A misspelling of porphyria, a group of disorders involving abnormal heme synthesis.

### **Porphyria**

A group of inherited or acquired disorders caused by defects in heme biosynthesis, producing neurologic, abdominal, or skin symptoms.

### **Porphyrin**

A ring-shaped compound involved in heme and other biological molecules; abnormal accumulation occurs in porphyrias.

### **Port-Wine Stain**

A permanent capillary malformation producing a flat pink, red, or purple skin patch.

### **Position**

The location or posture of a body part, organ, fetus, or patient.

### **Positive Feedback**

A regulatory process in which an output amplifies the process that produced it, as in labor contractions.

### **Positron Emission Tomography (PET)**

Imaging that detects paired photons from a positron-emitting tracer to map metabolism or molecular activity.

### **Post-**

A combining form meaning after or behind.

### **Post-Concussional Syndrome**

Persistent physical, cognitive, emotional, or sleep symptoms after a concussion or mild traumatic brain injury.

### **Posterior**

Situated behind or toward the back of the body or a structure.

### **Post-Hoc**

Performed or analyzed after an event; in statistics, a post-hoc analysis follows the planned primary analysis.

### **Posthumous**

Occurring or published after a person's death.

### **Post-Mortem**

Occurring after death or relating to examination of a body after death.

### **Postnatal**

Relating to the period after birth.

### **Postpartum Depression**

A depressive episode occurring during pregnancy or after childbirth, causing significant distress or impairment.

#### **Synonyms:**

Depression, Postpartum PPD (Postpartum Depression)

---

### **Postpartum Haemorrhage**

Excessive bleeding after childbirth, commonly defined by blood loss of at least 1,000 mL or bleeding with hypovolemia after birth.

### **Post-Prandial**

Occurring after a meal.

### **Postural Drainage**

Positioning a person so gravity assists drainage of secretions from selected parts of the lungs.

### **Postural Hypotension**

A significant fall in blood pressure on standing, often causing dizziness or fainting.

### **Posture**

The alignment and position of the body at rest or during activity.

### **Potassium**

An essential intracellular electrolyte important for nerve conduction, muscle contraction, and cardiac rhythm.

### **Potassium Permanganate**

An oxidizing antiseptic used in very dilute topical solutions; concentrated material can burn tissue.

### **Potassium-Sparing Diuretic**

A diuretic that promotes sodium excretion while reducing potassium loss, such as spironolactone or amiloride.

### **Pott's Disease**

Tuberculosis of the spine, causing vertebral destruction, back pain, deformity, or neurologic compromise.

### **Pott's Fracture**

An ankle fracture-dislocation involving the malleoli, historically defined variably.

### **Pouch**

A sac-like anatomical structure or surgically created reservoir.

### **Poultice**

A soft, moist substance applied to the body, historically to soothe or draw fluid from tissue.

### **Pound**

A unit of weight or pressure; the exact meaning depends on context.

### **Poverty**

Insufficient material resources to meet basic needs, a social determinant strongly affecting health and access to care.

### **Pox**

A disease producing vesicles, pustules, or pitted scars; the term is used in names such as smallpox and cowpox.

### **Poxvirus**

A family of large DNA viruses that includes variola, vaccinia, mpox, and molluscum contagiosum viruses.

### **Practitioner**

A person qualified and authorized to practice a healthcare profession.

### **Pragmatic**

Focused on practical outcomes or real-world effectiveness.

### **Pramipexole**

A dopamine agonist used mainly for Parkinson disease and restless legs syndrome.

### **Prasugrel**

An antiplatelet P2Y<sub>12</sub> inhibitor used in selected patients with acute coronary syndrome undergoing PCI.

---

**Pravastatin**

A statin that lowers LDL cholesterol by inhibiting HMG-CoA reductase.

**Praziquantel**

An anthelmintic used for schistosomiasis and several tapeworm and fluke infections.

**Pre-**

A combining form meaning before or in front of.

**Pre-Cancerous**

Showing cellular changes that may progress to cancer but are not invasive cancer.

**Precaution**

An action taken to reduce risk of harm, infection, or error.

**Preclinical**

Before human clinical testing or relating to disease changes before symptoms become evident.

**Precocious Puberty**

Onset of secondary sexual characteristics earlier than the accepted normal age range.

**Synonyms:**

Early Puberty Premature Puberty

**Pre-Eclampsia**

New-onset hypertension after 20 weeks of pregnancy with proteinuria or other maternal organ or placental dysfunction.

**Prefrontal**

Relating to the anterior part of the frontal lobe involved in planning, judgment, working memory, and behavior.

**Pregnancy Test**

A test detecting human chorionic gonadotropin in urine or blood to identify pregnancy.

**Preleukaemia**

An obsolete term formerly used for myelodysplastic syndromes or other states preceding leukemia.

**Premalignant**

Having cellular or tissue changes that may progress to invasive cancer.

**Premature**

Occurring earlier than expected or before the usual developmental or gestational time.

**Premature Ejaculation**

Ejaculation that occurs sooner than desired with poor control and causes persistent personal or relationship distress.

**Premature Infant**

An infant born before 37 completed weeks of gestation.

**Premature Menopause**

Loss of ovarian function and menstruation before age 40, now often termed primary ovarian insufficiency.

**Premenstrual Dysphoric Disorder (PMDD)**

A severe cyclical mood disorder with affective and physical symptoms in the luteal phase that remit after menstruation.

**Synonyms:**

PMDD (Premenstrual Dysphoric Disorder (PMDD))

**Premenstrual Syndrome (PMS)**

Recurring physical, emotional, or behavioral symptoms before menstruation that resolve around or after its onset.

**Premolar**

A tooth between the canine and molar teeth.

**Prepuce**

The fold of skin covering the glans penis or clitoris;

---

penile prepuce is the foreskin.

### **Presbyacusis**

Age-related progressive sensorineural hearing loss, usually affecting high frequencies.

### **Presbyopia**

Age-related loss of near focusing caused by reduced lens accommodation.

### **Prescription**

A written or electronic instruction from an authorized prescriber for a medicine or treatment.

### **Presenile Dementia**

An older term for dementia beginning before old age; modern diagnosis specifies the cause and syndrome.

### **Presentation**

The part of a fetus that is directed toward the birth canal, or the symptoms and signs with which a patient seeks care.

### **Preservation**

Maintenance of tissue, cells, organs, or function by preventing deterioration.

### **Preservative**

A substance added to prevent microbial growth or chemical deterioration of a product.

### **Pressor**

Raising blood pressure, usually by constricting blood vessels or increasing cardiac output.

### **Pressure**

Force exerted over an area; clinically measured in units such as mmHg.

### **Pressure Sore**

A localized injury to skin and underlying tissue caused by prolonged pressure or shear, also called a pressure ulcer.

### **Pre-Synaptic**

Situated before a synapse, especially the nerve-terminal side that releases a neurotransmitter.

### **Pretibial Myxoedema**

Thickened, waxy swelling of the skin over the shins, most often associated with Graves disease.

### **Prevalence**

The proportion of a population with a disease or characteristic at a specified time or period.

### **Prevention**

Measures intended to avoid disease, detect it early, limit complications, or reduce disability.

### **Preventive Medicine**

The field concerned with preventing disease and promoting health in individuals and populations.

### **Priapism**

A persistent, usually painful erection unrelated to sexual stimulation and lasting long enough to require urgent assessment.

#### **Synonyms:**

Ischemic Priapism Low-Flow Priapism Nonischemic Priapism

### **Prickle Cell**

An obsolete or imprecise term sometimes used for a dendritic epidermal cell or for a sickle cell; the intended meaning requires context.

### **Prickly Heat**

Miliaria, an itchy rash caused by blockage of sweat ducts.

### **Primary**

First in time, origin, importance, or site; in disease classification it often means arising independently rather than secondary to another cause.

### **Primary Care**

First-contact, continuing, comprehensive healthcare, including prevention and management of common

---

conditions.

### **Primary Lactase Deficiency**

Reduced lactase enzyme activity developing with age, causing lactose malabsorption and possible bloating, abdominal pain, gas, or diarrhea after dairy consumption.

### **Prokinetic**

A medicine that promotes gastrointestinal motility and movement of contents through the digestive tract; use depends on the underlying disorder and safety profile.

### **Primipara**

A person who has given birth once after the stage of fetal viability.

### **Primitive**

Relating to an early developmental stage or a basic, less differentiated form.

### **Primordial**

Existing at the earliest stage of development.

### **Prion**

An abnormally folded infectious protein that can cause progressive neurodegenerative disease.

### **Prism**

A transparent optical device that bends light; prisms may correct or measure ocular alignment.

### **PR Interval**

The ECG interval from the start of atrial depolarization to the start of ventricular depolarization, reflecting atrioventricular conduction.

### **Pro-**

A combining form meaning before, forward, or in favor of.

### **Probenecid**

A uricosuric medicine used to prevent gout attacks in selected patients and to alter renal excretion of

some drugs.

### **Prob Problem**

An incomplete or nonstandard label; its intended clinical meaning cannot be determined without source context.

### **Problem**

A symptom, sign, diagnosis, or issue requiring assessment or management.

### **Probocis**

A misspelling of proboscis, a projecting snout or appendage.

### **Proboscis**

An elongated nose, snout, or tubular feeding organ.

### **Procainamide**

An antiarrhythmic medicine used for selected cardiac rhythm disorders.

### **Procaine**

An ester local anesthetic, now used mainly in limited or historical settings.

### **Procarbazine**

An alkylating-like chemotherapy medicine used in selected lymphomas and brain tumors.

### **Prochlorperazine**

A phenothiazine medicine used as an antiemetic and antipsychotic.

### **Proctalgia**

Pain in or around the anus or rectum.

### **Proctitis**

Inflammation of the rectal lining.

### **Synonyms:**

Rectal Inflammation

### **Proctoclysis**

Administration of fluid into the rectum, an obsolete

---

method of fluid or medicine delivery.

### **Proctology**

The medical specialty concerned with diseases of the anus and rectum.

### **Proctoscope**

An instrument used to inspect the anal canal and rectum.

### **Proctoscopy**

Examination of the anal canal and rectum with a proctoscope.

### **Proctostomy**

Surgical creation of an opening from the rectum to the skin.

### **Prodrome**

An early symptom or group of symptoms preceding a disease or major clinical event.

### **Productive Cough**

A cough that brings up sputum or phlegm.

### **Profession**

A skilled occupation requiring specialized education and ethical standards.

### **Professional**

Relating to a trained occupation or to the conduct expected of a qualified practitioner.

### **Profunda**

A deep artery or vessel, commonly referring to the profunda femoris artery.

### **Progenitor**

A cell that has partially differentiated and can give rise to one or more mature cell types.

### **Progeny**

Offspring or descendants.

### **Progeria**

A rare genetic disorder causing features of accelerated aging beginning in childhood.

### **Progestational**

Relating to progesterone-like effects or to preparation of the uterus for pregnancy.

### **Progesterone**

A steroid hormone produced mainly by the corpus luteum and placenta that supports the endometrium and pregnancy.

### **Progestogen**

A natural or synthetic hormone with progesterone-like effects.

### **Proglottid**

A segment of a tapeworm containing reproductive organs.

### **Prognosis**

The expected course and outcome of a disease or condition.

### **Program**

A planned set of activities or services, such as a screening or rehabilitation program.

### **Progressive**

Increasing or worsening over time, or advancing in a specified direction.

### **Progressive Lenticular Degeneration**

Wilson disease, an inherited copper-accumulation disorder affecting the liver, brain, and eyes.

### **Progressive Muscular Atrophy**

A motor-neuron disorder predominantly affecting lower motor neurons and causing progressive muscle wasting and weakness.

### **Projection**

The act of extending, displaying, or estimating some-

---

thing; in imaging, a view produced by directing rays through a body.

### **Prolactin**

A pituitary hormone that stimulates breast development and milk production and influences reproductive function.

### **Prolactinoma**

A usually benign pituitary adenoma that secretes excess prolactin.

#### **Synonyms:**

Pituitary Tumor (Prolactinoma)

### **Prolapse**

Descent or displacement of an organ from its normal position.

### **Proliferation**

Rapid increase in the number of cells or organisms.

### **Proliferative**

Characterized by cell multiplication or new tissue growth.

### **Proline**

A protein-forming amino acid with a cyclic side chain.

### **Promazine**

A phenothiazine antipsychotic with sedative properties.

### **Promontory**

A projecting anatomical prominence, such as the sacral or cochlear promontory.

### **Promoters**

DNA regions that initiate transcription of a gene when bound by regulatory proteins.

### **Pronation**

Rotation of the forearm so the palm faces posteriorly or downward, or a related foot movement.

### **Pronephros**

The earliest embryonic kidney structure, which is nonfunctional in humans and largely regresses.

### **Pronator**

A muscle that turns a limb or part of it into a pronated position.

### **Prontosil**

An early sulfonamide antibacterial drug, historically important in antimicrobial therapy.

### **Propanolol**

A nonselective beta-adrenergic blocker used for hypertension, arrhythmias, angina, tremor, migraine prevention, and other indications.

### **Propantheline**

An antimuscarinic medicine formerly used for gastrointestinal spasm or excessive sweating.

### **Prophylaxis**

Treatment or preventive measures intended to reduce the risk of disease or infection.

### **Propofol**

A short-acting intravenous anesthetic used for induction and maintenance of anesthesia and procedural sedation.

### **Propranolol**

A nonselective beta blocker used for cardiovascular conditions, tremor, migraine prevention, and other indications.

### **Proprioception**

Awareness of body position and movement from receptors in muscles, tendons, joints, and skin.

### **Proprioceptor**

A sensory receptor that detects position, movement, or muscle stretch.

---

**Propulsion**

The act of driving or moving something forward; in Parkinson disease, propulsion may be impaired.

**Proptosis**

Forward displacement or bulging of an eye.

**Propylthiouracil**

An antithyroid medicine that inhibits thyroid hormone synthesis and peripheral conversion of T4 to T3.

**Prosopagnosia**

Inability to recognize familiar faces despite otherwise adequate vision.

**Prostaglandins**

Locally acting lipid mediators involved in pain, inflammation, vascular tone, gastric protection, and reproductive physiology.

**Prostate**

A gland below the bladder surrounding the proximal urethra that contributes fluid to semen.

**Prostatectomy**

Surgical removal of part or all of the prostate.

**Prostate Gland**

The prostate, a gland below the bladder that surrounds the urethra and contributes secretions to semen.

**Prostate-Specific Antigen (PSA)**

A kallikrein-related enzyme measured in blood to assess prostate disorders, with interpretation affected by benign and malignant conditions.

**Prostatism**

Lower urinary-tract symptoms caused by bladder-outlet obstruction or dysfunction, often associated with prostate enlargement.

**Prostatitis**

Inflammation or infection of the prostate, causing pelvic pain, urinary symptoms, or systemic illness.

**Prosthesis**

An artificial device replacing or supporting a missing body part or function.

**Prosthetic**

Relating to or made by a prosthesis.

**Prostrate**

Lying flat or face downward; not to be confused with prostate.

**Protamine**

A strongly basic protein used to reverse the anticoagulant effect of heparin.

**Protease**

An enzyme that breaks down proteins by cleaving peptide bonds.

**Protective**

Serving to prevent or reduce injury, infection, or other harm.

**Protein**

A molecule made of amino acids that performs structural, enzymatic, transport, signaling, or immune functions.

**Proteinuria**

Abnormally high protein excretion in urine, often indicating kidney disease but also occurring transiently.

**Proteolysis**

Breakdown of proteins into smaller peptides or amino acids.

**Proteolytic**

Relating to or causing protein breakdown.

---

**Proteus**

A genus of gram-negative bacteria that can cause urinary and wound infections.

**Prothrombin**

A vitamin-K-dependent plasma protein converted to thrombin during blood coagulation.

**Prothrombin Time**

A blood test assessing the extrinsic and common coagulation pathways, commonly reported as INR.

**Protozoa**

Single-celled eukaryotic organisms, some of which cause human disease.

**Protractile**

Capable of being extended or protruded.

**Protractor**

An instrument or muscle that moves a structure forward or outward.

**Protrusion**

A part that projects outward or a disc or tissue displaced beyond its normal boundary.

**Provisional Diagnosis**

A working diagnosis made before all information is available and subject to revision.

**Provocation**

An action or stimulus that triggers a symptom, response, or test finding.

**Proximal**

Closer to the point of attachment or to the center of the body than another structure.

**Prurigo**

A group of intensely itchy skin disorders with papules or nodules caused by inflammation and scratching.

**Pruritus**

Itching, an unpleasant skin sensation that creates the desire to scratch.

**Prussian Blue**

A blue pigment used in laboratory staining and as an antidote for selected radioactive cesium or thallium poisoning.

**Psalterium**

The body of the fornix in the brain, also called the hippocampal commissure; historically, a book of psalms.

**Psammoma**

A tumor or lesion containing concentrically laminated calcified bodies called psammoma bodies.

**Psychiatry**

A misspelling of psychiatry, the medical specialty concerned with mental disorders.

**Pseudarthrosis**

Failure of a fracture to unite, producing a false joint or persistent abnormal mobility.

**Pseudo-**

A combining form meaning false or resembling but not truly.

**Pseudocyesis**

A false belief or physical state resembling pregnancy without a fetus.

**Pseudodementia**

Cognitive symptoms caused by depression or another potentially reversible condition rather than primary neurodegeneration.

**Pseudohypertrophic Muscular Dystrophy**

An older name for Duchenne or related muscular dystrophy with enlarged-appearing muscles caused by fat and connective tissue.

---

## **Pseudomonas**

A genus of gram-negative bacteria, including *Pseudomonas aeruginosa*, that can cause opportunistic infections.

## **Pseudoneurosis**

An obsolete term for symptoms resembling neurosis but caused by an underlying physical disorder.

## **Pseudorabies**

Aujeszky disease, a herpesvirus infection of animals; humans are rare accidental hosts.

## **Pseudoxanthoma Elasticum**

An inherited connective-tissue disorder with mineralization and fragmentation of elastic fibers, affecting skin, eyes, and blood vessels.

### **Synonyms:**

PXE (Pseudoxanthoma Elasticum)

## **Psittacosis**

A zoonotic infection caused by *Chlamydia psittaci*, usually acquired from infected birds.

## **Psoas**

A major hip-flexor muscle running from the lumbar spine to the femur.

## **Psoriasis**

A chronic immune-mediated skin disease producing sharply demarcated, often scaly plaques.

## **Psychasthenia**

An obsolete term for obsessive doubts, compulsive thoughts, or an inability to direct attention.

## **Psychedelic**

Producing altered perception, mood, and cognition, as with certain hallucinogenic substances.

## **Psychiatry**

The medical specialty concerned with mental health and the diagnosis and treatment of mental disorders.

## **Psychic**

Relating to the mind or mental processes; claims of supernatural perception are not medical findings.

## **Psychoactive**

Affecting mood, thought, perception, behavior, or other mental processes.

## **Psychoanalysis**

A historical psychological theory and treatment approach emphasizing unconscious processes and conflicts.

## **Psychodrama**

A therapeutic method using guided dramatic enactment to explore emotions, relationships, and behavior.

## **Psychological**

Relating to mental processes, emotions, behavior, or their effects on health.

## **Psychology**

The scientific study of behavior and mental processes.

### **Synonyms:**

Mental Health (Psychology)

## **Psychometrics**

The measurement of psychological characteristics using standardized tests and statistical methods.

## **Psychomotor**

Relating to the interaction of mental processes and physical movement.

## **Psychoneurosis**

An obsolete term for a nonpsychotic emotional disorder, historically including anxiety and phobic conditions.

## **Psychopathic**

Relating to severe, persistent antisocial personality traits; the term is often used imprecisely.

---

## **Psychopathology**

The study or description of abnormal mental states and behavior.

## **Psychopharmacology**

The study of how drugs affect behavior, mood, cognition, and other mental processes.

## **Psychosexual**

Relating to psychological and sexual development or functioning.

## **Psychosis**

A state involving impaired reality testing, such as delusions, hallucinations, or disorganized thought.

## **Psychosurgery**

Surgery intended to alter brain circuits for severe, treatment-resistant psychiatric illness; it is rarely used and highly specialized.

## **Psychotherapy**

Structured psychological treatment using therapeutic communication and evidence-based techniques.

## **Psychotic**

Relating to or characterized by psychosis.

## **Pterygium**

A wing-shaped growth of conjunctival tissue extending onto the cornea, usually related to ultraviolet exposure.

## **Ptilosis**

Abnormal growth, loss, or condition of hair or feathers; the exact meaning depends on context.

## **Ptoxis**

Drooping of an eyelid or another body structure.

## **Ptyalin**

An older name for salivary amylase, the enzyme that begins starch digestion in the mouth.

## **Ptyalism**

Excessive salivation.

## **Puberty**

The developmental period in which hormonal changes produce sexual maturation and reproductive capability.

## **Pubes**

The pubic region or pubic hair.

## **Pubic**

Relating to the pubis or the region over the front of the pelvis.

## **Pubis**

The front part of the pelvic bone, meeting its opposite side at the pubic symphysis.

## **Pudendal**

Relating to the external genitalia or perineum.

## **Puerperal**

Relating to the period after childbirth, usually the first six weeks.

## **Puerperal Fever**

Fever and infection occurring after childbirth, often from uterine or genital-tract infection.

## **Puerperium**

The approximately six-week period after childbirth during which the reproductive organs return toward their nonpregnant state.

## **Pulex**

A genus of fleas, including *Pulex irritans*.

## **Pulex Irritans**

The human flea, which can cause bites and occasionally transmit infections.

## **Pulmonary Artery**

The artery carrying deoxygenated blood from the

---

right ventricle to the lungs.

### **Pulmonary Embolism**

Blockage of a pulmonary artery, usually by a clot that traveled from a deep vein.

#### **Synonyms:**

Blood Clot In The Lung (Pulmonary Embolism)  
Embolism Pulmonary (Pulmonary Embolism)

### **Pulmonary Oedema**

Accumulation of fluid in lung tissue or alveoli, causing breathlessness and impaired gas exchange.

### **Pulmonary Stenosis**

Narrowing of the pulmonary valve or outflow tract, obstructing blood flow from the right ventricle.

### **Pulmonary Tuberculosis**

Tuberculosis infection involving the lungs, caused by *Mycobacterium tuberculosis*.

### **Pulp**

The soft vascular and nervous tissue inside a tooth or, in plants, soft internal tissue.

### **Pulpitis**

Inflammation of the dental pulp, usually caused by caries, trauma, cracks, or restorative treatment. Reversible pulpitis causes brief pain provoked by cold or sweet stimuli; irreversible pulpitis causes spontaneous or lingering pain and may progress to pulp necrosis, requiring endodontic treatment or extraction.

### **Pulse**

The rhythmic expansion of an artery produced by each heartbeat.

### **Pulseless Disease**

Takayasu arteritis, a large-vessel vasculitis that can reduce pulses in affected arteries.

### **Pulsus**

A Latin term for pulse, used in names describing abnormal pulse patterns.

### **Pumice**

A porous volcanic stone used as an abrasive; excessive dust inhalation can irritate the lungs.

### **Puna**

A high-altitude region or, in some sources, a term related to altitude sickness; precise meaning depends on context.

### **Punch-Drunk**

An obsolete term for chronic traumatic encephalopathy associated with repeated head injury, especially in boxing.

### **Punctate**

Composed of or marked by small spots or points.

### **Puncture**

A wound or procedure made by a pointed object or needle.

### **Pungent**

Having a strong, sharp smell or taste; pungent substances may irritate mucous membranes.

### **Punicin**

A rare or historical term whose precise medical meaning is source-dependent and should be verified.

### **Pupil**

The central opening in the iris through which light enters the eye.

### **Pupillary**

Relating to the pupil.

### **Purge**

To empty the bowel, stomach, or body of a substance; the term may also mean forceful vomiting or diarrhea.

### **Purgative**

A substance that induces bowel evacuation.

---

**Purine**

A nitrogen-containing compound forming part of nucleotides; its breakdown produces uric acid.

**Purkinje Fibres**

Specialized cardiac conduction fibers that rapidly distribute impulses through the ventricular myocardium.

**Purpura**

Purple or red nonblanching skin or mucosal discoloration caused by bleeding into tissue.

**Pus**

A thick fluid containing dead cells, bacteria, inflammatory cells, and tissue debris.

**Pustule**

A small, raised skin lesion filled with pus.

**Putrefaction**

Decomposition of tissues after death by bacterial and enzymatic processes.

**Putrescine**

A foul-smelling diamine produced during breakdown of proteins in decaying tissue.

**Pyelitis**

Inflammation of the renal pelvis, usually due to infection.

**Pyelogram**

An imaging record of the renal pelvis and ureters after contrast administration.

**Pyelography**

Imaging of the renal pelvis and ureters using contrast.

**Pyelolithotomy**

Surgical removal of a stone from the renal pelvis.

**Pyelonephritis**

Infection and inflammation of the kidney and renal pelvis, usually caused by ascending bacteria.

**Pyloric Stenosis**

Narrowing of the pyloric outlet, classically causing projectile vomiting in infants or gastric-outlet symptoms in adults.

**Synonyms:**

Stenosis, Pyloric

**Pyloroplasty**

Surgical widening of the pylorus to improve gastric emptying.

**Pylorus**

The distal part of the stomach leading into the duodenum.

**Pyoderma**

A bacterial skin infection producing pus, crusts, erosions, or ulcers.

**Pyogenesis**

Formation of pus.

**Pyogenic**

Producing pus or associated with pus-forming infection.

**Pyometra**

Accumulation of pus within the uterus.

**Pyosalpinx**

Accumulation of pus within a fallopian tube, usually due to pelvic infection.

**Pyramid**

A pyramid-shaped structure; in neuroanatomy, the medullary pyramids contain corticospinal fibers.

**Pyramidal Tracts**

Descending motor pathways from the cerebral cortex to the brainstem and spinal cord.

---

**Pyramidon**

An obsolete analgesic and antipyretic medicine, also called aminopyrine.

**Pyrazinamide**

An antituberculous medicine used in combination therapy, especially during the initial phase.

**Pyrethrins**

Natural insecticides derived from chrysanthemum flowers; exposure can irritate skin and airways.

**Pyrethrum**

A plant-derived insecticide source containing pyrethrins.

**Pyrexia**

Fever or an elevated body temperature.

**Pyridostigmine**

An acetylcholinesterase inhibitor used mainly for myasthenia gravis and selected neuromuscular disorders.

**Pyrimethamine**

An antiparasitic medicine that inhibits folate metabolism and is used for selected protozoal infections.

**Pyrosis**

Heartburn, a burning discomfort behind the breastbone caused commonly by reflux of gastric contents.

**Pyuria**

Presence of white blood cells or pus in urine, often indicating urinary-tract inflammation or infection.

**Synonyms:**

Artificial pacemaker

**Pacemaker, Natural**

The sinoatrial node, whose cells normally initiate the heartbeat.

**Synonyms:**

Sinoatrial node

**PAD**

Peripheral artery disease caused by narrowed arteries, usually affecting the legs.

**Synonyms:**

Peripheral artery disease

**Painkillers**

Medicines or other treatments that relieve pain.

**Synonyms:**

Analgesics

**Palpate**

To examine body tissues by carefully feeling them with the hands.

**Synonyms:**

Palpation

**PCP**

Pneumocystis jirovecii pneumonia (formerly Pneumocystis carinii pneumonia); opportunistic infection in immunocompromised patients, especially transplant recipients.

**Pelvic Floor**

A group of muscles and connective tissues supporting the pelvic organs and controlling urinary and fecal continence.

**Pepsin**

A stomach enzyme that begins digestion of proteins.

**Percutaneous Electrical Nerve Stimulation**

Electrical stimulation delivered through the skin to reduce pain signals.

**Synonyms:**

PENS

**Percutaneous Transluminal Coronary Angioplasty**

Balloon-based treatment that widens a narrowed coronary artery, often followed by stent placement.

**Synonyms:**

PTCA; balloon angioplasty

---

### **Performance Anxiety**

Anxiety about sexual performance that can interfere with sexual function.

### **Periodic Limb Movement Disorder**

Repeated involuntary limb movements during sleep that may disrupt rest.

#### **Synonyms:**

PLMD Sleep Disorder Periodic Limb Movement (Periodic Limb Movement Disorder)

### **Periodization**

Planned variation of exercise volume and intensity over time.

### **Peripheral Vascular Disease**

Disease involving narrowed or blocked blood vessels outside the heart and brain.

#### **Synonyms:**

Peripheral arterial disease PVD (Peripheral Vascular Disease)

### **Peripheral Vision**

The portion of the visual field outside the direct line of sight.

#### **Synonyms:**

Side vision

### **Personal Emergency Response System**

A wearable or nearby device that lets a person summon help during an emergency.

#### **Synonyms:**

Medical alert system

### **Pessimism**

A tendency to expect negative outcomes or interpret situations unfavorably.

### **Peyronie's Disease**

Scar tissue within the penis that can cause curvature and pain during erection.

#### **Synonyms:**

Peyronie disease

### **Phantom Limb**

The sensation that an amputated limb is still present, sometimes with pain.

#### **Synonyms:**

Phantom-limb sensation

### **Phlebotomy**

The collection of blood from a vein, usually with a needle.

#### **Synonyms:**

Venipuncture

### **Photoreceptors**

Specialized retinal cells that detect light; rods and cones are the two main types.

### **Physician Assistant**

A licensed clinician who evaluates patients and provides medical care under a physician's practice framework.

#### **Synonyms:**

PA

### **Pigment**

A substance that gives tissue, hair, skin, or other material its color.

### **Piles**

Enlarged or swollen veins in the anus or lower rectum.

#### **Synonyms:**

Hemorrhoids

### **Pill**

A solid oral dosage form containing medicine or another active ingredient.

#### **Synonyms:**

Tablet

### **Plasma**

The liquid portion of blood in which blood cells and dissolved substances circulate.

---

**Plasma Cells**

Mature B lymphocytes that produce antibodies.

**Platelets**

Small blood components that gather at damaged vessels and help form clots.

**Synonyms:**

Thrombocytes

**Polymenorrhea**

Menstrual bleeding occurring at unusually short intervals.

**Polyp**

A growth projecting from a mucous membrane; it may be benign, precancerous, or rarely cancerous.

**Positive Psychology**

The study of well-being, strengths, resilience, and factors that help people thrive.

**Posterior Chamber**

The part of the eye between the iris and lens, containing aqueous humor.

**Posterior Heel Bursitis**

Inflammation of a bursa near the back of the heel, causing pain and swelling.

**Synonyms:**

Retrocalcaneal bursitis

**Posterior Keyhole Foraminotomy**

A minimally invasive operation that enlarges a spinal nerve opening to relieve compression.

**Postpartum**

Relating to the period after childbirth.

**Synonyms:**

Postnatal

**Post-Traumatic Headache**

A headache that begins or persists after a head or neck injury.

**Power**

The rate at which work is performed; in exercise, it combines force and movement speed.

**Power Training**

Exercise designed to improve the ability to produce force rapidly.

**Synonyms:**

Explosive training

**Prazosin**

An alpha-1 blocker that relaxes blood vessels and smooth muscle.

**Precursor**

A substance that can be converted into another biologically active substance.

**Prehypertension**

Blood pressure above normal but below the former threshold for hypertension.

**Synonyms:**

Elevated blood pressure

**Preload Reduction**

Lowering the amount of blood returning to the heart to reduce cardiac workload.

**Premature Ventricular Contraction**

An early heartbeat arising from the ventricles.

**Synonyms:**

PVC

**Prick Test**

A skin test in which small amounts of suspected allergens are introduced into the skin.

**Synonyms:**

Skin-prick test

**Primary Angioplasty**

Angioplasty used as the initial treatment to reopen an artery during an acute heart attack.

---

### **Primary Osteoporosis**

Bone loss due to aging, menopause, or other normal physiological processes rather than another disease.

### **Procurement**

Process of recovering organs and tissues from donors for transplantation.

### **Protocol**

A predefined plan specifying procedures for a clinical study, examination, or treatment.

### **PSA**

Prostate-specific antigen, a protein measured in blood to help evaluate prostate conditions.

#### **Synonyms:**

Prostate-specific antigen

### **PSA Velocity**

The rate at which PSA concentration changes over time.

### **Psychiatrist**

Physician specializing in diagnosis and treatment of mental disorders; involved in pre-transplant psychological evaluation and post-transplant mental health management.

### **Psychogenic**

Caused or substantially influenced by psychological factors.

### **Psychogenic Erectile Dysfunction**

Erectile difficulty primarily related to psychological factors rather than a structural disease.

### **Psychosomatic**

Relating to physical symptoms influenced by psychological processes or stress.

### **PTCA**

Percutaneous transluminal coronary angioplasty, a procedure that opens a narrowed coronary artery.

#### **Synonyms:**

Percutaneous coronary intervention

### **PTLD**

Post-transplant lymphoproliferative disorder; a spectrum of lymphoid proliferations ranging from benign hyperplasia to lymphoma, occurring in immunosuppressed transplant recipients.

### **Puborectalis Muscle**

A pelvic-floor muscle sling around the rectum that helps maintain continence.

### **Pudendal Arteries**

Arteries supplying blood to the external genital and perineal region.

### **Pudendal Nerve**

The nerve carrying sensation and motor signals to much of the perineum and pelvic floor.

### **Pulmonary**

Relating to the lungs.

### **Pulmonary Veins**

Veins carrying oxygen-rich blood from the lungs to the left atrium.

### **Pulse Pressure**

The difference between systolic and diastolic blood pressure.

### **Pump Failure**

Severe weakening of the heart's pumping ability, causing inadequate blood flow to organs.

#### **Synonyms:**

Cardiogenic pump failure

### **Purulent**

Containing or producing pus.

### **Pyloric Sphincter**

A muscular valve regulating passage of stomach contents into the duodenum.

#### **Synonyms:**

---

Pylorus

### **Pyridoxine**

A form of vitamin B6 involved in metabolism and nervous-system function.

#### **Synonyms:**

Vitamin B6

### **P2Y12 Inhibitor**

An antiplatelet drug that blocks the platelet P2Y12 ADP receptor, reducing activation and aggregation. Clopidogrel, prasugrel, and ticagrelor are used in selected acute coronary syndrome and percutaneous coronary intervention settings, with bleeding and drug-specific contraindications considered.

### **P53 Tumor Suppressor**

The p53 protein, encoded by the TP53 gene on chromosome 17p, is a transcription factor and the most commonly mutated gene in human cancer, with mutations found in over 50 percent of all malignancies.

### **Pacemaker**

An implanted electronic device that delivers electrical impulses to the heart to regulate heart rate and rhythm. Indications include symptomatic bradycardia, high-degree AV block, and sick sinus syndrome. Single-chamber pacemakers pace the atrium or ventricle; dual-chamber pacemakers pace both.

### **Pacemaker Complications**

Early: pneumothorax, hematoma, cardiac perforation/tamponade, lead dislodgement. Late: lead fracture, battery depletion, infection, tricuspid regurgitation from lead interference, venous thrombosis, and pacemaker syndrome (AV dyssynchrony in VVI pacing).

### **Pachygyria**

A cortical malformation in which the cerebral gyri are abnormally broad and reduced in number because of impaired neuronal migration. It may cause developmental delay, intellectual disability, seizures, and motor or neurological impairment of variable severity.

### **Pachymeningitis**

Inflammation of the dura mater (pachymeninx), the outermost layer of the meninges. Pachymeningitis is less common than leptomeningitis (inflammation of pia and arachnoid mater).

### **Pacing**

Planned regulation of activity, rest, and intensity to avoid symptom exacerbation while gradually increasing tolerance. It is used in fatigue, chronic pain, cardiopulmonary disease, and post-viral conditions.

### **PACS**

Picture Archiving and Communication System. Digital image storage and retrieval.

### **PAD Management**

Atherosclerotic occlusive disease of arteries supplying the lower limbs, causing reduced blood flow. See peripheral arterial disease.

### **Page Kidney**

Renal compression from a perinephric hematoma or mass causing hypertension through activation of the renin-angiotensin system, typically following trauma or occurring in patients on anticoagulation.

### **Paget Disease Of Bone**

A chronic bone disorder characterized by excessive, disorganized bone remodeling with increased osteoclastic bone resorption followed by compensatory osteoblastic bone formation, producing structurally abnormal bone that is enlarged, weak, and prone to fracture.

### **Paget's Disease**

A chronic bone disorder characterized by excessive, disorganized bone remodeling with increased osteoclastic bone resorption followed by compensatory osteoblastic bone formation, producing structurally abnormal bone that is enlarged, weak, and prone to fracture. See Paget Disease of Bone.

#### **Synonyms:**

Osteitis Deformans (Paget's Disease) Pagets Disease (Paget's Disease) PDB (Paget's Disease)

---

### **Paget Disease Of The Nipple**

A rare breast cancer involving the nipple and areola, often causing persistent eczema-like scaling, redness, itching, burning, or discharge. It may be associated with underlying ductal carcinoma in situ or invasive breast cancer.

### **Pain**

An unpleasant sensory and emotional experience associated with actual or potential tissue damage, serving as a protective alerting system but becoming maladaptive when chronic (lasting >3 months).

### **Pain (Geriatric)**

Pain in an older adult. Assessment considers communication, cognition, function, medicines, and possible causes; treatment is individualized to the person and condition.

#### **Synonyms:**

Geriatric

### **Pain (Vascular)**

Pain caused by impaired blood flow, often appearing in a limb with exertion as claudication or, in more severe disease, at rest.

#### **Synonyms:**

Vascular

### **Pain Assessment Scales**

Pain assessment uses standardized scales to quantify pain intensity. Numeric rating scale (NRS) asks patients to rate pain from 0 (no pain) to 10 (worst pain imaginable). Visual analog scale (VAS) is a 10 cm line with anchors. Faces pain scale (Wong-Baker FACES) uses facial expressions for children and cognitively impaired patients.

### **Pain Management**

Assessment and treatment of pain using appropriate pharmacologic, physical, psychological, and interventional approaches. Treatment is individualized according to the cause, severity, duration, functional effect, and risks of each option.

### **Pain Relief (Analgesia)**

Achieved through pharmacologic, interventional, physical, and psychologic modalities targeting nociceptive transmission and pain perception.

#### **Synonyms:**

Analgesia

### **Pair Production**

Photon interaction producing electron-positron pair. Requires energy >1.022 MeV.

### **Paleness**

A clinical condition involving paleness; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Palindromic Rheumatism**

Characterized by recurrent, self-limited attacks of mono- or oligoarthritis (hours to days), periarticular soft tissue swelling, no radiographic erosions between attacks. 30-50% evolve to RA (anti-CCP positive predicts progression).

### **Palliative Care**

Specialized medical care for serious illness focusing on symptom relief and quality of life. Not limited to end-of-life. Can be provided alongside curative treatment. Components: pain management, symptom control, psychosocial support, spiritual care, advance care planning. Referral early in disease course.

### **Palliative Rehabilitation**

Rehabilitation for people with serious or life-limiting illness, focused on comfort, function, participation, symptom management, and quality of life.

### **Pallister-Hall Syndrome**

A congenital disorder usually caused by pathogenic variants in *GLI3*. It is characterized by hypothalamic hamartoma and mesoaxial polydactyly and may include imperforate anus, renal or airway anomalies, and pituitary hormone abnormalities.

---

### Palmar Erythema Of Pregnancy

Symmetrical redness of the palms occurring during pregnancy, thought to be related to elevated circulating oestrogen levels causing vasodilatation. It is a benign, physiological finding that typically resolves after delivery and requires no specific treatment.

### Palmar Grasp Reflex

A primitive reflex in which an infant flexes the fingers around an object placed in the palm. It is normally present at birth and gradually diminishes as voluntary grasp develops; asymmetry or persistence may warrant neurologic assessment.

### Palpation

Examination by touching the body to assess tenderness, temperature, texture, masses, pulses, organ size, and movement.

### Palpebral Conjunctiva

The part of the conjunctiva that lines the inner surfaces of the eyelids. It joins the bulbar conjunctiva at the fornices and helps protect and lubricate the eye.

### Palpitation

The subjective sensation of a rapid, forceful, or irregular heartbeat. Palpitations are a common symptom with a broad differential.

### Palsy Of The Long Thoracic Nerve

Weakness or paralysis of the long thoracic nerve (C5-C7), which innervates the serratus anterior muscle. Causes include trauma, compression, viral infection, or idiopathic. Results in winging of the scapula, particularly when pushing against a wall, and impaired overhead arm elevation. Most cases resolve spontaneously.

### Pancoast Syndrome

A clinical syndrome caused by an apical lung tumour invading the lower brachial plexus, sympathetic chain, or adjacent structures. It may produce severe shoulder and arm pain, hand weakness, sensory loss, and Horner syndrome.

### Pancoast Tumor

Superior sulcus tumor invading brachial plexus, subclavian vessels, and sympathetic chain. Causes Horner syndrome, shoulder/arm pain, and hand muscle atrophy. Treated with chemoradiation followed by surgery.

### Pancreas

Retroperitoneal gland (15-20 cm) behind the stomach, spanning from duodenum to spleen. Exocrine function: acinar cells secrete digestive enzymes (amylase, lipase, proteases) and bicarbonate into pancreatic duct to duodenum.

### Pancreas Divisum

A congenital anomaly in which the dorsal and ventral pancreatic ducts fail to fuse. Most people are asymptomatic, but impaired drainage through the minor papilla can predispose to recurrent pancreatitis.

#### Synonyms:

Divisum Pancreas (Pancreas Divisum)

### Pancreatectomy

Removal of all (total) or part of the pancreas. Pancreaticoduodenectomy (Whipple) is used for pancreatic head and periampullary tumors; distal pancreatectomy for body and tail lesions.

### Pancreatic Abscess

A localized collection of pus within or adjacent to the pancreas, usually developing as a complication of infected pancreatic necrosis or severe pancreatitis. It may cause persistent fever, abdominal pain, sepsis, and organ failure.

### Pancreatic Adenocarcinoma

A malignant tumor arising from the exocrine ductal cells of the pancreas. It may cause jaundice, abdominal or back pain, weight loss, or no early symptoms; risk factors include smoking, chronic pancreatitis, diabetes, obesity, and inherited cancer syndromes.

### Pancreatic Cancer

Malignancy arising in the pancreas, most often pan-

---

creatic ductal adenocarcinoma. Symptoms may include jaundice, abdominal or back pain, weight loss, or digestive problems, although early disease may be asymptomatic. Treatment depends on tumor type, extent, and patient factors.

**Synonyms:**

Cancer, Pancreatic

### **Pancreatic Duct**

The main duct of the pancreas, conveying exocrine pancreatic secretions to the duodenum. It commonly joins the common bile duct before opening at the major duodenal papilla.

### **Pancreatic Elastase**

A stool test that measures elastase-1 as an indirect estimate of pancreatic exocrine function. Low results support pancreatic exocrine insufficiency, but interpretation depends on stool consistency, the assay, and the clinical setting. Replacement pancreatic enzymes do not usually interfere with the test.

### **Pancreatic Enzyme**

Digestive enzymes secreted by pancreatic acinar cells into the duodenum, including proteases (trypsinogen, chymotrypsinogen, proelastase, procarboxypeptidases), amylase (starch digestion), and lipase (triglyceride digestion), along with bicarbonate from ductal cells to neutralize gastric acid.

### **Pancreatic Exocrine Insufficiency**

Inadequate secretion or delivery of pancreatic digestive enzymes and bicarbonate, causing maldigestion and malabsorption. Chronic pancreatitis, cystic fibrosis, pancreatic resection, and advanced pancreatic disease are important causes; steatorrhea and weight loss may respond to pancreatic enzyme replacement.

### **Pancreatic Insufficiency**

Inadequate production or delivery of pancreatic digestive enzymes, causing impaired digestion and absorption, weight loss, diarrhea, or fatty stools. Treatment may include pancreatic enzyme replacement and nutritional support.

### **Pancreatic Mass**

Abnormality in pancreas detected on imaging. Pancreatic adenocarcinoma most common malignancy. Neuroendocrine tumors also important.

### **Pancreatic Neuroendocrine Tumors**

Tumors arising from neuroendocrine cells of the pancreas. They may produce hormones, such as insulin or gastrin, or be nonfunctioning. Classification and prognosis use differentiation, grade, proliferation measures, stage, and clinical behavior.

**Synonyms:**

Islet Cell Cancer

### **Pancreatic Pseudocyst**

A pancreatic pseudocyst is a localized collection of pancreatic fluid surrounded by a wall of granulation tissue without an epithelial lining, typically occurring as a complication of acute or chronic pancreatitis. Unlike true cysts, pseudocysts lack an epithelial lining, which is why they are called pseudocysts.

### **Pancreatic Surgery**

Pancreaticoduodenectomy (Whipple): pancreatic head, duodenum, gallbladder, distal stomach (pylorus-preserving standard), common bile duct; reconstruction: pancreaticojejunostomy (duct-to-mucosa or invagination), hepaticojejunostomy, gastrojejunostomy/duodenojejunostomy.

### **Pancreatic Trauma**

Injury to the pancreas caused by blunt or penetrating trauma. Assessment may require CT, laboratory testing, and observation or intervention according to the injury.

### **Pancreatitis**

Inflammation of the pancreas that may be acute or chronic. Causes include gallstones, alcohol, medicines, metabolic disorders, and other conditions; severity ranges from mild to necrotizing disease.

**Synonyms:**

Inflamed Pancreas Pancreas Inflammation Pancreas Inflammation (Pancreatitis)

---

### **Pancreatoblastoma**

A rare malignant pancreatic epithelial tumour occurring mainly in children. It may present with an abdominal mass, pain, vomiting, weight loss, or hormonal symptoms and requires imaging, tissue diagnosis, staging, and multidisciplinary treatment.

### **Pancreatography**

Contrast imaging of pancreatic duct. ERCP approach. Evaluates pancreatic duct abnormalities.

### **Pancytopenia**

Simultaneous reduction of red cells, white cells, and platelets, indicating bone marrow failure or infiltration.

### **PANDAS**

Pediatric autoimmune neuropsychiatric disorder associated with streptococcal infection, a proposed syndrome involving abrupt onset or worsening of obsessive-compulsive symptoms or tics in a child after infection. Diagnosis is clinical and remains controversial; evaluation should also consider common neurologic, psychiatric, and infectious causes.

### **Pandemic**

Epidemic spread across multiple countries/continents. Examples: COVID-19, Spanish flu, HIV/AIDS.

### **Paneth Cell**

Specialized secretory epithelial cell at the base of a small-intestinal crypt that produces antimicrobial substances.

### **Panic Attack**

An abrupt surge of intense fear or discomfort reaching a peak within minutes.

### **Panic Disorder**

Recurrent unexpected panic attacks, which are abrupt surges of intense fear or discomfort peaking within minutes.

### **Panlobular Emphysema**

A subtype involving diffuse destruction of the entire acinus. It predominantly affects the lower lobes and is classically associated with alpha-1 antitrypsin deficiency. The destruction is more uniform compared to centriacinar emphysema.

### **Panniculitis**

Inflammation of the subcutaneous fat, presenting as tender, erythematous or violaceous nodules and plaques, most commonly on the lower extremities. The classification is based on whether the septa or lobules of the fat are primarily affected, and the aetiology includes infections, autoimmune diseases, medications, and pancreatic disease.

### **Panoramic Radiograph**

An extraoral radiograph displaying both jaws, teeth, temporomandibular regions, and surrounding structures in one image. It is useful for surveying dentition, development, impaction, and gross osseous pathology but has less fine detail than intraoral radiographs.

### **Panretinal Photocoagulation**

A laser treatment that applies scattered burns to the peripheral retina to reduce abnormal blood-vessel growth. It is used for selected proliferative retinal diseases, including proliferative diabetic retinopathy, and can affect peripheral or night vision.

### **Panuveitis**

Inflammation involving the anterior uvea, vitreous, and posterior uveal tissues. It can threaten vision and may be caused by infection, autoimmune disease, trauma, or other disorders; treatment depends on the cause and severity.

### **Pap Smear**

Papanicolaou test (cervical cytology): a screening test collecting cervical cells (conventional or liquid-based) to detect precancerous cervical changes (CIN) and cancer, usually combined with HPV DNA testing (co-testing).

---

## Papillary Muscle

Muscular projections of the ventricular myocardium attached by chordae tendineae to the atrioventricular valve leaflets (anterolateral and posteromedial in the left ventricle; anterior, septal, and posterior in the right ventricle).

## Papillary Thyroid Carcinoma

Most common histological subtype of thyroid carcinoma accounting for approximately eighty percent of cases. Characterized by nuclear features including nuclear grooves, intranuclear cytoplasmic inclusions, and Orphan Annie eye nuclei. Often multifocal and bilateral with lymph node metastases.

## Papilledema

Swelling of the optic disc caused by elevated intracranial pressure, and it is a critical clinical sign that requires urgent investigation to identify the underlying cause, which may be life-threatening.

## Papilloma

A benign epithelial neoplasm characterised by finger-like projections of fibrovascular tissue covered by hyperplastic epithelium, most commonly caused by human papillomavirus infection in cutaneous warts or mucosal sites. Cutaneous papillomas present as flesh-coloured, rough, or pedunculated growths.

## Papillomatosis Cutis Lymphostatica

Diffuse, warty, papillomatous thickening of the skin resulting from chronic lymphoedema, most commonly affecting the lower extremities in the setting of long-standing venous or lymphatic insufficiency. The skin develops cobblestone-like hyperkeratotic papules and plaques due to lymph stasis and chronic inflammation.

## Papular

A papule: a small, solid, elevated skin lesion <1 cm in diameter (palpable), of various colors and etiologies.

## Papular Urticaria

A hypersensitivity reaction to insect bites, especially from fleas, bedbugs, or mosquitoes, causing recur-

rent intensely itchy papules or small vesicles, often clustered on exposed areas in children. Diagnosis is clinical.

## Paracentesis

Percutaneous needle aspiration of ascitic fluid from the peritoneal cavity. Used for diagnostic analysis to determine the cause of ascites and for therapeutic removal of large volumes for symptom relief. The serum-ascites albumin gradient is calculated to differentiate portal hypertensive from non-portal hypertensive causes.

## Paracetamol Overdose

Toxic ingestion of paracetamol that can cause dose-dependent hepatic necrosis; risk assessment uses the timing and serum concentration of the ingestion.

## Paracetamol Toxicity

Liver injury caused by excessive acetaminophen (paracetamol) exposure. Severe poisoning may cause nausea, abdominal pain, liver failure, or death and requires urgent assessment.

## Paraesophageal Hernia

A hiatal hernia in which part of the stomach moves through the diaphragm beside the esophagus. It may cause obstruction or strangulation even when reflux is absent.

## Paraganglioma

A neuroendocrine tumor arising from extra-adrenal paraganglia, related to pheochromocytoma; may secrete catecholamines. Associations with hereditary syndromes (SDH mutations, VHL, NF1) warrant genetic counseling.

## Paragonimiasis

A parasitic infection caused by *Paragonimus* lung flukes, usually acquired by eating undercooked crustaceans. It commonly affects the lungs.

## Parainfluenza

Parainfluenza viruses are respiratory viruses that commonly cause colds, croup, bronchitis, or pneu-

---

monia, especially in children; illness ranges from mild to severe airway disease.

### **Paranasal Sinuses**

Air-filled cavities in the bones around the nose that connect with the nasal cavity through small openings. They are lined with mucosa and contribute to mucus production and resonance of the voice.

### **Paraneoplastic Disorder**

A systemic syndrome caused by a malignancy through mechanisms other than direct invasion, metastasis, or metabolic effects of the tumor. Paraneoplastic syndromes result from hormone production, immune-mediated mechanisms, or cytokine release by the tumor, affecting distant organs.

### **Paraneoplastic Neurologic Syndrome**

Neurologic symptoms from immune response to cancer. Examples: Lambert-Eaton, cerebellar degeneration.

### **Paraneoplastic Syndrome**

Symptoms caused by cancer but not by tumor mass or metastasis. Mechanisms: hormone production, immune cross-reaction. Examples: SIADH, Cushing syndrome, Lambert-Eaton myasthenia, hypercalcemia.

### **Paranoia**

A thought process characterized by excessive or irrational suspiciousness and distrust of others, often manifesting as delusions of persecution, reference, or grandeur.

### **Paraphilia**

A condition characterized by intense and persistent sexual interest in atypical objects, situations, or individuals. Examples: exhibitionism, fetishism, frotteurism, pedophilic disorder, sexual masochism, sexual sadism, transvestic disorder, voyeurism, and paraphilia not otherwise specified.

### **Paraphimosis**

Paraphimosis occurs when a retracted foreskin can-

not be returned over the glans, causing painful swelling and possible loss of blood flow; it requires urgent reduction.

### **Parapneumonic Effusion**

Pleural effusion complicating pneumonia. Simple effusions resolve with antibiotics. Complicated effusions (pH < 7.2, glucose < 60 mg/dL) require chest tube drainage.

### **Parapneumonic Pleural Effusion**

Pleural fluid accumulation associated with bacterial pneumonia. It may be uncomplicated or progress to a complicated effusion or empyema, requiring imaging, pleural-fluid analysis, antibiotics, and sometimes drainage.

### **Paraquat**

A highly toxic herbicide. Ingestion can cause injury to the mouth and gastrointestinal tract, kidney failure, and delayed lung injury; severe poisoning has a high risk of death.

### **Paraseptal Emphysema**

A form of emphysema characterized by destruction of alveoli adjacent to the pleura. It typically affects young adults and predisposes to spontaneous pneumothorax due to rupture of subpleural blebs. It may be associated with Marfan syndrome.

### **Parasite**

An organism that lives on or within a host organism, deriving nutrients at the host's expense.

### **Parasitemia**

The presence and measurable burden of parasites in the blood. It is used particularly for malaria and some blood-borne protozoal infections and may correlate with disease severity.

### **Parasitic Infections**

Malaria: Plasmodium (falciparum, vivax, ovale, malariae, knowlesi). Falciparum: cerebral malaria, severe anemia, ARDS, AKI, hypoglycemia. Diagnosis: thick/thin smear, RDT (HRP2 for P. falciparum,

---

pLDH for all species, aldolase). Amoebiasis: E.

### **Parasitology**

The branch of microbiology that studies parasites, including protozoa, helminths, and ectoparasites. Parasitic infections are a major global health problem, particularly in tropical and subtropical regions. Protozoan parasites include *Plasmodium* (malaria), *Trypanosoma* (sleeping sickness, Chagas disease), and *Leishmania* (leishmaniasis).

### **Parasympathetic Nervous System**

The craniosacral division of the autonomic nervous system mediating 'rest-and-digest' functions. Preganglionic fibers from cranial nerves III, VII, IX, X, and sacral nerves S2-S4 synapse on ganglia near or within target organs (short postganglionic fibers).

### **Parasympatholytic**

A drug that blocks muscarinic (cholinergic) receptors, inhibiting parasympathetic nervous system activity. Agents: atropine (bradycardia, organophosphate poisoning), ipratropium/tiotropium (COPD/asthma—bronchodilation), scopolamine (motion sickness), oxybutynin/tolterodine (overactive bladder), and glycopyrrolate.

### **Parasympathomimetic**

A drug that mimics or enhances parasympathetic (cholinergic) activity. Direct agonists: muscarinic (pilocarpine—glaucoma, dry mouth) and nicotinic agonists.

### **Parathyroid**

One of the small endocrine glands behind the thyroid that secretes parathyroid hormone and regulates calcium and phosphate balance.

### **Parathyroid Crisis**

Severe hypercalcemia with calcium greater than fourteen milligrams per deciliter causing altered mental status, cardiac arrhythmias, and acute kidney injury. Most commonly occurs in patients with primary hyperparathyroidism precipitated by dehydration, immobility, or thiazide diuretics.

### **Parathyroid Hormone Physiology**

Parathyroid hormone is the primary regulator of calcium homeostasis secreted by the four parathyroid glands in response to low ionized calcium levels detected by the calcium-sensing receptor.

### **Parathyroid Hyperplasia**

Enlargement and increased cellularity of one or more parathyroid glands causing excessive parathyroid hormone secretion and primary hyperparathyroidism. It may occur sporadically or as part of multiple endocrine neoplasia.

### **Parathyroid Surgery**

Operations on the parathyroid glands, usually performed for selected cases of primary or secondary hyperparathyroidism. The decision depends on symptoms, calcium levels, kidney involvement, bone disease, overall health, and current clinical guidance.

### **Parathyroidectomy**

Surgical removal of parathyroid glands for refractory secondary hyperparathyroidism unresponsive to medical therapy. Indicated when calcium-phosphorus product persistently elevated despite maximal medical management, symptomatic bone disease, or calciphylaxis. Subtotal or total parathyroidectomy with autotransplantation.

### **Parenteral Nutrition**

Intravenous nutrition bypassing GI tract. Total parenteral nutrition (TPN) provides complete nutrition. Indications: bowel failure, short bowel syndrome, prolonged NPO, malabsorption. Risks: infection, liver dysfunction, metabolic complications, line complications.

### **Parietal Lobe**

The cerebral lobe posterior to the central sulcus and above the lateral sulcus, containing the primary somatosensory cortex (postcentral gyrus, Brodmann 3,1,2) processing touch, pain, temperature, and proprioception, plus the somatosensory association cortex.

---

## Parinaud Syndrome

A disorder caused by dysfunction of the dorsal midbrain, characterized by impaired upward gaze, abnormal pupil responses, and convergence-retraction eye movements. Causes include tumors, stroke, multiple sclerosis, and hydrocephalus.

## Parkinson Disease

A progressive neurodegenerative disorder characterized by the loss of dopaminergic neurons in the substantia nigra pars compacta of the midbrain, leading to reduced dopamine levels in the striatum and the cardinal motor features of bradykinesia, resting tremor, rigidity, and postural instability.

## Parkinson's Disease

A progressive neurodegenerative disorder caused by selective loss of dopaminergic neurons in the substantia nigra pars compacta, leading to dopamine depletion in the striatum. The pathological hallmark is the presence of Lewy bodies, intracellular inclusions composed of aggregated alpha-synuclein protein, within surviving neurons.

### Synonyms:

Parkinsons Disease (Parkinson's Disease)

## Parkinsonism

A clinical syndrome characterized by bradykinesia, rigidity, tremor (resting, pill-rolling), and postural instability. Idiopathic Parkinson disease: most common cause, responds well to levodopa.

## Paronychia

Paronychia is infection or inflammation of tissue around a fingernail or toenail, producing pain, redness, swelling, and sometimes a localized abscess. Streptococcus), presenting as painful, erythematous, swollen nail fold with possible abscess. Treatment includes warm compresses, antibiotics, and incision and drainage if abscessed.

## Parotid Gland

The largest of the three major salivary glands, located in the preauricular region, extending from the zygomatic arch superiorly to the angle of the mandible inferiorly. The parotid gland is encased in

the parotid fascia (investing layer of deep cervical fascia).

## Paroxysmal Nocturnal Dyspnea

Episodes of breathlessness that awaken a person from sleep after a period of lying down. It can occur with heart failure or other cardiopulmonary conditions and differs from orthopnea, which begins soon after lying down.

## Paroxysmal Nocturnal Hemoglobinuria

A rare, acquired clonal disorder of hematopoietic stem cells characterized by complement-mediated intravascular hemolysis, thrombosis (particularly in unusual sites such as hepatic, portal, and cerebral veins), and bone marrow failure.

## Paroxysmal Supraventricular Tachycardia

Sudden-onset and sudden-termination episodes of rapid regular tachycardia arising above the ventricles, usually involving an atrioventricular re-entry or nodal re-entry circuit. Palpitations, dizziness, chest discomfort, or syncope may occur.

## Partial Agonist

A partial agonist is a drug that binds to a receptor and produces a biological response that is less than the maximum possible response, even when all receptors are occupied. Partial agonists have affinity for the receptor but lower intrinsic activity compared to full agonists, producing a submaximal response regardless of dose.

## Partial Denture

Removable prosthesis replacing some teeth. Metal framework or acrylic. Requires remaining teeth for support.

## Partial Response

Significant tumor reduction but not complete.

## Partial Thromboplastin Time

A coagulation test measuring the intrinsic and common pathways (factors XII, XI, IX, VIII, X, V, II, fibrinogen), used to monitor unfractionated heparin

---

and detect factor deficiencies.

### **Partial Volume Artifact**

CT artifact from voxel containing multiple tissues. Reduced by thinner slices.

### **Partial-Volume Effect**

Underestimation or distortion of measured activity in small or low-contrast structures because the object size approaches the scanner's spatial resolution. It affects quantitative PET and SPECT and may require recovery or correction methods.

### **Particle (Vascular)**

An embolic particle used to occlude selected vessels under image guidance.

#### **Synonyms:**

Vascular

### **Particulate Matter**

Small solid or liquid particles suspended in air. Fine particles can penetrate the lungs and increase cardiovascular and respiratory risk.

### **Partograph (Partogram)**

A graphic record of cervical change, fetal descent, contractions, and maternal or fetal observations during labor. It can support communication and recognition of abnormal progress, but findings must be interpreted with current labor guidance and the overall clinical situation.

#### **Synonyms:**

Partogram

### **Parturition (Childbirth)**

The process of giving birth, encompassing three stages: (1) First stage: from the onset of regular uterine contractions (cervical effacement and dilation) to full dilation (10 cm). Latent phase—slow dilation (0–4 cm) over hours, variable duration. Active phase—more rapid dilation (4–10 cm), typically 1–1.5 cm/hour in nulliparous women.

#### **Synonyms:**

Childbirth

### **Parvovirus B19**

Human parvovirus B19: a small DNA virus causing erythema infectiosum ('fifth disease') in children, transmitted by respiratory droplets.

### **Parvovirus B19 Infection**

A viral infection that may cause slapped-cheek rash, joint symptoms, or temporary suppression of red-cell production.

### **Pasteurella Multocida**

A bacterium commonly carried by animals that can cause wound infections after bites or scratches and, less often, respiratory or bloodstream infection.

### **Pasteurization**

A heat treatment reducing microbial load in liquids by heating below boiling point to inactivate vegetative pathogens and spoilage organisms while preserving quality.

### **Patau Syndrome**

Trisomy 13, affecting 1 in 10,000-20,000 live births. Features: holoprosencephaly (most characteristic, incomplete forebrain division), microcephaly, microphthalmia or anophthalmia, cleft lip and palate, polydactyly (postaxial), clenched fists with overlapping fingers, and congenital heart defects (VSD, PDA, dextrocardia, 80%).

### **Patch**

A flat, circumscribed area of altered skin color larger than approximately 1 cm. It is the larger counterpart of a macule and may be caused by pigmentary, vascular, inflammatory, or neoplastic disease.

### **Patch (Vascular)**

A piece of biological or synthetic material sewn onto a blood vessel to widen or repair it.

#### **Synonyms:**

Vascular

### **Patch Graft**

Vascular graft for patch angioplasty. Bovine pericardium, PTFE.

---

## Patch Testing

Patch testing identifies allergens causing allergic contact dermatitis. The standard series includes 35 allergens. Additional custom trays include occupational and personal allergens. Patches are applied to the upper back for 48 hours and removed. Reading at 48 hours (initial) and 72 to 96 hours (delayed) identifies positive reactions.

## Patella

The largest sesamoid bone, embedded in the quadriceps tendon. It articulates with the femoral trochlea to form the patellofemoral joint and improves the mechanical efficiency of knee extension. It is triangular and covered by thick articular cartilage.

## Patella (Kneecap)

The largest sesamoid bone in the human body, embedded within the quadriceps tendon at the front of the knee. It improves the mechanical efficiency of knee extension, protects the front of the joint, and distributes forces across the femoral trochlea.

**Synonyms:**  
Kneecap

## Patellofemoral Instability

A tendency of the patella to move abnormally or dislocate from the femoral trochlea. Risk factors include abnormal trochlear shape, a high-riding patella, ligament insufficiency, altered limb alignment, and previous dislocation.

## Patellofemoral Pain Syndrome

Anterior knee pain related to the patellofemoral joint, common in adolescents and young adults (especially runners). Etiology: multifactorial (malalignment, quadriceps imbalance, overuse, tight lateral structures, weak VMO, and patellar instability).

**Synonyms:**  
Runner's Knee

## Patent Ductus Arteriosus

A congenital heart defect characterized by persistent patency of the ductus arteriosus, a vessel connecting the pulmonary artery to the proximal descending

aorta, which normally closes within the first few days of life. The resulting left-to-right shunt leads to pulmonary overcirculation and left heart volume overload.

## Patent Foramen Ovale

A persistent flap-like opening between the atria that normally permits fetal blood flow and usually closes after birth. It is often an incidental finding but may allow a clot to pass from the venous to the arterial circulation in selected circumstances.

## Paternal Uniparental Disomy 14 (UDP 14 Pat) Thoracic Dysplasia

A rare genetic condition resulting from inheritance of both copies of chromosome 14 from the father, leading to dysregulated expression of imprinted genes on chromosome 14. It presents with severe thoracic hypoplasia, pulmonary hypoplasia, and characteristic facial features. It is a lethal condition in most cases.

**Synonyms:**  
UDP 14 pat

## Paternity Testing

The use of genetic markers to establish or exclude a biological parent-child relationship, the reference method being short tandem repeat DNA profiling of the child, alleged father, and mother. Modern STR analysis commonly yields paternity probability exceeding 99.99 percent for true fathers.

## Pathogen

A tiny organism such as a virus, bacterium, or parasite that can invade the body and produce disease.

## Pathogenesis

Mechanism of disease development. Steps: initiation, promotion, progression.

## Pathogenic Variant

A genetic variant with sufficient validated evidence to be interpreted as causing or contributing to disease. Classification uses standardized evidence from population data, segregation, functional studies, computational analysis, and phenotype correlation.

---

## **Pathogenicity**

The capacity of a microorganism to cause disease in a susceptible host. Pathogenicity is a qualitative property, whereas virulence describes the relative degree of disease-causing capacity among strains or organisms.

## **Pathologic Fracture**

A fracture occurring through bone weakened by an underlying disease such as metastasis, myeloma, infection, benign tumor, or metabolic bone disorder. Evaluation includes characterization of the lesion and treatment of both the fracture and its cause.

## **Pathologic Hypertrophy**

The enlargement of an organ resulting from an increase in the size of its constituent cells without an increase in cell number, typically occurring as a response to chronically increased workload or hormonal stimulation.

## **Pathology**

Study of disease. Includes general pathology (cell injury, inflammation, neoplasia) and systemic pathology (organ-specific diseases).

## **Pathology Artifact**

A distortion, alteration, or contaminant introduced during specimen collection, fixation, processing, sectioning, staining, or imaging rather than representing true disease. Artifacts must be recognized to avoid diagnostic error.

## **Patient**

Person receiving medical care. Also: patient zero (initial case), patient safety.

## **Patient Advocacy**

Acting on behalf of a patient to ensure that the patient's needs, rights, and preferences are addressed in healthcare.

## **Patient Communication**

The exchange of information and understanding between a patient, caregivers, and healthcare pro-

fessionals during care.

## **Patient Education**

The process of explaining a health condition, treatment, medicines, exercises, equipment, warning signs, and prevention strategies in a way the patient can understand and use.

## **Patient Positioning**

Placing and supporting a patient in a position that permits safe care, accurate examination or imaging, and adequate comfort.

## **Patient Preparation**

The instructions and assessments completed before a test or procedure, such as fasting, medicine review, hydration, consent, or skin preparation when required.

## **Patient Safety**

Prevention of harm from healthcare. Examples: medication errors, healthcare-associated infections, surgical errors. Strategies: checklists, hand hygiene, barcoding.

## **Patient-Centered Care**

Care respecting patient preferences, needs, values. Examples: shared decision-making, communication, coordination.

## **Patient-Centered Outcome**

An outcome that reflects what matters to the patient, including symptoms, function, quality of life, treatment burden, and ability to achieve personal goals, rather than relying only on laboratory or imaging measures.

## **Patient-Controlled Analgesia**

A method in which a patient self-administers prescribed doses of analgesic medication using a programmable pump with preset safety limits. The medication, dose, and lockout interval are individualized according to the patient's condition and monitoring needs.

---

### Patient-Reported Outcome Measure

A validated questionnaire completed directly by a patient to assess symptoms, function, health status, or quality of life without clinician interpretation of the response.

### Patlak Plot

Linear graphical method for quantitative PET.

### Pattern Recognition Receptors

PRRs recognize PAMPs (pathogen) and DAMPs (damage). TLRs: TLR1/2 (lipoproteins), TLR2/6 (lipoteichoic acid), TLR3 (dsRNA), TLR4 (LPS, MD-2, CD14), TLR5 (flagellin), TLR7/8 (ss-RNA), TLR9 (CpG DNA). Cytosolic: RIG-I/MDA5 (RNA), cGAS (DNA -> cGAMP -> STING -> IFN), NOD1/2 (peptidoglycan).

### PCL Injuries

Posterior cruciate ligament (PCL) tears: dashboard injury (posterior tibial force), hyperflexion. Clinical: posterior drawer (most sensitive), quadriceps active test, posterior sag sign. Grade I (1-5mm), II (6-10mm), III (>10mm). Isolated PCL: nonoperative (brace, rehab) for Grade I/II; surgical for Grade III or combined.

### PCOS

Common endocrine disorder affecting six to twelve percent of reproductive-aged women characterized by hyperandrogenism, ovulatory dysfunction, and polycystic ovarian morphology on ultrasound. See Polycystic Ovary Syndrome.

### PCR (Polymerase Chain Reaction)

Technique amplifying specific DNA sequences exponentially. Components: template DNA, primers, DNA polymerase (Taq), nucleotides, buffer. Cycles: denaturation, annealing, extension. Applications: diagnostics, forensics, research.

#### Synonyms:

Polymerase Chain Reaction

### PE Anticoagulation

Anticoagulant treatment for pulmonary embolism

to prevent clot extension and recurrence. Options include direct oral anticoagulants, heparins, and vitamin K antagonists; the choice and duration depend on bleeding risk, pregnancy, kidney function, cancer, provoking factors, and other clinical features.

### Peak Expiratory Flow Rate

The maximum flow rate achieved during a forced expiratory manoeuvre after maximal inspiration, measured in litres per minute (L/min) using a peak flow meter. PEFR reflects the degree of airflow obstruction and is effort-dependent.

### Pearly Penile Papules

Small, benign, dome-shaped papules arranged circumferentially around the glans penis, representing normal anatomical variants requiring no treatment.

### Pectoralis Major Muscle

Thick fan-shaped chest muscle with clavicular and sternocostal heads, inserting on the lateral intertubercular groove lip. Innervated by medial/lateral pectoral nerves (C5-T1). Clavicular head flexes; sternocostal head extends from flexion. Adducts and medially rotates powerfully.

### Pectoralis Minor Muscle

Thin triangular muscle deep to pectoralis major, from ribs 3-5 to the coracoid process. Innervated by medial pectoral nerve (C8-T1). Draws scapula anteriorly/inferiorly, stabilizing it against the thorax. Assists forced inspiration. Tightness contributes to rounded shoulder posture and thoracic outlet syndrome.

### Pectus Carinatum

A congenital chest wall deformity characterized by anterior protrusion of the sternum (pigeon chest), caused by excessive growth of the costal cartilages pushing the sternum forward. Less common than pectus excavatum. Associated with congenital heart disease, Marfan syndrome, Noonan syndrome, and homocystinuria.

---

## **Pectus Excavatum**

The most common congenital chest wall deformity, characterized by depression of the sternum (funnel chest), caused by excessive growth of the costal cartilages that push the sternum inward. Typically sporadic, but associated with Marfan syndrome, Ehlers-Danlos syndrome, Noonan syndrome, and Poland syndrome.

### **Synonyms:**

Sunken Chest

## **Pediatric Anesthesia**

Pediatric anesthesia requires age-appropriate dosing, equipment, and techniques. Children have higher metabolic rates, increased oxygen consumption, smaller functional residual capacity, and higher risk of desaturation. Airway anatomy differs (larger tongue, more anterior larynx, narrower subglottic area).

## **Pediatric Appendicitis**

Acute inflammation of the vermiform appendix, usually caused by luminal obstruction. Children may have evolving periumbilical-to-right-lower-quadrant pain, anorexia, vomiting, fever, and guarding, but presentation can be atypical in young children; timely surgical and antimicrobial assessment reduces perforation risk.

## **Pediatric Cancer**

Cancer occurring in infants, children, or adolescents. Common types include leukemia, brain tumors, lymphoma, neuroblastoma, and Wilms tumor; prognosis varies by type and stage.

## **Pediatric Dentistry**

Specialty of dental care for children. Manages primary dentition, growth, behavior. Preventive focus. Special needs adaptation.

## **Pediatric Dermatology**

The medical specialty concerned with skin, hair, and nail disorders in infants, children, and adolescents. It includes congenital lesions, inflammatory diseases, infections, vascular lesions, and tumors.

## **Pediatric Dermatology Conditions**

Distinct from adult dermatology. Birthmarks include vascular (hemangiomas, port-wine stains) and pigmented (café-au-lait, congenital nevi, Mongolian spots). Infantile hemangiomas proliferate in first months then involute. Congenital melanocytic nevi carry melanoma risk proportional to size.

## **Pediatric Diabetic Ketoacidosis**

A life-threatening complication of type 1 diabetes characterized by hyperglycemia, metabolic acidosis, and ketosis. Presents with polyuria, polydipsia, vomiting, abdominal pain, Kussmaul respirations, and fruity breath odor.

## **Pediatric Eczema**

Atopic dermatitis in children commonly begins in infancy with facial and extensor involvement; flexural disease predominates in older children. Pruritus, xerosis, sleep disturbance, and scratching are characteristic.

## **Pediatric Fever**

An elevated body temperature in a child, usually caused by infection but sometimes by inflammation, medicines, or environmental heat. Evaluation depends on age, appearance, duration, and associated findings.

## **Pediatric Health**

Pediatric health encompasses the physical, cognitive, emotional, and social development of children from infancy through adolescence, with emphasis on preventive care, developmental surveillance, and age-appropriate management of acute and chronic conditions.

## **Pediatric Meningitis**

Inflammation of the meninges in children, bacterial forms being the most dangerous. Presents with fever, headache, neck stiffness, photophobia, altered mental status, and petechial rash (meningococcal). Infants may present with irritability, poor feeding, bulging fontanelle, and high-pitched cry.

---

## **Pediatric Nuclear Medicine**

Special considerations for children: lower doses, sedation often needed, distraction techniques. Dose reduction: weight-based activity, optimized protocols.

## **Pediatric Rehabilitation**

Rehabilitation for children with congenital or acquired disabilities. Developmental considerations, family-centered care, school collaboration.

## **Pediatric Shock**

Inadequate tissue oxygen delivery or utilization in a child, most often caused by hypovolemia, distributive disease, cardiogenic dysfunction, or obstruction. Children may maintain blood pressure until late; tachycardia, abnormal perfusion, altered mental status, and oliguria are important early warning signs.

## **Pediatric Skin Tumors**

Pediatric skin tumors differ from adult tumors. Infantile hemangioma is the most common benign tumor of infancy. Congenital melanocytic nevus carries risk of melanoma (larger nevi have higher risk). Juvenile xanthogranuloma is a benign histiocytic lesion. Pyogenic granuloma is a common vascular lesion.

## **Pediatric Toxicology**

Poisoning in children. Common: iron, medications, household cleaners, plants. Prevention: child-proof containers, education.

## **Pediatrician**

A medical doctor who specializes in the health and medical care of children from birth through adolescence (typically up to age 16-18).

## **Pediatrics**

The branch of medicine concerned with the health and medical care of infants, children, and adolescents from birth to age 18 (or up to age 16 in the UK).

## **Pediculosis Capitis**

Infestation of the scalp by head lice, causing itching and attached eggs or lice in the hair.

## **Pediculus Humanus Capitis**

A blood-sucking parasite commonly known as the louse (plural, lice) that can cause an itchy scalp; infestations are highly contagious and especially common in school-age children.

## **Pedophilic Disorder**

A paraphilic disorder involving recurrent, intense sexual fantasies, urges, or behaviors toward pre-pubescent children, generally beginning in adolescence or adulthood. Clinical diagnosis requires the criteria to cause significant distress or impairment, or to be acted upon, and requires the person to meet established age-difference criteria.

## **PEG Tube**

A feeding tube placed through the abdominal wall into the stomach using endoscopic guidance.

## **Percutaneous Endoscopic Gastrostomy**

Endoscopic placement of a feeding tube through the abdominal wall directly into the stomach. Indications: long-term enteral feeding (>4 weeks) for dysphagia (stroke, ALS, dementia, head/neck cancer) and malnutrition.

## **Pelvic Binder**

A circumferential device applied around the pelvis to reduce motion and hemorrhage from suspected unstable pelvic-ring injury. It should be centered over the greater trochanters and used with definitive imaging and hemorrhage-control management.

## **Pelvic Cavity**

The lower abdominal cavity enclosed by the pelvis, containing the urinary bladder, internal reproductive organs, and rectum.

## **Pelvic Congestion Syndrome**

Chronic pelvic pain associated with enlarged or inefficient pelvic veins, often worsening with prolonged

---

standing, before menstruation, or after intercourse. Diagnosis requires evaluation for other causes of pelvic pain and may involve pelvic imaging; treatment is individualized by gynecology or vascular specialists.

### **Pelvic Floor Dysfunction**

Weakness, overactivity, poor coordination, or injury of the muscles and connective tissues supporting the bladder, bowel, and reproductive organs. Symptoms may include urinary or fecal problems, pelvic pain, constipation, pain with sex, or pelvic organ prolapse; assessment may involve pelvic-health clinicians.

### **Pelvic Floor Health And Disorders**

The pelvic floor is a musculofascial sling (levator ani, coccygeus, and surrounding fascia) spanning the pelvic outlet, supporting the pelvic organs (bladder, uterus, rectum), maintaining continence, and facilitating urination, defecation, and sexual function.

### **Pelvic Inflammatory Disease**

Infection and inflammation of the upper female genital tract (uterus, fallopian tubes, ovaries, and peritoneum), most commonly caused by sexually transmitted infections (*Chlamydia trachomatis*, *Neisseria gonorrhoeae*). Presents with lower abdominal pain, cervical motion tenderness, adnexal tenderness, and fever.

### **Pelvic Inlet**

The superior opening of the true pelvis, bounded by the sacral promontory posteriorly, the arcuate lines of the ilia laterally, and the symphysis pubis anteriorly. Its anteroposterior diameter (true conjugate) normally measures at least 11 cm. The transverse diameter is typically 13 cm.

### **Pelvic Organ Prolapse**

POP: descent of the pelvic organs through the vagina due to pelvic floor weakness. Types: cystocele (anterior—bladder), rectocele (posterior—rectum), uterine prolapse (apical), enterocele, and vault prolapse (post-hysterectomy).

### **Pelvic Outlet**

The inferior opening of the true pelvis, bounded by the pubic symphysis, ischial tuberosities, sacrotuberous ligaments, and coccyx. Normal anteroposterior diameter is 11-13 cm (from the lower border of the pubic symphysis to the tip of the coccyx), and the transverse diameter (between the ischial tuberosities) is approximately 10-11 cm.

### **Pelvic Pain During Early Pregnancy**

Pain in the pelvis or lower abdomen during early pregnancy, caused by normal uterine changes, miscarriage, ectopic pregnancy, ovarian disease, infection, or other conditions. Severe or one-sided pain, shoulder pain, fainting, fever, or vaginal bleeding requires emergency assessment.

### **Pelvic Pain**

Pain localized to the lower abdomen, pelvis, or perineum, lasting <3 months (acute) or >3–6 months (chronic), and can arise from gynecologic, urologic, gastrointestinal, musculoskeletal, or psychologic causes.

### **Pelvic Spleen**

An ectopic or wandering spleen that has descended into the pelvic cavity, resulting from laxity or absence of the normal ligamentous attachments that fix the spleen in the left upper quadrant. It may present as a palpable pelvic mass, with risk of torsion, infarction, or rupture. Diagnosis is by CT or ultrasound.

### **Pemberton Sign**

Facial flushing, cyanosis, or breathing difficulty induced by raising both arms, suggesting obstruction at the thoracic inlet, often from a large retrosternal goiter.

### **Pemberton's Sign**

A clinical sign elicited by asking the patient to raise both arms above the head for one minute, causing facial plethora, cyanosis, and distended neck veins in patients with a substernal goiter or mediastinal mass compressing the thoracic inlet.

---

## Pemphigoid Gestationis

An autoimmune blistering disease of pregnancy characterised by intensely pruritic urticarial plaques and tense vesicles or bullae, typically arising in the second or third trimester around the umbilicus and spreading to the trunk and extremities.

## Pemphigus Vulgaris

An autoimmune intraepidermal blistering disease caused by IgG antibodies against desmoglein 1 and 3. It presents with flaccid blisters that rupture easily, leaving painful erosions of skin and mucous membranes. Nikolsky sign is positive (lateral pressure causes epidermal sloughing).

## Penetrance

Proportion of individuals with a particular genotype who express the expected phenotype. Complete penetrance: all with genotype show phenotype. Incomplete penetrance: some with genotype do not show phenotype.

## Penetrating Abdominal Trauma

Injury to the abdomen caused by a projectile, sharp object, or other penetrating force. It may damage abdominal organs or blood vessels and requires urgent assessment for internal bleeding or organ injury; management depends on the mechanism, examination, stability, and imaging findings.

## Penile Adhesions

Abnormal attachment of penile skin to the glans, often after circumcision or during childhood. They may cause irritation or conceal part of the glans and are assessed and treated according to severity.

## Penile Discharge

Fluid leaving the urethral opening that is not normal urine or semen. It may result from urethritis, including sexually transmitted infection, and requires clinical assessment and appropriate testing.

## Penile Edema

Swelling of the penis caused by inflammation, infection, trauma, allergic reaction, impaired lymphatic drainage, or a constricting ring or retracted foreskin.

Sudden painful swelling with an irreducible foreskin is an emergency.

## Penile Cancer

Rare malignancy, mostly squamous cell carcinoma. Risk factors: HPV, phimosis, poor hygiene, smoking. Presentation: penile lesion, ulcer, mass. Treatment: surgery (partial/total penectomy), radiation, chemotherapy.

## Penile Fracture

Rupture of tunica albuginea during erection. "Pop" sound, immediate detumescence, swelling, ecchymosis. Surgical emergency.

## Penile Implant

A surgically implanted device used to produce penile rigidity in selected people with erectile dysfunction that has not responded to other treatments.

## Penile Prosthesis

Inflatable or malleative device for erectile dysfunction. Types: two-piece, three-piece (reservoir, pump, cylinders). Surgical implantation. Complications: infection, erosion, mechanical failure, dissatisfaction.

## Penile Torsion

Rotation of the penis around its longitudinal axis, usually a congenital condition in which the glans or urethral opening is rotated. Symptomatic or marked torsion may require urologic evaluation and surgical correction.

## Penile Hygiene

Routine cleaning and drying of the penis and foreskin, with gentle retraction only when it moves freely and replacement afterward. Good hygiene helps reduce irritation and infection without harsh soaps or forceful retraction.

## Pentad Of TTP

Classic clinical pentad of Thrombotic Thrombocytopenic Purpura: (1) Thrombocytopenia, (2) Microangiopathic Hemolytic Anemia (schistocytes),

---

(3) Neurological symptoms, (4) Renal insufficiency, and (5) Fever. See Thrombotic Thrombocytopenic Purpura (TTP).

### **Pentavalent Vaccine**

A WHO-prequalified five-in-one combination vaccine containing Diphtheria toxoid, Tetanus toxoid, whole-cell Pertussis antigen, Hepatitis B (HBsAg), and Haemophilus influenzae type b (Hib) conjugate, administered as a single intramuscular injection.

### **Pentose Phosphate Pathway**

A cytoplasmic glucose oxidation pathway running parallel to glycolysis, primarily in the liver, adipose tissue, adrenal cortex, and red blood cells. It has two phases: the oxidative phase (producing NADPH and ribose-5-phosphate) and the non-oxidative phase (interconverting sugar phosphates).

### **Peptic Ulcer Bleeding**

Haemorrhage caused by erosion of an artery or other blood vessel beneath a gastric or duodenal peptic ulcer. It is a common cause of upper gastrointestinal bleeding and may present with haematemesis, coffee-ground vomiting, melaena, or haemodynamic instability.

### **Peptic Ulcer Disease**

Condition characterized by ulceration of the gastrointestinal mucosa extending through the muscularis mucosae into the submucosa or deeper layers, occurring most commonly in the duodenal bulb and gastric antrum.

### **Peptide Bond**

A covalent amide bond formed between the carboxyl group of one amino acid and the amino group of another, releasing water. Peptide bonds link amino acids into polypeptide chains and have partial double-bond character that restricts rotation.

### **Percussion Note**

The sound produced by percussing the chest wall. Normal lung produces a resonant note. Dullness suggests consolidation or fluid. Hyperresonance suggests pneumothorax or emphysema. Stony dullness

suggests pleural effusion.

### **Percutaneous Biopsy**

Removal of tissue through the skin using a needle or other instrument, often guided by ultrasound, CT, or another imaging method.

### **Percutaneous Coronary Intervention**

A catheter-based procedure to open blocked coronary arteries, typically involving balloon angioplasty and stent placement. Indications include acute STEMI (primary PCI), NSTEMI (early invasive strategy), and stable CAD with significant stenosis. Drug-eluting stents have reduced restenosis rates compared to bare-metal stents.

### **Percutaneous Drainage**

Placement of a needle or catheter through the skin to drain a fluid collection or obstructed body space, often with imaging guidance.

### **Percutaneous Nephrolithotomy**

Minimally invasive surgical procedure for removing large, complex, or staghorn renal calculi. Access: a needle track is established under fluoroscopic or ultrasound guidance from the flank through the renal parenchyma into the target renal calyx, dilated to allow passage of a nephroscope and working sheath.

### **Percutaneous Transluminal Angioplasty**

Balloon dilation of arterial stenosis. Often combined with stenting.

### **Percutaneous Umbilical Blood Sampling**

An invasive procedure for fetal blood sampling from the umbilical vein under ultrasound guidance, typically performed after 18-20 weeks.

### **Perforation Of A Viscus**

Full-thickness breach of the wall of a hollow abdominal organ, most commonly the stomach, duodenum, or colon, resulting in leakage of luminal contents into the peritoneal cavity. Causes include peptic ulcer disease, diverticulitis, appendicitis, inflammatory bowel disease, ischemia, and trauma.

---

### Performance Status

A standardized measure of a patient's functional ability and activity level, commonly recorded with ECOG or Karnofsky scales. It helps estimate prognosis, determine treatment eligibility, and quantify change during cancer care.

### Perfusion Imaging

Imaging tissue blood flow. CT perfusion, MR perfusion, PET perfusion. Used for stroke, tumor characterization.

### Perfusion PET

Tracers: Rb-82, N-13 ammonia, O-15 water. Measure blood flow.

### Periapical Abscess

An acute or chronic localized collection of pus at the apex of a tooth's root, arising from pulpal infection and necrosis (usually due to untreated dental caries or trauma).

### Periapical Granuloma

A chronic inflammatory lesion at the apex of a tooth, usually resulting from pulpal necrosis and persistent apical infection. It may be asymptomatic and is diagnosed through clinical, radiographic, and sometimes histopathologic assessment.

### Pericardial Cavity

The narrow, fluid-filled space between the layers of the pericardium surrounding the heart.

### Pericardial Effusion Etiology

Causes include infection, malignancy, kidney failure, hypothyroidism, autoimmune disease, inflammation after myocardial injury or cardiac surgery, radiation, trauma, and some medications. The likely cause varies with geography, age, medical history, and immune status.

### Pericardial Knock

A high-pitched, early diastolic sound caused by sudden cessation of ventricular filling in constrictive pericarditis. It is heard at the left sternal border

and may be confused with an S3 or opening snap. The knock is typically louder with inspiration and is a characteristic finding in constrictive pericarditis.

### Pericardial Metastases

Cancer deposits in the pericardium, which may cause inflammation or accumulation of fluid around the heart.

### Pericardial Tamponade

Fluid accumulation in pericardial space compromising cardiac filling. Beck triad: hypotension, jugular venous distension, muffled heart sounds. Electrical alternans on ECG. Diagnosis: echocardiography. Treatment: emergent pericardiocentesis, pericardial window.

### Pericardiocentesis

Pericardiocentesis is needle or catheter drainage of fluid from the pericardial sac, usually to relieve cardiac tamponade or diagnose an effusion; bleeding, arrhythmia, coronary injury, and pneumothorax are possible complications. Cardiac tamponade or diagnostically for pericardial effusion. The subxiphoid approach is most commonly used, with the needle directed toward the left shoulder under echocardiographic guidance.

### Perichondritis Of The Ear

Infection or inflammation of the auricular perichondrium, often after trauma, piercing, or surgery. *Pseudomonas aeruginosa* is an important cause; delayed treatment can produce cartilage necrosis and permanent deformity.

### Pericoronitis

Inflammation of the soft tissue around the crown of a partially erupted tooth, most often a mandibular third molar. Food retention and bacterial accumulation may cause pain, swelling, trismus, fever, or spread into deeper spaces.

### Periductal Mastitis

Inflammation around the major subareolar ducts, often associated with smoking, causing a painful periareolar mass, discharge, or recurrent breast ab-

---

ccess.

### **Perilymphatic Fistula**

Abnormal communication between the inner ear fluid spaces and the middle ear or mastoid, often after trauma, barotrauma, or surgery. It may cause episodic vertigo, hearing loss, tinnitus, or pressure-induced symptoms and requires specialist evaluation.

### **Perimenopause**

The transition time in a woman's life that begins when ovaries produce less estrogen and menstruation becomes less frequent, and ends when the ovaries no longer produce eggs and menstruation stops.

### **Perinatal Psychiatry**

The subspecialty focused on psychiatric disorders during pregnancy and the postpartum period. Common conditions include perinatal depression, perinatal anxiety, perinatal OCD, and postpartum psychosis. Medication selection must balance maternal mental health with fetal or neonatal exposure risks.

### **Perineal Laceration**

Tearing of the perineal tissues during vaginal delivery. The injury is graded by depth: it may involve skin, perineal muscle, the anal sphincter, or the rectal mucosa.

### **Perineal Laceration Classification**

Obstetric perineal tears are graded by depth: first degree involves skin, second degree involves perineal muscle, third degree involves the anal sphincter complex, and fourth degree extends through the rectal mucosa. Accurate examination and repair reduce long-term pelvic-floor and continence complications.

### **Perineal Protection**

Techniques used during the second stage to minimize perineal trauma (lacerations, episiotomy). Manual protection: the attendant's hand applies gentle pressure to the fetal head to control the speed of delivery (not too fast), supporting the perineum and flexing the fetal head.

### **Perineal Tear**

Laceration of the perineum during vaginal delivery, classified by degree: first degree (skin only), second degree (perineal muscles), third degree (sphincter complex involvement), and fourth degree (rectal mucosa). Most deliveries involve first or second degree tears. Third and fourth degree tears risk fecal incontinence.

### **Periodontal Abscess**

A localized accumulation of pus within periodontal tissues, commonly associated with a periodontal pocket, foreign material, or impaired drainage. It may cause pain, swelling, suppuration, tooth mobility, and systemic symptoms and requires urgent dental assessment.

### **Periodontal Flap Surgery**

Surgical access for deep debridement. Flap reflected, calculus removed, bone contoured, flap repositioned.

### **Periodontal Ligament**

Connective tissue attaching tooth to bone. Contains collagen fibers, cells, blood vessels, nerves. Provides proprioception, shock absorption. Expanded in bruxism.

### **Periodontal Pocket**

A pathologically deepened gingival sulcus caused by apical migration of the junctional epithelium and loss of periodontal attachment. Pocket depth and clinical attachment level are measured with a periodontal probe and interpreted with bleeding, inflammation, and radiographic bone loss.

### **Periodontal Probing**

Measurement of the depth of the gingival sulcus/pocket using a periodontal probe with millimeter markings. Normal: 1–3 mm. Periodontal pockets:  $\geq 4$  mm (indicates attachment loss and periodontitis). Full-mouth probing at 6 sites per tooth: mesio-buccal, mid-buccal, disto-buccal, mesio-lingual, mid-lingual, disto-lingual.

### **Perioperative Antibiotic Prophylaxis**

Administration of an appropriate antimicrobial

---

within a defined interval before incision to reduce infection risk for selected procedures. Choice, timing, redosing, and discontinuation depend on procedure, organisms, patient factors, and local guidance.

### **Perioral Dermatitis**

A papulopustular eruption around the mouth, sparing the vermilion border. It is more common in young women and associated with topical corticosteroid use. Other triggers include fluoridated toothpaste, cosmetics, and inhaler steroids.

### **Peripancreatic Malignancy**

Neoplastic process involving tissues surrounding the pancreas, including primary pancreatic adenocarcinoma with peripancreatic extension and metastatic disease from adjacent or distant organs. Often presents at an advanced stage with abdominal pain, weight loss, obstructive jaundice, and new-onset diabetes.

### **Peripartum Cardiomyopathy**

A form of dilated cardiomyopathy occurring in the last month of pregnancy or within 5 months postpartum, with no other identifiable cause. Risk factors include advanced maternal age, multiple gestations, preeclampsia, and African American race. Presents with heart failure symptoms.

### **Peripartum Cardiomyopathy Prognosis**

Recovery of ventricular function varies widely. Prognosis is influenced by the initial ejection fraction, ventricular size, symptoms, treatment, complications, and follow-up; persistent dysfunction requires ongoing cardiac care.

### **Peripheral**

Peripheral means away from the center or central nervous system; in clinical use it may describe nerves, vessels, lesions, circulation, or symptoms outside the brain, spinal cord, or central structures.

### **Peripheral Arterial Disease**

Atherosclerotic narrowing of arteries supplying limbs. Symptoms: intermittent claudication (pain with walking, relieved by rest), critical limb ischemia

(rest pain, ulcers, gangrene). Diagnosis: ABI <0.9, Doppler, angiography. Treatment: risk factor modification, exercise, cilostazol, revascularization for severe disease.

### **Peripheral Artery Disease**

Narrowing of arteries supplying the limbs, usually caused by atherosclerosis. It may cause exertional leg pain relieved by rest, reduced pulses, nonhealing wounds, or critical limb ischemia. Also called peripheral arterial disease.

#### **Synonyms:**

peripheral arterial disease.

### **Peripheral Blood Smear**

Microscopic examination of a stained blood smear (Wright-Giemsa stain).

### **Peripheral Blood Stem Cells**

Hematopoietic stem cells collected from circulating blood, usually after mobilization from the bone marrow; they can be used for autologous or allogeneic stem-cell transplantation.

### **Peripheral Edema**

Swelling due to accumulation of fluid in the interstitial space of the limbs, most commonly the lower extremities.

### **Peripheral Oedema**

Alternate spelling of Peripheral Edema; swelling caused by excess interstitial fluid, usually in the limbs.

### **Peripheral Nerve Blocks**

Peripheral nerve blocks provide targeted anesthesia and analgesia for specific surgical sites. Ultrasound-guided blocks improve success rates and reduce complications.

### **Peripheral Nerve Injuries**

Damage to nerves outside the brain and spinal cord caused by trauma, compression, stretching, disease, or toxins. It may cause pain, numbness, weakness, or loss of function; recovery depends on the severity

---

and location of the injury.

### **Peripheral Nervous System**

The portion of the nervous system consisting of nerves and ganglia outside the brain and spinal cord. The PNS connects the central nervous system (CNS) to peripheral tissues and organs. Components: (1) Cranial nerves (12 pairs)—emerging from the brain/brainstem, innervating head, neck, and viscera.

### **Peripheral Neuropathy**

A disorder of peripheral nerves causing sensory, motor, and/or autonomic symptoms in a distal, symmetric 'stocking-glove' pattern.

#### **Synonyms:**

Neuropathy, Peripheral Peripheral Neuritis (Peripheral Neuropathy)

### **Periprosthetic Joint Infection**

Infection involving a joint prosthesis and adjacent tissues. Diagnosis integrates clinical findings, inflammatory markers, joint-fluid analysis and culture, and imaging; treatment may require debridement, implant retention, staged exchange, or resection arthroplasty.

### **Perirenal Extramedullary Hematopoiesis**

Formation of blood cells in the tissue surrounding the kidney, occurring as a compensatory response to chronic severe anemia such as myelofibrosis or thalassemia major.

### **Peristalsis**

Peristalsis is coordinated, wave-like contraction of smooth muscle that propels food, fluid, or other contents through the gastrointestinal tract and some ducts.

### **Peritoneal Carcinomatosis**

Diffuse metastatic seeding of the peritoneal cavity from gastrointestinal or ovarian malignancies. Presents with ascites, bowel obstruction, and cachexia. Diagnosed by CT and paracentesis showing malignant cells. Prognosis is generally poor.

### **Peritoneal Dialysis**

Dialysis using peritoneum as semipermeable membrane. CAPD with four manual exchanges daily or APD using cyclor overnight. Advantages include home-based therapy and hemodynamic stability. Complications include peritonitis and catheter infection. Tenckhoff catheter is standard access.

### **Peritoneal Dialysis Catheter**

Flexible tube surgically placed into the peritoneal cavity for peritoneal dialysis. The Tenckhoff catheter is the most commonly used type with one or two cuffs that promote tissue ingrowth and anchor the catheter. Placement can be done surgically, laparoscopically, or percutaneously under radiological guidance.

### **Peritoneal Infection**

Infection of the lining of the abdominal cavity, often called peritonitis. Causes include a ruptured appendix or bowel, abdominal surgery, pelvic infection, or contamination during dialysis. Severe abdominal pain, fever, vomiting, or a rigid abdomen requires urgent assessment.

### **Peritoneum**

The serous membrane lining the abdominal cavity and covering the abdominal organs. Parietal peritoneum lines the abdominal wall (innervated by somatic nerves—pain is well-localized); visceral peritoneum covers organs (innervated by visceral afferents—pain is dull, poorly localized).

### **Peritonitis**

Peritonitis is inflammation or infection of the peritoneum, often from perforation, surgery, ascites infection, or abdominal disease, and may cause severe pain, ileus, sepsis, and shock. organ, appendicitis, abdominal trauma, or infection of ascitic fluid. Severe abdominal pain, guarding, fever, vomiting, or shock requires urgent medical evaluation.

### **Peritonitis In PD**

Infection or inflammation of the peritoneum in a person receiving peritoneal dialysis. Cloudy effluent, abdominal pain, or fever requires prompt evaluation

---

of the effluent and other causes. Treatment usually includes antibiotics selected for the suspected organisms; recurrent or refractory infection may require catheter removal.

### **Peritonsillar Abscess**

A collection of pus beside the tonsil, usually developing as a complication of tonsillar infection. See Quinsy.

### **Periungual Fibroma**

Benign, flesh-colored or pink fibrous tumors arising from the nail fold or nail bed, presenting as firm, exophytic nodules that may distort the nail plate. They occur sporadically or in association with tuberous sclerosis complex. When multiple periungual fibromas are present, they raise suspicion for tuberous sclerosis.

### **Periventricular Leukomalacia**

Ischemic white matter injury in the premature infant brain, a major cause of cerebral palsy. Risk factors include prematurity, hypotension, and inflammation. Diagnosis by cranial ultrasound showing periventricular echodensities or cystic changes. Prevention: avoiding hypotension, maintaining normothermia, and managing infection.

### **Permissive Hypercapnia**

A ventilator strategy that allows PaCO<sub>2</sub> to rise above normal (and pH to fall) in exchange for lung-protective ventilation with lower tidal volumes and airway pressures. It is used in severe ARDS when achieving normal PaCO<sub>2</sub> would require harmful ventilation parameters.

### **Pernicious Anemia**

A type of vitamin B12 deficiency anemia caused by autoimmune destruction of gastric parietal cells, leading to lack of intrinsic factor and impaired B12 absorption in the terminal ileum.

#### **Synonyms:**

Addison's Anemia (Pernicious Anemia)

### **Peroxisome**

Single-membrane organelles containing oxidative

enzymes (catalase, urate oxidase, D-amino acid oxidase) that produce and degrade hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>).

### **Persistent Asthma**

Asthma requiring daily controller therapy. Mild persistent: symptoms > 2 days/week but not daily. Moderate persistent: daily symptoms, nighttime awakenings > 1/week. Severe persistent: symptoms throughout the day, frequent nighttime awakenings, SABA use several times/day, extremely limited activity.

### **Persistent Depressive Disorder**

formerly called dysthymia, a chronic depressive mood lasting at least two years in adults (one year in children and adolescents).

### **Persistent Organic Pollutant**

POCPs: organochlorines, PCBs, dioxins. Bioaccumulate, long-range transport, persistent. Stockholm Convention bans/restricts.

### **Persistent Pulmonary Hypertension Of The Newborn**

Failure of the normal fall in pulmonary vascular resistance after birth, causing right-to-left shunting and hypoxaemia. Management requires urgent neonatal respiratory and circulatory support.

### **Persistent Pupillary Membranes**

Remnants of the fetal tunica vasculosa lentis that fail to regress after birth, appearing as fine pigmented strands bridging across the pupil or attaching from the iris collarette to the lens capsule. They are usually benign and asymptomatic but may rarely obstruct the visual axis requiring surgical or laser treatment.

### **Personal Protective Equipment**

PPE: gloves, gowns, masks, eye protection. Used based on transmission-based precautions.

### **Personality Disorder**

A group of mental disorders characterized by en-

---

during maladaptive patterns of thinking, feeling, and behaving that deviate from cultural expectations and cause functional impairment. Cluster A (odd/eccentric): paranoid, schizoid, schizotypal. Cluster B (dramatic/erratic): antisocial, borderline, histrionic, narcissistic.

### Personalized Medicine

An approach that uses a person's biological, clinical, and sometimes genetic information to guide prevention, diagnosis, or treatment.

### Pessaries

Devices inserted into the vagina to support pelvic organs in cases of pelvic organ prolapse (cystocele, rectocele, uterine prolapse). Types: ring pessary (most common, with or without supportive membrane), shelf pessary (for severe prolapse), cube pessary (suction-based), and Gellhorn pessary (for advanced prolapse).

### PET Scan (Positron Emission Tomography)

Nuclear medicine imaging using radioactive tracers (most commonly FDG, a glucose analog) to detect metabolically active tissues.

#### Synonyms:

Positron Emission Tomography

### PET Scanner

Ring of detectors capturing coincidence events. BGO, LSO, or LYSO crystals. Time-of-flight PET improves signal-to-noise.

### PET Tracers

18F-FDG: glucose metabolism (cancer, infection, inflammation). 18F-fluoride: bone turnover. 11C-metionine: protein synthesis. 68Ga-DOTATATE: somatostatin receptors. 68Ga-PSMA: prostate cancer.

### PET/CT

Combined PET and CT imaging. CT provides anatomical localization and attenuation correction. Essential for accurate interpretation. Low-dose CT for attenuation correction; diagnostic CT for de-

tailed anatomy.

### PET/MRI

Combined PET and MRI. Superior soft tissue contrast, no ionizing radiation from CT. Useful for neurology, oncology, cardiology. Longer scan time, higher cost.

### Peutz-Jeghers Syndrome

An autosomal dominant neurocutaneous disorder caused by germline loss-of-function mutations in the STK11 (LKB1) tumor suppressor gene on chromosome 19p13.

#### Synonyms:

PJS

### Peutz-Jeghers's Syndrome

An autosomal dominant condition caused by STK11 gene mutations, characterized by hamartomatous polyps throughout the gastrointestinal tract and mucocutaneous hyperpigmented macules on the lips, buccal mucosa, and digits. The polyps may cause gastrointestinal bleeding, intussusception, and obstruction.

### Peyronie Disease

Fibrous plaque in penis causing curvature, pain, erectile dysfunction. Treatment: observation, medications, injection therapy, surgery.

### Pfeiffer Syndrome

An autosomal dominant craniosynostosis syndrome caused by FGFR1 or FGFR2 mutations. Features: craniosynostosis (bilateral coronal), midface hypoplasia, proptosis, hypertelorism, broad thumbs and great toes (medial deviation), and variable syndactyly.

#### Synonyms:

Syndrome Pfeiffer (Pfeiffer Syndrome)

### PH

Measure of hydrogen ion concentration:  $\text{pH} = -\log[\text{H}^+]$ . Normal blood pH: 7.35-7.45. Acidemia:  $\text{pH} < 7.35$ . Alkalemia:  $\text{pH} > 7.45$ . Buffers minimize pH changes.

---

## PH Monitoring

Measurement of esophageal pH. Evaluates gastroesophageal reflux disease.

## Phacoemulsification

A cataract-surgery technique that uses ultrasound to break up and remove the cloudy lens through a small incision. An intraocular lens is usually implanted to restore focusing ability.

## Phalen Test

Wrist flexion test for carpal tunnel syndrome. Symptoms reproduced within 60 seconds.

## Phantom

Device simulating human anatomy for quality control and calibration. Types: line source, uniform, Jaszczak, NEMA IU body phantom.

## Phantom Limb Pain

Painful sensations perceived in a limb that has been amputated, caused by persistent or reorganized activity in peripheral nerves and central sensory pathways. It may feel burning, shooting, cramping, or electric.

## Phantosmia

Perception of a smell when no corresponding odor is present. It may occur with sinonasal disease, migraine, seizures involving olfactory networks, head injury, neurodegenerative disease, infection, or other neurological conditions.

## Pharmacodynamic Interaction

A drug interaction in which one drug changes the effect of another at its site of action without necessarily changing its concentration. Effects may be additive, synergistic, or antagonistic, such as combined respiratory depression or bleeding risk.

## Pharmacogenetics

Pharmacogenetics studies how inherited genetic variation alters a person's response to medicines, including efficacy, metabolism, and adverse-effect risk, to support individualized prescribing. toxicity),

CYP2C9/VKORC1 (warfarin dosing), HLA-B\*1502 (carbamazepine SJS in Asians), HLA-B\*5701 (abacavir hypersensitivity), UGT1A1 (irinotecan toxicity).

## Pharmacogenomics

The study of how genetic variations influence individual responses to drugs, including drug efficacy, toxicity, and metabolism. Genetic polymorphisms in drug-metabolizing enzymes, transporters, and receptors can lead to significant inter-individual variability in drug response.

## Pharmacokinetic Interaction

A drug interaction that changes absorption, distribution, metabolism, or excretion of another drug, thereby altering its concentration over time. Enzyme inhibition, enzyme induction, transporter effects, and altered gastric pH are common mechanisms.

## Pharmacological Stress Test

Stress testing using medications (dobutamine, adenosine, regadenoson). For patients unable to exercise.

## Pharmacovigilance

The science and activities relating to the detection, assessment, understanding, and prevention of adverse drug reactions and other drug-related problems.

## Pharyngeal Tonsil

The adenoid tissue located in the roof of the nasopharynx, behind the nose.

## Phase I Metabolism

Phase I metabolism involves chemical modification of drug molecules through oxidation, reduction, and hydrolysis reactions, primarily catalyzed by the cytochrome P450 enzyme system in the liver.

## Phase II Metabolism

Phase II metabolism, also known as conjugation reactions, involves the attachment of endogenous hy-

---

drophilic molecules to drugs or their Phase I metabolites, dramatically increasing water solubility and facilitating renal excretion.

**Synonyms:**

conjugation reactions, involves the attachment of.

**Phencyclidine**

A dissociative drug that can cause altered perception, agitation, hallucinations, impaired coordination, or dangerous behavior.

**Phenotype**

Observable characteristics of an individual, resulting from genotype and environmental interactions. Includes morphology, development, biochemical properties, behavior.

**Phenylketonuria**

Phenylketonuria is an inherited inability to metabolize phenylalanine, allowing toxic accumulation that can impair brain development without early dietary treatment. accumulation of phenylalanine and reduced tyrosine availability. Untreated disease can cause intellectual disability, seizures, eczema, and a musty odor; newborn screening and dietary treatment are effective.

**Phlebography**

Venography using contrast dye. Used for diagnosing venous thrombosis, malformations. Largely replaced by duplex ultrasound.

**Phlegmasia Cerulea Dolens**

Phlegmasia cerulea dolens is a severe, extensive deep-vein thrombosis that obstructs venous outflow, causing painful swollen blue discoloration and risking limb ischemia or pulmonary embolism.

**Phobias**

Persistent, excessive fear of a specific object or situation that leads to avoidance or significant distress.

**Phosphate Binders**

Calcium acetate, sevelamer, lanthanum. Bind dietary phosphate in GI tract. Target normal serum

phosphorus in CKD-MBD. Avoid calcium-based binders in patients with vascular calcification.

**Phosphate Homeostasis**

Serum phosphate is regulated by the interplay of PTH vitamin D and fibroblast growth factor 23. PTH promotes renal phosphate excretion. Active vitamin D stimulates intestinal phosphate absorption. FGF23 produced by osteocytes inhibits renal phosphate reabsorption and suppresses 1-alpha-hydroxylase reducing active vitamin D production.

**Phosphodiesterase Inhibitor**

A class of drugs that inhibit phosphodiesterase enzymes, which break down cyclic nucleotides (cAMP and cGMP), thereby increasing intracellular levels of these second messengers and potentiating their downstream effects.

**Phosphodiesterase-5 Inhibitors**

Medications that inhibit PDE-5, increasing cGMP and causing smooth muscle relaxation and vasodilation. Sildenafil and tadalafil are used for PAH and erectile dysfunction. In PAH, they reduce pulmonary vascular resistance and improve exercise capacity.

**Phosphofructokinase-1**

Rate-limiting enzyme of glycolysis. Activated by AMP, fructose-2,6-bisphosphate. Inhibited by ATP, citrate.

**Phospholipase C Pathway**

A GPCR signaling pathway activated primarily by Gq-protein coupled receptors (e.g., alpha-1 adrenergic, muscarinic M1/M3, vasopressin V1, angiotensin II AT1 receptors).

**Photoallergy**

An immune-mediated skin reaction that occurs when ultraviolet light activates a sensitizing substance on or in the skin, causing an eczematous rash.

---

### Photocoagulation

Coagulation of tissue by intense light, often laser light, to treat lesions such as abnormal retinal vessels.

### Photodynamic Therapy

A treatment that combines a photosensitizing agent with light to generate reactive oxygen species and destroy cancer cells, used for actinic keratosis, superficial skin cancers, and selected visceral tumors.

### Photoelectric Effect

Photon absorption by inner shell electron. Major interaction at low energies, high Z materials.

### Photomultiplier Tube

Converts light photons to electrical signals. Array of PMTs positioned behind crystal. Positioning circuit determines interaction location.

### Photoppeak

Full-energy peak in gamma spectrum. Used for energy window setting.

### Photopheresis

Extracorporeal treatment in which white blood cells are exposed to a photosensitizer and ultraviolet A light before being returned to the patient.

### Photosensitivity

An abnormal skin reaction to sunlight (UVA/UVB), manifesting as rash, erythema, or burning on sun-exposed areas.

### Phototoxic Dermatitis

An acute, dose-dependent inflammatory skin reaction occurring when certain ingested or topically applied chemicals (such as psoralens, tetracyclines, NSAIDs, or thiazides) absorb ultraviolet radiation, leading to direct cellular damage and a sunburn-like eruption in exposed areas.

### Phototoxicity

Skin reaction from UV light + chemical. Sunburn-like. Examples: tetracyclines, thiazides, NSAIDs,

psoralens.

### Phyllodes Tumor

A breast tumor composed of both stromal and epithelial elements, ranging from benign through borderline to malignant. Typically a large, rapidly growing mass; treatment is surgical excision with clear margins.

### Physiatrist

Physician specialty focusing on function, quality of life for patients with impairment, disability. See rehabilitation medicine.

### Physical Half-Life

The time required for half of the radioactive nuclei in a sample to undergo nuclear decay. It is distinct from biologic half-life, which describes biological elimination, and effective half-life, which combines both processes.

### Physical Therapy Assessment

Comprehensive evaluation: history, observation, ROM, strength, sensation, coordination, balance, gait, functional tasks.

### Physiologic Jaundice Of Newborn

A common, benign condition characterized by unconjugated hyperbilirubinemia appearing after 24 hours of age (peak at 3-5 days) in healthy term newborns. Caused by increased bilirubin production (high RBC turnover, short RBC lifespan) and immature hepatic conjugation (low UDP-glucuronyl transferase activity).

### Physiological Dead Space

Volume of ventilated respiratory tract that does not participate in gas exchange, including anatomic and alveolar dead space.

### Phytomenadione

Vitamin K is a fat-soluble vitamin essential for the post-translational gamma-carboxylation of glutamate residues to gamma-carboxyglutamate (Gla) in specific clotting factors (II, VII, IX, X, protein

---

C, protein S) and anticoagulant proteins (protein C, protein S, protein Z). See Vitamin K: Phylloquinone.

### **PI-RADS**

Prostate Imaging-Reporting and Data System. Standardizes multiparametric MRI reporting for prostate cancer detection and staging.

### **Peripherally Inserted Central Catheter**

A long, flexible catheter inserted into the basilic or cephalic vein and advanced so the tip sits in the superior vena cava. Inserted at the bedside, often by a specialized PICC nurse, with ultrasound and ECG or X-ray confirmation. Indications: long-term IV antibiotics (>2 weeks), TPN, chemotherapy, and frequent blood draws.

### **Pierre Robin Sequence**

A congenital anomaly triad: micrognathia (small mandible), glossoptosis (posteriorly displaced tongue causing airway obstruction), and U-shaped cleft palate. The sequence arises from early mandibular hypoplasia, which prevents the tongue from descending, thereby impairing palatal shelf fusion.

### **Pierson Syndrome**

A rare autosomal-recessive disorder caused by LAMB2 variants, classically combining congenital nephrotic syndrome with microcoria and structural abnormalities of the eyes. Kidney failure, developmental impairment, and severe visual disability may occur.

### **Pigment Cirrhosis**

Liver cirrhosis associated with abnormal pigment or iron deposition, as may occur in hereditary hemochromatosis.

### **Pigmentary Mosaicism**

A pattern of alternating hyperpigmented and hypopigmented skin patches arranged in a linear, segmental, or blaschkoid distribution, caused by genetic mosaicism from post-zygotic mutations affecting melanocyte development. It is a cosmetic condition

without systemic involvement.

### **Pilar Cyst**

A benign cyst arising from the outer root sheath of hair follicles, most commonly on the scalp. It presents as a firm, mobile, subcutaneous nodule without a central punctum. Unlike epidermoid cysts, pilar cysts have smooth walls and contain dense keratin. They may be multiple in familial cases. Treatment is simple excision.

### **Piles (Hemorrhoids)**

Swollen, inflamed vascular cushions in the anal canal that normally aid continence. Internal hemorrhoids (above the dentate line, painless) present with painless bright red rectal bleeding and prolapse; graded I-IV by degree of prolapse.

#### **Synonyms:**

Hemorrhoids

### **Pilonidal Disease**

A chronic inflammatory condition of the sacrococcygeal region involving hair follicles. Pilonidal sinus: epithelialized tract containing hair and debris. Pilonidal abscess: acute infection of the sinus. Most common in young, hirsute males, exacerbated by prolonged sitting, obesity, and local trauma.

### **Pilonidal Sinus Disease**

A chronic sinus or cyst in the natal cleft, usually containing hair and debris. It may cause recurrent pain, swelling, drainage, or abscess formation.

### **Pineal Gland Tumor**

A tumor of the pineal region, including germinoma, pineocytoma, and pineoblastoma. Presents with Parinaud syndrome, hydrocephalus, and raised intracranial pressure; germinomas are highly radiosensitive.

### **Pinguecula**

A pinguecula is a benign yellowish raised growth on the conjunctiva near the cornea, often associated with ultraviolet light, wind, and dust; it may irritate the eye.

---

### **Pink Puffer**

A clinical phenotype of emphysema in COPD. Patients present with severe dyspnea, minimal cough, thin habitus, pursed-lip breathing, accessory muscle use, and relatively normal PaO<sub>2</sub> with late hypercapnia. They tend to be older and have more extensive emphysema.

### **Pure-Tone Audiometry**

A hearing test that measures the softest tones a person can hear at selected frequencies through air and bone conduction. The results are plotted on an audiogram and help distinguish conductive from sensorineural hearing loss.

#### **Synonyms:**

Pure-tone threshold audiometry; pure-tone hearing test.

### **Piriformis Syndrome**

Sciatic nerve compression by piriformis muscle. Buttock pain, radiating down leg. Diagnosis: clinical, exclude disc herniation. Treatment: stretching, injection, surgical release.

#### **Synonyms:**

PiriformSyndrome (Piriformis Syndrome)

### **Pisiform**

Small pea-shaped sesamoid bone in the flexor carpi ulnaris tendon, in the proximal row. Articulates only with the triquetrum. Forms the medial border of Guyon's canal (ulnar nerve/artery passage). Only sesamoid carpal bone, subcutaneous and easily palpable on the ulnar palm.

### **Pituitary Adenoma**

Pituitary adenomas are benign neoplasms arising from the adenohypophysis (anterior pituitary gland), accounting for approximately ten to fifteen percent of all intracranial neoplasms.

### **Pituitary Apoplexy**

Acute hemorrhage or infarction within a pituitary adenoma causing sudden headache, visual field defects, ophthalmoplegia, and altered consciousness. Medical emergency requiring urgent glucocorticoid administration to prevent adrenal crisis from acute

ACTH deficiency.

### **Pituitary Tumor**

A neoplastic condition involving pituitary Tumor; diagnosis establishes the tumor type, extent, and appropriate management.

### **Pityriasis Rosea**

An acute, self-limited eruption often beginning with a herald patch followed by oval scaly lesions distributed along skin-cleavage lines. It usually resolves within several weeks; treatment is symptomatic, and atypical, severe, recurrent, or persistent disease should be reassessed.

#### **Synonyms:**

Pityriasis Rosea Gibert (Pityriasis Rosea)

### **Placebo Effect**

A psychological and physiological phenomenon where a patient experiences a real improvement in health or symptoms after receiving an inactive treatment (like a sugar pill) due to their expectations of healing.

### **Placenta Increta**

Abnormal placental invasion into the myometrium without reaching the serosa, increasing the risk of massive hemorrhage at delivery and often requiring cesarean hysterectomy.

### **Placental Abruption**

Premature separation of the placenta from the uterine wall before delivery. It may cause vaginal bleeding, abdominal pain, uterine tenderness, fetal distress, and maternal or fetal compromise.

### **Placental Accreta Spectrum**

Abnormal placental attachment to the myometrium, ranging from accreta (adherent to decidua basalis) to increta (invading myometrium) to percreta (invading through serosa). Major risk factor is prior caesarean section with anterior placenta previa.

### **Placental Separation Signs**

Clinical signs indicating the placenta has separated

---

from the uterine wall and is ready for delivery. Classic signs: lengthening of the umbilical cord (cord lengthens as the placenta descends), a sudden gush of blood, and uterine elevation and firming (the uterus rises and becomes globular as the placenta moves into the lower segment).

### **Plant Thorn Synovitis**

Inflammation of a joint after penetration by a plant thorn or splinter, sometimes involving an infection introduced by the injury. Symptoms may develop gradually as persistent joint pain, swelling, and limited movement; evaluation may require removal of retained material and targeted treatment.

#### **Synonyms:**

Arthritis Plant Thorn (Plant Thorn Synovitis)

### **Plantar Fasciitis**

The most common cause of heel pain, caused by degeneration and microtears of the plantar fascia at its calcaneal origin. Presents with sharp, stabbing heel pain with the first steps in the morning (post-static dyskinesia), improving after a few minutes but worsening with prolonged standing or activity.

### **Plantar Wart (Verruca Plantaris)**

A wart (verruca) located on the sole of the foot, caused by human papillomavirus (HPV, typically types 1, 2, 4, 63). Plantar warts are endophytic (grow inward due to pressure) rather than exophytic like common warts, and are often painful with direct pressure (walking, standing).

#### **Synonyms:**

Verruca Plantaris

### **Palatoschisis**

A congenital cleft or failure of fusion of the palate, commonly called cleft palate, which may affect feeding, speech, hearing, and dental development.

### **Preimplantation Genetic Testing**

Genetic testing of cells from an embryo created through in-vitro fertilization before possible transfer to the uterus, used in selected situations to identify specific inherited disorders or chromosome-number abnormalities.

### **Physostigmine**

A reversible acetylcholinesterase inhibitor that may reverse severe central anticholinergic delirium in carefully selected patients after assessment for contraindications and cardiac conduction abnormalities.

### **Periodic Fever, Aphthous Stomatitis, Pharyngitis, Adenitis Syndrome**

A recurrent fever syndrome, usually beginning in childhood, characterized by periodic fever with some combination of mouth ulcers, sore throat, and swollen neck lymph nodes; it is commonly abbreviated PFAPA.

### **Prodromal**

Describing early, nonspecific signs or symptoms that occur before the characteristic clinical features of a disease become apparent.

### **Parathyroid Glands**

Usually four small endocrine glands located behind the thyroid that secrete parathyroid hormone (PTH). PTH maintains calcium and phosphate balance by acting on bone, kidneys, and indirectly the intestine through vitamin D activation.

### **Pedunculated**

Attached to the skin or another surface by a narrow stalk, rather than having a broad base.

### **Perineal**

Relating to the perineum, the region between the external genitalia and the anus.

### **Periorbital**

Located around or surrounding the orbit and eyelids.

### **Photodermatosis**

A skin disorder caused or aggravated by exposure to ultraviolet or visible light, including polymorphous light eruption, phototoxic reactions, and photoallergic reactions.

---

## Polymorphous

Having lesions or clinical features that differ in shape, size, or stage and therefore show multiple forms.

## Plantar Warts

Common warts (verrucae) occurring on the plantar surface of the foot, caused by human papillomavirus infection of the keratinocytes. They present as hard, thickened papules with a rough surface and disrupted dermatoglyphics (skin lines), often with pinpoint black dots representing thrombosed capillaries.

### Synonyms:

Warts, Plantar

## Plaque Assay

A method for quantifying viruses: serial dilutions of a viral suspension are added to a monolayer of host cells, forming zones of cell destruction (plaques), each plaque representing one infectious unit; results expressed as plaque-forming units per mL (PFU/mL).

## Plasma Cell

The terminally differentiated antibody-secreting cell derived from activated B lymphocytes (after antigen stimulation, class switching, and affinity maturation in germinal centers).

## Plasma Cell Myeloma

A malignant neoplasm of clonal plasma cells, usually producing a monoclonal immunoglobulin or light chain. It may cause hypercalcemia, renal impairment, anemia, and destructive bone lesions, collectively known as CRAB features, together with recurrent infection and hyperviscosity in some patients.

## Plasma Concentration

The amount of a substance present in a defined volume of plasma at a given time. It is used to interpret exposure, toxicity, therapeutic drug monitoring, and pharmacokinetic relationships.

## Plasmids

Small, circular, extrachromosomal DNA elements that replicate independently of the bacterial chromosome. Plasmids carry non-essential genes that provide selective advantages including antibiotic resistance, virulence factors, and metabolic capabilities.

## Plasmodium Vivax

A malaria parasite transmitted by *Anopheles* mosquitoes. It infects red blood cells and can persist in the liver as dormant hypnozoites that cause relapses.

## Plastic Bronchitis

A rare condition producing large, branching mucous casts that form in the airways, causing life-threatening airway obstruction, often associated with congenital heart disease or post-fontan circulation.

## Plate Method

Simple portion control: half plate vegetables, quarter plate protein, quarter plate grains. Promotes balanced eating.

## Platelet Aggregation

The adhesion and clumping of platelets to form a hemostatic plug at sites of vascular injury.

## Platelet Function Disorders

Conditions in which platelets do not adhere, activate, or aggregate normally, causing impaired primary hemostasis. They may be inherited or acquired and can cause easy bruising, nosebleeds, heavy menstrual bleeding, or bleeding after procedures.

## Platelet Plug Formation

The initial hemostatic response to vascular injury, involving platelet adhesion, activation, and aggregation. When the endothelium is disrupted, subendothelial von Willebrand factor and collagen are exposed to flowing blood.

---

### **Platelets (Thrombocytes)**

Small, anucleate, disc-shaped cell fragments (2–4  $\mu\text{m}$  diameter) derived from megakaryocytes in the bone marrow, circulating at  $150\text{--}400 \times 10^9/\text{L}$ .

#### **Synonyms:**

Thrombocytes

### **Platypnea**

Dyspnea that occurs in the upright position and is relieved by lying down. It is the opposite of orthopnea. It is rare and may be associated with hepatopulmonary syndrome, intracardiac shunting, or pulmonary arteriovenous malformations.

### **Pleiotropy**

Single gene influencing multiple phenotypic traits. Examples: phenylketonuria (PKU) affects multiple systems; sickle cell anemia causes anemia, pain crises, organ damage.

### **Pleomorphic Adenoma**

A usually benign salivary-gland tumor composed of epithelial and connective-tissue elements. It most often occurs in the parotid gland and may slowly enlarge; long-standing lesions can rarely undergo malignant transformation.

### **Pleomorphism**

Variation in the size and shape of cells or their nuclei within a tissue. Marked pleomorphism is a feature of many high-grade malignancies but can also occur in some reactive or degenerative conditions.

### **Pleural Cavity**

The narrow, fluid-filled space between the two layers of the pleura surrounding each lung.

### **Pleural Fluid Glucose**

Pleural-fluid glucose may be reduced in empyema, complicated parapneumonic effusion, rheumatoid pleuritis, tuberculosis, and malignancy. It is interpreted with pH, cell count, protein, LDH, microbiology, imaging, and the clinical setting.

### **Pleural Fluid PH**

Pleural-fluid pH helps assess infection and other causes of effusion. A markedly low pH supports a complicated parapneumonic effusion in the appropriate clinical setting, but drainage decisions also depend on imaging, fluid appearance, microbiology, glucose, and the patient's condition.

### **Pleural Friction Rub**

A grating, leathery sound heard on auscultation caused by inflamed pleural surfaces rubbing against each other during breathing. It is a sign of pleurisy and may be heard in pneumonia, PE, and pleural effusion. It disappears when fluid accumulates and separates the pleural surfaces.

### **Pleural Perforation**

A breach in the pleural lining allowing air or fluid to enter the pleural space, potentially causing pneumothorax or hydropneumothorax, often from trauma, procedures, or underlying lung disease.

### **Pleural Plaque**

Circumscribed fibrous tissue on parietal pleura, hallmark of asbestos exposure. Bilateral, often calcified. Does not indicate asbestosis.

### **Pleurectomy**

Surgical removal of part or all of the pleura, used in the treatment of malignant pleural mesothelioma and recurrent malignant pleural effusion.

### **Pleuritis**

Inflammation of the pleural membranes (visceral and parietal pleura). Presents with pleuritic chest pain: sharp, stabbing pain exacerbated by deep breathing, coughing, or sneezing.

### **Pleurodesis**

Fusion of visceral and parietal pleura to prevent recurrence of effusions or pneumothorax. Chemical pleurodesis uses talc, doxycycline, or bleomycin.

### **Plug (Vascular)**

A vascular occlusion device used to block a selected

---

vessel under image guidance.

**Synonyms:**

Vascular

**Pneumatic Otoscopy**

A diagnostic technique that combines visualization of the tympanic membrane with assessment of its mobility in response to positive and negative air pressure changes, providing information about the presence of middle ear fluid and the condition of the Eustachian tube.

**Pneumatic Retinopexy**

A procedure for selected retinal detachments in which an intravitreal gas bubble is injected and laser or cryotherapy seals the retinal break while positioning helps the bubble support the repair.

**Pneumatosis Cystoides Coli**

Condition characterized by multiple gas-filled cysts within the wall of the colon, which may be primary (idiopathic) or secondary to intestinal mucosal disruption from conditions such as chronic obstructive pulmonary disease, ischemic bowel disease, or intestinal obstruction. Often discovered incidentally on imaging or colonoscopy.

**Pneumatosis Cystoides Intestinalis**

Gas-filled cysts within the bowel wall that may be primary or secondary to bowel ischemia, infection, chronic lung disease, or medications. Often an incidental finding on imaging. Primary pneumatosis is benign and asymptomatic. Secondary pneumatosis may indicate serious underlying disease. Managed by treating the underlying condition.

**Pneumatosis Intestinalis**

Presence of gas within the bowel wall appearing as linear or cystic radiolucencies on imaging. Primary pneumatosis is benign and idiopathic accounting for approximately fifteen percent of cases.

**Pneumocephalus**

The presence of air or gas within the cranial cavity, most commonly following trauma, surgery, or sinus disease, and potentially causing increased intracra-

nial pressure if tension develops.

**Pneumococcal Conjugate Vaccine**

A vaccine that links pneumococcal polysaccharides to a carrier protein to produce protective immunity against selected *Streptococcus pneumoniae* serotypes. Product choice and schedule depend on age, vaccination history, medical risk, and local recommendations.

**Pneumococcal Sepsis**

Sepsis caused by *Streptococcus pneumoniae*, often arising from pneumonia, meningitis, or another invasive pneumococcal infection.

**Pneumocystis Jirovecii Pneumonia**

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, especially in people with advanced HIV infection or other cellular immunodeficiency. It causes progressive exertional dyspnea, dry cough, fever, and hypoxemia.

**Pneumocystis Pneumonia**

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, usually in people with impaired cell-mediated immunity. It may cause progressive exertional dyspnea, dry cough, fever, and hypoxemia with diffuse ground-glass changes. Diagnosis and treatment require clinical, microbiologic, and radiologic assessment; trimethoprim-sulfamethoxazole is commonly used.

**Pneumography**

Contrast imaging of body cavities. Pneumoencephalography obsolete. Pneumoperitoneum for laparoscopy.

**Pneumopericardium**

Air in the pericardial space, usually from trauma (penetrating chest injury), esophageal perforation, or iatrogenic causes (central line placement, cardiac surgery). Can cause cardiac tamponade if under tension. Diagnosis by chest X-ray showing air surrounding the heart (air-fluid level if combined with effusion).

---

## POEMS Syndrome

A rare plasma-cell disorder named for polyneuropathy, organomegaly, endocrinopathy, monoclonal plasma-cell disorder, and skin changes. Other manifestations include sclerotic bone lesions, papilledema, fluid overload, thrombocytosis, and elevated vascular endothelial growth factor.

## Point Mutation

Change in single nucleotide base pair. Substitutions: transition (purine to purine, pyrimidine to pyrimidine) or transversion (purine to pyrimidine). Effects: silent (same amino acid), missense (different amino acid), nonsense (stop codon).

## Point-Of-Care Testing

Diagnostic testing performed near the patient rather than in a central laboratory. POCT can shorten turnaround time but requires validated devices, quality control, operator training, and appropriate interpretation.

## Point-Of-Care Ultrasound

Bedside ultrasonography performed and interpreted by the treating clinician to answer focused diagnostic or procedural questions. Emergency applications include cardiac activity, volume status, pulmonary pathology, abdominal free fluid, vascular thrombosis, and procedural guidance.

## Poison Control

A specialized service that provides immediate advice about exposure to medicines, chemicals, or other potential poisons.

## Poison-Center Consultation

Specialist toxicology advice used to identify hazards, interpret exposure and laboratory data, select antidotes, guide observation or disposition, and coordinate public-health response. Consultation is appropriate for significant, uncertain, mixed, pediatric, or unusual exposures.

## Poland Syndrome

A congenital condition characterized by absence or underdevelopment of part of the pectoral muscles on

one side, sometimes accompanied by abnormalities of the hand on the same side.

## Polio

Polio is poliomyelitis, an infection caused by poliovirus, an enterovirus of the Picornaviridae family. It is usually asymptomatic or mild but can cause meningitis or irreversible asymmetric flaccid paralysis; transmission is primarily fecal-oral.

## Poliovirus

An enterovirus that causes poliomyelitis. It is transmitted mainly by the fecal-oral route; most infections are asymptomatic, but a small proportion cause meningitis or acute flaccid paralysis by damaging motor neurons in the spinal cord. Diagnosis uses molecular testing, usually reverse-transcription PCR of stool or other appropriate specimens.

## Polish (Dental)

Smoothing restorative surfaces to reduce plaque accumulation. Essential for longevity.

### Synonyms:

Dental

## Polyarteritis Nodosa

Necrotizing inflammation of medium-sized muscular arteries, spares lungs. Associated with hepatitis B (10-30%). Clinical: systemic symptoms, mononeuritis multiplex, livedo reticularis, renal involvement (hypertension, renal insufficiency—no glomerulonephritis), GI ischemia.

### Synonyms:

PAN (Polyarteritis Nodosa)

## Polychondritis

Relapsing inflammatory disorder targeting cartilage throughout the body, causing pain, swelling, and destruction of the ears, nose, larynx, trachea, and joints. May lead to airway collapse and hearing loss.

## Polycystic Liver Disease

Dominant polycystic liver disease is an autosomal dominant condition characterized by multiple hepatic cysts that may cause massive hepatomegaly,

---

abdominal pain, and compressive symptoms. Usually associated with autosomal dominant polycystic kidney disease. Liver function is preserved even with extensive cyst involvement.

### **Polycystic Ovary Syndrome**

Common endocrine disorder affecting six to twelve percent of reproductive-aged women characterized by hyperandrogenism, ovulatory dysfunction, and polycystic ovarian morphology on ultrasound.

### **Polycythemia**

Elevated red blood cell mass/hematocrit. Primary: polycythemia vera (JAK2 V617F mutation, trilineage proliferation, low EPO, risk of thrombosis and myelofibrosis/leukemia). Secondary: hypoxia (COPD, high altitude, congenital heart disease, sleep apnea) with high EPO, or EPO-secreting tumors (renal cell, hepatoma).

### **Polycythemia Vera**

A chronic myeloproliferative neoplasm characterized by increased red blood cell mass, often with increased white blood cell and platelet counts, driven by constitutive activation of the JAK-STAT signaling pathway.

#### **Synonyms:**

Primary Polycythemia

### **Polydactylysm**

Congenital presence of extra fingers or toes.

### **Polygenic Inheritance**

Trait influenced by multiple genes, each with small effect. Examples: height, skin color, common diseases (diabetes, heart disease). Produces continuous variation.

### **Polygenic Risk Score**

A statistical estimate of disease susceptibility calculated from the combined effects of many genetic variants, each usually contributing a small amount of risk. It modifies but does not replace clinical risk assessment or environmental factors.

### **Polyhydramnios**

A clinical finding or condition involving polyhydramnios; evaluation depends on its characteristic features, causes, severity, and complications.

### **Polymerase Chain Reaction**

An in-vitro method that exponentially amplifies a defined DNA segment through repeated cycles of denaturation, primer annealing, and DNA synthesis by a thermostable polymerase. It is used in diagnosis, research, forensics, and pathogen detection.

### **Polymicrobial Infections**

Infections caused by multiple microbial species. Polymicrobial infections are common in wound infections, intra-abdominal infections, and respiratory infections. The interactions between organisms can be synergistic or antagonistic. Understanding polymicrobial infections is essential for selecting appropriate antimicrobial therapy.

### **Polymicrogyria**

A brain malformation characterized by an excessive number of abnormally small, fused gyri, resulting in an irregular, bumpy cortical surface with shallow sulci. Caused by abnormal late neuronal migration or post-migrational cortical organization. May be focal or diffuse, unilateral or bilateral, and symmetric or asymmetric.

### **Polyp Surveillance Colonoscopy**

Interval-based endoscopic follow-up of patients with previously identified colorectal polyps. Intervals are determined by polyp number, size, and histological features. One to two small adenomas require surveillance at seven to ten years. Three to four adenomas at three to five years.

### **Polyphagia**

Excessive, uncontrollable hunger or increased appetite. Classic cardinal symptom of uncontrolled Diabetes Mellitus (cellular starvation due to lack of insulin or insulin resistance), Hyperthyroidism (elevated basal metabolic rate), Prader-Willi Syndrome, and atypical depression.

---

## Polypharmacy

Use of multiple medications by one patient, often defined numerically as five or more concurrent medicines. It increases the risk of interactions, adverse effects, prescribing cascades, nonadherence, and medication errors, although some multidrug regimens are clinically appropriate.

## Polysomnography

Polysomnography examines polysomnography; interpretation depends on the specimen or body region, test method, reference range, and clinical question. Diagnoses sleep apnea, parasomnias.

## Polysomnography (Sleep Study)

Overnight monitoring for sleep-disordered breathing. Parameters: EEG (sleep staging: N1, N2, N3, REM), EOG (eye movements), EMG (chin and leg movements), airflow (nasal pressure, thermistor), respiratory effort (chest/abdomen belts), snore microphone, body position, oximetry (SpO2), and ECG.

**Synonyms:**  
Sleep Study

## Polyunsaturated Fat

Liquid at room temperature. Sources: fish, vegetable oils, nuts. Essential fatty acids.

## Popliteal Aneurysm

Aneurysm of popliteal artery behind knee. Associated with AAA. Risk: thrombosis, embolism, compression. Treatment: surgical repair or endovascular stenting.

## Popliteal Artery

Continues from femoral artery at the adductor hiatus, dividing into anterior/posterior tibial arteries at the lower popliteus border. Deepest popliteal fossa structure, related anteriorly to vein and tibial nerve. Palpable at the fossa's inferior margin.

## Popliteal Fossa

Diamond-shaped space on the posterior knee, bounded by hamstrings superiorly and gastroc-

nemius heads inferiorly. Contains popliteal artery/vein, tibial nerve, and common peroneal nerve. The popliteal pulse is palpated at the inferior margin.

## Population Attributable Fraction

The proportion of cases or disease burden in the total population that would theoretically be prevented if the exposure were eliminated, assuming the exposure is causal and other conditions remain unchanged.

## Population Attributable Risk

Proportion of disease in population attributable to exposure.  $PAR = (\text{incidence total} - \text{incidence unexposed}) / \text{incidence total}$ .

## Porcelain Gallbladder

Calcification of the gallbladder wall visible on imaging representing chronic inflammatory condition associated with cholelithiasis and chronic cholecystitis. Historically considered a strong risk factor for gallbladder carcinoma, recent studies suggest the cancer risk may be lower than previously estimated.

## Porphyria Cutanea Tarda

The most common porphyria, caused by a deficiency of hepatic uroporphyrinogen decarboxylase (UROD), leading to accumulation of uroporphyrinogens. Triggered by hepatitis C virus (HCV), alcohol abuse, iron overload (hemochromatosis), and estrogen therapy.

## Porphyrias

Metabolic disorders of heme synthesis causing cutaneous and neurological symptoms. Cutaneous porphyrias include porphyria cutanea tarda (blisters on sun-exposed skin, hypertrichosis, sclerodermoid changes), erythropoietic protoporphyria (immediate pain and burning on sun exposure without visible changes), and variegate porphyria.

## Portal Hypertension

Elevated pressure in the portal venous system defined as hepatic venous pressure gradient exceeding five millimeters of mercury with clinically significant

---

portal hypertension occurring when the gradient exceeds ten.

**Synonyms:**

PHT

**Portal Hypertensive Gastropathy**

Diffuse mucosal changes in the stomach due to portal hypertension causing chronic blood loss. Characterized by mosaic pattern and cherry red spots on endoscopy representing dilated mucosal vessels. Most common in patients with advanced cirrhosis and portal hypertension.

**Portal System**

Venous network draining the GI tract, spleen, and pancreas to the liver via the portal vein (formed by superior mesenteric and splenic vein union behind the pancreatic neck). Carries nutrient-rich deoxygenated blood for hepatic processing before systemic entry. Receives left gastric, right gastric, cystic, and paraumbilical veins.

**Portal Vein**

The vein carrying nutrient-rich blood from the gastrointestinal tract, spleen, pancreas, and gallbladder to the liver, formed behind the pancreatic neck by the union of the superior mesenteric and splenic veins. It enters the porta hepatis with the hepatic artery and bile duct.

**Portal Vein Thrombosis**

Partial or complete thrombosis of the portal vein or its branches. It may result from cirrhosis, malignancy, inflammation, thrombophilia, or abdominal surgery and can cause portal hypertension, intestinal ischemia, or variceal formation.

**Portion Control**

Managing serving sizes. Larger portions available today contribute to obesity. Using smaller plates, reading labels helpful.

**Portopulmonary Syndrome**

Development of pulmonary arterial hypertension in the setting of portal hypertension or liver disease. Results from increased cardiac output and

splanchnic vasodilation leading to pulmonary vascular remodeling.

**Positional Asphyxia**

Fatal or potentially fatal impairment of breathing caused by body position that restricts chest movement, airway patency, or venous return. Risk is increased by restraint, intoxication, obesity, and inability to reposition; findings are nonspecific and require scene and medical correlation.

**Positive End-Expiratory Pressure**

Pressure maintained at end-expiration to prevent alveolar collapse. Improves oxygenation by recruiting alveoli and increasing FRC. Balances oxygenation with hemodynamic effects.

**Positive Predictive Value**

The probability that a person with a positive test result truly has the target condition. PPV depends on test specificity and sensitivity and on disease prevalence or pretest probability in the tested population.

**Positive Predictive Value In Surveillance**

The proportion of reported signals or alerts that represent true events meeting the surveillance case definition. It is influenced by the specificity of the signal and the underlying prevalence of the condition.

**Positive Pressure Ventilation**

Mechanical ventilation that delivers air/oxygen under positive pressure to support or replace spontaneous breathing. Noninvasive (NIV): CPAP (continuous) and BiPAP (two levels) via mask for obstructive sleep apnea, cardiogenic pulmonary edema, and hypercapnic COPD.

**Positive Symptoms**

Symptoms reflecting an excess or distortion of normal mental functions, such as hallucinations, delusions, disorganized speech, or grossly disorganized behavior. They are contrasted with negative symptoms, which reflect loss or reduction of function.

---

## Positron

Anti-particle of electron. Emitted by PET radionuclides. Annihilation with electron produces two 511 keV photons.

## Positron Emission Mammography

PET imaging of breast. Higher sensitivity than mammography for dense breasts. Limited availability.

## Positron Emission Tomography

Functional imaging modality using positron-emitting radionuclides. Common isotope: fluorine-18 (110 min half-life). Detection: annihilation photons (511 keV) detected in coincidence. Tracers: FDG (metabolism), florbetapir (amyloid), flortaucipir (tau), PSMA (prostate cancer).

## Post-Acute Rehabilitation

Time-limited interdisciplinary care after an acute illness, injury, or hospitalization to restore mobility, self-care, cognition, communication, and safe community function. Intensity and setting depend on medical stability and rehabilitation potential.

## Post-Cardiac Arrest Management

Care after return of spontaneous circulation that supports breathing and circulation, identifies and treats the cause of the arrest, manages temperature and seizures when indicated, and assesses neurologic recovery over time.

## Post-Concussion Syndrome

Persistent symptoms after concussion: headache, dizziness, cognitive difficulties, sleep disturbance, mood changes. Management: symptom-directed, gradual return to activity.

## Post-Dural Puncture Headache

A positional headache occurring after accidental dural puncture during epidural placement or lumbar puncture, caused by cerebrospinal fluid leakage and intracranial hypotension. Symptoms include frontal or occipital headache worse when upright and relieved when supine, neck stiffness, tinnitus, photophobia, and nausea.

## Post-Exposure Prophylaxis

The administration of antimicrobial agents after exposure to a pathogen to prevent infection. PEP is used for HIV, hepatitis B, hepatitis C, rabies, and other infections. The timing of PEP is critical, with early administration being most effective. Understanding PEP is essential for managing occupational exposures and outbreaks.

## Post-Infectious Cough

A chronic cough persisting 3–8 weeks after a URI, caused by transient bronchial hyperresponsiveness and airway inflammation. It is self-limited and usually resolves without treatment. Inhaled corticosteroids, antitussives, and time are the mainstays of management.

## Post-Obstructive Pneumonia

Pneumonia occurring distal to a bronchial obstruction caused by tumor, foreign body, mucus plug, or stenosis. The obstruction prevents clearance of secretions, creating a favorable environment for infection. It does not resolve with antibiotics alone until the obstruction is relieved.

## Post-Operative Atelectasis

Collapse of some alveoli after surgery, promoted by anesthesia, shallow breathing, pain, immobility, mucus retention, or underlying lung disease. Management addresses the cause and may include mobilization, effective analgesia, deep breathing, and treatment of complications.

## Post-Pneumonectomy Syndrome

A rare complication following pneumonectomy where the remaining lung herniates across the mediastinum, causing compression of airways and vessels. It presents with dyspnea, stridor, and recurrent infections. Treatment is surgical correction with mediastinal repositioning and prosthetic implant placement.

## Post-Streptococcal Glomerulonephritis

Immune-mediated glomerulonephritis following infection with nephritogenic strains of group A streptococcus typically 1 to 3 weeks after pharyngitis

---

or 3 to 6 weeks after skin infection. Subepithelial humps on electron microscopy representing immune complex deposits.

### **Post-Surgical Pain**

Acute pain following operative procedures, caused by tissue incision, retraction, dissection, and inflammation, mediated by nociceptors sensitized by prostaglandins, bradykinin, and cytokines. Intensity varies by procedure (thoracotomy, joint replacement, and laparotomy produce more severe pain).

### **Post-Surgical Rehabilitation**

Recovery program after surgery. Phases: acute (pain control, wound care), subacute (range of motion, strengthening), functional (return to activities). Protocols vary by procedure.

### **Post-Term Pregnancy**

Pregnancy continuing beyond 42 weeks gestation (294 days from LMP). Risk factors include prior post-term pregnancy, nulliparity, and genetic factors. Complications include macrosomia, oligohydramnios, meconium aspiration, placental insufficiency, and stillbirth.

### **Post-Test Probability**

The probability of disease after incorporating a test result with the pretest probability. It can be estimated using Bayes' theorem or by converting pretest odds to post-test odds with the appropriate likelihood ratio.

### **Post-Thrombotic Syndrome**

Chronic pain, heaviness, edema, skin change, and sometimes ulceration developing after deep-vein thrombosis because of persistent venous obstruction and valvular damage. Compression, exercise, skin care, and selected interventions may reduce disability.

### **Post-Transfusion Purpura**

A rare immune-mediated thrombocytopenic disorder occurring several days after transfusion of blood products, usually in previously sensitized individuals. It causes abrupt, severe thrombocytopenia

with petechiae, mucosal bleeding, or more serious haemorrhage.

### **Post-Traumatic Stress Disorder**

A disorder that may develop after exposure to actual or threatened death, serious injury, or sexual violence, causing persistent re-experiencing, avoidance, negative mood or cognition, and heightened arousal.

### **Post-Void Residual**

The amount of urine remaining in the bladder after urination, measured by ultrasound or catheterization. A persistently high residual may indicate incomplete emptying, but its significance depends on the volume, timing, symptoms, and clinical context.

### **Post-Void Residual Volume**

The amount of urine remaining in the bladder immediately after urination, measured by ultrasound or catheterization. An elevated residual suggests incomplete emptying but must be interpreted with timing, bladder volume, symptoms, and repeated measurements.

### **Postanesthesia Care Unit**

The postanesthesia care unit (PACU) is a monitored recovery area where patients are observed during the immediate postoperative period. Admission assessment includes vital signs, level of consciousness, pain assessment, and surgical site evaluation.

### **Postcholecystectomy Syndrome**

Persistence or recurrence of symptoms after cholecystectomy. Causes include retained common bile duct stones, sphincter of Oddi dysfunction, bile salt malabsorption, irritable bowel syndrome, and other gastrointestinal conditions. Evaluation includes liver function tests, MRCP, and endoscopic ultrasound.

### **Posterior Cruciate Ligament Injury**

Tear of the PCL, less common than ACL injury. Mechanism: dashboard injury (tibia striking dashboard), hyperflexion, or fall on a flexed knee with foot plantarflexed. Presents with posterior knee

---

pain, mild swelling, and posterior sag of the tibia. Positive posterior drawer test (most sensitive), posterior sag sign (Godfrey test).

### **Posterior Cruciate Ligament Tear**

PCL tear: less common, usually from direct blow to tibia (dashboard injury). Symptoms: knee pain, swelling, instability. Diagnosis: posterior drawer test, MRI. Treatment: usually conservative, surgical if combined injuries.

### **Posterior Descending Artery**

An artery running in the posterior interventricular groove and supplying the inferior ventricular walls and posterior interventricular septum. It usually arises from the right coronary artery in right-dominant circulation but may arise from the circumflex artery.

### **Posterior Drawer Test**

PCL integrity test. Knee flexed 90 degrees, posterior tibial translation.

### **Posterior Pituitary**

The neural lobe of the pituitary that stores and releases vasopressin and oxytocin synthesized in the hypothalamus. Vasopressin regulates renal water retention and vascular tone; oxytocin contributes to uterine contraction and milk ejection.

### **Posterior Reversible Encephalopathy Syndrome**

A neurotoxic state caused by failed cerebrovascular autoregulation, typically from acute hypertension, eclampsia, immunosuppressive drugs (tacrolimus, cyclosporine), or sepsis. Presents with headache, seizures, altered consciousness, and visual disturbances.

### **Posterior Subcapsular Cataract**

A type of lens opacity located at the posterior aspect of the lens, just anterior to the posterior lens capsule, in the visual axis, and it is particularly visually disabling because of its central location.

### **Posterior Tibial Artery**

Arises from the popliteal artery, courses deep in the posterior leg, palpable behind the medial malleolus. Divides into medial/lateral plantar arteries for the sole. Supplies posterior leg muscles. Important for peripheral vascular disease assessment. The pedal pulse behind the medial malleolus is a key clinical examination component.

### **Posterior Urethral Valves**

The most common cause of lower urinary tract obstruction in male infants, caused by congenital mucosal folds (valves) in the posterior urethra (prostatic urethra) that obstruct urine outflow.

### **Posterior Uveitis**

Inflammation affecting the retina, choroid, or both. It may cause floaters, blurred vision, visual-field defects, or eye pain and can result from infection, autoimmune disease, or other inflammatory conditions.

### **Posterior Vitreous Detachment**

Separation of the posterior vitreous cortex from the retinal surface, commonly related to age-related vitreous liquefaction. New flashes or floaters require dilated retinal examination because an associated retinal tear or detachment may be present.

### **Postmenopausal Osteoporosis**

Bone loss caused by lower estrogen levels associated with menopause. Sometimes called type I osteoporosis.

### **Postmenopause**

The period in a woman's life lasting from the end of perimenopause until the end of life.

### **Postmortem Artifact**

Any structural, chemical, or physical change introduced into a body after death (e.g., embalming artifacts, insect activity, postmortem animal scavenging, resuscitation trauma) that mimics antemortem disease or trauma.

---

### Postmortem Interval

Estimated elapsed time between actual death and the time of autopsy or body discovery, calculated utilizing algor mortis, livor mortis, rigor mortis, vitreous potassium levels, and insect succession patterns.

### Postmortem Toxicology

Toxicologic analysis of specimens collected after death to identify drugs, alcohols, poisons, and metabolites. Results must account for therapeutic administration, redistribution, decomposition, specimen site, contamination, and tolerance before conclusions about causation are made.

### Postnatal Depression

A depressive episode occurring after childbirth, with persistent low mood, anhedonia, sleep or appetite disturbance, guilt, impaired bonding, or suicidal thoughts.

### Postoperative Care

Structured post-surgical management encompassing pain control, fluid balance, wound care, early mobilization, and venous thromboembolism prophylaxis.

### Postoperative Cognitive Dysfunction

A decline in cognitive abilities such as memory, attention, or executive function after surgery. It may be temporary or persistent and is more frequent in older adults and after major or complicated procedures. Assessment requires comparison with the person's baseline and consideration of delirium, medication effects, and other medical causes.

### Postoperative Complications

Clavien-Dindo classification: Grade I (any deviation, no treatment), Grade II (pharmacologic), Grade III (surgical/endoscopic/radiologic intervention: IIIa no GA, IIIb GA), Grade IV (ICU: IVa single organ, IVb multi-organ), Grade V (death).

### Postoperative Delirium

A common complication after major surgery, particularly in elderly patients. It is categorized as hyperactive (agitation, restlessness, hallucinations),

hypoactive (lethargy, withdrawal, decreased responsiveness), or mixed. Hypoactive delirium is the most common and most missed form.

### Postoperative Ileus

Temporary impairment of gastrointestinal motility after surgery, most common after abdominal surgery. Pathophysiology: autonomic dysfunction (sympathetic overactivity), inflammatory mediators, opioids, and electrolyte abnormalities.

### Postoperative Nausea And Vomiting

Nausea, retching, or vomiting occurring after surgery. Risk is influenced by factors such as previous motion sickness or postoperative nausea, anesthetic technique, opioid use, and patient characteristics. Prevention and treatment are tailored to the individual risk and procedure.

### Postoperative Pain Management

Management of pain after surgery using a combination of medicines, regional techniques, physical measures, and rehabilitation. The plan is tailored to the procedure, pain severity, medical conditions, and risks of adverse effects.

### Postoperative Pulmonary Complication

Respiratory deterioration after surgery, including atelectasis, pneumonia, aspiration, respiratory failure, bronchospasm, and exacerbation of chronic lung disease. Risk reduction includes smoking cessation, lung-protective ventilation, analgesia, mobilization, and appropriate respiratory exercises.

### Postpartum Anxiety

Excessive, persistent, or distressing anxiety during pregnancy or after childbirth that interferes with sleep, daily function, bonding, or self-care. It may occur with panic, intrusive worries, or depression and deserves clinical assessment; thoughts of self-harm or harm to the baby require emergency help.

### Postpartum Blues

A common, short-lived period of tearfulness, mood changes, irritability, or anxiety beginning soon after childbirth and usually improving within two weeks.

---

Support, rest, and practical help are important; persistent, severe, psychotic, or suicidal symptoms require prompt assessment for a postpartum mental-health disorder.

### **Postpartum Cardiomyopathy (Peripartum Cardiomyopathy)**

A dilated cardiomyopathy causing heart failure toward the end of pregnancy or during the months after delivery. Symptoms may include breathlessness, difficulty lying flat, swelling, fatigue, or chest discomfort and require prompt assessment.

#### **Synonyms:**

Peripartum Cardiomyopathy

### **Postpartum Endometritis**

Infection of the decidua and endometrial cavity after delivery, occurring more often after cesarean birth. Fever, uterine tenderness, pelvic pain, and foul-smelling lochia are typical; treatment generally requires intravenous broad-spectrum antibiotics.

### **Postpartum Hemorrhage**

Excessive bleeding after childbirth, usually caused by poor uterine contraction, retained placental tissue, genital-tract trauma, or a clotting disorder. It can cause shock and requires urgent obstetric assessment and treatment.

### **Postpartum Hemorrhage (Secondary)**

Excessive bleeding occurring between 24 hours and 12 weeks postpartum. Causes: retained products of conception (most common), endometritis, subinvolution of the placental site, and coagulopathy. Presents with heavy or prolonged bleeding, cramping, and passing clots. Diagnosis: ultrasound (retained tissue, thickened endometrium).

#### **Synonyms:**

Secondary

### **Postpartum Infection**

Infections occurring after delivery, a leading cause of maternal morbidity. Types: endometritis (most common, especially after cesarean), wound infection (cesarean incision, episiotomy, perineal laceration), urinary tract infection, mastitis, septic pelvic throm-

bophlebitis, and pneumonia.

### **Postpartum Psychosis**

A rare but severe psychiatric emergency (1-2 per 1000 deliveries) characterized by the acute onset of delusions, hallucinations, disorganized behavior, confusion, and mood swings (mania or depression) within 1-4 weeks postpartum.

### **Postpartum Thyroiditis**

Autoimmune inflammation of the thyroid occurring during the first year after delivery. It may cause a temporary hyperthyroid phase followed by hypothyroidism, and symptoms and recovery vary; thyroid-function testing guides follow-up and treatment.

### **Postrenal AKI**

Acute kidney injury caused by obstruction of urine flow from the kidneys to the urethra. Causes include prostate enlargement, stones, tumors, fibrosis, and neurogenic bladder. The effect depends on the location, duration, completeness, and whether one or both kidneys are affected.

### **Poststreptococcal Pustulosis**

A sterile, non-follicular pustular eruption occurring as a rare sequela of streptococcal pharyngitis, presenting with scattered pustules on an erythematous base, typically on the trunk and extremities. It is thought to be an immune-mediated hypersensitivity reaction to streptococcal antigens.

### **Postterm Pregnancy**

Pregnancy that continues beyond 42 completed weeks of gestation. Risks and management depend on gestational dating, fetal condition, and maternal health.

### **Posttraumatic Stress Disorder**

A psychiatric disorder that develops after exposure to a traumatic event (death, serious injury, sexual violence).

#### **Synonyms:**

PTSD (Posttraumatic Stress Disorder)

---

### **Postural Orthostatic Tachycardia Syndrome**

An autonomic disorder causing an excessive increase in heart rate after standing, with symptoms such as light-headedness, palpitations, fatigue, weakness, brain fog, nausea, or fainting. Diagnosis requires clinical assessment and exclusion of other causes of orthostatic symptoms.

### **Potassium Binders**

Sodium zirconium cyclosilicate and patiromer. Exchange potassium in GI tract for sodium or calcium. Treat chronic hyperkalemia allowing continued RAAS inhibitor use in CKD.

### **Potassium-Sparing Diuretics**

Potassium-sparing diuretics act on the distal nephron to promote sodium excretion while minimizing potassium loss. They include epithelial sodium channel blockers such as amiloride and triamterene, and mineralocorticoid receptor antagonists such as spironolactone and eplerenone.

### **Potency**

The amount of a drug required to produce a specified effect. A more potent drug produces that effect at a lower dose, but potency does not indicate the maximum effect.

### **Potency Vs Efficacy**

Potency is the amount of drug required to produce a given effect, measured by the EC<sub>50</sub> (the concentration producing 50% of maximal effect). Drugs with higher potency achieve effects at lower doses (e.g., fentanyl is more potent than morphine).

### **Pott Disease**

TB of the spine involving thoracic or lumbar vertebrae. Causes vertebral destruction, kyphosis (gibbus deformity), and paravertebral abscess. May cause spinal cord compression.

### **Potter Syndrome**

A sequence of anomalies resulting from severe oligohydramnios (low amniotic fluid volume), most commonly caused by bilateral renal agenesis, but also

from autosomal recessive polycystic kidney disease, posterior urethral valves, or chronic amniotic fluid leak.

### **Powassan Encephalitis**

Encephalitis caused by Powassan virus, a tick-borne flavivirus.

### **Prader-Willi Syndrome**

A genetic disorder caused by loss of function of genes on chromosome 15 (paternal deletion or maternal uniparental disomy). Features: neonatal hypotonia and failure to thrive, followed by hyperphagia and obesity in childhood. Intellectual disability, short stature, hypogonadism, and behavioral problems.

#### **Synonyms:**

Prader-Labhart-Willi Syndrome

### **Pralidoxime**

An oxime that can reactivate inhibited acetylcholinesterase when administered early after organophosphate poisoning, particularly for nicotinic weakness and respiratory-muscle dysfunction. It is used with atropine and supportive care according to exposure and local guidance.

### **Prebiotics**

Non-digestible fibers feeding beneficial gut bacteria. Sources: garlic, onions, leeks, asparagus, bananas, whole grains.

### **Prebiotics And Probiotics**

Prebiotics are nondigestible food ingredients (fiber and oligosaccharides—inulin, fructooligosaccharides, galactooligosaccharides) that selectively stimulate the growth and activity of beneficial gut bacteria (Bifidobacterium, Lactobacillus), promoting host health.

### **Precision Medicine**

Treatment tailored to individual tumor characteristics. Requires molecular profiling.

### **Preconception Counseling**

Counseling provided to women of reproductive age

---

before pregnancy to optimize outcomes.

### **Prediabetes**

Blood glucose higher than normal but below the diagnostic threshold for diabetes, usually identified by A1C, fasting glucose, or an oral glucose-tolerance test; it increases future diabetes and cardiovascular risk.

#### **Synonyms:**

Diabetes Pre (Prediabetes)

### **Predictive Test**

A test that estimates whether a person or disease is likely to respond to a particular treatment.

### **Preeclampsia**

Preeclampsia is pregnancy-related hypertension with proteinuria or other maternal organ dysfunction after midpregnancy and can progress to seizures, stroke, liver injury, or placental complications. pressure 140/90 mmHg or higher) after 20 weeks gestation with proteinuria or other end-organ damage.

#### **Synonyms:**

Pregnancy-Related Hypertension

### **Preeclampsia With Severe Features**

Preeclampsia accompanied by severe hypertension or signs of significant organ involvement, such as low platelets, liver or kidney dysfunction, pulmonary edema, severe headache, or visual symptoms. It requires urgent obstetric evaluation and management.

### **Pregnancy**

The physiological state in which a developing embryo or fetus grows within the female uterus, typically lasting approximately 40 weeks from the last menstrual period to childbirth.

### **Pregnancy Nutrition**

Nutrition care during pregnancy that supports maternal health, placental and fetal growth, and appropriate gestational weight gain. Energy, protein, folate, iron, iodine, choline, vitamin D, and other requirements vary by stage and individual clinical factors.

### **Pregnancy-Induced Hypertension**

New-onset hypertension during pregnancy without the proteinuria or organ dysfunction that defines preeclampsia. Diagnosis and treatment depend on repeated blood-pressure measurements, gestational age, symptoms, and evidence of maternal or fetal complications.

### **Preload**

The end-diastolic volume or pressure in the ventricles, representing the degree of ventricular stretch before contraction. Preload is determined by venous return and is estimated by the pulmonary capillary wedge pressure (PCWP) or left ventricular end-diastolic pressure (LVEDP).

### **Premature (Early) Ejaculation**

A persistent or recurrent pattern of ejaculation that occurs sooner than desired, with limited control and associated personal distress. Assessment considers the person's typical experience and sexual context.

#### **Synonyms:**

Early

### **Premature Atrial Contraction**

A premature beat arising from an ectopic focus in the atria, producing an early P wave (often abnormal morphology) followed by a normal QRS; common and usually benign, increasing with age and caffeine/stress. ECG: early abnormal P wave, normal PR and QRS, followed by a compensatory pause.

### **Premature Ovarian Insufficiency**

Loss of ovarian function before age forty characterized by amenorrhea, hypergonadotropic hypogonadism, and estrogen deficiency. Causes include genetic disorders particularly Turner syndrome and fragile X premutations, autoimmune oophoritis, iatrogenic from chemotherapy or radiation, and idiopathic.

### **Premature Rupture Of Membranes**

PROM: spontaneous rupture of the amniotic membranes before the onset of labor; preterm PROM (PPROM) occurs before 37 weeks. Features: gush

---

or leakage of fluid per vaginam; confirmed by sterile speculum (pooling, ferning, nitrazine pH test) or amniotic fluid biomarkers (IGFBP-1, PAMG-1).

### **Premature Ventricular Contractions**

Ectopic beats originating from the ventricles, appearing as wide, bizarre QRS complexes that occur earlier than expected. PVCs are common in the general population and are usually benign. Frequent PVCs (>10% of total beats) may cause left ventricular dysfunction.

#### **Synonyms:**

Extrasystole (Premature Ventricular Contractions)  
PVC (Premature Ventricular Contractions)

### **Premenstrual Dysphoric Disorder**

A severe, debilitating form of premenstrual syndrome characterized by marked mood symptoms (depression, anxiety, irritability, mood swings), physical symptoms (breast tenderness, bloating, fatigue), and functional impairment that occur during the luteal phase and remit within days of menses onset.

### **Premenstrual Syndrome**

A recurrent pattern of physical, emotional, and behavioral symptoms during the luteal phase of the menstrual cycle that resolve with menses. Affects up to 50% of reproductive-age women. Symptoms: irritability, mood swings, depression, anxiety, bloating, breast tenderness, fatigue, and appetite changes.

### **Prenatal Care**

Regular medical care during pregnancy to monitor maternal and fetal health. Includes history and physical exam, weight and blood pressure monitoring, urine testing, blood work, fundal height measurements, fetal heart rate auscultation, and ultrasound.

### **Prenatal Diagnosis**

Detection of genetic or structural disorders in fetus before birth. Methods: chorionic villus sampling (CVS, 10-13 weeks), amniocentesis (15-20 weeks), percutaneous umbilical blood sampling (PUBS, after 18 weeks). Non-invasive: NIPT (cell-free fetal DNA).

### **Prenatal Testing**

Screening and diagnostic tests performed during pregnancy to assess fetal health and development or identify genetic, chromosomal, and structural conditions. Tests may include ultrasound, maternal blood tests, cell-free DNA screening, chorionic-villus sampling, and amniocentesis.

### **Prenatal Exposure**

Contact of a fetus with a medicine, substance, infection, or environmental factor during pregnancy. Effects depend on the agent, dose, timing, and fetal susceptibility.

### **Prenatal Vitamins**

Multivitamin supplements formulated for pregnancy, containing folic acid (400-800 mcg), iron (27-60 mg), calcium (200-300 mg), vitamin D (400-600 IU), DHA (200 mg), and iodine (150-220 mcg). Started preconceptionally or at the first prenatal visit. Evidence supports NTD reduction from folic acid. Iron prevents maternal anemia.

### **Preoperative Assessment**

Preoperative assessment evaluates surgical risk and optimizes medical conditions before anesthesia. It includes medical history, physical examination, airway assessment, cardiovascular risk stratification ( Revised Cardiac Risk Index ), pulmonary function assessment, and laboratory testing based on clinical indication.

### **Preoperative Evaluation**

Medical assessment before elective surgery to optimize outcomes and minimize perioperative risk.

### **Prerenal Azotemia**

A rise in nitrogen-containing waste products caused by reduced effective blood flow to the kidneys without primary renal-tissue injury. Causes include dehydration, hemorrhage, heart failure, sepsis, and hepatorenal syndrome; urine indices may support but do not by themselves establish the diagnosis.

### **Presbycusis**

Bilateral, usually symmetric age-related sensorineu-

---

ral hearing loss, initially affecting high frequencies and speech discrimination in noise. Management includes hearing rehabilitation, hearing aids, communication strategies, and cochlear implantation in selected severe cases.

### **Prescription Drug**

A medication whose dispensing or use is subject to prescription requirements under the applicable law. It requires professional oversight because of its risks, complexity, or need for monitoring; regulatory approval and prescribing rules vary by country and product.

### **Prescription Medications**

Pharmaceutical drugs that require authorization from a licensed healthcare provider before they can be dispensed to a patient. These medications are regulated because they carry risks that necessitate professional oversight, including potential side effects, drug interactions, and the need for precise dosing.

### **Preseptal Cellulitis**

Preseptal cellulitis, also known as periorbital cellulitis, is an infection of the eyelid and periorbital tissues anterior to the orbital septum, without involvement of the orbital contents, and it is the most common orbital infection, particularly in children.

#### **Synonyms:**

periorbital cellulitis, is an infection of the.

### **Pressure Atrophy**

The gradual wasting of tissue resulting from sustained external compression that impairs blood supply and causes cellular shrinkage and eventual death. The mechanism involves compression of blood vessels, which reduces perfusion and causes ischemia of the dependent tissue.

### **Pressure Injury**

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences.

### **Pressure Support Ventilation**

Spontaneous breathing mode with ventilator-provided pressure support above PEEP for each breath. Reduces work of breathing. Used for weaning from mechanical ventilation.

### **Pressure Ulcer**

Localized damage to skin and underlying tissue caused by sustained pressure or pressure with shear, typically over a bony prominence. Staging includes non-blanchable erythema, partial-thickness loss, full-thickness loss, and full-thickness tissue loss with exposed or palpable deep structures; obscured wounds are unstageable.

### **Pressure Ulcer Prevention**

Measures that reduce prolonged pressure and tissue injury, including repositioning, support surfaces, skin inspection, moisture control, nutrition, and mobility.

### **Pressure Urticaria**

A form of chronic inducible urticaria in which sustained pressure causes localized swelling, erythema, and pain, usually after a delay of several hours. Lesions may last 8 to 72 hours and commonly affect the hands, feet, buttocks, or areas compressed by clothing or sitting.

### **Pressure-Flow Study**

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases. See urodynamic testing.

### **Presyncope**

The sensation of imminent fainting (lightheadedness, weakness, visual blurring) without actual loss of consciousness, due to transient global cerebral hypoperfusion that resolves before LOC. Causes: orthostatic hypotension (volume depletion, autonomic failure, medications), vasovagal, cardiac (arrhythmias, aortic stenosis), and metabolic.

---

### **Preterm Birth**

Birth before 37 completed weeks of gestation. It may follow spontaneous labor or rupture of the membranes, or may be medically indicated because of maternal or fetal complications.

### **Preterm Infant**

An infant born before 37 completed weeks of gestation; classified by gestational age (late preterm 34-36, moderate 32-33, very preterm <32, extremely <28 weeks) and by birth weight. Causes: preterm labor, PPROM, preeclampsia, multiple pregnancy, infection, and iatrogenic.

### **Preterm Labor**

Regular uterine contractions causing cervical change before 37 weeks gestation. Risk factors include prior preterm delivery, multiple gestation, infection, and cervical insufficiency. Diagnosis requires regular contractions with documented cervical change.

### **Preterm Premature Rupture Of Membranes**

Rupture of the amniotic membranes before the onset of labor at <37 weeks gestation. Causes: infection (subclinical chorioamnionitis), cervical insufficiency, and prior PPROM. Presents with sudden gush or leakage of fluid per vagina.

### **Pretest Probability**

The estimated probability that a patient has a disease before the result of a diagnostic test is known. It is based on prevalence, symptoms, examination findings, risk factors, and prior test results and should guide test selection and interpretation.

### **Pretibial Myxedema**

Localized dermatopathy occurring in approximately five percent of patients with Graves disease caused by glycosaminoglycan deposition in the dermis particularly over the pretibial area. Presents as non-pitting indurated plaques with a peau d'orange appearance.

### **Preventive Dentistry**

Practice of preventing dental disease. Methods: oral

hygiene instruction, fluoride, sealants, diet counseling, regular check-ups.

### **Prevertebral Air**

Gas in the prevertebral soft tissues on lateral cervical spine radiograph, indicating a breach in the aerodigestive tract. It may result from esophageal perforation, tracheal injury, retropharyngeal abscess with gas-forming organisms, or trauma.

### **Primary Adrenal Insufficiency (Addison's Disease)**

Destruction or dysfunction of the adrenal cortex causing deficiency of cortisol and aldosterone, presenting with fatigue, hyperpigmentation, weight loss, and salt craving. Lifelong hormone replacement is required.

#### **Synonyms:**

Addison's disease

### **Primary Adrenal Lymphoma**

A rare lymphoma arising primarily in the adrenal gland, most commonly diffuse large B-cell lymphoma. It often presents bilaterally and may cause adrenal insufficiency.

### **Primary Aldosteronism**

Excess production of aldosterone by the adrenal glands, usually from an adrenal nodule or enlargement of both glands. It increases sodium retention and may cause hypertension, low potassium, or suppressed renin.

### **Primary Biliary Cholangitis**

A chronic autoimmune liver disease in which small intrahepatic bile ducts are progressively damaged. It can cause cholestasis, itching, fatigue, and eventually cirrhosis; antimitochondrial antibodies often support the diagnosis.

### **Primary Ciliary Dyskinesia**

An inherited disorder of ciliary structure or function that impairs mucociliary clearance. It can cause chronic sinus and lung infections, bronchiectasis, infertility, and abnormal organ laterality.

---

### Primary Hyperaldosteronism

Excess autonomous production of aldosterone by the adrenal glands. It can cause hypertension, low potassium, metabolic alkalosis, and suppressed renin. Causes include an adrenal adenoma or bilateral adrenal hyperplasia.

### Primary Hyperoxaluria

A group of autosomal recessive metabolic disorders characterized by overproduction of oxalate by the liver, leading to calcium oxalate deposition in the kidneys and other organs. Type 1 is caused by alanine-glyoxylate aminotransferase deficiency. It presents with recurrent nephrolithiasis, nephrocalcinosis, and progressive renal failure.

### Primary Hyperparathyroidism

Autonomous overproduction of parathyroid hormone from one or more abnormal parathyroid glands causing hypercalcemia. Most commonly caused by a single parathyroid adenoma accounting for approximately eighty-five percent. Multigland hyperplasia accounts for approximately ten to fifteen percent and parathyroid carcinoma is rare.

### Primary Hypertrophic Osteoarthropathy

A rare inherited syndrome characterized by digital clubbing, periostosis of long bones, and pachydermia, presenting with joint pain, skin thickening, and visible nail-bed enlargement.

### Primary Immune Response

The adaptive immune response to first exposure to an antigen, characterized by a slow onset (lag phase: days, during which antigen processing, clonal expansion, and differentiation occur), followed by rising antibody titers (predominantly IgM, then IgG), and generation of memory cells.

### Primary Immunodeficiency

A group of genetically determined disorders of the immune system causing increased susceptibility to infection, autoimmunity, and malignancy.

### Primary Lateral Sclerosis

A rare neurodegenerative disorder confined to the

upper motor neurons (corticospinal tract) of the motor cortex and brainstem. Presents with slowly progressive spasticity, hyperreflexia, Babinski sign, and pseudobulbar affect (emotional lability).

### Primary Metabolism

The essential biochemical processes by which cells produce energy, synthesize molecules, and maintain their functions.

### Primary Myelofibrosis

A chronic myeloproliferative neoplasm characterized by bone marrow fibrosis (reticulin and/or collagen fibrosis), extramedullary hematopoiesis (primarily splenic and hepatic), and a leukoerythroblastic peripheral blood picture.

### Primary Open-Angle Glaucoma

A chronic optic neuropathy with characteristic retinal ganglion-cell and optic-nerve loss, usually accompanied by progressive visual-field defects, despite an anatomically open anterior-chamber angle. Intraocular pressure is an important modifiable risk factor, and treatment lowers pressure to slow progression.

### Primary Ovarian Insufficiency

Loss of normal ovarian activity before age 40, characterized by irregular or absent menses, reduced estrogen, and intermittently or persistently elevated gonadotropins. Causes include genetic, autoimmune, iatrogenic, toxic, infectious, and unknown factors.

### Primary Prevention

Preventing cancer development. Strategies: smoking cessation, vaccination (HPV, hepatitis B), sun protection, healthy diet, exercise.

### Primary Sclerosing Cholangitis

Chronic cholestatic liver disease characterized by progressive fibrosis and strictures of intrahepatic and extrahepatic bile ducts. The disease has a strong association with inflammatory bowel disease, especially ulcerative colitis, occurring in a substantial proportion of patients.

---

## Primary Tuberculosis

The first infection with *Mycobacterium tuberculosis*. It may produce a small pulmonary focus and regional lymph-node involvement; the infection may be contained as latent tuberculosis or progress to active disease.

## Primary Tumor

Original cancer site. Secondary: metastatic sites.

## Primordial Prevention

Preventing the emergence of disease risk factors by addressing social, economic, behavioural, and environmental conditions early. Examples: promoting healthy diets and physical activity in children, reducing tobacco exposure, and creating safe environments for exercise.

## Prion Disease

A neurodegenerative disease caused by abnormal folding and propagation of prion protein. These disorders are rare and usually progressive and fatal, although their course varies by the specific disease.

## PRK

Photorefractive keratectomy, commonly known as PRK, is a refractive surgical procedure that corrects myopia, hyperopia, and astigmatism by reshaping the corneal stroma using an excimer laser after mechanical removal of the corneal epithelium, without creating a corneal flap.

## Probable Cause

A legally recognized reasonable basis for believing that a person committed an offense or that evidence of an offense will be found.

## Probe

Instrument for exploring wound or cavity.

## Probiotic

Live microorganisms administered in adequate amounts to confer a health benefit by modulating the microbiome and immune responses.

## Procalcitonin

A biomarker that may rise during some bacterial infections and systemic inflammation. It can support assessment of infection and antibiotic decisions, but it cannot by itself diagnose or exclude bacterial infection or determine sepsis severity.

## Procalcitonin-Guided Antibiotic Therapy

The use of procalcitonin levels to guide initiation and discontinuation of antibiotics. Procalcitonin is a biomarker that rises in bacterial infections and falls with effective treatment. Elevated levels support the need for antibiotic therapy, while declining levels support discontinuation.

## Procedural Sedation

Administration of sedative and analgesic medicines to facilitate a painful or anxiety-provoking procedure while preserving spontaneous ventilation and protective reflexes to the intended depth. Continuous monitoring and immediate rescue capability are required.

## Procedure

A planned medical or surgical action performed for diagnosis, treatment, prevention, or palliation.

## Prodrug

A prodrug is a pharmacologically inactive compound that is converted to an active drug through metabolic processes within the body. Prodrugs are designed to overcome limitations of the parent drug including poor bioavailability, rapid metabolism, lack of tissue selectivity, or unacceptable side effects.

## Product Liability

Legal responsibility for injury or damage caused by a defective or unsafe product.

## Progesterone Supplementation

Administration of progesterone to prevent preterm birth in high-risk women. Natural progesterone (17-alpha hydroxyprogesterone caproate) shown to reduce preterm birth rate in women with prior spontaneous preterm delivery. Also beneficial for short

---

cervix detected on screening. Typically started in the second trimester.

### **Prognostic Test**

A test that provides information about the likely course or outcome of a disease.

### **Progression**

Worsening or advancement of a disease, such as increasing tumor size, new lesions, or spread to another site.

### **Progression-Free Survival**

The length of time from a defined starting point, such as diagnosis or treatment, until cancer progression or death from any cause, whichever occurs first.

### **Progressive Disease**

Worsening of cancer during or after treatment, defined per RECIST as growth of target lesions, appearance of new lesions, or unequivocal progression of non-target lesions.

### **Progressive Supranuclear Palsy**

A neurodegenerative tauopathy characterized by the accumulation of tau protein in the basal ganglia, brainstem, and cerebral cortex, belonging to the family of Parkinson plus syndromes.

#### **Synonyms:**

Steele-Richardson-Olszewski Syndrome Supranuclear Palsy

### **Prolactin Physiology**

Prolactin is the only pituitary hormone primarily under tonic inhibitory control by the hypothalamus through dopamine acting on D2 receptors. Prolactin stimulates lactation suppresses GnRH and is important for reproductive function. Physiological elevations occur during pregnancy lactation breast stimulation sleep and stress.

### **Prolactinoma Treatment**

Treatment may include a dopamine agonist, surgery, radiation, or observation, depending on tumor size,

symptoms, hormone levels, treatment response, and patient preferences. Dopamine agonists often lower prolactin levels and reduce tumor size.

### **Prolapse Of Orbital Fat**

Herniation of intraorbital fat through a dehiscence in the orbital septum, most commonly presenting as a painless, soft, reducible mass in the upper eyelid or lower eyelid. It is often age-related and may be confused with a lipoma or dermoid cyst.

### **Prolapse Of The Uterus (Uterine Prolapse)**

Descent of the uterus into the vaginal canal due to weakening of pelvic floor supports, most commonly the uterosacral and cardinal ligaments.

#### **Synonyms:**

Uterine Prolapse

### **Proliferative Diabetic Retinopathy**

The advanced stage of diabetic retinopathy, characterized by the growth of new, fragile blood vessels (neovascularization) on the retinal surface, optic disc, or iris in response to severe retinal ischemia and the release of vascular endothelial growth factor.

### **Prolonged Deceleration**

A fetal heart rate deceleration lasting  $\geq 2$  minutes but  $<10$  minutes. If the deceleration persists  $\geq 10$  minutes, it is a baseline change. Causes: maternal hypotension (epidural-induced aortocaval compression), uterine hyperstimulation, umbilical cord prolapse, placental abruption, and maternal seizure.

### **Prolonged Second Stage**

Second stage of labor exceeding the time limits: nulliparas — 3 hours with regional anesthesia (2 hours without); multiparas — 2 hours with regional (1 hour without). Management: reassess position, contractions, and fetal status. For inadequate contractions: oxytocin augmentation. For malposition (OP, OT): manual rotation.

### **Prominent Iris Collarette**

A visible thickening or ridge of the iris at the junction of the pupillary and ciliary zones, representing

---

the site where the embryonic pupillary membrane was attached. It is typically a normal anatomical variant but can be a clinical sign in conditions such as Axenfeld-Rieger syndrome or iridocorneal endothelial syndrome.

### Promoter

DNA sequence upstream of gene where RNA polymerase and transcription factors bind to initiate transcription. Core promoter: TATA box, transcription start site. Regulatory elements: enhancers, silencers.

### Prone Positioning

Turning supine patients to prone for > 12 hours daily in severe ARDS. Improves oxygenation by recruiting dorsal lung segments. Reduces mortality when  $\text{PaO}_2/\text{FiO}_2 < 150$ .

### Propafenone

A class IC antiarrhythmic with sodium channel blockade and weak beta-blocking activity. Used for paroxysmal atrial fibrillation (in patients without structural heart disease, including 'pill-in-the-pocket'), supraventricular tachycardias, and ventricular arrhythmias.

### Properdin Deficiency

X-linked recessive (CFP gene). Properdin stabilizes alternative pathway C3 convertase. Recurrent Neisseria infections (meningococcemia, gonococcemia). Low AH50, normal CH50, low properdin. Treatment: meningococcal vaccination (ACWY + B), prophylactic penicillin, IVIG for severe infections.

### Propofol Infusion Syndrome

Rare but fatal complication of prolonged high-dose propofol infusion. Features: metabolic acidosis, rhabdomyolysis, cardiac failure, hyperlipidemia. Risk: critical illness, children, high doses (>4-5 mg/kg/hr), prolonged infusion (>48 hours). Prevention: limit dose and duration.

### Prostacyclin Analogs

Medications that mimic prostacyclin (PGI<sub>2</sub>), causing vasodilation and inhibiting platelet aggrega-

tion in the pulmonary vasculature. They include epoprostenol (continuous IV), treprostinil (subcutaneous, IV, inhaled, oral), and iloprost (inhaled). They are used for severe PAH.

### Prostaglandin Analogs

A class of topical medications used in the treatment of open-angle glaucoma and ocular hypertension that lower intraocular pressure by increasing the uveoscleral outflow of aqueous humor, reducing intraocular pressure by approximately twenty-five to thirty-five percent.

### Prostate Adenocarcinoma

The most common non-cutaneous malignancy in men and the second leading cause of cancer death in men after lung cancer. The disease typically arises in the peripheral zone of the prostate and is hormone-dependent, requiring androgens for growth.

### Prostate Biopsy

Sampling of prostate tissue, commonly by transperineal or transrectal needle technique, for histologic diagnosis of prostate cancer. Targeted and systematic cores may be combined, with attention to infection prevention, bleeding, urinary retention, and sepsis risk.

### Prostate Cancer

Most common non-cutaneous cancer in men. Risk factors: age, family history, African American race, high red meat intake. Screening: PSA testing, DRE. Diagnosis: transrectal ultrasound-guided biopsy. Staging: TNM system, Gleason score.

#### Synonyms:

Cancer, Prostate Prostatic Carcinoma (Prostate Cancer)

### Prostate-Specific Antigen

A serine protease produced mainly by prostate epithelial cells and secreted into seminal fluid. PSA can be measured in blood, where levels may rise with benign enlargement, inflammation, infection, or prostate cancer. Interpretation depends on age, prostate size, medicines, symptoms, and changes over time.

---

## Prosthetic Limb

Artificial replacement for missing limb. Types: above/below knee, above/below elbow. Components: socket, suspension, joint, pylon, terminal device. Materials: carbon fiber, silicone, metal. Rehabilitation: gait training, strength, ADL.

## Prosthetic Training

Training for amputees: stump care, donning/doffing, gait training, balance, stair negotiation, community ambulation.

## Prosthetics

Artificial replacement of missing body part. Elderly use: lower limb (transtibial, transfemoral), upper limb. Considerations: mobility level, cognition, vision, comorbidities, support system. Rehabilitation: physical therapy, strength training, balance.

## Prosthodontics

Dental specialty concerned with replacement of missing teeth and restoration of oral function. Types: fixed (crowns, bridges, implants), removable (partial dentures, complete dentures), maxillofacial prosthetics (ocular, nasal, auricular). Goals: aesthetics, function, phonetics, preservation of remaining structures.

## Protease Inhibitor

A class of antiretroviral drugs that block the viral protease enzyme responsible for cleaving polypeptide precursors into functional proteins during HIV replication, preventing the formation of mature, infectious virions. Used in combination antiretroviral therapy for HIV infection.

## Protease Inhibitors

A class of antiviral drugs that block viral proteases, enzymes essential for processing viral polyproteins into functional components needed for viral assembly and maturation.

## Protective Factor

Attribute decreasing probability of disease. Examples: exercise (cardiovascular disease), vaccination (infectious disease).

## Protein Binding

The reversible association of drug molecules with plasma proteins, primarily albumin for acidic drugs and alpha-1 acid glycoprotein for basic drugs. Only unbound or free drug is pharmacologically active and available for distribution to tissues, metabolism by the liver, and excretion by the kidneys.

## Protein C

Natural anticoagulant. Inactivates factors Va and VIIIa. Warfarin can cause skin necrosis in deficiency.

## Protein C Deficiency

An inherited (autosomal dominant) thrombophilia causing increased VTE risk. Protein C is a vitamin K-dependent natural anticoagulant that inactivates factors Va and VIIIa and stimulates fibrinolysis. Heterozygous: 6-10 fold increased VTE risk.

## Protein Folding

The process by which newly synthesized polypeptide chains acquire their functional three-dimensional structures. The amino acid sequence (primary structure) determines the folding pathway.

## Protein S

Vitamin K-dependent plasma glycoprotein that acts as a cofactor for activated protein C in the inactivation of factors Va and VIIIa. Deficiency or dysfunction increases the risk of venous thromboembolism.

## Protein S Deficiency

An inherited (autosomal dominant) thrombophilia. Protein S is a vitamin K-dependent natural anticoagulant that acts as a cofactor for activated protein C in inactivating factors Va and VIIIa. Heterozygous: 2-10 fold increased VTE risk. Homozygous: rare, purpura fulminans.

## Protein Synthesis

Translation of mRNA code into polypeptide chain. Initiation: ribosome assembly at start codon (AUG). Elongation: aminoacyl-tRNAs bring amino acids; peptide bonds form in peptidyl transferase center; ribosome translocates. Termination: stop codon (UAA, UAG, UGA) recognized by release factors.

---

## Protein-Energy Malnutrition

Severe deficiency of protein and calories. Types: marasmus (chronic, wasting), kwashiorkor (acute, edema, fatty liver), marasmic-kwashiorkor. Risk: famine, poverty, alcoholism, malignancy, malabsorption. Treatment: gradual refeeding, monitor refeeding syndrome.

## Proto-Oncogene

A normal gene that regulates cell growth, division, differentiation, or survival and can become an oncogene after activating mutation, amplification, translocation, or overexpression.

## Proton Pump Inhibitor

A class of medications that irreversibly inhibit the gastric H<sup>+</sup>/K<sup>+</sup> ATPase (proton pump) in parietal cells, the final common pathway of gastric acid secretion, producing profound and sustained suppression of both basal and stimulated acid production.

## Proton Therapy

Radiation using protons instead of photons. Bragg peak allows precise dose delivery. Used for pediatric tumors, skull base tumors.

## Proximal Humerus Fractures

Proximal humerus fractures: Neer classification (4 parts: articular surface, greater tuberosity, lesser tuberosity, shaft; displaced >1 cm or angulated >45 degrees = part). 1-part (nondisplaced): sling, early motion. 2-part: surgical neck (ORIF plate, IM nail) or greater tuberosity (if displaced >5mm or rotator cuff involvement).

## Proximal Radioulnar Joint

Pivot synovial joint between radial head circumference and ulnar radial notch, held by the annular ligament. Allows pronation/supination with approximately 150 degrees range. Parallel bones in supination; radius crosses ulna in pronation. Significant in radial head fractures, Monteggia fracture-dislocations, and nursemaid's elbow.

## Proximal Tubule

Segment of the nephron extending from Bowman

capsule to the loop of Henle with a convoluted proximal straight tubule and convoluted proximal tubule. Responsible for reabsorbing approximately sixty-five percent of filtered sodium, water, bicarbonate, glucose, amino acids, and phosphate through an extensive brush border.

## Proximal Tubule Reabsorption

The proximal convoluted tubule (PCT) reabsorbs approximately 65 percent of filtered sodium, water, glucose, amino acids, bicarbonate, and phosphate.

## Proximate Cause

The legally sufficient cause that directly contributes to an injury or outcome.

## Prune Belly Syndrome

A congenital syndrome comprising the triad: deficient abdominal wall musculature (wrinkled, prune-like appearance), bilateral cryptorchidism (undescended testes), and urinary tract anomalies (dilated ureters, dilated and trabeculated bladder, and posterior urethral valves or urethral atresia). Almost exclusively affects boys.

## Pruritus Ani

Persistent itching around the anus with multiple potential causes including hemorrhoids, fissures, infections such as pinworms and candidiasis, dermatologic conditions including psoriasis and lichen sclerosis, and idiopathic causes.

## Pruritus In CKD

Severe itching in dialysis patients from uremic toxin accumulation, elevated calcium-phosphorus product, and secondary hyperparathyroidism. Difficult to treat. Include phosphate binders, dialysis optimization, gabapentin, and UV phototherapy.

## PSA (Prostate-Specific Antigen)

A serine protease produced by prostate tissue and measured in blood. It may be used with shared decision-making to assess prostate-cancer risk and to monitor known disease. PSA can also rise with benign enlargement, inflammation, infection, or recent procedures, so no single value establishes or

---

excludes cancer.

**Synonyms:**

Prostate-Specific Antigen

**Pseudoaneurysm**

A contained arterial wall disruption in which blood communicates with the arterial lumen but is held by surrounding tissue rather than all layers of the arterial wall. It may follow catheterization, trauma, surgery, infection, or grafting and can rupture or embolize.

**Pseudobulbar Affect**

Involuntary episodes of laughing or crying disproportionate to mood, usually due to neurologic disease.

**Synonyms:**

Pathological Laughter And Crying PBA

**Pseudoclubbing**

Broadening and flattening of the nail tips without the complete loss of the angle between the nail and nail fold that characterizes true clubbing. It is seen in conditions such as hyperparathyroidism, rheumatoid arthritis, and psoriasis.

**Pseudoephedrine**

A sympathomimetic (alpha-1 agonist, some beta effects) oral decongestant used for nasal congestion in colds and sinusitis. Increases nasal mucosal vasoconstriction.

**Pseudogout**

Calcium pyrophosphate deposition disease (CPPD): deposition of calcium pyrophosphate dihydrate crystals in joints, causing acute arthritis resembling gout (pseudogout) or chronic osteoarthritis-like disease.

**Synonyms:**

Arthritis Pseudogout (Pseudogout)

**Pseudogout Flare**

Acute crystal-induced arthritis caused by calcium pyrophosphate dihydrate deposition, often affecting the knee or wrist. Identification of positively birefringent rhomboid crystals in synovial fluid supports the diagnosis.

**Pseudohypoparathyroidism**

A group of disorders in which target tissues resist parathyroid hormone, causing low calcium, high phosphate, and elevated PTH, sometimes with characteristic skeletal features or hormone resistance.

**Pseudomelanosis Duodeni**

Benign condition characterized by dark pigment deposits in the duodenal mucosa, visible as slate-gray or black patches on endoscopy, caused by accumulation of iron-containing pigment in macrophages within the lamina propria.

**Pseudomembranous Colitis**

Colonic inflammation caused by *C. difficile* infection showing yellow-white plaques on colonoscopy. The plaques consist of fibrin, inflammatory cells, and necrotic epithelial debris overlying mucosal ulceration. Presents with profuse watery diarrhea and abdominal pain.

**Synonyms:**

*C. Difficile* Colitis Colitis, Pseudomembranous

**Pseudomonas Aeruginosa Infection**

Infection caused by *Pseudomonas aeruginosa*, an opportunistic gram-negative bacterium that can affect the lungs, wounds, urinary tract, blood, or other sites.

**Pseudomonas Aeruginosa Resistance**

*Pseudomonas aeruginosa* has intrinsic and acquired resistance mechanisms making it inherently resistant to many antibiotics. Intrinsic resistance includes low outer membrane permeability, efflux pumps, and chromosomal beta-lactamase.

**Pseudomyxoma Peritonei**

Accumulation of mucinous ascites and mucin-producing tumor nodules in the peritoneal cavity, usually from a ruptured low-grade appendiceal or ovarian mucinous neoplasm; treated with cytoreductive surgery and hyperthermic intraperitoneal chemotherapy.

**Pseudothrombocytosis Due To Red Cell**

---

## **Fragments**

Falsely elevated platelet count on automated hematology analyzers caused by fragmentation of red blood cells (schistocytes) being counted as platelets. Seen in microangiopathic hemolytic anemias such as TTP, HUS, DIC, and mechanical heart valves. Manual peripheral blood smear review confirms true platelet count.

## **PSMA**

Prostate-specific membrane antigen. Target for PET imaging and therapy in prostate cancer.

## **Psoas Abscess**

A collection of pus in or around the psoas muscle, caused by infection spreading through the blood or from nearby tissues. It may cause back or hip pain, fever, difficulty walking, or few symptoms and usually requires imaging and targeted treatment.

## **Psoriatic Arthritis**

An inflammatory arthritis associated with psoriasis of the skin or nails. It may affect the spine, peripheral joints, digits, or tendon insertions, and diagnosis uses the clinical pattern together with appropriate laboratory and imaging findings.

### **Synonyms:**

Arthritis Psoriatic (Psoriatic Arthritis)

## **Psychoactive Substance**

A substance that alters mood, perception, cognition, behavior, or consciousness.

## **Psychodermatology**

Psychodermatology addresses the mind-skin connection. Stress exacerbates psoriasis, eczema, acne, and urticaria. Psychiatric disorders (depression, anxiety, body dysmorphic disorder) are associated with skin conditions.

## **Psychodynamic Therapy**

A form of depth psychology that explores how unconscious processes, early life experiences, and internal conflicts influence current thoughts, feelings, and behaviors. It involves exploration of transference

and countertransference, defense mechanisms, and the therapeutic relationship as a vehicle for change.

## **Psychogenic Non-Epileptic Seizures**

Seizure-like episodes that are not caused by abnormal electrical activity in the brain. They are a form of conversion disorder with attacks or seizures. Events may include shaking, stiffening, unresponsiveness, and other movements.

## **Psychological Support**

Counseling, therapy for patients with chronic illness, disability, pain. Address depression, anxiety, adjustment difficulties, coping strategies.

## **Psychosocial Rehabilitation**

Support for mental illness recovery: skills training, supported employment, peer support.

## **Psychosocial Support**

Cancer affects mental health. Depression, anxiety common. Support groups, counseling beneficial.

## **PTH-Related Peptide**

A peptide that activates the parathyroid-hormone receptor and can cause humoral hypercalcemia of malignancy. It increases bone resorption and renal calcium retention while reducing phosphate reabsorption.

## **Pthirus Pubis**

The pubic louse, a parasitic insect that infests the pubic hair and occasionally other coarse body hair, causing pediculosis pubis. Transmission is primarily through sexual contact. It causes intense pruritus and may transmit *Borrelia recurrentis* causing relapsing fever. Diagnosis is by visual identification of the louse or nits.

## **PTSD**

Post-traumatic stress disorder, a condition involving persistent trauma-related memories, avoidance, negative mood or cognition, and heightened arousal after a severe traumatic event.

---

## Public Exposure

Radiation exposure to public from nuclear medicine patients. Guidelines for discharge after therapy. I-131 therapy: radiation safety instructions for 3-7 days.

## Public Health

The science and practice of protecting and improving the health of communities through education, policy-making, and research for disease and injury prevention.

## Public Health Emergency

Event threatening public health. Examples: pandemic, bioterrorism, natural disaster. Declaration enables special powers.

## Public Health Research Bias

Systematic error in a population-health study, including selection bias, information bias, and confounding.

## Pudendal Block

A local anesthetic block of the pudendal nerve (S2-S4) used for perineal anesthesia during the second stage of labor, outlet forceps delivery, or perineal repair. Technique: transvaginal approach — a needle guide is placed on the ischial spine, and the needle is advanced through the sacrospinous ligament.

## Puerperal Psychosis

A rare psychiatric emergency beginning soon after childbirth, characterized by rapidly changing mood, confusion, delusions, hallucinations, or disorganized behavior.

## Pugilistic Stance

The characteristic body position adopted by fire victims—flexed arms, elbows bent, fists clenched, knees flexed—resulting from heat-induced contraction (denaturation) of muscles (mainly flexors) and tendons, not from conscious movement. It occurs with thermal injury and can be present regardless of cause (even if death preceded fire).

## Pulmonary Alveolar Hemorrhage

Bleeding into the alveolar spaces from disruption of the alveolar-capillary membrane. Causes include vasculitis (GPA, MPA, Goodpasture), connective tissue disease, medications, and coagulopathy. It presents with hemoptysis, falling hemoglobin, diffuse bilateral infiltrates, and serially bloody returns on BAL.

## Pulmonary Alveolar Microlithiasis

A rare genetic disease caused by SLC34A2 mutations, leading to accumulation of calcium phosphate microliths within the alveoli. HRCT shows diffuse bilateral calcified nodules with a “sandstorm” appearance. It is usually diagnosed in the third to fourth decade.

## Pulmonary Alveolar Proteinosis

A rare disease characterized by accumulation of surfactant-like material within the alveoli due to impaired clearance by alveolar macrophages. Most cases are autoimmune (anti-GM-CSF antibodies). Presents with progressive dyspnea and cough. HRCT shows bilateral ground-glass opacities with “crazy paving” pattern.

## Pulmonary Angiography

Contrast imaging of the pulmonary arteries, usually by catheter. It can diagnose pulmonary vascular abnormalities but is now used less often for pulmonary embolism because CT pulmonary angiography is less invasive.

## Pulmonary Arterial Hypertension

A precapillary pulmonary hypertension syndrome caused by increased pulmonary vascular resistance from pulmonary arteriolar disease. It may be idiopathic, heritable, drug-associated, or associated with conditions such as connective-tissue disease, congenital heart disease, portal hypertension, or HIV.

## Pulmonary Arteriovenous Fistula

An abnormal direct connection between a pulmonary artery and vein that bypasses the capillary bed. It can cause hypoxemia, cyanosis, dyspnea,

---

paradoxical emboli, or brain abscess.

### **Pulmonary Arteriovenous Malformation**

An abnormal direct communication between a pulmonary artery and vein, causing a right-to-left shunt. It may be idiopathic or associated with hereditary hemorrhagic telangiectasia (Osler-Weber-Rendu syndrome). It can cause hypoxemia, paradoxical emboli (stroke, brain abscess), and hemoptysis.

### **Pulmonary Artery Catheter**

A catheter inserted through the right heart into the pulmonary artery to measure hemodynamic parameters (PA pressure, PAWP, cardiac output). Used for diagnosis and management of pulmonary hypertension, heart failure, and critical illness.

### **Pulmonary Atresia**

A congenital heart defect where the pulmonary valve is completely absent (atretic), obstructing right ventricular outflow. Two main types: pulmonary atresia with intact ventricular septum (PA-IVS) and pulmonary atresia with ventricular septal defect (PA-VSD, also called tetralogy of Fallot with pulmonary atresia).

#### **Synonyms:**

tetralogy of Fallot with pulmonary atresia).

### **Pulmonary Capillary Wedge Pressure**

An indirect estimate of left-atrial pressure obtained by briefly occluding a small pulmonary-artery branch with a balloon-tipped catheter. It reflects left-sided filling pressure when measured correctly and interpreted in the appropriate clinical and ventilatory context.

### **Pulmonary Contusion**

Bruising of the lung parenchyma from blunt chest trauma, causing hemorrhage and edema without lung laceration. It impairs gas exchange and can progress to ARDS. It is often associated with rib fractures and flail chest. Treatment is supportive with lung-protective ventilation.

### **Pulmonary Edema**

Accumulation of fluid in the pulmonary interstitium

and alveoli, most commonly due to left-sided heart failure (cardiogenic). Causes increased hydrostatic pressure leads to transudation. Presents with acute dyspnea, orthopnea, crackles, and S3 gallop. Non-cardiogenic causes include ARDS, renal failure, and high altitude.

#### **Synonyms:**

Edema, Pulmonary Edema Pulmonary (Pulmonary Edema)

### **Pulmonary Embolism Treatment**

Anticoagulation: DOACs preferred (rivaroxaban, apixaban) or LMWH bridging to warfarin. Duration: 3 months for provoked (reversible risk factor), indefinite for unprovoked or recurrent. Massive PE: systemic thrombolysis (alteplase 100 mg IV over 2 hours) or surgical catheter-directed embolectomy.

### **Pulmonary Fibrosis**

Scarring replacing normal alveolar architecture. Causes: IPF, connective tissue disease, asbestos, radiation, drugs (bleomycin, methotrexate). Features: progressive dyspnea, dry cough, digital clubbing.

### **Pulmonary Function Tests**

Spirometry: FVC (forced vital capacity), FEV1 (forced expiratory volume in 1 second), FEV1/FVC ratio. Obstructive pattern: FEV1/FVC <0.7 (asthma, COPD). Restrictive pattern: FVC <80% with normal or increased FEV1/FVC (pulmonary fibrosis, chest wall disorders). Lung volumes: TLC (total lung capacity), RV (residual volume).

### **Pulmonary Hemosiderosis**

Accumulation of iron-containing pigment in the lungs, usually after repeated bleeding into the air spaces. It may cause cough, coughing blood, anemia, shortness of breath, or diffuse lung changes and can result from immune-mediated or other disorders.

### **Pulmonary Hypertension**

Elevated mean pulmonary artery pressure (>20 mmHg at rest) due to various etiologies. WHO Group 1: pulmonary arterial hypertension (idiopathic, heritable, drug-induced). Group 2: left heart disease. Group 3: lung disease. Group 4:

---

chronic thromboembolic.

**Synonyms:**

PH (Pulmonary Hypertension)

**Pulmonary Hypertension Classification**

WHO Classification: Group 1 (PAH: idiopathic, heritable, drug-induced, connective tissue disease-associated). Group 2 (left heart disease: systolic/diastolic dysfunction, valvular). Group 3 (lung disease/hypoxia: COPD, ILD, sleep apnea). Group 4 (chronic thromboembolic). Group 5 (multifactorial: sarcoidosis, hematologic disorders).

**Pulmonary Infarction**

Lung necrosis from PE when bronchial supply is compromised. Causes pleuritic pain, hemoptysis, and wedge-shaped opacity. Most PE do not cause infarction due to dual blood supply.

**Pulmonary Lobes**

The anatomical divisions of the lungs separated by interlobar fissures. The right lung has superior, middle, and inferior lobes; the left lung has superior and inferior lobes and a lingula.

**Pulmonary Rehabilitation**

A supervised, multidisciplinary program combining exercise training, education, behavioral support, and self-management for chronic respiratory disease. It improves exercise capacity, dyspnea, functional status, and quality of life.

**Pulmonary Sequestration**

A congenital malformation of non-functioning lung tissue that lacks normal communication with the tracheobronchial tree and receives its blood supply from a systemic artery (usually the descending aorta). Intralobar sequestration is within the normal pleural investment; extralobar is outside.

**Pulmonary Surfactant**

A phospholipid-protein mixture produced by type II alveolar pneumocytes that reduces surface tension at the air-liquid interface within alveoli. The primary component is dipalmitoylphosphatidylcholine (DPPC, lecithin), which forms a monolayer that re-

duces surface tension to near zero during expiration.

**Pulmonary Valve**

Semilunar valve between right ventricle and pulmonary trunk with three cusps. Most superiorly located cardiac valve with thinner cusps than the aortic valve. Pulmonic stenosis is a congenital defect causing right ventricular hypertrophy. Less commonly affected by endocarditis than mitral/aortic valves.

**Pulmonary Vascular Resistance**

The resistance to blood flow through the pulmonary circulation, calculated approximately as the transpulmonary pressure gradient divided by cardiac output. Elevated resistance contributes to pulmonary hypertension and right-ventricular afterload.

**Pulmonary Vasodilator Therapy**

Medications that reduce pulmonary vascular resistance and pulmonary artery pressure. Used for WHO Group 1 PAH. Includes endothelin receptor antagonists (bosentan), PDE-5 inhibitors (sildenafil), prostacyclin analogs (epoprostenol), and soluble guanylate cyclase stimulators (riociguat).

**Pulmonary Vein**

The four veins (two from each lung) returning oxygenated blood from the lungs to the left atrium, a unique exception in the venous system (carrying oxygenated blood). Superior and inferior pulmonary veins enter the left atrium posteriorly.

**Pulmonary Wedge Pressure**

The pressure measured by a balloon-tipped pulmonary artery catheter when the balloon is inflated, occluding a branch of the pulmonary artery. It approximates left atrial pressure. Normal is 6–12 mmHg. Elevated in left heart failure (PCWP > 18 mmHg). Low in hypovolemia.

**Pulmonary-Artery Dissection**

Rare but life-threatening tear in the pulmonary artery wall, most commonly associated with pulmonary hypertension, Marfan syndrome, or prior

---

pulmonary artery catheterization. Presents with acute chest pain, dyspnea, and hemodynamic collapse. Diagnosis by CT angiography or echocardiography; management requires emergent surgical repair.

### **Pulp Stone**

Calcified mass in pulp chamber or root canal. May be free, attached, or embedded. Incidental finding.

### **Pulpectomy**

Complete removal of pulp from primary tooth. Followed by resorbable filling material.

### **Pulposus**

Relating to the nucleus pulposus, the gelatinous central portion of an intervertebral disk.

### **Pulpotomy**

Removal of coronal pulp in primary tooth with reversible inflammation. Maintains radicular pulp vitality.

### **Pulse Examination**

Assessment of arterial pulses for rate, rhythm, strength, and symmetry to help evaluate circulation.

### **Pulse Oximeter**

A noninvasive device that estimates peripheral oxygen saturation using light absorption. Readings can be affected by poor perfusion, motion, skin or nail characteristics, device limitations, and the clinical setting.

### **Pulse Oximetry**

A noninvasive method for estimating peripheral oxygen saturation by measuring red and infrared light absorption through a pulsatile vascular bed. It is widely used for monitoring, but values must be interpreted with symptoms, perfusion, device limitations, and the individual's clinical targets.

### **Pulseless Electrical Activity**

A cardiac arrest rhythm organized electrical activity without a detectable pulse. PEA has many

reversible causes (5 H's and 5 T's): hypovolemia, hypoxia, hydrogen ion (acidosis), hypo/hyperkalemia, hypothermia; tension pneumothorax, tamponade (cardiac), toxins, thrombosis (pulmonary), thrombosis (coronary).

### **Pulsus Paradoxus**

A decrease in systolic blood pressure greater than 10 mmHg during inspiration, normally less than 10 mmHg. Exaggerated in cardiac tamponade (due to ventricular interdependence in the confined pericardial space), severe asthma, COPD exacerbation, and constrictive pericarditis.

### **Punch Biopsy**

A small, full-thickness circular biopsy obtained with a rotating trephine, used to diagnose skin and soft-tissue lesions. Suture closure may be needed.

### **Punctate Hemorrhages (Tardieu Spots)**

Small, pinpoint sub-ecchymotic hemorrhages (petechiae) resulting from the rupture of small capillaries under conditions of intense mechanical venous engorgement and asphyxia.

#### **Synonyms:**

Tardieu Spots

### **Punctate Palmoplantar Keratoderma**

A hereditary keratoderma characterised by multiple, small, firm, circumscribed keratotic papules and plaques scattered across the palms and soles, often with an autosomal dominant inheritance pattern. It may present in adolescence or adulthood and can be associated with malignant transformation in rare cases.

### **Pure Tone Audiometry**

The standard behavioral test used to measure hearing sensitivity across the frequency range important for speech perception, typically from 250 to 8000 Hertz, by determining the lowest intensity level at which a pure tone can be detected approximately fifty percent of the time (the hearing threshold).

### **Purging**

Deliberate behaviors intended to compensate for

---

eating, such as self-induced vomiting or misuse of laxatives, diuretics, or excessive exercise.

### **Purging Disorder**

Recurrent purging behavior to influence weight or shape in the absence of binge eating. Self-induced vomiting, misuse of laxatives, diuretics, or other medications. It is classified under Other Specified Feeding or Eating Disorder (OSFED). It can lead to electrolyte imbalances, dental erosion, Russell's sign, and esophageal tears.

### **Purines**

Nitrogenous bases containing a double-ring structure (a six-membered ring fused to a five-membered imidazole ring), which serve as essential components of nucleotides in DNA and RNA. The primary purines are adenine (A) and guanine (G).

### **Purkinje Fibers**

The terminal branches of the cardiac conduction system, distributed throughout the ventricular myocardium. They conduct impulses rapidly (up to 4 m/s) to ensure coordinated ventricular contraction from apex to base. Purkinje fibers have an intrinsic firing rate of 20-40 beats per minute.

### **Purpura Fulminans**

A rapidly progressive, life-threatening condition characterised by extensive, confluent, non-blanching purpuric skin necrosis with haemorrhagic bullae, resulting from acute intravascular thrombosis and disseminated intravascular coagulation.

### **Purulent Pericarditis**

Bacterial infection of the pericardial space, most commonly caused by *S. aureus*, *S. pneumoniae*, or gram-negative organisms. Often occurs as a complication of pneumonia, endocarditis, chest surgery, or immunosuppression. Presents with fever, pleuritic chest pain, and rapidly accumulating effusion with tamponade physiology.

### **Push Enteroscopy**

Endoscopic technique using a longer endoscope to visualize and intervene in the proximal small bowel

beyond the reach of standard upper endoscopy. Unlike capsule endoscopy, push enteroscopy allows direct visualization with the ability to obtain biopsies and perform hemostasis.

### **Pyelotomy**

An incision into the renal pelvis, usually made to remove an obstruction or kidney stone.

### **Pylephlebitis**

Septic thrombophlebitis of the portal vein or its tributaries, most commonly arising from intra-abdominal infections such as appendicitis, diverticulitis, cholangitis, or hepatic abscess. Presents with high fever, rigors, right upper quadrant pain, jaundice, and sepsis.

### **Pyoderma Gangrenosum**

A neutrophilic inflammatory skin disorder that causes painful ulcers with undermined, violaceous borders. It may be associated with inflammatory bowel disease, arthritis, blood disorders, or other systemic conditions, and trauma can worsen the lesions.

### **Pyogenic Granuloma**

A benign vascular proliferation presenting as a rapidly growing, friable, red papule or nodule that bleeds easily. It commonly occurs on fingers, face, and lips, and may be triggered by trauma or pregnancy (epulis gravidarum). Diagnosis is clinical.

### **Pyonephrosis**

Pus in renal collecting system. Urological emergency. Requires drainage (stent or nephrostomy) and antibiotics.

### **Pyostomatitis Vegetans**

A rare, chronic, inflammatory oral mucosal condition characterized by multiple, soft, yellowish, vegetative pustules on an erythematous base, predominantly affecting the buccal mucosa and gingiva. It is strongly associated with inflammatory bowel disease, particularly ulcerative colitis, and may precede gastrointestinal symptoms.

---

### **Pyridoxine (Vitamin B6)**

A vitamin converted to pyridoxal phosphate, a coenzyme for transamination, decarboxylation, and other amino-acid reactions. Deficiency can cause neuropathy, dermatitis, seizures, and sideroblastic anemia; excessive supplementation can also cause neuropathy.

#### **Synonyms:**

Vitamin B6

### **Pyrimidines**

Nitrogenous bases containing a single six-membered heterocyclic ring, serving as structural building blocks for nucleic acids. The primary pyrimidines are cytosine (C), thymine (T, present in DNA), and uracil (U, present in RNA).

### **Pyruvate**

The three-carbon alpha-keto acid produced at the end of glycolysis from phosphoenolpyruvate by pyruvate kinase.

### **Pyruvate Dehydrogenase**

Converts pyruvate to acetyl-CoA. Regulated by phosphorylation (inactivated by PDH kinase). Requires thiamine, lipoate, CoA, FAD, NAD+.

### **Pyruvate Kinase Deficiency**

An inherited red-cell glycolytic defect causing chronic hemolytic anemia of variable severity. Manifestations include jaundice, splenomegaly, gallstones, fatigue, and complications of iron overload.

### **Pannus**

An abnormal layer of vascularized tissue that grows over a joint or the cornea.

### **Parasomnias**

Unwanted movements, behaviors, emotions, or experiences that occur during sleep or at the transition between sleep and wakefulness.

### **Parathyroid Hormone**

A hormone that regulates calcium and phosphate levels in the blood and supports bone remodeling.

### **Paroxysmal Hemicrania**

A rare headache disorder causing brief, repeated attacks of severe one-sided head or facial pain.

### **Patch Test**

A skin test used to identify delayed allergic contact reactions to substances applied under adhesive patches.

### **Pattern-Recognition Receptors**

Immune receptors that detect common molecular features of pathogens or damaged cells.

### **PDE5 Inhibitors**

Medicines that increase penile blood flow by inhibiting phosphodiesterase type 5; they are used mainly to treat erectile dysfunction.

### **Percutaneous Discectomy**

Removal of part of a herniated spinal disk through a small skin incision.

### **Perfusion Defect**

An area receiving abnormally low blood flow, identified by an imaging or functional test.

### **Peyronie's Disease**

A condition in which scar tissue in the penis causes curvature or pain during erection.

### **Phagocytes**

Immune cells that engulf and digest microorganisms, dead cells, and other particles.

### **Phonophobia**

Abnormal sensitivity to or fear of sound, often associated with migraine.

### **Photorefractive Keratectomy**

Laser eye surgery that reshapes the cornea to correct refractive errors.

### **Physical Dependence**

A state in which the body adapts to a substance

---

or medication and develops withdrawal symptoms when it is reduced or stopped.

### **Posterior Myocardial Infarction**

A heart attack involving the back wall of the heart.

### **Postherpetic Neuralgia**

Persistent nerve pain in an area affected by shingles after the rash has healed.

#### **Synonyms:**

Neuralgia, Postherpetic

### **Primary Hypertension**

High blood pressure without an identifiable single underlying cause.

### **Procedural Memory**

Long-term memory for learned skills and procedures.

### **Prolapsed Disk**

A spinal disk that bulges or ruptures and may compress a nearby nerve; also called a herniated disk.

#### **Synonyms:**

a herniated disk.

### **Proliferative Retinopathy**

Advanced retinal disease in which abnormal new blood vessels grow and may bleed or impair vision.

### **Prostatic Urethral Stent**

A small device placed in the prostatic urethra to help maintain urine flow when the prostate obstructs it.

### **Proctocolitis**

Inflammation of the rectum and the adjacent portion of the colon.

### **Pulmonary Emphysema**

A chronic lung disease in which damage to the air sacs reduces the lungs' ability to exchange gases.

### **Park-Bench Position**

A modified lateral position in which the upper body is partly rotated toward prone; it is used for selected posterior brain and neck procedures.

### **Prone Position**

A position in which the patient lies face down, commonly providing access to the back, spine, buttocks, or posterior legs.

### **Pancolitis**

Inflammation affecting the entire colon, often as an extensive form of ulcerative colitis.

### **Pancreatic Cysts**

Fluid-filled sacs in or around the pancreas, which may be benign or precancerous.

#### **Synonyms:**

Cyst, Pancreatic Cysts Pancreatic Inflammatory (Pancreatic Cysts) Cysts True Pancreas (Pancreatic Cysts) Intraductal Papillary Mucinous Neoplasm Pancreas (Pancreatic Cysts) IPMN Pancreas (Pancreatic Cysts) Mucinous Cyst Adenomas Pancreas (Pancreatic Cysts) Pancreas Inflammatory Cysts (Pancreatic Cysts) Pancreas Intraductal Papillary Mucinous Neoplasm (Pancreatic Cysts) Pancreas IPMN (Pancreatic Cysts) Pancreas Mucinous Cyst Adenomas (Pancreatic Cysts) Pancreas Non-Inflammatory Cysts (Pancreatic Cysts) Pancreas Pseudocysts (Pancreatic Cysts) Pancreas Serous Cyst Adenomas (Pancreatic Cysts) Pancreas Solid Pseudopapillary Tumor (Pancreatic Cysts) Serous Cyst Adenomas Pancreas (Pancreatic Cysts)

### **Panic Attacks And Panic Disorder**

Panic attacks are sudden episodes of intense fear; panic disorder involves recurrent attacks and persistent concern about having more.

### **Parotid Tumors**

Abnormal growths arising in the parotid salivary glands, located in front of and below the ears.

### **Parvovirus Infection**

An infection caused by parvovirus B19 that com-

---

monly causes mild fever and rash but may be serious in some people.

**Synonyms:**

Slapped Cheek Disease

**Peanut Allergy**

An immune reaction to peanut proteins that can cause symptoms ranging from hives to life-threatening anaphylaxis.

**Pediatric Brain Tumors**

Tumors that develop in the brain or nearby tissues of children.

**Synonyms:**

Brain Tumor, Child

**Pediatric Obstructive Sleep Apnea**

Repeated blockage of a child's upper airway during sleep, causing pauses in breathing.

**Synonyms:**

Obstructive Sleep Apnea In Children Sleep Apnea In Children, Obstructive

**Penicillin Allergy**

An immune reaction to penicillin antibiotics that may cause rash, swelling, breathing difficulty, or anaphylaxis.

**Peripheral Nerve Tumors**

Tumors that arise from or around nerves outside the brain and spinal cord.

**Postconcussion Syndrome**

Persistent physical, cognitive, or emotional symptoms after a concussion.

**Precordium**

The region of the chest overlying the heart.

**Philadelphia Chromosome**

A chromosome rearrangement, usually t(9;22), that creates the BCR::ABL1 fusion gene and is characteristic of most cases of chronic myeloid leukemia.

**Phonocardiography**

Graphic recording of heart sounds and murmurs using a microphone and recording system.

**Phorometer**

An instrument used to measure ocular alignment and the amount of prism correction needed for binocular vision disorders.

**Photosensitization**

Increased sensitivity to ultraviolet or visible light caused by a medication, chemical, or disease, producing an exaggerated skin reaction.

**Physical Examination**

A systematic assessment of the body using inspection, palpation, percussion, auscultation, and other examination methods.

**Physical Therapy**

Rehabilitation using exercise, movement training, manual techniques, and physical modalities to improve function, mobility, and reduce disability.

**Phytomedicine**

The evidence-based use of medicinal products derived from plants to prevent or treat disease.

**Pitting Edema**

Swelling in which pressure applied to the skin leaves a temporary indentation, usually because of excess interstitial fluid.

**Placental Abnormalities**

Disorders of placental location, attachment, structure, or separation that may affect pregnancy or cause bleeding.

**Placenta Previa**

Implantation of the placenta over or near the internal cervical opening, which can cause painless bleeding during the second half of pregnancy.

**Plasmin**

A proteolytic enzyme that breaks down fibrin and

---

helps dissolve blood clots.

### **Plethysmography**

Plethysmography examines plethysmography; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pleural Disorders**

Conditions affecting the pleura, including pleural effusion, pneumothorax, pleurisy, infection, and tumors.

### **Pleural Space**

The potential space between the visceral and parietal pleura surrounding each lung.

### **Pneumoplasty**

Surgical repair or reconstruction of lung tissue or an airway.

### **Pneumotachometer**

An instrument that measures the rate of airflow during breathing.

### **Protein Electrophoresis**

A laboratory test that separates proteins in serum or urine according to their electrical properties, helping detect abnormal protein patterns.

### **Pseudophakia**

The presence of an artificial intraocular lens after removal of the natural lens, usually during cataract surgery.

### **Pulmonary Circuit**

The circulation in which blood travels from the right ventricle to the lungs for gas exchange and returns to the left atrium.

### **Pulmonary Ventilation**

The movement of air into and out of the lungs.

### **Palatine Tonsils**

Paired masses of lymphoid tissue on the sides of the oropharynx that contribute to immune defense.

### **Pancreatic Islets**

Clusters of endocrine cells in the pancreas that release hormones such as insulin, glucagon, somatostatin, and pancreatic polypeptide.

### **Panhypopituitarism**

Deficiency of most or all anterior pituitary hormones due to disease of the pituitary gland or hypothalamus.

### **Pelvimetry**

Measurement of the dimensions of the maternal pelvis, usually to assess selected obstetric concerns.

### **Peripartum**

The period immediately before, during, and shortly after childbirth.

### **Peyer Patches**

Aggregated lymphoid follicles in the mucosa and submucosa of the ileum that monitor intestinal contents and support immune defense.

### **Primigravida**

A person who is pregnant for the first time.

### **Pes Anserinus**

The combined tendon insertion of the sartorius, gracilis, and semitendinosus muscles on the antero-medial proximal tibia; inflammation there is pes-anserine bursitis.

### **Pilonidal Cyst**

A cyst or sinus in the cleft between the buttocks, usually containing hair and skin debris. It may become infected, painful, swollen, and drain pus.

#### **Synonyms:**

Cyst, Pilonidal Pilonidal Sinus (Pilonidal Cyst)

### **Polyneuropathy**

A generalized disorder affecting multiple peripheral nerves, often causing symmetric numbness, tingling, burning pain, weakness, or impaired reflexes in the limbs.

---

## Puncture Wound

A wound produced when a pointed object penetrates the skin and underlying tissue, creating a small surface opening with potentially deep tissue damage and infection risk.

## Parathyroid Carcinoma

A rare malignant tumor of the parathyroid gland that commonly causes excessive parathyroid-hormone secretion, hypercalcemia, kidney stones, bone disease, or related symptoms.

## Pasteurellosis

Infection caused by *Pasteurella* bacteria, commonly introduced through animal bites or scratches and causing cellulitis, abscesses, or occasionally invasive disease.

## Pathophysiology

The study of the functional changes produced by disease or injury and the mechanisms through which they cause signs and symptoms.

## Pavor Nocturnus (Night Terrors)

Episodes of sudden intense fear, screaming, and autonomic arousal during sleep, usually arising from deep non-REM sleep and often followed by little or no memory.

### Synonyms:

Night Terrors

## Pectoriloquy

Abnormally clear transmission of spoken sounds through the chest wall, often suggesting lung consolidation or another change in lung tissue.

## Penumbra

Brain tissue surrounding an area of infarction that is functionally impaired but potentially salvageable if blood flow is restored promptly.

## Post-Natal Depression

Depression beginning during pregnancy or after childbirth, with persistent low mood or loss of interest and possible effects on sleep, bonding, and daily

functioning.

## Post-Partum Haemorrhage

Excessive bleeding after childbirth, most commonly caused by failure of the uterus to contract, retained placental tissue, genital-tract trauma, or clotting problems.

## Premature Birth

Birth before 37 completed weeks of pregnancy; the earlier the birth, the greater the risks of respiratory, neurological, and developmental complications.

## Presbycusis (Presbycusis)

Age-related, usually gradual sensorineural hearing loss, particularly affecting the ability to hear high-frequency sounds and understand speech in noise.

### Synonyms:

Presbycusis

## Prothrombin Time (PT)

A blood test measuring the time required for clot formation through the extrinsic and common coagulation pathways; it is commonly reported as the INR.

### Synonyms:

PT

## Pregnancy Of Unknown Location

A positive pregnancy test without a confirmed intrauterine or ectopic pregnancy on ultrasound. Serial human chorionic gonadotropin measurements and repeat imaging help determine whether the pregnancy is early, failing, or ectopic.

## Postpartum Preeclampsia

New-onset hypertension with pre-eclampsia features after childbirth, sometimes occurring several days or weeks postpartum. Severe headache, visual symptoms, chest pain, shortness of breath, or seizures require urgent assessment.

## Pelvic Girdle Pain In Pregnancy

Pain arising from the pelvic joints and surrounding tissues during pregnancy, often affecting the pubic

---

symphysis, sacroiliac joints, hips, or lower back. It may impair walking, turning in bed, or climbing stairs.

### **Postpartum Care**

Clinical care during the weeks after childbirth that assesses bleeding, uterine involution, blood pressure, infection, wound healing, breastfeeding, mental health, contraception, and recovery.

### **Postpartum Urinary Retention**

Inability to empty the bladder adequately after childbirth, sometimes associated with epidural anesthesia, perineal trauma, swelling, or prolonged labor. Prompt assessment prevents bladder overdistension and injury.

### **Postpartum Contraception**

Contraceptive counseling and care after childbirth, taking account of breastfeeding, venous-thromboembolism risk, medical conditions, fertility intentions, and the timing of method initiation.

### **Perinatal Asphyxia**

Impaired oxygenation or ventilation before, during, or shortly after birth that may cause neonatal encephalopathy, organ injury, or death. Immediate newborn assessment and resuscitation are essential.

### **Prenatal Genetic Counseling**

A consultation that reviews the risk of inherited or chromosomal conditions, available screening and diagnostic tests, possible results, and reproductive options before or during pregnancy.

### **Pachyonychia Congenita**

An inherited keratin disorder, usually caused by KRT6A, KRT16, or KRT17 variants, producing thick dystrophic nails, painful palmoplantar keratoderma, and sometimes cysts or oral leukokeratosis.

### **Pacifier**

A pacifier is a nipple-shaped device used to soothe an infant by sucking; safe use includes avoiding cords and sweet coatings and stopping according to

dental and developmental guidance.

### **Pacinian Corpuscle**

A biomedical term referring to pacinian corpuscle; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Packaging Tube**

A packaging tube is a squeezable container for medicines, creams, gels, pastes, or other products, designed to protect contents and allow controlled dispensing.

### **Paclitaxel**

Paclitaxel is a taxane chemotherapy drug that stabilizes microtubules and prevents cell division; it treats several cancers and can cause myelosuppression, neuropathy, alopecia, myalgia, and hypersensitivity reactions.

### **Paclitaxel Liposome**

A medical term referring to paclitaxel liposome. Its clinical meaning depends on the context in which it is used.

### **Paclitaxel Poliglumex**

A medical term referring to paclitaxel poliglumex. Its clinical meaning depends on the context in which it is used.

### **Paecilomyces**

paecilomyces is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Paenibacillus**

paenibacillus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

---

### **Paenibacillus Alvei**

paenibacillus alvei is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Paenibacillus Phoenicis**

paenibacillus phoenicis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Paenibacillus Polymyxa**

paenibacillus polymyxa is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Pagetoid Reticulosis**

A rare localized variant of cutaneous T-cell lymphoma with solitary slowly enlarging scaly plaques containing atypical pagetoid lymphocytes.

### **Pain Perception**

A clinical condition or finding involving pain perception. Its features, causes, evaluation, and management depend on the clinical context.

### **Pain Threshold**

A clinical condition or finding involving pain threshold. Its features, causes, evaluation, and management depend on the clinical context.

### **Palatal Muscle**

Muscle of the soft palate that elevates or tenses the palate and helps separate the nasal and oral cavities during swallowing and speech.

### **Palate Neoplasm**

A neoplasm involving palate neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Palatine Tonsil**

A biomedical term referring to palatine tonsil; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Palatorrhaphy**

Palatorrhaphy is surgical repair of a cleft or defect of the palate to restore separation between the oral and nasal cavities and improve feeding and speech.

### **Palifermin**

A pharmacologic agent associated with palifermin; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Palivizumab**

A medical term referring to palivizumab. Its clinical meaning depends on the context in which it is used.

### **Palladium**

A medical term referring to palladium. Its clinical meaning depends on the context in which it is used.

### **Palm Oil**

Palm oil is an edible plant oil high in palmitic and oleic acids; its nutritional effects depend on total dietary pattern and the fats it replaces.

### **Palmar Reflex**

The palmar reflex is an infant response in which stroking the palm causes finger flexion; persistence or asymmetry beyond the expected age may indicate neurologic dysfunction.

### **Palmitic Acid**

A 16-carbon saturated fatty acid common in dietary and stored fats; excess saturated-fat intake can contribute to adverse lipid profiles, although the body also synthesizes it normally.

### **Palmoplantar Hyperkeratosis**

Excessive thickening of the skin on the palms and soles, inherited or acquired, causing calluses, fissures,

---

pain, impaired walking, and sometimes infection.

### **Palonosetron**

A pharmacologic agent associated with palonosetron; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Palonosetron Hydrochloride**

A long-acting 5-HT<sub>3</sub> serotonin-receptor antagonist used to prevent nausea and vomiting caused by chemotherapy, surgery, or selected other treatments.

### **Palpable**

Palpable means detectable by touch during physical examination, such as a mass, enlarged organ, lymph node, pulse, tenderness, or abnormal surface.

### **Pamidronic Acid**

An intravenous bisphosphonate that inhibits osteoclast-mediated bone resorption and is used for selected hypercalcemia, bone complications of cancer, and Paget disease.

### **Pan Troglodyte**

Pan troglodytes is the scientific name for the common chimpanzee, a great ape and close evolutionary relative of humans used in behavioral and biomedical research.

### **Panax**

Panax is a plant genus that includes ginseng species whose roots are used in traditional products; composition, evidence, interactions, and adverse effects vary by preparation.

### **Pancreas Enzyme**

An enzyme produced by the pancreas, such as amylase, lipase, or proteases, that helps digest carbohydrate, fat, or protein in the small intestine.

### **Pancreas Infection**

An infectious process or toxic exposure involving pancreas infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host

response.

### **Pancreas Neoplasm**

A neoplasm involving pancreas neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pancreas Transplantation**

A medical procedure, treatment, device, or care topic related to pancreas transplantation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pancreatic Carcinoma**

A neoplasm involving pancreatic carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pancreatic Diseases**

A clinical condition or finding involving pancreatic diseases. Its features, causes, evaluation, and management depend on the clinical context.

### **Pancreatic Fistula**

A pancreatic fistula is an abnormal passage through which pancreatic juice leaks from the pancreas, often after trauma or surgery, causing fluid collections, ascites, or skin drainage.

### **Pancreatic Hormones**

Hormones produced by pancreatic islet cells, including insulin, glucagon, somatostatin, and pancreatic polypeptide, which regulate glucose, digestion, and energy metabolism.

### **Pancreatic Islet**

A pancreatic islet is a cluster of endocrine cells that releases hormones such as insulin, glucagon, and somatostatin to regulate blood glucose and digestion.

### **Pancreatic Juice**

Pancreatic juice is an alkaline digestive secretion containing bicarbonate and enzymes such as amylase, lipase, and proteases, delivered into the duode-

---

num.

### **Pancreaticoduodenectomy**

pancreaticoduodenectomy is used in relation to pancreaticoduodenectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Pancrelipase**

Pancrelipase is a mixture of pancreatic digestive enzymes used as replacement therapy for exocrine pancreatic insufficiency, including that caused by cystic fibrosis or pancreatic disease.

### **Pancuronium**

Pancuronium is a long-acting nondepolarizing neuromuscular blocker that prevents skeletal-muscle contraction during anesthesia or ventilation; it must be given with airway support.

### **Pandoraea**

A biomedical term referring to pandoraea; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pargyline**

Pargyline is an irreversible monoamine-oxidase inhibitor formerly used for hypertension; it is now mainly of historical or research interest because of interactions and adverse effects.

### **Paricalcitol**

Paricalcitol is a vitamin-D receptor activator used to reduce secondary hyperparathyroidism in selected chronic kidney disease, with monitoring for calcium and phosphate changes.

### **Parietal Pleura**

A biomedical term referring to parietal pleura; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Parinaric Acid**

A conjugated polyunsaturated fatty acid used as a fluorescent probe of lipid membranes and studied

in oxidation and lipid-chemistry research.

### **Parity**

Parity is the number of pregnancies that reached a viable gestational age, regardless of whether the infants were born alive or stillborn; it differs from gravidity.

### **Paromomycin**

A medicine or pharmacologic agent called paromomycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Parosteal Osteosarcoma**

A neoplasm involving parosteal osteosarcoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Parotid Neoplasm**

A neoplasm involving parotid neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Parotidectomy**

parotidectomy is used in relation to parotidectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Paroxetine**

Paroxetine is a selective serotonin-reuptake inhibitor used for depression, anxiety disorders, obsessive-compulsive disorder, PTSD, and some other conditions; sexual dysfunction, withdrawal symptoms, serotonin syndrome, and pregnancy-related risks require consideration.

### **Paroxetine Hydrochloride**

A medicine or pharmacologic agent called paroxetine hydrochloride. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Pars Compacta**

The substantia nigra pars compacta is a midbrain re-

---

gion containing dopamine-producing neurons whose loss contributes to the motor features of Parkinson disease.

### **Pars Planitis**

A form of intermediate uveitis involving inflammatory exudates near the pars plana, causing floaters, blurred vision, and sometimes macular edema or retinal complications.

### **Parthenogenesis**

Development of an embryo from an unfertilized egg; it occurs naturally in some animals and plants and is not a normal mechanism of human reproduction.

### **Partial**

Partial means incomplete or involving only a portion, such as partial loss, partial response, partial thickness, or partial seizure; the specific meaning depends on context.

### **Partial Cystectomy**

partial cystectomy is used in relation to partial cystectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Partial Hysterectomy**

partial hysterectomy is used in relation to partial hysterectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Partial Nephrectomy**

partial nephrectomy is used in relation to partial nephrectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Partial Remission**

A reduction in signs, symptoms, or measurable disease burden that does not meet criteria for complete remission; the definition depends on the disease and response criteria used.

### **Participation**

A person's involvement in life situations and activities, a central concept in rehabilitation and the

International Classification of Functioning that extends beyond impairment alone.

### **Particle Size**

Particle size is the diameter or size distribution of particles in a powder, suspension, aerosol, or formulation, influencing dissolution, absorption, stability, and delivery.

### **Parvimonas Micra**

A biomedical term referring to parvimonas micra; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Parvoviridae**

parvoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Parvovirus**

parvovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Passive Immunization**

Protection produced by giving preformed antibodies, such as immunoglobulin or antivenom, which acts quickly but is temporary because the recipient does not generate durable immune memory.

### **Paste**

A paste is a semisolid preparation or material containing finely divided solids in a liquid or base, used in medicines, dentistry, skin care, and laboratory work.

### **Pasteurella Aerogenes**

pasteurella aerogenes is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

---

### **Pasteurella Bettyae**

*pasteurella bettyae* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Pasteurella Canis**

*pasteurella canis* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Pasteurella Pneumotropica**

*pasteurella pneumotropica* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Pasteurellaceae**

*pasteurellaceae* is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Patellar Dislocation**

Complete displacement of the kneecap from the femoral groove, usually laterally, causing acute pain, deformity, swelling, and difficulty extending the knee.

### **Patent Urachus**

A patent urachus is persistence of the fetal channel between the bladder and umbilicus after birth, allowing urine to drain from the umbilicus and predisposing to infection.

### **Paternal Behavior**

Paternal behavior includes caregiving, protection, bonding, and other behaviors by a father or male caregiver; it is shaped by biology, experience, culture, and circumstances.

### **Pathologic Dilatation**

Abnormal widening of a hollow organ, duct, blood vessel, or other structure beyond its expected size

because of obstruction, weakness, pressure, or disease.

### **Pathologic Ossification**

Abnormal formation of bone in soft tissue or in a location where bone should not develop, as in heterotopic ossification after trauma, neurologic injury, or surgery.

### **Pathologic Process**

A pathologic process is an abnormal biological change that produces disease, such as infection, inflammation, ischemia, degeneration, abnormal growth, or immune injury.

### **Pathologic Response**

A pathologic response is an abnormal reaction of cells, tissues, or organs to injury, infection, immune activation, toxins, or other stressors that contributes to disease.

### **Pathological Fracture**

A clinical condition or finding involving pathological fracture. Its features, causes, evaluation, and management depend on the clinical context.

### **Pathologist**

A pathologist is a physician who diagnoses disease by examining tissues, cells, blood, or body fluids and may guide laboratory testing, cancer classification, and treatment decisions.

### **Patient Care**

A medical procedure, treatment, device, or care topic related to patient care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Patient Discharge**

A medical procedure, treatment, device, or care topic related to patient discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

---

## Patient Observation

Systematic monitoring of a patient's symptoms, vital signs, examination findings, behavior, and response to treatment to detect deterioration or guide management.

## Patient Rights

Ethical and legal protections for people receiving care, including informed consent, privacy, access to information, respectful treatment, participation in decisions, and refusal of treatment where lawful.

## Paxillin

Paxillin is a focal-adhesion adaptor protein that links integrin signaling to the actin cytoskeleton and helps regulate cell adhesion, migration, and mechanical sensing.

## Pazopanib

A medical term referring to pazopanib. Its clinical meaning depends on the context in which it is used.

## Peanut Oil

Peanut oil is oil extracted from peanuts; refined oil usually contains little allergenic protein, whereas unrefined products may trigger reactions in susceptible people.

## Peau D'Orange

Peau d'orange is dimpled skin resembling an orange peel, caused by edema tethered around hair follicles; it can occur with breast cancer, infection, or lymphatic obstruction.

## Pectin

Pectin is a soluble plant fiber that forms gels and may alter stool consistency and absorption; it is used in foods, formulations, and some nutritional products.

## Pectinate Line

The pectinate line is the junction in the anal canal between regions with different embryologic origin, blood supply, lymphatic drainage, sensation, and venous anatomy.

## Pectoral Girdle

The pectoral girdle consists of the clavicles and scapulae, attaching the upper limbs to the trunk and providing broad surfaces for shoulder and arm movement.

## Pectoralis Muscles

The pectoralis major and minor muscles of the chest, which move and stabilize the shoulder and assist with movements such as pushing, adduction, and breathing.

## Pediatric AIDS

Pediatric AIDS is advanced HIV infection in a child, with severe immune suppression or AIDS-defining illness; antiretroviral therapy and prevention of opportunistic infection are essential.

## Pediatric Nursing

Pediatric nursing provides age-appropriate care to infants, children, and adolescents, accounting for growth, development, family involvement, communication, safety, and medication differences.

## Pediatric Obesity

Excess body fat in a child or adolescent defined using age- and sex-specific BMI percentiles, associated with metabolic, orthopedic, respiratory, psychosocial, and cardiovascular risks.

## Pediococcus

pediococcus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

## Pediococcus Pentosaceus

pediococcus pentosaceus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

---

### **Pedophilia**

Pedophilia is a psychiatric term for a persistent sexual interest in prepubescent children; sexual contact with a child is abuse and illegal, and safety-focused professional help is required.

### **Pedunculate**

Pedunculate describes a structure, lesion, or polyp attached by a narrow stalk rather than a broad base.

### **Peer Review**

Peer review is evaluation of research, clinical work, or scholarly writing by qualified independent reviewers to assess methods, evidence, clarity, and significance.

### **Pefloxacin**

A pharmacologic agent associated with pefloxacin; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Pegargiminase**

A pharmacologic agent associated with pegargiminase; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Pegaspargase**

A pharmacologic agent associated with pegaspargase; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Pegdinetanib**

A medical term referring to pegdinetanib. Its clinical meaning depends on the context in which it is used.

### **Pegfilgrastim**

A pharmacologic agent associated with pegfilgrastim; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Peldesine**

Peldesine is an investigational sphingosine-1-phosphate lyase inhibitor studied for effects on immune-cell trafficking and inflammatory or autoimmune disease.

### **Pelitrexol**

Pelitrexol is an investigational antifolate drug that inhibits thymidylate synthase and has been studied as an antineoplastic agent.

### **Pellet**

A pellet is a small compacted mass of medication, material, or tissue; drug pellets may be formulated for implantation or controlled release.

### **Pelvic Bone**

The ring of bones formed by the paired hip bones, sacrum, and coccyx that supports the trunk, protects pelvic organs, and transmits weight to the lower limbs.

### **Pelvic Diaphragm**

A biomedical term referring to pelvic diaphragm; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pelvic Examination**

Clinical inspection and palpation of the external genitalia, vagina, cervix, uterus, and adnexa to evaluate bleeding, pain, discharge, lesions, pregnancy-related findings, or infection.

### **Pelvic Exenteration**

Extensive surgery removing selected pelvic organs and surrounding tissues, reserved for carefully selected locally advanced or recurrent cancers when less radical treatment is inadequate.

### **Pelvic Girdle**

A biomedical term referring to pelvic girdle; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

---

### **Pelvic Infection**

An infectious process or toxic exposure involving pelvic infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pelvic Kidney**

A kidney that remains in the pelvis rather than ascending to its usual lumbar position during development; it may be asymptomatic or associated with abnormal drainage, stones, infection, or vascular anatomy.

### **Pelvic Lymphadenectomy**

pelvic lymphadenectomy is used in relation to pelvic lymphadenectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Pelvic Mass**

A biomedical term referring to pelvic mass; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pelvic Neoplasm**

A neoplasm involving pelvic neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pelvic Viscus**

A biomedical term referring to pelvic viscus; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pemetrexed**

Pemetrexed is a folate-antimetabolite chemotherapy drug that inhibits several enzymes involved in nucleotide synthesis, used especially for mesothelioma and nonsquamous non-small-cell lung cancer; folic acid and vitamin B12 reduce toxicity.

### **Pemetrexed Disodium**

A medical term referring to pemetrexed disodium. Its clinical meaning depends on the context in which it is used.

### **Pemoline**

Pemoline is a stimulant formerly used for attention-deficit disorders; serious liver toxicity led to withdrawal or severe restriction in many countries.

### **Penbutolol**

A medicine or pharmacologic agent called penbutolol. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Penclomedine**

Penclomedine is an investigational antineoplastic compound studied for cytotoxic effects against cancer cells and is not a routine clinical medicine.

### **Pendulous**

Pendulous means hanging loosely from a supporting structure, as in a pedunculated lesion, drooping tissue, or an organ suspended by a stalk.

### **Penicillin G**

A medicine or pharmacologic agent called penicillin g. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Penicillin V**

A medicine or pharmacologic agent called penicillin v. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Penicillium**

A medical term referring to penicillium. Its clinical meaning depends on the context in which it is used.

### **Penile Disease**

A clinical condition or finding involving penile disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Penile Erection**

Rigidity of the penis caused by increased arterial inflow and reduced venous outflow after sexual or

---

reflex stimulation; persistent difficulty obtaining or maintaining it is erectile dysfunction.

### **Penile Infection**

An infectious process or toxic exposure involving penile infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Penile Leukoplakia**

A clinical condition involving penile Leukoplakia; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Penis Carcinoma**

A neoplasm involving penis carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Penoscrotal Transposition**

A congenital difference in which the penis and scrotum are positioned abnormally relative to each other, often associated with hypospadias or other genital and urinary anomalies.

### **Pentadecanoic Acid**

A 15-carbon saturated fatty acid found in small amounts in dairy and ruminant fats and used in nutritional and lipid-metabolism research.

### **Pentamidine Isethionate**

An antiprotozoal and antimicrobial drug used in selected cases of *Pneumocystis pneumonia*, leishmaniasis, trypanosomiasis, and other infections; toxicity includes hypoglycemia, kidney injury, and arrhythmia.

### **Pentatrichomonas Hominis**

*Pentatrichomonas hominis* is a flagellated intestinal protozoan generally regarded as nonpathogenic; finding it in stool usually indicates exposure to fecal contamination.

### **Pentetic Acid**

A chelating compound that binds metal ions and

is used in selected radiopharmaceuticals, contrast agents, or laboratory applications.

### **Pentosan Polysulfate**

A medical term referring to pentosan polysulfate. Its clinical meaning depends on the context in which it is used.

### **Pentose**

A pentose is a five-carbon sugar, including ribose in RNA and deoxyribose in DNA, and participates in nucleotide and carbohydrate metabolism.

### **Pentoxifylline**

An infectious process or toxic exposure involving pentoxifylline; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pentylene-tetrazole**

A medicine or pharmacologic agent called pentylene-tetrazole. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Peplomycin**

A medicine or pharmacologic agent called peplomycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Pepsin A**

Pepsin A is a stomach protease activated by acid that begins digestion of dietary proteins into smaller peptides.

### **Peptic Esophagitis**

Inflammation and injury of the esophageal lining caused mainly by repeated gastroesophageal reflux of acid or bile, producing heartburn, chest discomfort, swallowing pain, or strictures.

### **Peptichemio**

A medical term referring to peptichemio. Its clinical meaning depends on the context in which it is used.

---

## Peptide Biosynthesis

peptide biosynthesis concerns peptide biosynthesis, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Peptide Hormone

A hormone made of amino acids that binds a cell-surface receptor and regulates processes such as metabolism, growth, reproduction, stress, and fluid balance.

## Peptide Library

peptide library concerns peptide library, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Peptide Metabolism

peptide metabolism concerns peptide metabolism, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Peptide Transport

peptide transport concerns peptide transport, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Peptide Yy

peptide yy concerns peptide yy, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

## Peptidoglycan

A medical term referring to peptidoglycan. Its clinical meaning depends on the context in which it is used.

## Peptococcaceae

A medical term referring to peptococcaceae. Its clinical meaning depends on the context in which it is used.

## Peptococcus

peptococcus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or

colonization.

## Peptococcus Niger

peptococcus niger is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Peptoniphilus

A medical term referring to peptoniphilus. Its clinical meaning depends on the context in which it is used.

## Peptoniphilus Harei

A medical term referring to peptoniphilus harei. Its clinical meaning depends on the context in which it is used.

## Peptoniphilus Indolicus

A medical term referring to peptoniphilus indolicus. Its clinical meaning depends on the context in which it is used.

## Peptostreptococcus

peptostreptococcus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Peracetic Acid

A strong oxidizing disinfectant and sterilant used for equipment and surfaces; concentrated exposure irritates or burns skin, eyes, and airways.

## Peracute

Peracute describes disease or a clinical event that develops extremely rapidly, often over minutes to hours, with little time for adaptation or diagnosis.

## Perception

The brain's process of organizing and interpreting sensory information into an experience of objects, events, body sensations, or the environment.

---

### **Perceptual Disorder**

A clinical condition or finding involving perceptual disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Perceptual Distortion**

An inaccurate or altered interpretation of a real sensory stimulus, which may occur with neurologic disease, psychiatric illness, drugs, migraine, seizures, or sensory impairment.

### **Perceptual Masking**

Reduction in the ability to detect or identify one sensory stimulus because another stimulus overlaps it in time, space, or processing.

### **Percutaneous Discectomy**

percutaneous discectomy is used in relation to percutaneous discectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Perforant Pathway**

A biomedical term referring to perforant pathway; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Performance**

Performance describes how effectively a person, organ, treatment, test, or system carries out a defined task; the relevant measure depends on the clinical context.

### **Performed Diagnosis**

A diagnosis established after clinical assessment and appropriate testing identifies the condition explaining a patient's findings; it should be distinguished from a symptom or provisional impression.

### **Performed Histopathology**

A medical term referring to performed histopathology. Its clinical meaning depends on the context in which it is used.

### **Performed Procedure**

A medical procedure, treatment, device, or care topic related to performed procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Perfusion Culture**

A laboratory culture system in which cells or tissue receive continuously renewed nutrient medium, supporting controlled study of growth, metabolism, infection, or drug effects.

### **Pergolide**

A pharmacologic agent associated with pergolide; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Perianal**

Located around the anus; the term describes the skin, glands, pain, inflammation, abscesses, fistulas, and other findings in that region.

### **Perianal Abscess**

A localized collection of pus near the anus caused by infected anal glands or surrounding tissue, producing severe throbbing pain, swelling, fever, and sometimes a fistula.

### **Perianal Glands**

Small glands near the anus that contribute secretions to the local tissue; obstruction or infection can contribute to perianal abscesses and fistulas.

### **Periarteritis Nodosa**

An older name for polyarteritis nodosa, a necrotizing vasculitis of medium-sized arteries that can cause skin, nerve, muscle, kidney, and abdominal ischemic symptoms without typical glomerulonephritis.

### **Periarticular**

Periarticular means located around a joint, including nearby tendons, bursae, ligaments, capsule, and soft tissues rather than the joint surface itself.

---

### **Pericardial Mesothelioma**

A biomedical term referring to pericardial mesothelioma; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pericardial Stripping**

A biomedical term referring to pericardial stripping; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pericardial Wall**

A biomedical term referring to pericardial wall; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pericardiectomy**

pericardiectomy is used in relation to pericardiectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Pericardiostomy**

A biomedical term referring to pericardiostomy; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pericytes**

Pericytes are contractile support cells wrapped around small blood vessels that help regulate capillary stability, blood flow, repair, and the blood-brain barrier.

### **Perifosine**

Perifosine is an investigational alkylphospholipid that affects cell-membrane signaling, including AKT pathways, and has been studied in cancer treatment.

### **Perillyl Alcohol**

Perillyl alcohol is a monoterpene found in some plant oils and studied experimentally for effects on cell signaling and cancer growth.

### **Perilymph**

A biomedical term referring to perilymph; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Perimenopausal**

Perimenopausal describes the years of hormonal and menstrual transition before and around menopause, when cycles, bleeding, hot flashes, sleep, and fertility may change.

### **Perinatal Death**

A clinical condition involving perinatal Death; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Perindopril**

A medicine or pharmacologic agent called perindopril. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Perineural**

Perineural means around a nerve; the term may describe normal connective tissue, inflammation, tumor spread, or imaging findings surrounding a nerve.

### **Perineuronal Satellitosis**

Clustering of glial cells around a neuron, seen microscopically in some brain tumors, inflammatory conditions, and reactive processes; its significance depends on the surrounding pathology.

### **Perinuclear Space**

The narrow compartment between the inner and outer nuclear membranes, continuous with the endoplasmic-reticulum lumen and involved in nuclear-envelope structure.

### **Periodic Acid**

An oxidizing acid used in histochemistry, especially the periodic-acid-Schiff reaction, which highlights carbohydrates, mucosubstances, fungi, and basement membranes.

---

### **Periodontal Cyst**

A periodontal cyst is a fluid-filled epithelial-lined lesion near the tooth-supporting tissues, with effects ranging from incidental discovery to local bone destruction.

### **Periodontal Dressing**

A medical procedure, device, or treatment involving periodontal dressing. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Periodontist**

A periodontist is a dentist specializing in prevention, diagnosis, and treatment of gum disease and supporting tissues, including periodontal surgery and implants.

### **Periodontium Disease**

A clinical condition or finding involving periodontium disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Periorbital Edema**

A clinical condition or finding involving periorbital edema. Its features, causes, evaluation, and management depend on the clinical context.

### **Periorbital Infection**

An infectious process or toxic exposure involving periorbital infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Peripheral Blood**

Peripheral blood is blood obtained from a vein or capillary rather than directly from an organ or marrow, used for counts, smears, chemistry, and other testing.

### **Peripheral Ischemia**

Inadequate arterial blood flow to an arm, leg, digit, or other peripheral tissue, causing pain, pallor, coolness, weak pulses, numbness, ulcers, or tissue loss.

### **Peripheral Nerve**

A nerve outside the brain and spinal cord that carries motor, sensory, and autonomic signals between the central nervous system and the rest of the body.

### **Periplasm**

The periplasm is the space between the inner and outer membranes of Gram-negative bacteria, containing enzymes, transport proteins, and structural components.

### **Perirenal Hematoma**

A clinical condition involving perirenal Hematoma; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Peritoneal**

Peritoneal means relating to the peritoneum, the thin membrane lining the abdominal cavity and covering many abdominal organs.

### **Peritoneal Cavity**

The potential space between the parietal and visceral peritoneum surrounding abdominal and pelvic organs; fluid, blood, pus, or tumor cells can accumulate there.

### **Peritoneal Diseases**

A clinical condition or finding involving peritoneal diseases. Its features, causes, evaluation, and management depend on the clinical context.

### **Peritoneal Fluid**

Peritoneal fluid is the small amount of lubricating fluid in the abdominal cavity; excess or infected fluid may cause ascites, peritonitis, or diagnostic findings.

### **Peritoneal Lavage**

Peritoneal lavage is washing or sampling the abdominal cavity with sterile fluid, historically used to detect internal bleeding or contamination and sometimes used therapeutically.

---

### **Peritoneal Necrosis**

Death of peritoneal tissue caused by ischemia, severe infection, inflammation, trauma, or tumor, potentially leading to peritonitis, adhesions, sepsis, or organ failure.

### **Peritoneal Sac**

The peritoneal sac is the potential space enclosed by the peritoneum, containing lubricating fluid and allowing abdominal organs to move with minimal friction.

### **Peritoneum Neoplasm**

A neoplasm involving peritoneum neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Perivitelline Space**

The perivitelline space is the narrow region between an egg's plasma membrane and surrounding vitelline or zona material, important in fertilization and early development.

### **Permease**

A permease is a membrane transport protein that facilitates movement of a specific molecule or ion across a cell membrane.

### **Permissiveness**

Permissiveness is the ability of a cell or host environment to allow a biological process, such as viral replication, gene expression, or tissue response, to occur.

### **Peroneal Nerve**

The common fibular nerve, a branch of the sciatic nerve that winds around the fibular neck and supplies sensation and muscles responsible for ankle dorsiflexion and eversion.

### **Peroxidase**

A medical term referring to peroxidase. Its clinical meaning depends on the context in which it is used.

### **Peroxisomal Disorder**

A clinical condition or finding involving peroxisomal disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Peroxisome Proliferation**

An increase in the number or size of peroxisomes, organelles involved in fatty-acid oxidation and reactive-oxygen metabolism, triggered by selected chemicals, hormones, or metabolic states.

### **Perseveration**

Involuntary repetition of a word, idea, movement, or response after the appropriate stimulus has changed, associated with frontal or basal-ganglia disease, aphasia, delirium, or psychiatric illness.

### **Persistent Cloaca**

Persistent cloaca is a congenital malformation in which the rectum, vagina, and urinary tract join into one channel, requiring specialist evaluation and reconstructive care.

### **Person**

A person is an individual human being; clinical care considers the person's biology, symptoms, preferences, capacity, relationships, and social circumstances.

### **Person Name**

A person name is an identifying name associated with an individual; accurate identification is essential for safe records, testing, prescribing, and communication.

### **Person With Disability**

A person with disability has a long-term physical, sensory, intellectual, or mental-health impairment that may interact with barriers to limit participation; care should be accessible and person-centered.

### **Personality**

Personality is the relatively enduring pattern of thoughts, emotions, motivations, and behaviors through which a person experiences and responds

---

to the world.

### **Personality Change**

Personality change is a new or marked alteration in behavior, emotional responses, judgment, or interpersonal style, which may reflect neurologic disease, psychiatric illness, substances, or medical conditions.

### **Personality Test**

A psychological assessment using structured questions or stimuli to describe enduring traits, patterns, or possible personality pathology; results require validated instruments and clinical interpretation.

### **Persuasive Communication**

Communication intended to influence beliefs, decisions, or behavior through information, reasoning, emotion, or framing; healthcare use should preserve informed choice and avoid coercion.

### **Pertussis Toxin**

An infectious process or toxic exposure involving pertussis toxin; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pertussis Vaccine**

A medical term referring to pertussis vaccine. Its clinical meaning depends on the context in which it is used.

### **Pertuzumab**

A medical term referring to pertuzumab. Its clinical meaning depends on the context in which it is used.

### **Pestalotiopsis**

A medical term referring to pestalotiopsis. Its clinical meaning depends on the context in which it is used.

### **Petechia**

A petechia is a tiny nonblanching red, purple, or brown spot caused by bleeding from small vessels into the skin or mucosa; numerous or rapidly spread-

ing petechiae need assessment.

### **Petri Dish**

A Petri dish is a shallow lidded laboratory container used to culture microorganisms or cells and to hold specimens or small samples.

### **Pexophagy**

Pexophagy is selective autophagic degradation of peroxisomes, allowing cells to remove damaged or excess organelles and recycle their components.

### **P-Glycoprotein**

An ATP-dependent membrane transporter encoded by ABCB1 that pumps many drugs and other compounds out of cells, affecting intestinal absorption, tissue penetration, and drug interactions.

### **PH Meter**

A medical term referring to ph meter. Its clinical meaning depends on the context in which it is used.

### **Phagocytic Vesicle**

A phagocytic vesicle, or phagosome, is the membrane-bound compartment formed when a cell engulfs a particle before fusion with lysosomes for digestion.

### **Phagolysosome**

A phagolysosome forms when a phagosome fuses with a lysosome, exposing engulfed microbes or debris to enzymes and toxic substances for destruction.

### **Phagophores**

Phagophores are isolation membranes that expand around cytoplasmic material during autophagy and close to form autophagosomes.

### **Phalanx Unspecified**

A phalanx is one of the bones of a finger or toe; “unspecified” indicates that the particular digit or proximal, middle, or distal segment is not identified.

### **Phantom Pain**

A clinical condition or finding involving phantom

---

pain. Its features, causes, evaluation, and management depend on the clinical context.

### **Pharmaceutical Adjuvant**

A pharmaceutical adjuvant is an inactive or auxiliary ingredient added to improve a medicine's stability, absorption, preservation, delivery, or therapeutic effect.

### **Pharmaceutical Excipient**

A pharmaceutical excipient is a non-active ingredient in a dosage form, such as a filler, binder, coating, solvent, preservative, or disintegrant.

### **Pharmaceutical Solutions**

Liquid preparations in which one or more active pharmaceutical ingredients are dissolved in a suitable vehicle for administration, with concentration, sterility, stability, and route determining safe use.

### **Pharmacogenomic Testing**

Testing that examines genetic variants affecting drug metabolism, transport, targets, or adverse reactions to help select or dose certain medicines.

### **Pharmacologic Substance**

A pharmacologic substance is a chemical that produces a biological effect by interacting with cells, receptors, enzymes, transporters, or other targets.

### **Pharmacotherapy**

pharmacotherapy is used in relation to pharmacotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Pharmacy Facility**

A pharmacy facility is an authorized location where medicines may be stored, prepared, dispensed, monitored, and supplied under applicable professional and safety standards.

### **Pharyngeal Carcinoma**

A neoplasm involving pharyngeal carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pharyngeal Disease**

A clinical condition or finding involving pharyngeal disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Pharyngeal Hemorrhage**

A clinical condition or finding involving pharyngeal hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Pharyngeal Mucositis**

Inflammation and ulceration of the throat lining, commonly caused by radiation, chemotherapy, infection, trauma, or medications and producing pain, difficulty swallowing, and reduced intake.

### **Pharyngeal Stenosis**

A clinical condition or finding involving pharyngeal stenosis. Its features, causes, evaluation, and management depend on the clinical context.

### **Pharyngectomy**

pharyngectomy is used in relation to pharyngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Pharyngolaryngeal Pain**

A clinical condition or finding involving pharyngolaryngeal pain. Its features, causes, evaluation, and management depend on the clinical context.

### **Pharynx Necrosis**

Death of tissue in the throat caused by severe infection, ischemia, radiation, caustic injury, or tumor, with risk of deep infection, bleeding, airway compromise, and sepsis.

### **Pharynx Neoplasm**

A neoplasm involving pharynx neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Phase-Contrast Microscopy**

A diagnostic or laboratory method related to phase-contrast microscopy. Results are interpreted with

---

the method, reference range, and clinical findings.

### **Phenacetin**

Phenacetin is a former analgesic and fever-reducing drug withdrawn or restricted because long-term use can cause kidney damage and increase cancer risk.

### **Phenazopyridine**

Phenazopyridine is a urinary analgesic that temporarily relieves dysuria without treating its cause; it can turn urine orange and prolonged or excessive use may cause haemolysis or methemoglobinaemia.

### **Phenethyl Isothiocyanate**

Phenethyl isothiocyanate is a sulfur-containing compound found in some plants and studied experimentally for antimicrobial and anticancer effects.

### **Phenethylamines**

Phenethylamines are a chemical family including neurotransmitters, medicines, and psychoactive substances that can affect adrenergic, dopaminergic, or serotonergic signaling.

### **Phenformin**

Phenformin is a former biguanide diabetes medicine withdrawn because it can cause life-threatening lactic acidosis.

### **Phenobarbital**

Phenobarbital is a long-acting barbiturate anti-seizure medicine that enhances GABA-A receptor inhibition; sedation, respiratory depression, cognitive effects, dependence, and enzyme-inducing drug interactions are important risks.

### **Phenocopy**

A phenocopy is a trait resembling an inherited phenotype but produced by an environmental exposure, disease, or other non-genetic cause.

### **Phenolphthalein**

A medical term referring to phenolphthalein. Its clinical meaning depends on the context in which it is used.

### **Phenols**

A medical term referring to phenols. Its clinical meaning depends on the context in which it is used.

### **Phenothiazine**

Phenothiazine is a chemical class that includes several antipsychotic and antiemetic medicines, with possible sedation, movement, and cardiac adverse effects.

### **Phenoxodiol**

Phenoxodiol is an investigational anticancer compound studied for effects on apoptosis and cellular signaling.

### **Phenprocoumon**

Phenprocoumon is a long-acting vitamin-K antagonist anticoagulant that reduces clotting-factor production and requires coagulation monitoring.

### **Phenthoate**

Phenthoate is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic poisoning after exposure.

### **Phentolamine**

Phentolamine is a short-acting alpha-adrenergic blocker used for catecholamine-related hypertension and to limit tissue injury after certain vasoconstrictor leaks.

### **Phenylacetate**

A medical term referring to phenylacetate. Its clinical meaning depends on the context in which it is used.

### **Phenylalanine**

A medical term referring to phenylalanine. Its clinical meaning depends on the context in which it is used.

### **Phenylbutyrate**

A medical term referring to phenylbutyrate. Its clinical meaning depends on the context in which it is used.

---

### Phenylpropanolamine

A biological or biochemical term involving phenylpropanolamine. Its role depends on the relevant cells, molecules, and physiological process.

### Phenytoin Sodium

A medical term referring to phenytoin sodium. Its clinical meaning depends on the context in which it is used.

### Pheromone

A pheromone is a chemical signal released by an organism that alters behavior or physiology in another member of the same species.

### Phialemonium Atrogriseum

A medical term referring to phialemonium atrogriseum. Its clinical meaning depends on the context in which it is used.

### Phialophora

A medical term referring to phialophora. Its clinical meaning depends on the context in which it is used.

### Phialophora Verrucosa

A medical term referring to phialophora verrucosa. Its clinical meaning depends on the context in which it is used.

### Phlebovirus

phlebovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Phonation

Production of voiced sound when exhaled air makes the vocal folds vibrate in the larynx; disorders cause hoarseness, weak voice, or loss of voice.

### Phorate

Phorate is a highly toxic organophosphate pesticide whose exposure can produce excessive cholinergic activity and medical emergency.

### Phorbol Ester

A phorbol ester is a plant-derived compound that activates protein kinase C and is used in research on inflammation, signaling, and tumor promotion.

### Phorbols

Phorbols are diterpene compounds related to phorbol esters that can activate cellular protein kinase C signaling.

### Phosgene

A highly toxic industrial gas that reacts with moist respiratory tissues and can cause delayed pulmonary edema, cough, chest tightness, and respiratory failure after exposure.

### Phosgene Oxime

A highly corrosive chemical warfare agent that causes immediate severe pain, skin and eye injury, airway damage, and tissue necrosis on contact.

### Phosmet

Phosmet is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after substantial exposure.

### Phosphamidon

A biological or biochemical term involving phosphamidon. Its role depends on the relevant cells, molecules, and physiological process.

### Phosphatidic Acid

A membrane phospholipid and signaling intermediate that serves as a precursor for other glycerolipids and influences membrane curvature, trafficking, and cell growth.

### Phosphatidylcholine

A biological or biochemical term involving phosphatidylcholine. Its role depends on the relevant cells, molecules, and physiological process.

### Phosphatidylethanolamines

A biological or biochemical term involving phosphatidylethanolamines. Its role depends on the

---

relevant cells, molecules, and physiological process.

### **Phosphatidylinositol**

A biological or biochemical term involving phosphatidylinositol. Its role depends on the relevant cells, molecules, and physiological process.

### **Phosphatidylserine**

A biological or biochemical term involving phosphatidylserine. Its role depends on the relevant cells, molecules, and physiological process.

### **Phosphatidylserines**

A biological or biochemical term involving phosphatidylserines. Its role depends on the relevant cells, molecules, and physiological process.

### **Phosphine**

A biological or biochemical term involving phosphine. Its role depends on the relevant cells, molecules, and physiological process.

### **Pigmentation Disorder**

A clinical condition or finding involving pigmentation disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Pilocytic Astrocytoma**

Pilocytic astrocytoma is usually a slow-growing low-grade astrocytic brain tumor, often occurring in children and commonly involving the cerebellum or optic pathway.

### **Piloerection**

Elevation of hair shafts producing gooseflesh, caused by contraction of arrector pili muscles under sympathetic stimulation from cold, fear, pain, fever, or certain drugs.

### **Pilomatrixoma**

Pilomatrixoma is a usually benign skin tumor derived from hair-matrix cells, presenting as a firm subcutaneous nodule, often on the head or neck.

### **Pilonidal Fistula**

An abnormal tunnel from a pilonidal sinus to the skin, usually in the natal cleft, that can drain pus or recur after abscess formation.

### **Pilot Project**

A pilot project is a small preliminary implementation used to test feasibility, identify problems, and refine methods before broader rollout.

### **Pilus**

A pilus is a hair-like bacterial surface structure used for attachment, movement, or transfer of genetic material between cells.

### **Pinch Strength**

Pinch strength is the force produced when the thumb presses against one or more fingers and can help assess hand, nerve, muscle, and functional impairment.

### **Pindolol**

A medicine or pharmacologic agent called pindolol. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Pineal Cyst**

A pineal cyst is a fluid-filled lesion of the pineal gland, usually incidental and harmless but occasionally associated with headache, hydrocephalus, or visual symptoms.

### **Pineal Germinoma**

A pineal germinoma is a malignant germ-cell tumor in the pineal region, often causing headache, eye-movement abnormalities, or hydrocephalus and usually responsive to radiotherapy and chemotherapy.

### **Pineoblastoma**

A medical term referring to pineoblastoma. Its clinical meaning depends on the context in which it is used.

---

### **Pineocytoma**

Pineocytoma is a usually slow-growing tumor of pineal cells that may obstruct cerebrospinal-fluid flow and cause raised intracranial pressure.

### **Pinhole Meatus**

A pinhole meatus is an abnormally narrow external opening, commonly referring to the urethral meatus, that can obstruct urine flow or complicate catheterization.

### **Pioglitazone**

Pioglitazone is a PPAR-gamma agonist that improves insulin sensitivity in type 2 diabetes; weight gain, oedema, heart-failure worsening, fractures, and bladder-cancer concerns require patient-specific assessment.

### **Pipemidic Acid**

An older quinolone antibacterial formerly used mainly for urinary-tract infections; resistance and safety limitations have greatly reduced its clinical use.

### **Pipendoxifene**

Pipendoxifene is an investigational selective estrogen-receptor modulator studied for possible effects on breast, bone, and reproductive tissues.

### **Piperacillin**

Piperacillin is an extended-spectrum penicillin antibiotic often combined with tazobactam to treat serious infections including *Pseudomonas*; allergy, diarrhoea, cytopenias, electrolyte effects, and renal dosing are important.

### **Piperonyl Butoxide**

An infectious process or toxic exposure involving piperonyl butoxide; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pipette**

A pipette is a laboratory instrument used to measure and transfer small volumes of liquid accurately.

### **Pipobroman**

Pipobroman is an oral alkylating antineoplastic drug used historically for some blood disorders and associated with marrow suppression and later cancer risk.

### **Pirfenidone**

Pirfenidone is an antifibrotic medicine used to slow decline in idiopathic pulmonary fibrosis; nausea, photosensitivity, fatigue, and liver-enzyme elevation may occur and require monitoring.

### **Pirimicarb**

Pirimicarb is a selective carbamate insecticide targeting aphids; exposure can inhibit acetylcholinesterase and cause cholinergic symptoms.

### **Pirinitramide**

Pirinitramide is a synthetic opioid analgesic used historically in some countries; opioid effects include sedation, constipation, dependence, and respiratory depression.

### **Piritrexim**

Piritrexim is an investigational antifolate that inhibits dihydrofolate reductase and has been studied as an anticancer agent.

### **Piromidic Acid**

An older quinolone-like antibacterial investigated or used for urinary and gastrointestinal infections; current use depends on local availability, susceptibility, and safety guidance.

### **Piroxicam**

A medical term referring to piroxicam. Its clinical meaning depends on the context in which it is used.

### **Pisiform Bone**

A small pea-shaped carpal bone embedded in the tendon of flexor carpi ulnaris on the ulnar side of the wrist; fracture or arthritis can cause localized wrist pain.

---

### **Pithomyces**

A medical term referring to pithomyces. Its clinical meaning depends on the context in which it is used.

### **Pituicytoma**

Pituicytoma is a rare typically slow-growing tumor arising from specialized glial cells of the pituitary stalk or posterior pituitary region.

### **Pituitary**

The pituitary is an endocrine gland at the base of the brain that releases hormones controlling growth, thyroid and adrenal function, reproduction, lactation, and water balance.

### **Pituitary Carcinoma**

A neoplasm involving pituitary carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pituitary Disease**

A clinical condition or finding involving pituitary disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Pituitary Dwarfism**

Pituitary dwarfism is severe short stature caused by deficient growth hormone or broader pituitary dysfunction, with evaluation focused on endocrine and genetic causes.

### **Pituitary Hormone**

A hormone secreted by the anterior or posterior pituitary that regulates growth, thyroid and adrenal function, reproduction, lactation, water balance, or other endocrine organs.

### **Pituitary Neoplasm**

A neoplasm involving pituitary neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pityriasis Lichenoides**

An uncommon inflammatory skin disorder producing recurrent small scaly papules, with forms

ranging from mild chronic lesions to an acute ulceronecrotic eruption.

### **Pivampicillin**

A medical term referring to pivampicillin. Its clinical meaning depends on the context in which it is used.

### **Pixantrone**

Pixantrone is an anthracenedione antineoplastic drug developed for selected aggressive lymphomas, with potential marrow, infection, and cardiac risks.

### **Place**

Place describes a location or position; in healthcare, the relevant place may be an anatomic site, care setting, or environmental context.

### **Placebo Control**

A placebo control is an inactive treatment designed to resemble the intervention in a clinical trial, helping separate treatment effects from expectation and natural change.

### **Placenta Accreta**

Placenta accreta spectrum occurs when placental tissue abnormally attaches to or invades the uterine wall, creating major risk of hemorrhage during attempted delivery or removal.

### **Placenta Disorder**

A clinical condition or finding involving placenta disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Placenta Percreta**

Placenta percreta is the most invasive form of placenta accreta spectrum, with villi growing through the uterine wall and sometimes into nearby organs such as the bladder.

### **Placental Hormone**

A hormone produced by placental tissue, such as hCG, progesterone, estrogens, or human placental lactogen, that supports pregnancy, fetal growth, and maternal metabolic adaptation.

---

### Placental Infarction

A region of placental tissue damaged by inadequate maternal blood flow and coagulation, which may be incidental or, when extensive, associated with fetal growth restriction or pregnancy complications.

### Placental Lactogen

Placental lactogen is a hormone made by the placenta that alters maternal metabolism and supports breast development and fetal nutrient availability during pregnancy.

### Placentation

The developmental process by which the placenta forms and attaches to the uterus, establishes maternal–fetal circulation, and develops the exchange and endocrine functions needed for pregnancy.

### Plagiocephaly

Plagiocephaly is asymmetric flattening or shaping of an infant's skull, caused by position or premature suture fusion; its evaluation distinguishes benign molding from craniosynostosis.

### Planococcaceae

Planococcaceae is a family of Gram-positive bacteria found in environmental habitats; clinical importance depends on the species and site of recovery.

### Planococcus Bacteria

planococcus bacteria is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### Plant Development

Plant development is the progression from seed or meristem through growth, differentiation, flowering, reproduction, and senescence.

### Plant Extract

A plant extract is a preparation made by removing selected constituents from plant material; compo-

sition, dose, contamination, interactions, and evidence vary widely.

### Plant Oils

Plant oils are lipid mixtures extracted from seeds, fruits, or other plant parts and used as foods, medicines, cosmetics, or industrial materials.

### Plant Part

A plant part is a structural component such as a root, stem, leaf, flower, fruit, or seed that may contain distinct nutrients, chemicals, or medicinal constituents.

### Plant Poisoning

An infectious process or toxic exposure involving plant poisoning; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### Plant Proteins

Proteins supplied by legumes, grains, nuts, seeds, vegetables, and other plants; combining varied sources can provide essential amino acids, with nutritional needs depending on age and health.

### Plant Tumor

A neoplasm involving plant tumor. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Plant Virus

plant virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Plantar Nerve

A nerve supplying sensation to the sole of the foot and motor branches to intrinsic foot muscles; compression can cause burning pain, numbness, or altered toe movement.

### Plantaris Muscle

A small posterior-leg muscle with a long tendon

---

that assists weakly with knee flexion and plantar flexion; it can be strained during sudden athletic movement.

### **Plasma Cell Neoplasm**

A clonal disorder of antibody-producing plasma cells, ranging from localized plasmacytoma to multiple myeloma with marrow, bone, kidney, calcium, or blood abnormalities.

### **Plasma Kallikrein**

A medical term referring to plasma kallikrein. Its clinical meaning depends on the context in which it is used.

### **Plasma Membrane**

The selectively permeable lipid bilayer surrounding a cell, containing proteins that control transport, signaling, adhesion, recognition, and communication with the extracellular environment.

### **Plasma Substitutes**

A medical term referring to plasma substitutes. Its clinical meaning depends on the context in which it is used.

### **Plasmablastic Lymphoma**

A neoplasm involving plasmablastic lymphoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Plasmalogen**

A medical term referring to plasmalogen. Its clinical meaning depends on the context in which it is used.

### **Plasmid**

A plasmid is a small usually circular DNA molecule separate from a bacterial chromosome that can replicate independently and sometimes carries antibiotic-resistance genes.

### **Plasminogen**

Plasminogen is the inactive circulating precursor of plasmin, the enzyme that degrades fibrin; tissue or urokinase-type activators convert it to plasmin

during fibrinolysis.

### **Plasminogen Activator**

A plasminogen activator is an enzyme, such as tissue plasminogen activator or urokinase, that converts plasminogen to plasmin and promotes fibrin clot breakdown; therapeutic use carries bleeding risk.

### **Plasminogen Inactivators**

A medical term referring to plasminogen inactivators. Its clinical meaning depends on the context in which it is used.

### **Plasmodesma**

A plasmodesma is a microscopic channel through a plant cell wall connecting neighboring cells and allowing controlled movement of molecules and signals.

### **Pleural Neoplasm**

A neoplasm involving pleural neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Pleural Sac**

A biomedical term referring to pleural sac; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pleural Tuberculosis**

Tuberculous infection or inflammation of the pleura, often producing a lymphocyte-rich pleural effusion, chest pain, fever, and breathlessness and requiring microbiologic or tissue evaluation.

### **Pleuritic Pain**

A clinical condition or finding involving pleuritic pain. Its features, causes, evaluation, and management depend on the clinical context.

### **Pleuropulmonary Blastoma**

A medical term referring to pleuropulmonary blastoma. Its clinical meaning depends on the context in which it is used.

---

### **Plexiform Neurofibroma**

A plexiform neurofibroma is a diffuse nerve-sheath tumor, strongly associated with neurofibromatosis type 1, that can grow along multiple nerve branches and sometimes become malignant.

#### **Synonyms:**

PN PNF

### **Pliability**

Pliability is the ability of a material or tissue to bend, stretch, or deform without breaking; it is relevant to skin, vessels, lungs, and medical devices.

### **Plitidepsin**

Plitidepsin is an antineoplastic compound that targets eukaryotic elongation factor 1A and has been studied for selected cancers and viral infections.

### **Ploidies**

Ploidy describes the number of complete chromosome sets in a cell, such as haploid, diploid, or polyploid; abnormal ploidy can characterize tumors or developmental disorders.

### **Plozalizumab**

A medical term referring to plozalizumab. Its clinical meaning depends on the context in which it is used.

### **Pluralibacter Gergoviae**

An infectious process or toxic exposure involving pluralibacter gergoviae; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pluripotent Stem Cell**

A stem cell capable of producing derivatives of all three embryonic germ layers but not, by itself, a complete organism; embryonic and induced pluripotent stem cells are major research sources.

### **Pneumococcal Infection**

An infectious process or toxic exposure involving pneumococcal infection; diagnosis considers the cause, route of exposure, affected tissues, severity,

and host response.

### **Pneumococcal Vaccine**

A medical term referring to pneumococcal vaccine. Its clinical meaning depends on the context in which it is used.

### **Pneumocystis**

A medical term referring to pneumocystis. Its clinical meaning depends on the context in which it is used.

### **Pneumocystis Carinii**

A medical term referring to pneumocystis carinii. Its clinical meaning depends on the context in which it is used.

### **Pneumocystis Infection**

An infectious process or toxic exposure involving pneumocystis infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pneumocystis Jiroveci**

Pneumocystis jirovecii is a fungus that causes opportunistic pneumonia, especially in advanced HIV or other cellular immunodeficiency; symptoms include progressive dry cough, fever, and hypoxaemia, and diagnosis requires appropriate respiratory testing.

### **Pneumovirinae**

A medicine or pharmacologic agent called pneumovirinae. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Pneumovirus**

pneumovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Pocket Erosion**

Loss of tissue at the margin or base of a periodontal or surgical pocket, potentially exposing deeper struc-

---

tures and promoting infection, bleeding, or impaired healing.

### **Podocyte**

A podocyte is a specialized epithelial cell covering glomerular capillaries; injury to its filtration slits contributes to proteinuria and kidney disease.

### **Podofilox**

Podofilox is a topical antimitotic medicine used to treat selected external anogenital warts caused by human papillomavirus; irritation and correct application are important.

### **Podophyllin**

Podophyllin is a plant-derived resin with antimitotic activity formerly used topically for warts; it can be severely toxic if absorbed and is generally replaced by safer products.

### **Podosome**

A podosome is an actin-rich adhesion and matrix-degrading structure in cells such as macrophages and osteoclasts.

### **Poikiloderma**

A skin pattern combining mottled pigmentation, visible small vessels, and epidermal thinning, seen in connective-tissue disease, chronic sun damage, inflammation, and some cutaneous lymphomas.

### **Pokeweed Mitogen**

Pokeweed mitogen is a plant lectin used experimentally to stimulate lymphocyte proliferation and investigate immune-cell responses.

### **Pol Gene**

The HIV gene encoding enzymes required for viral replication, including protease, reverse transcriptase, and integrase; antiretroviral drugs target these products.

### **Polarography**

Polarography is an electrochemical analytical method that measures current while voltage changes

at an electrode to identify or quantify reducible substances.

### **Polidocanol**

Polidocanol is a detergent sclerosant injected to close selected varicose veins or vascular lesions by damaging the vessel lining and promoting fibrosis.

### **Poliosis**

A localized patch of white or depigmented hair caused by reduced melanin in follicles, occurring in vitiligo, alopecia areata, inflammatory disease, genetic syndromes, or after injury.

### **Poliovirus Vaccine**

poliovirus vaccine is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Pollakisuria**

Pollakisuria is unusually frequent urination, often in small amounts, caused by irritation, infection, stones, bladder disorders, anxiety, or other urinary conditions.

### **Pollen Tube**

A pollen tube is a tube grown by a germinating pollen grain that carries sperm cells through plant tissue to the ovule for fertilization.

### **Pollination**

Transfer of pollen from anthers to a receptive stigma or ovule, allowing fertilization in flowering plants; it is not a human reproductive process.

### **Poly A**

A medical term referring to poly a. Its clinical meaning depends on the context in which it is used.

### **Poly I-C**

A medical term referring to poly i-c. Its clinical meaning depends on the context in which it is used.

---

### **Poly ICLC**

A medical term referring to poly iclc. Its clinical meaning depends on the context in which it is used.

### **Polyadenylation**

Addition of a polyadenosine tail to the 3' end of many eukaryotic messenger RNAs, promoting stability, nuclear export, and efficient translation.

### **Polyamine**

A medical term referring to polyamine. Its clinical meaning depends on the context in which it is used.

### **Polyamine Catabolism**

A medical term referring to polyamine catabolism. Its clinical meaning depends on the context in which it is used.

### **Polybrominated Biphenyl**

A medical term referring to polybrominated biphenyl. Its clinical meaning depends on the context in which it is used.

### **Polychlorinated Biphenyl**

A medical term referring to polychlorinated biphenyl. Its clinical meaning depends on the context in which it is used.

### **Polyene**

A medical term referring to polyene. Its clinical meaning depends on the context in which it is used.

### **Polyethylene**

A medical term referring to polyethylene. Its clinical meaning depends on the context in which it is used.

### **Polygenic Obesity**

Obesity arising from the combined effects of many genetic variants interacting with diet, activity, sleep, medications, and the wider environment rather than a single gene defect.

### **Polyglutamate Camptothecin**

A medical term referring to polyglutamate camptothecin. Its clinical meaning depends on the con-

text in which it is used.

### **Polygraphy**

polygraphy is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Polyketide Synthase**

A medical term referring to polyketide synthase. Its clinical meaning depends on the context in which it is used.

### **Polylysine**

A medical term referring to polylysine. Its clinical meaning depends on the context in which it is used.

### **Polymer**

A medical term referring to polymer. Its clinical meaning depends on the context in which it is used.

### **Polymerization**

Chemical joining of many small monomers into a larger polymer, a process important in biomolecules, plastics, dental materials, drug delivery, and laboratory techniques.

### **Polymyxin B**

A medical term referring to polymyxin b. Its clinical meaning depends on the context in which it is used.

### **Polyneuritis**

Inflammation or injury affecting multiple peripheral nerves, causing symmetric pain, numbness, weakness, or autonomic dysfunction; causes include immune disease, infection, toxins, and deficiency.

### **Polynucleotide**

A biological or biochemical term involving polynucleotide. Its role depends on the relevant cells, molecules, and physiological process.

### **Polyoma Virus**

polyoma virus is a virus or viral group classified by its genetic and biologic features. Clinical impor-

---

tance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Polyomavirus Hominis 2**

polyomavirus hominis 2 is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Polyphenol**

A medical term referring to polyphenol. Its clinical meaning depends on the context in which it is used.

### **Polyploid**

A medical term referring to polyploid. Its clinical meaning depends on the context in which it is used.

### **Polypropylene**

A medical term referring to polypropylene. Its clinical meaning depends on the context in which it is used.

### **Polyradiculopathy**

Disease affecting multiple spinal nerve roots, producing pain, weakness, sensory loss, or reflex changes in a distribution determined by the involved roots.

### **Polysome**

A medical term referring to polysome. Its clinical meaning depends on the context in which it is used.

### **Polysplenias**

A medical term referring to polysplenias. Its clinical meaning depends on the context in which it is used.

### **Polystyrene**

A medical term referring to polystyrene. Its clinical meaning depends on the context in which it is used.

### **Polytene Chromosome**

An enlarged chromosome formed by repeated DNA replication without cell division, displaying visible bands and commonly used to study gene activity in insect tissues.

### **Polythiazide**

A medical term referring to polythiazide. Its clinical meaning depends on the context in which it is used.

### **Polyurethane**

A medical term referring to polyurethane. Its clinical meaning depends on the context in which it is used.

### **Polyvinyl**

A medical term referring to polyvinyl. Its clinical meaning depends on the context in which it is used.

### **Pomalidomide**

A medical term referring to pomalidomide. Its clinical meaning depends on the context in which it is used.

### **Pontiac Fever**

An infectious process or toxic exposure involving pontiac fever; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Popliteal Cyst**

A fluid-filled swelling behind the knee, also called a Baker cyst, caused by communication between the joint and a bursa and often associated with arthritis, meniscal injury, or inflammation.

### **Population Density**

The number of people living in a defined area, a demographic measure relevant to crowding, resource needs, environmental exposure, and spread of communicable disease.

### **Population Genetics**

The study of how gene frequencies and genetic variation change within and between populations through inheritance, mutation, selection, migration, and genetic drift.

### **Population Group**

A defined set of people sharing a characteristic such as age, location, exposure, ancestry, occupation, or

---

health condition for epidemiologic or clinical analysis.

### **Population Health**

The health outcomes of a defined group and the distribution of those outcomes, considered in relation to social conditions, environment, behavior, healthcare, and policy.

### **Porfimer Sodium**

A medical term referring to porfimer sodium. Its clinical meaning depends on the context in which it is used.

### **Porfiromycin**

A medicine or pharmacologic agent called porfiromycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Porifera**

A medical term referring to porifera. Its clinical meaning depends on the context in which it is used.

### **Porin**

A porin is a channel-forming protein in an outer membrane, especially of Gram-negative bacteria, allowing passage of selected small molecules.

### **Porokeratosis**

A group of keratinization disorders producing characteristic ridge-like borders called cornoid lamellae around annular scaly lesions, with some forms carrying a small skin-cancer risk.

### **Poroma**

A poroma is a usually benign sweat-gland tumor presenting as a flesh-colored or reddish papule or nodule, often on palms or soles.

### **Porphyromonas**

A medical term referring to porphyromonas. Its clinical meaning depends on the context in which it is used.

### **Porphyromonas Bennonis**

A medical term referring to porphyromonas bennonis. Its clinical meaning depends on the context in which it is used.

### **Porphyromonas Catoniae**

A medical term referring to porphyromonas catoniae. Its clinical meaning depends on the context in which it is used.

### **Porphyromonas Endodontalis**

A medical term referring to porphyromonas endodontalis. Its clinical meaning depends on the context in which it is used.

### **Porphyromonas Levii**

A medical term referring to porphyromonas levii. Its clinical meaning depends on the context in which it is used.

### **Porphyromonas Somerae**

A medical term referring to porphyromonas somerae. Its clinical meaning depends on the context in which it is used.

### **Portion Of Cytosol**

A region of the cell's aqueous internal fluid outside membrane-bound organelles, containing ions, metabolites, proteins, and enzymes that support cellular reactions.

### **Positive**

Positive means that a test, finding, result, or response is present or above a defined threshold; interpretation depends on the test and clinical setting.

### **Positive Finding**

A positive finding is an observed symptom, examination sign, image, laboratory result, or test response that supports the presence of a specified condition or feature.

### **Positron Camera**

A positron camera detects paired gamma rays from positron annihilation and is used in positron-

---

emission tomography to map tracer distribution.

### **Postal Service**

A postal service transports letters, packages, specimens, or medicines; healthcare shipping requires appropriate packaging, labeling, temperature control, and privacy.

### **Posterior Rhinorrhea**

Posterior rhinorrhea is mucus draining from the nose into the throat, commonly causing throat clearing or cough from allergy, infection, irritation, or sinus disease.

### **Postganglionic Fiber**

An autonomic nerve fiber extending from a ganglion to its target organ after the synapse, carrying sympathetic or parasympathetic signals to smooth muscle, glands, or the heart.

### **Postnatal Care**

A medical procedure, treatment, device, or care topic related to postnatal care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Postoperative Hemorrhage**

A clinical condition or finding involving postoperative hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Postoperative Infection**

An infectious process or toxic exposure involving postoperative infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Postoperative Period**

The postoperative period is the time after an operation when recovery, pain control, wound care, mobility, nutrition, complications, and follow-up are monitored.

### **Postprandial Period**

The postprandial period is the interval after eat-

ing when digestion and nutrient absorption occur and glucose, insulin, and other metabolic responses change.

### **Postsynaptic Membrane**

The specialized receiving surface of a neuron or muscle cell at a synapse, containing receptors and signaling proteins that respond to neurotransmitter released by the presynaptic cell.

### **Potassium Acetate**

A medical term referring to potassium acetate. Its clinical meaning depends on the context in which it is used.

### **Potassium Channel**

A medical term referring to potassium channel. Its clinical meaning depends on the context in which it is used.

### **Potassium Chloride**

A chemical or physiological term involving potassium chloride. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

### **Potassium Citrate**

A chemical or physiological term involving potassium citrate. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

### **Potassium Cyanide**

A chemical or physiological term involving potassium cyanide. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

### **Potassium Deficiency**

A clinical condition or finding involving potassium deficiency. Its features, causes, evaluation, and management depend on the clinical context.

### **Potassium Dichromate**

A chemical or physiological term involving potas-

---

sium dichromate. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

### Potassium Iodide

potassium iodide is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### Potassium Ion

The positively charged form of potassium, the principal intracellular cation that helps establish resting membrane potential, nerve transmission, muscle contraction, and cardiac rhythm.

### Potential

Potential describes a capacity, possibility, or stored energy that may become clinically relevant depending on circumstances and additional findings.

### Potentiometry

potentiometry is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

### Povidone

povidone is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### Povidone-Iodine

povidone-iodine is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### Powder Diffraction

An analytical method that identifies crystalline substances by measuring how an X-ray or other beam is diffracted by powdered material.

### Poxviridae

poxviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Poxviridae Infection

poxviridae infection is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Ppar Alpha

PPAR-alpha is a nuclear receptor that regulates fatty-acid oxidation and lipid metabolism and is activated by fibrate medicines.

### Ppar Delta

PPAR-delta is a nuclear receptor involved in fatty-acid use, energy balance, inflammation, and tissue differentiation.

### Pracinostat

Pracinostat is an investigational histone-deacetylase inhibitor studied in myeloid and other cancers by altering gene expression and cell survival.

### Pragmatic Trial

A pragmatic trial evaluates an intervention under usual real-world care conditions to estimate how well it works in routine practice.

### Pralatrexate

pralatrexate is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### Pravastatin Sodium

pravastatin sodium is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

---

### **Prealbumin**

Prealbumin, or transthyretin, is a liver-produced transport protein for thyroid hormone and retinol-binding protein; its level is influenced by inflammation and nutrition.

### **Precancerous Condition**

A neoplasm involving precancerous condition. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Precancerous Polyp**

A neoplasm involving precancerous polyp. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Precipitating Factor**

A precipitating factor is an event or exposure that triggers the onset or worsening of symptoms or disease in a susceptible person.

### **Preclinical Study**

preclinical study is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

### **Preconception Care**

A medical procedure, treatment, device, or care topic related to preconception care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Prediabetes Syndrome**

A clinical condition or finding involving prediabetes syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Prednimustine**

Prednimustine is a former antineoplastic drug combining a corticosteroid-related group with an alkylating component and causing immunosuppression and marrow toxicity.

### **Prednisolone**

prednisolone is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Prednisone**

prednisone is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Preexcitation Syndrome**

A clinical condition or finding involving preexcitation syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Prefix**

A prefix is a word element placed before a root to modify meaning; medical prefixes commonly indicate location, number, time, direction, or abnormality.

### **Prefrontal Cortex**

The prefrontal cortex is the front part of the frontal lobe involved in planning, judgment, working memory, impulse control, and social behavior.

### **Pregabalin**

pregabalin is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Preganglionic Fiber**

An autonomic nerve fiber that runs from the central nervous system to an autonomic ganglion, where it synapses with a postganglionic neuron.

### **Pregnancy Complication**

A maternal, fetal, placental, or labor-related problem that disrupts an otherwise expected pregnancy, such as preeclampsia, hemorrhage, diabetes, growth restriction, or preterm labor.

---

## Pregnancy Outcome

Pregnancy outcome describes what happens to a pregnancy, such as live birth, miscarriage, stillbirth, preterm birth, or other maternal or fetal result.

## Pregnancy Status

Pregnancy status indicates whether a person is pregnant, not pregnant, or of unknown status and can affect medication, imaging, and treatment decisions.

## Pregnancy Trimester

A pregnancy trimester is one of three approximate stages of gestation used to organize fetal development, screening, risks, and clinical care.

## Pregnane

Pregnane is a 21-carbon steroid hydrocarbon that forms the structural backbone of progesterone and several corticosteroid and progestin compounds.

## Pregnanolone

Pregnanolone is a neuroactive steroid metabolite that can modulate GABA-A receptors and influence neuronal excitability, mood, and sedation.

## Pregnenolone

Pregnenolone is a steroid hormone precursor made from cholesterol that can be converted into progesterone, corticosteroids, and sex hormones.

## Premature Adrenarche

Early appearance of pubic or axillary hair, body odor, or mild acne from adrenal androgen production without true central puberty; evaluation excludes virilizing disorders.

## Premature Closure

Closure of a body opening, developmental structure, or growth plate earlier than expected, potentially causing obstruction, abnormal shape, or impaired growth depending on the site.

## Premature Labor

Regular uterine contractions with cervical change before 37 completed weeks of pregnancy, which can

lead to preterm birth and requires assessment of membranes, infection, and fetal well-being.

## Premature Thelarche

Isolated breast development in a young child without other signs of puberty, often transient but assessed for growth acceleration, estrogen exposure, or true precocious puberty.

## Pre-Medication

Medicine given before a procedure, treatment, or exposure to prevent a predictable problem such as pain, nausea, allergy, infection, or anxiety.

## Pre-MiRNA

A pre-miRNA is an early hairpin-shaped microRNA transcript processed in the nucleus before becoming a mature regulator of gene expression.

## Prenylation

Attachment of a lipid group to a protein, helping determine its membrane localization, signaling, stability, and interactions; abnormal prenylation contributes to some diseases and is a drug target.

## Preoperative Care

A medical procedure, treatment, device, or care topic related to preoperative care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Preoptic Area

The preoptic area is a hypothalamic region involved in temperature regulation, sleep, reproductive behavior, and hormone control.

## Presenilin

Presenilin is a component of the gamma-secretase complex that processes membrane proteins; inherited variants can cause familial early-onset Alzheimer disease.

## Pressoreceptor

A pressure-sensitive receptor, especially a baroreceptor in the carotid sinus or aortic arch, that detects

---

arterial stretch and helps regulate heart rate and blood pressure.

### **Presynaptic Terminals**

Presynaptic terminals are the ends of neurons that release neurotransmitters into synapses in response to electrical activity.

### **Primary Endpoint**

A primary endpoint is the main prespecified outcome used to judge the effect of an intervention in a clinical trial.

### **Primary Hypersomnia**

Excessive daytime sleepiness not better explained by insufficient sleep, another sleep disorder, substance, or medical condition; modern classification uses specific central-hypersomnolence diagnoses.

### **Primary Hypoparathyroidism**

Inadequate parathyroid hormone production causing low calcium and high phosphate, with possible tingling, cramps, tetany, seizures, cataracts, or chronic bone and dental effects.

### **Primary Hypothyroidism**

Reduced thyroid-gland production of thyroxine and triiodothyronine, usually causing high TSH and symptoms such as fatigue, cold intolerance, constipation, dry skin, and slowed heart rate.

### **Primary MicroRNA**

A primary microRNA is the initial RNA transcript made from a microRNA gene before nuclear and cytoplasmic processing into mature microRNA.

### **Primidone**

primidone is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Primitive Node**

The primitive node is an embryonic organizer at the cranial end of the primitive streak that helps

establish body axes and germ-layer formation.

### **Primitive Streak**

The primitive streak is an embryonic structure through which cells migrate during gastrulation to form the three germ layers and establish body organization.

### **Prinomastat**

Prinomastat is an investigational matrix-metalloproteinase inhibitor studied for blocking enzymes involved in tumor invasion and tissue remodeling.

### **Privacy**

Privacy is a person's right and expectation that personal information, communications, and bodily matters are protected from unauthorized access or disclosure.

### **Privacy Breach**

A privacy breach is unauthorized access, use, disclosure, loss, or exposure of personal or health information.

### **Probability**

Probability is a numerical expression of how likely an event is, ranging from impossible to certain and used in diagnosis, risk assessment, and research.

### **Probucol**

Probucol is a lipid-lowering drug that reduces cholesterol but may prolong the QT interval and is not widely used in current practice.

### **Procarbazine Hydrochloride**

Procarbazine hydrochloride is the hydrochloride salt formulation of the antineoplastic drug procarbazine.

### **Procentriole**

A procentriole is an immature centriole that duplicates beside a parent centriole and later matures to organize microtubules.

---

### **Procerus Muscle**

A small facial muscle over the bridge of the nose that draws the medial eyebrows downward and produces horizontal wrinkles between the eyebrows.

### **Processing Bodies**

Processing bodies are cytoplasmic RNA-protein granules where messenger RNAs may be stored, decapped, degraded, or regulated.

### **Processor**

A processor is a device or biological system that performs a defined sequence of operations; in computing it executes instructions, while in medicine the meaning is context-dependent.

### **Procollagen**

A molecular biology or biochemical term involving procollagen. Its role depends on the relevant molecule, pathway, and cellular context.

### **Product Recall**

Removal or correction of a medicine, device, food, or other product because it may be defective, contaminated, mislabeled, or unsafe for use.

### **Proestrus**

Proestrus is the phase of the reproductive cycle before estrus, characterized by follicular development and rising estrogen in many mammals.

### **Progesterone Antagonist**

progesterone antagonist is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Progestin**

A progestin is a synthetic progesterone-like hormone used in contraception, hormone therapy, and treatment of selected gynecologic conditions.

### **Prognostic Factor**

A prognostic factor is a clinical, pathologic, or biologic feature associated with the likely course, out-

come, or survival of a disease.

### **Program Development**

Program development is the planned design, testing, implementation, and evaluation of a service, intervention, or software system.

### **Programmed Instruction**

A structured teaching method that presents small units of information with questions and immediate feedback, allowing learners to progress through material step by step.

### **Proinsulin**

proinsulin is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Projectile Vomiting**

Forceful vomiting expelled with unusual intensity, which may occur with gastric outlet obstruction, raised intracranial pressure, infection, migraine, or other causes; severity and associated signs guide evaluation.

### **Prokaryote**

A prokaryote is a cell or organism without a membrane-bound nucleus, including bacteria and archaea.

### **Prolactin Receptor**

A cell-surface receptor activated by prolactin to regulate mammary development, milk production, reproduction, immune effects, and other tissue responses.

### **Prolapsed Cord**

A prolapsed umbilical cord descends beside or ahead of the fetus after membrane rupture, risking cord compression and reduced fetal oxygen; it is an obstetric emergency.

### **Prolindac**

Prolindac is an investigational prodrug designed to

---

release an active anticancer agent within tumors.

### **Prolymphocyte Count**

The number or proportion of prolymphocytes, immature-appearing lymphoid cells, in blood or marrow; an increased count may occur in selected lymphoid leukemias and requires morphology and immunophenotyping.

### **Prolymphocytic Leukemia**

A neoplasm involving prolymphocytic leukemia. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Promecarb**

Promecarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after substantial exposure.

### **Promegapoietin**

Promegapoietin is an investigational hematopoietic growth-factor molecule designed to stimulate production of blood cells or platelets.

### **Prometaphase**

Prometaphase is the stage of mitosis after nuclear-envelope breakdown when spindle microtubules attach to chromosome kinetochores.

### **Promethazine**

promethazine is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Promonocyte Count**

The number or proportion of promonocytes, immature monocyte precursors, in blood or marrow; increased cells may support evaluation of acute or chronic myeloid leukemia.

### **Promyelocytes**

Promyelocytes are immature myeloid blood-cell precursors that develop from myeloblasts and mature into myelocytes; abnormal accumulation occurs in

some leukemias.

### **Prone**

Prone means lying face downward with the front of the body against a surface; positioning affects breathing, pressure injury, and procedures.

### **Pronephric**

Pronephric refers to the earliest embryonic kidney system, which is temporary and helps organize development of later renal structures.

### **Propane**

Propane is a flammable hydrocarbon gas used as fuel; inhalation or displacement of oxygen can cause suffocation, and liquid contact can cause cold burns.

### **Propanol**

Propanol is an alcohol solvent with two structural isomers; ingestion or substantial exposure can depress the nervous system and irritate tissues.

### **Propellant**

A propellant is a gas or volatile substance that expels a product from a container or delivers medicine in an inhaler.

### **Properdin**

Properdin is a positive regulator of the alternative complement pathway that stabilizes complement convertase and supports innate immune defense.

### **Propetamphos**

Propetamphos is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

### **Prophage**

A prophage is bacteriophage genetic material integrated into a bacterial chromosome or maintained in a dormant state inside a bacterium.

### **Prophase**

Prophase is the early stage of cell division when chromosomes condense, the spindle begins forming,

---

and the nucleolus disappears.

### **Prophenofos**

Prophenofos is an organophosphate pesticide whose toxicity results mainly from acetylcholinesterase inhibition and excess cholinergic activity.

### **Prophylactic Mastectomy**

prophylactic mastectomy is used in relation to prophylactic mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Propiolactone**

Propiolactone is a reactive chemical formerly used as a disinfectant or sterilant; it is corrosive and potentially carcinogenic.

### **Propionates**

Salts or esters of propionic acid used in food preservation, metabolism, and some medicines; clinical effects depend on the specific compound and exposure.

### **Propionibacteriaceae**

propionibacteriaceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Propionibacterium**

propionibacterium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Propionibacterium Acnes**

propionibacterium acnes is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Propoxur**

Propoxur is a carbamate insecticide that inhibits acetylcholinesterase and may cause sweating, salivation, vomiting, breathing difficulty, or weakness after exposure.

### **Propoxycaine**

A medical term referring to propoxycaine. Its clinical meaning depends on the context in which it is used.

### **Propoxyphene**

Propoxyphene is a former opioid analgesic withdrawn in many countries because of overdose toxicity, respiratory depression, and dangerous cardiac arrhythmias.

### **Propylene Glycol**

A biological substance or process involving propylene Glycol; its medical significance depends on its function, location, amount, and clinical context.

### **Prosencephalon**

The prosencephalon is the embryonic forebrain, which develops into the telencephalon and diencephalon and their associated brain structures.

### **Prosoposchisis**

A rare congenital facial cleft or fissure caused by abnormal fusion of facial processes during embryonic development, potentially affecting the nose, mouth, eyes, and feeding or breathing.

### **Prostaglandin**

A locally acting lipid mediator derived from arachidonic acid that influences pain, inflammation, fever, vascular tone, platelet function, gastric protection, kidney function, and uterine contraction.

### **Prostaglandin Antagonist**

A drug that blocks a prostaglandin receptor or pathway, reducing selected prostaglandin-mediated effects such as inflammation, pain, uterine contraction, or gastric secretion.

---

### Prostaglandin Degradation

Enzymatic inactivation and removal of prostaglandins, which limits the duration and intensity of their local effects on vessels, inflammation, smooth muscle, kidneys, stomach, and reproductive tissues.

### Prostaglandin Receptor

A membrane receptor that binds a specific prostaglandin and activates intracellular signaling controlling vascular tone, inflammation, pain, smooth muscle, platelet activity, or reproduction.

### Prostaglandins E

The E series of prostaglandins, lipid mediators that influence inflammation, vascular tone, gastric protection, kidney blood flow, cervical ripening, and uterine contraction.

### Prostaglandins F

The F series of prostaglandins, lipid mediators involved in smooth-muscle contraction, luteal function, vascular responses, inflammation, and labor-related uterine activity.

### Prostate Carcinoma

A neoplasm involving prostate carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Prostate Disease

A clinical condition or finding involving prostate disease. Its features, causes, evaluation, and management depend on the clinical context.

### Prostate Infection

An infectious process or toxic exposure involving prostate infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### Prostate Neoplasm

A neoplasm involving prostate neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Prostatic Fluid

Prostatic fluid is a mildly alkaline secretion that forms part of semen and contains substances supporting sperm function and survival.

### Prostatic Obstruction

A clinical condition or finding involving prostatic obstruction. Its features, causes, evaluation, and management depend on the clinical context.

### Prosthetic Heart Valve

An artificial valve replacing or supplementing a diseased cardiac valve; mechanical valves require anticoagulation, while tissue valves have different durability and anticoagulation considerations.

### Protanopia

Protanopia is complete absence of red-cone function, causing a form of red-green color-vision deficiency and altered perception of red and related colors.

### Proteaphagy

A molecular biology or biochemical term involving proteaphagy. Its role depends on the relevant molecule, pathway, and cellular context.

### Proteasome

A molecular biology or biochemical term involving proteasome. Its role depends on the relevant molecule, pathway, and cellular context.

### Proteasome Binding

A molecular biology or biochemical term involving proteasome binding. Its role depends on the relevant molecule, pathway, and cellular context.

### Proteasome Inhibitor

proteasome inhibitor is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### Protective Agent

A clinical or therapeutic concept involving protective agent. Its features, uses, and clinical signifi-

---

cance depend on the relevant medical context.

### **Protegrin**

A molecular biology or biochemical term involving protegrin. Its role depends on the relevant molecule, pathway, and cellular context.

### **Protein Acetylation**

Addition of an acetyl group to a protein, often changing its activity, localization, stability, or interactions; histone acetylation is a major regulator of gene expression.

### **Protein Biosynthesis**

Production of proteins by transcription of DNA into RNA followed by ribosomal translation of messenger RNA into an amino-acid chain.

### **Protein Deficiency**

Inadequate protein intake, digestion, absorption, or use, causing loss of muscle, impaired immunity and wound healing, edema, or growth failure when severe or prolonged.

### **Protein Denaturation**

Loss of a protein's normal three-dimensional structure from heat, chemicals, pH, or mechanical stress, often impairing its biological function without breaking its peptide backbone.

### **Protein Dephosphorylation**

Removal of a phosphate group from a protein by a phosphatase, often reversing or modifying signaling, enzyme activity, localization, or cell-cycle control.

### **Protein Engineering**

Design or modification of proteins through genetic, biochemical, or computational methods to alter activity, stability, specificity, expression, or therapeutic usefulness.

### **Protein Expression**

The process by which genetic information produces a protein, including transcription, RNA processing, translation, folding, modification, and cellular

localization.

### **Protein Glycosylation**

Enzymatic attachment of carbohydrate chains to proteins, affecting folding, stability, trafficking, recognition, and function; inherited glycosylation defects can cause multisystem disease.

### **Protein Import**

Transport of a protein into an organelle or across a cellular membrane using targeting signals, receptors, translocons, and energy-dependent folding or assembly mechanisms.

### **Protein Isoform**

One of several related protein forms produced from different genes, alternative splicing, or post-translational processing, with potentially different locations or functions.

### **Protein Kinase**

An enzyme that transfers phosphate from ATP to a protein, changing its activity or interactions and regulating signaling, metabolism, growth, differentiation, and cell division.

### **Protein Metabolism**

The synthesis, folding, modification, breakdown, and recycling of proteins and amino acids in cells and tissues.

### **Protein Methylation**

Addition of methyl groups to selected amino-acid residues, regulating protein activity, chromatin, signaling, and gene expression.

### **Protein Overexpression**

Production of an abnormally large amount of a protein, caused by gene amplification, transcriptional activation, altered degradation, or other mechanisms and potentially driving disease or serving as a biomarker.

### **Protein Phosphorylation**

Addition of phosphate to a protein by a kinase,

---

a reversible switch that regulates enzyme activity, signaling pathways, gene expression, transport, and cell division.

### **Protein Prenylation**

Attachment of a hydrophobic isoprenoid group to a protein, helping target it to membranes and enabling signaling or trafficking functions.

### **Protein Purification**

Separation of a desired protein from cells or a mixture using properties such as charge, size, solubility, affinity, or binding, while preserving its structure and activity.

### **Protein Refolding**

Return of a denatured or newly synthesized protein to its functional three-dimensional structure, sometimes requiring chaperones or controlled laboratory conditions.

### **Protein Secretion**

Transport of a protein out of a cell or into a specialized compartment, commonly through the endoplasmic-reticulum and Golgi pathway or through regulated vesicle release.

### **Protein Sequence**

The ordered chain of amino acids in a protein, which encodes information about folding, domains, binding sites, processing, and biological function.

### **Protein Splicing**

Removal of an internal protein segment called an intein with ligation of the surrounding exteins, producing a mature functional protein.

### **Protein Subunit**

One polypeptide component of a multi-subunit protein complex, whose interactions with other subunits create the complex's final structure and function.

### **Protein Translocation**

Movement of a newly synthesized or mature protein across a membrane or to a different cellular compart-

ment, directed by targeting signals and transport machinery.

### **Protein Transport**

Cellular movement of proteins between compartments, across membranes, or outside the cell, ensuring that each protein reaches its functional location.

### **Protein Unfolding**

Loss of a protein's native three-dimensional structure, caused by heat, chemicals, mutations, or cellular stress, which can impair function or promote aggregation.

### **Proteinaceous Plug**

A blockage made primarily of protein-rich material, mucus, cellular debris, or secretions that can obstruct an airway, duct, catheter, or other passage.

### **Proteobacteria**

proteobacteria is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Proteogenomics**

Integration of genomic, transcriptomic, and proteomic data to identify proteins, discover coding variants, characterize tumors or microbes, and connect DNA changes with protein function.

### **Proteoglycan**

A molecular biology or biochemical term involving proteoglycan. Its role depends on the relevant molecule, pathway, and cellular context.

### **Proteolipids**

Proteins tightly associated with lipid molecules or lipid membranes, important in myelin, mitochondrial membranes, ion transport, and other membrane structures.

### **Proteome**

A molecular biology or biochemical term involving

---

proteome. Its role depends on the relevant molecule, pathway, and cellular context.

### **Proteomic Profile**

proteomic profile is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Proteomics**

A molecular biology or biochemical term involving proteomics. Its role depends on the relevant molecule, pathway, and cellular context.

### **Proteus Hauseri**

proteus hauseri is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Proteus Mirabilis**

proteus mirabilis is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Proteus Penneri**

proteus penneri is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Proteus Syndrome**

A clinical condition or finding involving proteus syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Proteus Vulgaris**

proteus vulgaris is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Prothionamide**

A thioamide antimycobacterial drug used as part

of selected multidrug regimens for drug-resistant tuberculosis; gastrointestinal, hepatic, neurologic, and thyroid adverse effects require monitoring.

### **Protista**

Protista is a historical grouping for diverse mostly single-celled eukaryotes, including organisms formerly called protozoa and some algae.

### **Protocol Agent**

A protocol agent is a substance or intervention specified by a study or treatment protocol to produce a defined experimental or clinical effect.

### **Psychoacoustics**

The study of how people perceive and interpret sound, including loudness, pitch, masking, localization, speech, and hearing thresholds.

### **Psychobiology**

The study of interactions between biological processes and behavior or mental states, including brain circuits, hormones, genes, immune signals, and environmental effects.

### **Psychodidae**

A family of small hairy flies that includes sand flies; some species transmit pathogens such as Leishmania and therefore have public-health importance.

### **Psycholinguistics**

The study of how the brain and mind produce, understand, acquire, and remember language, including speech, reading, grammar, and meaning.

### **Psychological Adjustment**

The process of adapting thoughts, emotions, and behavior to stress, illness, disability, loss, developmental change, or other life circumstances.

### **Psychological Dependence**

A pattern in which a person feels a strong emotional or mental need for a substance or behavior, often with craving, preoccupation, or distress when it is unavailable.

---

### **Psychological Transfer**

The redirection of feelings, expectations, or relationship patterns from earlier experiences onto another person, especially the therapist in psychotherapy; interpretation requires clinical context.

### **Psychomotor Agitation**

Restless, excessive, or purposeless movement associated with inner tension, anxiety, mania, delirium, depression, substance effects, or medication reactions.

### **Psychomotor Disorder**

A clinical condition or finding involving psychomotor disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Psychomotor Performance**

The ability to coordinate mental processing with physical movement, assessed through tasks involving speed, precision, reaction time, balance, or sequencing.

### **Psychoneuroimmunology**

The study of interactions among psychological processes, the nervous system, endocrine signals, and immune function in health and disease.

### **Psychophysics**

The quantitative study of relationships between physical stimuli and subjective sensory experience, such as thresholds, discrimination, and perceived intensity.

### **Psychophysiology**

The study of links between psychological processes and measurable bodily functions such as heart rate, skin conductance, muscle activity, and brain signals.

### **Psychosexual Development**

Development of sexual identity, interest, relationships, and behavior across the lifespan as influenced by biology, cognition, attachment, culture, and experience.

### **Psychotic Disorder**

A clinical condition or finding involving psychotic disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Psychotropic Drug**

psychotropic drug is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Psychrobacter**

An infectious process or toxic exposure involving psychrobacter; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Psychrobacter Immobilis**

An infectious process or toxic exposure involving psychrobacter immobilis; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pteridine**

A molecular biology or biochemical term involving pteridine. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pubertal Failure**

Failure to begin or progress through expected puberty because of hypothalamic, pituitary, gonadal, chromosomal, chronic-disease, nutritional, or other causes.

### **Public Assistance**

Government or community support providing eligible people with food, housing, income, healthcare, disability, or other essential services.

### **Publication**

A formally distributed written, electronic, or multimedia work that communicates research, evidence, education, policy, or other information.

---

### **Puerperal Disorder**

A clinical condition or finding involving puerperal disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Puerperal Infection**

An infectious process or toxic exposure involving puerperal infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pulmonary Blastoma**

A medical term referring to pulmonary blastoma. Its clinical meaning depends on the context in which it is used.

### **Pulmonary Circulation**

The blood-flow circuit from the right ventricle through the pulmonary arteries and lung capillaries to the left atrium, where blood releases carbon dioxide and gains oxygen.

### **Pulmonary Compliance**

A biomedical term referring to pulmonary compliance; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Fistula**

A biomedical term referring to pulmonary fistula; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Hemorrhage**

A clinical condition or finding involving pulmonary hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Pulmonary Infection**

An infectious process or toxic exposure involving pulmonary infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Pulmonary Mass**

A biomedical term referring to pulmonary mass; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Nodule**

A biomedical term referring to pulmonary nodule; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Reactance**

A biomedical term referring to pulmonary reactance; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Trunk**

A biomedical term referring to pulmonary trunk; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Valve Insufficiency**

A biomedical term referring to pulmonary valve insufficiency; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonologist**

A pulmonologist is a physician specializing in diseases of the lungs and breathing system, including asthma, COPD, infections, and sleep-related breathing disorders.

### **Pulp Canal**

The pulp canal is the passage within a tooth root containing dental pulp, nerves, and blood vessels; infection may require root-canal treatment.

### **Pulp Disease**

A clinical condition or finding involving pulp disease. Its features, causes, evaluation, and management depend on the clinical context.

---

### **Pulse Irregular**

An irregular pulse has uneven timing or varying beats and may reflect premature beats, atrial fibrillation, other arrhythmias, or measurement variation.

### **Pulse Radiolysis**

Pulse radiolysis is a research technique using short radiation pulses to create and study transient chemical species and reaction kinetics.

### **Pulse Rate**

Pulse rate is the number of palpable arterial beats per minute and usually approximates heart rate, although some arrhythmias produce a pulse deficit.

### **Pulvinar**

The pulvinar is the largest posterior nucleus of the thalamus and participates in visual attention, sensory integration, and connections with the cortex.

### **Puncture Biopsy**

Removal of a small tissue sample through a needle or puncture for microscopic, molecular, or microbiologic examination; imaging may guide the target and route.

### **Punicic Acid**

A conjugated polyunsaturated fatty acid found mainly in pomegranate seed oil and studied for lipid and inflammatory effects; clinical supplement benefits remain uncertain.

### **Punishment**

Punishment is a consequence intended to reduce a behavior; in healthcare, coercive or harmful punishment is inappropriate and behavior support should prioritize safety and dignity.

### **Purine Nucleosides**

A molecular biology or biochemical term involving purine nucleosides. Its role depends on the relevant molecule, pathway, and cellular context.

### **Purine Nucleotides**

A molecular biology or biochemical term involving purine nucleotides. Its role depends on the relevant molecule, pathway, and cellular context.

### **Purinoreceptor**

A purinoreceptor is a cell-surface receptor activated by extracellular purines such as ATP, ADP, or adenosine and involved in signaling, inflammation, and vascular control.

### **Purkinje Cell**

A large inhibitory neuron in the cerebellar cortex whose axons provide the sole output of the cerebellar cortex and regulate coordination, balance, and motor learning.

### **Puromycin**

A medicine or pharmacologic agent called puromycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Purulent Discharge**

A medical procedure, treatment, device, or care topic related to purulent discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Putamen**

The putamen is a basal-ganglia structure involved in movement selection, motor learning, and habit-related behavior.

### **P-Value**

A p-value is the probability, under a specified null hypothesis, of observing results at least as extreme as those found; it does not by itself measure clinical importance.

### **Pycnodysostosis**

A rare autosomal-recessive bone dysplasia caused by CTSK deficiency, producing short stature, dense but fragile bones, acro-osteolysis, delayed closure of cranial sutures, and dental abnormalities.

---

### **Pyloric Antrum**

The pyloric antrum is the lower stomach region that grinds food and regulates its passage toward the pyloric canal and duodenum.

### **Pyramidal Cell**

A triangular-shaped excitatory neuron with a prominent apical dendrite, found especially in the cerebral cortex and hippocampus and involved in long-range brain signaling.

### **Pyramidal Tract**

The pyramidal tract is a major motor pathway from the cerebral cortex to the brainstem and spinal cord that controls voluntary movement.

### **Pyrazines**

Pyrazines are aromatic nitrogen-containing chemical compounds found in foods, flavors, medicines, and industrial materials; effects depend on the specific compound and exposure.

### **Pyrazole**

A medicine or pharmacologic agent called pyrazole. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Pyrazoles**

pyrazoles is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

### **Pyrene**

Pyrene is a four-ring polycyclic aromatic hydrocarbon produced by incomplete combustion and used as an environmental marker of complex combustion mixtures.

### **Pyrenochaeta**

pyrenochaeta is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Pyridine**

A molecular biology or biochemical term involving pyridine. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyridostigmine Bromide**

pyridostigmine bromide is a medicine or pharmacologic agent; its indication, dosing, contraindications, interactions, and adverse effects depend on the specific product and patient.

### **Pyridoxal Phosphate**

A biological or biochemical term involving pyridoxal phosphate. Its role depends on the relevant cells, molecules, and physiological process.

### **Pyrimidine Analog**

A molecular biology or biochemical term involving pyrimidine analog. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyrimidine Dimer**

A molecular biology or biochemical term involving pyrimidine dimer. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyrimidine Nucleosides**

A molecular biology or biochemical term involving pyrimidine nucleosides. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyrimidine Nucleotides**

A molecular biology or biochemical term involving pyrimidine nucleotides. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyrogen**

A pyrogen is a substance that induces fever, commonly through immune signaling; bacterial endotoxin is an important example in contaminated medicines or fluids.

### **Pyroglyphidae**

Pyroglyphidae is a mite family that includes house-dust mites whose allergens can trigger allergic rhini-

---

tis, asthma, or atopic dermatitis.

### **Pyronine**

Pyronine is a red fluorescent dye used in histology and research to stain RNA and certain cellular components.

### **Pyrophosphatase**

A molecular biology or biochemical term involving pyrophosphatase. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyropoikilocytosis**

A severe inherited red-cell membrane disorder combining marked poikilocytosis, small irregular erythrocytes, thermal instability, and hemolytic anemia.

### **Pyroptosis**

A programmed inflammatory form of cell death involving gasdermin pores, cell swelling, membrane rupture, and release of cytokines, commonly triggered by intracellular infection or inflammasome activation.

### **Pyrosequencing**

pyrosequencing is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

### **Pyroxamide**

Pyroxamide is an investigational histone-deacetylase inhibitor studied for anticancer effects through altered gene expression and cell growth.

### **Pyrroles**

A molecular biology or biochemical term involving pyrroles. Its role depends on the relevant molecule, pathway, and cellular context.

### **Pyrrolidonecarboxylic Acid**

A cyclic amino-acid derivative, also called pyroglutamic acid, found in proteins and metabolic pathways; abnormal accumulation may occur in selected

metabolic or medication-related conditions.

### **Pyrrolnitrin**

Pyrrolnitrin is an antimicrobial compound produced by some bacteria and studied for antifungal activity and biological control.

### **Pyruvate Decarboxylase**

Pyruvate decarboxylase is an enzyme that converts pyruvate to acetaldehyde and carbon dioxide during fermentation in some organisms.

### **Pyruvate Kinase**

Pyruvate kinase catalyzes the final ATP-producing step of glycolysis; inherited deficiency causes hemolytic anemia because red cells cannot generate enough energy.

### **Painful Urination (Dysuria)**

Pain, burning, or discomfort during urination, commonly caused by urinary infection, inflammation, stones, irritation, or sexually transmitted infection.

### **Peeling Skin**

Loss or shedding of the outer layer of skin, which may result from dryness, sunburn, irritation, allergy, infection, inflammation, or a systemic illness.

### **Protein In Urine (Proteinuria)**

An abnormal amount of protein in the urine, which may be temporary or indicate kidney disease, diabetes, high blood pressure, infection, or another condition.

### **PA/IVS**

Alternate index label; see *Pulmonary atresia with intact ventricular septum*.

### **PAES**

Alternate index label; see *Popliteal artery entrapment*.

### **Pain, Back**

Alternate index label; see *Back pain*.

---

**Pain, Breast**

Alternate index label; see *Breast pain*.

**Pain, Chest**

Alternate index label; see *Chest pain*.

**Pain, Knee**

Alternate index label; see *Knee pain*.

**Pain, Neck**

Alternate index label; see *Neck pain*.

**Pain, Wrist**

Alternate index label; see *Wrist pain*.

**Painful Bladder Syndrome**

Alternate index label; see *Interstitial cystitis*.

**Painful Periods**

Alternate index label; see *Menstrual cramps*.

**Palsy, Bell's**

Alternate index label; see *Bell's palsy*.

**Palsy, Cerebral**

Alternate index label; see *Cerebral palsy*.

**Palsy, Facial**

Alternate index label; see *Bell's palsy*.

**Pancreas Inflammation**

Alternate index label; see *Pancreatitis*.

**PAPVR**

Alternate index label; see *Partial anomalous pulmonary venous return*.

**Paraneoplastic Neurological Disorder**

Alternate index label; see *Paraneoplastic syndromes of the nervous system*.

**Paraneoplastic Neurological Syndrome**

Alternate index label; see *Paraneoplastic syndromes of the nervous system*.

**Partial Anomalous Pulmonary Venous Connection**

Alternate index label; see *Partial anomalous pulmonary venous return*.

**Pathological Gambling**

Alternate index label; see *Compulsive gambling*.

**Pathological Laughter And Crying**

Alternate index label; see *Pseudobulbar affect*.

**Pathological Stealing**

Alternate index label; see *Kleptomania*.

**PBA**

Alternate index label; see *Pseudobulbar affect*.

**PDA**

Alternate index label; see *Patent ductus arteriosus (PDA)*.

**Pelvic Pain, Chronic**

Alternate index label; see *Chronic pelvic pain*.

**Pelvic Support Problems, Uterine Prolapse**

Alternate index label; see *Uterine prolapse*.

**Perforated Eardrum**

Alternate index label; see *Ruptured eardrum (perforated eardrum)*.

**Pericardial Inflammation**

Alternate index label; see *Pericarditis*.

**Periodontal Disease, Gingivitis**

Alternate index label; see *Gingivitis*.

**Periodontal Disease, Periodontitis**

Alternate index label; see *Periodontitis*.

**Peripheral Neurofibromatosis**

Alternate index label; see *Neurofibromatosis type 1*.

---

**Pernio**

Alternate index label; see *Chilblains*.

**Peroneal Muscular Atrophy**

Alternate index label; see *Charcot-Marie-Tooth disease*.

**Personality Disorder, Antisocial**

Alternate index label; see *Antisocial personality disorder*.

**Personality Disorder, Borderline**

Alternate index label; see *Borderline personality disorder*.

**Personality Disorder, Narcissistic**

Alternate index label; see *Narcissistic personality disorder*.

**Personality Disorder, Schizoid**

Alternate index label; see *Schizoid personality disorder*.

**Personality Disorder, Schizotypal**

Alternate index label; see *Schizotypal personality disorder*.

**Pes Planus**

Alternate index label; see *Flatfeet*.

**Petit Mal Seizure**

Alternate index label; see *Absence seizure*.

**Phobia, Social**

Alternate index label; see *Social anxiety disorder (social phobia)*.

**PHT**

Alternate index label; see *Portal hypertension*.

**PID**

Alternate index label; see *Pelvic inflammatory disease (PID)*.

**Pilonidal Dimple**

Alternate index label; see *Sacral dimple*.

**Pimples**

Alternate index label; see *Acne*.

**Pituitary Insufficiency**

Alternate index label; see *Hypopituitarism*.

**Pituitary Neuroendocrine Tumor**

Alternate index label; see *Pituitary tumors and adenomas*.

**Pityriasis Versicolor**

Alternate index label; see *Tinea versicolor*.

**PJI**

Alternate index label; see *Periprosthetic joint infection (PJI)*.

**PJS**

Alternate index label; see *Peutz-Jeghers syndrome*.

**PKD**

Alternate index label; see *Polycystic kidney disease*.

**PKU**

Alternate index label; see *Phenylketonuria (PKU)*.

**Plantar Neuroma**

Alternate index label; see *Morton neuroma*.

**PLS**

Alternate index label; see *Primary lateral sclerosis (PLS)*.

**PMBCL**

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

**PMBL**

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

---

**PN**

Alternate index label; see *Plexiform neurofibroma*.

**PNF**

Alternate index label; see *Plexiform neurofibroma*.

**Polyps, Colon**

Alternate index label; see *Colon polyps*.

**Polyps, Endometrial**

Alternate index label; see *Uterine polyps*.

**Polyps, Nasal**

Alternate index label; see *Nasal polyps*.

**Polyps, Stomach**

Alternate index label; see *Stomach polyps*.

**Polyps, Uterine**

Alternate index label; see *Uterine polyps*.

**Poor Color Vision**

Alternate index label; see *Color blindness*.

**Post-Cardiac Injury Syndrome**

Alternate index label; see *Dressler syndrome*.

**Post-Chemotherapy Cognitive Impairment**

Alternate index label; see *Chemo brain*.

**Posterior Prolapse**

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

**Postmyocardial Infarction Syndrome**

Alternate index label; see *Dressler syndrome*.

**Prader-Labhart-Willi Syndrome**

Alternate index label; see *Prader-Willi syndrome*.

**Pregnancy-Related Hypertension**

Alternate index label; see *Preeclampsia*.

**Premature Ovarian Failure**

Premature ovarian failure is loss of normal ovarian function before age 40, causing irregular or absent periods, infertility, and low-estrogen symptoms; causes may be genetic, autoimmune, toxic, or unknown.

**Premature Puberty**

Alternate index label; see *Precocious puberty*.

**Primary Adrenal Insufficiency**

Alternate index label; see *Addison's disease*.

**Primary Biliary Cirrhosis**

Alternate index label; see *Primary biliary cholangitis (PBC)*.

**Primary Polycythemia**

Alternate index label; see *Polycythemia vera*.

**Prolapse, Mitral Valve**

Alternate index label; see *Mitral valve prolapse*.

**Prolapsed Bladder**

Alternate index label; see *Anterior vaginal prolapse (cystocele)*.

**Prolapsed Uterus**

Alternate index label; see *Uterine prolapse*.

**Prostate Gland Enlargement**

Alternate index label; see *Benign prostatic hyperplasia (BPH)*.

**Pruritis Ani**

Alternate index label; see *Anal itching*.

**PTCL**

Alternate index label; see *Peripheral T-cell lymphoma*.

**Puffy Eyes**

Alternate index label; see *Bags under eyes*.

---

## **PVCs**

Alternate index label; see *Premature ventricular contractions (PVCs)*.

## **PVD**

Alternate index label; see *Peripheral artery disease (PAD)*.

## **PVPS**

Alternate index label; see *Post-vasectomy pain syndrome*.

## **Paget Disease Of The Bone**

Paget disease of bone is abnormal remodeling that produces enlarged, weakened, or deformed bone and may cause pain, fractures, hearing loss, or nerve compression.

## **Pain And Your Emotions**

Pain and your emotions addresses care related to pain and your emotions, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Pain Medications - Narcotics**

Pain medications - narcotics addresses care related to pain medications - narcotics, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Painful Menstrual Periods**

Painful menstrual periods addresses care related to painful menstrual periods, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Painful Swallowing**

Painful swallowing addresses care related to painful swallowing, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Paint, Lacquer, And Varnish Remover Poisoning**

Paint, lacquer, and varnish remover poisoning in-

volves toxic or environmental exposure to paint, lacquer, and varnish remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Palatal Myoclonus**

Palatal myoclonus is rhythmic involuntary contraction of muscles of the soft palate, sometimes caused by lesions in brainstem motor pathways and producing clicking in the ear.

## **Palliative Care - Fear And Anxiety**

Palliative care - fear and anxiety addresses care related to palliative care - fear and anxiety, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Palliative Care - Fluid, Food, And Digestion**

Palliative care - fluid, food, and digestion addresses care related to palliative care - fluid, food, and digestion, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Palliative Care - Managing Pain**

Palliative care - managing pain addresses care related to palliative care - managing pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Palliative Care - Shortness Of Breath**

Palliative care - shortness of breath addresses care related to palliative care - shortness of breath, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Palliative Care - What The Final Days Are Like**

Palliative care - what the final days are like addresses care related to palliative care - what the final days are like, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

---

### **Palpebral Slant - Eye**

Palpebral slant - eye concerns palpebral slant - eye, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Pancreas Transplant**

Pancreas transplant involves toxic or environmental exposure to pancreas transplant; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pancreatitis - Children**

Pancreatitis in children is inflammation of the pancreas causing abdominal pain, nausea, vomiting, and elevated pancreatic enzymes from structural, genetic, medication, infectious, or other causes.

### **Pancreatitis - Discharge**

A medical procedure, treatment, device, or care topic related to pancreatitis - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Panniculectomy**

Panniculectomy examines panniculectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pantothenic Acid And Biotin**

Two B vitamins involved in energy metabolism, fatty-acid synthesis, and other enzyme reactions; deficiency is uncommon but can occur with severe malnutrition, malabsorption, or specific inherited disorders.

### **Pap Test**

Pap test examines pap test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Para-Aminobenzoic Acid**

A folate-related compound used by bacteria in folate synthesis and formerly used in some medicines; humans do not require it as an essential vitamin.

### **Paradichlorobenzene Poisoning**

Paradichlorobenzene poisoning involves toxic or environmental exposure to paradichlorobenzene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Paraffin Poisoning**

Paraffin poisoning involves toxic or environmental exposure to paraffin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Paranoid Personality Disorder**

A clinical condition involving paranoid Personality Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Paraquat Poisoning**

Paraquat poisoning involves toxic or environmental exposure to paraquat poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Parathyroid Adenoma**

A parathyroid adenoma is a usually benign tumor of a parathyroid gland that can secrete excess parathyroid hormone and cause primary hyperparathyroidism with high calcium.

### **Parathyroid Cancer**

A neoplastic condition involving parathyroid Cancer; diagnosis establishes the tumor type, extent, and appropriate management.

### **Parathyroid Gland Removal**

A medical procedure, treatment, device, or care topic related to parathyroid gland removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Parathyroid Hormone (PTH) Blood Test**

Parathyroid hormone (PTH) blood test examines parathyroid hormone (pth) blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Parathyroid Hormone-Related Protein Blood Test**

Parathyroid hormone-related protein blood test examines parathyroid hormone-related protein blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Parinaud Oculoglandular Syndrome**

A biomedical term referring to parinaud oculoglandular syndrome; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Parkinson Disease - Discharge**

A medical procedure, treatment, device, or care topic related to parkinson disease - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Parkinson Disease - Resources**

Parkinson disease - resources addresses care related to parkinson disease - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Paroxysmal Cold Hemoglobinuria (PCH)**

An autoimmune hemolytic anemia caused by a biphasic Donath–Landsteiner antibody that binds red cells in the cold and triggers complement-mediated destruction on rewarming.

### **Paroxysmal Nocturnal Hemoglobinuria (PNH)**

Paroxysmal nocturnal hemoglobinuria (PNH) examines paroxysmal nocturnal hemoglobinuria (pnh); interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Paroxysmal Supraventricular Tachycardia (PSVT)**

Paroxysmal supraventricular tachycardia is an abrupt-onset and abrupt-ending rapid rhythm arising above the ventricles, causing palpitations, dizziness, chest discomfort, or syncope.

### **Synonyms:**

PSVT (Paroxysmal Supraventricular Tachycardia (PSVT)) Supraventricular Tachycardia Paroxysmal (Paroxysmal Supraventricular Tachycardia (PSVT)) Tachycardia Paroxysmal Atrial (Paroxysmal Supraventricular Tachycardia (PSVT)) Tachycardia Paroxysmal Supraventricular (Paroxysmal Supraventricular Tachycardia (PSVT))

### **Partial Breast Brachytherapy**

A medical procedure, treatment, device, or care topic related to partial breast brachytherapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Partial Breast Radiation Therapy - External Beam**

A medical procedure, treatment, device, or care topic related to partial breast radiation therapy - external beam; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Partial Knee Replacement**

A medical procedure, treatment, device, or care topic related to partial knee replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Partial Thromboplastin Time (PTT)**

The partial thromboplastin time measures the intrinsic and common coagulation pathways and helps monitor unfractionated heparin or investigate bleeding and clotting abnormalities.

### **Patches**

Patches are flat, distinct areas of altered skin color larger than a macule; their appearance, distribution, and associated symptoms help identify the cause.

### **Patchy Skin Color**

Patchy skin color concerns patchy skin color, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

---

### **Patent Urachus Repair**

A medical procedure, treatment, device, or care topic related to patent urachus repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Patient Portals - An Online Tool For Your Health**

A secure electronic system allowing patients to view records, results, medicines, appointments, messages, and educational material and sometimes communicate with their care team.

### **PBG Urine Test**

PBG urine test examines pbg urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pectus Excavatum - Discharge**

Pectus excavatum - discharge examines pectus excavatum - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pectus Excavatum Repair**

Pectus excavatum repair examines pectus excavatum repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pediatric Heart Surgery**

A medical procedure, treatment, device, or care topic related to pediatric heart surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pediatric Heart Surgery - Discharge**

A medical procedure, treatment, device, or care topic related to pediatric heart surgery - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pediatric Sleep Apnea**

Pediatric sleep apnea is repeated interruption or reduction of breathing during sleep, commonly from

enlarged tonsils or adenoids, causing snoring, restless sleep, behavior changes, or impaired growth.

### **Pedicle**

A pedicle is a stalk or attachment containing vessels, nerves, or other supporting structures, such as the base of a polyp, flap, or vertebral arch.

### **PEG Tube Insertion - Discharge**

A medical procedure, treatment, device, or care topic related to peg tube insertion - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pelvic CT Scan**

Pelvic CT scan examines pelvic ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pelvic Floor Muscle Training Exercises**

Pelvic floor muscle training exercises addresses care related to pelvic floor muscle training exercises, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Pelvic Inflammatory Disease (PID)**

Pelvic inflammatory disease is infection and inflammation of the upper female reproductive tract, often caused by sexually transmitted organisms and capable of causing infertility, ectopic pregnancy, or chronic pain.

**Synonyms:**  
PID

### **Pelvic Inflammatory Disease (PID) - Aftercare**

A medical procedure, treatment, device, or care topic related to pelvic inflammatory disease (pid) - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pelvic Laparoscopy**

A medical term referring to pelvic laparoscopy. Its clinical meaning depends on the context in which it is used.

---

### **Pelvic Radiation - Discharge**

A medical procedure, treatment, device, or care topic related to pelvic radiation - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pelvic Ultrasound - Abdominal**

Pelvic ultrasound - abdominal examines pelvic ultrasound - abdominal; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pelvis MRI Scan**

Pelvis MRI scan examines pelvis mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pelvis X-Ray**

Pelvis x-ray examines pelvis x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pencil Eraser Swallowing**

Pencil eraser swallowing involves toxic or environmental exposure to pencil eraser swallowing; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pencil Swallowing**

Pencil swallowing involves toxic or environmental exposure to pencil swallowing; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Penis Care (Uncircumcised)**

Penis care (uncircumcised) addresses care related to penis care (uncircumcised), including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Penis Pain**

Penis pain addresses care related to penis pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Pentazocine Overdose**

Pentazocine overdose involves toxic or environmental exposure to pentazocine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pentobarbital Overdose**

Pentobarbital overdose involves toxic or environmental exposure to pentobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Peppermint Oil Overdose**

Peppermint oil overdose involves toxic or environmental exposure to peppermint oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Peptic Ulcer Disease - Discharge**

Peptic ulcer disease discharge care addresses healing of a stomach or duodenal mucosal ulcer, medication adherence, bleeding warning signs, and avoidance of contributing irritants.

### **Percutaneous Kidney Procedures**

A medical procedure, treatment, device, or care topic related to percutaneous kidney procedures; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Percutaneous Transhepatic Cholangiogram**

A percutaneous transhepatic cholangiogram uses a needle through the liver to inject contrast into bile ducts for imaging and may guide drainage or stent placement.

### **Percutaneous Urinary Procedures - Discharge**

A medical procedure, treatment, device, or care topic related to percutaneous urinary procedures - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Percutaneously Inserted Central**

---

### **Catheter - Infants**

A medical procedure, device, or treatment involving percutaneously inserted central catheter - infants. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Perianal Streptococcal Cellulitis**

Perianal streptococcal cellulitis refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Pericardial Fluid Culture**

Pericardial fluid culture examines pericardial fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pericardial Fluid Gram Stain**

Pericardial fluid Gram stain examines pericardial fluid gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pericarditis - After Heart Attack**

A biomedical term referring to pericarditis - after heart attack; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pericarditis - Constrictive**

Pericarditis - constrictive examines pericarditis - constrictive; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Perichondritis**

Perichondritis is inflammation or infection of tissue surrounding cartilage, often affecting the outer ear after trauma or piercing and potentially damaging cartilage.

### **Periorbital Cellulitis**

Periorbital cellulitis refers to a defined body structure, tissue, or physiologic process; its normal loca-

tion and function provide the basis for interpreting related disease or injury.

### **Peripheral Arterial Line - Infants**

Peripheral arterial line - infants concerns peripheral arterial line - infants, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Peripheral Artery Bypass - Leg**

Peripheral artery bypass - leg concerns peripheral artery bypass - leg, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Peripheral Artery Bypass - Leg - Discharge**

A medical procedure, treatment, device, or care topic related to peripheral artery bypass - leg - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Peripheral Artery Disease - Legs**

Peripheral artery disease of the legs is atherosclerotic reduction in arterial blood flow causing exertional claudication, diminished pulses, nonhealing wounds, or critical limb ischemia.

### **Peripheral Artery Disease Of The Legs - Self-Care**

Self-care for leg arterial disease includes walking or supervised exercise, tobacco cessation, foot protection, prescribed medicines, and control of blood pressure, diabetes, and cholesterol.

### **Peripheral Intravenous Line - Infants**

Peripheral intravenous line - infants concerns peripheral intravenous line - infants, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Peripherally Inserted Central Catheter - Dressing Change**

A medical procedure, device, or treatment involving peripherally inserted central catheter - dressing

---

change. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Peripherally Inserted Central Catheter - Flushing**

A medical procedure, device, or treatment involving peripherally inserted central catheter - flushing. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Peripherally Inserted Central Catheter - Insertion**

A medical procedure, treatment, device, or care topic related to peripherally inserted central catheter - insertion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Perirenal Abscess**

A perirenal abscess is a collection of pus around the kidney, usually from spread of a urinary or kidney infection, causing fever, flank pain, and possible sepsis.

### **Peritoneal Fluid Analysis**

Peritoneal fluid analysis examines peritoneal fluid analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Peritoneal Fluid Culture**

Peritoneal fluid culture examines peritoneal fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Peritonitis - Secondary**

Secondary peritonitis is infection of the abdominal lining caused by a perforated or injured gastrointestinal or other abdominal organ and may rapidly lead to sepsis.

### **Peritonitis - Spontaneous Bacterial**

Peritonitis - spontaneous bacterial examines peritonitis - spontaneous bacterial; interpretation de-

pends on the specimen or body region, test method, reference range, and clinical question.

### **Personality Disorders**

A clinical finding or condition involving personality Disorders; evaluation depends on its characteristic features, causes, severity, and complications.

### **Pesticides**

Pesticides involves toxic or environmental exposure to pesticides; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pesticides On Fruits And Vegetables**

Pesticides on fruits and vegetables involves toxic or environmental exposure to pesticides on fruits and vegetables; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **PET Scan For Breast Cancer**

PET scan for breast cancer examines pet scan for breast cancer; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Petroleum Jelly Overdose**

Petroleum jelly overdose involves toxic or environmental exposure to petroleum jelly overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Petrositis**

Petrositis examines petrositis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pets And The Immunocompromised Person**

Pets and the immunocompromised person examines pets and the immunocompromised person; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pharmacogenetic Testing**

Pharmacogenetic testing examines pharmacogenetic

---

testing; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pharyngitis - Sore Throat**

Pharyngitis is inflammation of the throat causing pain with swallowing, commonly from viral infection and sometimes from group A streptococcal infection or other causes.

### **Pharyngitis - Viral**

Viral pharyngitis is inflammation of the throat caused by a virus, commonly producing sore throat, cough, runny nose, or fever and usually resolving with supportive care.

### **Pharyngomaxillary Space Abscess**

A pharyngomaxillary space abscess is a deep infection containing pus near the pharynx and maxilla that can cause severe pain, swelling, difficulty swallowing, and airway risk.

### **Phencyclidine Overdose**

Phencyclidine overdose involves toxic or environmental exposure to phencyclidine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pheniramine Overdose**

Pheniramine overdose involves toxic or environmental exposure to pheniramine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Phenobarbital Overdose**

Phenobarbital overdose involves toxic or environmental exposure to phenobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Phenothiazine Overdose**

Phenothiazine overdose involves toxic or environmental exposure to phenothiazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Phenytoin Overdose**

Phenytoin overdose involves toxic or environmental exposure to phenytoin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Philodendron Poisoning**

Philodendron poisoning involves toxic or environmental exposure to philodendron poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Phobia - Simple/Specific**

A clinical finding or condition involving phobia - Simple/Specific; evaluation depends on its characteristic features, causes, severity, and complications.

### **Phonological Disorder**

A clinical condition involving phonological Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Phosphorus Blood Test**

Phosphorus blood test examines phosphorus blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Phosphorus In Diet**

Phosphorus in diet addresses care related to phosphorus in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Photodynamic Therapy For Cancer**

A medical procedure, treatment, device, or care topic related to photodynamic therapy for cancer; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Photographic Fixative Poisoning**

Photographic fixative poisoning involves toxic or environmental exposure to photographic fixative poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

---

## Physical Activity

Physical activity examines physical activity; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Physical Exam Frequency

Physical exam frequency is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

## Physical Medicine And Rehabilitation

A medical procedure, treatment, device, or care topic related to physical medicine and rehabilitation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Physician Assistant Profession (PA)

A healthcare profession in which a trained, licensed clinician evaluates patients, diagnoses and treats illness, prescribes where authorized, and works with physicians within a defined scope of practice.

## Pin Care

Pin care addresses care related to pin care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Pine Oil Poisoning

Pine oil poisoning involves toxic or environmental exposure to pine oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## Pinworm Test

Pinworm test examines pinworm test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Pinworms

Pinworms are intestinal nematodes, *Enterobius vermicularis*, that cause nighttime anal itching; treatment, hand hygiene, and laundering help prevent household reinfection.

## Piperonyl Butoxide With Pyrethrins Poisoning

Piperonyl butoxide with pyrethrins poisoning involves toxic or environmental exposure to piperonyl butoxide with pyrethrins poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## Piroxicam Overdose

Piroxicam overdose involves toxic or environmental exposure to piroxicam overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## Pityriasis Alba

Pityriasis alba is a common benign skin condition causing faint, dry, lighter patches, especially on children's faces, often more noticeable after tanning.

## Pityriasis Rubra Pilaris

Pityriasis rubra pilaris is an uncommon inflammatory skin disorder producing reddish-orange scaly plaques, follicular bumps, and areas of relatively normal skin.

## Placenta Abruptio

Placental abruption is premature separation of the placenta from the uterine wall, causing bleeding, abdominal pain, uterine tenderness, fetal compromise, or maternal shock.

## Placenta Abruptio - Definition

Placental abruption is premature separation of the placenta from the uterine wall before birth, causing bleeding, abdominal pain, uterine tenderness, and possible fetal or maternal compromise.

## Placental Insufficiency

Placental insufficiency is inadequate placental delivery of oxygen and nutrients, which can cause fetal growth restriction, abnormal Doppler findings, reduced fluid, or fetal distress.

## Plant Fertilizer Poisoning

Plant fertilizer poisoning involves toxic or environ-

---

mental exposure to plant fertilizer poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Plaque And Tartar On Teeth**

Dental plaque is a bacterial biofilm that forms on teeth, while tartar is hardened mineralized plaque; both contribute to cavities, gingivitis, and periodontitis.

### **Plasma Amino Acids**

Plasma amino acids concerns plasma amino acids, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Plastic Casting Resin Poisoning**

Plastic casting resin poisoning involves toxic or environmental exposure to plastic casting resin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Plastic Resin Hardener Poisoning**

Plastic resin hardener poisoning involves toxic or environmental exposure to plastic resin hardener poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Platelet Aggregation Test**

Platelet aggregation test examines platelet aggregation test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Platelet Antibodies Blood Test**

Platelet antibodies blood test examines platelet antibodies blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pleural Fluid Analysis**

Pleural fluid analysis examines pleural fluid analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pleural Fluid Culture**

Pleural fluid culture examines pleural fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pleural Fluid Gram Stain**

Pleural fluid Gram stain examines pleural fluid gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pleural Fluid Smear**

Pleural fluid smear is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

### **Pleural Needle Biopsy**

Pleural needle biopsy examines pleural needle biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pneumococcal Conjugate Vaccine - What You Need To Know**

A medical term referring to pneumococcal conjugate vaccine - what you need to know. Its clinical meaning depends on the context in which it is used.

### **Pneumococcal Meningitis**

A clinical condition involving pneumococcal Meningitis; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Pneumococcal Polysaccharide Vaccine (PPSV23) - What You Need To Know**

A medical term referring to pneumococcal polysaccharide vaccine (ppsv23) - what you need to know. Its clinical meaning depends on the context in which it is used.

### **Pneumonia - Weakened Immune System**

A clinical condition involving pneumonia - Weakened Immune System; its causes, manifestations,

---

severity, and complications guide diagnosis and management.

### **Pneumonia In Adults - Discharge**

A medical procedure, treatment, device, or care topic related to pneumonia in adults - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pneumonia In Children - Community Acquired**

A clinical condition involving pneumonia In Children - Community Acquired; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Pneumonia In Children - Discharge**

A medical procedure, treatment, device, or care topic related to pneumonia in children - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pneumothorax - Infants**

A clinical finding or condition involving pneumothorax - Infants; evaluation depends on its characteristic features, causes, severity, and complications.

### **Poinsettia Plant Exposure**

Poinsettia plant exposure involves toxic or environmental exposure to poinsettia plant exposure; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Point Tenderness - Abdomen**

Abdominal point tenderness is sharply localized pain when a particular abdominal site is pressed, which may indicate inflammation, infection, obstruction, or another focal process.

### **Poison Control Center - Emergency Number**

A poison-control center provides immediate expert advice after a possible poisoning or toxic exposure; the correct emergency number depends on the country and life-threatening symptoms require emer-

gency services.

### **Poison Ivy - Oak - Sumac**

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy red patches and blisters after skin exposure.

### **Poison Ivy - Oak - Sumac Rash**

A poison-ivy, oak, or sumac rash is itchy allergic contact dermatitis caused by urushiol, often appearing in streaks and spreading as exposed oil remains on skin or clothing.

### **Poisoning - Fish And Shellfish**

Poisoning - fish and shellfish involves toxic or environmental exposure to poisoning - fish and shellfish; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Poisoning First Aid**

Poisoning first aid involves toxic or environmental exposure to poisoning first aid; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Pokeweed Poisoning**

Pokeweed poisoning involves toxic or environmental exposure to pokeweed poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Polio Vaccine - What You Need To Know**

A medical term referring to polio vaccine - what you need to know. Its clinical meaning depends on the context in which it is used.

### **Polychromatophilia**

Polychromatophilia is bluish-gray staining of red blood cells on a blood smear, reflecting increased circulating immature reticulocytes from stimulated red-cell production.

### **Polycythemia - Newborn**

Neonatal polycythemia is an abnormally high red-cell concentration in a newborn that can increase

---

blood viscosity and cause poor feeding, lethargy, breathing problems, or low glucose.

### **Polyendocrine Metabolic Ovarian Syndrome**

A clinical condition involving polyendocrine Metabolic Ovarian Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Polymorphous Light Eruption**

Polymorphous light eruption is an itchy inflammatory rash triggered by sunlight, usually appearing hours to days after exposure and recurring seasonally in susceptible people.

#### **Synonyms:**

Sun Poisoning

### **Polymyositis - Adult**

Adult polymyositis is an uncommon immune-mediated inflammatory muscle disease causing progressive symmetric proximal weakness and elevated muscle enzymes, after exclusion of mimics.

### **Polyp Biopsy**

Polyp biopsy examines polyp biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pompholyx Eczema**

Pompholyx, or dyshidrotic eczema, causes intensely itchy small blisters on the palms, sides of fingers, or soles and may leave painful peeling or cracks.

### **Porphyryns Blood Test**

Porphyryns blood test examines porphyryns blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Porphyryns Urine Test**

Porphyryns urine test examines porphyryns urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Portacaval Shunting**

A medical term referring to portacaval shunting. Its clinical meaning depends on the context in which it is used.

### **Portion Size**

The amount of food or drink served or eaten at one time, distinct from a standardized serving size and important for estimating energy, carbohydrate, sodium, and nutrient intake.

### **Positioning Your Baby For Breastfeeding**

Placing an infant's head, neck, and body in alignment with the breast so the mouth opens widely, the latch is deep, and feeding is comfortable and effective.

### **Positive Airway Pressure Treatment**

A medical procedure, treatment, device, or care topic related to positive airway pressure treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Post-Splenectomy Complications**

Post-splenectomy complications examines post-splenectomy complications; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Posterior Cruciate Ligament (PCL) Injury - Aftercare**

A medical procedure, treatment, device, or care topic related to posterior cruciate ligament (pcl) injury - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Posterior Fossa Tumor**

A neoplastic condition involving posterior Fossa Tumor; diagnosis establishes the tumor type, extent, and appropriate management.

### **Postherpetic Neuralgia - Aftercare**

Postherpetic neuralgia - aftercare examines postherpetic neuralgia - aftercare; interpretation depends

---

on the specimen or body region, test method, reference range, and clinical question.

### **Poststreptococcal Glomerulonephritis (GN)**

Poststreptococcal glomerulonephritis is kidney inflammation occurring after certain streptococcal infections, causing blood or protein in urine, swelling, high blood pressure, and reduced kidney function.

### **Postsurgical Pain Treatment In Adults**

Postsurgical pain treatment in adults addresses care related to postsurgical pain treatment in adults, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Potassium Carbonate Poisoning**

Potassium carbonate poisoning involves toxic or environmental exposure to potassium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Potassium Hydroxide Poisoning**

Potassium hydroxide poisoning involves toxic or environmental exposure to potassium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Potassium In Diet**

Potassium in diet addresses care related to potassium in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Potassium Test**

Potassium test examines potassium test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Potassium Urine Test**

Potassium urine test examines potassium urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Potato Plant Poisoning - Green Tubers And Sprouts**

Potato plant poisoning - green tubers and sprouts involves toxic or environmental exposure to potato plant poisoning - green tubers and sprouts; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Potbellies And Toddlers**

A rounded abdomen in a toddler is often normal body shape or posture, but persistent distension with pain, vomiting, poor growth, constipation, or a mass needs medical assessment.

### **Potential Acuity Meter**

Potential acuity meter is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

### **PPD Skin Test**

PPD skin test examines ppd skin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pre-Existing Diabetes And Pregnancy**

Pre-existing type 1 or type 2 diabetes during pregnancy increases risks to parent and fetus, so glucose control, medicines, fetal growth, blood pressure, and eye and kidney health need coordinated care.

### **Preeclampsia - Self-Care**

A medical procedure, treatment, device, or care topic related to preeclampsia - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Pregnancy - Health Risks**

Health risks in pregnancy vary with medical conditions, medicines, infections, age, exposures, and obstetric history; prenatal assessment identifies preventable complications and needed monitoring.

---

## **Pregnancy - Identifying Fertile Days**

Fertile days are the interval around ovulation when intercourse can lead to pregnancy; cycle timing, cervical mucus, basal temperature, and ovulation tests can provide estimates but are imperfect.

## **Pregnancy And Herpes**

Genital herpes during pregnancy can affect delivery planning and rarely infect the newborn; antiviral treatment and examination of lesions near labor help reduce transmission risk.

## **Pregnancy And The Flu**

Influenza during pregnancy can be more severe and affect the fetus; vaccination is recommended in pregnancy, and suspected illness should receive prompt clinical advice about antiviral treatment.

## **Pregnancy And Travel**

Travel during pregnancy depends on gestational age, health, destination infections, transport, and access to care; prevention includes vaccines as appropriate, food and water safety, movement, and medical planning.

## **Pregnancy And Work**

Work during pregnancy is usually possible but may require adjustments for heavy lifting, prolonged standing, heat, chemicals, radiation, infection, night work, or other occupational hazards.

## **Pregnancy Care**

Pregnancy care addresses care related to pregnancy care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Premenstrual Breast Changes**

Premenstrual breast changes include cyclic fullness, tenderness, swelling, or lumpiness caused by hormonal variation; a persistent one-sided mass, skin change, or bloody discharge needs evaluation.

## **Premenstrual Syndrome - Self-Care**

A medical procedure, treatment, device, or care topic related to premenstrual syndrome - self-care;

indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Prenatal Care In Your First Trimester**

Prenatal care in your first trimester addresses care related to prenatal care in your first trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Prenatal Care In Your Second Trimester**

Prenatal care in your second trimester addresses care related to prenatal care in your second trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Prenatal Care In Your Third Trimester**

Prenatal care in your third trimester addresses care related to prenatal care in your third trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Preparing Children For Pregnancy And A New Baby**

Preparing a child for a new baby involves age-appropriate explanation, routine and attention planning, safe involvement, reassurance, and support for emotional or behavioral changes.

## **Preparing For Surgery When You Have Diabetes**

A medical procedure, treatment, device, or care topic related to preparing for surgery when you have diabetes; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Preschooler Development**

Preschooler development includes rapid gains in language, motor skills, thinking, self-care, play, and social-emotional regulation; milestones vary, but loss of skills warrants assessment.

## **Preschooler Test Or Procedure Preparation**

Preschooler test or procedure preparation examines

---

preschooler test or procedure preparation; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pressure Injuries - What To Ask Your Doctor**

Pressure injuries - what to ask your doctor examines pressure injuries - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Preventing Falls**

Fall prevention combines strength and balance activity, vision and medication review, safe footwear, adequate lighting, handrails, removal of hazards, and appropriate assistive devices.

### **Preventing Falls - What To Ask Your Doctor**

Preventing falls - what to ask your doctor examines preventing falls - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Preventing Food Poisoning**

Preventing food poisoning involves toxic or environmental exposure to preventing food poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Preventing Head Injuries In Children**

Children's head injuries can be reduced with age-appropriate car seats, helmets, supervision, safe play areas, window and stair protection, and prevention of abusive shaking or impact.

### **Preventing Hepatitis A**

Hepatitis A prevention relies on vaccination, hand-washing, safe food and water, sanitation, and post-exposure advice when close contact with an infected person occurs.

### **Preventing Hepatitis B Or C**

Hepatitis B prevention includes vaccination and avoiding blood or sexual exposure; hepatitis C

prevention centers on sterile injection equipment, screened blood, and testing and treatment of infection.

### **Preventing Infections When Visiting Someone In The Hospital**

Preventing infections when visiting someone in the hospital examines preventing infections when visiting someone in the hospital; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Preventing Pressure Injuries**

Pressure-injury prevention uses regular repositioning, skin inspection, moisture control, nutrition, pressure-redistributing surfaces, and minimizing friction and shear in people with limited mobility.

### **Preventing Stroke**

Stroke prevention includes controlling blood pressure, diabetes and cholesterol, avoiding tobacco, treating atrial fibrillation when indicated, exercising, and addressing other vascular risks.

### **Preventive Health Care**

Preventive health care addresses care related to preventive health care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Primary Alveolar Hypoventilation**

A rare disorder of inadequate automatic breathing, often related to PHOX2B or other autonomic-control abnormalities, causing elevated carbon dioxide especially during sleep.

### **Primary Amyloidosis**

Primary amyloidosis, usually AL amyloidosis, results from abnormal plasma-cell proteins depositing as amyloid in organs such as the heart, kidneys, nerves, or gastrointestinal tract.

### **Primary And Secondary Hyperaldosteronism**

Excess aldosterone production, from an adrenal

---

source in primary disease or from increased renin stimulation in secondary disease, causing hypertension, sodium retention, and sometimes low potassium.

### **Primary Lymphoma Of The Brain**

Primary central-nervous-system lymphoma is a lymphoma arising in the brain, spinal cord, eyes, or surrounding fluid without systemic disease at diagnosis.

### **Problems Sleeping During Pregnancy**

Sleep problems during pregnancy may result from discomfort, reflux, urination, anxiety, hormonal change, or sleep apnea; safe sleep habits and clinician-guided treatment are important.

### **Prochlorperazine Overdose**

Prochlorperazine overdose involves toxic or environmental exposure to prochlorperazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Prognathism**

Forward projection of the upper or lower jaw relative to the facial skeleton, affecting bite, appearance, chewing, speech, and sometimes airway function.

### **Progressive Multifocal Leukoencephalopathy**

Progressive multifocal leukoencephalopathy is a potentially fatal demyelinating brain infection caused by JC virus reactivation during significant immune suppression.

### **Prolactin Blood Test**

Prolactin blood test examines prolactin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Promethazine Overdose**

Promethazine overdose involves toxic or environmental exposure to promethazine overdose; dose, route, timing, symptoms, and organ involvement

determine urgency and treatment.

### **Propane Poisoning**

Propane poisoning involves toxic or environmental exposure to propane poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Propyl Alcohol**

Propyl alcohols are flammable solvents; ingestion or substantial exposure can irritate tissues and depress the central nervous system, with toxicity depending on the isomer and dose.

### **Prostate Brachytherapy**

A medical procedure, treatment, device, or care topic related to prostate brachytherapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Prostate Brachytherapy - Discharge**

A medical procedure, treatment, device, or care topic related to prostate brachytherapy - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Prostate Cancer - Resources**

Prostate cancer - resources addresses care related to prostate cancer - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Prostate Cancer Screening**

Prostate cancer screening addresses care related to prostate cancer screening, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Prostate Cancer Staging**

A biomedical term referring to prostate cancer staging; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

---

### **Prostate Cancer Treatment**

A medical procedure, treatment, device, or care topic related to prostate cancer treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Prostate Radiation - Discharge**

A medical procedure, treatment, device, or care topic related to prostate radiation - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Prostate Resection - Minimally Invasive**

Prostate resection - minimally invasive examines prostate resection - minimally invasive; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prostate Resection - Minimally Invasive - Discharge**

Prostate resection - minimally invasive - discharge examines prostate resection - minimally invasive - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prostate-Specific Antigen (PSA) Blood Test**

Prostate-specific antigen (PSA) blood test examines prostate-specific antigen (psa) blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prostatitis - Bacterial**

Prostatitis - bacterial examines prostatitis - bacterial; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prostatitis - Bacterial - Self-Care**

Prostatitis - bacterial - self-care examines prostatitis - bacterial - self-care; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prostatitis - Nonbacterial**

Prostatitis - nonbacterial examines prostatitis - nonbacterial; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Prosthetic Graft**

A prosthetic graft is an artificial tube or patch used to replace or bypass a damaged blood vessel or other tubular structure; infection and thrombosis are important risks.

### **Protecting Yourself From Cancer Scams**

Protecting yourself from cancer scams examines protecting yourself from cancer scams; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Protein C Blood Test**

Protein C blood test examines protein c blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Protein Electrophoresis - Serum**

Protein electrophoresis - serum examines protein electrophoresis - serum; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Protein In Diet**

Protein in diet addresses care related to protein in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Protein S Blood Test**

Protein S blood test examines protein s blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Protein-Losing Enteropathy**

A biomedical term referring to protein-losing enteropathy; its classification, distinguishing features, and medical significance depend on the clinical or

---

biologic context.

### **Prothrombin Deficiency**

Prothrombin deficiency is a rare bleeding disorder caused by insufficient or abnormal clotting factor II, leading to prolonged bleeding of variable severity.

### **Proton Pump Inhibitors**

Proton pump inhibitors suppress gastric acid secretion and treat reflux, ulcers, and other acid-related disorders; prolonged or inappropriate use should be periodically reviewed.

### **Protuberance**

A protuberance is a structure or area that projects outward from a surface, such as a normal bone prominence, swelling, or mass.

### **Provisional Tic Disorder**

A clinical condition involving provisional Tic Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Proximal Renal Tubular Acidosis**

A biological substance or process involving proximal Renal Tubular Acidosis; its medical significance depends on its function, location, amount, and clinical context.

### **Psoriasis - Resources**

Psoriasis - resources addresses care related to psoriasis - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Ptosis - Infants And Children**

Ptosis in an infant or child is drooping of the upper eyelid, which may obstruct vision or cause amblyopia and can reflect congenital, muscular, nerve, or other disease.

### **Puberty In Boys**

Puberty in boys is the hormone-driven development of testes, penis, body hair, voice, muscle, and fertility, usually progressing through predictable physical

stages.

### **Puberty In Girls**

Puberty in girls is the hormone-driven development of breasts, body hair, growth, menstrual cycles, and reproductive maturity, usually progressing through predictable stages.

### **Pubic Lice**

Pubic lice are parasitic insects infesting coarse body hair, causing intense itching and visible nits; treatment and assessment of close or sexual contacts are needed.

### **Pulling A Patient Up In Bed**

A safe repositioning technique using adequate staff, friction-reducing equipment, and coordinated movement to move a patient toward the head of the bed while preventing falls, shear, and staff injury.

### **Pulmonary Actinomycosis**

Pulmonary actinomycosis examines pulmonary actinomycosis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pulmonary Aspergilloma**

Pulmonary aspergilloma is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evidence of invasive or superficial infection.

### **Pulmonary Embolus**

A biomedical term referring to pulmonary embolus; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Hypertension - At Home**

Pulmonary hypertension - at home addresses care related to pulmonary hypertension - at home, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

---

### **Pulmonary Nocardiosis**

A biomedical term referring to pulmonary nocardiosis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Veno-Occlusive Disease**

A biomedical term referring to pulmonary veno-occlusive disease; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Pulmonary Ventilation/Perfusion Scan**

Pulmonary ventilation/perfusion scan examines pulmonary ventilation/perfusion scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pulmonic Valve Stenosis**

Pulmonic valve stenosis is narrowing of the valve between the right ventricle and pulmonary artery, creating outflow obstruction and sometimes right-heart strain.

### **Pulse - Bounding**

A bounding pulse feels unusually strong or full and can occur with fever, anemia, hyperthyroidism, exercise, anxiety, aortic regurgitation, or high-output states.

### **Pupil - White**

A white pupil, or leukocoria, may result from reflection, cataract, retinal disease, infection, or retinoblastoma and requires prompt eye assessment, especially in a child.

### **Pustules**

Pustules are small raised skin lesions filled with pus, occurring in acne, folliculitis, infections, inflammatory disorders, or drug reactions.

### **Pyloric Stenosis In Infants**

Pyloric stenosis in infants examines pyloric stenosis in infants; interpretation depends on the specimen or body region, test method, reference range, and

clinical question.

### **Pyogenic Liver Abscess**

A pyogenic liver abscess is a pus-filled infection in the liver, usually from biliary, abdominal, or bloodstream spread, causing fever, pain, and possible sepsis.

### **Pyruvate Kinase Blood Test**

Pyruvate kinase blood test examines pyruvate kinase blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Pagets Disease (Paget's Disease)**

Alternate index label for Paget's Disease.

### **Pain Cancer (Cancer Pain)**

Alternate index label for Cancer Pain.

### **Pain Elbow (Elbow Pain)**

Alternate index label for Elbow Pain.

### **Pain Gallbladder (Gallbladder Pain (Gall Bladder Pain))**

Alternate index label for Gallbladder Pain (Gall Bladder Pain).

### **Pain Heel (Heel Spurs)**

Alternate index label for Heel Spurs.

### **Pain Kidney (Kidney Pain)**

Alternate index label for Kidney Pain.

### **Pain Knee (Knee Pain Facts)**

Alternate index label for Knee Pain Facts.

### **Pain Lower Right Abdomen (Appendicitis)**

Alternate index label for Appendicitis.

### **Pain Management: Neuropathic Pain**

Neuropathic pain arises from injury or dysfunction of nerves and may feel burning, electric, shooting,

---

numb, or hypersensitive. Treatment can include the cause-specific therapy, physical and psychological rehabilitation, topical agents, anticonvulsants, antidepressants, or specialist procedures.

**Synonyms:**

Neuropathic Pain (Pain Management: Neuropathic Pain)

**Pain Nerve (Neuropathic Pain (Nerve Pain))**

Alternate index label for Neuropathic Pain (Nerve Pain).

**Pain Scrotum (Testicular Disorders)**

Alternate index label for Testicular Disorders.

**Pain Stomach (Abdominal Pain (Causes, Remedies, Treatment))**

Alternate index label for Abdominal Pain (Causes, Remedies, Treatment).

**Pain Tailbone (Coccydynia)**

Alternate index label for Coccydynia.

**Pain Tooth (Toothache Overview)**

Alternate index label for Toothache Overview.

**Pain Vaginal (Vaginal Pain (Vulvodynia))**

Alternate index label for Vaginal Pain (Vulvodynia).

**Pain Whiplash (Whiplash)**

Alternate index label for Whiplash.

**Palm Sweating Excessive (Hyperhidrosis)**

Alternate index label for Hyperhidrosis.

**Palpitations Overview**

Palpitations are awareness of a racing, pounding, fluttering, or skipped heartbeat. They may result from normal stress, stimulants, anemia, thyroid disease, medicines, or arrhythmia; fainting, chest pain, breathlessness, or sustained rapid rhythm requires urgent assessment.

**Palsy Cerebral (Cerebral Palsy)**

Alternate index label for Cerebral Palsy.

**PAN (Polyarteritis Nodosa)**

Alternate index label for Polyarteritis Nodosa.

**Pancreas Inflammation (Pancreatitis)**

Alternate index label for Pancreatitis.

**Pancreas Inflammatory Cysts (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Intraductal Papillary Mucinous Neoplasm (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas IPMN (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Mucinous Cyst Adenomas (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Non-Inflammatory Cysts (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Pseudocysts (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Serous Cyst Adenomas (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Pancreas Solid Pseudopapillary Tumor (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

**Panniculitis Idiopathic Nodular (Weber-Christian Disease)**

Alternate index label for Weber-Christian Disease.

**Parenchymal Diffuse Lung Disease**

---

**(Interstitial Lung Disease (Interstitial Pneumonia))**

Alternate index label for Interstitial Lung Disease (Interstitial Pneumonia).

**Parkinsons Disease (Parkinson's Disease)**

Alternate index label for Parkinson's Disease.

**Parkinsons Disease Diet (Parkinson's Disease: Eating Right)**

Alternate index label for Parkinson's Disease: Eating Right.

**Parotitis (Mumps)**

Alternate index label for Mumps.

**Paroxysmal Nocturnal Hemoglobinuria (Paroxysmal Nocturnal Hemoglobinuria PNH)**

Alternate index label for Paroxysmal Nocturnal Hemoglobinuria PNH.

**Patchy Hair Loss (Alopecia Areata)**

Alternate index label for Alopecia Areata.

**PBC (Primary Biliary Cirrhosis (PBC))**

Alternate index label for Primary Biliary Cirrhosis (PBC).

**PCOS (Polycystic Ovary)**

Alternate index label for Polycystic Ovary.

**PDB (Paget's Disease)**

Alternate index label for Paget's Disease.

**Pemphigoid Bullous (Bullous Pemphigoid)**

Alternate index label for Bullous Pemphigoid.

**Penile Fibrosis (Peyronie's Disease (Curvature Of The Penis))**

Alternate index label for Peyronie's Disease (Curvature of the Penis).

**Penis Disorder (Priapism (Penis Disorder))**

Alternate index label for Priapism (Penis Disorder).

**Penis Disorder Balantis (Balanitis (Penis Disorder))**

Alternate index label for Balanitis (Penis Disorder).

**Pericardial Disease (Pericarditis)**

Alternate index label for Pericarditis.

**Perichondrial Hematoma (Cauliflower Ear)**

Alternate index label for Cauliflower Ear.

**Period Vs. Spotting (Spotting Vs. Period Differences)**

Alternate index label for Spotting vs. Period Differences.

**Periodic Paralysis Syndrome**

Periodic paralysis syndromes are rare inherited or acquired disorders causing episodic muscle weakness associated with abnormal potassium handling or thyroid disease. Attacks may follow rest after exercise, meals, or stress; ECG, potassium testing, and genetic or endocrine evaluation guide care.

**Periodontitis (Gum Disease)**

Alternate index label for Gum Disease.

**Peripheral Neuritis (Peripheral Neuropathy)**

Alternate index label for Peripheral Neuropathy.

**Peripheral Neuropathy Diabetic (Diabetic Neuropathy)**

Alternate index label for Diabetic Neuropathy.

**Personality Disorder Antisocial (Antisocial Personality Disorder)**

Alternate index label for Antisocial Personality Disorder.

---

### **Pes Planus (Flatfoot (Pes Planus))**

Alternate index label for Flatfoot (Pes Planus).

### **Peyronie's Disease (Curvature Of The Penis)**

Alternate index label for Curvature of the Penis.

### **PH (Pulmonary Hypertension)**

Alternate index label for Pulmonary Hypertension.

### **Pharyngit Contagious (Is Sore Throat Pharyngitis Contagious)**

Alternate index label for Is Sore Throat Pharyngitis Contagious.

### **Pharyngitis (Sore Throat (Pharyngitis))**

Alternate index label for Sore Throat (Pharyngitis).

### **Phimosis And Paraphimosis (Penis Disorders)**

Alternate index label for Penis Disorders.

### **Phlebitis And Thrombophlebitis**

Phlebitis is inflammation of a vein, while thrombophlebitis includes a clot within the inflamed vein. Superficial disease causes localized pain and redness; deep-vein thrombosis can embolize to the lungs and is suspected with limb swelling, pain, or breathlessness.

### **Piles (Hemorrhoids (Piles))**

Alternate index label for Hemorrhoids (Piles).

### **Pilonidal Sinus (Pilonidal Cyst)**

Alternate index label for Pilonidal Cyst.

### **Pimples (Acne)**

Alternate index label for Acne.

### **Pinched Nerve Overview**

A pinched nerve is compression or irritation of a nerve root or peripheral nerve, causing pain, tingling, numbness, weakness, or radiating symptoms. Causes include disc disease, narrowing, injury, or en-

trapment; progressive weakness or bowel or bladder change is urgent.

#### **Synonyms:**

Nerve Pinched (Pinched Nerve Overview)

### **Pinkeye Contagious (Is Pinkeye Contagious)**

Alternate index label for Is Pinkeye Contagious.

### **Pinky Broken Finger (Broken Finger)**

Alternate index label for Broken Finger.

### **Pinworm Infection**

Pinworm infection is an intestinal infestation by *Enterobius vermicularis*, causing nighttime anal itching, disturbed sleep, and sometimes abdominal or genital irritation. Treatment of the person and close household contacts, hygiene, and repeat dosing reduce reinfection.

#### **Synonyms:**

Infection Pinworms (Pinworm Infection) Worms Pinworms (Pinworm Infection)

### **PiriformSyndrome (Piriformis Syndrome)**

Alternate index label for Piriformis Syndrome.

### **Pituitary Tumor (Prolactinoma)**

Alternate index label for Prolactinoma.

### **Pityriasis Rosea Gibert (Pityriasis Rosea)**

Alternate index label for Pityriasis Rosea.

### **Plague (Plague Facts)**

Alternate index label for Plague Facts.

### **Plague Facts**

Plague is an infection caused by *Yersinia pestis*, usually acquired from infected flea exposure or animals. Bubonic disease causes painful lymph nodes, while pneumonic disease can spread through respiratory droplets; prompt antibiotics and public-health action are essential.

#### **Synonyms:**

Plague (Plague Facts)

---

**Plasmodium Infection (Malaria Facts)**

Alternate index label for Malaria Facts.

**Platelet Count Low (Thrombocytopenia (Low Platelet Count))**

Alternate index label for Thrombocytopenia (Low Platelet Count).

**Platelet Disorder - Immune Thrombocytopenia (ITP)**

Alternate index label for ITP.

**Pleural Effusion (Fluid In The Chest Or On Lung)**

Alternate index label for Fluid In the Chest or On Lung.

**Pleurisy Contagious (Is Pleurisy Contagious)**

Alternate index label for Is Pleurisy Contagious.

**Pleuritis (Pleurisy)**

Alternate index label for Pleurisy.

**PM (Polymyositis)**

Alternate index label for Polymyositis.

**PMDD (Premenstrual Dysphoric Disorder (PMDD))**

Alternate index label for Premenstrual Dysphoric Disorder (PMDD).

**PMR (Polymyalgia Rheumatica)**

Alternate index label for Polymyalgia Rheumatica.

**Poison Ivy, Oak, And Sumac**

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy streaks or patches of redness, blisters, and swelling. Washing exposed skin and clothing promptly helps; breathing difficulty or facial swelling is an emergency.

**Synonyms:**

Allergy Plant Contact (Poison Ivy, Oak, And Sumac)

**Poisoning Arsenic (Arsenic Poisoning)**

Alternate index label for Arsenic Poisoning.

**Poisoning Ciguatera (Ciguatera Poisoning)**

Alternate index label for Ciguatera Poisoning.

**Poisoning Thallium (Thallium)**

Alternate index label for Thallium.

**Polio Facts**

Polio is infection with poliovirus, which may be asymptomatic or cause meningitis, muscle weakness, paralysis, and respiratory failure. Vaccination is highly effective prevention; suspected disease requires urgent medical and public-health evaluation.

**Polycystic Ovary**

Polycystic ovaries contain many small follicles and may occur as a normal variant or with polycystic ovary syndrome. PCOS additionally involves ovulatory dysfunction, androgen excess, irregular periods, infertility, acne, or metabolic risk and requires clinical—not ultrasound alone—diagnosis.

**Synonyms:**

PCOS (Polycystic Ovary)

**Polycythemia (High Red Blood Cell Count)**

Alternate index label for High Red Blood Cell Count.

**Polyps Colon (Colon Polyps)**

Alternate index label for Colon Polyps.

**Polyps Rectal (Colon Polyps)**

Alternate index label for Colon Polyps.

**Polyps Uterus (Uterine Fibroids)**

Alternate index label for Uterine Fibroids.

**Popcorn Lung Bronchiolitis Obliterans**

Bronchiolitis obliterans is irreversible scarring and narrowing of small airways that can follow toxic inhalation, infection, transplantation, or autoimmune

---

disease. It causes persistent cough and breathlessness with obstructive lung testing; exposure avoidance and specialist care are important.

### **Popliteal Cyst (Baker Cyst)**

Alternate index label for Baker Cyst.

### **Post-Nasal Drip (Chronic Rhinitis)**

Alternate index label for Chronic Rhinitis.

### **Pot Marijuana (Marijuana)**

Alternate index label for Marijuana.

### **Powassan Virus Disease**

Powassan virus disease is a rare tick-borne infection that can cause fever, headache, vomiting, confusion, seizures, meningitis, or encephalitis. Treatment is supportive, and prevention relies on avoiding ticks and removing them promptly.

### **PPD (Postpartum Depression)**

Alternate index label for Postpartum Depression.

### **Pregnancy Diet (Pregnancy: Your Guide To Eating Right)**

Alternate index label for Pregnancy: Your Guide to Eating Right.

### **Pregnancy Ectopic (Ectopic Pregnancy)**

Alternate index label for Ectopic Pregnancy.

### **Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)**

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

### **Pregnancy Planning (Preparing For Pregnancy)**

Alternate index label for Preparing for Pregnancy.

### **Pregnancy Tubal (Ectopic Pregnancy)**

Alternate index label for Ectopic Pregnancy.

### **Pregnancy Vs. PMS (PMS Vs. Pregnancy Differences And Similarities)**

Alternate index label for PMS vs. Pregnancy Differences and Similarities.

### **Pregnancy: Bleeding During The First Trimester**

First-trimester bleeding may occur with implantation, cervical changes, miscarriage, ectopic pregnancy, or other causes. Assessment uses symptoms, examination, serial pregnancy hormone testing, and ultrasound; heavy bleeding, severe pain, faintness, or shoulder pain is urgent.

### **Pregnancy: Pain Relief Options For Birth**

Labor pain relief may include breathing and movement, water, massage, nitrous oxide, intravenous medicines, epidural analgesia, or spinal anesthesia. Choice depends on labor stage, maternal and fetal status, contraindications, availability, and informed preference.

### **Pregnancy: Placenta Previa**

Placenta previa occurs when the placenta lies over or near the cervical opening and can cause painless bright-red bleeding, especially later in pregnancy. Digital vaginal examination is avoided until location is known; recurrent bleeding requires obstetric planning and sometimes cesarean delivery.

### **Pregnancy: Preeclampsia And Eclampsia**

Preeclampsia is new hypertension during pregnancy with proteinuria or organ dysfunction; eclampsia is the occurrence of seizures. Severe headache, visual symptoms, upper-abdominal pain, shortness of breath, or seizure requires emergency obstetric treatment.

#### **Synonyms:**

Eclampsia Pregnancy (Pregnancy: Preeclampsia And Eclampsia) Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)

### **Pregnant (Pregnancy Planning (Preparing For Pregnancy))**

Alternate index label for Pregnancy Planning (Preparing for Pregnancy).

---

### **Premature Menopause (Medical Procedural Causes)**

Alternate index label for Medical Procedural Causes.

### **Premenstrual Syndrome (Menstrual Cramps And PMS Medication Guide)**

Alternate index label for Menstrual Cramps and PMS Medication Guide.

### **Prevention IBS (Irritable Bowel Syndrome (IBS) Triggers, Prevention)**

Alternate index label for Irritable Bowel Syndrome (IBS) Triggers, Prevention.

### **Priapism (Penis Disorder)**

Alternate index label for Penis Disorder.

### **Primary Biliary Cirrhosis (PBC)**

Alternate index label for PBC.

### **Primary Biliary Cirrhosis Treatment (PBC)**

Alternate index label for PBC.

### **Primary Immunodeficiency Disease PID**

Primary immunodeficiency diseases are inherited disorders of immune development or function that cause unusual, severe, recurrent, or persistent infections and sometimes autoimmunity or inflammation. Evaluation may include blood counts, immunoglobulins, functional tests, and genetic testing.

#### **Synonyms:**

Deficiency Primary Immunodeficiency (Primary Immunodeficiency Disease PID)

### **Primary Sclerosing Cholangitis (PSC)**

Alternate index label for PSC.

### **Primary Vs. Secondary Progressive MS**

Primary progressive multiple sclerosis worsens from onset without clear early relapses, while secondary progressive MS follows an earlier relapsing course and later develops steady progression. Disability, MRI activity, relapses, and treatment response

guide management.

### **Profunda Miliaria (Heat Rash)**

Alternate index label for Heat Rash.

### **Prostate Inflammation (Prostatitis (Inflammation Of The Prostate Gland))**

Alternate index label for Prostatitis (Inflammation of the Prostate Gland).

### **Prostatic Carcinoma (Prostate Cancer)**

Alternate index label for Prostate Cancer.

### **Prostatitis (Inflammation Of The Prostate Gland)**

Alternate index label for Inflammation of the Prostate Gland.

### **Prostatitis Vs BPH Enlarged Prostate Gland**

Prostatitis is inflammation or infection of the prostate and may cause pelvic pain, painful urination, fever, or urinary symptoms. Benign prostatic hyperplasia is age-related prostate enlargement causing weak stream, hesitancy, and incomplete emptying without infection.

### **Proximal Neuropathy Diabetic (Diabetic Neuropathy)**

Alternate index label for Diabetic Neuropathy.

### **Pruritus (Itch)**

Alternate index label for Itch.

### **PSC (Primary Sclerosing Cholangitis (PSC))**

Alternate index label for Primary Sclerosing Cholangitis (PSC).

### **Psoriasis Of The Scalp (Scalp Psoriasis)**

Alternate index label for Scalp Psoriasis.

### **PSVT (Paroxysmal Supraventricular Tachycardia (PSVT))**

Alternate index label for Paroxysmal Supraventric-

---

ular Tachycardia (PSVT).

### **Psychosis ICU (ICU Psychosis)**

Alternate index label for ICU Psychosis.

### **Psychotic Disorder Brief (Brief Psychotic Disorder)**

Alternate index label for Brief Psychotic Disorder.

### **Psychotic Disorders**

Psychotic disorders involve impaired reality testing, such as hallucinations, delusions, disorganized thought, or marked behavioral change. Causes include schizophrenia-spectrum illness, mood disorders, substances, medicines, neurologic disease, and medical illness; new psychosis requires prompt assessment and safety planning.

### **PTSD (Posttraumatic Stress Disorder)**

Alternate index label for Posttraumatic Stress Disorder.

### **Pugilistica Dementia (Dementia)**

Alternate index label for Dementia.

### **Pulled Hamstring (Hamstring Injury)**

Alternate index label for Hamstring Injury.

### **Pulmonary FibrosisIdiopathic (Idiopathic Pulmonary Fibrosis (IPF))**

Alternate index label for Idiopathic Pulmonary Fibrosis (IPF).

### **PVC (Premature Ventricular Contractions)**

Alternate index label for Premature Ventricular Contractions.

### **PVD (Peripheral Vascular Disease)**

Alternate index label for Peripheral Vascular Disease.

### **PXE (Pseudoxanthoma Elasticum)**

Alternate index label for Pseudoxanthoma Elasticum.

### **P Arm Of A Chromosome**

The short arm of a chromosome, designated p for petit, opposite the longer q arm; cytogenetic locations are written with p-band coordinates.

### **P.C.**

P.C. is an abbreviation whose meaning depends on context; in medication instructions it commonly means after meals, while other clinical uses must be specified.

### **P.O.**

P.O. is the medication abbreviation for by mouth or orally; clear modern instructions should spell this out to prevent route errors.

### **P.R.N.**

P.R.N. means as needed, indicating that a medicine or intervention is used only when specified symptoms or circumstances occur within prescribed limits.

### **PA (Physician Assistant)**

A physician assistant is a licensed healthcare professional who evaluates patients, diagnoses and treats illness, prescribes where authorized, and works within a supervising or collaborative practice model.

### **PA X-Ray**

A PA X-ray is a posteroanterior radiograph, commonly of the chest, taken with the beam traveling from back to front to reduce heart magnification.

### **Pachy- (Prefix)**

A word-forming prefix meaning thick or thickness, as in pachyonychia, pachyderma, and pachycephaly.

### **Pachyderma**

Abnormal thickening and coarsening of the skin, which may occur with chronic inflammation, lymphedema, endocrine disease, or pachydermoperiostosis.

### **Paget Disease**

A clinical condition involving paget Disease; its

---

causes, manifestations, severity, and complications guide diagnosis and management.

### **Pain Unit**

A clinical service specializing in assessment and treatment of acute, chronic, cancer, neuropathic, or procedural pain using medicines, procedures, rehabilitation, and psychological care.

### **Painful Urination**

Dysuria, or pain, burning, or discomfort during urination, commonly caused by urinary infection, urethritis, stones, irritation, or inflammatory genital disease.

### **Paleostriatum**

The paleostriatum is a historical or comparative-anatomy term for a forebrain basal-ganglia region involved in motor control, corresponding in part to mammalian pallidal structures.

### **Palindrome**

A palindrome is a word or sequence that reads the same forward and backward; in genetics, palindromic DNA sequences can have specialized structural or recognition roles.

### **Palliative Treatment**

Palliative treatment is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Palmitate**

Palmitate is the salt or ester form of palmitic acid and participates in fatty-acid metabolism, lipid storage, and protein modification.

### **Palpitations**

The conscious sensation of the heartbeat as pounding, racing, fluttering, or skipping, caused by normal beats, arrhythmias, stimulants, anxiety, anemia, thyroid disease, or other conditions.

### **Panic**

Panic is sudden intense fear or distress with autonomic symptoms such as racing heart, sweating, trembling, breathlessness, or a sense of impending danger.

### **Panniculus**

A panniculus is a fold or layer of subcutaneous fatty tissue, especially the lower abdominal apron that may overhang the pubic region.

### **PAP**

PAP is an abbreviation with context-dependent meanings, including Papanicolaou testing, pulmonary alveolar proteinosis, or prostatic acid phosphatase; the full term should be specified.

### **Para**

Para- is a prefix meaning beside, beyond, abnormal, or related to childbirth depending on the word; its exact meaning must be read in context.

### **Para- (Prefix)**

Para- is a medical prefix whose meaning varies by use, including beside, beyond, abnormal, or the number of births reaching a specified gestational age.

### **Parainfectious**

Parainfectious describes a condition occurring during or around an infection, often from an immune response rather than direct invasion by the infectious organism.

### **Paralysis, Stomach**

Stomach paralysis, or gastroparesis, is delayed gastric emptying without a mechanical blockage, causing early fullness, nausea, vomiting, bloating, and variable glucose control.

### **Parasitic**

Parasitic means relating to an organism that lives in or on a host and obtains nutrients at the host's expense, sometimes causing disease.

---

### **Parasitic Worm**

A parasitic worm is a helminth that lives in a host; human infection may involve the intestine, blood, lymphatics, lungs, liver, or tissues.

### **Parasitosis**

Infestation or infection by a parasite; the term may describe a confirmed parasitic disease or, in delusional parasitosis, a fixed false belief of infestation without evidence.

### **Paraskevidekatriaphobia**

An excessive fear of Friday the 13th, a specific situational phobia when it causes marked distress, avoidance, or impairment.

### **Parasomnia**

A parasomnia is an undesirable movement, behavior, emotion, or experience occurring during sleep or transitions between sleep and wakefulness.

### **Parasuicide**

Parasuicide is an older term for a suicide attempt or intentional self-harm without fatal outcome; current assessment focuses on self-harm, intent, safety, and urgent support.

### **Parathyroid Gland**

Parathyroid gland refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Parenchymal**

Parenchymal means relating to the functional cells of an organ, distinguished from its supporting connective tissue, vessels, and framework.

### **Parentectomy**

Parentectomy is surgical removal of a parent or source structure, such as the parent vessel or lesion, and its precise meaning depends on the procedure.

### **Parenteral**

Parenteral means delivered by a route other than the gastrointestinal tract, commonly by injection

or infusion such as intravenous, intramuscular, or subcutaneous administration.

### **Parietal Pericardium**

A biomedical term referring to parietal pericardium; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Paroxysmal Atrial Tachycardia**

Sudden episodes of rapid, regular atrial rhythm that start and stop abruptly, often producing palpitations, lightheadedness, chest discomfort, or shortness of breath.

### **Partial Seizure**

A seizure beginning in a localized region of one cerebral hemisphere, now called a focal seizure, with symptoms determined by the involved network and awareness either preserved or impaired.

### **Parturition**

The process of childbirth, including cervical ripening, labor contractions, delivery of the fetus, and expulsion of the placenta.

### **PAS**

PAS is an abbreviation that may mean periodic-acid-Schiff staining, para-aminosalicylic acid, or pulmonary-artery systolic pressure; context determines the meaning.

### **Passive Exercise**

A medical procedure, treatment, device, or care topic related to passive exercise; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **PAT**

PAT is a context-dependent abbreviation that may refer to paroxysmal atrial tachycardia, a rapid rhythm beginning in the atria, or another clinical term.

---

### **Patellofemoral Syndrome (PFS)**

A clinical condition involving patellofemoral Syndrome (PFS); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Patent (Adjective)**

Patent means open, unobstructed, or functioning, as in a patent airway, vessel, duct, or congenital fetal channel.

### **Patent (Noun)**

A patent is a legal grant giving an inventor defined rights over an invention for a limited period, subject to applicable law.

### **Patho-**

The term Patho- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Pathogenic**

Pathogenic means capable of causing disease in a susceptible host; pathogenicity depends on the organism or factor, dose, route, and host defenses.

### **Pathologic**

Pathologic means related to disease or an abnormal structural or functional change, rather than normal anatomy or physiology.

### **Pathy**

A suffix meaning disease, disorder, or abnormality, as in neuropathy, cardiomyopathy, and nephropathy.

### **Patient Autonomy**

A patient's right and capacity to make informed voluntary decisions about healthcare after receiving understandable information about options, benefits, risks, and alternatives.

### **Pavlov Pouch**

A Pavlov pouch is a surgically created isolated stomach pouch used in experimental physiology to study gastric secretion and neural control.

### **PCA**

PCA is a context-dependent abbreviation, commonly meaning patient-controlled analgesia, in which a patient activates prescribed doses from an infusion device.

### **PCBs**

PCBs, or polychlorinated biphenyls, are persistent industrial chemicals that accumulate in tissues and can affect the nervous, endocrine, immune, and reproductive systems.

### **PCO**

PCO may mean polycystic ovaries or posterior capsular opacification; the intended condition depends on the clinical context.

### **PCO Disease**

A clinical condition involving pCO Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **PCT**

PCT is a context-dependent abbreviation that may mean procalcitonin, porphyria cutanea tarda, or patient-care technician; the full term should be specified.

### **PDR**

PDR commonly means Physicians' Desk Reference, a drug-information reference, but the abbreviation has other uses and should be interpreted in context.

### **Pediatric**

Pediatric means relating to the medical care of infants, children, and adolescents, whose anatomy, physiology, development, and medication needs differ from adults.

### **Pedophobia**

An excessive or persistent fear of children or infants that causes distress, avoidance, or impairment and may be classified as a specific phobia when clinically significant.

---

## PEEP

PEEP, or positive end-expiratory pressure, is pressure maintained in the airways at the end of exhalation during mechanical ventilation to prevent alveolar collapse.

## Peeping Tom

Peeping tom is a nonclinical term for a person who secretly observes others, often for sexual gratification; assessment focuses on consent, harm, and safety.

## PEF

PEF, or peak expiratory flow, is the fastest airflow produced during a forceful exhalation and is used chiefly to monitor variable airway obstruction such as asthma.

## PEG

A pharmacologic agent associated with pEG; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

## Peliosis Hepatis

Blood-filled cyst-like spaces within the liver, associated with medicines, toxins, infection, malignancy, or systemic disease and occasionally complicated by liver failure or rupture.

## Pelvic

A biomedical term referring to pelvic; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Penile

Penile means relating to the penis, the external male organ involved in urination and sexual reproduction.

## Penis, Erection Of The

Penile rigidity produced by increased arterial inflow and reduced venous outflow after sexual or reflex stimulation; persistent difficulty is erectile dysfunction.

## Penis, Small

A penis that is substantially below expected stretched length for age, usually assessed as micropenis in a newborn or child after excluding measurement and developmental variation.

## PEP

PEP is a context-dependent abbreviation, including post-exposure prophylaxis, a preventive medicine course after a possible infection exposure.

## Percentile

A percentile indicates the percentage of a reference population with a value below a measurement, such as height, weight, or test score.

## Percutaneous Nephrolithotripsy (PNL)

Percutaneous nephrolithotripsy removes or fragments kidney stones through a tract made through the skin into the kidney, usually for larger or complex stones.

## Perforated Bowel

A perforated bowel is a hole through the intestinal wall allowing contents to leak into the abdomen, causing peritonitis and potentially life-threatening sepsis.

## Peri-

The term Peri- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

## Periappendiceal

Periappendiceal means located around the appendix, as in inflammation, fluid, an abscess, or fat stranding near the appendiceal tissue.

## Pericardial

A biomedical term referring to pericardial; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Perinatal

Perinatal refers to the period around birth, conven-

---

tionally including late pregnancy and the first days or weeks after delivery depending on the definition used.

### **Perinatal Transmission**

Transmission of an infection or condition from mother to infant during pregnancy, labor, delivery, or breastfeeding, as with HIV, hepatitis B, syphilis, or certain genetic and congenital disorders.

### **Perinatologist**

A perinatologist is an obstetrician specializing in high-risk pregnancy, fetal medicine, prenatal diagnosis, and complications affecting the pregnant person or fetus.

### **Periodic Abstinence**

Periodic abstinence is avoiding intercourse during estimated fertile days to reduce pregnancy likelihood; cycle timing is imperfect and does not prevent infections.

### **Periodic Breathing**

Periodic breathing consists of repeated cycles of shallow or absent breathing followed by deeper breaths, occurring in some infants, during sleep, or with neurologic or cardiopulmonary disease.

### **Perionychium**

The skin and soft tissue surrounding a fingernail or toenail, including the nail folds and nearby cuticle; infection or inflammation causes paronychia.

### **Perioperative**

Perioperative means relating to the period before, during, and after an operation, including preparation, anesthesia, recovery, and complication prevention.

### **Pes**

Pes means foot; it is also used in terms describing foot shape or deformity, such as pes planus or pes cavus.

### **Pestilence**

Pestilence is an old term for a severe, widespread, often fatal infectious disease outbreak; modern usage usually specifies the pathogen and epidemiologic event.

### **Ph.D.**

A Ph.D. is a doctoral research degree awarded after advanced study and an original dissertation; it does not by itself confer a clinical license.

### **Phago-**

The term Phago- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Pharmacologist**

A pharmacologist studies how medicines and chemicals act in living systems, including mechanisms, metabolism, toxicity, and therapeutic effects.

### **Pharmacopoeia**

A pharmacopoeia is an official reference specifying standards for identity, purity, strength, testing, and preparation of medicines.

### **Phe**

Phe is the standard abbreviation for phenylalanine, an essential amino acid incorporated into proteins and metabolized through a pathway disrupted in phenylketonuria.

### **Pheresis**

Pheresis is removal of a selected component from blood by an apheresis machine while returning the remaining blood components to the donor or patient.

### **Phlebo- (Prefix)**

Phlebo- is a medical prefix meaning relating to a vein, as in phlebitis, phlebectomy, or phlebography.

### **PHS**

PHS is an abbreviation whose meaning depends on context, including public health service or primary

---

hyperhidrosis; the full term should be specified.

### **Physical Child Abuse**

Physical child abuse is intentional physical injury or harmful force inflicted on a child, requiring immediate safety assessment, medical care, and safeguarding action.

### **Physician Assistant (PA)**

A physician assistant is a licensed clinician who examines, diagnoses, treats, and counsels patients within the scope of local law and a supervising or collaborative practice arrangement.

### **Physicians' Desk Reference**

A reference source containing prescribing information, indications, contraindications, dosing, warnings, and adverse effects for medicines and selected products.

### **Physiologic**

Physiologic means relating to normal body function or a process occurring within the expected biological range.

### **Physiologic Jaundice Of The Newborn**

A clinical finding or condition involving physiologic Jaundice Of The Newborn; evaluation depends on its characteristic features, causes, severity, and complications.

### **PI**

PI is a context-dependent abbreviation, including principal investigator, pulmonary insufficiency, or protease inhibitor; the intended meaning must be specified.

### **Pigmentation**

Coloration of skin, hair, eyes, or other tissue produced mainly by melanin, carotenoids, blood, or exogenous material; abnormal changes may reflect inflammation, endocrine disease, drugs, or tumors.

### **Pisa Syndrome**

A clinical condition involving pisa Syndrome; its

causes, manifestations, severity, and complications guide diagnosis and management.

### **Placenta, Succenturiate**

A succenturiate placenta has one or more accessory placental lobes separate from the main placenta, which can cause retained tissue or fetal-vessel complications after delivery.

### **Plan B**

Plan B is a levonorgestrel emergency contraceptive intended to reduce pregnancy risk after unprotected intercourse or contraceptive failure; it does not end an established pregnancy.

### **Plant Thorn Arthritis**

Plant thorn arthritis is persistent joint inflammation after a thorn puncture introduces plant material, sometimes requiring removal of foreign material and treatment of infection or inflammation.

### **Plantar Response**

A biomedical term referring to plantar response; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Plaque Psoriasis**

The most common form of psoriasis, producing well-demarcated raised red plaques with silvery scale, commonly on elbows, knees, scalp, and lower back and sometimes associated with arthritis.

### **Plasma Osmolarity**

A chemical or physiological term involving plasma osmolarity. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

### **Plegia**

-plegia is a suffix meaning paralysis, as in paraplegia, hemiplegia, or quadriplegia.

### **Pleiotropic Cytokine**

A cytokine that acts on multiple cell types or pro-

---

duces several biological effects, such as changes in inflammation, blood formation, immunity, or tissue repair.

### **Pleomorphic**

Pleomorphic means having multiple forms or marked variation in cell or tissue appearance; in pathology, it may be a feature of malignancy but is not diagnostic alone.

### **Plethoric**

Plethoric means unusually full, congested, or ruddy, often describing the appearance associated with increased blood volume or red-cell mass.

### **Pleural**

A biomedical term referring to pleural; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **PLP**

PLP commonly means pyridoxal 5'-phosphate, the active coenzyme form of vitamin B6 required by many enzymes, but the abbreviation has other uses.

### **PMD**

PMD is a context-dependent abbreviation, including Pelizaeus–Merzbacher disease, a rare inherited disorder of central myelination, or a professional medical designation.

### **PMDD**

Premenstrual dysphoric disorder is a severe cyclic mood disorder occurring before menstruation with irritability, depression, anxiety, and functional impairment that improve after menses.

### **PML**

PML commonly means progressive multifocal leukoencephalopathy, a JC-virus demyelinating brain infection during severe immune suppression, but it may have other meanings.

### **Pneumo-**

The term Pneumo- is a medical word element or

prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Pneumonia, Bilateral**

A clinical condition involving pneumonia, Bilateral; its causes, manifestations, severity, and complications guide diagnosis and management.

### **PNS (Peripheral Nervous System)**

The peripheral nervous system includes nerves and ganglia outside the brain and spinal cord and carries sensory, motor, and autonomic signals between the body and central nervous system.

### **Polycystic Ovarian Syndrome**

A clinical condition involving polycystic Ovarian Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Polycythemia Vera (PV)**

Polycythemia vera is a myeloproliferative blood cancer, usually driven by a JAK2 mutation, causing excess red cells and increased risks of thrombosis, bleeding, and transformation.

### **Polygenic Disease**

A clinical condition involving polygenic Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Polyglandular Autoimmune Syndrome (PGA)**

A biomedical term referring to polyglandular autoimmune syndrome (pga); its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Polymorphic**

A clinical or therapeutic concept involving polymorphic. Its features, uses, and clinical significance depend on the relevant medical context.

### **Polymorphonuclear Leukocyte**

A white blood cell with a multilobed nucleus, especially a neutrophil, eosinophil, or basophil, involved

---

in innate immune defense and inflammation.

### **Polymyalgia Rheumatica (PMR)**

Polymyalgia rheumatica causes abrupt bilateral shoulder and hip-girdle aching and stiffness in older adults and can occur with giant-cell arteritis.

### **Polyneuritis, Acute Idiopathic**

A clinical or therapeutic concept involving polyneuritis, acute idiopathic. Its features, uses, and clinical significance depend on the relevant medical context.

### **PON**

PON is a context-dependent abbreviation that may refer to postoperative nausea, paraoxonase, or another clinical term; the full meaning should be stated.

### **Poor Circulation**

Reduced or abnormal blood flow, usually referring to arterial insufficiency or venous disease, causing coolness, color change, pain, swelling, ulcers, or delayed wound healing.

### **Porcine**

Porcine means derived from or relating to pigs; porcine tissues, enzymes, and biologic products may be used in medicine after appropriate processing and screening.

### **Positive-Strand RNA Virus**

A positive-strand RNA virus has a genome that can function directly as messenger RNA in host cells, allowing translation soon after infection.

### **Post**

Post- is a prefix meaning after, as in post-operative, postpartum, or postprandial.

### **Posteroanterior**

Posteroanterior means directed from back to front; a PA chest radiograph uses this projection to reduce magnification of the heart.

### **Posthitis**

Inflammation of the foreskin, causing redness, swelling, itching, pain, discharge, or difficulty retracting it; infection, irritation, diabetes, and poor hygiene are possible contributors.

### **Postmenopausal**

Postmenopausal describes the period after menopause, when ovarian estrogen production and menstrual periods have permanently ceased.

### **Postop**

Postop is an abbreviation for postoperative, meaning relating to the period after a surgical procedure.

### **Postoperative**

Postoperative means occurring or provided after surgery, including recovery, wound care, pain control, rehabilitation, and complication monitoring.

### **Postprandial**

Postprandial means occurring after a meal, especially the changes in glucose, insulin, digestion, and circulation after eating.

### **Postural**

Postural means relating to body position or posture, including symptoms or vital signs that change when a person sits, stands, or lies down.

### **Pouch Of Douglas**

The pouch of Douglas is the peritoneal recess between the uterus and rectum, also called the rectouterine pouch, where fluid may collect.

### **Power Outage Food Safety**

A medical term referring to power outage food safety. Its clinical meaning depends on the context in which it is used.

### **PPD**

PPD may mean purified protein derivative used in tuberculosis skin testing or post-partum depression; context determines the intended meaning.

---

## **Prandial**

Prandial means relating to a meal, as in preprandial before eating or postprandial after eating.

## **Precordial Catch Syndrome (PCS)**

A clinical condition involving precordial Catch Syndrome (PCS); its causes, manifestations, severity, and complications guide diagnosis and management.

## **Predispose**

To predispose is to increase a person's susceptibility or likelihood of developing a disease or response when additional triggers occur.

## **Prefixes, Medical**

Word beginnings that modify medical terms by indicating location, number, time, speed, size, direction, deficiency, excess, or other meaning, such as hyper-, hypo-, peri-, and brady-.

## **Pregnant**

Pregnant means carrying a developing embryo or fetus in the uterus after conception; pregnancy status affects medicines, imaging, and clinical decisions.

## **Premature Baby**

An infant born before 37 completed weeks of pregnancy, with risks related to immature lungs, brain, feeding, temperature control, immunity, and other organ systems.

## **Premenstrual**

Occurring during the days before menstruation; the term commonly refers to cyclical symptoms such as mood change, breast tenderness, bloating, headache, or fatigue.

## **Premie**

Premie is an informal term for a premature infant, born before 37 completed weeks of gestation and at risk for complications related to immature organs.

## **Prenatal**

Prenatal means occurring during pregnancy before birth, including care, testing, development, coun-

seling, and treatment of the pregnant person or fetus.

## **Prenatal Development**

Prenatal development is growth and differentiation of the embryo and fetus from conception to birth, influenced by genes, nutrition, maternal health, and exposures.

## **Preop**

Preop is an abbreviation for preoperative, meaning relating to preparation and assessment before surgery.

## **Prepubertal**

Prepubertal means before the physical and hormonal changes of puberty have begun or progressed to reproductive maturity.

## **Primary Immunodeficiency Disease**

A clinical condition involving primary Immunodeficiency Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

## **Private Mutation**

A genetic variant confined to a family, individual, tumor, or small population rather than commonly seen in the general population; its significance requires genetic and clinical interpretation.

## **Probiotics**

Probiotics are live microorganisms that may provide a health benefit when consumed in adequate amounts, although effects are strain-specific and vary by condition.

## **PROC**

PROC is the gene symbol for protein C, an anticoagulant protein that limits clot formation; inherited deficiency increases thrombosis risk.

## **Process**

A process is an ordered series of biological, physical, chemical, or operational changes that produces a result.

---

### **Proclivity**

Proclivity is a tendency or predisposition toward a particular behavior, response, disease, or outcome.

### **Proinflammatory**

Proinflammatory describes a substance, cell, or response that promotes inflammation through mediators such as cytokines, chemokines, or lipid signals.

### **Prophylactic**

Prophylactic means intended to prevent disease, infection, injury, or another unwanted outcome before it occurs.

### **Propylthiouracil (PTU)**

Propylthiouracil is an antithyroid drug that reduces thyroid-hormone synthesis and conversion of T4 to T3; liver injury and fetal risks require careful use.

### **Prostaglandin E2**

A prostaglandin that mediates inflammation, pain, fever, vasodilation, gastric protection, cervical ripening, and uterine contraction and is used in selected obstetric and cardiovascular treatments.

### **Prostaglandin F2-Alpha**

A prostaglandin that promotes smooth-muscle contraction and luteolysis; analogues are used in glaucoma, postpartum hemorrhage, labor-related care, and veterinary medicine.

### **Prostate Enlargement**

A biomedical term referring to prostate enlargement; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Prostatodynia**

Prostatodynia is an older term for pelvic or prostate-region pain without proven bacterial infection, now often considered within chronic pelvic pain syndrome.

### **Protean**

A biological or biochemical term involving protean.

Its role depends on the relevant cells, molecules, and physiological process.

### **Protein Malnutrition**

Protein malnutrition refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Proteolipid Protein**

Proteolipid protein refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Pruritic**

Itchy or causing an urge to scratch; pruritus can result from skin inflammation, allergy, infection, systemic disease, medications, or neuropathic mechanisms.

### **Pruritic Eruption**

An itchy skin eruption that may result from allergic, inflammatory, infectious, drug-related, or autoimmune disease; diagnosis depends on its morphology, distribution, timing, and associated findings.

### **Pseudomonas Aeruginosa**

*Pseudomonas aeruginosa* is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Pseudotumor Cerebri**

An older term for idiopathic intracranial hypertension, in which raised pressure around the brain causes headache, transient visual obscurations, pulsatile tinnitus, and possible papilledema without a mass lesion.

### **PSP**

PSP commonly means progressive supranuclear palsy, a neurodegenerative disorder causing early postural instability, vertical gaze impairment, rigidity, and cognitive change.

---

## Psychiatric

Relating to the assessment, diagnosis, treatment, or prevention of disorders of mood, thought, perception, behavior, or emotional functioning.

## Psycho-Oncology

The clinical and research field addressing psychological, social, behavioral, and communication needs of people with cancer and their families across diagnosis, treatment, survivorship, and end of life.

## Psychologist, Clinical

A licensed mental-health professional who assesses and treats psychological, emotional, behavioral, and cognitive problems using psychotherapy and other evidence-based interventions within local scope of practice.

## Psychotropic Medication

A medicine, biologic, or pharmacologic term related to psychotropic medication; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

## PTC (Percutaneous Transhepatic Cholangiography)

PTC is imaging of the bile ducts after contrast is injected through a needle passed through the skin and liver; drainage or stenting may follow.

## PTU

PTU is the abbreviation for propylthiouracil, an antithyroid medicine used selectively because of liver toxicity and other safety considerations.

## Pulmonary Medicine

A biomedical term referring to pulmonary medicine; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Pump-Oxygenator

A clinical or therapeutic concept involving pump-oxygenator. Its features, uses, and clinical significance depend on the relevant medical context.

## Pustulosis

A skin disorder characterized by sterile or infectious pustules, which may be localized or widespread and associated with inflammation, fever, psoriasis, drug reactions, or infection.

## Putrid Throat

Putrid throat refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

## PUVA

PUVA combines a psoralen medicine with ultraviolet-A exposure to treat selected skin diseases; eye protection and cancer-risk precautions are required.

## PV

PV is a context-dependent abbreviation, including polycythemia vera, plasma volume, or peripheral vision; the full term should be specified.

## PVB

PVB is a context-dependent abbreviation that may mean paravertebral block, a regional anesthetic technique, or another medical term.

## PVC

A PVC, or premature ventricular contraction, is an early heartbeat arising in a ventricle; occasional PVCs are common, while frequent or symptomatic beats need evaluation.

## PX

PX is a context-dependent abbreviation that may mean prognosis, patient, prescription, or a genetic marker; clinical documentation should spell out the intended term.

## Pyarthrosis

Infection of a joint with pus in the joint space, usually bacterial septic arthritis, causing acute pain, swelling, restricted movement, fever, and risk of cartilage destruction.

---

## Pyelo

Pyelo is an informal shortening usually referring to pyelonephritis, an infection of the kidney and renal pelvis that can cause fever and flank pain.

## Pyrimidine

A molecular biology or biochemical term involving pyrimidine. Its role depends on the relevant molecule, pathway, and cellular context.

## PYY

PYY, or peptide YY, is a gut hormone released after eating that reduces appetite and slows gastrointestinal motility.

## Peyer's Patches

Organized lymphoid tissue in the mucosa and submucosa of the ileum. These aggregates sample intestinal contents and contribute to immune surveillance of the gastrointestinal tract.

### Synonyms:

ileal lymphoid nodules

## Pulmonary Arteries

The paired arteries that carry deoxygenated blood from the right ventricle to the lungs for gas exchange.

### Synonyms:

pulmonary artery

## Pet Allergy

An allergic reaction to proteins in an animal's skin flakes, saliva, or urine, commonly causing rhinitis, conjunctivitis, or asthma.

## Popliteal Artery Aneurysm

An abnormal enlargement of the artery behind the knee that may cause limb ischemia, clotting, or embolization.

## Primary Progressive Aphasia

A neurodegenerative disorder causing gradual worsening of language abilities, including speaking, naming, comprehension, reading, or writing.

## Paraneoplastic Syndromes Of The Nervous System

Neurologic disorders caused by an immune response to cancer rather than by direct tumor invasion or metastasis.

### Synonyms:

Cancer, Paraneoplastic Syndromes Paraneoplastic Neurological Disorder Paraneoplastic Neurological Syndrome

## Pinched Nerve

Compression or irritation of a nerve that can cause pain, tingling, numbness, or weakness along the nerve's distribution.

### Synonyms:

Compressed Nerve Nerve Compression

## Pink Eye (Conjunctivitis)

Inflammation or infection of the conjunctiva causing eye redness, discharge, irritation, itching, or tearing.

## Pubic Lice (Crabs)

Infestation of coarse body hair by lice, usually causing intense itching and requiring treatment and contact precautions.

### Synonyms:

Crabs

## Painful Intercourse (Dyspareunia)

Persistent or recurrent genital pain before, during, or after sexual intercourse, with physical, hormonal, emotional, or relationship-related causes.

## Premature Ventricular Contractions (PVCs)

Early extra heartbeats originating in the heart's ventricles, often felt as fluttering, skipped beats, or pounding and frequently benign.

### Synonyms:

Extrasystole PVCs Ventricular Premature Contraction VPCs

## Pre-Hepatic Jaundice (Haemolytic Jaundice)

Jaundice caused by excessive breakdown of red

---

blood cells before bilirubin reaches the liver, producing increased unconjugated bilirubin.

**Synonyms:**

Haemolytic Jaundice

**Post-Hepatic Jaundice (Obstructive Jaundice)**

Jaundice caused by obstruction of bile flow after bilirubin has been processed by the liver, commonly from gallstones, strictures, or tumours.

**Synonyms:**

Obstructive Jaundice

**Premature Labour (Preterm Labour)**

Labour that begins before 37 completed weeks of pregnancy and may result in preterm birth.

**Synonyms:**

Preterm Labour

**Precipitate Labour**

Unusually rapid labour, often defined as delivery within three hours of the onset of regular contractions.

**Plane Warts (Verruca Plana)**

Small, smooth, relatively flat warts caused by HPV, often occurring in groups on the face, hands, or legs.

**Synonyms:**

Verruca Plana

**Plantar Warts (Verruca Plantaris)**

Warts on the soles of the feet caused by HPV. Pressure may push them inward and produce pain during walking.

**Synonyms:**

Verruca Plantaris

**Pilomatrix Carcinoma**

A rare malignant tumor showing matrical hair-follicle differentiation, usually presenting as a firm dermal or subcutaneous nodule on the head, neck, or upper extremity; it may recur or metastasize.

**Pleomorphic Dermal Sarcoma**

An uncommon high-grade cutaneous sarcoma, usu-

ally on chronically sun-damaged skin of older adults, composed of markedly pleomorphic cells and capable of local recurrence or metastasis.

**Postinflammatory Hyperpigmentation**

Darkening of skin after inflammation or injury, caused by increased melanin production or its deposition in the epidermis or dermis.

**Proliferating Trichilemmal Tumor**

A usually low-grade follicular tumor arising from a trichilemmal cyst, most often on the scalp; large or recurrent lesions may show locally aggressive or malignant behavior.

**Primary Cutaneous B-Cell Lymphoma**

A B-cell lymphoma presenting primarily in the skin without evidence of extracutaneous disease at diagnosis; clinical behavior and treatment depend on the specific subtype.

**Pseudoangiomatous Stromal Hyperplasia**

A benign breast stromal proliferation forming slit-like spaces within dense collagen that may mimic vascular channels. It can be incidental or present as a palpable or imaging-detected mass.

**Plasma Cell Mastitis**

A chronic benign inflammatory breast lesion with prominent plasma-cell infiltration, often involving ducts beneath the nipple and potentially causing a mass, nipple retraction, or discharge. It can clinically mimic carcinoma.

**Paris System For Reporting Urinary Cytology**

A standardized framework for urinary cytology that emphasizes detection of high-grade urothelial carcinoma and uses defined categories to improve diagnostic consistency and clinical communication.

**Pancreaticobiliary Cytology**

Cytologic evaluation of pancreatic and biliary lesions, usually from fine-needle aspiration, brushings, or bile-duct sampling. It is used to assess neopla-

---

sia, inflammation, and obstructive lesions alongside imaging and histology.

### **Pancreatic Ductal Adenocarcinoma**

The most common exocrine pancreatic malignancy, arising from ductal epithelium and often presenting late with painless jaundice, weight loss, pain, or pancreatitis. Diagnosis and staging rely on imaging, tissue sampling when needed, and multidisciplinary assessment.

### **Pancreatic Neuroendocrine Tumor**

A neoplasm arising from pancreatic neuroendocrine cells that may secrete hormones or be nonfunctioning. Behavior ranges from indolent to aggressive and is assessed by differentiation, grade, proliferative index, and stage.

### **Paget Disease Of The Anus**

An intraepithelial adenocarcinoma of perianal skin or anal mucosa presenting as a persistent eczematous, itchy, or eroded lesion. Biopsy is required, and associated underlying or distant malignancy must be evaluated.

### **Amnion Nodosum**

Multiple small nodules of vernix or amniotic debris attached to the amnion, usually associated with reduced or absent fetal urine contribution to amniotic fluid and oligohydramnios.

### **Chorangioma**

A benign vascular tumor of the placenta, usually small and incidental but occasionally associated with fetal anemia, hydrops, growth restriction, or other complications when large.

### **Circumvallate Placenta**

An extrachorial placental configuration in which the chorionic plate is smaller than the basal plate, producing a raised circumferential edge; it may be associated with bleeding, abruption, or growth restriction.

### **Exaggerated Placental Site**

An exuberant but benign proliferation of implantation-site intermediate trophoblast in the uterus or placental bed; it can mimic gestational trophoblastic neoplasia and requires pathologic correlation.

### **Invasive Mole**

A hydatidiform mole that invades the uterine myometrium or vascular spaces; it is a form of gestational trophoblastic neoplasia and may persist or metastasize.

### **Placenta Accreta Spectrum**

Abnormal adherence or invasion of placental villi into the uterine wall, ranging from accreta to increta and percreta; it can cause severe postpartum hemorrhage and requires planned obstetric management.

### **Placental Mesenchymal Dysplasia**

A rare placental lesion with enlarged cystic stem villi and abnormal chorionic vessels that can mimic a partial mole and may be associated with fetal growth restriction or other fetal abnormalities.

### **Proliferative Fasciitis**

A benign, reactive fibroblastic proliferation resembling nodular fasciitis but containing distinctive ganglion-like cells; it usually grows quickly and resolves or stabilizes after local treatment.

### **Proliferative Myositis**

A benign reactive proliferation within skeletal muscle that may present as a rapidly enlarging mass and mimic sarcoma. Imaging and biopsy are used to establish the diagnosis.

### **Plexiform Fibrohistiocytic Tumor**

A rare low-grade malignant fibroblastic and histiocytic tumor, usually arising in the dermis or subcutis of the upper extremities of young people; local recurrence is common and metastasis is uncommon.

---

### **Phosphaturic Mesenchymal Tumor**

A usually benign mesenchymal tumor that secretes fibroblast growth factor 23 and causes tumor-induced osteomalacia with phosphate wasting, bone pain, weakness, and fractures; removal is usually curative.

### **Pleomorphic Xanthoastrocytoma**

A circumscribed astrocytic tumor, often arising superficially in the cerebral hemispheres of younger patients and associated with seizures. Most are low grade, but anaplastic transformation can occur.

### **Pineal Parenchymal Tumor**

A tumor arising from pineal cells, ranging from pineocytoma to pineal parenchymal tumor of intermediate differentiation and pineoblastoma. Symptoms may result from hydrocephalus or compression of nearby visual and ocular-motor pathways.

### **Papillary Fibroelastoma**

A small benign cardiac valvular tumor composed of avascular frond-like elastic tissue. It may be incidental but can cause embolic events, particularly when mobile or located on the left-sided valves.

### **Paget Disease Of The Vulva**

An intraepithelial adenocarcinoma of vulvar skin, usually presenting as a persistent itchy, eczematous, or erythematous plaque. Biopsy and evaluation for an associated underlying or distant malignancy are required.

### **Pleomorphic Adenoma Of The Vulva**

An exceptionally rare benign mixed epithelial and mesenchymal tumor of the vulva, resembling pleomorphic adenoma of salivary tissue and requiring histopathologic confirmation.

### **Periosteal Osteosarcoma**

A surface osteosarcoma arising beneath the periosteum, usually producing cartilage and affecting the shaft of a long bone. It is generally intermediate grade and requires specialist orthopedic-oncology management.

### **Pediatric Ophthalmology**

The subspecialty caring for eye and vision disorders in infants, children, and adolescents, including strabismus, amblyopia, congenital abnormalities, refractive error, and childhood eye disease.

### **Piebaldism**

A rare congenital disorder of melanocyte development caused most often by pathogenic variants affecting the KIT signaling pathway. It produces stable, sharply demarcated depigmented patches of skin and a characteristic white forelock or localized poliosis from birth. The lesions usually remain non-progressive, although their distribution and degree of pigment loss vary among affected individuals. Diagnosis is generally clinical, with genetic assessment considered when features suggest a broader pigmentary or syndromic disorder.

### **Prosoplasia**

Development of a new or more specialized cellular function or phenotype within a tissue. The term describes progressive differentiation toward an advanced functional state rather than loss of differentiation or disordered maturation. It may be used in developmental biology and pathology to characterize cellular specialization in response to genetic, environmental, or tissue-specific signals. Interpretation depends on the tissue, developmental stage, molecular pathways, and whether the change is physiologic, adaptive, or associated with disease.

## Q

### Q Fever

A zoonotic disease caused by *Coxiella burnetii*, an obligate intracellular Gram-negative bacterium. Q fever is transmitted to humans primarily by inhalation of contaminated aerosols from infected livestock (cattle, sheep, goats) and their products (placenta, birth fluids, urine, feces, milk). Incubation: 2–3 weeks.

### Quantitative Computed Tomography

CT-based imaging that measures bone mineral density as well as showing bone structure.

### Q-T Interval

The ECG interval from the start of ventricular depolarization to the end of repolarization; it is corrected for heart rate when assessing arrhythmia risk.

### Quantitative Digital Radiography

Digital X-ray imaging that uses measured pixel data for assessment of anatomy, density, or change over time.

### Quadruplets

Four offspring born from the same pregnancy or four infants born in a multiple birth.

### Queckenstedt's Test

A historical test in which jugular-vein compression was used during lumbar puncture to assess cerebrospinal-fluid pressure transmission; it is rarely used today.

### Quinghaosu

Another name for artemisinin, an antimalarial compound derived from *Artemisia annua* and used in

combination therapies.

### Quinolones

A class of synthetic antibiotics that inhibit bacterial DNA gyrase or topoisomerase IV.

### Quintuplets

Five offspring born from the same pregnancy or five infants born in a multiple birth.

**Synonyms:**

QCT

### Quick Relievers

Fast-acting medicines that relax airway muscle and rapidly ease bronchoconstriction.

**Synonyms:**

Rescue medicines

### Quiet Sleep

Non-REM sleep, during which brain and body activity generally slow.

**Synonyms:**

Non-REM sleep

### Q Wave

The negative deflection that follows the P wave in some electrocardiographic leads, representing initial ventricular depolarization.

### QALY

Quality-adjusted life year, a measure combining the length of life with a value assigned to health-related quality of life during that time.

---

## QRS Complex

The deflection representing ventricular depolarization, consisting of a Q wave (initial downward deflection), R wave (upward deflection), and S wave (downward deflection after R). Normal duration is 0.06-0.10 seconds (1.5-2.5 small boxes). Widened QRS ( $>0.12$  s) indicates bundle branch block, ventricular rhythm, or hyperkalemia.

## QT Interval

The time from the onset of the QRS complex to the end of the T wave, representing total ventricular depolarization and repolarization. Normal QT is 0.35-0.44 seconds. The corrected QT (QTc) adjusts for heart rate using Bazett's formula:  $QTc = QT / \text{square root of RR interval}$ .

## QT Prolongation

An electrocardiographic finding characterized by prolongation of the QT interval, representing the time from ventricular depolarization to repolarization, which predisposes to the potentially fatal arrhythmia torsades de pointes. The corrected QT interval should be less than 440 milliseconds in men and 460 milliseconds in women.

## Quad Screen (Maternal Serum Screening)

Second-trimester prenatal screening (15-22 weeks) for fetal aneuploidy and neural tube defects. Measures 4 markers: AFP (alpha-fetoprotein: elevated in NTD, low in Down syndrome), hCG (elevated in Down syndrome), uE3 (unconjugated estriol: low in Down syndrome), and inhibin A (elevated in Down syndrome).

### Synonyms:

Maternal Serum Screening

## Quadrant

One of four sections of the abdomen (RUQ, LUQ, RLQ, LLQ) used for clinical description. RUQ: liver, gallbladder, duodenum, right kidney. LUQ: stomach, spleen, left kidney, pancreas tail. RLQ: appendix, cecum, right ovary. LLQ: sigmoid colon, left ovary.

## Quadrantectomy

Surgical removal of one quadrant of an organ, most commonly a breast-conserving operation removing a breast tumour with a surrounding margin of tissue. The exact procedure and need for additional treatment depend on pathology and clinical staging.

## Quadriceps Femoris

The four-headed muscle group on the anterior thigh consisting of rectus femoris and the three vasti. It extends the knee; rectus femoris also flexes the hip, and the group contributes to standing, walking, and shock absorption.

## Quadriceps Femoris Muscle

Four-muscle anterior thigh group: rectus femoris, vastus lateralis, vastus medialis, vastus intermedius, all inserting on the tibial tuberosity via the patellar ligament. Innervated by femoral nerve (L2-L4). Primary knee extensor for walking, running, rising from seated. VMO is important for patellar tracking.

## Quadriceps Injury

Damage to the quadriceps muscle or tendon caused by sudden force, overuse, or direct trauma. It may cause front-of-thigh pain, bruising, weakness, or difficulty extending the knee. Severe pain, a palpable defect, or inability to bear weight requires assessment for a significant tear or tendon rupture.

## Quadriceps Tendon Ruptures

A tear of the tendon connecting the quadriceps muscle to the patella, causing weakness or inability to extend the knee. Complete tears often require surgical repair; treatment depends on the extent of injury and the person's functional needs.

## Quadriplegia

Paralysis of all four limbs and trunk, resulting from a spinal cord lesion at the cervical level or a bilateral brainstem lesion. Common causes include traumatic spinal cord injury, stroke, multiple sclerosis, spinal cord tumors, and demyelinating disease.

## Quadruplet Pregnancy

A pregnancy involving four fetuses. It carries in-

---

creased risks of preterm birth, fetal growth restriction, hypertensive and metabolic complications, and maternal morbidity and therefore requires specialized multidisciplinary antenatal care.

### **Quality Assurance**

Planned activities used to verify that healthcare services meet defined standards of safety, quality, and performance.

### **Quality Control**

Daily, weekly, monthly tests ensure system performance. Uniformity, energy, sensitivity, spatial resolution, count rate performance.

### **Quality Control (Laboratory)**

Procedures using control materials, calibration, equipment checks, and documented review to ensure that a laboratory method remains accurate and precise during routine testing.

#### **Synonyms:**

Laboratory

### **Quality Improvement**

Systematic efforts to improve healthcare. Methods: PDSA cycles, Lean, Six Sigma. Outcomes: safety, effectiveness, patient-centeredness.

### **Quality Of Life**

A person's perceived physical, psychological, social, and functional well-being.

### **Quality-Adjusted Life Year**

A health-economic measure combining length of life with health-related quality of life on a scale where 1 represents full health and 0 represents death. It is used to compare cost-effectiveness across interventions.

### **Quantification**

Measurement of radiotracer uptake or clearance. SUV (PET), clearance rates (renal), ejection fraction (cardiac). Essential for treatment monitoring.

### **Quantitative PET**

The measurement or estimation of radiotracer concentration and tissue kinetics from PET data, using measures such as standardized uptake value or compartmental modeling.

### **Quarantine**

Separation or restriction of movement of people who have been exposed to an infectious disease while monitoring whether they become ill. It differs from isolation of people who are already infected.

### **Quickening**

The first perception of fetal movement by the mother, typically felt between 16-20 weeks in multiparous women and 18-22 weeks in nulliparous women. Described initially as a subtle fluttering sensation that becomes stronger and more regular as pregnancy progresses.

### **Quiescent**

Inactive or dormant state of disease. Example: quiescent ulcerative colitis (no symptoms but histologic inflammation may persist).

### **Quinine**

An alkaloid derived from cinchona bark, with antimalarial, antipyretic, and skeletal muscle relaxant properties. Quinine is a blood schizonticide with activity against all Plasmodium species, but resistance has emerged in *P. falciparum*.

### **Quinsy**

A peritonsillar abscess: a collection of pus between the tonsillar capsule and the superior pharyngeal constrictor muscle, usually developing as a complication of tonsillar infection.

### **Quinupristin-Dalfopristin**

A streptogramin antibiotic combination that inhibits bacterial protein synthesis. It is used intravenously for selected serious gram-positive infections, including some resistant *Enterococcus faecium* infections, when appropriate alternatives are unavailable.

---

## Quorum Sensing

Cell-density-dependent bacterial communication system in which bacteria produce and detect small signaling molecules (autoinducers—acyl-homoserine lactones in gram-negative, autoinducing peptides in gram-positive, AI-2 inter-species) to coordinate population-wide behaviors.

## Quadripareisis

Weakness affecting all four limbs, usually resulting from cervical spinal-cord disease, brain injury, neuromuscular disease, or another disorder of the central or peripheral nervous system.

## Quinolone

A class of synthetic antibacterial drugs that inhibit bacterial DNA gyrase or topoisomerase IV. Examples include ciprofloxacin and levofloxacin.

## Quadrantanopia

Loss of vision in one quarter of the visual field, usually caused by a lesion affecting specific portions of the optic pathways.

## Quadriceps Tendon Rupture

A tear of the tendon connecting the quadriceps muscle to the patella, causing pain, swelling, and inability to actively extend the knee.

## Quadriceps Tendinitis

Overuse-related inflammation or degeneration of the quadriceps tendon, causing pain above the kneecap that worsens with jumping, running, or resisted knee extension.

## Quartan Fever

A fever pattern in which fever attacks recur approximately every 72 hours, classically associated with infection by *Plasmodium malariae*.

## Quincke's Disease (Angioneurotic Oedema)

Sudden swelling of deeper layers of the skin or mucosa, commonly affecting the lips, face, tongue, throat, or bowel; airway involvement is an emer-

gency.

### Synonyms:

Angioneurotic Oedema

## Quincke's Pulse

Visible capillary pulsation in the nail bed or skin, often associated with a wide pulse pressure and severe aortic regurgitation.

## Quincke's Sign

A sign of severe aortic regurgitation in which alternating flushing and blanching of the nail bed or skin can be seen with each heartbeat.

## Quotidian Fever

A fever pattern in which fever attacks occur approximately every 24 hours; it may occur in malaria and several other infections.

## Qigong

Qigong is a traditional mind–body practice combining controlled movement, breathing, and attention; it may support relaxation or function, but evidence and safety vary and it should not replace indicated medical care.

## Quality

In healthcare, quality is the degree to which care is safe, effective, timely, equitable, efficient, and centered on patient needs, measured against defined standards or outcomes.

## Quantum Dot

A quantum dot is a nanoscale semiconductor particle whose size-dependent electronic properties produce characteristic light emission; medical research uses include imaging probes, biosensors, and targeted delivery systems.

## Quassins

Bitter triterpenoid compounds found in *Quassia* species and responsible for much of the plant's bitter taste; they have been studied experimentally for insecticidal and biological effects but have no established routine therapeutic use.

---

## Quercetin

A flavonoid polyphenol found in many fruits, vegetables, and teas; it is marketed in supplements and studied for antioxidant and anti-inflammatory effects, but clinical benefits vary and interactions with medicines are possible.

## Questionnaire

A questionnaire is a structured set of written or electronic questions used to collect information about symptoms, exposures, behaviors, function, quality of life, or patient-reported outcomes; validity depends on its design and population.

## Quetiapine Fumarate

The fumarate salt of quetiapine, an atypical antipsychotic used for schizophrenia, bipolar disorder, and selected adjunctive treatment of major depressive disorder. Sedation, metabolic effects, orthostatic hypotension, and movement-related adverse effects require monitoring.

## Quinalphos

An organophosphate insecticide that inhibits acetylcholinesterase. Exposure can cause a cholinergic toxidrome with sweating, salivation, vomiting, muscle fasciculations, weakness, seizures, and respiratory failure and requires urgent toxicology care.

## Quinapril

Quinapril is an angiotensin-converting-enzyme inhibitor used for hypertension and heart failure; cough, hyperkalaemia, renal-function changes, angioedema, and fetal toxicity are important risks.

## Quinazoline

A bicyclic nitrogen-containing heterocyclic chemical scaffold used in medicinal chemistry. Quinazoline derivatives include compounds with kinase-inhibitory and other pharmacologic activities.

## Quinidine

A class IA antiarrhythmic medicine that blocks cardiac sodium channels and prolongs repolarization. It is used selectively because it can cause QT prolongation, torsades de pointes, thrombocytopenia,

and other adverse effects.

## Quinolinic Acid

Quinolinic acid is a neuroactive intermediate in the kynurenine pathway and an agonist at NMDA receptors; excessive accumulation may contribute to excitotoxic neuronal injury and occurs in some inflammatory or neurologic conditions.

## Quinone Metabolism

quinone metabolism is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

## Quinones

Oxidized aromatic compounds involved in electron-transfer reactions and redox chemistry. Some quinones have biological or pharmacologic roles, while others can generate reactive oxygen species or cause toxicity.

## Quinuclidines

A group of bicyclic tertiary amines containing the quinuclidine ring system, found in some natural products and medicines. Their effects depend on the attached chemical groups and receptor targets.

## Quipazine

An experimental serotonergic compound used mainly in pharmacologic and neurobehavioral research. It is not an established routine clinical treatment.

## Quadruple Screen Test

The quadruple screen measures maternal blood markers to estimate risk of selected fetal chromosomal or neural-tube conditions; it is a screening test, not a diagnosis.

## Quantitative Bence-Jones Protein Test

A quantitative Bence-Jones protein test measures free monoclonal light chains in urine, supporting evaluation and monitoring of plasma-cell disorders such as multiple myeloma.

---

### **Quantitative Immunoglobulins**

Quantitative immunoglobulin testing measures classes of antibodies in blood and helps evaluate immune deficiency, chronic inflammation, monoclonal gammopathy, or abnormal immune activation.

### **Quantitative Nephelometry Test**

Quantitative nephelometry estimates specific proteins by measuring light scattered by immune complexes, supporting assessment of immunoglobulins, complement, and other serum proteins.

### **Questions To Ask Your Child's Doctor About Cancer**

Questions about a child's cancer should clarify the diagnosis, stage, treatment options, expected benefits and risks, clinical trials, supportive care, and follow-up plan.

### **Questions To Ask Your Doctor About Getting Pregnant**

Questions before pregnancy should address chronic conditions, medications, vaccinations, genetic risks, nutrition, fertility timing, and health changes that improve pregnancy safety.

### **Questions To Ask Your Doctor About Going Home With Your Baby**

Questions before taking a newborn home should cover feeding, sleep safety, medicines, warning signs, follow-up, immunizations, and when to seek urgent care.

### **Questions To Ask Your Doctor About Hospital Care After Delivery**

Questions after delivery should clarify maternal recovery, bleeding, pain, wound care, mood symptoms, feeding, contraception, newborn care, and follow-up.

### **Questions To Ask Your Doctor About Staying Healthy During Pregnancy**

Pregnancy health questions should address nutrition, activity, prenatal testing, medications, infection prevention, warning signs, and management of existing medical conditions.

### **Questions To Ask Your Doctor After Knee Replacement**

Questions after knee replacement should clarify wound care, pain control, mobility restrictions, exercises, clot prevention, infection warning signs, and rehabilitation milestones.

### **Questions To Ask Your Doctor Before Knee Replacement**

Questions before knee replacement should address the diagnosis, alternatives, implant choice, surgical risks, preparation, expected recovery, rehabilitation, and long-term activity.

### **Questions To Ask Your Health Care Provider About Labor And Delivery**

Labor and delivery questions should clarify birth-plan preferences, pain relief, monitoring, induction, cesarean indications, newborn care, and urgent situations.

### **Questions To Ask Your Health Care Provider About Post Pregnancy Care**

Post-pregnancy care questions should cover bleeding, pain, blood pressure, incision or tear healing, mood, contraception, lactation, pelvic recovery, and routine follow-up.

### **Questions To Ask Your Surgeon About Spinal Surgery**

Questions before spinal surgery should clarify the pain generator, goals, alternatives, procedure, neurologic risks, recovery restrictions, rehabilitation, and expected outcomes.

### **Quit Smoking (Smoking And Quitting Smoking)**

Alternate index label for Smoking and Quitting Smoking.

### **Q Arm Of A Chromosome**

q arm of a chromosome is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

---

### **Q.2H**

A prescription abbreviation meaning “every 2 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.

### **Q.3H.**

A prescription abbreviation meaning “every 3 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.

### **Q.H. (On Prescription)**

Q.H. means every hour on a prescription; explicit plain-language instructions are safer than ambiguous abbreviations.

### **Q.I.D. (On Prescription)**

Q.I.D. means four times daily on a prescription; the exact timing and maximum dose should be written clearly.

### **Q.S.**

A prescription abbreviation from the Latin “quantum sufficiat,” meaning “quantity sufficient” to make the required amount or concentration. The exact quantity must be specified by the formulation or prescription context.

### **Qd (On Prescription)**

QD is intended to mean once daily, but it can be misread; prescriptions should use “daily” instead.

### **Quadriceps**

The four muscles on the front of the thigh that extend the knee; the rectus femoris also assists hip flexion. The quadriceps tendon connects them to the patella and contributes to the extensor mechanism.

### **Quaque (On Prescription)**

Quaque is Latin for every or each and appears in historical prescription abbreviations; modern instructions should use plain language.

### **Quaque Die (On Prescription)**

Quaque die means every day or once daily; clear modern medication directions should spell this out.

### **Quasidominant**

Describing an inheritance pattern in which a recessive trait appears in successive generations because affected individuals reproduce with carriers or because of a high disease frequency. It can resemble dominant inheritance in a pedigree.

### **Quater In Die (On Prescription)**

Quater in die means four times a day; explicit timing is preferable to this Latin abbreviation.

### **Quiescence**

A temporary state of cellular or physiologic inactivity or reduced activity. Some cells, including certain stem cells and latent infectious agents, may remain quiescent and later become active.

## R

### Rabies

Rabies is a nearly always fatal viral encephalitis transmitted through saliva, usually by an animal bite, but prompt wound care and post-exposure prophylaxis can prevent disease. infected animals. After inoculation, the virus travels to the CNS via peripheral nerves. Symptoms include hydrophobia, aerophobia, and progressive neurological deterioration. Diagnosis is made by direct fluorescent antibody testing of brain tissue.

### Radial Tunnel Syndrome

Compression of the radial nerve near the elbow, causing arm pain, tingling, or weakness.

### Radiation

Energy transmitted as particles or electromagnetic waves, including X-rays and gamma rays.

### Radical Prostatectomy

Surgery that removes the entire prostate, usually with nearby seminal vesicles.

### Radioallergosorbent Test

A blood test used to detect allergen-specific IgE antibodies.

### RAD

Acronym whose medical meaning depends on context, commonly radiation absorbed dose or right axis deviation on an ECG.

### Radioactive Isotopes

Unstable forms of elements that emit radiation and are used in nuclear imaging, treatment, or research.

### Radioactivity

Spontaneous decay of unstable atomic nuclei with emission of particles or electromagnetic radiation.

### Radiographer

A trained professional who performs diagnostic imaging examinations or delivers radiotherapy, depending on specialty and jurisdiction.

### Radiography

Production of images using X-rays or other ionizing radiation.

### Radiology

The medical specialty using imaging to diagnose disease and guide procedures.

### Radionuclide

A radioactive isotope used as a tracer or therapeutic agent.

### Radio-Opaque

Blocking X-rays and appearing relatively white on a radiograph; radiopaque is the modern spelling.

### Radiotherapy

Treatment using ionizing radiation to destroy or control abnormal cells, especially cancer.

### Radium

A radioactive chemical element; radium exposure can cause radiation injury and cancer.

### RâLe

An older term for an abnormal crackling or bubbling

---

respiratory sound, now generally described as a crackle.

### **Raloxifene**

A selective estrogen-receptor modulator used mainly to reduce fracture risk in selected postmenopausal people.

### **Randomised Controlled Trial**

A study in which participants are assigned by chance to interventions or controls and outcomes are compared.

### **Ranitidine**

An H<sub>2</sub>-receptor antagonist formerly used to reduce gastric acid; availability has been withdrawn or restricted in many countries because of impurity concerns.

### **Rape**

Nonconsensual sexual penetration or sexual violence; it is a serious crime and a medical, safeguarding, and trauma-care concern.

### **Raphe**

A seam-like line or ridge where structures join, such as the median raphe or raphe nuclei of the brainstem.

### **Rarefaction**

Reduction in density or pressure, as in the low-pressure phase of a sound wave.

### **Raynaud's Disease**

Primary episodic vasospasm of fingers or toes triggered by cold or stress, causing color changes and numbness.

### **Read Codes**

A clinical coding system historically used to represent diagnoses, findings, and procedures in electronic health records.

### **Recombinant DNA Technology**

Laboratory techniques that join DNA from different

sources to produce a desired genetic construct or product.

### **Reconstructive (Plastic) Surgery**

Surgery that restores form or function after congenital difference, injury, disease, or removal of tissue.

### **Recovered Memory Syndrome**

A controversial and nonstandard label for memories recalled after an alleged period of amnesia; recovered memories require careful, non-leading assessment.

### **Recovery Position**

A side-lying position used for an unconscious but normally breathing person to help keep the airway open and reduce aspiration risk.

### **Recrudescence**

Recurrence of symptoms or infection after apparent improvement, often from persistence of the original organism or disease process.

### **Recurrent Laryngeal Nerve**

A branch of the vagus nerve supplying most intrinsic muscles of the larynx; injury can cause hoarseness.

### **Red Blood Cell**

An erythrocyte, the oxygen-carrying blood cell containing hemoglobin.

### **Reduction**

Restoration of a displaced fracture or joint to better alignment, or decrease in amount, size, or activity.

### **Reduction Division**

Meiosis, a cell division that reduces chromosome number by half to form gametes.

### **Reflex Action**

An involuntary, rapid response to a stimulus mediated through a reflex arc.

### **Regimen**

A planned schedule of medicines, treatments, diet, or other healthcare measures.

---

### **Regional Anaesthesia**

Loss of sensation in a larger body region produced by blocking nerves or a nerve plexus while consciousness is usually preserved.

### **Regional Ileitis**

Crohn disease affecting predominantly the terminal ileum.

### **Registrar**

A doctor in postgraduate specialist training or a medical records professional, depending on context and country.

### **Regulation Of Health Professions**

Legal and professional systems governing training, registration, scope, conduct, and accountability of healthcare workers.

### **Reiter's Syndrome**

An older name for reactive arthritis, an inflammatory arthritis occurring after certain infections.

### **Relate Marriage Guidance**

Counseling or relationship support provided by Relate or similar services; it is not a medical diagnosis.

### **Relaxation Therapy**

Techniques such as breathing, muscle relaxation, or imagery used to reduce stress, arousal, or symptom burden.

### **Remittent Fever**

Fever that varies during the day but does not return to normal temperature.

### **REM Sleep**

Rapid-eye-movement sleep, a stage associated with vivid dreaming, active brain activity, and skeletal-muscle atonia.

### **Renal Cell Carcinoma**

A malignant tumor arising from renal tubular epithelium, most commonly clear-cell carcinoma.

### **Renal Diseases**

Disorders affecting kidney tissue or function, including glomerular, tubular, vascular, infectious, obstructive, and neoplastic disease.

### **Renal Tubule**

The nephron segment that modifies filtrate by reabsorbing and secreting water and solutes.

### **Renin**

An enzyme released mainly by juxtaglomerular kidney cells that initiates the renin-angiotensin-aldosterone system.

### **Rennin**

An older spelling that may refer to renin or to rennet enzyme; in humans, renin regulates blood pressure and fluid balance.

### **Repetitive Strain Injury (RSI)**

Pain or dysfunction associated with repeated movements or sustained posture, commonly affecting tendons, nerves, and muscles.

### **Repressed Memory Therapy**

A controversial approach aimed at recovering allegedly repressed memories; suggestive techniques can create false memories and require caution.

### **Reproductive System**

The organs and tissues responsible for producing gametes, reproductive hormones, conception, and in some bodies pregnancy and birth.

### **Research**

Systematic investigation designed to generate or test knowledge.

### **Research Fraud And Misconduct**

Fabrication, falsification, plagiarism, or other serious breaches of standards in planning, conducting, reporting, or reviewing research.

### **Resection**

Surgical removal of part or all of an organ, tissue,

---

or lesion.

**Synonyms:**

Resection, Intestinal

**Resection, Intestinal**

Alternate index label; see *Resection* and *Small bowel resection*.

**Reserve Volume**

The additional amount of air that can be inhaled or exhaled beyond a normal tidal breath.

**Residual Volume**

The amount of air remaining in the lungs after maximal forced expiration.

**Resistin**

A signaling protein associated with adipose tissue and inflammation; its human clinical significance remains under study.

**Resolution**

The ability of an imaging system to distinguish separate structures, or the improvement or disappearance of a disease or symptom.

**Resonance**

Amplification or characteristic vibration produced when a system is driven at a suitable frequency; used in sound and MRI contexts.

**Resorcinol**

A phenolic compound used in selected topical dermatologic preparations; concentrated exposure can irritate or poison.

**Respiration**

The processes of breathing, gas exchange, and cellular energy production involving oxygen and carbon dioxide.

**Respiratory Arrest**

Cessation of effective breathing, requiring immediate assessment and resuscitation.

**Respiratory Distress Syndrome**

Severe respiratory failure with diffuse lung injury; in adults it is ARDS, while neonatal RDS is surfactant deficiency.

**Respiratory Syncytial Virus (RSV)**

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and can cause significant disease in older adults.

**Respiratory System**

The airways, lungs, respiratory muscles, and related structures that move air and exchange oxygen and carbon dioxide.

**Restless Legs Syndrome**

An urge to move the legs with uncomfortable sensations, worse at rest and in the evening or night.

**Restriction Enzyme**

A bacterial enzyme that cuts DNA at specific nucleotide sequences and is used in molecular biology.

**Retardation**

An outdated or context-dependent term for slowing or delay; modern clinical language should specify the affected function and cause.

**Retching**

Repeated involuntary effort to vomit without necessarily producing stomach contents.

**Retention Of Urine**

Inability to empty the bladder completely or at all despite urine production.

**Reticulocytes**

Immature red blood cells recently released from bone marrow; their proportion helps assess red-cell production.

**Reticulo-Endothelial System**

An older term for the mononuclear phagocyte system, including macrophages in blood, tissues, liver, spleen, and lymph nodes.

---

## Retina, Disorders Of

Diseases affecting the retina, including vascular, degenerative, inflammatory, infectious, inherited, and neoplastic conditions.

### Retina

The light-sensitive neural tissue lining the back of the eye that converts light into nerve signals.

### Retinoblastoma

A malignant retinal tumor occurring mainly in young children, associated with RB1 gene abnormalities.

#### Synonyms:

Cancer, Retinoblastoma

### Retinoic Acid

An active metabolite of vitamin A that regulates gene expression and cell differentiation; it is used in selected dermatologic and cancer treatments.

### Retinoids

Vitamin-A-related compounds used in selected dermatologic, ophthalmic, and oncologic treatments.

### Retinol

Vitamin A alcohol, important for vision, epithelial health, and immune function.

### Retinopathy

Disease or damage of the retina, often due to diabetes, hypertension, prematurity, vascular disease, or inherited disorders.

### Retractor

An instrument or muscle that pulls a structure backward or holds tissue aside during examination or surgery.

### Retro-

A combining form meaning backward, behind, or posterior.

### Retrobulbar Neuritis

Inflammation or demyelination of the optic nerve

behind the eyeball, causing painful visual loss and often associated with multiple sclerosis.

### Retrograde

Moving backward or against the normal direction, such as retrograde amnesia or retrograde blood flow.

### Retropharyngeal Abscess

A collection of pus behind the pharynx, potentially obstructing the airway or spreading into the chest.

### Retrospectoscope

A historical instrument or method for examining past events or records; the term is not a standard current clinical procedure.

### Retroversion

Backward tilting or turning of an organ, especially a uterus tilted toward the spine.

### Retrovirus

An RNA virus that uses reverse transcriptase to make DNA from its RNA genome, including HIV.

### Revalidation

Formal reassessment that a healthcare professional remains fit, competent, and up to date to practice.

### Reverse Transcriptase

An enzyme that synthesizes DNA using RNA as a template.

### Reverse Transcriptase Inhibitor

An antiviral medicine that blocks reverse transcriptase, used in combination treatment for HIV or selected infections.

### Reye's Syndrome

A rare, potentially fatal illness causing acute brain dysfunction and liver injury, associated particularly with viral illness and aspirin exposure in children.

### Rhabdoviruses

A family of bullet-shaped RNA viruses including rabies virus and vesicular stomatitis virus.

---

### Rhesus Factor

The Rh blood-group antigen, especially the D antigen, whose presence or absence is important in transfusion and pregnancy.

### Rhesus System

The Rh blood-group system, a group of inherited red-cell antigens including D, C, c, E, and e. RhD status is commonly reported as positive or negative and is important in transfusion compatibility and prevention of hemolytic disease of the fetus and newborn.

### Rheumatic Fever

An inflammatory complication of untreated or inadequately treated group A streptococcal throat infection, affecting joints, heart, skin, or brain.

### Rheumatoid Arthritis

A chronic autoimmune inflammatory arthritis causing synovitis, pain, stiffness, deformity, and possible systemic disease.

#### Synonyms:

RA RA (Rheumatoid Arthritis)

### Rheumatology

The medical specialty concerned with inflammatory, autoimmune, and musculoskeletal disorders.

### Rh Factor

The Rh blood-group antigen system, especially the D antigen.

### Rhinitis

Inflammation of the nasal lining causing congestion, discharge, sneezing, or itching.

### Rhinophyma

Progressive thickening and enlargement of the nose, usually associated with advanced rosacea.

### Rhinoplasty

Surgery to reshape or reconstruct the nose for functional or cosmetic reasons.

### Rhinorrhoea

Discharge of watery or mucoid fluid from the nose.

### Rhinoviruses

A group of viruses that commonly cause the common cold and can worsen asthma.

### Rhizotomy

Surgical or radiofrequency interruption of selected nerve roots to reduce pain, spasticity, or abnormal reflexes.

### Rhonchi

Low-pitched continuous respiratory sounds caused by airflow through narrowed or mucus-filled large airways.

### Rhythm Method

A fertility-awareness method that estimates fertile days from menstrual-cycle timing to avoid or achieve pregnancy.

### Ribavirin

An antiviral medicine used in selected viral infections, usually in combination and under specialist supervision.

### Riboflavin

Vitamin B2, a precursor of FAD and FMN needed for cellular energy metabolism.

### Ribonucleic Acid

RNA, a nucleic acid involved in genetic information transfer, protein synthesis, regulation, and some catalytic functions.

### Ribosome

A cellular structure that translates messenger RNA into protein.

### Ribozyme

An RNA molecule with catalytic activity.

---

## Ribs

The curved bones forming much of the chest wall and protecting the heart and lungs.

## Rickets

Defective mineralization of growing bone, usually due to vitamin D, calcium, or phosphate deficiency.

### Synonyms:

Osteomalacia (Rickets)

## Rickettsia

A group of small intracellular bacteria transmitted mainly by arthropods and causing diseases such as typhus and spotted fevers.

## Rifampicin

A rifamycin antibiotic used in tuberculosis and selected other bacterial infections, usually in combination to prevent resistance.

## Rift Valley Fever

A mosquito-borne viral disease affecting animals and humans, usually causing fever but sometimes severe eye, brain, or hemorrhagic disease.

## Rigidity

Abnormally increased resistance to passive movement, classically seen in Parkinson disease or meningeal irritation.

## Rigor

Marked stiffness or rigidity; rigor mortis is post-mortem muscle stiffening, while rigor may also mean a severe chill.

## Ring Block

Local anesthetic injected around the base of a finger or toe to numb the entire digit.

## Ringworm

A contagious superficial fungal infection of skin, hair, or nails; it is not caused by a worm.

### Synonyms:

Scalp And Body (Ringworm)

## Rinnes Test

Rinne's test compares air and bone conduction with a tuning fork to help assess conductive hearing loss.

## Risk Factor

A characteristic, exposure, or behavior associated with increased probability of disease or another outcome.

## Risk Management

Identification, assessment, reduction, and monitoring of hazards that could cause harm.

## Risk Register

A documented list of identified risks, their likelihood, impact, controls, owners, and review status.

## Risus Sardonicus

A fixed, sardonic facial spasm classically associated with tetanus or strychnine poisoning.

## Ritodrine

A beta-2 agonist formerly used as a tocolytic to delay premature labor; it has limited current use because of maternal adverse effects.

## Rivastigmine

A cholinesterase inhibitor used for mild-to-moderate Alzheimer disease and Parkinson disease dementia.

## RNA

Ribonucleic acid, a nucleic acid involved in gene expression and regulation.

## Robotic Surgery

Computer-assisted surgery using robotic instruments controlled by a surgeon.

## Rocky Mountain Spotted Fever

A potentially severe tick-borne infection caused by *Rickettsia rickettsii*.

## Rodent Ulcer

An older name for basal cell carcinoma, a common

---

locally invasive skin cancer.

### **Rombergism**

Unsteadiness or falling when standing with feet together and eyes closed, indicating impaired proprioception or vestibular function.

### **Root Filling**

Dental treatment in which the cleaned root canal is sealed to prevent reinfection.

### **Rorschach Test**

A projective psychological test using inkblots; its diagnostic validity is limited and interpretation requires specialist training.

### **Rosacea**

A chronic inflammatory facial skin disorder causing flushing, persistent redness, visible vessels, papules, pustules, or ocular symptoms.

#### **Synonyms:**

Acne Rosacea (Rosacea)

### **Roseola Infantum**

A common childhood viral illness, usually caused by human herpesvirus 6, with high fever followed by a trunk rash as fever resolves.

### **Rotator Cuff**

The group of four shoulder muscles and tendons that stabilize the glenohumeral joint and rotate the arm.

#### **Synonyms:**

Tendinitis Rotator Cuff (Rotator Cuff)

### **Rotaviruses**

Viruses that cause acute gastroenteritis, especially severe diarrhea and dehydration in young children.

### **Roughage**

Dietary fiber, particularly the indigestible part of plant foods that supports bowel function.

### **Rouleaux**

Stacking of red blood cells like coins, often caused

by increased plasma proteins.

### **Roundworms**

Nematode worms, some of which infect humans and cause intestinal or tissue disease.

### **Rous Sarcoma**

A malignant connective-tissue tumor caused by Rous sarcoma virus in chickens; the historical term is important in cancer biology rather than routine human diagnosis.

### **RSI**

Repetitive strain injury, a group of pain and dysfunction syndromes associated with repeated movement or sustained posture.

### **RSV**

Respiratory syncytial virus, a common respiratory virus that can cause bronchiolitis and pneumonia.

### **Rubella**

A contagious viral infection causing mild fever and rash but potentially severe congenital abnormalities when acquired during pregnancy.

#### **Synonyms:**

Measles, German Three-Day Measles

### **Ryle's Tube**

A nasogastric tube used to drain stomach contents or deliver fluids, nutrition, or medicines.

#### **Synonyms:**

RAST

### **Radiofrequency**

Electromagnetic energy used in some diagnostic and therapeutic medical procedures.

#### **Synonyms:**

RF energy

### **Radiograph**

An image produced using X-rays.

#### **Synonyms:**

X-ray

---

### **Radionuclide Imaging Or Scan**

Imaging that detects radiation from a tracer administered to the patient.

#### **Synonyms:**

Nuclear scan; scintigraphy

### **Radionuclides**

Radioactive atoms used as tracers in nuclear medicine imaging or treatment.

### **Rapid Eye Movement Sleep**

A sleep stage marked by rapid eye movements, vivid dreaming, and high brain activity.

#### **Synonyms:**

REM sleep

### **RAST**

A blood test for allergen-specific IgE antibodies.

#### **Synonyms:**

Radioallergosorbent test

### **Raynaud's Syndrome**

Episodic narrowing of small blood vessels in fingers or toes triggered by cold or stress.

#### **Synonyms:**

Raynaud phenomenon

### **RCT**

Randomized controlled trial, a study comparing randomly assigned intervention and control groups.

#### **Synonyms:**

Randomized controlled trial

### **RDA**

Recommended dietary allowance, the daily nutrient intake sufficient for nearly all healthy people in a defined group.

#### **Synonyms:**

Recommended dietary allowance

### **Rebound Insomnia**

Return or worsening of insomnia after stopping a sleep medicine.

### **Receptors**

Cell proteins or structures that bind specific signaling molecules and trigger a response.

### **Recombinant Tissue Plasminogen Activator**

A laboratory-produced clot-dissolving medicine used in selected emergencies.

#### **Synonyms:**

Recombinant tPA

### **Recommended Dietary Allowance**

The average daily intake expected to meet the nutrient needs of nearly all healthy people in a defined group.

#### **Synonyms:**

RDA

### **Rejection**

An immune response in which the body attacks transplanted tissue or an organ.

#### **Synonyms:**

Transplant rejection

### **Relaxation Response**

Physiological changes produced by relaxation practices that counter the stress response.

### **REM**

Rapid eye movement, a sleep stage associated with vivid dreams and intense brain activity.

#### **Synonyms:**

Rapid eye movement sleep

### **REM Behavior Disorder**

A sleep disorder in which a person acts out dreams during REM sleep.

#### **Synonyms:**

REM sleep behavior disorder

### **REM Rebound**

Increased REM sleep after REM deprivation or withdrawal of a REM-suppressing medicine.

---

## Renal

Renal means relating to the kidneys, which filter blood, regulate fluid and electrolytes, produce hormones, and excrete urine.

## Reperfusion

Restoration of blood flow to tissue after an interruption.

## Reperfusion Therapy

Treatment that restores circulation to tissue deprived of blood, such as clot-dissolving treatment or angioplasty.

## Resistance

The ability of a microorganism to withstand a medicine that previously inhibited or killed it.

### Synonyms:

Drug resistance

## Resistant Hypertension

High blood pressure that remains above goal despite appropriate treatment with multiple medicines.

### Synonyms:

Treatment-resistant hypertension

## Respirologist

Physician specializing in diseases of the respiratory system, including lung transplantation evaluation and management.

## Restenosis

Re-narrowing of a blood vessel after it has been opened by angioplasty or another procedure.

## Resting Energy Expenditure

The calories the body uses at rest to maintain essential functions.

### Synonyms:

Resting metabolic rate

## Resuscitation

Emergency measures used to restore breathing and circulation.

### Synonyms:

CPR; revival

## Retinoid

A vitamin-A-related compound used in some skin treatments and other medical applications.

## Retrieval

Process of organ or tissue recovery from a donor for transplantation; also called procurement.

## Retrospective Study

A study that examines past records or exposures to investigate disease causes or outcomes.

## Revascularization

Restoration of blood flow to an area through bypass surgery, angioplasty, or another procedure.

## Rheumatic Disease

A clinical condition involving rheumatic Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

## Rheumatism

Pain, stiffness, or discomfort in joints and surrounding soft tissues.

## Rheumatologist

A physician specializing in inflammatory and autoimmune diseases of joints and connective tissue.

## Rhytidectomy

Cosmetic surgery that removes excess facial skin and tightens supporting tissues.

### Synonyms:

Facelift

## Risky Drinking

Alcohol use that increases the likelihood of health, safety, or social consequences.

### Synonyms:

Hazardous drinking

---

## **RLS**

Restless legs syndrome, an urge to move the legs with uncomfortable sensations, especially at night.

### **Synonyms:**

Restless legs syndrome

## **Root**

The part of a tooth below the gum line.

## **Root Canal**

The channel inside a tooth root containing the pulp and its nerves and blood vessels.

## **Rupture**

A tear or complete break in an organ, vessel, muscle, or other tissue.

## **Ruptured Disk**

A spinal disk whose outer layer has torn, allowing inner material to bulge outward.

### **Synonyms:**

Herniated disk; slipped disk

## **Rabies Vaccination**

Immunization used before or after exposure to reduce the risk of rabies. Post-exposure management also includes wound care and, when indicated, rabies immunoglobulin.

## **Radial Artery**

The smaller terminal branch of the brachial artery, arising at the cubital fossa, running laterally along the radius to the wrist (palpable at the anatomical snuffbox) and hand. Supplies the lateral forearm and the thumb side of the hand; forms the deep palmar arch.

## **Radial Artery Thrombosis**

Formation of a thrombus in the radial artery, often at the site of arterial catheterization or in the setting of a hypercoagulable state or vasculitis. May cause hand ischemia with pain, pallor, and decreased pulse. Treatment includes anticoagulation and surgical intervention for limb-threatening ischemia.

## **Radial Club Hand**

A congenital longitudinal deficiency of the radial ray, ranging from thumb hypoplasia to complete absence of the radius. The hand is radially deviated due to the absent radial support, with the carpus displaced proximally and radially.

## **Radial Nerve**

From posterior cord (C5-T1), the plexus's largest branch. In the arm runs in the radial groove with the profunda brachii artery, innervating triceps and anconeus. At the elbow divides into superficial (sensory to dorsal hand) and deep (posterior interosseous) branches. Deep branch innervates forearm/hand extensors.

## **Radiation Biology**

The study of how ionizing or nonionizing radiation affects cells, tissues, organisms, and populations.

## **Radiation Contamination**

Unwanted radioactive material on a person, surface, object, or body site. Contamination may be removable or fixed and requires containment, monitoring, decontamination, and documentation according to radiation-safety procedures.

## **Radiation Dose**

The amount of ionizing radiation absorbed or received by a person or tissue. Dose varies with the examination, equipment, protocol, and patient size; imaging should be justified and optimized to obtain the needed information with the lowest reasonable exposure.

## **Radiation Emergency**

An event involving actual or suspected harmful radiation exposure or contamination that requires urgent protective and medical measures.

## **Radiation Enteritis**

Inflammation and injury of the small or large intestine caused by therapeutic ionizing radiation. It may be acute with diarrhea, cramping, and nausea or delayed with strictures, malabsorption, bleeding, fistula, or obstruction.

---

### **Radiation Fibrosis**

Permanent scarring and stiffening of tissue caused by radiation injury, which may develop months or years after treatment. It can affect the skin, lungs, bowel, or other organs and may cause pain, reduced function, or shortness of breath.

### **Radiation Monitoring**

Measurement of radiation levels or individual exposure using devices such as personal dosimeters and area monitors.

### **Radiation Necrosis**

Irreversible tissue injury caused by ionizing radiation, often developing months or years after treatment. In the brain it may produce edema, seizures, headache, or focal deficits and can resemble recurrent tumour on imaging.

### **Radiation Oncologist**

A physician who uses ionizing radiation and related treatments to manage cancer and selected other diseases.

### **Radiation Oncology**

A medical specialty that uses high-energy radiation (such as X-rays or gamma rays) to shrink tumors and destroy cancer cells.

### **Radiation Physics**

The study and application of physical principles governing radiation production, detection, imaging, therapy, and protection.

### **Radiation Pneumonitis**

An inflammatory lung injury occurring weeks to months after thoracic radiation. It may cause dry cough, fever, dyspnea, and hypoxemia within the irradiated field and can progress to radiation fibrosis.

### **Radiation Poisoning**

Illness caused by substantial exposure to ionizing radiation, potentially producing skin injury, bone-marrow suppression, gastrointestinal symptoms, or organ failure.

### **Radiation Pregnancy Screening**

Assessment of pregnancy status before procedures involving ionizing radiation or radioactive materials when pregnancy is possible. The decision to proceed requires clinical justification, risk optimization, and consideration of gestational age and fetal dose.

### **Radiation Protection**

The practice of keeping radiation exposure as low as reasonably achievable while obtaining the required diagnostic or therapeutic result. It relies on justification, optimization, time reduction, distance, shielding, and appropriate contamination control.

### **Radiation Recall**

An inflammatory reaction that occurs in previously irradiated skin or mucosa after administration of certain chemotherapeutic agents, particularly antimetabolites and anthracyclines. It manifests as erythema, desquamation, or mucositis in the previously irradiated field, mimicking acute radiation dermatitis.

### **Radiation Safety**

Principles: time, distance, shielding. ALARA (As Low As Reasonably Achievable). Radioactive materials handled in designated areas. Waste disposal per regulations. Pregnancy screening for women of childbearing age.

### **Radiation Sickness**

Acute radiation syndrome caused by high-dose whole-body or substantial partial-body exposure to ionizing radiation. It may produce nausea, vomiting, marrow failure, infection, bleeding, gastrointestinal injury, neurovascular collapse, and death depending on dose.

### **Radiation Therapy**

Use of ionizing radiation to kill cancer cells. Types: external beam, brachytherapy, stereotactic. Mechanisms: DNA damage, cell death. Side effects: fatigue, skin reactions, site-specific effects.

### **Radiation-Induced Angiosarcoma**

A rare, aggressive soft tissue sarcoma arising in

---

previously irradiated tissue, typically with a long latency period. It carries a poor prognosis due to local recurrence and metastatic potential.

### **Radiation-Recall Dermatitis**

An inflammatory skin reaction that occurs in a previously irradiated area after exposure to a triggering substance, often months or years later. The area may become red, swollen, painful, or blistered and requires clinical evaluation.

### **Radiculitis**

Inflammation or irritation of a spinal nerve root, causing radiating pain, paresthesia, sensory loss, weakness, or reflex change in a dermatomal or myotomal distribution. Causes include infection, inflammatory disease, disc pathology, and compression.

### **Radiculopathy**

Dysfunction of a spinal nerve root, usually from disc herniation, narrowing, or inflammation. It may cause shooting pain, tingling, numbness, weakness, or altered reflexes along the affected nerve pathway.

### **Radioactive Iodine**

Used for thyroid imaging and treatment. I-131 emits beta particles (therapy) and gamma rays (imaging). Half-life: 8 days. Used for hyperthyroidism (Graves, toxic nodules) and thyroid cancer ablation. I-123 for diagnostics (shorter half-life, pure gamma).

### **Radioactive Iodine Ablation**

Treatment of differentiated thyroid carcinoma using iodine-131 to destroy residual thyroid tissue after total thyroidectomy. Indications include intermediate and high-risk disease for remnant ablation and treatment of residual or recurrent disease. Patients must be hypothyroid or receive recombinant TSH to maximize iodine uptake.

### **Radiobiology**

Study of radiation effects on biological systems. DNA damage, cell death, repair mechanisms.

### **Radiocarpal Joint**

The wrist joint between the distal radius and articular disc proximally and the scaphoid, lunate, and triquetrum distally. It permits flexion, extension, radial deviation, ulnar deviation, and circumduction.

### **Radiochemical Purity**

The fraction of total radioactivity present in the intended chemical form of a radiopharmaceutical. Impurities may alter biodistribution, reduce target uptake, and increase radiation dose to nontarget tissues.

### **Radiochemistry**

Chemistry of radiopharmaceuticals. Labeling, purification, quality control.

### **Radiocontrast**

A substance administered during imaging to make selected tissues, vessels, or body spaces more visible.

### **Radioembolization**

Intra-arterial delivery of radioactive microspheres (yttrium-90) to liver tumors through the hepatic artery, used for hepatocellular carcinoma and liver metastases.

### **Radiofrequency Ablation**

A procedure that uses high-frequency electrical energy to heat and destroy selected tissue, often under imaging guidance.

### **Radioimmunoassay**

Sensitive immunoassay using radiolabeled antigens or antibodies. Competitive binding principle. Used for hormone measurement (thyroid, reproductive), tumor markers, drug levels. Largely replaced by non-radioactive methods (ELISA) but still used for some assays.

### **Radiologic Technologist**

A trained health professional who performs selected medical-imaging examinations and helps protect patients from unnecessary radiation exposure.

---

## Radiologic-Pathologic Correlation

Integration of imaging findings with gross and microscopic pathology to explain lesion location, extent, tissue composition, and sampling adequacy. It is important for discordant biopsy and imaging results.

## Radiologist

A physician trained to interpret medical images and, in some specialties, perform image-guided procedures.

## Radiology Report

Document describing imaging findings and interpretation. Structure: indication, technique, findings, impression. Clear, concise language essential. Critical findings require immediate communication.

## Radiology-Patient Identification

Verification of the correct patient, examination, body site, indication, pregnancy status when relevant, allergies, renal function, and prior imaging before image acquisition or intervention. It is a core diagnostic and procedural safety step.

## Radiolucent

Describing a material that allows relatively greater passage of X-rays and therefore appears darker on a radiograph or CT image. Air is highly radiolucent; some stones, foreign bodies, and lesions may also be radiolucent.

## Radionuclide Therapy

Internal radiation therapy using radiopharmaceuticals. Examples: I-131 (thyroid), Lu-177 DOTATATE (neuroendocrine tumors), Lu-177 PSMA (prostate cancer), Ra-223 (bone metastases), Y-90 microspheres (liver cancer).

## Radionuclidic Purity

The fraction of radioactivity arising from the intended radionuclide rather than contaminating radionuclides. It is important because contaminants may change radiation type, energy, half-life, dosimetry, and patient risk.

## Radiopaque

Describing a material that attenuates X-rays strongly and therefore appears relatively white on a radiograph or CT image. Bone, metal, and some contrast agents are radiopaque.

## Radiopharmaceutical

Radioactive compound used for diagnostic or therapeutic purposes. Components: radionuclide + targeting molecule. Selectivity determines biodistribution and image quality.

## Radiopharmaceutical Extravasation

Inadvertent leakage of a radiopharmaceutical from the injection vessel into surrounding tissue. It can reduce diagnostic accuracy and, with therapeutic agents, cause local radiation injury; the event requires documentation and dose assessment.

## Radiopharmaceutical Labeling Kit

A prepared set of reagents used to attach a radionuclide, commonly technetium-99m, to a compound for diagnostic imaging.

## Radiopharmaceutical Quality Control

Testing performed to verify identity, radionuclidic purity, radiochemical purity, pH, sterility, endotoxin limits, and other release specifications before clinical administration. Requirements depend on the preparation and jurisdiction.

## Radiopharmacy

Preparation and dispensing of radiopharmaceuticals. Good manufacturing practice (GMP) required. Sterility, pyrogen testing, quality control.

## Radiosensitization

Increased susceptibility of cells or tissues to injury from ionizing radiation.

## Radiotracer

A compound containing a radioactive nuclide that follows a biologic pathway and permits in-vivo imaging or measurement. Its distribution reflects the target physiology, receptor, enzyme, transporter, or

---

tissue process.

### **Radium-223**

Alpha emitter, half-life 11.4 days. Used for bone metastases from prostate cancer. Mimics calcium, targets bone turnover sites.

### **Radius**

Lateral forearm bone in the anatomical position. Proximal end: head, neck, radial tuberosity. Shaft. Distal end: styloid process, articular surfaces. The radial head articulates with the capitulum and ulnar notch, allowing pronation/supination.

### **Rampant Caries**

Widespread severe caries affecting multiple surfaces. Associated with sugary drinks, xerostomia, bulimia.

### **Ramsay Hunt Syndrome**

Reactivation of varicella-zoster virus in the geniculate ganglion causing ipsilateral facial paralysis, severe ear pain, and vesicular eruption in or around the ear or oral cavity. Hearing loss and vertigo may occur; prompt treatment is important.

### **Randomized Controlled Trial**

An experimental study in which participants are assigned by chance to different interventions or a control condition and followed for specified outcomes.

### **Range Of Motion**

ROM: joint movement capacity. Goniometer measurement. Restrictions from contracture, pain, swelling.

### **Ranson Criteria**

Clinical scoring system for acute pancreatitis severity incorporating eleven parameters at two time points. Admission parameters include age, white blood cell count, glucose, LDH, and AST. Forty-eight hour parameters include hematocrit drop, BUN increase, calcium, oxygen tension, base deficit, and fluid sequestration.

### **Ranula**

A mucocele (mucus extravasation cyst) of the sublingual salivary gland, presenting as a blue-translucent, fluctuant swelling in the floor of the mouth, typically lateral to the lingual frenulum. A ranula results from trauma or obstruction of a sublingual gland duct, causing mucus accumulation in the sublingual space.

### **Rapid Sequence Induction**

An intubation technique designed to minimize aspiration risk in patients with full stomach.

### **Rapid Strep Test**

A test performed on a throat swab to detect Group A Streptococcus. It provides a rapid result, but a negative result may require confirmatory testing depending on the patient's age, symptoms, and local guidance.

### **Rapid-Sequence Intubation**

A planned emergency airway technique using a sedative-hypnotic and a neuromuscular blocker in rapid succession to facilitate tracheal intubation while minimizing aspiration risk. Preparation includes preoxygenation, backup airway plans, hemodynamic assessment, and confirmation of tube position.

### **Rapidly Progressive Glomerulonephritis**

A syndrome of rapidly worsening kidney function accompanied by glomerular inflammation, often with crescent formation on biopsy. Causes include anti-glomerular-basement-membrane disease, immune-complex disease, and pauci-immune vasculitis. It requires urgent evaluation and treatment.

### **Rasburicase**

A recombinant urate-oxidase enzyme that converts uric acid to the more soluble allantoin. It is used in selected patients at risk of or experiencing tumorlysis-related hyperuricemia. It can cause serious hypersensitivity or hemolysis in people with glucose-6-phosphate dehydrogenase deficiency and requires appropriate screening and monitoring.

---

## Rash

A general term for any visible skin eruption, change in skin color, texture, or appearance.

### Synonyms:

Allergy Rash (Rash)

## Rashes

Rashes are visible changes in skin color, texture, or sensation caused by infection, allergy, inflammation, medicines, or other disease.

## Rat Bite Fever

A systemic bacterial infection caused by *Streptobacillus moniliformis* or *Spirillum minus*, transmitted through rat bites or contact with rat-contaminated food or water. It presents with relapsing fever, rash, polyarthritis, and lymphadenopathy. The characteristic rash is petechial or maculopapular on the extremities.

## Rat-Bite Fever

Systemic infection caused by *Streptobacillus moniliformis* or *Spirillum minus* after exposure to infected rodents. Fever, migratory arthralgia, vomiting, and a maculopapular or petechial rash may occur.

## Raynaud Phenomenon

Exaggerated vasospastic response of digital arteries to cold or stress, causing well-demarcated color changes (white-blue-red) in fingers or toes. Primary Raynaud: idiopathic, symmetric, no tissue damage, normal capillaries.

## Raynaud Syndrome

A vasospastic disorder causing episodic digital color changes (white -> blue -> red) triggered by cold or stress, due to exaggerated vasoconstriction of digital arteries. Primary Raynaud: benign, symmetric, in young women, no underlying disease.

## Raynaud's Phenomenon

Episodic constriction of small arteries in the fingers or toes, causing color changes, numbness, or pain after cold exposure or emotional stress.

### Synonyms:

Raynauds Phenomenon (Raynaud's Phenomenon)

Raynauds Syndrome (Raynaud's Phenomenon)

## Reactivation Tuberculosis

Reactivation of latent infection, typically years later. Characteristically affects apical and posterior upper lobe segments. Features include chronic cough, hemoptysis, night sweats, weight loss, and cavitation.

## Reactive Arthritis

An inflammatory arthritis that develops after certain genitourinary or gastrointestinal infections. It may involve the joints, eyes, skin, or urinary tract; not every person has all of these features.

### Synonyms:

Arthritis Reactive (Reactive Arthritis) Arthritis Re-  
iters (Reactive Arthritis)

## Reactive Attachment Disorder

A pattern of inhibited, emotionally withdrawn behavior toward adult caregivers. The child rarely or minimally seeks comfort when distressed and rarely or minimally responds to comfort when distressed. The child shows a pattern of persistently irritable and sad mood that is not limited to interactions with caregivers.

## Reactive Oxygen Species

Superoxide, hydrogen peroxide, hydroxyl radical. Normal metabolism byproducts.

## Reactive Perforating Collagenosis

A perforating dermatosis in which dermal collagen is extruded through the epidermis, presenting as discrete, dome-shaped papules with a central keratotic plug, most commonly on the extensor extremities.

## Receiver Operating Characteristic

ROC curve: plot of sensitivity vs. 1-specificity. Area under curve measures test accuracy.

## Receptor

A protein that binds a specific signaling molecule (ligand) and initiates a cellular response. Types:

---

(1) Cell surface: ion channel (nicotinic AChR), G-protein coupled (GPCR: adrenergic, muscarinic, opioid), enzyme-linked (RTK: insulin receptor, cytokine receptors).

### Receptor Desensitization

A rapid decrease in the response of a receptor to continuous or repeated agonist stimulation, occurring within minutes to hours.

### Receptor Downregulation

A decrease in the number or sensitivity of receptors in response to chronic receptor stimulation by agonists. When receptors are chronically activated, the cells compensate by internalizing and degrading receptors, reducing receptor density on the cell surface, and decreasing receptor responsiveness.

### Receptor Tyrosine Kinases

Single-pass transmembrane receptors with intrinsic tyrosine kinase activity in their intracellular domain. Ligand binding (e.g., insulin, EGF, PDGF, FGF) induces receptor dimerization and autophosphorylation of tyrosine residues.

### Receptor Upregulation

An increase in the number or sensitivity of receptors in response to chronic receptor blockade or decreased neurotransmitter activity. When receptors are chronically blocked by antagonists, the cells compensate by synthesizing more receptors to maintain homeostatic signaling, leading to increased sensitivity to agonists.

### Recessive

Allele whose phenotype is masked in heterozygotes. Autosomal recessive disorders: cystic fibrosis, sickle cell anemia, Tay-Sachs disease. Requires two copies for expression.

### RECIST

Response Evaluation Criteria in Solid Tumors, standardized imaging-based criteria that categorize response to anticancer therapy as complete response, partial response, stable disease, or progressive disease.

### Recombinant DNA

DNA molecule formed by combining genetic material from different sources. Basis of biotechnology. Used to produce insulin, growth hormone, vaccines, gene therapy vectors.

### Rectal Bleeding

Passage of bright-red or dark blood from the rectum, caused by hemorrhoids, fissures, polyps, inflammatory bowel disease, diverticular disease, or cancer. Persistent, heavy, or unexplained bleeding requires evaluation.

#### Synonyms:

Blood In The Stool (Rectal Bleeding)

### Rectal Prolapse

Protrusion of rectal tissue through the anal opening. Complete prolapse involves all layers of the rectal wall and presents as a concentric cylindrical mass with visible mucosal folds. Partial prolapse involves only the mucosa. Associated with chronic straining, pelvic floor dysfunction, and neurological conditions.

### Rectocele

A weakening of the vaginal wall that allows the rectum to bulge into the vagina.

### Rectovaginal Fistula

Abnormal connection between the rectum and vagina causing passage of stool or gas through the vagina. Causes include obstetric injury particularly third and fourth degree perineal tears, Crohn disease, radiation therapy, and surgical complications. Presents with vaginal discharge of stool, flatus, or recurrent vaginal infections.

### Rectum

The final straight section of the large intestine, approximately 12-15 cm long, extending from the sigmoid colon to the anal canal. The rectum stores feces before defecation.

### Rectus Abdominis Muscle

Long flat vertical anterior abdominal wall muscle

---

from pubic symphysis to xiphoid process/costal cartilages 5-7, divided by tendinous intersections ("six-pack"). Innervated by T7-T12. Flexes trunk, compresses abdomen, increases intra-abdominal pressure. Diastasis recti common in pregnancy/obesity.

### **Rectus Abdominis Sheath**

A fibrous aponeurotic envelope formed by the abdominal wall muscles and surrounding the rectus abdominis muscle. It contains the superior and inferior epigastric vessels and related nerves.

### **Recurrence**

Return of cancer after treatment. Can be local, regional, or distant.

### **Recurrence Risk**

The probability that a genetic condition will occur again in a future pregnancy or relative, estimated from the inheritance pattern, parental testing, penetrance, and observed or presumed pathogenic variant.

### **Recurrence-Free Survival**

Time without cancer return after treatment.

### **Recurrent**

Disease returning after remission. Examples: recurrent UTI, herpes.

### **Recurrent Caries**

Caries under or around restoration. Due to microleakage, marginal breakdown.

### **Red Blood Cell Labeling**

Nuclear medicine technique labeling RBCs with Tc-99m. Used for GI bleeding detection, cardiac blood pool imaging.

### **Red Flag**

A symptom, sign, or test result suggesting a potentially serious condition that requires urgent assessment or escalation of care. Red flags are context-specific and should not be used as a substitute for clinical judgment.

### **Red Infarction**

Red infarction, also known as hemorrhagic infarction, occurs in tissues with dual blood supply, loose tissue architecture, or venous obstruction, allowing blood to accumulate in the necrotic area and produce a dark red appearance.

#### **Synonyms:**

hemorrhagic infarction, occurs in tissues with dual blood.

### **Redundant Mitral Valve**

Excess leaflet tissue of the mitral valve, most commonly the posterior leaflet, which may prolapse into the left atrium during systole. Often associated with myxomatous degeneration and mitral valve prolapse. May be asymptomatic or cause mild mitral regurgitation detected incidentally on echocardiography.

### **Reemerging Disease**

Previously controlled disease increasing. Examples: tuberculosis, measles, drug-resistant infections.

### **Reexpansion Pulmonary Edema**

Noncardiogenic pulmonary edema developing rapidly after rapid reexpansion of a collapsed lung, typically following chest tube drainage of a large or long-standing pneumothorax.

### **Refeeding Syndrome**

Life-threatening fluid and electrolyte shifts when nutrition restarted in malnourished patient. Hypophosphatemia, hypokalemia, hypomagnesemia, fluid overload, cardiac failure. Prevention: start low (25-30 kcal/kg), advance slowly, supplement electrolytes, monitor closely.

### **Reference Interval**

The range of laboratory results expected in a defined reference population, usually encompassing the central 95 percent of values. A result outside the interval is not by itself diagnostic and must be interpreted with clinical context, biologic variation, and the laboratory's method-specific range.

---

## Referred Pain

An unpleasant sensory and emotional experience associated with actual or potential tissue damage, serving as a protective alerting system but becoming maladaptive when chronic (lasting >3 months). See pain.

## Reflex Anoxic Seizure

A brief seizure-like episode caused by transient cerebral hypoperfusion after a sudden painful or emotional stimulus, usually with pallor, bradycardia, and rapid recovery.

## Reflex Arc

The neural pathway that mediates a reflex action, bypassing conscious brain processing for rapid, automatic responses. A reflex arc consists of five components: (1) Receptor—sensory nerve ending detecting a stimulus (e.g., pain, stretch).

## Reflux

Gastroesophageal reflux in infants: effortless regurgitation of gastric contents, very common (physiologic 'spitting up') and usually benign, resolving by 12 months with maturation of the lower esophageal sphincter.

## Reflux Nephropathy

Renal scarring and chronic kidney damage caused by vesicoureteral reflux, recurrent urinary infection, or both. It may lead to hypertension, proteinuria, impaired growth, and chronic kidney disease.

## Refraction

Refraction examines refraction; interpretation depends on the specimen or body region, test method, reference range, and clinical question. humour, crystalline lens, vitreous humour) to focus a sharp image on the retina. The refractive power of the eye is measured in dioptres (D). Emmetropia: normal refractive state—parallel light rays focus exactly on the retina without accommodation.

## Refractive Errors And Astigmatism

Refractive errors are vision disorders caused by the eye's inability to properly focus light onto the retina,

resulting in blurred vision.

## Refractive Surgery

Surgical procedures that reshape the cornea or alter the eye to correct refractive errors and reduce dependence on eyeglasses or contact lenses. Laser techniques include LASIK (corneal flap with excimer ablation), photorefractive keratectomy (surface ablation), and small-incision lenticule extraction (SMILE).

## Refractory

Resistant to a treatment or not responding adequately to it. The term may refer to cancer or other diseases.

## Refractory Period

The period after an action potential during which a cell cannot (absolute refractory period) or can only partially (relative refractory period) generate a new action potential.

## Refsum Disease

An autosomal-recessive peroxisomal disorder of phytanic-acid metabolism. It causes retinitis pigmentosa, anosmia, peripheral neuropathy, ataxia, hearing loss, ichthyosis, and shortened metacarpals or metatarsals with variable onset.

## Regadenoson Pharmacological Stress

Selective A2A adenosine receptor agonist used as a pharmacological vasodilator for nuclear myocardial perfusion imaging. Single IV bolus injection produces coronary vasodilation with fewer side effects than adenosine (less bronchospasm, AV block). Contraindicated in severe asthma or COPD requiring oxygen.

## Regional Anesthesia

Regional anesthesia involves the administration of local anesthetic agents to specific nerves or nerve plexuses to provide surgical anesthesia and postoperative analgesia for a defined body region.

---

## Regulatory Approval

Authorization by a competent regulatory authority for a medicine, device, or procedure to be marketed or used for specified purposes after review of evidence.

## Regulatory T Cells

Tregs (CD4+ CD25+ FOXP3+): essential for peripheral tolerance. Thymic (tTreg) vs peripheral (pTreg) origin. FOXP3: master transcription factor; mutations cause IPEX.

## Regurgitation

The backward flow of blood through a heart valve that fails to close properly (valvular incompetence or insufficiency).

## Rehabilitation

A coordinated process that helps a person restore or adapt physical, cognitive, psychological, and social function after illness, injury, surgery, or disability.

## Rehabilitation Clinic

Outpatient rehabilitation facility.

## Rehabilitation Engineering

Technology development for disability: prosthetics, orthotics, assistive devices, environmental control.

## Rehabilitation Hospital

Inpatient facility specializing in rehabilitation.

## Rehabilitation Medicine

Physician specialty focusing on function, quality of life for patients with impairment, disability. Also called physiatry.

### Synonyms:

physiatry.

## Rehabilitation Motivation

Patient factors that influence participation in rehabilitation, including intrinsic and extrinsic motivation and engagement with therapeutic goals.

## Rehabilitation Potential

The expected capacity to improve function, independence, participation, or quality of life through rehabilitation. It depends on diagnosis, prognosis, cognition, motivation, comorbidity, social support, and environmental resources.

## Rehabilitation Unit

Hospital ward dedicated to rehabilitation.

## Reinfection

A new episode of infection by the same or a related pathogen after the original infection has resolved. Reinfection is distinct from relapse, in which the original infection persists or returns from an incompletely eradicated focus.

## Relapse

Return or worsening of a disease after a period of improvement or remission. The term is used for cancer and many noncancerous disorders.

## Relapse-Free Survival

The time from completion of treatment to recurrence of the cancer or death from any cause.

## Relapsing Fever

An acute febrile illness caused by *Borrelia* species, characterized by recurrent episodes of fever separated by afebrile intervals.

## Relapsing Polychondritis

A systemic autoimmune disorder causing inflammation and destruction of cartilage throughout the body. Airway involvement can cause tracheal and bronchial stenosis. Other features include auricular chondritis, nasal chondritis, ocular inflammation, and arthritis. Treatment is corticosteroids and immunosuppressants.

## Relative Afferent Pupillary Defect

An asymmetric reduction in the direct pupillary light response caused by unequal afferent input from the retina or optic nerve. It is detected with the swinging-flashlight test and is also called a Marcus

---

Gunn pupil.

**Synonyms:**

a Marcus Gunn pupil.

**Relative Biological Effectiveness**

Ratio of dose of reference radiation to dose of test radiation for same effect. Alpha particles: RBE 10-20.

**Relative Risk**

Ratio of disease risk in exposed vs. unexposed.  $RR = (a/(a+b)) / (c/(c+d))$ .  $RR > 1$ : increased risk.  $RR < 1$ : protective.

**Reliability**

Consistency of measurement. Test-retest, inter-rater reliability.

**REM Sleep Behavior Disorder**

A sleep disorder in which the normal muscle paralysis of REM sleep is reduced or absent, allowing a person to move or vocalize while dreaming.

**Synonyms:**

Rapid Eye Movement Sleep Behavior Disorder

**Remifentanyl**

An ultra-short-acting synthetic opioid analgesic metabolized by non-specific plasma and tissue esterases, producing context-sensitive half-time of approximately 3 to 10 minutes regardless of infusion duration. This makes it ideal for total intravenous anesthesia (TIVA) combined with propofol, and for procedures requiring rapid emergence.

**Remission**

Decrease or disappearance of cancer signs. Complete remission: no detectable disease. Partial remission: significant reduction but not complete.

**Remitting Seronegative Symmetrical Synovitis With Pitting Edema**

RS3PE: an acute-onset, symmetric polyarthritis (usually in elderly) with pitting edema of the hands/feet, negative rheumatoid factor and anti-CCP, and marked response to low-dose corticosteroids.

teroids.

**Remodeling**

Bone adaptation to implant stress. Wolff's law: bone remodels along lines of stress.

**Renal Abscess**

A localized collection of pus within or around the kidney, usually caused by infection. Diagnosis and treatment may require imaging, antibiotics, and drainage.

**Renal Agenesis**

Congenital absence of one (unilateral, 1 in 1,000) or both (bilateral, 1 in 4,000) kidneys. Unilateral renal agenesis: usually asymptomatic, discovered incidentally — the solitary kidney undergoes compensatory hypertrophy. The contralateral kidney may have VUR, UPJ obstruction, or ectopia.

**Renal Anemia**

Anemia associated with chronic kidney disease, caused by reduced erythropoietin production and other factors such as iron deficiency, inflammation, and shortened red-cell survival. Evaluation and treatment are individualized; iron replacement and erythropoiesis-stimulating therapy may be considered when appropriate.

**Renal Artery**

A paired branch of the abdominal aorta supplying a kidney. It divides into segmental, interlobar, arcuate, and interlobular arteries within the renal parenchyma.

**Renal Artery Aneurysm**

A focal enlargement of a renal artery, often asymptomatic but capable of causing hypertension, thromboembolism, or rupture. Management depends on size, symptoms, anatomy, pregnancy, and growth, and may involve surveillance, endovascular treatment, or surgery.

**Renal Artery Doppler**

Ultrasound assessing renal artery stenosis. Screen-

---

ing for renovascular hypertension.

### Renal Artery Embolism

Acute occlusion of renal artery from cardiac emboli typically from atrial fibrillation or mural thrombus. Presents with acute flank pain and hematuria. CT angiography shows filling defect. Treat with anticoagulation and possibly thrombolysis or embolectomy if caught early.

### Renal Artery Stenosis

Narrowing of renal artery causing renovascular hypertension. Atherosclerotic most common in elderly at ostium. Fibromuscular dysplasia in young women causing mid-distal stenosis with string-of-beads appearance. Flash pulmonary edema and declining function on ACE inhibitors indicate intervention.

#### Synonyms:

Renal Artery Disease Renal Vascular Disease

### Renal Biopsy

Percutaneous needle biopsy for histological diagnosis. Indicated for unexplained AKI, nephrotic syndrome, hematuria with renal involvement, and transplant dysfunction. Ultrasound-guided for accuracy. Complications include bleeding, arteriovenous fistula, and rarely loss of kidney.

### Renal Calculi (Kidney Stones)

Crystalline mineral deposits that form in the kidneys or urinary tract. They may cause severe colicky pain, blood in the urine, urinary obstruction, or infection.

#### Synonyms:

Kidney Stones

### Renal Changes In Pregnancy

Pregnancy increases renal blood flow and glomerular filtration. These changes lower usual serum creatinine values and may increase urinary loss of glucose and amino acids.

### Renal Clearance

The volume of plasma completely cleared of a substance by the kidneys per unit time, measured in mL/min. Clearance of any substance X is calcu-

lated as:  $CX = (U_x \times V)/P_x$ , where  $U_x$  is urine concentration,  $V$  is urine flow rate, and  $P_x$  is plasma concentration.

### Renal Colic

Severe, paroxysmal flank pain caused by ureteral obstruction, typically by a kidney stone, with radiation to the groin; often the worst pain experienced.

### Renal Cortex

Outer kidney portion between capsule and medulla. Granular tissue with glomeruli, convoluted tubules, and cortical collecting ducts. Extends between pyramids as renal columns. Receives approximately 90 percent of renal blood flow; primary filtration site.

### Renal Cryptococcosis

Infection of the kidney by *Cryptococcus* species, usually as part of disseminated cryptococcosis in an immunocompromised person.

### Renal Diet

Restricted protein, sodium, potassium, phosphorus for kidney disease. Individualized based on stage. Dialysis increases protein requirement.

### Renal Dose Adjustment

Modification of a medication dose, dosing interval, or both to account for reduced kidney clearance. The adjustment should use an appropriate estimate of renal function, drug-specific pharmacokinetics, treatment indication, and therapeutic monitoring when available.

### Renal Drug Excretion

The elimination of drugs by the kidney through glomerular filtration, active tubular secretion, and passive tubular reabsorption. Drugs eliminated renally (e.g., aminoglycosides, vancomycin, lithium, metformin) require dose adjustment in renal impairment.

### Renal Failure

Decline in kidney function leading to accumulation of waste products (azotemia) and electrolyte

---

abnormalities. Acute kidney injury (AKI): rapid decline over hours to days, potentially reversible. Chronic kidney disease (CKD): progressive decline over months to years.

### **Renal Infarction**

Renal infarction results from occlusion of the renal artery or its branches, causing coagulative necrosis of the renal parenchyma. The kidney has end-arterial supply with limited collateral circulation, making it susceptible to ischemic injury even from small vessel occlusion.

### **Renal Leukemia Infiltration**

Kidney involvement by chronic lymphocytic leukemia or other hematological malignancies causing bilateral renomegaly and renal dysfunction. Leukemic cells infiltrate the interstitium and peritubular capillaries. May cause AKI from compression of tubules and vessels or chronic kidney disease.

### **Renal Mass**

Abnormality in kidney detected on imaging. Solid masses may be renal cell carcinoma. Cystic masses classified by Bosniak system.

### **Renal Medulla**

The inner part of the kidney containing the renal pyramids, loops of Henle, vasa recta, and collecting ducts. Its structure and blood supply help establish the concentration gradient used to concentrate urine.

### **Renal Osteodystrophy**

Bone disease in CKD including osteitis fibrosa, osteomalacia, adynamic bone disease, and osteoporosis. Results from calcium-phosphate imbalance, secondary hyperparathyroidism, and vitamin D deficiency. Manage with phosphate binders, vitamin D analogues, and parathyroidectomy for refractory hyperparathyroidism.

### **Renal Pelvis**

The funnel-shaped expansion of the ureter within the kidney, formed by the union of major calyces. It collects urine from the renal papillae and directs

it into the ureter.

### **Renal Replacement Therapy**

Treatment that substitutes for inadequate kidney excretory and regulatory function. Modalities include intermittent hemodialysis, continuous kidney replacement therapy, peritoneal dialysis, and kidney transplantation.

### **Renal Replacement Therapy Indications**

Urgent indications for dialysis include refractory hyperkalemia, severe metabolic acidosis, toxin exposure by a dialyzable agent, refractory fluid overload or pulmonary edema, and symptomatic uremia. The decision incorporates the patient's trajectory and overall goals of care.

### **Renal Scan**

Nuclear medicine imaging using Tc-99m compounds. Evaluates renal function, obstruction, blood flow. MAG3 for function, DTPA for GFR.

### **Renal Scintigraphy**

Renal imaging using Tc-99m compounds. MAG3 (tubular secretion) for functional assessment, DTPA (glomerular filtration) for GFR measurement. Used for obstruction, function, transplant monitoring, renin-mediated hypertension.

### **Renal Transplant (Renal Transplantation)**

Surgical placement of a functioning donor kidney into a person with advanced kidney failure. It can restore kidney function but requires suitability assessment and long-term immunosuppression.

#### **Synonyms:**

Renal Transplantation

### **Renal Trauma**

Kidney injury from trauma. CT staging guides management. Grades I-V based on injury severity.

### **Renal Tubular Acidosis**

Group of disorders with normal anion gap metabolic acidosis from impaired renal acid excretion or bicar-

---

bonate reabsorption. Type 1 distal with impaired H<sup>+</sup> secretion and urine pH greater than 5.5. Type 2 proximal with impaired bicarbonate reabsorption. Type 4 hyperkalemic from aldosterone deficiency or resistance.

### Renal Ultrasound

Noninvasive imaging used to assess kidney size, structure, blood flow, and urinary obstruction. It is particularly useful when obstruction, cystic disease, or structural abnormality is suspected and is often used in the evaluation of acute or chronic kidney disease.

### Renal Vein

A paired vein draining each kidney into the inferior vena cava. The left renal vein is longer and crosses anterior to the aorta, receiving the left gonadal and suprarenal veins.

### Renin Inhibitor

A class of antihypertensive drugs that directly inhibit renin, the first and rate-limiting enzyme in the renin-angiotensin-aldosterone system. Renin catalyzes the conversion of angiotensinogen to angiotensin I, which is then converted to angiotensin II by ACE. Aliskiren is the only direct renin inhibitor available.

### Renin-Angiotensin-Aldosterone System

A hormonal system in which renin initiates formation of angiotensin II, promoting vasoconstriction and aldosterone secretion. Aldosterone increases distal sodium reabsorption and potassium and hydrogen-ion secretion; RAAS dysregulation contributes to hypertension, heart failure, and CKD progression.

### Renin-Angiotensin-Aldosterone System Physiology

The RAAS regulates blood pressure and fluid electrolyte balance. Renin released from juxtaglomerular cells cleaves angiotensinogen to angiotensin I. Angiotensin converting enzyme converts angiotensin I to angiotensin II which causes vasoconstriction and stimulates aldosterone secretion from the adrenal

cortex.

### Renography

Nuclear medicine imaging of kidneys. Evaluates function, obstruction, blood flow.

### Renovascular Hypertension

Hypertension due to renal artery stenosis. Diagnosis: Doppler ultrasound, CTA, MRA, renography. Treatment: angioplasty, stenting, surgery.

### Reperfusion Injury

Tissue damage following restoration of blood flow after ischemia. Mechanisms: oxidative stress, calcium overload, inflammation. Examples: myocardial reperfusion injury, stroke reperfusion injury. Mitigation: antioxidants, reperfusion protocols.

### Replantation Of An Avulsed Tooth

Replacement of an avulsed permanent tooth into its socket after trauma, followed by flexible stabilization and endodontic and periodontal follow-up when indicated. Prognosis depends strongly on extraoral dry time, storage conditions, root maturity, and contamination.

### Repolarization

The return of the membrane potential toward the resting value after depolarization. In neurons and skeletal/cardiac muscle, repolarization is primarily caused by the efflux of potassium through voltage-gated potassium channels and inactivation of sodium channels.

### Reporting Standards

Standards for structured reporting. ACR guidelines, BI-RADS, LI-RADS, PI-RADS.

### Reproductive Organs

The organs involved in reproduction. Female: ovaries (produce eggs and hormones), fallopian tubes (transport eggs, site of fertilization), uterus (nurtures the developing fetus), cervix (lower part of uterus, dilates during labor), vagina (passage for sperm and baby), and vulva (external genitalia).

---

## Reproductive Toxicity

Effects on reproduction: infertility, teratogenesis, fetal toxicity, developmental toxicity. Testing required for pharmaceuticals.

## Reproductive Years

The period of a woman's life during which she is capable of conceiving, typically from menarche (first menstrual period, average age 12-13) to menopause (final menstrual period, average age 51).

## Research Ethics

Principles that protect the rights, safety, welfare, privacy, and informed participation of people or animals involved in research.

## Reservoir

A human, animal, or environmental habitat in which an infectious agent normally lives, multiplies, and persists. A reservoir may serve as the source from which the agent is transmitted to a susceptible host.

## Residual Limb

The portion of a limb remaining after amputation. Care includes edema control, skin inspection, shaping, strengthening, desensitization, contracture prevention, and prosthetic preparation.

## Resorption Atelectasis

Atelectasis caused by complete obstruction of an airway, leading to absorption of trapped air by the pulmonary capillaries. Common causes include mucus plugging, foreign body, tumor, and post-surgical shallow breathing. The affected area appears as increased density on CXR with volume loss.

## Respiratory Acidosis

Acid-base disturbance due to accumulation of CO<sub>2</sub> from hypoventilation, lowering pH (acidemia). Causes: respiratory depression (opioids, sedatives, CNS disease), airway obstruction, neuromuscular weakness (GBS, myasthenia), chest wall restriction, severe COPD/asthma, and ventilation-perfusion mismatch.

## Respiratory Alkalosis

Acid-base disturbance from excessive elimination of CO<sub>2</sub> by hyperventilation, raising pH (alkalemia). Causes: anxiety/hyperventilation, hypoxia, pulmonary embolism, sepsis, fever, pain, salicylate toxicity, liver failure, pregnancy, high altitude. Compensation: renal bicarbonate excretion (days).

## Respiratory Changes In Pregnancy

The growing uterus elevates the diaphragm, while hormonal changes increase ventilatory drive. Tidal volume and minute ventilation generally increase, while functional residual capacity decreases.

## Respiratory Depression

Breathing that is abnormally slow or shallow, causing inadequate ventilation and possible carbon-dioxide retention or low oxygen. Medicines, brain disorders, and metabolic illness can cause it.

## Respiratory Distress

Difficulty breathing due to various causes. Assessment: work of breathing (retractions, nasal flaring, tripod position), oxygen saturation, breath sounds. Causes: asthma, COPD, pneumonia, pulmonary embolism, pneumothorax, anaphylaxis, heart failure.

## Respiratory Drive

The neural output that stimulates respiratory muscles and determines ventilation. It is generated by brainstem networks and modified by chemoreceptor input, mechanoreceptors, wakefulness, metabolic state, medications, and behavioral control.

## Respiratory Failure

Inadequate gas exchange resulting in hypoxemia (PaO<sub>2</sub> <60 mmHg), hypercapnia (PaCO<sub>2</sub> >50 mmHg), or both. Type 1 (hypoxemic): V/Q mismatch, shunt, diffusion impairment. Type 2 (hypercapnic): hypoventilation from neuromuscular disease, COPD exacerbation, or opioid overdose.

## Respiratory Health

The proper functioning of the lungs and airways, enabling efficient gas exchange and oxygen delivery to

---

the body. Maintaining respiratory health involves avoiding tobacco smoke, minimizing exposure to air pollutants and occupational hazards, and receiving vaccinations against respiratory infections like influenza and pneumococcal disease.

### **Respiratory Infections**

Illnesses caused by pathogens including viruses, bacteria, and fungi that affect the airways and lungs.

### **Respiratory Physiology**

The study of pulmonary function encompassing ventilation (movement of air), gas exchange (diffusion of O<sub>2</sub> and CO<sub>2</sub> across the alveolar-capillary membrane), transport of gases in blood, and regulation of breathing.

### **Respiratory Protection**

Measures and equipment used to reduce inhalation of harmful dusts, fumes, gases, aerosols, or infectious particles.

### **Respiratory Quotient**

The ratio of carbon dioxide production to oxygen consumption for a particular substrate or metabolic state. It differs from the respiratory exchange ratio measured at the mouth and is used in metabolic and ventilatory physiology.

### **Respiratory Rate**

The number of breaths taken per minute. The expected rate varies with age, activity, temperature, illness, and other factors.

### **Respiratory Rehabilitation**

A program of exercise, education, breathing techniques, and self-management that improves function and quality of life in people with chronic respiratory disease.

### **Respiratory Syncytial Virus**

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and young children. Infection is usually mild in adults but may be severe in infants, older adults, and people with chronic

heart or lung disease.

#### **Synonyms:**

RSV (Respiratory Syncytial Virus)

### **Respiratory Tract Infections**

Infections affecting any part of the respiratory tract, classified by anatomical location into upper respiratory tract infections (URTIs) and lower respiratory tract infections (LRTIs).

### **Respiratory Viruses**

Viruses that cause respiratory tract infections. Major respiratory viruses include influenza, respiratory syncytial virus (RSV), parainfluenza virus, adenovirus, and human metapneumovirus. SARS-CoV-2 causes COVID-19. Symptoms range from mild upper respiratory illness to severe pneumonia.

### **Response Assessment**

Evaluation of treatment response. RECIST criteria for solid tumors. PET response criteria for lymphoma.

### **Response Evaluation Criteria**

RECIST criteria for tumor response. PERCIST for PET.

### **Resting Membrane Potential**

The steady electrical potential difference across the cell membrane of an unstimulated cell, typically -70 mV in neurons, -80 to -90 mV in skeletal and cardiac muscle, and -50 to -60 mV in smooth muscle.

### **Restorative Dentistry**

Specialty of restoring damaged teeth. Procedures: fillings, inlays, onlays, crowns, bridges, implants. Goals: function, aesthetics, durability.

### **Restraint**

Device or medication limiting movement. Physical restraints: vests, wrist restraints, lap traps. Chemical restraints: antipsychotics, benzodiazepines for behavior control. Should be last resort, time-limited, with monitoring. Alternatives: addressing underlying causes, environmental modification.

---

### **Restraint-Related Harm**

Physical or psychological injury associated with using a device, medication, or environmental restriction to limit a person's movement. Older adults are at risk of falls, pressure injury, delirium, aspiration, and functional decline; the least restrictive alternatives should be prioritized.

### **Restrictive Cardiomyopathy**

A cardiomyopathy characterized by impaired ventricular relaxation and filling due to stiff, noncompliant myocardium, with preserved systolic function and normal or reduced ventricular volumes. Causes include amyloidosis, sarcoidosis, hemochromatosis, endomyocardial fibrosis, and radiation.

### **Retained Placenta**

Failure of the placenta to deliver after birth within the interval expected for safe management. It may result from failure of separation, abnormal placental attachment, or trapping behind a closed cervix and can cause severe bleeding.

### **Retained Products Of Conception**

Fragments of placental or fetal tissue retained in the uterus after delivery, miscarriage, or abortion. Causes: incomplete placental separation, succenturiate lobe, and placenta accreta. Presents: persistent or heavy bleeding, pain, and fever in the postpartum period.

### **Retention Time**

The time required for a compound to pass through a chromatographic system from injection to detection. In analytical toxicology, comparison with validated standards helps identify compounds, but retention time alone is not definitive identification.

### **Reticular Formation**

A network of interconnected nuclei in the brainstem (midbrain, pons, medulla) that regulates arousal, consciousness, sleep-wake transitions, and alertness (ascending reticular activating system), as well as muscle tone, posture, cardiovascular and respiratory control (vasomotor and respiratory centers), pain modulation, and attention.

### **Reticulocyte Count**

The number or percentage of immature red blood cells in blood. It reflects recent bone-marrow red-cell production and helps assess anemia, especially when interpreted with the hemoglobin and clinical context.

### **Retinal Detachment**

A separation of the neurosensory retina from the underlying retinal pigment epithelium, creating a potential space that fills with fluid and resulting in progressive vision loss in the affected area, and it is classified into three main types based on the underlying mechanism.

### **Retinal Artery Occlusion**

Blockage of a retinal artery causing sudden, usually painless loss of vision. It requires urgent ophthalmic and vascular evaluation because it may indicate a systemic embolic or vascular disorder.

### **Retinal Detachment Repair**

Surgical or pneumatic treatment to close retinal breaks and reattach the retina. Techniques include vitrectomy, scleral buckling, and pneumatic retinopexy, selected according to the type and location of detachment.

### **Retinal Hemorrhages**

Bleeding within the retina, a hallmark finding in abusive head trauma (shaken baby syndrome). Found on dilated fundoscopic examination, often bilateral and multi-layered. Also seen in severe accidental trauma, bleeding disorders, and increased intracranial pressure.

### **Retinal Ischemia**

Inadequate blood flow to the retina, often caused by a retinal artery occlusion or severe vascular disease. It may cause sudden, painless visual loss and requires emergency ophthalmic and vascular assessment; treatment depends on the cause and time of presentation.

### **Retinal Layers**

The retina consists of ten distinct layers that process

---

visual information through a complex neural circuit.

### **Retinal Prosthesis**

Experimental device for blindness. Argus II system: camera to processor to electrode array stimulates retina. Indications: retinitis pigmentosa. Provides light perception, pattern recognition.

### **Retinal Tear**

A full-thickness break in the neurosensory retina, often caused by vitreoretinal traction. It can permit fluid to enter the subretinal space and progress to rhegmatogenous retinal detachment; symptomatic tears are generally treated urgently with laser photocoagulation or cryotherapy.

### **Retinal Vein Occlusion**

Obstruction of a retinal vein producing retinal hemorrhages, edema, and variable visual loss. Branch and central forms may cause macular edema, retinal ischemia, and neovascular complications.

### **Retinitis Pigmentosa**

A group of inherited retinal disorders in which rod and cone photoreceptors gradually degenerate. Symptoms may include night blindness, narrowing of the visual field, and progressive loss of vision.

### **Retinopathy Of Prematurity**

Abnormal vascularization of the retina in premature infants, a leading cause of childhood blindness. Affects infants less than 32 weeks gestation and less than 1500 grams. Stages range from mild (avascular retina) to severe (retinal detachment). Screening began at 31-33 weeks corrected gestational age or 4 weeks chronological age.

### **Retinoschisis**

Splitting of the retinal layers, producing a separation between inner and outer retinal tissue. It may be degenerative and peripheral or inherited and juvenile, and can cause visual-field loss, reduced acuity, or complications resembling retinal detachment.

### **Retract (Vascular)**

To pull a vessel or tissue away from an operative field using a surgical retractor.

**Synonyms:**

Vascular

### **Retraction (Self-Retaining)**

Holding tissue away from an operative field with a retractor that remains in position without continuous manual support.

**Synonyms:**

Self-Retaining

### **Retractor (Abdominal)**

A surgical instrument used to hold back the abdominal wall or organs to improve access and visibility during an operation.

**Synonyms:**

Abdominal

### **Retractor (Hand)**

A handheld surgical instrument used to hold tissue or an organ away from the operative field.

**Synonyms:**

Hand

### **Retractor (Surgical)**

An instrument used to separate or hold tissues aside during a surgical procedure.

**Synonyms:**

Surgical

### **Retrograde Ejaculation**

Semen enters bladder instead of exiting urethra. Causes: diabetes, surgery, medications. Dry orgasm. Treatment: medications, sperm retrieval for fertility.

### **Retroperitoneal Fibrosis**

Chronic fibroinflammatory tissue formation in the retroperitoneum, often encasing the ureters and great vessels. It can cause hydronephrosis, flank pain, reduced kidney function, hypertension, or lower-limb edema and may be idiopathic, immune-mediated, drug-related, or secondary to malignancy.

---

## Retroperitoneal Hemorrhage

Bleeding into the retroperitoneal space, which may result from aortic rupture, anticoagulation therapy, retroperitoneal hematoma following femoral catheterization, trauma, or retroperitoneal neoplasms. Presents with flank pain, abdominal distension, hypotension, and anemia.

## Retroperitoneum

The anatomical space posterior to the peritoneum. It contains the kidneys, adrenal glands, ureters, aorta, and inferior vena cava, as well as portions of the duodenum, pancreas, and colon. Some organs are secondarily retroperitoneal after development. It is divided into anterior pararenal, perirenal, and posterior pararenal spaces.

## Rett Syndrome

An X-linked dominant neurodevelopmental disorder affecting almost exclusively females, caused by mutations in the MECP2 gene.

## Return Of Spontaneous Circulation

Restoration of sustained cardiac mechanical activity after cardiac arrest, evidenced by a palpable pulse or measurable blood pressure and signs of circulation. Post-arrest care addresses oxygenation, ventilation, blood pressure, temperature, neurologic injury, and the cause of arrest.

## Reverberation Artifact

Ultrasound artifact from multiple reflections. Reduced by changing angle, using tissue harmonic imaging.

## Reverse Transcription

Synthesis of DNA from an RNA template by the enzyme reverse transcriptase.

## Reversible Cell Injury

Cellular dysfunction caused by a harmful stimulus that can resolve when the stimulus is removed. Common changes include cellular swelling, fatty change, membrane blebbing, and reduced oxidative phosphorylation without irreversible membrane or nuclear destruction.

## Revision Arthroplasty

Surgical replacement, exchange, or repair of a failed or painful joint prosthesis. Indications include infection, aseptic loosening, instability, periprosthetic fracture, wear, and recurrent dislocation.

## Reye Syndrome

A rare acute encephalopathy with hepatic dysfunction, classically occurring in children recovering from a viral illness. It causes persistent vomiting, altered mental status, cerebral edema, and elevated liver enzymes without primary inflammatory liver failure.

### Synonyms:

Reye Johnson Syndrome (Reye Syndrome)

## Reynolds Pentad

Extension of the Charcot triad to include hypotension and altered mental status representing suppurative cholangitis, a severe life-threatening form of ascending cholangitis. Patients present with high fever, rigors, right upper quadrant pain, jaundice, hypotension, and confusion.

## Rezafungin

A long-acting echinocandin antifungal medicine that inhibits fungal cell-wall synthesis. It is used for selected invasive candidiasis infections; its long duration permits an intermittent dosing schedule under specialist supervision.

## Rh Isoimmunization

Maternal alloantibody production against fetal Rh D-positive red blood cells in an Rh D-negative mother, occurring when fetal RBCs enter the maternal circulation (fetomaternal hemorrhage).

## Rhabdoid Tumor

A highly aggressive malignant tumor of infancy, occurring in the kidney (malignant rhabdoid tumor) or brain (atypical teratoid/rhabdoid tumor), characterized by loss of the SMARCB1 (INI1) gene.

## Rhabdomyolysis

Rhabdomyolysis is rapid skeletal-muscle breakdown releasing myoglobin and electrolytes into blood, po-

---

tentially causing hyperkalemia, acute kidney injury, arrhythmia, and compartment complications. crush injury, extreme exertion, seizures, heat illness, and some diseases; it can lead to acute kidney injury and requires prompt medical assessment.

### **Rhabdomyolysis And AKI**

Severe muscle breakdown releases myoglobin and other intracellular contents, potentially causing acute kidney injury, electrolyte abnormalities, and cardiac arrhythmias. Findings may include muscle pain, weakness, dark urine, and elevated creatine kinase; treatment requires urgent assessment and cause-directed fluid and supportive therapy.

### **Rhabdomyoma**

A benign cardiac tumour composed of striated muscle cells, occurring predominantly in infants and children and strongly associated with tuberous sclerosis. It commonly involves the ventricular myocardium and may regress spontaneously, although large or multiple tumours can cause obstruction or arrhythmias.

### **Rhabdomyosarcoma**

Rhabdomyosarcoma is a malignant tumor showing skeletal-muscle differentiation, occurring most often in children but also in adults.

### **Rhegmatogenous Retinal Detachment**

The most common type of retinal detachment, caused by a full-thickness break or tear in the retina that allows liquefied vitreous humor to enter the subretinal space, separating the neurosensory retina from the underlying retinal pigment epithelium.

### **Rhesus (Rh) Factor**

A system of antigens on the surface of red blood cells, especially the D antigen. A person is Rh-positive when the D antigen is present and Rh-negative when it is absent. Rh incompatibility can affect pregnancy and transfusion safety.

**Synonyms:**

Rh

### **Rheumatic Heart Disease**

Valvular damage resulting from acute rheumatic fever, an autoimmune response to Group A streptococcal pharyngitis. Most commonly affects the mitral valve (stenosis/regurgitation), followed by aortic. Prevention through prompt treatment of streptococcal pharyngitis.

### **Rheumatoid Factor**

An autoantibody, usually of the IgM class, directed against part of IgG. It may support a diagnosis of rheumatoid arthritis but can also occur in other autoimmune diseases, infections, and healthy people.

### **Rhinencephalon**

The part of the brain concerned chiefly with the sense of smell and related limbic functions.

### **Rhinovirus**

A genus of non-enveloped, positive-sense RNA viruses in the Picornaviridae family. Rhinoviruses are a common cause of the common cold and spread mainly through respiratory secretions and contaminated hands or surfaces.

### **RhoGAM**

Rh immune globulin containing anti-D antibodies, used to prevent Rh isoimmunization in Rh-negative mothers. Administered intramuscularly at 28 weeks gestation and within 72 hours after delivery of an Rh-positive infant. Also given after amniocentesis, chorionic villus sampling, miscarriage, ectopic pregnancy, or abdominal trauma.

### **Rib**

One of 12 paired, curved bones forming the thoracic cage, protecting the heart, lungs, and great vessels. True ribs (1–7) attach directly to the sternum via costal cartilage. False ribs (8–10) attach indirectly to the sternum via the costal cartilage of rib 7. Floating ribs (11–12) have no anterior attachment.

### **Riboflavin (Vitamin B2)**

A water-soluble vitamin that forms the coenzymes FAD and FMN. These cofactors participate in oxidation-reduction reactions, including

---

electron transfer, fatty-acid oxidation, and energy metabolism.

**Synonyms:**

Vitamin B2

**Ribosomal RNA**

RNA component of ribosomes, catalyzing peptide bond formation (peptidyl transferase activity). Eukaryotic ribosome: 60S (28S, 5.8S, 5S rRNAs + proteins) + 40S (18S rRNA + proteins) = 80S. Prokaryotic: 50S (23S, 5S rRNAs) + 30S (16S rRNA) = 70S. rRNA genes are highly conserved, used in phylogenetics.

**Rickettsialpox**

Rickettsialpox is a mite-borne infection caused by *Rickettsia akari*, producing an inoculation eschar followed by fever and a vesicular rash.

**Ridge Preservation**

Socket grafting after extraction to maintain bone volume. Reduces ridge resorption.

**Right Atrium**

Receives deoxygenated blood from superior vena cava, inferior vena cava, and coronary sinus. Smooth posterior part (sinus venosus) and rough anterior auricle with pectinate muscles. The fossa ovalis is the fetal foramen ovale remnant. The SA node pacemaker is near the superior vena cava opening.

**Right Bundle Branch**

A continuation of the bundle of His that travels along the right side of the interventricular septum to the right ventricle. It supplies the right ventricular myocardium and Purkinje fibers. Right bundle branch block (RBBB) occurs when this branch is damaged, causing delayed right ventricular activation.

**Right Coronary Artery**

Arises from the right aortic sinus and travels in the right atrioventricular groove. It supplies the right atrium, right ventricle, SA node (60% of individuals), AV node (85% of individuals), and the inferior wall of the left ventricle.

**Right Coronary Artery Occlusion**

Blockage of the right coronary artery, reducing blood flow to areas of the heart it supplies and potentially causing myocardial infarction or rhythm disturbances.

**Right Heart Failure**

Failure of the right ventricle to adequately pump blood to the lungs, causing systemic venous congestion. Causes include left heart failure (most common), pulmonary hypertension, right ventricular infarction, pulmonary embolism, and constrictive pericarditis. Signs include elevated JVD, peripheral edema, hepatomegaly, and ascites.

**Right Hypochondriac Region**

One of nine abdominal regions in the upper right abdomen, bounded medially by the right midclavicular line and superiorly by the right costal margin. Contains the cecum, appendix, ascending colon, and inferior right liver lobe. Pain here may indicate appendicitis (McBurney's point), cecal pathology, or hepatic disease.

**Right Iliac Region**

Lower right abdomen containing the cecum, appendix, and terminal ileum. McBurney's point (junction of lateral and middle thirds from umbilicus to ASIS) is critical for appendicitis diagnosis. Also significant for evaluating inguinal and femoral hernias, and the right ureter's course.

**Right Lymphatic Duct**

Short lymphatic vessel (approximately 1.5 cm) draining lymph from the right upper quadrant: right arm, right side of the head and neck, and right thorax. Formed by the junction of right jugular, subclavian, and bronchomediastinal trunks, emptying into the right venous angle (junction of right internal jugular and subclavian veins).

**Right Sixth Cranial Nerve Palsy**

Weakness or paralysis of the right abducens nerve (CN VI), causing inability to abduct the right eye and resulting in horizontal diplopia worse at distance and on right gaze.

---

### **Right Ureterovesical Calculus**

A stone lodged at the junction of the right ureter and bladder, causing flank pain, hematuria, and urinary urgency or frequency. May require endoscopic or lithotripsy intervention.

### **Right Ventricle**

Receives deoxygenated blood from the right atrium through the tricuspid valve, pumping into the pulmonary trunk via the pulmonary valve. Thinner walls (3-5 mm) than the left ventricle due to low pulmonary resistance.

### **Rigor Mortis**

Post-mortem stiffening of body muscles resulting from loss of ATP synthesis following death. Without ATP, actin and myosin filaments remain permanently cross-linked in a rigid state.

### **Ringing In The Ears**

Perception of ringing, buzzing, hissing, or other sound without an external source, medically called tinnitus. It may be associated with hearing loss, loud-noise exposure, earwax, ear infection, medicines, or jaw disorders. Sudden hearing loss, one-sided symptoms, or pulsatile ringing requires medical evaluation.

#### **Synonyms:**

Tinnitus (Ringing In The Ears)

### **Rinne Test**

The Rinne test is a screening test that compares air conduction and bone conduction hearing using a vibrating tuning fork (typically 512 Hz) to help differentiate between conductive and sensorineural hearing loss.

### **RIPE Therapy**

Standard 4-drug regimen for active TB: Rifampin, Isoniazid, Pyrazinamide, Ethambutol. Intensive phase 2 months, continuation phase 4 months (total 6 months). Pyridoxine prevents isoniazid-induced neuropathy.

### **Rippling Muscle Disease**

A rare, benign myopathy characterized by mechanically-induced muscle contractions that spread across the muscle as a visible wave (rippling), typically triggered by stretch, percussion, or movement.

### **Ristocetin-Induced Platelet Aggregation**

A platelet-function assay that evaluates platelet agglutination in the presence of ristocetin, which depends on von Willebrand factor and platelet glycoprotein Ib.

### **River Blindness**

Onchocerciasis, a parasitic infection caused by *Onchocerca volvulus* and transmitted by blackflies. It can cause severe itching, skin disease, and visual impairment.

### **Robot-Assisted Rehabilitation**

Robotic devices for repetitive task training. Upper extremity, lower extremity, gait training. Objective measurement, high repetition.

### **Romberg Test**

The Romberg test is a clinical neurological test used to assess the integrity of the dorsal column-medial lemniscus pathway (proprioception) and the cerebellum in maintaining balance. The test is performed by asking the patient to stand with feet together and eyes open, and then to close the eyes.

### **Romberg's Sign**

Increased unsteadiness when a person stands with the feet together and closes the eyes, suggesting impaired proprioception or vestibular function.

### **Root Caries**

Caries on exposed root surfaces. Common in elderly with recession. Fluoride effective.

### **Root Fracture**

Vertical or horizontal fracture of root. Prognosis depends on location and direction. Vertical root fractures typically require extraction.

---

## Rooting Reflex

A primitive reflex present from birth to 3-4 months, triggered by stroking the infant's cheek or corner of the mouth. The infant turns toward the stimulus and opens the mouth, searching for the nipple. Facilitates breastfeeding. Absence may indicate neurologic impairment. Disappears as voluntary feeding develops.

## Ropinirole

A non-ergot dopamine agonist (D2/D3) used for Parkinson disease and restless legs syndrome. Adverse effects: nausea, dizziness, somnolence (sudden sleep attacks), orthostatic hypotension, impulse control disorders (gambling, hypersexuality), hallucinations, and leg edema. Extended-release for once-daily Parkinson dosing.

## Roseola

Roseola infantum is a common viral illness, usually caused by human herpesvirus 6, with several days of high fever followed by a pink trunk rash as the fever resolves; febrile seizures may occur.

### Synonyms:

Sixth Disease (Roseola)

## Rostral

Positioned toward the snout or front of the head; in the brain, it means toward the forehead.

## Rotator Cuff Arthropathy

Glenohumeral joint degeneration associated with chronic, irreparable rotator-cuff deficiency. Superior migration of the humeral head, altered joint mechanics, pain, and loss of elevation may lead to consideration of reverse shoulder arthroplasty.

## Rotavirus

A double-stranded RNA virus that is the leading cause of severe gastroenteritis in children worldwide. The virus has a segmented genome and infects enterocytes of the small intestine. Rotavirus causes profuse watery diarrhea, vomiting, and dehydration. Diagnosis is made by antigen detection in stool.

## Rotavirus Vaccine

An oral live attenuated vaccine that protects infants and young children against severe rotavirus gastroenteritis. The product, schedule, and age limits depend on the immunization program; mild fever or diarrhea may occur.

## Roth Spots

Retinal hemorrhages with pale centers, seen on fundoscopic examination in infective endocarditis. They are a minor criterion in the Duke criteria. Roth spots are caused by immune complex-mediated vasculitis of retinal vessels.

## Rothmund-Thomson Syndrome

A genetically heterogeneous disorder characterized by poikiloderma beginning in infancy, short stature, sparse hair, skeletal abnormalities, juvenile cataracts in some forms, and increased risk of osteosarcoma or other cancers.

## Rouleau

A stack or column of red blood cells, commonly seen in blood with increased plasma proteins.

## Round Pneumonia

Pneumonia appearing as a round opacity on CXR rather than typical consolidation. More common in children and elderly. May mimic lung mass.

## Roundworm

Ascariasis: infection by *Ascaris lumbricoides*, the most common human soil-transmitted helminth, acquired by ingesting eggs from contaminated food/soil.

## Route Of Administration

The path by which a drug enters the body, influencing absorption, onset, bioavailability, and first-pass metabolism. Enteral routes: oral, sublingual, buccal, rectal. Parenteral: intravenous (100 percent bioavailability, immediate onset), intramuscular, subcutaneous, intradermal.

---

### **Rovsing Sign**

Physical exam sign of acute appendicitis: palpation of the left lower quadrant elicits pain in the right lower quadrant due to displacement of gas stretching the inflamed appendix. See Appendicitis.

### **RPR/VDRL (Syphilis Serology)**

Nontreponemal blood tests used to screen for and monitor syphilis. Reactive results require interpretation with clinical findings and, usually, a treponemal confirmatory test.

#### **Synonyms:**

Syphilis Serology

### **Rubella Virus**

A togavirus that causes rubella (German measles), a mild febrile illness with rash. The virus is transmitted by respiratory droplets. Rubella is most dangerous during pregnancy, causing congenital rubella syndrome (CRS) with deafness, cataracts, and cardiac defects. Diagnosis involves serology. Treatment is supportive.

### **Rubin Maneuver**

An internal rotational maneuver for shoulder dystocia: the operator inserts a hand and applies pressure to the posterior aspect of the anterior fetal shoulder, rotating it toward the fetal chest (adducting the shoulders). This reduces the bisacromial diameter and disimpacts the anterior shoulder from the pubic symphysis.

### **Rubinstein-Taybi Syndrome**

A genetic developmental disorder associated with characteristic facial features, short stature, broad thumbs and toes, and intellectual disability. It is commonly caused by pathogenic variants in CREBBP or EP300.

### **Rumination Disorder**

Recurrent effortless regurgitation of recently ingested food, followed by rechewing, reswallowing, or spitting, without the retching typical of vomiting. It can cause weight loss, malnutrition, and dental complications.

### **Ruptured Abdominal Aortic Aneurysm**

A tear through an abdominal aortic aneurysm causing internal bleeding, shock, and usually sudden abdominal or back pain. It requires emergency repair.

### **Russell-Silver Syndrome**

A congenital growth disorder involving prenatal and postnatal growth restriction, relative macrocephaly, triangular face, body asymmetry, and feeding difficulty. It is often associated with abnormalities of genomic imprinting on chromosomes 7 or 11.

### **Rx**

Prescription or treatment. Symbol derives from Latin "requirere" (to take). Also used as abbreviation for remedy. Rx symbol: Rx or %x;.

### **Reverse Trendelenburg Position**

A supine position in which the head and upper body are elevated above the feet.

### **Rapid Gastric Emptying**

Abnormally rapid movement of food from the stomach into the small intestine, sometimes called dumping syndrome.

### **Rectal Cancer**

Cancer that develops in the tissues of the rectum.

#### **Synonyms:**

Cancer, Rectal

### **Recurrent Breast Cancer**

Breast cancer that returns after a period in which it was undetectable.

### **Residual Limb Pain**

Pain in the remaining portion of a limb after amputation.

#### **Synonyms:**

Stump Pain

### **Retinal Diseases**

Disorders that damage the retina, the light-sensitive tissue at the back of the eye.

---

### Ringworm Of The Body

A contagious fungal infection causing an itchy, ring-shaped rash on the skin.

### Ringworm Of The Scalp

A fungal infection of the scalp and hair that can cause scaling, broken hairs, and hair loss.

### Rotator Cuff Injury

Damage to one or more tendons or muscles that stabilize and move the shoulder.

### Rales

Crackling or bubbling sounds heard in the lungs, often caused by fluid or narrowed airways.

### Retinitis

Inflammation of the retina that may impair vision.

### Romberg Sign

Loss of balance when standing with the feet together and the eyes closed, suggesting impaired proprioception or vestibular function.

### Rule Of Nines

A method for estimating the percentage of body-surface area affected by burns.

### Rongeur

A strong, jawed surgical instrument used to bite and remove small pieces of bone or other hard tissue.

### Rabies Virus

The virus that causes rabies, a usually fatal viral infection of the central nervous system transmitted most often through the saliva of an infected animal.

### Radioactive Iodine Uptake Test

A nuclear medicine test that measures how much radioactive iodine the thyroid gland absorbs. It helps evaluate hyperthyroidism and some thyroid disorders.

### Radioisotope (Radionuclide)

An unstable isotope that emits radiation as it decays; radioisotopes are used in medical imaging, diagnosis, and selected treatments.

#### Synonyms:

Radionuclide

### Rale (Rhonchus)

An abnormal sound heard through a stethoscope during breathing, caused by air moving through fluid, mucus, narrowed airways, or abnormal lung tissue.

#### Synonyms:

Rhonchus

### Renal Dialysis

A treatment that removes waste products and excess fluid from the blood when the kidneys cannot do so adequately, using haemodialysis or peritoneal dialysis.

### Retinol (Vitamin A)

A fat-soluble vitamin required for vision, epithelial health, immune function, and normal growth; deficiency may cause night blindness and xerophthalmia.

#### Synonyms:

Vitamin A

### Revascularisation

Restoration of blood flow to an organ or limb by a procedure such as angioplasty, stenting, or surgical bypass.

### Root Canal Therapy

Dental treatment in which infected or inflamed pulp is removed from a tooth, the canal is cleaned and sealed, and the tooth is restored.

### Roth's Spots

Small retinal haemorrhages with pale centres, associated with conditions such as infective endocarditis, severe anaemia, leukaemia, and diabetes.

---

### **Radionuclide Heart Scan**

A nuclear medicine study that uses a radioactive tracer to evaluate myocardial blood flow, heart muscle viability, or ventricular function.

### **Rasp**

A roughened surgical instrument used to file, shape, or smooth bone or other hard tissue.

### **Red Blood Cells**

Blood cells that contain hemoglobin and transport oxygen from the lungs to tissues while carrying some carbon dioxide back to the lungs.

### **Reed-Sternberg Cells**

Large abnormal cells derived from B lymphocytes and characteristic of classic Hodgkin lymphoma.

### **Reflexes**

Automatic, rapid responses to stimuli mediated through neural pathways called reflex arcs.

### **Renal Corpuscle**

The filtration unit at the beginning of a nephron, consisting of the glomerulus enclosed by Bowman capsule.

### **Renal Pyramids**

Cone-shaped structures in the renal medulla that contain tubules and collecting ducts and drain urine toward the renal papillae.

### **Repetitive Strain Injury**

Pain or dysfunction caused by repeated forceful movements, sustained positions, or overuse of muscles, tendons, nerves, or other tissues.

### **Resectoscope**

An endoscopic surgical instrument with a viewing system and working loop used to remove or cauterize tissue, especially during prostate or bladder procedures.

### **Resorption**

The removal and absorption of tissue, especially the

breakdown of bone by osteoclasts.

### **Reticular Activating System**

A network involving the brainstem reticular formation and related structures that helps regulate wakefulness, alertness, attention, and sleep-wake transitions.

### **Retinoscope**

An instrument that shines light into the eye to help determine refractive error.

### **Rh Incompatibility**

An immune reaction that can occur when an Rh-negative pregnant person carries an Rh-positive fetus and forms antibodies against fetal red blood cells. Anti-D immune globulin can prevent sensitization.

### **Rods**

Retinal photoreceptor cells that provide vision in dim light and contribute to peripheral vision but do not detect color.

### **Rubeola**

Measles, a highly contagious viral illness caused by measles virus and characterized by fever, cough, conjunctivitis, and a widespread maculopapular rash.

#### **Synonyms:**

Measles (Rubeola)

### **Radius Fracture**

A break in the radius, one of the two bones of the forearm, often occurring near the wrist after a fall onto an outstretched hand.

### **Rotator Cuff Tear**

A partial or complete tear of one or more tendons stabilizing the shoulder, causing pain, weakness, and difficulty raising or rotating the arm.

### **Radial Nerve Palsy**

Dysfunction of the radial nerve causing weakness of wrist and finger extension, often producing wrist drop, with sensory loss over part of the back of the hand in some cases.

---

### **Radiation Proctitis**

Inflammation and injury of the rectum after pelvic radiation therapy, causing rectal pain, urgency, diarrhea, mucus, or bleeding.

### **Rhinorrhea**

Excessive watery or mucoid discharge from the nose, commonly caused by infection, allergy, irritants, or changes in temperature.

### **Rib Fracture**

A break in one or more ribs, usually causing localized chest pain worsened by breathing, coughing, or movement and sometimes associated with injury to underlying organs.

### **Retrograde Amnesia**

Loss of memory for events that occurred before an injury, illness, or other triggering event, with variable preservation of more remote memories.

### **Rabeprazole**

Rabeprazole is a proton-pump inhibitor that irreversibly suppresses gastric H<sup>+</sup>/K<sup>+</sup>-ATPase; it treats reflux and peptic-ulcer disease and supports *Helicobacter pylori* eradication.

### **Rabies Vaccine**

A medical term referring to rabies vaccine. Its clinical meaning depends on the context in which it is used.

### **Raclopride**

Raclopride is a research radioligand that binds dopamine D2 receptors and is used in brain-imaging studies of dopamine signaling.

### **Radiation Dosage**

A medical procedure, device, or treatment involving radiation dosage. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Radiation Exposure**

A medical procedure, device, or treatment involving radiation exposure. Its purpose, risks, and follow-up

depend on the specific intervention and patient.

### **Radiation Field**

A medical procedure, device, or treatment involving radiation field. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Radiation Leukemia**

A neoplasm involving radiation leukemia. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Radiation Oncologists**

A medical procedure, device, or treatment involving radiation oncologists. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Radiation Tolerance**

A medical procedure, device, or treatment involving radiation tolerance. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Radical Cystoprostatectomy**

radical cystoprostatectomy is used in relation to radical cystoprostatectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radical Hysterectomy**

radical hysterectomy is used in relation to radical hysterectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radical Lymphadenectomy**

radical lymphadenectomy is used in relation to radical lymphadenectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radical Mastectomy**

radical mastectomy is used in relation to radical mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radical Nephrectomy**

radical nephrectomy is used in relation to radical nephrectomy during assessment, diagnosis, treat-

---

ment, monitoring, or patient support.

### **Radicular Cyst**

A medical term referring to radicular cyst. Its clinical meaning depends on the context in which it is used.

### **Radiodermatitis**

Radiodermatitis is skin injury caused by ionizing radiation, ranging from redness and hair loss to chronic ulceration, fibrosis, or cancer risk.

### **Radioembolisation**

A medical procedure, device, or treatment involving radioembolisation. Its purpose, risks, and follow-up depend on the specific intervention and patient.

### **Radioimmunodetection**

A biological or biochemical term involving radioimmunodetection. Its role depends on the relevant cells, molecules, and physiological process.

### **Radioimmunoguided Surgery**

radioimmunoguided surgery is used in relation to radioimmunoguided surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radioimmunotherapy**

radioimmunotherapy is used in relation to radioimmunotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radioisotope**

A biological or biochemical term involving radioisotope. Its role depends on the relevant cells, molecules, and physiological process.

### **Radiologic Health**

Radiologic health concerns protection from unnecessary ionizing radiation while preserving the diagnostic or therapeutic benefit of medical imaging.

### **Radiologic Response**

A clinical condition or finding involving radiologic response. Its features, causes, evaluation, and man-

agement depend on the clinical context.

### **Radiometry**

A medical term referring to radiometry. Its clinical meaning depends on the context in which it is used.

### **Radionuclide Angiography**

A diagnostic or laboratory method related to radionuclide angiography. Results are interpreted with the method, reference range, and clinical findings.

### **Radionuclide Generator**

radionuclide generator is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Radionuclide Imaging**

A diagnostic or laboratory method related to radionuclide imaging. Results are interpreted with the method, reference range, and clinical findings.

### **Radioprotective Agent**

A radioprotective agent reduces tissue injury from ionizing radiation by limiting DNA damage, scavenging radicals, or supporting repair.

### **Radiosurgery**

radiosurgery is used in relation to radiosurgery during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radiotherapy Bolus**

radiotherapy bolus is used in relation to radiotherapy bolus during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radiotherapy Dosage**

radiotherapy dosage is used in relation to radiotherapy dosage during assessment, diagnosis, treatment, monitoring, or patient support.

### **Radon**

A biological or biochemical term involving radon. Its role depends on the relevant cells, molecules, and

---

physiological process.

### **Raffinose**

Raffinose is a plant oligosaccharide that humans digest poorly and that can be fermented by gut bacteria, causing gas in some people.

### **Rahnella**

rahnella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rahnella Aquatilis**

rahnella aquatilis is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rale**

A rale, or crackle, is an abnormal discontinuous breath sound produced by fluid, collapsed airways, or opening of small airways during breathing.

### **Raloxifene Hydrochloride**

A medicine or pharmacologic agent called raloxifene hydrochloride. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Ralstonia**

ralstonia is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Ralstonia Mannitolilytica**

ralstonia mannitolilytica is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Ralstonia Pickettii**

ralstonia pickettii is a bacterial taxon; disease risk and clinical significance depend on the strain, speci-

men source, host factors, and evidence of infection rather than colonization.

### **Raltegravir Potassium**

A medicine or pharmacologic agent called raltegravir potassium. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Raltitrexed**

A medicine or pharmacologic agent called raltitrexed. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Ramipril**

Ramipril is an angiotensin-converting-enzyme inhibitor used for hypertension, heart failure, and cardiovascular risk reduction; cough, hyperkalaemia, renal-function changes, angioedema, and fetal toxicity are important risks.

### **Ramucirumab**

A medical term referring to ramucirumab. Its clinical meaning depends on the context in which it is used.

### **Random Allocation**

A biological or biochemical term involving random allocation. Its role depends on the relevant cells, molecules, and physiological process.

### **Randomization Validation**

A diagnostic or laboratory method related to randomization validation. Results are interpreted with the method, reference range, and clinical findings.

### **Ranibizumab**

A medical term referring to ranibizumab. Its clinical meaning depends on the context in which it is used.

### **Ranolazine**

Ranolazine is an antianginal drug that inhibits the late sodium current in cardiac cells and reduces chronic angina without substantially lowering heart

---

rate or blood pressure; QT prolongation and drug interactions require caution.

### **Ranpirnase**

A medical term referring to ranpirnase. Its clinical meaning depends on the context in which it is used.

### **Raoultella**

raoultella is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Raoultella Planticola**

A biomedical term referring to raoultella planticola; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Raoultella Terrigena**

A biomedical term referring to raoultella terrigena; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Raphe Nuclei**

The raphe nuclei are brainstem groups of neurons that produce serotonin and influence mood, pain, sleep, arousal, and autonomic functions.

### **Rare Diseases**

A clinical condition or finding involving rare diseases. Its features, causes, evaluation, and management depend on the clinical context.

### **Ras Peptide**

ras peptide is a defined chemical or biologic substance involved in ras peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **Ratio**

A ratio compares two quantities by division, such as a measurement of risk, concentration, or body proportions.

### **Rationalization**

A biological or biochemical term involving rationalization. Its role depends on the relevant cells, molecules, and physiological process.

### **Rauscher Virus**

rauscher virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Rauwolfia Alkaloid**

Rauwolfia alkaloids are plant-derived compounds that deplete or reduce sympathetic neurotransmission and were historically used for hypertension.

### **Ravuconazole**

A medicine or pharmacologic agent called ravuconazole. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Razoxane**

Razoxane is a topoisomerase-II inhibitor related to dexrazoxane and studied or used historically for selected anticancer or cardioprotective purposes.

### **Reaction**

A biological or biochemical term involving reaction. Its role depends on the relevant cells, molecules, and physiological process.

### **Reactive Hypoglycemia**

Reactive hypoglycemia is low blood glucose occurring after eating, often several hours later, with shakiness, sweating, hunger, or weakness and requiring evaluation of causes.

### **Reagent**

A reagent is a chemical or biological substance used to cause or detect a reaction in laboratory testing, research, or manufacturing.

### **Reality Testing**

A diagnostic or laboratory method related to reality

---

testing. Results are interpreted with the method, reference range, and clinical findings.

### **Rebeccamycin**

A medicine or pharmacologic agent called rebeccamycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Receive**

To receive means to be given or take in a treatment, substance, signal, transplant, specimen, or other intervention or material.

### **Receptor Binding**

receptor binding is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Recombinant**

A biological or biochemical term involving recombinant. Its role depends on the relevant cells, molecules, and physiological process.

### **Recombinant Protein**

recombinant protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Recombinase**

A biological or biochemical term involving recombinase. Its role depends on the relevant cells, molecules, and physiological process.

### **Recombinational Repair**

A medical procedure, treatment, device, or care topic related to recombinational repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Record**

A health record is a documented account of a person's history, findings, tests, diagnoses, treatments, decisions, and outcomes.

### **Recreation Therapy**

recreation therapy is used in relation to recreation therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Rectal**

Rectal means relating to the rectum, the final section of the large intestine before the anal canal.

### **Rectal Carcinoma**

A neoplasm involving rectal carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Rectal Disease**

A clinical condition or finding involving rectal disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Rectal Fistula**

A rectal fistula is an abnormal tract connecting the rectum with skin or another organ, often causing drainage, infection, or passage of stool through an abnormal route.

### **Rectal Hemorrhage**

A clinical condition or finding involving rectal hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Rectal Mucositis**

Rectal mucositis is inflammation and injury of the rectal lining, often after radiation, chemotherapy, infection, inflammatory disease, or trauma.

### **Rectal Necrosis**

Rectal necrosis is death of rectal tissue from inadequate blood flow, severe inflammation, infection, pressure, or another destructive process.

---

### **Rectal Neoplasm**

A neoplasm involving rectal neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Rectal Obstruction**

A clinical condition or finding involving rectal obstruction. Its features, causes, evaluation, and management depend on the clinical context.

### **Rectal Perforation**

A biological or biochemical term involving rectal perforation. Its role depends on the relevant cells, molecules, and physiological process.

### **Rectal Polyposis**

Rectal polyposis is the presence of multiple polyps in the rectum, which may be sporadic or part of an inherited syndrome and can increase cancer risk.

### **Rectal Route**

The rectal route administers a medicine or fluid through the anus into the rectum, where it may act locally or be absorbed systemically.

### **Rectal Stenosis**

A clinical condition or finding involving rectal stenosis. Its features, causes, evaluation, and management depend on the clinical context.

### **Rectal Tenesmus**

Rectal tenesmus is a persistent or urgent feeling of needing to pass stool despite an empty or nearly empty rectum, caused by inflammation, infection, mass, or motility disorder.

### **Rectosigmoid Neoplasm**

A neoplasm involving rectosigmoid neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Rectus Abdominis**

The rectus abdominis is a paired abdominal muscle that flexes the trunk, stabilizes the pelvis, and helps compress abdominal contents.

### **Recurrent Disease**

A clinical condition or finding involving recurrent disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Recurrent Fractures**

A clinical condition or finding involving recurrent fractures. Its features, causes, evaluation, and management depend on the clinical context.

### **Red Nucleus**

The red nucleus is a midbrain structure involved in motor coordination and connections with the cerebellum and spinal cord.

### **Reducing Agents**

Reducing agents donate electrons in chemical reactions and can alter oxidation state; they are used in laboratory chemistry, biology, and manufacturing.

### **Reducing Diet**

A reducing diet is a calorie-controlled eating pattern intended to reduce body weight; safe plans should provide adequate nutrients and account for health conditions.

### **Reductase Deficiency**

A clinical condition or finding involving reductase deficiency. Its features, causes, evaluation, and management depend on the clinical context.

### **Reduviidae**

A biomedical term referring to reduviidae; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Referral**

A medical term referring to referral. Its clinical meaning depends on the context in which it is used.

### **Reflex**

A reflex is a rapid, involuntary response to a stimulus mediated through a neural or physiologic pathway.

---

### **Reflex Epilepsy**

Reflex epilepsy is epilepsy in which specific stimuli such as flashing light, sound, reading, or touch reliably trigger seizures.

### **Refractive Error**

A refractive error occurs when the eye does not focus light correctly on the retina, causing nearsightedness, farsightedness, astigmatism, or presbyopia.

### **Refractometer**

A refractometer measures how much light bends through a substance and is used for fluid concentration, optical properties, or eye refraction.

### **Refractometry**

A medical term referring to refractometry. Its clinical meaning depends on the context in which it is used.

### **Refractory Anemia**

Refractory anemia is an older term for anemia that persists despite usual treatment and may refer to a myelodysplastic syndrome or another underlying disorder.

### **Refractory Cancer**

A neoplasm involving refractory cancer. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Refractory Disease**

A clinical condition or finding involving refractory disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Regeneration**

regeneration is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Regional**

A biological or biochemical term involving regional. Its role depends on the relevant cells, molecules, and

physiological process.

### **Regional Chemotherapy**

regional chemotherapy is used in relation to regional chemotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Regulatory Authority**

A regulatory authority is a government or official body that sets and enforces standards for medicines, devices, facilities, professionals, or public health.

### **Regulatory Gene**

regulatory gene is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Reifenstein Syndrome**

A clinical condition or finding involving reifenstein syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Reiki**

Reiki is a complementary practice involving light touch or hands near the body; evidence for treating disease is limited and it should not replace effective medical care.

### **Relaxation**

A biological or biochemical term involving relaxation. Its role depends on the relevant cells, molecules, and physiological process.

### **Relaxin**

Relaxin is a reproductive hormone that helps remodel connective tissue and may contribute to cervical, pelvic, and vascular changes during pregnancy.

### **Religion**

A biological or biochemical term involving religion. Its role depends on the relevant cells, molecules, and physiological process.

---

## Removal Technique

A medical procedure, treatment, device, or care topic related to removal technique; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Renal Adenoma

A renal adenoma is a usually benign kidney tumor, often discovered incidentally; its size, imaging features, and growth determine whether follow-up is needed.

## Renal Carcinoma

A neoplasm involving renal carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

## Renal Circulation

A biological or biochemical term involving renal circulation. Its role depends on the relevant cells, molecules, and physiological process.

## Renal Cyst

A renal cyst is a fluid-filled sac in or on the kidney, commonly benign but sometimes complex or associated with inherited cystic disease.

## Renal Function

A biological or biochemical term involving renal function. Its role depends on the relevant cells, molecules, and physiological process.

## Renal Glomerulus

A renal glomerulus is a tuft of capillaries within a nephron that filters blood to begin urine formation.

## Renal Hamartoma

A renal hamartoma is a benign disorganized overgrowth of mature tissues in the kidney, sometimes used to describe an angiomyolipoma-like lesion.

## Renal Hypertension

renal hypertension is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentra-

tion, pathway, or clinical context.

## Renal Hypertrophy

Renal hypertrophy is enlargement of kidney tissue, often compensating for loss or reduced function of the other kidney but sometimes caused by disease.

## Renal Insufficiency

Renal insufficiency is reduced kidney function that impairs waste removal, fluid and electrolyte balance, acid handling, or hormone production.

## Renal Necrosis

Renal necrosis is death of kidney tissue caused by severe ischemia, toxins, infection, obstruction, or other injury and can cause acute kidney failure.

## Renal Oncocytoma

A renal oncocytoma is a usually benign kidney tumor arising from oncocytic cells; imaging may not always distinguish it reliably from renal cancer.

## Renal Parenchyma

Renal parenchyma is the functional kidney tissue containing nephrons and supporting structures that filter blood and produce urine.

## Renal Reabsorption

A clinical condition or finding involving renal reabsorption. Its features, causes, evaluation, and management depend on the clinical context.

## Renal Sarcoma

A neoplasm involving renal sarcoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

## Renal Tubule Acidosis

renal tubule acidosis is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

## Renaut Body

A Renaut body is a specialized cluster of cells in

---

the peripheral nerve endoneurium, associated with pressure sensitivity and sometimes nerve pathology.

### **Renshaw Cell**

renshaw cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Reoviridae**

reoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Reoviridae Infection**

reoviridae infection is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Repeat Surgery**

repeat surgery is used in relation to repeat surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### **Replication Initiation**

A biological or biochemical term involving replication initiation. Its role depends on the relevant cells, molecules, and physiological process.

### **Replicon**

A medical term referring to replicon. Its clinical meaning depends on the context in which it is used.

### **Reporter Gene**

reporter gene is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Repression**

A biological or biochemical term involving repression. Its role depends on the relevant cells,

molecules, and physiological process.

### **Reproduction**

reproduction is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Reproduction Spores**

reproduction spores is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

### **Reproductive Behavior**

Reproductive behavior includes behaviors involved in courtship, mating, pair bonding, pregnancy, parenting, or sexual response and is influenced by biology and environment.

### **Reproductive History**

Reproductive history records pregnancies, births, miscarriages, abortions, menstrual function, fertility, contraception, and related conditions relevant to health assessment.

### **Reproductive Process**

A reproductive process is a biological event involved in gamete production, fertilization, implantation, pregnancy, birth, or development of offspring.

### **Reproductive Technique**

A reproductive technique is a medical or laboratory method used to assist conception, preserve fertility, diagnose reproductive disease, or manage pregnancy.

### **Reprogram**

To reprogram a cell means to alter its gene-expression state so it acquires a different developmental potential or function.

### **Reptiles**

A medical term referring to reptiles. Its clinical meaning depends on the context in which it is used.

---

### Research Activity

Research activity is systematic work that generates or evaluates evidence through observation, experimentation, analysis, or synthesis.

### Research Design

Research design is the planned structure of a study, including its question, participants, interventions, measurements, comparisons, and analysis.

### Research Personnel

Research personnel are people who design, conduct, coordinate, monitor, analyze, or support a research study according to its protocol and ethical requirements.

### Research Study

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### Resectable

A medical term referring to resectable. Its clinical meaning depends on the context in which it is used.

### Reserpine

Reserpine depletes neuronal catecholamines and serotonin by inhibiting vesicular monoamine transport; it was formerly used for hypertension and psychosis but is now rarely used because of depression, parkinsonism, and hypotension.

### Residential Mobility

Residential mobility is movement between homes or communities and can affect continuity of care, social support, exposure, and health access.

### Residual Neoplasm

A neoplasm involving residual neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Residual Risk

Residual risk is the chance of harm that remains

after preventive measures, treatment, screening, or controls have been applied.

### Residual Tumor

A neoplasm involving residual tumor. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Resin

A medical term referring to resin. Its clinical meaning depends on the context in which it is used.

### Resiquimod

A medical term referring to resiquimod. Its clinical meaning depends on the context in which it is used.

### Resistance Training

A medical term referring to resistance training. Its clinical meaning depends on the context in which it is used.

### Resistant Starch

A medical term referring to resistant starch. Its clinical meaning depends on the context in which it is used.

### Respiratory Burst

A respiratory burst is rapid production of reactive oxygen species by activated phagocytes to help destroy engulfed microorganisms.

### Respiratory Disorder

A clinical condition or finding involving respiratory disorder. Its features, causes, evaluation, and management depend on the clinical context.

### Respiratory Infection

An infectious process or toxic exposure involving respiratory infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### Respiratory Muscle

respiratory muscle refers to a defined body structure, tissue, or physiologic process; its normal location

---

and function provide the basis for interpreting related disease or injury.

### **Respiratory Neoplasm**

A neoplasm involving respiratory neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Respiratory Paralysis**

Respiratory paralysis is failure of the muscles needed for breathing because of nerve, muscle, brainstem, toxin, or spinal-cord dysfunction and is an emergency.

### **Respiratory Therapy**

respiratory therapy is used in relation to respiratory therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Respiratory Transport**

Respiratory transport is movement of oxygen and carbon dioxide between lungs, blood, and tissues, largely through hemoglobin and dissolved gas.

### **Respirovirus**

respirovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Respite Care**

A medical procedure, treatment, device, or care topic related to respite care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Restlessness**

Restlessness is an uncomfortable need to move or inability to remain still, caused by anxiety, akathisia, restless-legs syndrome, pain, stimulants, withdrawal, or medical illness.

### **Restriction Mapping**

A biological or biochemical term involving restriction mapping. Its role depends on the relevant cells,

molecules, and physiological process.

### **Resveratrol**

A medical term referring to resveratrol. Its clinical meaning depends on the context in which it is used.

### **Retainer**

A medical term referring to retainer. Its clinical meaning depends on the context in which it is used.

### **Reticular Dermis**

A medical term referring to reticular dermis. Its clinical meaning depends on the context in which it is used.

### **Reticulin**

A medical term referring to reticulin. Its clinical meaning depends on the context in which it is used.

### **Reticulocyte**

A medical term referring to reticulocyte. Its clinical meaning depends on the context in which it is used.

### **Reticulocytopenia**

A medical term referring to reticulocytopenia. Its clinical meaning depends on the context in which it is used.

### **Reticulocytosis**

Reticulocytosis is an increased number of immature red blood cells in blood, usually indicating stimulated marrow production after blood loss or hemolysis.

### **Reticuloendothelial System**

A medical term referring to reticuloendothelial system. Its clinical meaning depends on the context in which it is used.

### **Reticulophagy**

A medical term referring to reticulophagy. Its clinical meaning depends on the context in which it is used.

---

### **Reticulosarcoma**

A neoplasm involving reticulosarcoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Reticulum**

A medical term referring to reticulum. Its clinical meaning depends on the context in which it is used.

### **Retina Disorder**

A clinical condition or finding involving retina disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Retina Hemorrhage**

A clinical condition or finding involving retina hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Retinal Cone**

A retinal cone is a light-sensitive photoreceptor specialized for color and detailed vision in brighter conditions.

### **Retinal Damage**

A medical term referring to retinal damage. Its clinical meaning depends on the context in which it is used.

### **Retinal Degeneration**

retinal degeneration is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Retinal Dysplasia**

Retinal dysplasia is abnormal development and organization of the retina, which can impair vision and occur with congenital, genetic, or prenatal disorders.

### **Retinal Dystrophy**

Retinal dystrophy is progressive degeneration of retinal cells, often inherited, causing night blindness, visual-field loss, and eventual reduced vision.

### **Retinal Fold**

A retinal fold is a crease or ridge in the retina caused by traction, developmental abnormality, detachment, swelling, or another ocular process.

### **Retinal Ganglion**

A biological or biochemical term involving retinal ganglion. Its role depends on the relevant cells, molecules, and physiological process.

### **Retinal Macula**

The macula is the central region of the retina responsible for detailed straight-ahead vision, reading, and color discrimination.

### **Retinal Neoplasm**

A neoplasm involving retinal neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Retinal Perforation**

A biological or biochemical term involving retinal perforation. Its role depends on the relevant cells, molecules, and physiological process.

### **Retinal Pigment**

Retinal pigment refers to melanin-containing pigment in the retinal pigment epithelium, which supports photoreceptors and absorbs excess light.

### **Retinal Vasculitis**

Retinal vasculitis is inflammation of retinal blood vessels, which can cause hemorrhage, leakage, ischemia, vision loss, and systemic inflammatory disease.

### **Retinaldehyde**

A medical term referring to retinaldehyde. Its clinical meaning depends on the context in which it is used.

### **Retinoblastoma Protein**

retinoblastoma protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function.

---

tion in cells; abnormal amounts or activity may contribute to disease.

### **Retirement**

Retirement is withdrawal from regular employment or a career; changes in income, activity, social contact, and health coverage can affect wellbeing.

### **Retortamonas Intestinalis**

A diagnostic or laboratory method related to retortamonas intestinalis. Results are interpreted with the method, reference range, and clinical findings.

### **Retractile Testis**

A diagnostic or laboratory method related to retractile testis. Results are interpreted with the method, reference range, and clinical findings.

### **Retreatment**

retreatment is used in relation to retreatment during assessment, diagnosis, treatment, monitoring, or patient support.

### **Retrobulbar Hemorrhage**

A clinical condition or finding involving retrobulbar hemorrhage. Its features, causes, evaluation, and management depend on the clinical context.

### **Retroesophageal**

Retroesophageal means located behind the esophagus, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

### **Retrognathia**

Retrognathia is backward positioning of the lower jaw relative to the upper jaw and may affect facial structure, bite, airway, or sleep breathing.

### **Retrograde Degeneration**

retrograde degeneration is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Retroperitoneal Neoplasm**

A neoplasm involving retroperitoneal neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Retroperitoneal Space**

The retroperitoneal space is the area behind the peritoneal lining containing the kidneys, adrenal glands, pancreas, parts of the bowel, vessels, nerves, and lymphatics.

### **Retrospective Studies**

Retrospective studies examine existing records or past exposures and outcomes; they are efficient but vulnerable to missing data, bias, and confounding.

### **Retrotracheal**

Retrotracheal means located behind the trachea, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

### **Retrotransposition**

A biological or biochemical term involving retrotransposition. Its role depends on the relevant cells, molecules, and physiological process.

### **Retroviral Vector**

A medicine or pharmacologic agent called retroviral vector. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Retroviridae**

retroviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Retroviridae Infection**

retroviridae infection is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

---

### Revascularization Surgery

revascularization surgery is used in relation to revascularization surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### Reversal Learning

Reversal learning is the ability to change a learned response when the previously rewarded or correct choice is no longer so.

### R-Factor

A medical term referring to r-factor. Its clinical meaning depends on the context in which it is used.

### Rgs Proteins

rgs proteins is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### Rhabdoviridae

rhabdoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Rhamnose

Rhamnose is a deoxy sugar found in plants and bacterial cell walls and used in biochemical and microbiologic research.

### Rhesus Incompatibility

Rhesus incompatibility occurs when an RhD-negative pregnant person forms antibodies against RhD-positive fetal red cells, risking haemolytic disease in a later or affected pregnancy; anti-D immunoglobulin prevents sensitization.

### Rheumatic Chorea

Rheumatic chorea is involuntary, irregular movement caused by an autoimmune reaction after group A streptococcal infection and is a manifestation of acute rheumatic fever.

### Rheumatoid Nodule

A rheumatoid nodule is a firm inflammatory lump under the skin or near a joint in rheumatoid arthritis, often over pressure points.

### Rhinocephaly

Rhinocephaly is a rare congenital facial-development abnormality with a proboscis-like structure and severe forebrain malformation.

### Rhinology

A medical term referring to rhinology. Its clinical meaning depends on the context in which it is used.

### Rhinovirus A

rhinovirus A is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Rhinovirus C

rhinovirus C is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Rhizobiaceae

A medical term referring to rhizobiaceae. Its clinical meaning depends on the context in which it is used.

### Rhizobium

A medical term referring to rhizobium. Its clinical meaning depends on the context in which it is used.

### Rhizomucor

A medical term referring to rhizomucor. Its clinical meaning depends on the context in which it is used.

### Rhizomucor Pusillus

A medical term referring to rhizomucor pusillus. Its clinical meaning depends on the context in which it is used.

### Rhizopus

A medical term referring to rhizopus. Its clinical

---

meaning depends on the context in which it is used.

### **Rhizopus Oryzae**

A medical term referring to rhizopus oryzae. Its clinical meaning depends on the context in which it is used.

### **Rhizoxin**

Rhizoxin is a microtubule-disrupting compound produced by some fungi and studied as an experimental cytotoxic or anticancer agent.

### **Rhodium**

A medical term referring to rhodium. Its clinical meaning depends on the context in which it is used.

### **Rhodobacteraceae**

An infectious process or toxic exposure involving rhodobacteraceae; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Rhodococcus**

rhodococcus is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Rhodococcus Equi**

rhodococcus equi is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

### **Rhodopseudomonas**

A medical term referring to rhodopseudomonas. Its clinical meaning depends on the context in which it is used.

### **Rhodopsin**

A medical term referring to rhodopsin. Its clinical meaning depends on the context in which it is used.

### **Rhodospirillaceae**

A medical term referring to rhodospirillaceae. Its

clinical meaning depends on the context in which it is used.

### **Rhodospirillales**

A medical term referring to rhodospirillales. Its clinical meaning depends on the context in which it is used.

### **Rhodospirillum**

A medical term referring to rhodospirillum. Its clinical meaning depends on the context in which it is used.

### **Rhodotorula Glutinis**

A medical term referring to rhodotorula glutinis. Its clinical meaning depends on the context in which it is used.

### **Rhombencephalon**

The rhombencephalon is the embryonic hindbrain, which develops into the pons, medulla, cerebellum, and related structures.

### **Riboflavin Assay**

A diagnostic or laboratory method related to riboflavin assay. Results are interpreted with the method, reference range, and clinical findings.

### **Riboflavin Deficiency**

A clinical condition or finding involving riboflavin deficiency. Its features, causes, evaluation, and management depend on the clinical context.

### **Ribonuclease**

A biological or biochemical term involving ribonuclease. Its role depends on the relevant cells, molecules, and physiological process.

### **Ribonuclease H**

A biological or biochemical term involving ribonuclease h. Its role depends on the relevant cells, molecules, and physiological process.

### **Ribonuclease Iii**

A biological or biochemical term involving ribonu-

---

lease iii. Its role depends on the relevant cells, molecules, and physiological process.

### **Ribonucleoprotein**

ribonucleoprotein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Ribonucleoside**

A biological or biochemical term involving ribonucleoside. Its role depends on the relevant cells, molecules, and physiological process.

### **Ribonucleotide Reductase**

Ribonucleotide reductase converts ribonucleotides to deoxyribonucleotides needed for DNA synthesis and repair.

### **Ribonucleotides**

A biological or biochemical term involving ribonucleotides. Its role depends on the relevant cells, molecules, and physiological process.

### **Ribophagy**

Ribophagy is selective autophagic degradation of ribosomes, allowing cells to recycle ribosomal components when nutrients or growth conditions change.

### **Ribose**

A medical term referring to ribose. Its clinical meaning depends on the context in which it is used.

### **Ribosomal Protein**

ribosomal protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Ribosome Subunit**

A medical term referring to ribosome subunit. Its clinical meaning depends on the context in which it is used.

### **Ribostamycin**

A medicine or pharmacologic agent called ribostamycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Richter's Syndrome**

A clinical condition or finding involving richter's syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Ricin**

Ricin is a highly toxic plant protein that blocks protein synthesis; ingestion, inhalation, or injection can cause severe organ injury and death.

### **Rickettsia Felis**

rickettsia felis is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rickettsia Infections**

rickettsia infections is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rickettsia Japonica**

rickettsia japonica is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rickettsia Prowazekii**

rickettsia prowazekii is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rickettsia Rickettsii**

rickettsia rickettsii is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

---

### **Rickettsia Typhi**

rickettsia typhi is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Rickettsiaceae**

rickettsiaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Ridaforolimus**

Ridaforolimus is an investigational mTOR inhibitor studied for anticancer effects by reducing growth and proliferation signaling.

### **Ridged Nail**

A ridged nail has longitudinal or transverse grooves in its surface, which may result from aging, trauma, inflammation, nutritional problems, or systemic disease.

### **Riedel's Thyroiditis**

Riedel's thyroiditis is rare fibrosing inflammation that makes the thyroid hard and can extend into nearby tissues, causing compression or hypothyroidism.

### **Rieger Syndrome**

A clinical condition or finding involving rieger syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Rifabutin**

A medical term referring to rifabutin. Its clinical meaning depends on the context in which it is used.

### **Rifampin**

Rifampin is a rifamycin antibiotic that inhibits bacterial DNA-dependent RNA polymerase and is a key component of tuberculosis treatment; it causes orange body fluids and has many drug interactions and hepatotoxicity risk.

### **Rifamycin**

A medicine or pharmacologic agent called rifamycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Rifaximin**

Rifaximin is a minimally absorbed rifamycin antibiotic used for selected intestinal infections, prevention of recurrent hepatic encephalopathy, and some diarrhoeal syndromes; indication and resistance patterns guide use.

### **Right Eye**

The right eye is the ocular organ on the right side of the body, containing the cornea, lens, retina, optic nerve, and supporting tissues.

### **Right Kidney**

The right kidney is the kidney on the right side of the abdomen that filters blood, regulates fluid and electrolytes, and produces urine and hormones.

### **Right Lung**

The right lung is the three-lobed lung on the right side of the chest that exchanges oxygen and carbon dioxide.

### **Righting Reflex**

The righting reflex is an automatic response that restores head and body orientation when balance or position changes.

### **Rigosertib Sodium**

Rigosertib sodium is an investigational anticancer agent studied for effects on cell-cycle regulation and survival signaling.

### **Rilotumumab**

A medical term referring to rilotumumab. Its clinical meaning depends on the context in which it is used.

### **Rilpivirine**

A medicine or pharmacologic agent called rilpivirine. Its uses, contraindications, interactions, and adverse

---

effects depend on the specific agent and patient.

### **Riluzole**

A medical term referring to riluzole. Its clinical meaning depends on the context in which it is used.

### **Rimantadine**

A medical term referring to rimantadine. Its clinical meaning depends on the context in which it is used.

### **Ring Chromosome**

ring chromosome is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Risedronate Sodium**

A medical term referring to risedronate sodium. Its clinical meaning depends on the context in which it is used.

### **Risk**

Risk is the probability of an unwanted event or outcome, considered together with its severity and the circumstances that influence it.

### **Risk Adjustment**

Risk adjustment accounts for differences in baseline patient characteristics so outcomes or payments can be compared more fairly across groups.

### **Risk Factors**

Risk factors are characteristics, exposures, behaviors, or conditions associated with increased likelihood of developing a disease or adverse outcome.

### **Risk-Taking**

Risk-taking is behavior involving deliberate or inadvertent exposure to possible harm, influenced by perception, reward, development, mental health, and circumstances.

### **Risperidone**

Risperidone is an atypical antipsychotic that blocks dopamine and serotonin receptors and treats

schizophrenia, bipolar disorder, and selected severe behavioral symptoms; hyperprolactinaemia, metabolic effects, movement disorders, and sedation may occur.

### **Ristocetin**

Ristocetin is an antibiotic used in laboratory testing of platelet aggregation and von Willebrand factor, not as a routine modern treatment.

### **Ritonavir**

A medicine or pharmacologic agent called ritonavir. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Ritual**

A ritual is a repeated, structured behavior or ceremony; repetitive rituals may also occur as compulsions in obsessive-compulsive disorder.

### **Rituximab**

Rituximab is a monoclonal antibody against CD20 that depletes B cells and is used for B-cell malignancies and selected autoimmune diseases; infusion reactions, infections, hepatitis-B reactivation, and rare PML are important risks.

### **Rivaroxaban**

Rivaroxaban is an oral direct factor Xa inhibitor used to prevent or treat venous thromboembolism and reduce stroke risk in selected atrial fibrillation; bleeding and renal-function-dependent dosing are important considerations.

### **RNA Binding**

A medical term referring to rna binding. Its clinical meaning depends on the context in which it is used.

### **RNA Biosynthesis**

A medical term referring to rna biosynthesis. Its clinical meaning depends on the context in which it is used.

### **RNA Degradation**

A biological or biochemical term involving rna degra-

---

dation. Its role depends on the relevant cells, molecules, and physiological process.

### **RNA Folding**

A medical term referring to rna folding. Its clinical meaning depends on the context in which it is used.

### **RNA Helicase**

A medical term referring to rna helicase. Its clinical meaning depends on the context in which it is used.

### **RNA Interference**

A medical term referring to rna interference. Its clinical meaning depends on the context in which it is used.

### **RNA Splicing**

A medical term referring to rna splicing. Its clinical meaning depends on the context in which it is used.

### **RNA Transport**

A medical term referring to rna transport. Its clinical meaning depends on the context in which it is used.

### **RNA Virus**

RNA virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **RNase P**

A medical term referring to rnase p. Its clinical meaning depends on the context in which it is used.

### **Robinow Syndrome**

A clinical condition or finding involving robinow syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### **Rod Photoreceptor**

rod photoreceptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute

to disease.

### **Rofecoxib**

Rofecoxib is a selective COX-2 anti-inflammatory drug withdrawn in many countries because of increased cardiovascular risk.

### **Romidepsin**

A medical term referring to romidepsin. Its clinical meaning depends on the context in which it is used.

### **Romiplostim**

A medical term referring to romiplostim. Its clinical meaning depends on the context in which it is used.

### **Ronnel**

Ronnel is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

### **Ropivacaine**

A medical term referring to ropivacaine. Its clinical meaning depends on the context in which it is used.

### **Ropivacaine Hydrochloride**

A medical term referring to ropivacaine hydrochloride. Its clinical meaning depends on the context in which it is used.

### **Rose Bengal**

Rose bengal is a dye used in eye-surface testing and laboratory or diagnostic procedures; it highlights damaged or poorly protected conjunctival cells.

### **Roseolovirus**

roseolovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Roseomonas**

A medical term referring to roseomonas. Its clinical meaning depends on the context in which it is used.

---

### **Roseomonas Gilardii**

A medical term referring to *roseomonas gilardii*. Its clinical meaning depends on the context in which it is used.

### **Roseomonas Mucosa**

A medical term referring to *roseomonas mucosa*. Its clinical meaning depends on the context in which it is used.

### **Rosiglitazone**

Rosiglitazone is a PPAR-gamma agonist that improves insulin sensitivity in type 2 diabetes; weight gain, oedema, heart-failure worsening, fractures, and cardiovascular risk require careful patient selection.

### **Rosiglitazone Maleate**

A medical term referring to *rosiglitazone maleate*. Its clinical meaning depends on the context in which it is used.

### **Ross River Virus**

ross river virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Rostaporfin**

Rostaporfin is an investigational photosensitizing compound studied for photodynamic treatment of cancer or other abnormal tissue.

### **Rosuvastatin Calcium**

A medicine or pharmacologic agent called *rosuvastatin calcium*. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Rotation**

A biological or biochemical term involving rotation. Its role depends on the relevant cells, molecules, and physiological process.

### **Rotavirus Infection**

rotavirus infection is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Rotenone**

Rotenone is a naturally occurring pesticide that inhibits mitochondrial complex I and can be toxic to people and animals after exposure.

### **Rothia Dentocariosa**

A medical term referring to *rothia dentocariosa*. Its clinical meaning depends on the context in which it is used.

### **Rothia Mucilaginosa**

A medical term referring to *rothia mucilaginosa*. Its clinical meaning depends on the context in which it is used.

### **Rotifera**

A medical term referring to *rotifera*. Its clinical meaning depends on the context in which it is used.

### **Round Ligament**

A round ligament is a cord-like supporting structure, including the uterine ligaments that pass toward the groin and help maintain uterine position.

### **Roxithromycin**

A medicine or pharmacologic agent called *roxithromycin*. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Rubber**

Rubber is an elastic material used in gloves, devices, and equipment; natural-rubber latex can cause irritant or allergic reactions.

### **Rubber Dams**

A medical term referring to *rubber dams*. Its clinical meaning depends on the context in which it is used.

---

### Rubeosis Iridis

Rubeosis iridis is abnormal growth of new blood vessels on the iris, usually from retinal ischemia such as diabetes or vein occlusion, and may cause neovascular glaucoma.

### Rubidium

A medical term referring to rubidium. Its clinical meaning depends on the context in which it is used.

### Rubitecan

A medical term referring to rubitecan. Its clinical meaning depends on the context in which it is used.

### Rubivirus

rubivirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Rubredoxins

A medical term referring to rubredoxins. Its clinical meaning depends on the context in which it is used.

### Rubricyte Count

rubricyte count is a diagnostic or laboratory method used to evaluate a clinical question; interpretation depends on the specimen or body site, method, reference range, and patient context.

### Rubulavirus

rubulavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Rumen

The rumen is the largest compartment of a ruminant animal's stomach where microbes ferment plant material before digestion continues.

### Rumination

A biological or biochemical term involving rumination. Its role depends on the relevant cells, molecules, and physiological process.

### Ruminococcus

ruminococcus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### Ruminococcus Gnavus

ruminococcus gnavus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### Rural Health

Rural health concerns health outcomes and care access in rural communities, where distance, workforce shortages, transport, resources, and social conditions may affect services.

### Russell-Siver Syndrome

A clinical condition or finding involving russell-siver syndrome. Its features, causes, evaluation, and management depend on the clinical context.

### Ruthenium

A medical term referring to ruthenium. Its clinical meaning depends on the context in which it is used.

### Rutin

A medical term referring to rutin. Its clinical meaning depends on the context in which it is used.

### Ryanodine

A medical term referring to ryanodine. Its clinical meaning depends on the context in which it is used.

### Red Eye

Redness of the white part of the eye caused by irritation, dryness, allergy, infection, injury, inflammation, or increased surface blood flow.

### RA

Alternate index label; see *Rheumatoid arthritis*.

---

**Rapid Eye Movement Sleep Behavior Disorder**

Alternate index label; see *REM sleep behavior disorder*.

**Rapid Heartbeat**

Alternate index label; see *Tachycardia*.

**Rash, Poison Ivy**

Alternate index label; see *Poison ivy rash*.

**Reading Disability, Specific**

Alternate index label; see *Dyslexia*.

**Rebound Headache**

Alternate index label; see *Medication overuse headaches*.

**Rectal Inflammation**

Alternate index label; see *Proctitis*.

**Rectal Itching**

Alternate index label; see *Anal itching*.

**Rectal Ulcer**

Alternate index label; see *Solitary rectal ulcer syndrome*.

**Recurrent Oral Ulcers**

Alternate index label; see *Canker sore*.

**Recurrent Prostate Cancer**

Alternate index label; see *Prostate cancer recurrence*.

**Reflux, Bile**

Alternate index label; see *Bile reflux*.

**Reflux, Vesicoureteral**

Alternate index label; see *Vesicoureteral reflux*.

**Regurgitation, Aortic Valve**

Alternate index label; see *Aortic valve regurgitation*.

**Regurgitation, Mitral Valve**

Alternate index label; see *Mitral valve regurgitation*.

**Renal Artery Disease**

Alternate index label; see *Renal artery stenosis*.

**Renal Cancer**

Alternate index label; see *Kidney cancer*.

**Renal Lithiasis**

Alternate index label; see *Kidney stones*.

**Renal Vascular Disease**

Alternate index label; see *Renal artery stenosis*.

**Retinopathy, Diabetic**

Alternate index label; see *Diabetic retinopathy*.

**Rhinitis, Allergic**

Alternate index label; see *Hay fever*.

**Rhinitis, Nonallergic**

Alternate index label; see *Nonallergic rhinitis*.

**Rhinitis, Vasomotor**

Alternate index label; see *Nonallergic rhinitis*.

**Ringling In The Ear**

Alternate index label; see *Tinnitus*.

**Ringworm Of The Foot**

Alternate index label; see *Athlete's foot*.

**Road Rage**

Alternate index label; see *Intermittent explosive disorder*.

**Round Back**

Alternate index label; see *Kyphosis*.

**Runner's Knee**

Alternate index label; see *Patellofemoral pain syndrome*.

---

### **Radial Head Fracture - Aftercare**

Radial head fracture - aftercare examines radial head fracture - aftercare; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radial Nerve Dysfunction**

Radial nerve dysfunction examines radial nerve dysfunction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radiation Therapy - Questions To Ask Your Doctor**

Radiation therapy - questions to ask your doctor examines radiation therapy - questions to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radiation Therapy - Skin Care**

A medical procedure, treatment, device, or care topic related to radiation therapy - skin care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Radical Prostatectomy - Discharge**

Radical prostatectomy - discharge examines radical prostatectomy - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radioactive Iodine Uptake**

Radioactive iodine uptake examines radioactive iodine uptake; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radiofrequency Ablation For Chronic Pain**

A clinical condition or finding involving radiofrequency ablation for chronic pain. Its features, causes, evaluation, and management depend on the clinical context.

### **Radioiodine Therapy**

A medical procedure, treatment, device, or care topic related to radioiodine therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Radionuclide Cisternogram**

Radionuclide cisternogram examines radionuclide cisternogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Radionuclide Cystogram**

Radionuclide cystogram examines radionuclide cystogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Rapid Shallow Breathing**

Rapid shallow breathing is an increased breathing rate with small tidal volumes and may signal lung disease, pain, metabolic illness, fatigue, or respiratory failure.

### **Rash - Child Under 2 Years**

A rash in a child under 2 can result from infection, allergy, heat, irritation, or inflammation; breathing difficulty, lethargy, fever, blistering, or rapid spread needs urgent care.

### **RBC Count**

RBC count examines rbc count; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **RBC Indices**

RBC indices examines rbc indices; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **RBC Nuclear Scan**

RBC nuclear scan examines rbc nuclear scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

## **RBC Urine Test**

RBC urine test examines rbc urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Reactive Attachment Disorder Of Infancy Or Early Childhood**

Reactive attachment disorder of infancy or early childhood examines reactive attachment disorder of infancy or early childhood; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Recognizing Medical Emergencies**

Recognizing a medical emergency includes identifying severe breathing difficulty, chest pain, stroke signs, major bleeding, seizure, collapse, poisoning, or altered consciousness and calling emergency services.

## **Recognizing Teen Depression**

A biological or biochemical term involving recognizing teen depression. Its role depends on the relevant cells, molecules, and physiological process.

## **Recombinant Zoster (Shingles) Vaccine, RZV - What You Need To Know**

A biological or biochemical term involving recombinant zoster (shingles) vaccine, rzv - what you need to know. Its role depends on the relevant cells, molecules, and physiological process.

## **Recovering After Stroke**

Stroke recovery uses rehabilitation for movement, speech, swallowing, thinking, mood, and daily activities while preventing recurrent stroke and managing complications.

## **Rectal Biopsy**

Rectal biopsy examines rectal biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Rectal Culture**

Rectal culture examines rectal culture; interpretation

depends on the specimen or body region, test method, reference range, and clinical question.

## **Rectal Prolapse Repair**

Rectal prolapse repair examines rectal prolapse repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Red Birthmarks**

Red birthmarks are vascular skin marks present at or soon after birth, ranging from harmless capillary marks to lesions requiring monitoring or specialist treatment.

## **Refractive Corneal Surgery - Discharge**

Refractive corneal surgery - discharge examines refractive corneal surgery - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Refractive Corneal Surgery - What To Ask Your Doctor**

Refractive corneal surgery - what to ask your doctor examines refractive corneal surgery - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Refrigerant Poisoning**

Refrigerant poisoning involves toxic or environmental exposure to refrigerant poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Relaxation Techniques For Stress**

Relaxation techniques for stress addresses care related to relaxation techniques for stress, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Remembering Tips**

Memory-support strategies include repetition, written reminders, routines, adequate sleep, organization, attention to one task, and evaluation of medical

---

or medication causes of decline.

### **Renal And Urological Diseases**

A clinical finding or condition involving renal And Urological Diseases; evaluation depends on its characteristic features, causes, severity, and complications.

### **Renal Arteriography**

Renal arteriography uses contrast X-rays to visualize kidney arteries and may identify narrowing, bleeding, aneurysm, or vascular anatomy during an intervention.

### **Renal Papillary Necrosis**

Renal papillary necrosis is death of the kidney papillae from ischemia, infection, obstruction, diabetes, sickle-cell disease, or analgesic injury and may cause blood or obstruction.

### **Renal Pelvis Or Ureter Cancer**

A neoplastic condition involving renal Pelvis Or Ureter Cancer; diagnosis establishes the tumor type, extent, and appropriate management.

### **Renal Perfusion Scintiscan**

Renal perfusion scintiscan examines renal perfusion scintiscan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Renal Vein Thrombosis**

Renal vein thrombosis is a clot in a kidney vein that can cause flank pain, blood or protein in urine, kidney dysfunction, swelling, or pulmonary embolism.

### **Renal Venogram**

Renal venogram examines renal venogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Renin Blood Test**

Renin blood test examines renin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Repair Of Webbed Fingers Or Toes**

A medical procedure, treatment, device, or care topic related to repair of webbed fingers or toes; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Replantation Of Digits**

A biological or biochemical term involving replantation of digits. Its role depends on the relevant cells, molecules, and physiological process.

### **Reportable Diseases**

A clinical finding or condition involving reportable Diseases; evaluation depends on its characteristic features, causes, severity, and complications.

### **Resources**

Resources addresses care related to resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Respiratory**

Respiratory means relating to breathing, the airways, lungs, gas exchange, or the organs and muscles that move air.

### **Respiratory Syncytial Virus (RSV) Preventive Antibody - What You Need To Know**

An RSV preventive antibody provides temporary passive protection against severe respiratory syncytial virus disease for eligible infants or high-risk people; it is not a vaccine or treatment for established infection.

### **Respiratory Viruses And Face Masks**

Respiratory viruses and face masks addresses care related to respiratory viruses and face masks, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Responsible Drinking**

Responsible drinking addresses care related to responsible drinking, including practical measures, warning signs, follow-up, and decisions to discuss

---

with a clinician.

### **Retrograde Cystography**

Retrograde cystography is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Retroperitoneal Inflammation**

Retroperitoneal inflammation is inflammatory disease in the space behind the peritoneum, caused by infection, pancreatitis, urinary disease, trauma, medicines, or fibrosis.

### **Retrosternal Thyroid Surgery**

A medical procedure, treatment, device, or care topic related to retrosternal thyroid surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Retroversion Of The Uterus**

A biological or biochemical term involving retroversion of the uterus. Its role depends on the relevant cells, molecules, and physiological process.

### **Returning To Sports After A Back Injury**

Returning to sports after a back injury addresses care related to returning to sports after a back injury, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Returning To Work After Cancer: Know Your Rights**

Returning to work after cancer: know your rights addresses care related to returning to work after cancer: know your rights, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Reverse Total Shoulder Replacement**

A medical procedure, treatment, device, or care topic related to reverse total shoulder replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Reverse Total Shoulder Replacement - Discharge**

A medical procedure, treatment, device, or care topic related to reverse total shoulder replacement - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Reye Syndrome - Resources**

Reye syndrome - resources addresses care related to reye syndrome - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Rheumatoid Factor (RF)**

Rheumatoid factor (RF) examines rheumatoid factor (rf); interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Rheumatoid Lung Disease**

A clinical condition involving rheumatoid Lung Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Rheumatoid Pneumoconiosis**

A clinical finding or condition involving rheumatoid Pneumoconiosis; evaluation depends on its characteristic features, causes, severity, and complications.

### **Rhubarb Leaves Poisoning**

Rhubarb leaves poisoning involves toxic or environmental exposure to rhubarb leaves poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Rib Fracture - Aftercare**

Rib fracture - aftercare examines rib fracture - aftercare; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Ribcage Pain**

Ribcage pain addresses care related to ribcage pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

---

## **Right Heart Ventricular Angiography**

Right heart ventricular angiography examines right heart ventricular angiography; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Risks Of Hip And Knee Replacement**

A medical procedure, treatment, device, or care topic related to risks of hip and knee replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Risks Of Tobacco**

Tobacco use increases risks of cancer, heart and blood-vessel disease, stroke, lung disease, pregnancy complications, addiction, and harm from second-hand smoke.

## **Risks Of Underage Drinking**

Alcohol use by minors can impair brain development, judgment, learning, safety, and mental health and increases risks of injury, dependence, and unsafe sexual or substance-related behavior.

## **Rotator Cuff - Self-Care**

A medical procedure, treatment, device, or care topic related to rotator cuff - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Rotator Cuff Exercises**

Rotator cuff exercises addresses care related to rotator cuff exercises, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Rotator Cuff Problems**

Rotator cuff problems include tendinopathy, bursitis, and tears that cause shoulder pain, weakness, painful motion, and difficulty with overhead activity.

## **Rotator Cuff Repair**

A medical procedure, treatment, device, or care topic related to rotator cuff repair; indications, benefits, risks, and follow-up depend on the specific

intervention and patient.

## **Rotavirus Antigen Test**

Rotavirus antigen test examines rotavirus antigen test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Rotavirus Vaccine - What You Need To Know**

A medicine or pharmacologic agent called rotavirus vaccine - what you need to know. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

## **RPR Test**

RPR test examines rpr test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **RSV (Respiratory Syncytial Virus) Vaccine - What You Need To Know**

A medicine or pharmacologic agent called rsv (respiratory syncytial virus) vaccine - what you need to know. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

## **RSV Antibody Test**

RSV antibody test examines rsv antibody test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Rubber Cement Poisoning**

Rubber cement poisoning involves toxic or environmental exposure to rubber cement poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Ruptured Eardrum**

A ruptured eardrum is a tear in the tympanic membrane caused by infection, pressure, trauma, or foreign objects and may cause pain, drainage, hearing loss, or dizziness.

---

### **RA (Rheumatoid Arthritis)**

Alternate index label for Rheumatoid Arthritis.

### **Rape (Sexual Assault)**

Alternate index label for Sexual Assault.

### **Rash Heat (Heat Rash)**

Alternate index label for Heat Rash.

### **Raynauds Phenomenon (Raynaud's Phenomenon)**

Alternate index label for Raynaud's Phenomenon.

### **Raynauds Syndrome (Raynaud's Phenomenon)**

Alternate index label for Raynaud's Phenomenon.

### **Reasons You Are Tired After Surgery (7 Reasons You Are Tired After Surgery)**

Alternate index label for 7 Reasons You are Tired after Surgery.

### **Rectal Bleeding (Blood In The Stool (Rectal Bleeding))**

Alternate index label for Blood in the Stool (Rectal Bleeding).

### **Renal Failure (Kidney Failure)**

Alternate index label for Kidney Failure.

### **Repetitive Motion Disorders (RMDs)**

Alternate index label for RMDs.

### **Resistance Antibiotic (Antibiotic Resistance)**

Alternate index label for Antibiotic Resistance.

### **Respiratory Syncytial Virus Contagious (Is Respiratory Syncytial Virus (RSV) Contagious)**

Alternate index label for Is Respiratory Syncytial Virus (RSV) Contagious.

### **Restless Leg Syndrome**

Restless legs syndrome causes an urge to move the legs with uncomfortable sensations that worsen at rest and in the evening and improve temporarily with movement. Iron deficiency, kidney disease, medicines, pregnancy, and genetics may contribute.

#### **Synonyms:**

Legs Restless (Restless Leg Syndrome) Syndrome

Restless Legs (Restless Leg Syndrome)

### **Reye Johnson Syndrome (Reye Syndrome)**

Alternate index label for Reye Syndrome.

### **Rheumatoid Arthritis Cause Gastrointestinal Issues**

Rheumatoid arthritis can affect the gastrointestinal system indirectly through inflammation, associated autoimmune disease, reduced mobility, or medicines such as nonsteroidal anti-inflammatory drugs. Abdominal pain, bleeding, persistent diarrhea, or weight loss needs evaluation rather than attribution to arthritis alone.

### **Rheumatoid Arthritis Inflammation Of The Brain**

Direct brain inflammation is uncommon in rheumatoid arthritis, but vasculitis, medication effects, infection, stroke risk, or another autoimmune process can cause neurologic symptoms. New confusion, seizure, weakness, severe headache, or vision change requires urgent assessment.

### **Rigid And Flexible Sigmoidoscopy**

A sigmoidoscopy examines the rectum and lower colon with a flexible or rigid instrument. It can evaluate bleeding, pain, altered bowel habits, inflammation, polyps, or tumors; preparation, reach, comfort, and biopsy capability differ by technique.

### **Ring Schatzki (Schatzki Ring)**

Alternate index label for Schatzki Ring.

### **Ringings In The Ears (Tinnitus (Ringings**

---

### **In The Ears))**

Alternate index label for Tinnitus (Ringing in the Ears).

### **RMDs (Repetitive Motion Disorders (RMDs))**

Alternate index label for Repetitive Motion Disorders (RMDs).

### **RMSF (Rocky Mountain Spotted Fever (RMSF))**

Alternate index label for Rocky Mountain Spotted Fever (RMSF).

### **Rocky Mountain Spotted Fever (RMSF)**

Alternate index label for RMSF.

### **Roseola Contagious (Is Roseola Contagious)**

Alternate index label for Is Roseola Contagious.

### **RSD (Reflex Sympathetic Dystrophy Syndrome)**

Alternate index label for Reflex Sympathetic Dystrophy Syndrome.

### **RSI (Repetitive Motion Disorders (RMDs))**

Alternate index label for Repetitive Motion Disorders (RMDs).

### **RSV (Respiratory Syncytial Virus)**

Alternate index label for Respiratory Syncytial Virus.

### **Ruba Miliaria (Heat Rash)**

Alternate index label for Heat Rash.

### **Rubeola (Measles (Rubeola))**

Alternate index label for Measles (Rubeola).

### **Ruptured Perforated Eardrum**

A perforated eardrum is a tear in the tympanic membrane from infection, pressure change, trauma,

or an inserted object. Pain, drainage, hearing loss, or ringing may occur; keeping the ear dry and avoiding unprescribed drops helps while healing or repair is assessed.

### **R (Symbol)**

R is a symbol whose meaning depends on context, including right side, radius, resistance, or a statistical correlation coefficient.

### **R/O**

R/O is an abbreviation for rule out, indicating that a condition is being considered but has not been confirmed; clear documentation should state the actual diagnostic question.

### **Race**

Race is a social classification that can influence lived experience and health through genetics in limited contexts, discrimination, environment, and access to care; it is not a precise proxy for biology.

### **Radial**

Radial means relating to the radius bone or the thumb side of the forearm, hand, or a structure arranged like radii from a center.

### **Radiomimetic**

Radiomimetic describes a chemical or treatment that produces cellular or DNA damage resembling the effects of ionizing radiation.

### **Raised Hemidiaphragm**

A raised hemidiaphragm is elevation of one side of the diaphragm, caused by abdominal pressure, lung volume loss, phrenic-nerve dysfunction, or diaphragmatic disease.

### **Ramus**

A ramus is a branch-like extension of a bone, nerve, artery, or other structure, such as the mandibular ramus.

### **Random**

Random means determined by chance rather than a

---

predictable pattern; randomization in research helps balance known and unknown confounding factors.

### **RANTES**

RANTES, now called CCL5, is a chemokine that attracts immune cells and participates in inflammation, antiviral defense, and immune signaling.

### **Rapid Plasma Reagin Test**

Rapid plasma reagin test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Raw Egg**

Raw eggs may contain Salmonella and are safest when properly refrigerated, handled hygienically, and cooked unless pasteurized products are used.

### **RBC**

RBC is the abbreviation for red blood cell, the cell that transports oxygen with hemoglobin and carries carbon dioxide back toward the lungs.

### **RDS (Respiratory Distress Syndrome)**

A clinical condition involving rDS (Respiratory Distress Syndrome); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Reabsorption**

A clinical condition or finding involving reabsorption. Its features, causes, evaluation, and management depend on the clinical context.

### **Rebound Effect**

A medical term referring to rebound effect. Its clinical meaning depends on the context in which it is used.

### **Recalcitrant**

A medical term referring to recalcitrant. Its clinical meaning depends on the context in which it is used.

### **Recent Memory**

Recent memory is the ability to recall information

or events from the near past and can be impaired by aging, delirium, brain disease, depression, or medicines.

### **Recession Of Medial Rectus Muscle**

Recession of Medial Rectus Muscle refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Recommended Daily Allowance**

The Recommended Dietary Allowance is the average daily nutrient intake sufficient for nearly all healthy people in a specified age and sex group.

### **Rectal (Adjective)**

Rectal means relating to the rectum, the final part of the large intestine before the anal canal.

### **Rectouterine Pouch**

The rectouterine pouch, or pouch of Douglas, is the peritoneal recess between the uterus and rectum where fluid or disease may collect.

### **Recur**

To recur means to return or happen again, as symptoms, disease, infection, or a tumor after a period of improvement or treatment.

### **Regional Enteritis**

A biological or biochemical term involving regional enteritis. Its role depends on the relevant cells, molecules, and physiological process.

### **Rehab**

A medical term referring to rehab. Its clinical meaning depends on the context in which it is used.

### **Rehydration**

A biological or biochemical term involving rehydration. Its role depends on the relevant cells, molecules, and physiological process.

### **Reinnervation**

A biological or biochemical term involving rein-

---

nervation. Its role depends on the relevant cells, molecules, and physiological process.

### **Remedy**

A medical term referring to remedy. Its clinical meaning depends on the context in which it is used.

### **Renal Calculi**

Renal calculi are kidney stones formed from crystallized minerals in urine and may cause colicky flank pain, blood in urine, obstruction, or infection.

### **Renal Stone**

A renal stone is a solid crystal aggregate formed in the kidney that can pass through the urinary tract or obstruct urine flow.

### **Rep**

Rep is an abbreviation whose meaning depends on context, including repetition in exercise or representative in a professional role.

### **Reproductive Cells**

Reproductive cells refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Reproductive Organs, Female**

Female reproductive organs include the ovaries, fallopian tubes, uterus, cervix, vagina, and external genitalia, which support hormones, ovulation, menstruation, pregnancy, and birth.

### **Research, Controlled**

Controlled research compares an intervention or exposure with a specified control condition to estimate effects while reducing alternative explanations.

### **Reservoir Of Infection**

A reservoir of infection is a person, animal, environment, or material in which an infectious organism normally lives and from which transmission can occur.

### **Resident**

A resident is a physician or other trainee receiving supervised specialty education after initial professional qualification; the term can also mean a person living in a place.

### **Residual**

Residual means remaining after a process, treatment, measurement, or event, such as residual urine, disease, risk, or volume.

### **Respiratory Distress Syndrome (RDS)**

A clinical condition involving respiratory Distress Syndrome (RDS); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Respiratory Insufficiency**

Respiratory insufficiency is inadequate gas exchange or ventilatory function causing low oxygen, high carbon dioxide, or both; causes include lung, airway, neuromuscular, and central respiratory disorders.

### **Rest**

Rest is reduced physical or mental activity used to recover, though excessive inactivity can impair strength and function in some conditions.

### **Resting Phase**

The resting phase is a period of relative inactivity, such as G0 in the cell cycle or a physiologic interval between active events.

### **Restless Anal Syndrome**

A clinical condition involving restless Anal Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Restless Legs**

Restless-legs syndrome causes an urge to move the legs with uncomfortable sensations, beginning or worsening at rest and in the evening and improving temporarily with movement; iron deficiency and medicines may contribute.

---

## Retromingent

Retromingent describes urination directed backward, a term historically applied to unusual urinary stream direction or anatomy.

## Reuptake

Reuptake is transport of a released neurotransmitter or other molecule back into the cell that released it or into nearby cells, limiting its signal.

## RF

RF is a context-dependent abbreviation, including rheumatoid factor, radiofrequency, or risk factor; the complete term should be stated.

## Rib Cage

The rib cage consists of ribs, sternum, thoracic vertebrae, muscles, and connective tissues that protect chest organs and assist breathing.

## Ribonucleic Acid (RNA)

A biological substance or process involving ribonucleic Acid (RNA); its medical significance depends on its function, location, amount, and clinical context.

## Ribonucleoprotein (RNP)

A biomedical term referring to ribonucleoprotein (rnp); its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

## Ringworm (Tinea)

Ringworm is a superficial dermatophyte fungal infection of skin, scalp, or nails that produces scaly annular lesions or hair loss; treatment depends on the site and may require topical or oral antifungals.

## RIRS (Retrograde Intrarenal Surgery)

RIRS is a minimally invasive procedure using a flexible scope passed through the urinary tract to inspect and fragment or remove kidney stones.

## RLL

RLL is the abbreviation for right lower lobe, usually

referring to the lower lobe of the right lung.

## RLQ

RLQ is the abbreviation for right lower quadrant of the abdomen, containing structures including the appendix, cecum, and right adnexa.

## RML

RML is the abbreviation for right middle lobe, the middle lobe of the right lung.

## Robust

Robust means strong, resilient, or relatively insensitive to variation; in research, a robust result remains stable under reasonable analytic changes.

## Rock (Drug)

A medicine, biologic, or pharmacologic term related to rock (drug); its mechanism, indication, interactions, and adverse effects depend on the specific agent.

## Rod

A rod is a long cylindrical structure; in the retina, a rod photoreceptor supports dim-light and peripheral vision.

## Roentgenology

Roentgenology is the historical term for the use and study of X-rays in medical diagnosis and imaging.

## Round

Round means circular or approximately spherical; in anatomy or pathology it describes shape and must be interpreted with the structure being described.

## RP

RP is a context-dependent abbreviation, commonly retinitis pigmentosa, an inherited retinal degeneration causing night blindness and progressive visual-field loss.

## RT

RT is a context-dependent abbreviation, including radiation therapy, respiratory therapist, or right;

---

the full term should be specified.

### **RT-PCR**

RT-PCR converts RNA to complementary DNA and amplifies target sequences, allowing detection or measurement of RNA viruses, genes, and transcripts.

### **RUL**

RUL is the abbreviation for right upper lobe, usually referring to the upper lobe of the right lung.

### **Rule Out**

Rule out means evaluate a possibility and determine whether it is present; it does not mean the condition has already been excluded.

### **Runny Nose**

Runny nose refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **RUQ**

RUQ is the abbreviation for right upper quadrant of the abdomen, containing the liver, gallbladder, duodenum, and portions of bowel and kidney.

### **RV (Rotavirus)**

Rotavirus is a highly contagious virus causing vomiting and watery diarrhea, especially in infants and young children; vaccination substantially reduces severe disease.

### **RVF**

RVF is a context-dependent abbreviation, including Rift Valley fever, an infection transmitted by mosquitoes or infected animals, or right ventricular failure.

### **Ruptured Eardrum (Perforated Eardrum)**

A hole or tear in the eardrum that may cause pain, drainage, hearing loss, or ringing and can result from infection, injury, or pressure changes.

#### **Synonyms:**

Eardrum, Ruptured Perforated Eardrum

### **Round Ligament Pain**

Sharp or aching pain in the lower abdomen or groin caused by stretching of the round ligaments as the uterus enlarges during pregnancy. Persistent, severe, or bleeding-associated pain requires medical evaluation.

### **Reticular**

Net-like or arranged in a network pattern, describing the appearance or distribution of a skin lesion, rash, or vascular pattern.

### **Renin-Angiotensin System**

A hormone and enzyme system that regulates blood pressure, fluid balance, and vascular tone. Renin initiates formation of angiotensin II, which promotes vasoconstriction and aldosterone release; excessive activation contributes to hypertension and heart failure.

### **Ring Vaccination**

A public-health strategy in which close contacts and contacts of contacts around an identified case are vaccinated to create a protective ring and limit transmission.

### **Reduction Mammoplasty**

Surgery that removes breast tissue, fat, and excess skin to reduce breast size and relieve symptoms such as neck, shoulder, or back discomfort; it may also reshape the breasts.

### **Rheumatoid Synovitis**

Chronic autoimmune inflammation of synovial tissue in rheumatoid arthritis, producing pain, swelling, pannus formation, cartilage damage, and progressive joint destruction.

### **Rare Disease**

A condition affecting relatively few people in a defined population; many rare diseases are genetic, require specialized diagnosis, and may have limited evidence or treatment options.

---

## S

### 16S Ribosomal RNA Sequencing

Molecular identification of bacteria and archaea using conserved and variable regions of the 16S ribosomal RNA gene. It is useful for difficult-to-culture organisms but may not distinguish closely related species or provide susceptibility data.

### SAD

Seasonal affective disorder, a recurring mood disorder linked to seasonal changes and reduced daylight.

#### Synonyms:

Seasonal Affective Disorder (SAD)

### Sabin Vaccine

The oral polio vaccine containing live attenuated poliovirus strains.

### Saccharomyces

A genus of yeasts, including *S. cerevisiae*; some species are used industrially and can rarely cause opportunistic infection.

### Sacral Nerves

The spinal nerves arising from the sacral spinal cord and supplying the pelvis, pelvic floor, bladder, bowel, and lower limbs.

### Sacroileitis

A misspelling or variant of sacroiliitis, inflammation of a sacroiliac joint.

### Sadism

Sexual arousal or gratification from inflicting pain, humiliation, or suffering; clinical significance depends on distress, impairment, or nonconsent.

### Safe Period

A fertility-awareness term for days believed to have a lower chance of conception; cycle variation makes it unreliable as sole contraception.

### Safety Of Drugs

The assessment and management of medicine benefits, risks, interactions, contraindications, monitoring, and safe use.

### Salaam Attacks

Brief repeated flexor spasms or head drops in infants, historically associated with infantile spasms.

### Salicylic Acid

A keratolytic and anti-inflammatory compound used topically for acne, psoriasis, warts, and other hyperkeratotic disorders.

### Salivary Glands

Exocrine glands that produce saliva, including the parotid, submandibular, and sublingual glands.

### Salk Vaccine

The inactivated poliovirus vaccine administered by injection.

### Salmonella Infections

Infections caused by *Salmonella* bacteria, ranging from gastroenteritis to enteric fever or invasive bloodstream disease.

### Salmon Patches

Flat pink or red capillary birthmarks, commonly on the eyelids, forehead, or nape; many fade during

---

infancy.

### **Salpingo-**

A combining form relating to a fallopian tube.

### **Salpingo-OöPhorectomy**

Surgical removal of a fallopian tube and ovary, also called salpingo-oophorectomy.

### **Salt**

An ionic chemical compound; dietary sodium chloride is essential in small amounts but excess intake can increase blood pressure.

### **Sandfly Fever**

An acute viral illness transmitted by phlebotomine sandflies, causing fever, headache, muscle pain, and sometimes rash.

### **Sanguineous**

Containing or consisting of blood.

### **Saphenous**

Relating to the superficial veins of the lower limb, especially the great or small saphenous vein.

### **Saprophyte**

An organism that obtains nutrients from dead organic material; some saprophytic organisms can become opportunistic pathogens.

### **Sarco-**

A combining form meaning flesh or soft tissue.

### **Sarcoptes**

The mite genus containing *Sarcoptes scabiei*, the cause of scabies.

### **SARS**

Severe acute respiratory syndrome, a viral respiratory illness caused by SARS-CoV.

### **Scab**

A crust of dried blood, serum, pus, or tissue fluid

over a healing skin injury.

### **Scabicide**

A medicine that kills scabies mites.

### **Scalded-Skin Syndrome**

Staphylococcal scalded-skin syndrome, a toxin-mediated superficial epidermal separation causing tender erythema and peeling, especially in children.

### **Scalds**

Burns caused by hot liquids or steam.

### **Scalp**

The skin and underlying tissues covering the skull.

### **Scanning Speech**

A slow, irregularly paced speech pattern with abnormal emphasis, classically associated with cerebellar or multiple-sclerosis disease.

### **Scanning Techniques**

Imaging or measurement methods that systematically examine a body region, organ, or sample.

### **Scar**

Fibrous tissue formed during healing after injury, inflammation, or surgery.

### **Scheuermann's Disease**

A juvenile spinal growth disorder causing wedging of vertebral bodies and structural kyphosis.

### **Schistomicide**

A substance that kills *Schistosoma* parasites.

### **Schizo-**

A combining form relating to splitting or schizophrenia.

### **Schizogony**

A form of asexual reproduction in which one protozoan cell divides into many daughter cells.

---

### **Schwann Cell**

A peripheral glial cell that forms myelin or supports axons.

### **Scirrhus**

A hard, fibrous form of carcinoma, historically used especially for breast or gastric cancer.

### **Scorbutic**

Relating to scurvy or vitamin C deficiency.

### **Scrivener's Palsy**

An older term for task-specific hand dystonia or cramp occurring during writing.

### **Scrombotoxin Poisoning**

A misspelled or nonstandard form referring to scombrotoxin poisoning, caused by histamine in improperly stored fish.

### **Scrum-Pox**

A nonstandard or historical term whose intended clinical meaning is unclear and should be verified from its source.

### **Scurf**

Fine flakes or scales shed from the skin, especially the scalp.

### **Sea-Sickness**

Motion sickness occurring during travel at sea.

### **Seasonal Affective Disorder Syndrome**

Seasonal affective disorder, a recurring mood disorder with episodes linked to a particular season.

### **Sebaceous Cyst**

A common but imprecise term for an epidermoid cyst, a keratin-filled cyst beneath the skin.

### **Sebaceous Glands**

Skin glands that secrete sebum, usually into hair follicles.

### **Sebum**

An oily secretion produced by sebaceous glands that lubricates and protects skin and hair.

### **Secondary Sexual Characteristics**

Physical changes of puberty that distinguish mature males and females but are not directly part of the reproductive organs.

### **Sedimentation Rate**

The erythrocyte sedimentation rate, a nonspecific blood test that may increase with inflammation, infection, anemia, or other conditions.

### **Sedatives**

Medicines or substances that reduce central nervous system activity and produce calmness or sleepiness.

### **Selective Serotonin-Reuptake Inhibitors (SSRIs)**

Antidepressants that increase serotonin signaling by inhibiting its reuptake into nerve terminals.

### **Selegiline**

A monoamine-oxidase-B inhibitor used in selected treatment of Parkinson disease and sometimes depression.

### **Selenium Sulphide**

A topical antifungal and antiseborrheic medicine used for dandruff and seborrheic dermatitis.

### **Self-Poisoning**

Intentional ingestion or exposure to a potentially harmful substance, often requiring urgent medical and mental-health assessment.

### **Sella Turcica**

A saddle-shaped depression in the sphenoid bone containing the pituitary gland.

### **Semilunar Cartilages**

The crescent-shaped fibrocartilages of the knee, more commonly called menisci.

---

### **Seminiferous Tubules**

Tightly coiled testicular tubules in which sperm are produced.

### **Seminoma**

A malignant germ-cell tumor of the testis, usually sensitive to radiotherapy and chemotherapy.

### **Senile Dementia**

An outdated term formerly used for dementia in older adults; current diagnosis specifies the cause.

### **Senility**

An outdated, imprecise term for age-related decline; modern assessment identifies specific medical, cognitive, or functional causes.

### **Senna**

A plant-derived stimulant laxative containing sennosides.

### **Sensation**

Perception of stimuli such as touch, pain, temperature, sound, or position.

### **Sensitisation**

The process by which repeated exposure increases an immune, neural, or behavioral response.

### **Sensitivity**

The proportion of people with a condition who have a positive test result; it also means responsiveness to a stimulus.

### **Sensory**

Relating to sensation or sensory nerves and pathways.

### **Sensory Cortex**

Cerebral cortex that receives and interprets sensory information, especially the postcentral gyrus for body sensation.

### **Sensory Deprivation**

Marked reduction of normal sensory input, which can affect mood, cognition, and perception.

### **Sepsis**

Life-threatening organ dysfunction caused by a dysregulated response to infection.

#### **Synonyms:**

Septicemia (Sepsis)

### **Septal Defect**

An abnormal opening between chambers of the heart or between other bodily compartments.

### **Septicaemia**

An older term for bloodstream infection, often used to describe bacteremia with systemic illness.

### **Septic Arthritis**

Infection of a joint, usually bacterial, causing acute pain, swelling, restricted movement, and systemic illness.

#### **Synonyms:**

Arthritis Infectious (Septic Arthritis)

### **Septic Shock**

A life-threatening form of circulatory failure caused by sepsis, with persistent hypotension or tissue hypoperfusion despite fluid treatment.

### **Septum**

A wall or partition separating two spaces or tissues.

### **Sequelae**

Persistent consequences or complications that remain after an illness or injury.

### **Sequestrum**

A piece of dead bone or tissue separated from living tissue, commonly occurring in chronic osteomyelitis.

### **Seroconversion**

Development of detectable antibodies in blood after infection, vaccination, or another immune stimulus.

---

## Serotype

A distinct variation of a microorganism or antigen defined by its immune reactivity.

## Serous

Thin, watery, and usually clear; serous fluid resembles serum.

## Serous Membranes

Smooth membranes lining closed body cavities and covering organs, such as pleura, pericardium, and peritoneum.

## Serum

The liquid portion of blood remaining after clotting, lacking fibrinogen and most clotting factors.

## Serum Sickness

An immune-complex reaction after exposure to a foreign protein or some medicines, causing fever, rash, joint pain, and sometimes organ involvement.

## Serum Therapy

Treatment using serum or serum-derived antibodies, historically including antitoxins and immunoglobulin preparations.

## Sesamoid Bones

Small bones embedded in tendons, such as the patella and bones beneath the big toe.

## Sessile

Attached by a broad base rather than a stalk, as in a sessile polyp.

## Severe Acute Respiratory Syndrome (SARS)

A severe viral respiratory illness caused by SARS-CoV.

### Synonyms:

Severe Acute Respiratory Syndrome (Severe Acute Respiratory Syndrome (SARS))

## Sex Change

A nontechnical term for gender transition or medical

gender-affirming care; respectful, current terminology should be used.

## Sex Chromosomes

The X and Y chromosomes, which contribute to sex development and carry many other genes.

## Sex Education

Education about anatomy, relationships, consent, contraception, sexually transmitted infections, and sexual health.

## Sex Hormones

Hormones involved in reproductive development and function, including estrogens, progesterone, and androgens.

## Sex-Linked Inheritance

Inheritance of a trait caused by a gene on a sex chromosome, commonly the X chromosome.

## Sex Therapy

Structured psychological or behavioral therapy for sexual concerns or dysfunction.

## Sexual Abuse

Nonconsensual sexual contact, exploitation, or behavior; it is a safeguarding and health emergency when immediate danger or injury exists.

## Sexual Deviation

An obsolete and stigmatizing term for atypical sexual interests; current assessment focuses on consent, distress, impairment, and harm.

## Sexual Dysfunction

Persistent difficulty with sexual desire, arousal, orgasm, or pain that causes distress or impairment.

## Sexually Transmitted Diseases (STDs)

Infections transmitted mainly through sexual contact, including chlamydia, gonorrhea, syphilis, HIV, and HPV.

### Synonyms:

STDs

---

### Shaken Impact Syndrome

A term for abusive head trauma involving shaking with or without impact, especially in infants.

### Shellfish Poisoning

Illness caused by toxins accumulated in shellfish, producing gastrointestinal, neurologic, or paralytic symptoms.

### Shigella

A genus of bacteria causing shigellosis, an acute diarrheal illness that may include fever and bloody stools.

### Shingles

Herpes zoster, reactivation of varicella-zoster virus in sensory nerves causing a painful unilateral vesicular rash.

### Shin Splints

Pain along the inner border of the shin, often referring to medial tibial stress syndrome from repetitive loading.

#### Synonyms:

Medial Tibial Stress Syndrome

### Shock

A life-threatening state of circulatory failure in which inadequate tissue perfusion and oxygen delivery cause cellular and organ dysfunction. Major mechanisms are hypovolaemia, cardiac pump failure, distributive vasodilation, and obstruction to blood flow; features may include hypotension, tachycardia, altered mental status, cold or abnormal skin perfusion, and reduced urine output.

### Shock Lung

An older term for acute respiratory distress syndrome.

### Shock Therapy

An imprecise term that may refer to electroconvulsive therapy or outdated shock treatments; the specific intervention should be named.

### Short-Sight

Myopia, a refractive error in which distant objects are focused in front of the retina.

### Short Stature

Height substantially below the expected range for age and sex, requiring assessment of growth pattern and cause.

### Shoulder

The region and joint connecting the upper limb to the trunk.

### Shunt

A passage that diverts blood, cerebrospinal fluid, urine, or another fluid from one channel to another.

### Sialagogues

Substances or medicines that stimulate saliva production.

### Sialorrhoea

Excessive drooling or salivation.

### Sibling

A person's brother or sister; family history from siblings can inform genetic and disease risk assessment.

### Sickle-Cell Anaemia

A hereditary hemoglobin disorder in which HbS polymerization causes chronic hemolytic anemia and episodic vaso-occlusive pain.

### Sickness

A general term for illness or nausea; clinical assessment should identify the specific symptom or disease.

### Side-Effects

Unintended effects of a medicine or treatment, which may be mild, serious, predictable, or idiosyncratic.

---

## Siderosis

Accumulation of iron in tissues, or lung disease caused by inhalation of iron-containing dust.

## SIDS

Sudden infant death syndrome, the sudden unexplained death of an infant younger than one year after thorough investigation.

## Sight

The ability to see, involving the eyes and visual nervous system.

## Sildenafil Citrate

The citrate salt of sildenafil, a phosphodiesterase-5 inhibitor used for erectile dysfunction and pulmonary arterial hypertension.

## Silicones

Synthetic polymers used in medical devices, implants, dressings, and other products; adverse effects depend on formulation and site.

## Silicosis

A fibrotic lung disease caused by inhalation of respirable crystalline silica dust.

## Simmonds' Disease

An older term for hypopituitarism, especially pituitary failure causing wasting and endocrine deficiency.

## Simvastatin

A statin medicine that lowers LDL cholesterol by inhibiting HMG-CoA reductase.

## Singer's Nodule

A vocal-fold nodule caused by chronic voice overuse, producing persistent hoarseness.

## Sinoatrial Node

The heart's natural pacemaker in the right atrium that normally initiates each heartbeat.

## Sinus

A cavity, channel, or tract; in clinical use it commonly refers to a paranasal sinus or an abnormal draining tract.

## Sinusitis

Inflammation of the paranasal sinuses, usually causing facial pressure, nasal obstruction, discharge, or reduced smell.

## Sinusoid

A small, highly permeable blood vessel, especially in the liver, spleen, and bone marrow.

## Sinus Tachycardia

A heart rhythm originating in the sinoatrial node with a faster-than-normal rate, often due to exercise, fever, pain, anemia, or stress.

## SI Units

The International System of Units used for standardized measurements, including meter, kilogram, second, mole, and pascal.

## Sjögren's Syndrome

An autoimmune disease causing dry eyes and mouth and sometimes systemic glandular, lung, kidney, nerve, or joint involvement.

### Synonyms:

Sjögren's Disease

## Skeletal Muscle

Striated muscle attached to bones and generally under voluntary control.

## Skeleton

The framework of bones and cartilage supporting the body and protecting organs.

## Skin

The body's outer covering, consisting mainly of epidermis and dermis with appendages such as hair and glands.

---

### **Skin Test**

Alternate index label for diagnostic or immunologic skin tests, including prick, patch, and tuberculin testing.

### **Skin, Diseases Of**

Conditions affecting skin, hair, nails, glands, or subcutaneous tissue, including infection, inflammation, neoplasia, and genetic disorders.

### **Skin-Grafting**

Transfer of skin from a donor site to cover a wound or tissue defect.

### **Skull**

The bony framework of the head, protecting the brain and supporting the face.

### **Slapped Cheek Syndrome**

Erythema infectiosum, a parvovirus B19 infection causing a slapped-cheek rash and sometimes joint or hematologic complications.

### **SLE**

Systemic lupus erythematosus, a chronic autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, and other organs.

### **Sleep**

A recurring state of reduced awareness and responsiveness with characteristic brain and body physiology.

#### **Synonyms:**

Disorders Sleep (Sleep)

### **Sleep Apnoeas**

Repeated pauses or reductions in breathing during sleep, caused by airway obstruction, impaired respiratory drive, or both.

### **Sleep, Disorders Of**

Conditions that alter sleep quantity, timing, quality, breathing, movement, or behavior.

### **Sleeping Sickness**

African trypanosomiasis, a tsetse-fly-borne infection caused by *Trypanosoma brucei* that can progress to neurologic disease.

### **Slough**

Dead or detached tissue separating from a wound, ulcer, or inflamed surface.

### **Small-Bowel Transplantation**

Surgical replacement of a diseased or nonfunctioning small intestine with donor bowel.

### **Small-Cell Carcinoma**

An aggressive neuroendocrine cancer, most commonly arising in the lung.

### **Smallpox**

A severe contagious disease caused by variola virus; it has been eradicated globally.

### **Smegma**

A collection of shed cells, oils, and moisture around the genital folds, which may promote irritation if hygiene is poor.

### **Smell**

The sense of detecting airborne chemicals through olfactory receptors.

### **Smoke Inhalation**

Injury from breathing smoke, hot gases, or combustion products, potentially causing airway burns, poisoning, and lung injury.

### **Smoking**

Inhalation of smoke from burning tobacco or other substances, associated with addiction, cancer, cardiovascular disease, and lung disease.

### **Smooth Muscle**

Involuntary muscle in the walls of hollow organs, blood vessels, and airways.

---

### **Snake-Bite**

A wound from a snake that may cause local injury, envenomation, infection, or systemic toxicity.

### **Snapping Finger**

Trigger finger, painful catching or locking of a finger caused by stenosing inflammation around a flexor tendon.

### **Sneezing**

A forceful reflex expulsion of air through the nose and mouth, often triggered by nasal irritation.

### **Snellen Chart**

A chart of letters or symbols used to measure visual acuity at a specified distance.

### **Snoring**

Noisy breathing during sleep caused by vibration of narrowed upper-airway tissues.

### **Snow Blindness**

Photokeratitis, painful temporary corneal injury from intense ultraviolet exposure, often reflected by snow or ice.

### **Snuffles**

A runny or congested nose; in newborns, persistent snuffles can be a sign of congenital syphilis.

### **Social Medicine**

The study and practice of how social conditions affect health and healthcare.

### **Sodium**

The main extracellular cation, essential for fluid balance, nerve function, and muscle activity.

### **Sodium Aurothiomalate**

An injectable gold compound formerly used to treat rheumatoid arthritis and now rarely used.

### **Sodium Chloride**

The salt sodium chloride; sterile solutions are used

for fluid replacement, irrigation, and drug dilution.

### **Sodium Cromoglycate**

A mast-cell stabilizer used in selected allergy and asthma treatments; also called cromolyn.

### **Sodium Diatrizoate**

An iodinated contrast medium used historically for radiographic imaging.

### **Sodium Hypochlorite**

A chlorine-containing disinfectant and bleach; concentrated exposure can cause corrosive injury.

### **Sodium Valproate**

An anticonvulsant and mood stabilizer; it carries important pregnancy and reproductive risks and requires specialist prescribing.

### **Sodomy**

A legal or historical term for certain sexual acts; it is not a medical diagnosis and should be replaced by precise, nonjudgmental language.

### **Solar Plexus**

A network of autonomic nerves in the upper abdomen, centered around the celiac plexus.

### **Solution**

A homogeneous mixture in which one or more substances are dissolved in a solvent; medical solutions include saline and antiseptics.

### **Solvent Abuse (Misuse)**

Harmful inhalation or ingestion of volatile solvents, which can cause neurologic, cardiac, liver, kidney, or respiratory injury.

### **Somatic**

Relating to the body, especially the body wall and musculoskeletal system, or to physical symptoms.

### **Somatoform Diseases**

An obsolete term for disorders with prominent physical symptoms or health concerns associated with

---

psychological distress.

### **Somatostatin**

A hormone that inhibits secretion of growth hormone, insulin, glucagon, and several gastrointestinal hormones.

### **Somatotype**

A descriptive body-build classification; it is not a disease diagnosis.

### **Somnambulism**

Sleepwalking, a parasomnia involving complex behavior during incomplete arousal from sleep.

### **Soporifics**

Medicines or substances that induce sleep or drowsiness.

### **Sore**

Painful or tender; a sore may also mean an open skin or mucosal lesion.

### **Sore Throat**

Pain or irritation in the throat, commonly caused by viral infection but sometimes by streptococcal infection or other disease.

### **Sotalol**

A medicine with beta-blocking and class III antiarrhythmic effects, used for selected cardiac rhythm disorders.

### **Sound**

Mechanical energy transmitted as waves and perceived by hearing; clinical sound assessment includes speech and respiratory or cardiac sounds.

### **Soya**

Soybean and products made from it; soy is a food source and can cause allergy in susceptible people.

### **Space Medicine**

The medical specialty concerned with human health and performance in aviation and space environments.

### **Spanish Fly**

A historical name for cantharidin-containing blister beetles; ingestion is poisonous and it is not a safe aphrodisiac.

### **Spasm**

An involuntary, often painful contraction of a muscle or group of muscles.

### **Spasmodic Torticollis**

Cervical dystonia causing involuntary contractions and abnormal twisting or posture of the neck.

### **Spastic**

Characterized by increased muscle tone and velocity-dependent resistance to stretch.

### **Spatula**

A flat instrument used to spread, mix, examine, or transfer material.

### **Specialist**

A healthcare professional with advanced training in a particular field.

### **Specificity**

The proportion of people without a condition who have a negative test result.

### **Speculum**

An instrument used to hold open a body passage for examination or procedures.

### **Speech Disorders**

Conditions affecting production, fluency, voice, articulation, or motor control of speech.

### **Speech Therapy**

Assessment and treatment of communication, speech, voice, language, and swallowing disorders.

---

**Sperm**

Male reproductive cells capable of fertilizing an ovum.

**Spermatic**

Relating to sperm or the structures that produce, transport, or support sperm.

**Spermatic Cord**

A cord-like structure containing the vas deferens, testicular vessels, nerves, and lymphatics.

**Spermatogenesis**

Production and maturation of sperm in the seminiferous tubules.

**Spermatorrhoea**

An obsolete term for involuntary or excessive semen discharge.

**Spermatozoa**

Plural of spermatozoon, mature male reproductive cells.

**Spermatozoon**

A mature male reproductive cell, or sperm cell.

**Spermicide**

A substance that immobilizes or destroys sperm and is used as a contraceptive.

**Sphenoid**

Relating to the sphenoid bone at the base of the skull.

**Sphygmograph**

An instrument that records the arterial pulse waveform.

**Sphygmomanometer**

An instrument for measuring arterial blood pressure.

**Spina Bifida**

A neural-tube defect caused by incomplete closure

of the vertebral arch, ranging from occult defects to open myelomeningocele.

**Spinal Anaesthesia**

Injection of local anesthetic into cerebrospinal fluid in the lumbar spine to produce regional numbness.

**Spinal Column**

The vertebral column, consisting of vertebrae, discs, ligaments, and joints that support and protect the spinal cord.

**Spinal Cord**

The cylindrical nervous tissue within the vertebral canal that carries signals between brain and body and mediates reflexes.

**Spine And Spinal Cord, Diseases And Injuries Of**

Disorders or trauma affecting vertebrae, discs, ligaments, spinal cord, or nerve roots.

**Spiramycin**

A macrolide antibiotic used in selected infections, including some prenatal toxoplasmosis protocols.

**Spirillum**

A spiral-shaped bacterium; *Spirillum minus* can cause rat-bite fever.

**Spirit**

A volatile liquid preparation or alcohol; the meaning depends on the medical, pharmaceutical, or general context.

**Spiritual Pain**

Distress involving meaning, purpose, beliefs, identity, or connection, often addressed in palliative and supportive care.

**Spirochaete**

A slender spiral-shaped bacterium, including *Treponema*, *Borrelia*, and *Leptospira*.

---

## **Spirometer**

An instrument that measures lung volumes and airflow.

## **Spirolactone**

An aldosterone antagonist and potassium-sparing diuretic used for heart failure, hypertension, hyperaldosteronism, and other indications.

## **Splanchnic**

Relating to the internal organs, especially abdominal organs and their blood vessels or nerves.

## **Spleen**

A lymphoid organ in the upper-left abdomen. Its red pulp filters blood and removes aged or abnormal blood cells; its white pulp supports immune responses. It also stores platelets and helps clear blood-borne microorganisms.

## **Spleen, Diseases Of**

Disorders affecting splenic structure or function, including splenomegaly, infarction, infection, cysts, abscess, rupture, vascular disease, and hematologic or infiltrative disorders.

## **Splenectomy**

Surgical removal of the spleen, performed for selected traumatic, hematologic, malignant, vascular, or other disorders. It increases the risk of severe infection with encapsulated bacteria and requires preventive planning.

## **Splenomegaly**

Abnormal enlargement of the spleen, usually secondary to infection, liver or portal-venous disease, hemolysis, hematologic malignancy, storage disease, or inflammation. It may cause left-upper-quadrant fullness or pain and increases rupture risk.

## **Splinter Haemorrhages**

Small linear bleeding beneath a nail, caused by trauma, endocarditis, vasculitis, or other conditions.

## **Splints**

Devices that support, immobilize, align, or protect an injured or diseased body part.

## **Spondylitis**

Inflammation of one or more vertebrae or the spine.

## **Spondylolisthesis**

Forward or backward displacement of one vertebra relative to another.

## **Spondylosis**

Degenerative changes of the spine involving vertebrae, discs, and facet joints.

## **Spongiform Encephalopathy**

A fatal or progressive neurodegenerative disorder with sponge-like brain changes, including prion diseases.

## **Sporadic**

Occurring irregularly or as an isolated case rather than in a predictable pattern or family cluster.

## **Spore**

A resistant reproductive or survival structure produced by fungi, bacteria, or some plants.

## **Sporozoa**

An older group name for spore-forming protozoan parasites, including Plasmodium.

## **Sporozoites**

Motile infective forms of certain protozoa, such as the Plasmodium forms injected by mosquitoes.

## **Sports Medicine**

The field concerned with prevention, diagnosis, treatment, and rehabilitation of activity-related injury and performance problems.

## **Spots Before The Eyes**

Visual floaters, flashes, or scotomata perceived in the visual field; sudden onset requires urgent assess-

---

ment.

### **Spotted Fever**

A group of tick-borne rickettsial illnesses causing fever, headache, and often a spotted rash.

### **Sprains**

Injuries involving stretching or tearing of ligaments around a joint.

### **Sprue**

A malabsorption syndrome, especially tropical sprue or celiac disease in older terminology.

### **Sputum**

Mucus or other material coughed up from the lower respiratory tract.

### **Squill**

A plant-derived cardiac glycoside source historically used as an expectorant or cardiac medicine; toxicity limits use.

### **Squint**

Strabismus, misalignment of the eyes so they do not point in the same direction.

### **SSRIs**

Selective serotonin-reuptake inhibitors, antidepressants that increase serotonin signaling.

### **Stabs**

Brief, sharp, stabbing pains or injuries; the exact cause depends on site and context.

### **Staghorn Calculus**

A branching kidney stone that fills part or all of the renal pelvis and calyces, often associated with infection.

### **Stammering**

Stuttering, a speech-fluency disorder involving repetitions, prolongations, or blocks.

### **Standard Deviation**

A statistical measure of the spread of observations around their mean.

### **Stannosis**

Pneumoconiosis caused by inhalation of tin oxide dust.

### **Stanozolol**

A synthetic anabolic androgenic steroid with limited medical use and potential liver, lipid, and cardiovascular toxicity.

### **Stapedectomy**

Surgical removal or replacement of the stapes, usually to treat otosclerosis and conductive hearing loss.

### **Stapes**

The smallest auditory ossicle, transmitting vibrations from the incus to the inner ear.

### **Staphylococcus**

A genus of gram-positive cocci that includes *S. aureus* and common skin colonizers and pathogens.

### **Starch**

A plant polysaccharide digested to glucose and an important dietary carbohydrate.

### **Starvation**

Severe prolonged deficiency of food or energy intake causing wasting, metabolic adaptation, and organ dysfunction.

### **Stasis**

Slowing or stopping of normal flow, such as blood, lymph, or intestinal contents.

### **STAT**

A medical instruction meaning immediately or with urgent priority.

---

**Status Asthmaticus**

A severe asthma exacerbation that fails to respond adequately to initial treatment and may cause respiratory failure.

**Status Epilepticus**

A prolonged seizure or recurrent seizures without recovery between them, requiring emergency treatment.

**STD(S)**

Abbreviation for sexually transmitted disease(s), now often called sexually transmitted infections.

**Steatoma**

A fatty or sebaceous mass; the term may refer to a lipoma or, in the ear, a cholesteatoma depending on context.

**Steatorrhoea**

Excess fat in stools, causing pale, bulky, greasy, foul-smelling stools and suggesting fat malabsorption.

**Stem Cell**

An unspecialized cell capable of self-renewal and differentiation into one or more mature cell types.

**Stenosis**

Abnormal narrowing of a passage, vessel, valve, or opening.

**Stent**

A tube or scaffold placed inside a vessel or other passage to keep it open.

**Stereognosis**

The ability to identify an object by touch without looking, requiring intact cortical sensory function.

**Stereotaxis**

A technique using a three-dimensional coordinate system to target deep structures, especially in brain procedures.

**Sterilisation**

Destruction or removal of all forms of microbial life, or permanent contraception depending on context.

**Sterility**

Inability to reproduce, or complete absence of viable microorganisms from an object or preparation.

**Sternum**

The breastbone forming the front of the central chest wall.

**Steroid**

A compound with a characteristic four-ring structure, including corticosteroids and sex hormones.

**Stertor**

A low-pitched snoring or rattling breathing sound caused by upper-airway obstruction.

**Stethoscope**

An instrument for listening to sounds from the heart, lungs, blood vessels, and other body structures.

**Stevens-Johnson Syndrome**

A rare severe mucocutaneous reaction, usually to medicines or infection, with epidermal detachment and involvement of multiple mucosal surfaces.

**Synonyms:**

SJS

**Stiffness**

Difficulty or discomfort with movement, often due to joint, muscle, neurologic, or inflammatory disease.

**Stigma**

A mark, characteristic, or social discrediting label; in medicine it may refer to a sign or to harmful social attitudes.

**Stilboestrol**

An older name for diethylstilbestrol, a synthetic estrogen no longer used routinely because of serious risks.

---

## Stilet

A slender pointed instrument used to guide, clear, or stiffen a cannula or tube.

## Stillbirth

The birth of a baby showing no signs of life after the locally defined gestational or birth-weight threshold.

## Still's Disease

Systemic juvenile idiopathic arthritis or adult-onset Still disease, inflammatory disorders with fever, arthritis, rash, and systemic inflammation.

### Synonyms:

Arthritis Still (Still's Disease)

## Stings

Injuries caused by venom injected through an insect, animal, or plant structure.

## Stitch

A suture used to close tissue, or a sharp transient pain, often in the side during exercise.

## St John's Wort

A herbal preparation from *Hypericum perforatum* used for mood symptoms but capable of serious drug interactions.

## Stokes-Adams Syndrome

Transient loss of consciousness caused by an intermittent cardiac arrhythmia, usually profound bradycardia or heart block.

## Stoma

A natural opening or a surgically created opening connecting an organ to the skin or another organ.

## Stomach

A muscular digestive organ between the oesophagus and small intestine that stores and begins digestion of food.

## Stomach, Diseases Of

Disorders affecting the stomach, including gastritis, ulcers, motility disorders, obstruction, and tumors.

## Stomach Tube

A tube passed through the mouth or nose into the stomach for drainage, feeding, sampling, or treatment.

## Stomach Washout

Gastric lavage, irrigation and suction of stomach contents in selected poisoning or other emergencies.

## Stomatitis

Inflammation and ulceration of the mouth lining.

## -Stomy

A suffix meaning surgical creation of an opening, such as colostomy or gastrostomy.

## Stone

A hard concretion formed in a body organ or duct, commonly from mineral salts.

## Stools

Feces, the solid waste expelled from the digestive tract.

## Strabismus

Misalignment of the eyes, causing them to point in different directions.

## Strain

An injury from overstretching or tearing a muscle or tendon, or a force applied to tissue.

## Stranguary

An obsolete term for painful, difficult, or frequent urination.

## Strangulation

Compression of a body structure, especially the neck or a hernia, that compromises blood flow or airway.

## Strapping

Application of adhesive tape or bandage to support, protect, or restrict movement of a body part.

---

## Strep Throat

Pharyngitis caused by group A Streptococcus.

## Streptococcus

A genus of gram-positive cocci causing infections such as pharyngitis, pneumonia, cellulitis, and endocarditis.

## Streptokinase

A thrombolytic protein that activates plasminogen and dissolves clots; use is limited by bleeding risk and alternatives.

## Streptomycin

An aminoglycoside antibiotic used in selected tuberculosis and other infections.

## Stress

A physiological or psychological response to perceived demands or threat.

## Stress Fractures

Small cracks in bone caused by repetitive loading that exceeds remodeling capacity.

## Striae

Linear bands or streaks in skin, commonly stretch marks caused by dermal connective-tissue change.

## Stridor

A harsh, high-pitched breathing sound caused by upper-airway narrowing.

## Stroke

A sudden neurologic deficit caused by interrupted blood flow to the brain or bleeding within or around it.

## Stroma

The supporting connective tissue of an organ, surrounding its functional cells.

## Strongyloidiasis

A parasitic infection caused by *Strongyloides stercoralis*, which can become life-threatening in immunosuppression.

## Strychnine

A poisonous alkaloid causing painful generalized muscle spasms and convulsions with preserved consciousness.

## Stupor

A state of markedly reduced responsiveness from which a person can be aroused only with vigorous stimulation.

## Stuttering

A speech-fluency disorder involving repetitions, prolongations, blocks, or struggle during speech.

## St Vitus's Dance

An older name for Sydenham chorea, involuntary movements following group A streptococcal infection.

## Stye

A tender localized infection or inflammation of an eyelid gland, also called a hordeolum.

### Synonyms:

Sty (Stye)

## Styptics

Agents that help stop minor bleeding by promoting local vasoconstriction, coagulation, or tissue contraction.

## Sub-

A combining form meaning under, below, or less than normal.

## Subacute

Between acute and chronic in onset, duration, or severity.

## Subacute Combined Degeneration Of The Cord

Spinal-cord degeneration caused mainly by vitamin B12 deficiency, affecting posterior and lateral

---

columns.

### **Subacute Sclerosing Panencephalitis**

A rare progressive brain disease occurring years after measles infection, caused by persistent defective measles virus.

### **Subarachnoid Haemorrhage**

Bleeding into the space around the brain containing cerebrospinal fluid, often causing sudden severe headache.

### **Subclavian**

Relating to the vessels or structures beneath the clavicle.

### **Subclinical**

Present without obvious symptoms or signs, often detectable only by testing.

### **Subconscious**

Mental processes outside immediate awareness; it is a psychological term rather than a specific diagnosis.

### **Subdural**

Situated beneath the dura mater.

### **Subinvolution**

Failure of an organ, especially the uterus after childbirth, to return toward its normal size.

### **Subjective**

Based on a person's own experience or report rather than directly observable measurement.

### **Sublimation**

A psychological defense process in which unacceptable impulses are redirected into socially acceptable activity; in chemistry it is solid-to-gas transition.

### **Subluxation**

Partial dislocation of a joint, with some contact between articular surfaces remaining.

### **Submucosa**

The connective-tissue layer beneath a mucous membrane.

### **Subphrenic Abscess**

A collection of pus beneath the diaphragm, usually after abdominal infection or surgery.

### **Substrate**

A substance on which an enzyme acts or a material used by a biochemical pathway.

### **Succussion**

A shaking movement or splash-like sound produced by fluid and gas in a cavity, historically assessed over the chest or abdomen.

### **Sucrose**

Common table sugar, a disaccharide of glucose and fructose.

### **Suction**

Removal of fluid, secretions, or material using negative pressure.

### **Sudden Unexpected Death In Infancy**

Unexpected death of an infant, requiring investigation to determine whether it is explained or unexplained.

### **Sudek's Atrophy**

An older name for complex regional pain syndrome with pain, swelling, autonomic change, and regional bone loss.

### **Sudorifics**

Substances that promote sweating.

### **Suffocation**

Inability to breathe adequately because of airway obstruction, oxygen deprivation, compression, or another cause.

---

## **Suicide**

Death caused by intentional self-inflicted action; suicidal thoughts and behavior require urgent, compassionate assessment.

## **Sulcus**

A groove or furrow on an organ or surface, especially the brain or heart.

## **Sulfamethoxazole**

A sulfonamide antibiotic used commonly with trimethoprim in selected infections.

## **Sulfasalazine**

An anti-inflammatory medicine used for inflammatory bowel disease and rheumatoid or other inflammatory arthritis.

## **Sulfinpyrazone**

An older uricosuric medicine used historically for gout.

## **Sulphonylureas**

Oral medicines that stimulate pancreatic insulin release to lower blood glucose in type 2 diabetes.

## **Sumatriptan**

A serotonin 5-HT<sub>1B/1D</sub> agonist used for acute migraine and cluster headache attacks.

## **Summer Diarrhoea**

An older term for seasonal diarrheal illness, often referring to infectious diarrhea in children.

## **Sunburn**

Inflammatory skin injury caused by excessive ultraviolet radiation.

## **Super-**

A combining form meaning above, excessive, or superior.

## **Superficial**

Near the surface of the body or an organ.

## **Supination**

Rotation of the forearm so the palm faces upward or forward, or a related foot movement.

## **Supine**

Lying on the back with the face upward.

## **Suppository**

A solid preparation inserted into the rectum, vagina, or urethra where it dissolves or melts.

## **Suppression**

Reduction or inhibition of a function, response, symptom, or process.

## **Suppuration**

Formation or discharge of pus.

## **Supra-**

A combining form meaning above or beyond.

## **Suprapubic**

Situated above the pubic bone.

## **Suprarenal Glands**

The adrenal glands located above the kidneys.

## **Supraventricular Tachycardia**

A rapid heart rhythm arising above the ventricles, often beginning and ending abruptly.

### **Synonyms:**

SVT

## **Suramin**

An antiparasitic medicine used mainly for selected African trypanosomiasis.

## **Surfactant**

A substance that lowers surface tension; pulmonary surfactant prevents alveolar collapse.

## **Surgery**

Treatment involving operative manipulation of tissues or organs.

---

## **Surrogate**

A substitute or proxy; in medicine, a surrogate endpoint is an intermediate measure used in place of a clinical outcome.

## **Susceptibility**

The likelihood of being affected by a disease, exposure, drug, or microorganism.

## **Suture**

A stitch or material used to close or join tissue.

## **Swab**

A sterile absorbent applicator or the specimen collected with it from a body surface or cavity.

## **Swan-Ganz Catheter**

A pulmonary-artery catheter used to measure pressures and cardiac output in selected critically ill patients.

## **Sweat**

Fluid secreted by sweat glands, helping regulate body temperature.

## **Sweat Glands**

Eccrine and apocrine glands that produce sweat or related secretions.

## **Sycosis Barbae**

Chronic folliculitis of the beard area, usually caused by bacterial infection and ingrown hairs.

## **Sydenham's Chorea**

A post-streptococcal autoimmune movement disorder causing involuntary, irregular movements and emotional or behavioral change.

## **Sympathetic**

Relating to the sympathetic division of the autonomic nervous system or to shared feeling, depending on context.

## **Sympathetic Nervous System**

The autonomic division that prepares the body for activity or stress by increasing heart rate and altering vascular, airway, and digestive function.

## **Sympathomimetic Drugs**

Medicines that mimic sympathetic nervous-system activity, often by stimulating alpha or beta adrenergic receptors.

## **Symphysis**

A joint in which bones are united by fibrocartilage, such as the pubic symphysis.

## **Symptom**

A subjective experience reported by a patient, such as pain, nausea, or breathlessness.

## **Syn-**

A combining form meaning together, with, or joined.

## **Synapse**

A junction where a neuron communicates with another neuron, muscle, or gland.

## **Syncope**

A sudden, brief loss of consciousness and postural tone caused by temporary global cerebral hypoperfusion, followed by spontaneous, usually complete recovery. Common mechanisms are reflex syncope, orthostatic hypotension, and cardiac disease; prolonged confusion or seizure-like features require evaluation for another cause.

## **Syndactyly**

Congenital fusion or webbing of adjacent fingers or toes.

## **Syndrome**

A recognizable pattern of symptoms, signs, or findings that occur together.

## **Synechiae**

Abnormal adhesions between tissues, especially within the eye, uterus, or nasal cavity.

---

**Synergist**

A muscle, drug, or factor that works together with another to produce or enhance an effect.

**Synostosis**

Fusion of two bones by bone tissue, congenital or acquired.

**Synovectomy**

Surgical removal of part or all of an inflamed synovial membrane.

**Synovial Membrane**

The lining of a synovial joint that produces lubricating synovial fluid.

**Synovitis**

Inflammation of a synovial membrane, causing swelling, pain, and restricted movement.

**Synovium**

The synovial membrane and its associated tissue lining a joint or tendon sheath.

**Synthetic**

Produced by chemical or laboratory processes rather than directly obtained in its natural form.

**Syphilis**

A sexually transmitted infection caused by *Treponema pallidum*, progressing through primary, secondary, latent, and sometimes tertiary stages.

**Syringe**

A device with a barrel and plunger used to withdraw or inject fluids.

**Syringe Drivers**

Small battery-powered pumps that deliver medicines continuously or at programmed intervals through a syringe.

**Syringomyelia**

A fluid-filled cavity within the spinal cord that can

cause pain, sensory loss, weakness, or autonomic dysfunction.

**Systemic**

Affecting the whole body or relating to an entire system rather than a localized site.

**Systemic Lupus Erythematosus (SLE)**

A chronic autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, heart, lungs, and other organs.

**Systole**

The phase of the cardiac cycle during which a chamber contracts and ejects blood.

**Systolic Pressure**

The maximum arterial pressure during ventricular contraction, recorded as the upper number of a blood-pressure reading.

**Synonyms:**

Seasonal affective disorder

**Saline**

A sterile water solution containing sodium chloride, commonly used for fluids, irrigation, or drug delivery.

**Synonyms:**

Normal saline

**Sarcolemma**

The specialized cell membrane surrounding a muscle fiber.

**Satisficer**

A person who chooses an option that meets acceptable criteria without seeking the absolute best option.

**Sausage Digit**

Diffuse swelling of an entire finger or toe, often seen with inflammatory arthritis.

**Synonyms:**

Dactylitis

---

### Scapulothoracic Joint

The functional gliding connection between the scapula and the back of the chest wall.

### Schlemm's Canal

A circular channel that drains aqueous humor from the eye.

**Synonyms:**

Canal of Schlemm

### Scintillations

Perceived flashes or zigzag lines, often occurring during a migraine aura.

### Secondary Osteoporosis

Bone loss caused by another illness, medication, or prolonged immobility.

### Sed Rate

A blood test measuring how quickly red blood cells settle, used as a nonspecific marker of inflammation.

**Synonyms:**

Erythrocyte sedimentation rate; ESR

### Selective Estrogen Receptor Modulators

Medicines that activate estrogen receptors in some tissues and block them in others.

**Synonyms:**

SERMs

### Selective Serotonin Reuptake Inhibitors

Antidepressants that increase serotonin signaling by reducing its reuptake into nerve cells.

**Synonyms:**

SSRIs

### Self-Help Group

A peer group in which members support one another while changing a harmful behavior or coping with a problem.

**Synonyms:**

Support group

### Seminal Vesicles

Glands behind the bladder that produce much of the fluid in semen.

### Senescence

Gradual biological decline associated with aging.

**Synonyms:**

Biological aging

### Sensate Focus Techniques

Structured touch exercises used in sex therapy to reduce performance pressure and improve intimacy.

**Synonyms:**

Sensate focus

### Sensitized

State of having preformed antibodies against human leukocyte antigens (HLA); complicates transplant matching and increases rejection risk.

### SERMs

Selective estrogen receptor modulators that have estrogen-like effects in some tissues and blocking effects in others.

**Synonyms:**

Selective estrogen receptor modulators

### Seroma

A pocket of clear fluid that develops near a surgical incision or injured tissue.

### Serotonin

A neurotransmitter involved in mood, sleep, appetite, and pain regulation.

**Synonyms:**

5-hydroxytryptamine; 5-HT

### Sesamoiditis

Inflammation and pain around a small sesamoid bone, often beneath the big toe.

### Set

A group of consecutive repetitions of an exercise.

---

### Short-Term Memory

The temporary storage and use of information over seconds to minutes.

**Synonyms:**

Working memory

### Sigmoidoscopy

Sigmoidoscopy examines sigmoidoscopy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### Signature Strengths

Personal character strengths that a person values and naturally uses.

### Silent Heart Attack

A myocardial infarction without recognized pain or typical warning symptoms.

**Synonyms:**

Unrecognized myocardial infarction

### Silent Ischemia

Inadequate blood flow to heart muscle without noticeable symptoms.

**Synonyms:**

Asymptomatic ischemia

### Single-Photon Absorptiometry

An older technique using gamma rays to measure bone density, usually in an arm or peripheral bone.

**Synonyms:**

SPA

### Sinus Node

The heart's natural pacemaker, located in the right atrium.

**Synonyms:**

Sinoatrial node

### Six Minute Walk

Functional exercise test measuring the distance a patient can walk in six minutes; used to assess cardiopulmonary capacity and functional status.

### Skeletal Muscles

Muscles attached to bones that produce voluntary movement.

### Smoldering Multiple Myeloma

An asymptomatic plasma-cell disorder with increased clonal plasma cells or monoclonal protein but no myeloma-defining organ damage; it requires risk-based monitoring for progression to active multiple myeloma.

**Synonyms:**

Voluntary muscles

### Skin Resurfacing

Procedures that improve skin texture or pigmentation by removing or remodeling superficial skin layers.

### Sleep Architecture

The pattern and organization of sleep stages across a sleep period.

### Sleep Spindles

Brief bursts of rhythmic brain activity during stage 2 non-REM sleep.

### Sling

A supportive device or surgically placed strip used to support an injured limb or urinary structures.

### Slipped Disk

A spinal disk that bulges or herniates through a tear in its outer layer.

**Synonyms:**

Herniated disk

### Slipped Vertebra

Forward displacement of one vertebra relative to the one below it.

**Synonyms:**

Spondylolisthesis

### Slit Lamp

An instrument using magnification and a narrow beam of light to examine the eye.

---

**Synonyms:**

Biomicroscope

**Slow-Twitch Fiber**

A muscle fiber adapted for sustained, aerobic activity and fatigue resistance.

**Synonyms:**

Type I muscle fiber

**Slow-Wave Sleep**

Deep non-REM sleep characterized by slow brain waves and reduced responsiveness.

**Synonyms:**

Deep sleep

**SMART**

A goal-setting framework emphasizing specific, measurable, achievable, realistic, and time-bound goals.

**Synonyms:**

SMART goals

**Social Worker**

Healthcare professional providing psychosocial support, resource coordination, and counseling for patients and families throughout the transplant process.

**Somatization**

Expression of psychological distress through physical symptoms.

**Somniloquy**

Talking during sleep.

**Synonyms:**

Sleep talking

**Sorbitol**

A sugar alcohol used as a sweetener and, in larger amounts, as an osmotic laxative.

**Spacer**

A chamber used with a metered-dose inhaler to improve delivery of medicine to the lungs.

**Synonyms:**

Valved holding chamber

**Sphincter**

A ring-shaped muscle that regulates an opening by contracting and relaxing.

**Spinal Tap**

A procedure that withdraws cerebrospinal fluid from the lower spinal canal for testing.

**Synonyms:**

Lumbar puncture

**Spinous Process**

The posterior bony projection of a vertebra to which muscles and ligaments attach.

**Splenic Flexure Syndrome**

Left-upper-abdominal pain caused by gas trapped at the bend between the transverse and descending colon.

**Spongy Bone**

Porous trabecular bone found inside many bones, especially near joints.

**Synonyms:**

Cancellous bone; trabecular bone

**Squamous Cell**

A thin, flat epithelial cell.

**Stable Angina**

Predictable exertional chest pain caused by temporary inadequate coronary blood flow.

**Synonyms:**

Chronic stable angina

**Stable Coronary Artery Disease**

Coronary artery narrowing causing a consistent, predictable pattern of angina.

**Synonyms:**

Stable ischemic heart disease

**Stages Of Change**

A model describing gradual phases people pass

---

through while changing behavior.

**Synonyms:**

Transtheoretical model

**Standardized Extract**

An herbal extract adjusted to contain a specified amount of a selected constituent.

**Statins**

Cholesterol-lowering medicines that inhibit HMG-CoA reductase.

**Synonyms:**

HMG-CoA reductase inhibitors

**Steroids**

Hormone-like medicines or compounds with a four-ring chemical structure; corticosteroids are used to reduce inflammation.

**Synonyms:**

Corticosteroids

**Stimulant**

A substance that increases activity of the central nervous system or other body systems.

**Stratum Corneum**

The outermost layer of the epidermis, composed mainly of dead keratinized cells.

**Strength**

The ability of a muscle or muscle group to exert force.

**Strength Training**

Exercise using resistance to increase muscle strength and capacity.

**Synonyms:**

Resistance training; weight training

**Stress Response**

Physiological changes that prepare the body to respond to a perceived threat.

**Synonyms:**

Fight-or-flight response

**Stressors**

Events, conditions, or circumstances that trigger a stress response.

**Stria**

A line, streak, or band in tissue, such as a stretch mark.

**Synonyms:**

Striae

**Stricture**

Abnormal narrowing of a hollow body passage.

**Subarachnoid Space**

The space between the arachnoid and pia mater containing cerebrospinal fluid.

**Subcutaneous**

Subcutaneous means beneath the skin; injections by this route deliver medicine into the fatty tissue between skin and muscle.

**Subendocardial Myocytes**

Heart-muscle cells in the inner layer of the myocardium, which are especially vulnerable to reduced blood flow.

**S3 Gallop Pathology**

A third heart sound produced during rapid ventricular filling. In some adults it may indicate volume overload or ventricular dysfunction, although it can be physiologic in children, young adults, and pregnancy. Its significance depends on the complete clinical assessment.

**S4 Gallop Pathology**

A fourth heart sound indicates atrial contraction against a stiff ventricle (decreased compliance). Associated with left ventricular hypertrophy from hypertension, aortic stenosis, and hypertrophic cardiomyopathy. S4 is best heard at the apex with the bell, and is accentuated by exertion, expiration, and isorhythmic AV dissociation.

---

## Sacral Nerve Stimulation

Neuromodulation for urinary/fecal incontinence, constipation. Sacral nerve root (S3) stimulation. Implantable pulse generator + electrode. Indications: refractory urge incontinence, fecal incontinence, non-obstructive urinary retention.

## Sacral Nerve Stimulator

An implanted device that delivers electrical stimulation to sacral nerves to alter bladder, bowel, or pelvic-floor function in selected patients.

## Sacral Vertebrae

Five vertebrae fused to form the sacrum. They transmit body weight from the vertebral column to the pelvic girdle and contain anterior and posterior sacral foramina for spinal nerves.

## Sacroiliac Joint

The synovial joint between the sacrum and the ilium (auricular surfaces), forming the connection between the axial skeleton and the pelvis. The sacroiliac joint is reinforced by strong ligaments (anterior, interosseous, and posterior sacroiliac ligaments, sacrotuberous and sacrospinous ligaments).

## Sacroiliitis

Inflammation of one or both sacroiliac joints, causing pain in the lower back, buttock, or posterior thigh that may worsen with prolonged rest. Causes include axial spondyloarthritis, psoriatic or enteropathic arthritis, infection, trauma, and degenerative disease.

## Sacrum

Large triangular bone from 5 fused sacral vertebrae between the hip bones. Articulates with L5 superiorly and coccyx inferiorly. The sacral promontory is an obstetric landmark. Contains 4 pairs of sacral foramina. Forms the posterior pelvic wall.

## Safety Plan

A collaboratively written, practical plan for responding to escalating suicidal thoughts or emotional crisis. It identifies warning signs, internal coping strategies, supportive contacts, professional resources, and

methods to restrict access to lethal means.

## Sagittal Plane

A vertical plane that divides the body or an organ into right and left sides.

## Salbutamol (Albuterol)

A selective beta-2 adrenergic agonist bronchodilator used for acute relief and prevention of bronchospasm in asthma and COPD. Relaxes airway smooth muscle; short-acting (SABA), onset 5-15 minutes, duration 4-6 hours via inhaler or nebulizer. Adverse effects: tremor, tachycardia, palpitations, hypokalemia, and headache.

### Synonyms:

Albuterol

## Salicylate

A group of compounds that includes aspirin and has analgesic, antipyretic, and anti-inflammatory effects.

## Salicylate Toxicity

Poisoning caused by excessive aspirin or another salicylate, potentially producing vomiting, ringing in the ears, fever, abnormal breathing, confusion, and acid-base disturbances.

## Saline Infusion Sonohysterography

Ultrasound evaluation of uterus using saline contrast. Evaluates intrauterine pathology.

## Saliva

Secretion of salivary glands (1-1.5 L/day). Functions: lubrication, digestion (amylase), buffering, antimicrobial, remineralization. Xerostomia (dry mouth) increases caries risk. Causes: medications, Sjogren syndrome, radiation, dehydration.

## Salivary Gland

Any exocrine gland that secretes saliva into the oral cavity. The major paired glands are the parotid, submandibular, and sublingual glands; numerous minor glands occur throughout the oral mucosa.

---

## Salivary Gland Cancer

A rare malignancy most often arising in the parotid gland. Histologic types include mucoepidermoid carcinoma, adenoid cystic carcinoma, and acinic cell carcinoma; facial nerve preservation is a key surgical consideration.

## Salivary Gland Infection

Infection of a salivary gland, usually bacterial and often involving the parotid or submandibular gland. Painful swelling, fever, dry mouth, and purulent drainage from the duct may occur.

## Salivary Gland Scintigraphy

Salivary gland function assessment using Tc-99m pertechnetate. Used for Sjogren syndrome, obstruction, radiation sialadenitis.

## Salivary Gland Tumors

Tumors arising in the salivary glands. Many are benign, especially in the parotid gland; pleomorphic adenoma is a common benign type. Malignant types include mucoepidermoid, adenoid cystic, and acinic cell carcinoma.

### Synonyms:

Tumor, Salivary Gland

## Salivation

The secretion of saliva by the salivary glands.

## Salmonella

A genus of Gram-negative, facultatively anaerobic, rod-shaped bacteria in the Enterobacteriaceae family. It includes non-typhoidal strains that cause gastroenteritis and typhoidal strains that can cause enteric fever.

## Salmonellosis

Infection with Salmonella bacteria (non-typhoidal), typically acquired from contaminated food (eggs, poultry, meat). Presents with acute gastroenteritis: diarrhea, fever, and abdominal cramps within 6-72 hours of ingestion. Self-limited in immunocompetent patients. Bacteremia can occur, especially in immunocompromised.

### Synonyms:

Salmonella Food Poisoning (Salmonellosis)

## Salpingectomy

Surgical removal of a fallopian tube. It may be used to treat a tubal ectopic pregnancy, hydrosalpinx, or other tubal disease. The approach and whether the tube is removed depend on the clinical condition, fertility plans, and the state of the opposite tube.

## Salpingitis

Inflammation of the fallopian tubes, most commonly caused by ascending infection from the lower genital tract. Salpingitis is a component of pelvic inflammatory disease and is often bilateral.

## Salpingo-Oophorectomy

Surgical removal of one or both fallopian tubes and ovaries. Bilateral salpingo-oophorectomy treats and stages ovarian cancer and is used as risk-reducing surgery in BRCA mutation carriers.

## Salpingography

Contrast imaging of fallopian tubes. Part of hysterosalpingography.

## Salpingostomy (Salpingotomy)

A fertility-preserving surgical procedure for tubal ectopic pregnancy: a linear incision on the antimesenteric border of the fallopian tube to remove the ectopic gestation, leaving the tube in situ. Indications: unruptured ectopic, desire for future fertility, contralateral tubal damage or absence.

### Synonyms:

Salpingotomy

## Saltatory Conduction

The rapid propagation of action potentials along myelinated nerve fibers, where the action potential appears to "jump" from one Node of Ranvier to the next. Myelin (produced by Schwann cells in the PNS and oligodendrocytes in the CNS) insulates the axon, preventing ion flow across the internodal membrane.

---

## Salvage Therapy

Treatment given for cancer that has not responded to, or has returned after, an earlier course of treatment.

## Sandhoff Disease

An autosomal-recessive lysosomal storage disorder caused by deficiency of beta-hexosaminidase A and B, leading to accumulation of GM2 ganglioside. It causes progressive neurodegeneration, developmental regression, seizures, hypotonia, and sometimes organ enlargement.

## Sandpaper Tooth

Rough enamel surface retains plaque. May indicate early demineralization or fluorosis.

## Saphenous Vein

A superficial vein of the lower limb that drains the foot and leg. The great and small saphenous veins are clinically important in venous disease and may be used as graft material in selected vascular or cardiac bypass procedures.

## SAPHO Syndrome

A rare inflammatory disorder involving synovitis, acne, pustulosis, hyperostosis, and osteitis. It commonly affects the anterior chest wall, spine, or jaw and may resemble infection or malignancy. Diagnosis is clinical and treatment may include anti-inflammatory or specialist immunomodulatory therapy.

## Sarcoidosis

Sarcoidosis is multisystem granulomatous inflammation, commonly affecting lungs and lymph nodes but also skin, eyes, heart, nerves, and other organs. It commonly affects the lungs and lymph nodes but may involve the skin, eyes, heart, nervous system, or other organs.

### Synonyms:

Arthritis Sarcoid (Sarcoidosis)

## Sarcoidosis Skin Manifestations

Cutaneous sarcoidosis affects 25 percent of patients

with systemic sarcoidosis.

## Sarcoma

A malignant tumor arising from connective or supporting tissues, including bone, cartilage, fat, muscle, and blood vessels. Examples include osteosarcoma, liposarcoma, and rhabdomyosarcoma.

## Sarcopenia

Age-related loss of muscle mass and function. Prevalence increases with age. Risk factors: reduced protein intake, decreased physical activity, chronic disease. Assessment: grip strength, gait speed, muscle mass measurement. Treatment: protein supplementation, resistance exercise, vitamin D, hormonal therapy if deficient.

## Sarcopenic Obesity

The coexistence of excess adiposity with reduced skeletal-muscle mass, strength, or physical performance. It increases risks of disability, falls, metabolic disease, and poor surgical outcomes and requires assessment beyond body-mass index alone.

## Sarcoptes Scabiei

A mite that causes scabies, a contagious skin infestation transmitted by prolonged skin-to-skin contact. The female mite burrows into the stratum corneum, laying eggs along the burrow, which appears as a greyish, serpiginous line. The life cycle from egg to adult takes approximately 10-14 days.

## SARS-CoV-2

A coronavirus belonging to the Coronaviridae family that causes COVID-19. SARS-CoV-2 has a positive-sense single-stranded RNA genome and a spike glycoprotein that mediates attachment to ACE2 receptors. The virus replicates in the cytoplasm using its own RNA-dependent RNA polymerase.

## Satiety

Feeling of fullness after eating. Affected by meal composition, volume, fiber, protein. Satiety hormones: CCK, PYY, GLP-1.

---

## Saturated Fat

Solid at room temperature. Sources: meat, dairy, coconut oil, palm oil. Controversial cardiovascular effects. Current guidelines limit intake.

## Saturation

Occupancy of available binding, metabolic, transport, or elimination capacity such that further increases in concentration or dose produce a nonlinear response. Saturable metabolism can cause disproportionate rises in plasma concentration and toxicity.

## Scabies

Scabies is infestation by *Sarcoptes scabiei* mites, causing intense nighttime itching and a characteristic rash or burrows, with spread through close contact. mite *Sarcoptes scabiei* var. *hominis*. The hallmark symptom is severe, generalized pruritus that characteristically worsens at night, driven by a hypersensitivity reaction to the mite's proteins, eggs, and feces.

### Synonyms:

Sarcoptic Mange (Scabies)

## Scaffold

Three-dimensional structure for tissue engineering. Porous, biodegradable. Cells populate scaffold.

## Scaling And Root Planing

Nonsurgical periodontal instrumentation that removes supra- and subgingival deposits and smooths contaminated root surfaces. It reduces inflammation and pocket depth in appropriate patients but does not regenerate lost periodontal attachment by itself.

## Scalp Psoriasis

Psoriasis affecting the scalp, causing sharply demarcated red plaques covered by silvery scale that may extend beyond the hairline. It can itch, crack, or bleed and is not contagious. Treatment may include medicated shampoos, topical corticosteroids, vitamin-D analogues, or systemic therapy for extensive disease.

### Synonyms:

Psoriasis Of The Scalp (Scalp Psoriasis)

## Scalpel

Surgical knife with interchangeable blades. Blade numbers indicate size and shape. #10: common for incisions. #11: puncture. #15: precise work.

## Scalpel Handle

Handle for holding scalpel blades. #3 handle common.

## Scaphoid

Largest proximal carpal row bone on the radial wrist side. Most commonly fractured carpal bone from falls on an outstretched hand. Unique distal blood supply makes waist fractures prone to proximal fragment avascular necrosis. Anatomical snuffbox tenderness is characteristic.

## Scaphoid Fractures

Scaphoid fractures: most common carpal fracture (young males, FOOSH). Classification: Herbert: A (incomplete), B (complete: B1 distal waist, B2 proximal waist, B3 proximal pole, B4 distal tubercle, B5 transverse). Vascularity: retrograde from distal radius -> proximal pole at risk for AVN.

## Scapula

Flat triangular bone on the posterior thorax between ribs 2-7. Key features: acromion, coracoid process, glenoid cavity, spine, supraspinous/infraspinous fossae. Stabilized by 17 muscles and serves as rotator cuff attachment. Has 3 borders, 3 angles, and 2 surfaces. Fractures are uncommon, usually from high-energy trauma.

## Scar Management

Measures used to reduce symptoms and abnormal scar formation. Options include silicone products, pressure therapy, massage, corticosteroid injections, or other specialist treatments, depending on the scar and its cause.

## Scarlatina

Scarlet fever, an illness caused by toxin-producing

---

group A Streptococcus and characterized by sore throat, fever, and a fine rough-textured rash.

**Synonyms:**

Scarlet Fever (Scarlatina)

**Scarlet Fever**

A toxin-mediated illness caused by Group A Streptococcus producing erythrogenic toxin. Presents with fever, pharyngitis, and a characteristic diffuse, erythematous, sandpaper-textured rash that blanches with pressure. Circumoral pallor, Pastia lines (linear petechiae in skin folds), and strawberry tongue are classic findings.

**Scarring Alopecia**

Permanent hair loss caused by destruction and fibrosis of the hair follicle. Causes include lichen planopilaris, discoid lupus, central centrifugal cicatricial alopecia, folliculitis decalvans, and severe infection; early diagnosis and biopsy can prevent progression.

**Scatter Correction**

Correction for scattered photons. Dual energy window method.

**Scatter Events**

Photons deflected from original path. Corrected by energy windowing and scatter correction algorithms.

**Scavenging System**

The anesthesia gas scavenging system collects and removes waste anesthetic gases from the operating room environment to protect staff from chronic exposure. Active scavenging uses negative pressure from vacuum source; passive scavenging vents to exhaust through gravity.

**Schatzki Ring**

Thin circumferential mucosal ring located at the squamocolumnar junction of the distal esophagus at the superior margin of a hiatal hernia. The ring is composed of mucosa and submucosa. May be asymptomatic or cause episodic dysphagia particularly to solid food and acute food bolus impaction.

**Synonyms:**

Ring Schatzki (Schatzki Ring) Strictures Esophagus (Schatzki Ring)

**Schedule I**

A United States controlled-substance category for drugs with high misuse potential and no accepted medical use under federal law.

**Schedule II**

A United States controlled-substance category for drugs with accepted medical uses but high misuse potential.

**Schedule III**

A United States controlled-substance category for drugs with lower misuse potential than Schedule II drugs.

**Schedule IV**

A United States controlled-substance category for drugs with accepted medical uses and lower misuse potential than Schedule III drugs.

**Schedule V**

A United States controlled-substance category for drugs with the lowest level of misuse potential among the federal schedules.

**Schilling Test**

A historical test of vitamin B12 absorption, formerly used to investigate pernicious anaemia and intestinal malabsorption. It has largely been replaced by serum vitamin B12, methylmalonic acid, homocysteine, and intrinsic-factor antibody testing.

**Schistocytes**

Fragmented, helmet-shaped, or triangular red blood cells produced by mechanical shearing as erythrocytes pass through obstructed or fibrin-laden microvessels.

**Schistosoma Haematobium**

A parasitic blood fluke that can cause urinary schistosomiasis, including hematuria and chronic injury

---

of the urinary tract.

### **Schistosomiasis**

A parasitic disease caused by *Schistosoma* blood flukes acquired through freshwater exposure, potentially causing intestinal or urinary inflammation, bleeding, liver disease, or chronic organ damage.

#### **Synonyms:**

bilharzia, caused by blood flukes of the genus. Bilharzia (Schistosomiasis)

### **Schizencephaly**

A rare brain malformation characterized by a full-thickness, gray matter-lined cleft extending from the pial surface to the lateral ventricle. Caused by early focal neuronal migration abnormalities, often associated with prenatal vascular disruption or COL4A1 mutations. Closed-lip (Type I): the cleft walls are apposed.

### **Schizoaffective Disorder**

A disorder characterized by an uninterrupted period of illness during which there is a major mood episode concurrent with criterion A of schizophrenia (delusions, hallucinations, disorganized speech, grossly disorganized or catatonic behavior, or negative symptoms).

### **Schizoid Personality Disorder**

A pattern of detachment from social relationships with a restricted range of emotional expression.

#### **Synonyms:**

Personality Disorder, Schizoid

### **Schizophrenia**

Schizophrenia is a chronic psychotic disorder involving delusions, hallucinations, disorganized thought or behavior, negative symptoms, and impaired functioning. delusions, disorganized thinking) and negative symptoms (avolition, alogia, anhedonia, blunted affect), with cognitive impairment and functional decline. Diagnosis: at least two core symptoms for  $\geq 1$  month with continuous signs for  $\geq 6$  months.

### **Schizotypal Personality Disorder**

A pattern of social and interpersonal deficits marked by acute discomfort with and reduced capacity for close relationships, cognitive or perceptual distortions, and eccentricities of behavior.

#### **Synonyms:**

Personality Disorder, Schizotypal

### **Schnitzler Syndrome**

A rare autoinflammatory syndrome characterized by chronic urticarial rash, intermittent fever, bone pain, arthralgia or arthritis, and elevated inflammatory markers, usually with a monoclonal IgM protein and less commonly IgG.

### **School-Based Rehabilitation**

Therapy and other support services provided in a school setting to help a child participate in education and daily school activities.

### **Schwannoma**

A benign peripheral nerve sheath tumor arising from Schwann cells. It presents as a solitary, slow-growing, painless nodule along a peripheral nerve course. It can be moved laterally but not longitudinally along the nerve. Vestibular schwannoma (acoustic neuroma) arises from CN VIII. Diagnosis is by MRI.

#### **Synonyms:**

Neurilemmoma

### **Sciatic Nerve**

Body's largest nerve (L4-S3), formed from the lumbosacral plexus, exiting via the greater sciatic foramen below the piriformis. Descends in the posterior thigh, dividing into tibial and common peroneal nerves at the popliteal fossa. Innervates hamstrings and provides lower leg/foot motor/sensory innervation via its branches.

### **Sciatica**

Sciatica is radiating leg pain or sensory symptoms along a lumbosacral nerve-root distribution, commonly from disk herniation or spinal narrowing. through the buttock and down the posterior thigh to the foot. Most commonly caused by lumbar disc

---

herniation compressing the nerve root (L4-L5 or L5-S1). Other causes: spinal stenosis, spondylolisthesis, piriformis syndrome, and epidural abscess.

**Synonyms:**

Sciatic Neuritis (Sciatica)

**Scimitar Syndrome**

A congenital cardiopulmonary anomaly involving partial or total anomalous pulmonary venous return from the right lung to the inferior vena cava, often with right-lung hypoplasia and dextroposition of the heart. It may cause recurrent respiratory infection, pulmonary hypertension, or heart failure.

**Scintillation**

The emission of light by a material after it absorbs ionizing radiation. Scintillation detectors use this light to measure radiation.

**Scintillation Crystal**

Sodium iodide doped with thallium (NaI:Tl) crystal converts gamma rays to light photons. Coupled to photomultiplier tubes.

**Scissors**

Cutting instruments. Types: Mayo (tissue), Metzenbaum (delicate), suture.

**Scissors (Surgical)**

Cutting instruments used to divide tissue, sutures, dressings, or other materials during medical procedures.

**Synonyms:**

Surgical

**Scissors (Vascular)**

A surgical instrument with two blades used to cut tissue, sutures, dressings, or other materials during vascular procedures.

**Synonyms:**

Vascular

**Sclera**

The sclera is the tough white outer coat of the eye that protects the globe and provides attachment for

eye muscles.

**Scleral Buckling**

A retinal-detachment repair procedure in which a silicone band or buckle is placed around the outside of the eye to support the retinal break and reduce traction.

**Scleritis**

Scleritis is painful inflammation of the sclera, often associated with autoimmune disease and capable of threatening vision.

**Synonyms:**

Inflammation Sclera (Scleritis)

**Scleroderma**

Scleroderma is an autoimmune connective-tissue disease causing skin thickening and variable fibrosis or vascular injury in the gastrointestinal tract, lungs, kidneys, or heart.

**Synonyms:**

Arthritis Scleroderma (Scleroderma) Sclerosis, Systemic

**Scleromyxedema**

A rare, chronic, progressive mucinosis characterised by generalised papular and sclerodermoid thickening of the skin with firm, waxy papules in a "peau d'orange" pattern, most prominently on the face, neck, and hands.

**Sclerosing Sialadenitis**

A chronic fibrosing inflammation of the salivary glands characterized by progressive glandular enlargement and firmness, sometimes associated with IgG4-related disease.

**Sclerosteosis**

A rare inherited sclerosing bone dysplasia characterized by progressive thickening of the skull and long bones, tall stature or syndactyly in some forms, and possible cranial-nerve compression. Hearing loss, facial palsy, headache, and raised intracranial pressure may occur.

---

## Scoliosis

Scoliosis is a three-dimensional sideways curvature and rotation of the spine, which may be idiopathic, congenital, neuromuscular, or degenerative.

### Synonyms:

Spinal Curvature

## Scotoma

A focal area of diminished or absent vision within an otherwise intact visual field, classified by location and morphology.

## Screening

Testing people without symptoms to identify a disease or an increased risk of disease. The appropriate test, age range, interval, and follow-up depend on the condition, individual risk, and current guidance; screening benefits must be balanced against harms.

## Screening (Geriatric)

Detection of disease in asymptomatic elderly. Balance benefits vs. harms, life expectancy, preferences. Examples: bone density, abdominal aortic aneurysm, colorectal cancer (individualized), depression, falls.

### Synonyms:

Geriatric

## Screening Guidelines

Recommendations describing who should be screened for a disease, which test to use, and when to begin or repeat testing.

## Screening Program

An organized public-health service that systematically invites a defined population to undergo testing for an asymptomatic condition, with quality-assured follow-up, diagnosis, treatment, and evaluation of benefits and harms.

## Screening Test

A test applied to people without symptoms or a known diagnosis to identify those at increased risk of a condition. A screening result usually requires a diagnostic or confirmatory evaluation before treat-

ment is initiated.

## Screws

Threaded devices used to hold bone fragments together or attach implants to bone.

## Scrofula

Tuberculous infection of cervical lymph nodes, producing chronic neck swellings that may suppurate or form draining sinuses; nontuberculous mycobacteria can cause a similar presentation.

## Scrotal Calcinosis

The deposition of calcium within the scrotal skin, presenting as multiple, firm, whitish, painless nodules on the scrotum, which may be solitary or numerous and may ulcerate. The exact aetiology is debated and may involve dystrophic calcification of pre-existing epidermal inclusion cysts, dermal cysts, or eccrine duct abnormalities.

## Scrotal Infection

Infection of the scrotal skin or underlying structures, which may cause redness, swelling, warmth, pain, or drainage. Rapidly worsening pain, fever, discoloration, or severe swelling is an emergency because serious soft-tissue infection must be excluded.

## Scrotal Pain

Pain in the scrotum caused by infection, trauma, hernia, fluid collections, varicocele, or testicular torsion. Sudden severe pain, nausea, a high-riding testis, or abnormal testicular position requires immediate assessment for torsion.

## Scrotum

The scrotum is the external skin-and-muscle sac containing the testes and epididymides; its muscles help regulate testicular temperature, and swelling or pain may indicate infection, torsion, hernia, or tumor. spermatic cords. The scrotal wall has multiple layers reflecting the abdominal wall layers.

## Scurvy

Vitamin C deficiency causing impaired collagen

---

formation, with bleeding gums, easy bruising, petechiae, poor wound healing, anemia, bone pain, and fatigue.

### **Seasonal Affective Disorder**

A specifier of recurrent major depressive episodes that occur at a specific time of year, most commonly winter (with remission in spring/summer). Symptoms: hypersomnia, hyperphagia with carbohydrate craving, weight gain, fatigue, and low energy.

### **Sebaceous Gland**

A small gland in the skin that secretes sebum (oil) into hair follicles to lubricate and waterproof the skin and hair.

### **Seborrheic Dermatitis**

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. Presents with erythematous patches with greasy, yellowish scales. Dandruff is a mild form. More common and severe in Parkinson disease, HIV/AIDS, and Down syndrome.

#### **Synonyms:**

Dermatitis, Seborrheic

### **Seborrheic Keratoses**

Common, benign, epidermal skin tumors presenting as waxy, stuck-on, pigmented plaques with a rough, verrucous surface, typically appearing on the trunk and face of middle-aged and older adults. They are the most common benign skin neoplasm and are caused by keratinocyte proliferation.

### **Seborrheic Keratosis**

A benign epidermal tumor appearing as stuck-on, waxy, hyperpigmented plaques with a verrucous surface. They are extremely common in older adults and increase in number with age. Seborrheic keratoses are not premalignant.

#### **Synonyms:**

Keratosis, Seborrheic

### **Seborrhoea**

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. See Seborrheic Dermatitis.

### **Seckel Syndrome**

A rare recessive primordial dwarfism syndrome featuring severe proportionate growth restriction, microcephaly, characteristic facial features, and developmental or intellectual impairment. Skeletal, hematological, and other congenital abnormalities may occur.

### **Second Malignancy**

New cancer after initial cancer treatment. Risk from radiation, chemotherapy.

### **Second Messenger Systems**

Intracellular signaling molecules that relay extracellular signals (first messengers: hormones, neurotransmitters, growth factors) to cellular responses.

### **Second Messengers**

Intracellular signaling molecules generated in response to extracellular signals (first messengers like hormones or neurotransmitters). cAMP (cyclic adenosine monophosphate): produced from ATP by adenylyl cyclase, activated by Gs-protein coupled receptors, activates protein kinase A (PKA); degraded by phosphodiesterase.

### **Second Opinion**

An independent medical assessment by another qualified clinician to help confirm or clarify a diagnosis, prognosis, or treatment plan.

### **Second Stage Of Labor**

From full cervical dilatation (10 cm) to delivery of the baby. The mother feels the urge to push as the presenting part descends. Pushing: closed-glottis (Valsalva) or open-glottis. Duration: up to 3 hours in nulliparas with regional anesthesia (2 hours without), and 2 hours in multiparas (1 hour without).

---

## Second Trimester

The period from 13 to 27 weeks gestational age. Fetal growth accelerates, mother begins to feel quickening (fetal movement) between 16-20 weeks. Anatomy ultrasound at 18-22 weeks screens for structural anomalies. Maternal serum screening offered. Nausea typically resolves.

## Second-Degree AV Block

Intermittent failure of AV conduction. Mobitz Type I (Wenckebach): progressive PR prolongation then dropped QRS; usually benign (AV nodal, narrow QRS). Mobitz Type II: constant PR interval with sudden dropped QRS; more serious (infranodal, wide QRS), risk of progression to complete heart block and Stokes-Adams attacks.

## Second-Degree Burn

Partial-thickness burn involving the epidermis and dermis: superficial partial-thickness (blisters, moist, painful, pink) vs. deep partial-thickness (blanching, painful, may have thrombosed capillaries). Causes: thermal (scalds, flames), chemical, electrical.

## Second-Hand Smoke

Smoke inhaled from burning tobacco products or exhaled by a person who is smoking. It contains toxic substances and increases health risks in exposed people.

## Secondary Attack Rate

The proportion of susceptible contacts who develop infection after exposure to a primary case within a defined period. It helps estimate transmissibility in households, schools, healthcare settings, and other close-contact groups.

## Secondary Hyperparathyroidism

Compensatory PTH increase in CKD from decreased phosphate excretion, low calcitriol, and hypocalcemia. Leads to renal osteodystrophy and vascular calcification. Managed with dietary phosphorus restriction, phosphate binders, active vitamin D, and calcimimetics. Refractory cases may require parathyroidectomy.

## Secondary Immune Response

The rapid, enhanced immune response on re-exposure to an antigen, mediated by memory B cells and memory T cells generated during the primary response. Features: shorter lag phase, higher and faster antibody titers (predominantly high-affinity IgG), and more effective cell-mediated responses.

## Secondary Immunodeficiency

Reduced immune function caused by an acquired condition or exposure rather than a primary genetic disorder. Causes include HIV infection, cancer, malnutrition, medicines, and chronic disease; the manifestations depend on which immune functions are impaired.

## Secondary Prevention

Early detection and treatment. Examples: screening (mammography, colonoscopy, blood pressure), self-examination.

## Secondary Syphilis

The systemic dissemination stage of *Treponema pallidum* infection, occurring weeks to months after the primary chancre, characterised by a generalised maculopapular rash (including the palms and soles), mucous patches, condylomata lata, lymphadenopathy, and systemic symptoms such as fever and malaise.

## Secondary Tumor

A tumor formed when cancer cells spread from the original site to another part of the body.

## Secretin

A peptide hormone produced by S-cells in the duodenal and jejunal mucosa in response to acidic chyme (pH less than 4.5) entering the duodenum from the stomach.

## Secretion

Active movement of a substance from cells into a body fluid, lumen, or external environment. In toxicokinetics, renal tubular or biliary secretion can contribute to elimination of a toxin or metabolite.

---

## Secretory Diarrhea

Diarrhea caused by active secretion or reduced absorption of electrolytes and water by the intestine. It persists despite fasting and may result from infections, medications, bile-acid disorders, endocrine tumors, or inflammatory disease.

## Sedation Dentistry

Pharmacological techniques for anxiety management: nitrous oxide (laughing gas), oral sedation, IV sedation, general anesthesia. Indications: dental phobia, special needs, prolonged procedures. Monitoring required for deeper sedation.

## Sedation Levels

A continuum ranging from minimal sedation, in which normal responses to verbal commands are preserved, to moderate or deep sedation, in which responses and airway or breathing support may be reduced. The level can change and requires appropriate monitoring.

## Sedative

A medication that reduces central nervous system activity, producing calming effects, drowsiness, and sleep at higher doses. Sedatives are used for anxiety, procedural sedation, insomnia, and as adjuncts in anesthesia.

## Sedative-Hypnotic

CNS depressants. Benzodiazepines, barbiturates, Z-drugs. Overdose: respiratory depression, coma. Treatment: supportive, flumazenil (benzodiazepines only), airway management.

## Segmental Pressures

Blood pressure measurements at different leg levels. Localizes level of obstruction.

## Segmentation

A pattern of intestinal motility involving localized, rhythmic contractions of circular muscle that segment the intestinal contents, mixing them with digestive secretions and increasing contact with the absorptive mucosal surface. Unlike peristalsis, segmentation does not propel contents distally.

## Seizure

A transient occurrence of signs and/or symptoms due to abnormal, excessive, or synchronous neuronal activity in the brain. Provoked seizures have an identifiable acute cause (fever, electrolyte disturbance, drug toxicity, withdrawal). Unprovoked seizures occur without an acute trigger.

## Selective Estrogen Receptor Modulator

A class of medications that bind to estrogen receptors (ER-alpha and ER-beta) with tissue-specific agonist or antagonist activity, depending on the target tissue and differential co-regulator recruitment.

## Selective Mutism

Consistent failure to speak in specific social situations where speaking is expected despite speaking in other situations. The disturbance interferes with educational or occupational achievement or social communication. Must last for at least one month and is not attributable to lack of knowledge of or comfort with the spoken language.

## Selenium

Trace mineral, component of antioxidant enzymes. Deficiency: Keshan disease (cardiomyopathy), Kashin-Beck disease (osteoarthropathy). Sources: Brazil nuts, seafood, meat.

## Selenium-75

Calibration source. Half-life 119 days. Used for uniformity correction.

## Self-Efficacy

Patient belief in ability to manage condition. Influences adherence, outcomes.

## Self-Experimentation

Research in which an investigator deliberately uses an intervention or procedure on themselves. It requires careful attention to consent, safety, and scientific validity.

## Self-Harm

Intentional self-inflicted injury without suicidal in-

---

tent, also termed non-suicidal self-injury; common methods include cutting, burning, and self-hitting. Prevalent in adolescents and in borderline personality disorder, depression, eating disorders, and trauma, serving affect regulation or self-punishment.

### **Self-Management**

Actions a person takes to monitor and manage a health condition, including treatment use, symptom monitoring, and lifestyle measures.

### **Semen**

The fluid ejaculated from the male reproductive tract, containing sperm (produced in the testes) suspended in seminal plasma (produced by the seminal vesicles, prostate, and bulbourethral glands). Semen provides nutrients (fructose, amino acids), protective agents (zinc, antioxidants), and a medium for sperm transport.

### **Semen Analysis**

Laboratory assessment of ejaculate volume, sperm concentration, total count, motility, morphology, vitality, and other characteristics. It is a key initial test in male-factor infertility and should usually be repeated because results vary biologically.

### **Semicircular Canals**

Three fluid-filled (endolymph) loops in each inner ear, oriented approximately orthogonally to detect angular (rotational) acceleration in three planes: horizontal (lateral), anterior (superior), and posterior. Each has an ampulla with a crista containing hair cells embedded in a gelatinous cupula.

### **Seminal Vesicle**

One of a paired set of male accessory reproductive glands behind the urinary bladder. Its fructose-rich secretion contributes substantially to semen and joins the vas deferens through the ejaculatory duct.

### **Sensorineural Hearing Loss**

Hearing loss from pathology of the cochlea or auditory (eighth cranial) nerve, characterized on pure-tone audiometry by elevated bone conduction thresholds and no air-bone gap.

### **Speech Audiometry**

Hearing testing that measures detection or recognition of speech at different loudness levels. It commonly includes speech reception threshold and word-recognition testing, complementing pure-tone audiometry.

#### **Synonyms:**

Speech testing; speech audiometric testing.

### **Sensorium**

The state or level of consciousness and awareness of one's surroundings.

### **Sensory Level**

A sharply demarcated horizontal boundary below which sensation is altered on the trunk or limbs. A sensory level strongly suggests a spinal-cord lesion, although its localization requires correlation with motor, reflex, and autonomic findings.

### **Sensory Nerves**

Nerves that transmit sensory information from peripheral receptors to the central nervous system. Sensory (afferent) neurons have their cell bodies in the dorsal root ganglia (spinal nerves) or cranial nerve ganglia (cranial nerves).

### **Sentinel Event**

Unexpected occurrence involving death or serious physical/psychological injury. Requires root cause analysis.

### **Sentinel Injury**

A minor but potentially significant injury in a non-mobile infant, such as unexplained bruising, oral injury, or a fracture, that may precede more severe abuse. It warrants careful history, complete examination, safeguarding assessment, and documentation.

### **Sentinel Lymph Node**

First lymph node draining tumor site. Biopsy assesses nodal spread.

---

### Sentinel Lymph-Node Biopsy

Surgical removal and pathologic examination of the first draining lymph node or nodes from a primary skin cancer. It is used for selected melanomas and other tumors to assess regional metastatic risk and guide staging.

### Sentinel Surveillance

Ongoing collection of health data from selected reporting sites, providers, or populations chosen to represent trends rather than enumerate every event. It can provide early warning and monitor changes in disease activity.

### Separation Anxiety Disorder

Developmentally inappropriate and excessive fear or anxiety concerning separation from attachment figures. The individual may have recurrent excessive distress when anticipating or experiencing separation from home or major attachment figures.

### Separation Of The Iris

Disinsertion or dialysis of the iris root from its attachment at the ciliary body, typically caused by blunt ocular trauma. It appears as a peripheral iridodialysis visible on slit-lamp examination and may cause monocular double vision, glare, or secondary glaucoma if extensive.

### Sepsis Syndrome

The spectrum of the host's dysregulated response to infection: sepsis (infection + organ dysfunction, SOFA increase  $\geq 2$ ), septic shock (sepsis + hypotension requiring vasopressors with lactate  $>2$  mmol/L despite adequate fluid), and severe organ dysfunction/multi-organ failure.

### Septal Hematoma

Accumulation of blood between the perichondrium and the septal cartilage of the nose, typically following nasal trauma (nasal fracture). Presents with nasal obstruction, pain, and a bluish, boggy swelling of the nasal septum.

### Septic Embolism

Septic embolism occurs when infected material,

typically thrombi containing bacteria, embolizes through the bloodstream to distant sites, causing metastatic infection. The most common source is infective endocarditis, where infected vegetations on heart valves break off and lodge in peripheral vessels.

### Septicemia

Septicemia is an older term for serious bloodstream infection; modern assessment distinguishes bacteremia from sepsis, which is life-threatening organ dysfunction caused by infection.

### Septo-Optic Dysplasia

A congenital disorder characterized by variable combinations of optic-nerve hypoplasia, midline brain abnormalities, and pituitary hormone deficiencies. It may cause visual impairment, nystagmus, developmental differences, seizures, and growth or endocrine problems.

### Septoplasty

Septoplasty is surgery to straighten or reshape the nasal septum to improve airflow or address structural obstruction.

### Sequential Therapy

Treatments given in sequence. Used when combination not suitable.

### Serodiagnostic

Relating to diagnosis by detecting antibodies or other markers in blood serum.

### Serology

The laboratory evaluation of serum for antibodies, antigens, or other immune markers. Results may indicate current infection, previous exposure, vaccination, autoimmune reactivity, or passive antibody transfer and must be interpreted with timing and clinical context.

### Seronegative Arthritis

Arthritis with negative rheumatoid factor and anti-CCP. Includes spondyloarthropathies, psoriatic

---

arthritis, reactive arthritis.

### Serotonin Syndrome

A potentially life-threatening condition caused by excessive serotonergic activity in the central and peripheral nervous systems, typically resulting from drug interactions or overdose involving serotonergic medications.

### Serotonin-Norepinephrine Reuptake Inhibitors

Antidepressants that block the reuptake of both serotonin and norepinephrine. They include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran. SNRIs are used for major depressive disorder, generalized anxiety disorder, diabetic neuropathy, fibromyalgia, and chronic pain.

### Serotonin-Norepinephrine-Dopamine Reuptake Inhibitors

A class of antidepressants that inhibit reuptake of serotonin, norepinephrine, and dopamine. The primary agent is bupropion, which also acts as a norepinephrine-dopamine reuptake inhibitor. It is used for depression, smoking cessation, and as augmentation. It lacks sexual side effects and weight gain associated with SSRIs.

### Serpentine Supravenous Hyperpigmentation

A dermatological finding characterized by dark, wavy, serpiginous hyperpigmentation along the course of superficial veins, most commonly on the upper chest and neck. Associated with venous stasis, thrombophlebitis, and certain malignancies. The pigmentation results from hemosiderin deposition in the perivenous dermis.

### Serrated Pathway

Alternative molecular pathway to colorectal carcinogenesis accounting for fifteen to thirty percent of cases. It involves serrated polyps as precursors including sessile serrated lesions with dysplasia. Molecular features include CpG island methylator phenotype, BRAF mutations, and microsatellite instability from MLH1 silencing.

### Serratus Anterior Muscle

Fan-shaped muscle from ribs 1-8/9 to the medial scapular border. Innervated by long thoracic nerve (C5-C7). Protracts scapula, upwardly rotates glenoid for overhead elevation, stabilizes against thorax. Long thoracic nerve injury causes medial scapular winging, especially visible during wall push-ups. Commonly injured in breast surgery.

### Sertoli-Cell Tumor

A sex-cord stromal tumor that may produce androgens or estrogens and can cause endocrine manifestations.

### Serum Concentration

The concentration of a substance measured in the liquid component of clotted blood. Interpretation depends on sampling time, exposure history, distribution, metabolism, elimination, and the relationship between concentration and toxicity.

### Serum Osmolal Gap

The difference between measured serum osmolality and calculated osmolality. An increased gap suggests unmeasured osmoles, including toxic alcohols, but interpretation must consider timing, renal function, lactate, ketones, and laboratory variation.

### Serum Protein Electrophoresis

Separation of serum proteins by electrophoresis into 5 fractions: albumin, alpha-1, alpha-2, beta, and gamma. Monoclonal gammopathy: M-spike in gamma region (multiple myeloma, MGUS, Waldenstrom macroglobulinemia). Immunofixation: identifies heavy chain (IgG, IgA, IgM, IgD, IgE) and light chain (kappa, lambda) isotype.

### Sever Disease

Calcaneal apophysitis in children/adolescents. Heel pain, worse with activity. Treatment: rest, heel cups, stretching.

### Severe Acute Respiratory Syndrome

A severe respiratory illness caused by SARS coronavirus, characterized by fever, dry cough, dyspnea, and viral pneumonia that may progress to respira-

---

tory failure.

### Severe Combined Immunodeficiency

Severe combined immunodeficiency (SCID) represents a group of genetic disorders characterized by profoundly defective T cell development and function, with variable B and NK cell involvement, resulting in severe susceptibility to life-threatening infections in infancy.

### Sevoflurane

A volatile inhaled anesthetic with relatively low blood-gas solubility, permitting rapid changes in anesthetic depth and recovery. It can cause dose-dependent cardiovascular and respiratory depression and is a recognized trigger of malignant hyperthermia in susceptible patients.

### Sexual Assault

A broad legal category of any non-consensual sexual contact or penetration, encompassing rape, indecent assault, and drug-facilitated assault. Examination documents general and anogenital injuries, collects biological and trace samples, and screens for drug-facilitated assault by extended-window testing.

#### Synonyms:

Rape (Sexual Assault)

### Sexual Intercourse (Coitus)

The insertion of a penis into a partner's body for sexual pleasure, reproduction, or both. Most commonly vaginal intercourse (penile-vaginal penetration) but may also include anal intercourse. Sexual intercourse is a key component of human pair bonding and reproduction.

#### Synonyms:

Coitus

### Sexual Masochism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the act of being humiliated, beaten, bound, or otherwise made to suffer, lasting  $\geq 6$  months and causing distress or impairment or involving acting on these urges.

### Sexual Rehabilitation

Address sexual function after injury, illness. Counseling, devices, medications.

### Sexual Sadism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the physical or psychological suffering of another person, lasting  $\geq 6$  months and causing distress or impairment or involving acting on these urges with a nonconsenting person.

### Sexually Transmitted Infection

STI: infection transmitted via sexual contact. Examples: syphilis, gonorrhea, chlamydia, HIV.

### SGLT2 Inhibitor

A drug that reduces sodium-glucose cotransport in the proximal renal tubule, increasing urinary glucose and sodium excretion.

### Shadowing Artifact

Ultrasound artifact from attenuating structures. Enhanced by harmonic imaging.

### Shaken Baby Syndrome

A form of abusive head trauma caused by violent shaking, typically in infants under 1 year. The triad: subdural hemorrhage, retinal hemorrhages, and encephalopathy. May present with irritability, lethargy, vomiting, seizures, and apnea. CT shows subdural hematoma; MRI shows diffuse axonal injury.

### Shared Decision-Making

A collaborative process in which clinicians and patients combine best available evidence with patient values, preferences, goals, and circumstances to choose among reasonable options.

### Sharp Force Trauma

Injury produced by an edged or pointed instrument that cuts or penetrates the skin, divided into incised wounds (longer than deep, clean margins) and stab wounds (deeper than wide). Wound length, depth,

---

angle, hesitation marks, and defense injuries infer weapon type and manner.

### **Sharps Container**

Puncture-resistant container for used needles and sharp instruments. Red, labeled biohazard.

### **Sharps Injury**

A percutaneous or mucocutaneous injury caused by a needle or other sharp instrument that may expose a person to blood or body fluids. Immediate wound care, incident reporting, risk assessment, and pathogen-specific post-exposure management are required.

### **Shave Biopsy**

Removal of a raised skin lesion by horizontal slicing with a scalpel at the level of the dermis; used for exophytic lesions such as seborrheic keratoses and superficial basal cell carcinomas.

### **Sheehan Syndrome**

Postpartum pituitary necrosis resulting from severe hemorrhage and hypotension during delivery. The pituitary gland is enlarged during pregnancy and particularly vulnerable to ischemic injury from blood loss. Presentation varies from fatigue and failure to lactate to panhypopituitarism. Growth hormone and prolactin deficiency occur first.

### **Sheehan Syndrome (Postpartum Pituitary Necrosis)**

Ischemic necrosis of the anterior pituitary gland due to severe postpartum hemorrhage (PPH) and hypotension. The pituitary enlarges during pregnancy and is vulnerable to ischemia from hypotensive episodes.

#### **Synonyms:**

Postpartum Pituitary Necrosis

### **Shielding**

Lead, tungsten, acrylic shielding for radiation protection.

### **Shigellosis**

Shigellosis is intestinal infection caused by *Shigella* bacteria, producing diarrhea that may be bloody, fever, cramps, and dehydration.

### **Shirodkar Cerclage**

A transvaginal cervical cerclage technique that involves dissection of the bladder and rectum to place the suture (Mersilene tape) as high as possible at the level of the internal os. Technically more difficult than McDonald cerclage with higher risk of hemorrhage and bladder injury.

### **Shivering**

Involuntary, rhythmic skeletal muscle contraction generating heat in response to cold exposure or fever, a key thermoregulatory response under hypothalamic (preoptic area) control. Shivering can increase heat production 3-5 fold.

### **Shock Wave Lithotripsy**

Non-invasive procedure using extracorporeal shock waves to fragment renal and ureteral stones. The patient is positioned over a water cushion coupling the shock wave generator to the body. Shock waves are focused on the stone under fluoroscopic or ultrasound guidance.

### **Shone Complex**

A group of congenital left-sided obstructive heart lesions, classically including supravulvular mitral ring, parachute mitral valve, subaortic stenosis, and coarctation of the aorta. The combination and severity vary and may lead to heart failure or systemic outflow obstruction.

### **Short Bowel Syndrome**

Clinical condition resulting from surgical resection or functional loss of a significant portion of the small intestine leading to inadequate absorption of nutrients.

### **Shortness Of Breath**

An uncomfortable awareness of difficult or insufficient breathing. See Dyspnea.

---

## Shoulder Dislocation

Complete displacement of the upper arm bone from the shoulder socket, usually caused by a fall, collision, or forceful twisting. It causes severe pain, deformity, and inability to move the arm; urgent reduction and assessment for associated fractures or nerve and blood-vessel injury are required.

## Shoulder Dystocia

An obstetric emergency where the fetal head delivers but the anterior shoulder is impacted behind the maternal symphysis pubis. Defined as head-to-body delivery time exceeding 60 seconds or need for ancillary maneuvers. Risk factors include macrosomia, diabetes, prior shoulder dystocia, and operative vaginal delivery.

## Shoulder Impingement

Pain associated with movement of the shoulder, often involving the rotator-cuff tendons or subacromial tissues. Symptoms include pain with overhead activity and sometimes weakness; assessment and treatment are individualized and may include exercise-based rehabilitation.

## Shoulder Instability

Excessive or recurrent movement of the shoulder joint caused by injury, laxity, or altered joint anatomy. Associated lesions may include a Bankart tear, Hill-Sachs lesion, or injury to the joint capsule or ligaments.

## Shoulder Pain

Pain in or around the shoulder caused by injury, tendon or bursa disorders, arthritis, nerve disease, or referred pain. Sudden weakness, deformity, chest symptoms, fever, or pain after major trauma requires prompt evaluation.

## Shunt (Vascular)

A surgically created or implanted pathway that redirects blood or another fluid from one vessel or body space to another.

### Synonyms:

Vascular

## Shwachman Syndrome

An inherited multisystem disorder usually involving exocrine pancreatic insufficiency, bone-marrow dysfunction, and skeletal abnormalities. Children may have steatorrhea, poor growth, recurrent infections, neutropenia, anemia, or increased risk of myeloid malignancy.

## SIADH

Syndrome of Inappropriate Antidiuretic Hormone secretion characterized by hyponatremia (dilutional) with inappropriately concentrated urine ( $>100$  mOsm/kg) and elevated urine sodium ( $>40$  mEq/L). Euvolemic hyponatremia.

## SIADH (Syndrome Of Inappropriate Antidiuretic Hormone Secretion)

Excessive vasopressin activity causing impaired free-water excretion, euvolemic hyponatremia, and inappropriately concentrated urine after exclusion of other causes. Treatment depends on severity and cause and may include fluid restriction or carefully monitored hypertonic saline for severe symptomatic cases.

### Synonyms:

Syndrome of Inappropriate Antidiuretic Hormone Secretion

## Sialadenitis

Inflammation of salivary gland. Acute (bacterial) or chronic (recurrent). Treatment: antibiotics, hydration, gland massage, surgery if chronic.

## Sialography

Contrast imaging of salivary ducts. Evaluates obstruction, stricture, tumors. Rarely performed now.

## Sialolithiasis

Formation of a stone in a salivary gland or its duct, most often the submandibular gland. It may cause recurrent swelling and pain, especially during meals, and can lead to infection or obstruction.

## Sialorrhea

Excessive salivation. Neurological causes, medica-

---

tions, dental causes. Treatment: hydration, glycopyrrolate, botulinum toxin, surgery.

### Sialuria

A rare inherited disorder of sialic-acid metabolism caused by abnormal regulation of the GNE enzyme. Excess free sialic acid accumulates in cells and urine and may cause developmental delay, coarse facial features, hepatosplenomegaly, and variable intellectual disability.

### Sicca Syndrome

Dry eyes and dry mouth due to decreased tear and saliva production. Primary: Sjogren syndrome. Secondary: associated with RA, SLE, scleroderma, graft-versus-host disease, hepatitis C, sarcoidosis, HIV, medications (anticholinergics, antidepressants). Diagnosis: Schirmer test (<5 mm/5 min), rose bengal staining, salivary gland biopsy.

### Sick Sinus Syndrome

Sinus node dysfunction causing a spectrum of arrhythmias: sinus bradycardia, sinus arrest, sinoatrial block, and tachycardia-bradycardia syndrome. Most common in elderly patients. Presents with syncope, fatigue, palpitations, and exercise intolerance. Diagnosis: ECG, Holter monitor (pauses >3 seconds).

#### Synonyms:

Bradycardia-Tachycardia Syndrome

### Sickle Cell Anemia

The most severe form of sickle cell disease (HbSS), causing chronic hemolytic anemia and vaso-occlusive crises. Features: jaundice, splenomegaly (infancy), pain crises, acute chest syndrome, stroke, and increased infection risk from functional asplenia. Diagnosis: hemoglobin electrophoresis showing HbS.

### Sickle Cell Crisis

An acute clinical complication of sickle cell disease, most commonly a vaso-occlusive episode producing ischemic pain. Other acute crises include acute chest syndrome, splenic or hepatic sequestration, and aplastic crisis; treatment depends on the specific complication and severity.

### Sickle Cell Dactylitis

Painful swelling of the hands or feet caused by blockage of small blood vessels during a sickle-cell episode, especially in infants and young children. It may be an early sign of sickle-cell disease and requires appropriate clinical evaluation.

### Sickle Cell Disease

Autosomal recessive hemoglobinopathy (HbS). Glutamic acid → valine at position 6 of beta-globin. Homozygous (HbSS) most severe. Sickling under hypoxia causes vaso-occlusion, hemolysis. Symptoms: pain crises, acute chest syndrome, stroke, splenic sequestration, aplastic crisis (parvovirus B19).

### Sickle Cell Trait

An inherited carrier state in which a person has one hemoglobin S allele and one normal beta-globin allele, usually producing both hemoglobin A and hemoglobin S. Most people are asymptomatic, but complications can occur in severe physiologic conditions.

### Side Effect

An unintended pharmacological effect of a drug occurring at therapeutic doses, usually predictable from the drug's mechanism of action (a Type A reaction).

### Sievert (Sv)

The SI unit used for equivalent and effective dose, incorporating radiation type and, for effective dose, tissue sensitivity. It is used to estimate stochastic radiation risk rather than simply physical energy deposition.

#### Synonyms:

Sv

### Sigmoid Colon

S-shaped segment from descending colon to rectum in the left iliac fossa, approximately 40-50 cm, with complete mesentery (intraperitoneal, mobile). Most common diverticular disease site from narrow lumen and high pressure. Common volvulus site, particularly in elderly/institutionalized patients. Second most common colorectal cancer site.

---

## Sigmoid Volvulus

Axial twisting of the sigmoid colon around its mesentery, the most common cause of colonic volvulus, typically occurring in elderly, institutionalized, or neuropsychiatric patients with chronic constipation and a redundant sigmoid. Presents with acute large bowel obstruction, abdominal distension, and absent bowel sounds.

## Sign

Objective evidence of disease. Examples: rash, murmur, edema. Observed by examiner.

## Signal Transduction

The process by which an extracellular signal (hormone, neurotransmitter, growth factor, drug) binding to a cell-surface or intracellular receptor is converted into a specific intracellular response.

## Signal-To-Noise Ratio

Ratio of true counts to statistical noise. Improved by longer acquisition, higher activity.

## Signet Ring Cell Carcinoma

A poorly differentiated adenocarcinoma in which intracellular mucin displaces the nucleus to the periphery, most often of the stomach or colon; associated with an aggressive course and diffuse growth pattern.

## Silicone Oil Hyperoleon

Emulsification of silicone oil tamponade used in vitreoretinal surgery, where the oil breaks into tiny droplets that migrate into the anterior chamber or trabecular meshwork. It can cause elevated intraocular pressure, band keratopathy, and chronic inflammation requiring oil removal and anterior chamber washout.

## Silver Diamine Fluoride

Liquid that arrests caries and stains cavity black. Used in young children, special needs patients.

## Sinding-Larsen-Johansson Syndrome

Traction apophysitis of inferior patellar pole in ado-

lescents. Similar to Osgood-Schlatter but at knee. Treatment: rest, activity modification.

## Single Nucleotide Polymorphism

Single base pair variation occurring in >1% of population. Most common genetic variation. Used in GWAS, forensics, pharmacogenetics.

## Single Photon Emission Computed Tomography

Nuclear medicine imaging using gamma-emitting isotopes (technetium-99m most common). Rotating gamma camera acquires images. Applications: myocardial perfusion, bone scans, thyroid imaging, renal scans, brain perfusion. Lower resolution than PET but more widely available and cost-effective.

## Single Ventricle

A group of congenital heart defects where one functional ventricle supports both the systemic and pulmonary circulations. Includes tricuspid atresia, mitral atresia, double inlet left ventricle, hypoplastic left heart syndrome, and unbalanced AV canal.

## Single-Dose Toxicity

Harm caused by one exposure to a substance or medicine, assessed according to dose, route, timing, and the exposed person's characteristics.

## Sinus Lift

Procedure to increase bone height in posterior maxilla. Subperiosteal or transalveolar approach. Graft material placed.

## Sinus Pain

Pressure or pain around the forehead, cheeks, nose, or eyes caused by sinus inflammation, infection, migraine, or other conditions. Severe headache, eye swelling, vision change, high fever, or neurologic symptoms requires urgent assessment.

## Sinus Rhomboidalis

A diamond-shaped depression in the floor of the fourth ventricle of the brain.

---

## Sinuses

Air-filled cavities within the skull bones lined by respiratory mucosa, connected to the nasal cavity via ostia.

## Sinusitis And Sinus Problems

Inflammation or infection of the paranasal sinuses that may cause nasal congestion, discharge, facial pressure, headache, or reduced smell. Symptoms may also arise from other nasal or facial conditions and require assessment when persistent or severe.

## Sinusoidal Fetal Heart Rate Pattern

A rare, ominous FHR pattern characterized by a smooth, sine-wave-like undulation with a fixed frequency (2-5 cycles/minute) and absent variability. Strongly associated with severe fetal anemia (Rh isoimmunization, fetomaternal hemorrhage, parvovirus B19), fetal hypoxia, and fetal acidosis.

## Sirenomelia

A rare congenital malformation in which the lower limbs are partially or completely fused. It is usually associated with severe abnormalities of the genitourinary, gastrointestinal, vascular, and spinal systems and is often fatal in the neonatal period.

## Sister Mary Joseph's Nodule

A firm, hard nodule in the umbilicus resulting from metastatic malignancy, most commonly from intra-abdominal or pelvic cancers including gastric, ovarian, and colorectal carcinoma. It indicates advanced, disseminated disease with a poor prognosis. Diagnosis is by fine needle aspiration biopsy.

## Sitosterolemia

An autosomal-recessive disorder of plant-sterol transport caused by ABCG5 or ABCG8 variants. It can produce premature atherosclerosis, xanthomas, hemolytic anemia, macrothrombocytopenia, and elevated plasma plant sterols.

## Situs Inversus

A congenital condition in which the thoracic and abdominal organs are reversed or mirrored from their normal positions. Complete situs inversus

(situs inversus totalis) involves all organs.

## Situs Inversus Totalis

A congenital condition in which the major visceral organs are mirrored from their normal positions, with the liver on the left, heart on the right, and other viscera similarly reversed.

## Sjogren Syndrome

Primary Sjogren syndrome (pSS) is a chronic autoimmune exocrinopathy characterized by lymphocytic infiltration of lacrimal and salivary glands causing dry eyes (keratoconjunctivitis sicca) and dry mouth (xerostomia), with female predominance (9:1) and peak onset 40-60. Secondary SS occurs with RA, SLE, SSc.

## SjöGren Syndrome

A systemic autoimmune disease characterized by lymphocytic destruction and dysfunction of lacrimal and salivary glands, producing dry eyes and dry mouth. It may involve multiple organs and increases the risk of salivary-gland lymphoma.

## Skeletal Muscle Relaxant

A medication that reduces muscle spasm, spasticity, and associated pain.

## Skeletal Survey

A series of radiographs obtained when child abuse is suspected. Includes AP and lateral views of the skull, chest (including oblique views), abdomen, spine, and bilateral upper and lower extremities. Identifies fractures of varying ages, which is highly suggestive of non-accidental trauma.

## Skeletonization

Final stage of postmortem decomposition where soft tissues, organs, and skin have completely decayed or been scavenged, leaving only clean osseous skeletal remains.

## Skilled Nursing Facility

Inpatient facility providing skilled nursing and therapy. For recovery after hospitalization.

---

## Skin Absorption

Movement of a substance through the skin into underlying tissues or the bloodstream. Absorption depends on the substance, skin condition, contact time, and exposed area.

## Skin Aging

Skin aging has intrinsic (chronological) and extrinsic (photoaging) components. Photoaging causes wrinkle formation, telangiectasias, lentigines, leather-like texture, and actinic keratoses. Intrinsic aging causes thinning, wrinkling, and delayed wound healing. Prevention includes sun protection (broad-spectrum SPF 30 or greater daily).

## Skin Aging And Appearance

Skin aging is a complex biological process influenced by both intrinsic factors, such as genetics and natural aging, and extrinsic factors, particularly ultraviolet radiation exposure.

## Skin Allergies And Contact Dermatitis

Inflammatory skin reactions triggered by exposure to allergens or irritants that come into direct contact with the skin.

## Skin Allergy Testing

Skin allergy testing includes prick testing (immediate hypersensitivity, IgE-mediated) and intradermal testing (more sensitive, used for drug and venom allergy). Prick testing introduces allergen extract into the epidermis; wheal and flare reaction at 15 minutes indicates sensitization. Intradermal testing injects dilute allergen into the dermis.

## Skin And Aging

Skin aging involves intrinsic and extrinsic changes. Intrinsic aging causes thinning, wrinkling, and fragility. Extrinsic (photo)aging causes wrinkles, telangiectasias, lentigines, and actinic keratoses. Collagen loss, elastin degradation, and decreased cell turnover contribute to aging skin.

## Skin And Environment

Environmental factors significantly affect skin health. Pollution causes oxidative stress, inflam-

mation, and accelerated aging. Particulate matter penetrates skin, generating free radicals. Blue light from screens causes hyperpigmentation, particularly in darker skin tones. Indoor heating and air conditioning cause dryness.

## Skin Appendages

Skin structures include hair follicles, sebaceous glands, eccrine sweat glands, and apocrine sweat glands. Hair follicles cycle through anagen (growth), catagen (transition), and telogen (resting) phases. Sebaceous glands produce sebum, an oily substance lubricating skin and hair.

## Skin Barrier Function

The skin barrier prevents water loss and protects against environmental insults. The stratum corneum acts as a physical barrier, while the acid mantle (pH 4 to 6) provides chemical defense. Lipids (ceramides, cholesterol, free fatty acids) in the intercellular space form a waterproof barrier.

## Skin Biopsy Methods

Skin biopsy methods vary by lesion characteristics. Punch biopsy (2 to 6 mm circular blade) provides full-thickness specimen for most diagnoses. Shave biopsy (razor or scalpel) removes superficial lesions; deep shave (saucerization) includes subcutaneous fat for suspected melanoma.

## Skin Biopsy Techniques

Skin biopsy is selected according to the suspected diagnosis and lesion depth. Punch biopsy samples full-thickness skin; shave biopsy samples superficial lesions; excisional biopsy removes an entire small lesion; and incisional biopsy samples part of a large lesion.

## Skin Cancer

Most common cancer. Types: basal cell, squamous cell, melanoma. Prevention: sun protection. Early detection critical.

### Synonyms:

Cancer, Skin

---

## Skin Cancer Epidemiology

Skin cancers are common and include basal-cell carcinoma, squamous-cell carcinoma, and melanoma. Incidence and mortality vary by tumor type, geography, skin phenotype, ultraviolet exposure, immune status, and access to diagnosis and treatment.

## Skin Cancer Prevention

Prevention focuses on reducing ultraviolet exposure through shade, protective clothing, hats, sunglasses, and appropriately used broad-spectrum sunscreen. Avoiding tanning beds also reduces ultraviolet exposure.

## Skin Cancer Screening

Skin cancer screening uses the ABCDE criteria for melanoma, the ugly duckling sign, and total body skin examination. Dermoscopy (dermatoscopy) magnifies skin lesions revealing structures invisible to the naked eye, improving diagnostic accuracy. Skin self-examination teaches patients to monitor moles for changes.

## Skin Cancer Staging

Skin cancer staging guides treatment and prognosis. Melanoma: Breslow thickness (most important prognostic factor), ulceration, mitotic rate, sentinel lymph node status (AJCC 8th edition).

## Skin Cancer Surgery

Skin cancer surgical techniques maximize cure while minimizing morbidity. Wide local excision with appropriate margins (BCC: 4 mm, SCC: 4 to 6 mm, melanoma: based on Breslow thickness). Mohs micrographic surgery provides 99 percent cure rate for BCC and 97 percent for SCC with tissue preservation.

## Skin Flaps

Skin flaps transfer tissue with its blood supply. Rotation flaps rotate adjacent tissue into defect. Advancement flaps slide tissue forward. Transposition flaps move tissue across intervening skin. Random pattern flaps rely on dermal plexus; axial pattern flaps have named vascular pedicle.

## Skin Graft

Transfer of skin from a donor site to a recipient site to cover a wound. Split-thickness skin graft (STSG): epidermis + partial dermis (0.008-0.018 inches), harvested with dermatome, donor site heals spontaneously (2-3 weeks). Full-thickness skin graft (FTSG): epidermis + full dermis, donor site requires closure, better cosmetic outcome.

## Skin Immune System

The skin immune system (SALT: skin-associated lymphoid tissue) provides immunological surveillance. Langerhans cells (dendritic cells in epidermis) capture antigens and present them to T cells. Dermal dendritic cells, mast cells, and resident T cells form an innate and adaptive immune network.

## Skin Infection

Infection of the skin or underlying soft tissue, commonly caused by bacteria, fungi, or viruses. Redness, warmth, swelling, pain, drainage, or fever may occur; rapidly spreading redness, severe pain, blisters, or systemic illness requires prompt medical assessment.

## Skin Integrity

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences. See pressure injury.

## Skin Irritation

Inflammation or discomfort caused by direct contact with an irritant, often producing redness, burning, itching, dryness, or scaling.

## Skin Microbiome

The skin microbiome is the community of microorganisms (bacteria, fungi, viruses) residing on the skin. *Staphylococcus aureus* colonization is increased in atopic dermatitis and psoriasis. *Cutibacterium acnes* plays a role in acne. Diversity is decreased in diseased skin.

## Skin Of Color

Skin of color (Fitzpatrick IV to VI) has unique der-

---

matologic considerations. It is more prone to hyperpigmentation disorders (post-inflammatory hyperpigmentation, melasma, acanthosis nigricans) and keloid formation. It is less prone to skin cancer but presents with more advanced disease when it occurs.

### **Skin Pigmentation**

Determined by melanin produced by melanocytes in the stratum basale. Eumelanin (brown-black) and pheomelanin (red-yellow) are the two types. Melanin production is stimulated by UV radiation through melanocyte-stimulating hormone (MSH). Fitzpatrick skin type classification (I to VI) describes pigmentation and sun response.

### **Skin Tags**

Benign fibroepithelial polyps occurring in intertriginous areas (neck, axillae, groin, under breasts). They are associated with obesity, insulin resistance, and pregnancy. Skin tags are asymptomatic but may become irritated or bleed. Treatment includes snipping, cryotherapy, electrocautery, and shave excision.

### **Skull Fracture**

Skull fracture examines skull fracture; interpretation depends on the specimen or body region, test method, reference range, and clinical question. linear, depressed, basilar, or comminuted, with potential for intracranial injury and cerebrospinal fluid leak.

### **SLAP Lesion**

Superior labrum anterior to posterior tear. Associated with overhead activities, trauma. Treatment: rest, physical therapy, surgical repair if symptomatic.

### **SLAP Tears**

Tears of the superior glenoid labrum extending from anterior to posterior, sometimes involving the biceps tendon attachment. They may cause pain, clicking, or instability, especially with overhead activity.

### **Sleep (Geriatric)**

Sleep patterns and sleep problems in older adults,

including insomnia, sleep apnea, circadian changes, and medication-related disturbances.

#### **Synonyms:**

Geriatric

### **Sleep Apnea**

Repeated pauses or reductions in breathing during sleep. It may be obstructive, central, or mixed and can disturb sleep and oxygenation.

### **Sleep Apnea (Dental)**

Oral appliance for obstructive sleep apnea. Mandibular advancement device. Indications: mild to moderate OSA, CPAP intolerance.

#### **Synonyms:**

Dental

### **Sleep Apnea (Obstructive Sleep Apnea - OSA)**

A sleep disorder characterized by repeated episodes of partial or complete upper airway obstruction during sleep (obstructive sleep apnea—OSA, most common) or cessation of respiratory drive (central sleep apnea—CSA), causing intermittent hypoxia, hypercapnia, and sleep fragmentation.

#### **Synonyms:**

Obstructive Sleep Apnea - OSA

### **Sleep Bruxism**

Repeated grinding or clenching of the teeth during sleep, which may cause tooth wear, jaw pain, or headaches.

### **Sleep Hygiene**

A set of behavioral and environmental practices designed to promote consistent, uninterrupted, and restorative sleep. Key elements include maintaining a regular sleep schedule, creating a cool, dark, and quiet sleep environment, avoiding caffeine and electronic screens before bedtime, and engaging in relaxing pre-sleep routines.

### **Sleep Medications And Supplements**

Pharmacological agents used to treat insomnia and other sleep disorders when behavioral interventions

---

alone are insufficient.

### **Sleep Paralysis**

Temporary inability to move or speak when falling asleep or waking, while awareness is partly or fully preserved. Episodes usually last seconds to minutes and may include frightening hallucinations. Recurrent episodes can be associated with sleep deprivation, irregular sleep, narcolepsy, or other sleep disorders.

### **Sleep Studies (Polysomnography)**

Sleep tests, most commonly polysomnography, are diagnostic studies used to evaluate sleep architecture and identify sleep disorders. Polysomnography records brain waves, eye movements, heart rate, breathing patterns, blood oxygen levels, and limb movements throughout the night in a controlled laboratory setting.

#### **Synonyms:**

Polysomnography

### **Sleep-Related Hypoventilation**

Inadequate ventilation during sleep causing elevated carbon dioxide, oxygen desaturation, or both. Causes include obesity, neuromuscular disease, chest-wall disorders, chronic lung disease, medications, and central respiratory-control abnormalities.

### **Sleepwalking**

Sleepwalking addresses care related to sleepwalking, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician. sleep, usually with little or no memory afterward. It is more common in children and may be triggered by sleep deprivation, stress, fever, or other sleep disorders; injury prevention and evaluation of recurrent or dangerous episodes are important.

### **Sleeve Gastrectomy**

Removal of major stomach, leaving sleeve. Restrictive procedure. Lower malabsorption risk than bypass. Effective weight loss.

### **Sliding Filament**

The mechanism of muscle contraction in which actin filaments slide past myosin filaments, shortening the sarcomere without changing filament lengths. Myosin cross-bridges bind actin, undergo a power stroke using ATP hydrolysis, detach, and reattach to new actin sites in a cyclic manner.

### **Slipped Capital Femoral Epiphysis**

Displacement of the femoral head relative to the femoral neck through the growth plate (physis) in adolescents. Most common hip disorder in adolescents (10-16 years). Risk factors: obesity, male sex, African American, and endocrine disorders (hypothyroidism, growth hormone deficiency).

### **Slit Lamp Biomicroscopy**

A fundamental ophthalmological examination technique that uses a high-intensity, adjustable slit beam of light combined with a binocular microscope to provide a magnified, stereoscopic view of the anterior segment and, with the use of auxiliary lenses, the posterior segment of the eye.

### **Small Airway Disease**

Disease affecting airways with diameter  $< 2$  mm (bronchioles). It is the earliest site of damage in COPD and is often subclinical until advanced. It is characterized by narrowing, mucus plugging, and inflammation of small airways. PFTs may show air trapping (increased RV/TLC) before FEV1 decline.

### **Small Bowel Follow-Through**

Extended upper GI series tracking barium through small bowel.

### **Small Bowel Obstruction**

Partial or complete blockage of the small intestine. Common causes include adhesions, hernias, tumors, and inflammatory narrowing. Symptoms may include abdominal pain, vomiting, distension, and inability to pass stool or gas.

### **Small Bowel Series**

X-ray imaging of small intestine using barium. Evaluates Crohn disease, tumors, obstructions.

---

### **Small Cell Carcinoma**

A high-grade neuroendocrine carcinoma, most often of the lung, strongly associated with smoking. Highly responsive initially to chemotherapy and radiation but prone to rapid recurrence and early brain metastases.

### **Small Cell Lung Cancer**

Aggressive lung cancer, strongly associated with smoking. Early metastasis, responds to chemotherapy.

### **Small Fiber Neuropathy**

Damage to small sensory and autonomic nerve fibers, often causing burning pain, tingling, altered temperature or pain sensation, abnormal sweating, or gastrointestinal and cardiovascular symptoms. Diabetes, autoimmune disease, vitamin deficiency, toxins, and inherited disorders may contribute; evaluation seeks an underlying cause.

### **Small Intestinal Bacterial Overgrowth**

An abnormal increase or change in bacteria within the small intestine, often causing bloating, abdominal pain, nausea, diarrhea, fullness, weight loss, or nutrient deficiency. Causes include impaired intestinal movement, structural problems, surgery, and some systemic diseases; persistent symptoms require medical evaluation.

### **Small Intestine**

Longest GI segment (approximately 6 meters) from pylorus to ileocecal valve. Primary nutrient digestion and absorption site. Three segments: duodenum (25 cm, chyme/bile/pancreatic enzymes), jejunum (2.5 m, prominent folds/villi for absorption), ileum (3.5 m, Peyer's patches for immunity).

### **Small-Bowel Volvulus**

Twisting of the small intestine around its mesentery, causing mechanical obstruction and potentially compromising mesenteric blood flow. It may be primary (idiopathic, more common in developing countries) or secondary to adhesions, malrotation, hernias, or intraluminal tumors.

### **SMART Goals For Antibiotic Stewardship**

Stewardship objectives that are specific, measurable, achievable, relevant, and time-limited. They define a clear antimicrobial-use or patient-outcome target and a way to monitor progress.

### **SMILE**

Small incision lenticule extraction, commonly known as SMILE, is a minimally invasive refractive surgical procedure that corrects myopia and myopic astigmatism by creating and removing a thin, disc-shaped piece of corneal stroma called a lenticule through a small incision, without creating a corneal flap.

### **Smile Design**

Planning smile based on facial features, gum display, tooth proportions. Digital smile design software available.

### **Smith-Lemli-Opitz Syndrome**

An autosomal recessive disorder of cholesterol metabolism caused by mutations in DHCR7, encoding 7-dehydrocholesterol reductase, the final enzyme in the cholesterol biosynthetic pathway.

### **Smith-Magenis Syndrome**

A genetic neurodevelopmental disorder, usually involving deletion of 17p11.2 or an RAI1 variant. It causes developmental delay, intellectual disability, distinctive facial features, sleep disturbance, behavioral dysregulation, and variable congenital abnormalities.

### **Smoke Evacuator**

A device that captures and filters airborne surgical plume generated by electrosurgery, laser use, or ultrasonic energy. Evacuation reduces exposure to particulate matter, toxic gases, and potentially infectious biologic material.

### **Smoke Inhalation Injury**

Pulmonary injury caused by inhalation of toxic products of combustion.

---

## Smoking Cessation

The process of stopping tobacco or nicotine use. It may involve counseling, behavioral support, medicines, or nicotine replacement.

## Smothering

Mechanical obstruction of the external nose and mouth that prevents effective ventilation. It may be caused by a covering, compression, or an obstructing soft material; findings are often nonspecific and must be interpreted with the scene, history, and complete examination.

## Snapping Hip Syndrome

Hip pain/clicking from tendon snapping over bony prominence. Internal (iliopsoas), external (IT band), intra-articular (labral tear). Treatment: physical therapy, injection, surgery if refractory.

## Sneddon Syndrome

A non-inflammatory thrombotic vasculopathy characterized by livedo racemosa and recurrent ischemic cerebrovascular events. Headache, hypertension, cognitive impairment, and cardiac-valve abnormalities may occur; evaluation addresses vascular risk and autoimmune or thrombophilic causes.

## Snoring And Sleep Apnea

Snoring is the sound produced by vibrating soft tissues in the upper airway during sleep, often resulting from partial airway obstruction. Sleep apnea is a more serious condition characterized by repeated episodes of complete or partial airway collapse during sleep, leading to intermittent hypoxia, frequent arousal, and fragmented sleep.

## SNRIs

Serotonin-norepinephrine reuptake inhibitors are a class of antidepressant drugs that inhibit the reuptake of both serotonin and norepinephrine from the synaptic cleft, increasing both serotonergic and noradrenergic neurotransmission. Common SNRIs include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran.

## Social Anxiety Disorder

Marked fear or anxiety about one or more social situations in which the individual may be scrutinized by others. The individual fears acting in a way or showing anxiety symptoms that will be negatively evaluated.

## Social Isolation

Limited contact or interaction with other people. Persistent isolation may adversely affect mental and physical health.

## Sodium Bicarbonate Therapy

Alkalinizing agent for metabolic acidosis in CKD. Target serum bicarbonate greater than 22 mEq/L. Slows CKD progression and improves muscle wasting. Dose titrated to serum levels.

## Sodium Polystyrene Sulfonate

Potassium-binding resin for hyperkalemia. Risk: colonic necrosis, especially with sorbitol.

## Soft Markers For Aneuploidy

Sonographic findings in the second trimester that are common in normal fetuses but have a statistically higher prevalence in aneuploid fetuses (especially trisomy 21).

## Soft Tissue Injury

Damage to muscles, tendons, ligaments, fascia, skin, or other non-bony tissues, often caused by trauma or overuse.

## Soft Tissue Rheumatism

Pain conditions affecting muscles, tendons, ligaments, bursae. Examples: frozen shoulder, lateral epicondylitis, rotator cuff tendinopathy. Treatment: rest, physiotherapy, injections, surgery if refractory.

## Soft Tissue Sarcoma

A group of malignant tumors arising in muscle, fat, fibrous tissue, blood vessels, or other connective tissues. Treatment depends on the subtype, location, stage, and relationship to nearby structures.

**Synonyms:**

---

Cancer, Soft Tissue Sarcoma Sarcoma, Soft Tissue

### **Soft Tissue Tumors**

Lipoma: most common benign soft tissue tumor, subcutaneous, encapsulated. Liposarcoma: most common malignant STS in adults, deep, subtypes (well-differentiated/dedifferentiated, myxoid/round cell, pleomorphic). Synovial sarcoma: t(X;18), SS18-SSX, young adults, deep extremity, "triple sign" on MRI.

### **Soft-Tissue Calcinosis**

The deposition of insoluble calcium phosphate salts in soft tissues such as skin, subcutaneous tissue, muscles, and tendons, which may be metastatic (due to hypercalcaemia or hyperphosphataemia), dystrophic (in damaged or devitalised tissue), or idiopathic.

### **Soil Contamination**

Environmental toxicology. Heavy metals, pesticides, industrial waste. Remediation: excavation, bioremediation, containment.

### **Solar Urticaria**

A rare form of inducible urticaria triggered by ultraviolet or visible light, producing pruritic erythema and wheals within minutes on exposed skin. Symptoms usually improve after removal from the light source. Diagnosis may involve phototesting.

### **Soleus Muscle**

Broad flat deep posterior leg muscle from posterior tibia, fibula, and tendinous arch to the calcaneus via the Achilles tendon. Innervated by tibial nerve (S1-S2). Powerful ankle plantarflexor, the primary anti-gravity muscle for upright posture. One-joint muscle.

### **Solitary Pulmonary Nodule**

Single, well-circumscribed lesion < 3 cm surrounded by normal lung. Differential includes granuloma, hamartoma, and carcinoma. PET-CT and tissue sampling help determine etiology.

### **Solvent Exposure**

Contact with organic solvents by inhalation, ingestion, or skin absorption. Acute exposure may cause irritation or central nervous system effects; repeated exposure may damage organs.

### **Somatic Mutation**

Acquired genetic change in cancer cells. Not inherited.

### **Somatic Symptom Disorder**

Characterized by one or more somatic symptoms that are distressing or result in significant disruption of daily life, accompanied by excessive thoughts, feelings, or behaviors related to the somatic symptoms.

### **Somatic Variant**

A DNA variant acquired after conception in a non-germline cell lineage. It is not usually transmitted to offspring and may produce mosaic disease or contribute to cancer when it affects growth-control pathways.

### **Somatostatin Analog**

A class of synthetic peptides that mimic the actions of native somatostatin, a hormone that inhibits the secretion of growth hormone, thyroid-stimulating hormone, insulin, glucagon, gastrin, and other GI hormones.

### **Somatostatinoma**

Rare pancreatic or duodenal tumor producing somatostatin causing diabetes, gallstones, steatorrhea, and hypochlorhydria from suppression of insulin, gallbladder contraction, pancreatic enzymes, and gastric acid respectively. Diagnosed by elevated somatostatin levels. Treatment is surgical resection for localized disease.

### **Somatotropic Pituitary Adenoma**

A benign neoplasm of the anterior pituitary arising from growth hormone-secreting cells, causing acromegaly in adults and gigantism in children if occurring before epiphyseal closure.

---

## Sonographer

A healthcare professional trained to perform ultrasound scans (sonography).

## Source Control

A procedure or intervention that eliminates, drains, debrides, or otherwise controls an anatomic focus of infection or contamination. Examples include drainage of an abscess, removal of infected tissue or device, and repair of a perforation.

## Soy Protein Intolerance

Adverse gastrointestinal reaction to soy proteins, most often seen in infants and young children. It may cause vomiting, diarrhoea, abdominal pain, blood or mucus in the stool, feeding difficulty, or poor growth.

## Spasticity

Velocity-dependent increase in muscle tone caused by an upper motor-neuron lesion, producing stiffness, spasms, abnormal reflexes, and restricted movement.

## Spasticity Management

Assessment and treatment of abnormal muscle stiffness and spasms. Measures may include stretching, therapy, positioning, medicines, injections, or surgery.

## Spatial Resolution

Ability to distinguish small objects. PET: 4-6 mm. SPECT: 8-12 mm.

## Special Care Baby Unit

A ward within a hospital that provides specialist care for newborn babies who need additional support but not intensive care.

## Special Stain

A histochemical stain that highlights a particular tissue component, organism, or deposited substance not adequately demonstrated by routine hematoxylin and eosin. Examples include periodic acid-Schiff, Ziehl-Neelsen, Congo red, and Gomori

methenamine silver stains.

## Specific Absorbed Fraction

Fraction of emitted energy absorbed in target organ.

## Specific Activity

Radioactivity per unit mass of compound. High specific activity essential for receptor targeting (low receptor density).

## Specific Gravity

Ratio of urine density to water density reflecting solute concentration. Normal 1.005 to 1.030. Less precise than osmolality but faster to measure. Elevated in dehydration, glycosuria, proteinuria, and contrast. Decreased in diabetes insipidus and fluid overload.

## Specific Learning Disorder

A neurodevelopmental disorder causing persistent difficulty acquiring or using academic skills in reading, writing, or mathematics. The difficulties interfere with functioning and are not better explained by another condition or inadequate instruction.

## Specific Phobia

A disorder involving marked, persistent fear or anxiety about a particular object or situation. The fear is excessive relative to the actual danger, leads to avoidance or intense distress, and interferes with daily functioning.

## Specimen Adequacy

The degree to which a collected clinical specimen is sufficient in quantity, correctly identified, properly transported, and representative of the site being tested. Inadequacy can cause invalid, misleading, or falsely negative results.

## Specimen Container

Container for collecting specimens. Types: urine cup, stool container, sputum cup, biohazard bag.

## Specimen Cup

Container for urine or stool samples.

---

### **Specimen Transport Medium**

A formulated medium that preserves the viability and diagnostic characteristics of microorganisms during transport from the collection site to the laboratory. The required medium, temperature, container, and transport time depend on the specimen and suspected pathogen.

### **SPECT Scan (Single Photon Emission CT)**

Nuclear medicine imaging using gamma-emitting radioisotopes (Tc-99m, Tl-201, I-123) with a rotating gamma camera to create 3D images.

#### **Synonyms:**

Single Photon Emission CT

### **Spectral Analysis**

Energy discrimination to reject scatter. Energy window typically 20% centered on photopeak.

### **Speech**

Phonation and articulation. Teeth, tongue, lips, palate involved. Dental prostheses may affect speech initially.

### **Speech Delay**

A delay in language development compared to peers: by 12 months—no single words; 18 months—<10-20 words/no word combinations by 24 months; or regression.

### **Speech Discrimination**

Speech discrimination testing, also known as word recognition scoring, measures the ability to understand speech at a comfortable listening level, and it is an important component of the audiometric evaluation that provides information about cochlear and neural function beyond what pure tone audiometry alone can reveal.

#### **Synonyms:**

word recognition scoring, measures the.

### **Speech-Language Pathology Assessment**

Evaluate communication, swallowing, cognition. Standardized tests, clinical observation.

### **Spermatocele**

Benign, painless, fluid-filled cystic retention cavity arising from the epididymis (usually the head/caput), containing avascular fluid and non-viable spermatozoa. Etiology: obstruction of an efferent ductule of the epididymis.

#### **Synonyms:**

Cyst, Spermatic

### **Spermatogonium**

A germ cell in the testis that divides and develops into primary spermatocytes.

### **Spermarche**

The onset of sperm production and the first ejaculation, marking an important stage of male puberty.

### **Spermatorrhea**

Involuntary discharge of semen, especially without orgasm.

### **Sphenoid Bone**

Butterfly-shaped bone at the skull base, with body (sphenoid sinuses), greater/lesser wings, and pterygoid processes. The sella turcica houses the pituitary gland.

### **Sphenoid Sinusitis**

Inflammation or infection of the sphenoid sinus, which lies deep behind the nasal cavity. It may cause deep headache, facial pain, or visual symptoms and can rarely spread to nearby nerves or the brain; persistent or severe symptoms require medical assessment.

### **Sphenoidal Sinus**

A paired air-filled sinus within the sphenoid bone at the base of the skull. It lies near important nerves and blood vessels, so inflammation or surgery in this area requires careful assessment.

### **Spherocytes**

Small, dark, sphere-shaped red blood cells lacking central pallor. Formed when RBC membrane is lost without loss of volume, reducing the surface

---

area-to-volume ratio.

### **Spider Angioma**

A spider angioma is a central red blood vessel with radiating fine vessels that blanches with pressure and may occur normally or with liver or hormonal disease.

### **Spider Bite**

A cutaneous envenomation resulting from the bite of a spider, ranging from minor local reactions to severe systemic envenomation. The brown recluse spider may cause loxoscelism with necrotic skin lesions, while the black widow spider may cause latrodectism with muscle cramps, hypertension, and autonomic dysfunction.

### **Spina Bifida Meningocele**

A form of spina bifida where the meninges (but not neural tissue) herniate through a vertebral defect, forming a CSF-filled sac. The spinal cord remains in its normal position and is not involved. Presents as a visible, fluid-filled, translucent sac on the back, typically without neurologic deficits.

### **Spina Bifida Myelomeningocele**

The most severe form of spina bifida, where both the meninges and neural tissue (spinal cord and nerve roots) herniate through a vertebral defect. Presents as a visible, flat or sac-like lesion on the back with neurologic deficits below the level of the lesion (paralysis, sensory loss, bowel/bladder dysfunction).

### **Spina Bifida Occulta**

A usually mild form of spina bifida in which the vertebral arch does not fully close without herniation of the spinal cord or meninges. It is often asymptomatic but may be associated with a skin dimple, hair tuft, or other finding over the lower spine.

### **Spinal Analgesia**

Intrathecal administration of a local anesthetic and/or opioid primarily to provide analgesia, often with limited motor block. Intrathecal opioids

can extend postoperative pain relief but may cause pruritus, urinary retention, respiratory depression, and other opioid effects.

### **Spinal Anesthesia**

Injection of local anesthetic into the lumbar subarachnoid space to produce temporary sensory, motor, and sympathetic blockade below the level of injection. Complications include hypotension, bradycardia, urinary retention, post-dural puncture headache, high or total spinal block, infection, and bleeding.

### **Spinal Anesthesia For Cesarean Delivery**

A neuraxial anesthetic technique used for elective and many emergency cesarean deliveries. A small dose of local anesthetic (hyperbaric bupivacaine 12-15 mg) with opioid (fentanyl 15-25 mcg, morphine 0.15-0.25 mg) is injected into the subarachnoid space. Produces rapid surgical anesthesia (T4 sensory level for cesarean).

### **Spinal Angiography**

Contrast imaging of spinal vessels. Evaluates vascular malformations.

### **Spinal Cord Compression**

Oncologic emergency. Back pain, weakness, sensory loss, bowel/bladder dysfunction. MRI diagnostic. Treatment: steroids, radiation, surgery.

### **Spinal Cord Injury**

Spinal cord injury: ASIA impairment scale (A-E). Complete (ASIA A) vs incomplete.

**Synonyms:**

SCI

### **Spinal Dysraphism**

A group of congenital malformations resulting from incomplete closure of the neural tube during embryonic development, affecting the spinal cord and overlying vertebral structures. Includes open defects (myelomeningocele) and closed defects (spina bifida occulta, lipomyelomeningocele, dermal sinus).

---

## Spinal Epidural Abscess

A collection of pus in the spinal epidural space, usually caused by haematogenous or contiguous infection. It may present with severe local back pain, fever, spinal tenderness, radicular pain, neurological deficit, or sphincter disturbance, although the classic triad is often incomplete.

## Spinal Fusion

Surgical union of two or more vertebrae using bone graft or bone graft substitutes with instrumentation (rods, screws, cages). Approaches: posterior (posterolateral fusion, transforaminal lumbar interbody fusion TLIF), anterior (anterior lumbar interbody fusion ALIF), and lateral (extreme lateral interbody fusion XLIF).

## Spinal Muscular Atrophy

An inherited disorder causing progressive loss of motor neurons and muscle weakness, often beginning in infancy or childhood but sometimes appearing in adulthood. Severity varies; breathing, swallowing, and mobility may be affected. Early diagnosis allows genetic counseling and disease-modifying care.

## Spinal Nerve

A mixed nerve formed by the union of dorsal and ventral roots as it exits the vertebral canal. There are 31 pairs, carrying sensory, motor, and autonomic fibers to and from the spinal cord.

## Spinal Precautions

Immobilization of spine in trauma patients to prevent neurological injury. Indications: mechanism (fall >3 feet, MVC, gunshot), altered mental status, focal neurological deficit, midline spinal tenderness. Technique: cervical collar, backboard, log roll. Clearance: NEXUS criteria or Canadian C-spine rule.

## Spinal Shock

A state of transient physiological areflexia and flaccid paralysis occurring immediately after acute spinal cord injury, below the level of the lesion.

## Spinal Stenosis

Narrowing of the spinal canal causing compression of the spinal cord or nerve roots. Lumbar stenosis (most common): neurogenic claudication (leg pain/weakness with walking, relieved by sitting/leaning forward), often bilateral.

### Synonyms:

Stenosis, Spinal

## Spindle-Cell Sarcoma

A group of sarcomas characterized by elongated, spindle-shaped malignant cells. It includes entities like leiomyosarcoma, fibrosarcoma, and malignant peripheral nerve sheath tumor, with variable behavior.

## Spine

The vertebral column, consisting of stacked vertebrae that support the body and protect the spinal cord.

## Spine Disorders

The spine, or vertebral column, is a complex bony and soft-tissue structure that provides axial support, protects the spinal cord, and enables flexible movement of the trunk. It consists of 33 vertebrae divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, separated by intervertebral discs that act as shock absorbers.

## Spinocerebellar Ataxias

A group of autosomal dominant neurodegenerative disorders characterized by progressive cerebellar ataxia, often with additional neurological features. Over forty different SCA types have been identified, with SCA1, SCA2, SCA3 (Machado-Joseph disease, the most common worldwide), SCA6, and SCA7 being the most prevalent.

## Spirochete

A thin, coiled gram-negative bacterium with internal periplasmic flagella conferring corkscrew motility, requiring darkfield or special stains. Pathogenic genera include *Treponema* (syphilis), *Borrelia* (Lyme disease, relapsing fever), and *Leptospira* (leptospirosis), diagnosed mainly by serology and darkfield

---

microscopy.

### **Spirometry**

Most common PFT measuring air volume and flow during forced breathing. Key measurements: FVC, FEV1, FEV1/FVC ratio. Used to diagnose and classify obstructive and restrictive diseases.

### **Spleen Hilum**

Concave medial surface where the tortuous splenic artery (celiac trunk branch) enters and splenic vein exits, with lymphatics and nerves. Artery divides into 5 segmental branches at the hilum (basis for partial splenectomy). Splenic vein joins the superior mesenteric vein forming the portal vein.

### **Splenic Cyst**

A fluid-filled lesion within the spleen, classified as true cysts with an epithelial lining, including congenital, epidermoid, and dermoid cysts, or pseudocysts without a lining, typically resulting from trauma, infection, or pancreatitis. Most are asymptomatic and discovered incidentally on imaging.

### **Splenic Infarction**

Ischemic necrosis of splenic tissue caused by obstruction of splenic arterial or venous blood flow. Causes include embolism, thrombosis, hematologic disease, hypercoagulability, infection, trauma, or vasculitis; it often causes sudden left-upper-quadrant pain and is evaluated with imaging.

### **Splenic Rupture**

A tear of the spleen, usually after blunt abdominal trauma but sometimes spontaneous in an enlarged or diseased spleen. It can cause life-threatening internal bleeding; diagnosis and treatment depend on hemodynamic stability and imaging, with urgent surgery or embolization sometimes required.

### **Splice-Site Variant**

A variant affecting the sequences required for accurate removal of introns and joining of exons during RNA processing. It may cause abnormal transcripts, exon skipping, intron retention, or reduced functional protein.

### **Splint**

Immobilizes injured body part. Types: aluminum, plastic, canvas, pneumatic.

### **Splint (Dental)**

Fixation of mobile teeth or fractured tooth. Wire and composite, orthodontic bracket splint.

**Synonyms:**

Dental

### **Splinter Hemorrhages**

Linear hemorrhages under the nail bed, oriented longitudinally. In infective endocarditis, they are caused by septic microemboli to the nail bed capillaries. They are a minor Duke criterion. Splinter hemorrhages can also result from trauma, psoriasis, and systemic vasculitis.

### **Splitting**

A psychological defense pattern in which a person or situation is viewed as entirely good or entirely bad, with difficulty integrating positive and negative qualities. It can occur in several mental-health conditions and is not diagnostic by itself.

### **Spondyloarthritis**

Group of inflammatory arthritis associated with HLA-B27. Includes ankylosing spondylitis, psoriatic arthritis, reactive arthritis, enteropathic arthritis. Features: axial involvement, enthesitis, dactylitis.

### **Sponge (Vascular)**

A sterile absorbent material used during vascular procedures to control minor bleeding or protect tissue.

**Synonyms:**

Vascular

### **Spontaneous Bacterial Peritonitis**

Infection of ascitic fluid without an identifiable intra-abdominal source representing a serious complication of cirrhosis with ascites. The pathogenesis involves impaired immune function, bacterial translocation from the intestinal lumen, and seeding of ascitic fluid which provides a favorable medium for

---

bacterial growth.

### **Spontaneous Breathing Trial**

A period of unsupported breathing to assess a patient's readiness for extubation. The patient breathes through a T-piece or with minimal pressure support for 30–120 minutes. Successful SBT predicts successful extubation.

### **Spontaneous Pneumothorax**

Pneumothorax without trauma. Primary in healthy individuals; secondary with underlying lung disease. Treatment depends on size.

### **Sporotrichosis**

Sporotrichosis is a fungal infection caused by *Sporothrix* species, often introduced through plant matter and producing nodules along lymphatic channels.

### **Sports Rehabilitation**

Rehabilitation that restores safe movement and performance after a sports-related injury.

### **Sprain**

An injury to a ligament (connective tissue connecting bone to bone) caused by excessive stretching or tearing. Grading: Grade I (mild stretching, microscopic tears), Grade II (partial tear with laxity), Grade III (complete tear with instability).

### **Sprengel Deformity**

A congenital elevation of the scapula due to failure of the scapula to descend from its embryonic cervical position to its normal thoracic position during weeks 9–12 of gestation. The scapula is higher, smaller, and rotated inferiorly compared to the normal side. Range of motion is limited, especially in shoulder abduction.

### **Spur-Cell Hemolytic Anemia**

A severe hemolytic anemia seen in advanced liver disease where acanthocytosis develops due to altered membrane cholesterol, causing premature red cell destruction in the spleen.

### **Squamous Cell Carcinoma**

Cutaneous squamous cell carcinoma is a malignant keratinocyte tumor commonly arising on chronically sun-exposed skin or in areas of chronic inflammation or immunosuppression. It may present as a scaly, indurated, hyperkeratotic papule, plaque, or ulcer.

### **ST Segment**

The isoelectric period between ventricular depolarization (QRS) and repolarization (T wave). It corresponds to the plateau phase of ventricular action potentials. ST segment elevation (>1 mm in limb leads or >2 mm in precordial leads) suggests acute myocardial infarction, pericarditis, or early repolarization.

### **ST-Segment Elevation**

Elevation of the ECG ST segment above the isoelectric baseline, reflecting abnormal ventricular repolarization. It may indicate acute coronary occlusion but can also occur in pericarditis, early repolarization, ventricular aneurysm, or other conditions; interpretation requires clinical context and serial testing.

### **St. John's Wort**

Herbal supplement. CYP3A4 inducer, reduces efficacy of many drugs (oral contraceptives, warfarin, antiretrovirals).

### **Stab Wound**

A penetrating sharp-force injury in which wound track depth exceeds skin defect length, produced by a pointed or sharp-edged implement. The skin defect approximates blade width only when perpendicular to Langer's lines, and a single-edged blade produces one sharp and one blunt end.

### **Stable Disease**

Cancer neither growing nor shrinking significantly.

### **Stage I**

A cancer stage that generally indicates limited disease, although the exact definition and prognosis depend on the cancer type and staging system.

---

## Stage II

A cancer stage whose meaning depends on the cancer type and may indicate a larger primary tumor or limited local spread without distant metastasis.

## Stage III

A cancer stage that often indicates more extensive local or regional disease, with the precise criteria depending on the cancer type.

## Stage IV

A cancer stage that generally indicates spread to distant organs or sites. Prognosis and treatment vary by cancer type and individual factors.

## Stages Of Labor

Four stages describing the progression from uterine contractions to delivery of the placenta. First stage: onset of regular contractions to full cervical dilatation (10 cm). Second stage: full dilatation to delivery of the baby. Third stage: delivery of the baby to delivery of the placenta.

## Staining

A laboratory technique applying dyes to microbial smears or tissue sections to visualise microorganisms and reveal structural characteristics. Major methods include Gram, acid-fast, Giemsa, and fluorescent stains, providing rapid presumptive identification from clinical specimens and guiding initial empiric therapy.

## Stainless Steel

Alloy for preformed crowns, orthodontic bands, instruments. Corrosion-resistant.

## Standard Of Care

The conduct, skill, diligence, and judgment a reasonably prudent practitioner of the same specialty would exercise under similar circumstances; the benchmark for medical negligence. It is established through guidelines, peer practice, and expert testimony rather than fixed statute.

## Standard Precautions

Precautions for all patient care. Examples: hand hygiene, PPE, safe injection, respiratory hygiene.

## Standardized Uptake Value

Quantitative PET measure: tissue activity divided by injected dose per body weight. Normalizes for body size, injection dose. SUVmax: maximum pixel value in lesion. SUVmean: average lesion uptake. Background: blood pool, liver.

## Staph Infection

Infections caused by *Staphylococcus aureus* (and coagulase-negative staphylococci), a gram-positive coccus in clusters.

### Synonyms:

Staphylococcus Infection (Staph Infection)

## Staphylococcal Infection

An infection caused by *Staphylococcus aureus* or another *Staphylococcus* species. It may affect the skin, bone, joints, lungs, heart valves, blood, or other tissues. Diagnosis and antimicrobial treatment depend on the site, severity, and susceptibility of the organism.

## Staphylococcal Pneumonia

Severe pneumonia from *S. aureus*, often post-influenza. May cause necrotizing pneumonia, lung abscess, and empyema.

## Staphylococcal Scalded Skin

A toxin-mediated *Staphylococcus aureus* infection causing superficial separation and tenderness of the outer skin, usually in infants or young children. Widespread redness and fragile blisters may rupture to leave painful, moist areas resembling a scald burn and require prompt medical assessment.

## Staphylococcus Aureus

A gram-positive, catalase-positive, coagulase-positive coccus that causes a wide range of infections including skin infections, pneumonia, endocarditis, and osteomyelitis. *S. aureus* produces numerous virulence factors including toxins, enzymes, and sur-

---

face proteins. MRSA strains carry the *mecA* gene encoding PBP2a.

### **Staple (Vascular)**

A small metal or polymer device used to close tissue or connect vascular structures.

#### **Synonyms:**

Vascular

### **Stargardt Disease**

The most common inherited macular dystrophy, usually autosomal recessive and caused by ABCA4 gene mutations. Presents in childhood or adolescence with progressive central vision loss, retinal flecks, and bull's-eye maculopathy; no curative treatment exists.

### **Starling Forces**

Starling forces describe the balance of hydrostatic and oncotic pressures that govern fluid movement across capillary walls, determining the distribution of fluid between the intravascular and extravascular compartments.

### **Statin**

An inhibitor of HMG-CoA reductase that lowers hepatic cholesterol synthesis and increases hepatic LDL-receptor expression. Statins reduce atherosclerotic cardiovascular events; adverse effects include muscle symptoms, rare severe myopathy, and liver-enzyme abnormalities.

### **Statins In Diabetes**

Use of HMG-CoA reductase inhibitors to reduce atherosclerotic cardiovascular risk in people with diabetes. The decision, intensity, and treatment target are individualized according to age, cardiovascular risk, kidney function, and other clinical factors.

### **Station**

The relationship of the fetal presenting part to the level of the ischial spines, measured in centimeters.

### **Steady State**

The condition where the rate of drug administration equals the rate of elimination, resulting in constant average plasma concentrations with repeated dosing. During regular dosing at fixed intervals, steady state is achieved after approximately 4 to 5 half-lives, regardless of the dosing frequency or dose size.

### **Steal Syndrome**

Ischemia of distal extremity due to blood flow diversion to bypass graft or AV fistula. Most common: upper extremity after AV fistula creation. Symptoms: hand pain, pallor, numbness, weakness. Treatment: banding, ligation, revision.

### **Steatorrhea**

The passage of excess fat in the stool, causing greasy, pale, foul-smelling, floating stools—a hallmark of fat malabsorption.

### **Stem Cell Transplantation**

Hematopoietic stem cell transplantation (HSCT) replaces diseased or ablated bone marrow with healthy donor or autologous stem cells.

### **STEMI**

ST-elevation myocardial infarction: transmural myocardial necrosis from acute total occlusion of a coronary artery, an emergency requiring immediate reperfusion. ECG: ST-segment elevation in contiguous leads (or new LBBB); troponin elevated.

### **Stenosis Of The Left Anterior Descending Artery**

Narrowing of the left anterior descending coronary artery, which can reduce blood flow to the front of the heart and cause ischemia.

### **Stenotrophomonas Maltophilia Resistance**

Resistance in *Stenotrophomonas maltophilia* results from intrinsic and acquired mechanisms that limit the activity of several antibiotics. Treatment should be guided by the site of infection, susceptibility testing, illness severity, and specialist advice.

---

### **Stent (Vascular)**

A small mesh or tube placed inside a narrowed or blocked vessel to help keep it open.

#### **Synonyms:**

Vascular

### **Stent Balloon (Vascular)**

A balloon catheter used to expand a stent against the wall of a blood vessel.

#### **Synonyms:**

Vascular

### **Stent Graft**

A fabric-covered stent placed inside a blood vessel to reinforce the vessel wall or exclude an aneurysm from blood flow.

### **Stent Placement**

Image-guided deployment of stent. Vascular, biliary, ureteral, esophageal. Maintains patency.

### **Stent-Graft (Vascular)**

A fabric-covered vascular stent used to reinforce a vessel or exclude an aneurysm or leak.

#### **Synonyms:**

Vascular

### **Stenting**

Placement of mesh tube to keep vessel open. Drug-eluting stents reduce restenosis.

### **Stepping Reflex**

A primitive reflex present from birth to 2 months, elicited by holding the infant upright with feet touching a flat surface. The infant makes stepping-like movements as if walking. Disappears by 2 months as voluntary motor control develops. Reappears around 9-10 months as voluntary walking emerges.

### **Stereotactic Biopsy**

Biopsy using stereotactic guidance. Breast, brain, lung.

### **Stereotactic Body Radiation Therapy**

A highly precise form of external radiation deliver-

ing high-dose ablative treatment in few fractions, used for early-stage lung cancer and selected liver, pancreatic, spinal, and kidney tumors.

### **Stereotactic Radiosurgery**

Single high-dose radiation to small target. Used for brain metastases, AVMs, acoustic neuroma.

### **Sterile Field**

A designated area maintained free of viable microorganisms during an invasive procedure. Only sterile equipment and materials may contact the field or the sterile portions of instruments.

### **Sterile Site**

A body site or specimen type expected to contain no viable microorganisms in health, such as blood, cerebrospinal fluid, synovial fluid, or tissue from a closed space. Recovery of a pathogen from a sterile site is generally clinically significant, subject to contamination assessment.

### **Sterilization**

A process eliminating all microbial life including spores, achieving a sterility assurance level of at least  $10^{-6}$ .

### **Sternoclavicular Joint**

A saddle-type synovial joint between the clavicle and manubrium of the sternum. It is the only bony connection between the upper limb and axial skeleton and permits movement of the shoulder girdle.

### **Sternocleidomastoid Muscle**

Strap-like anterior neck muscle from manubrium and medial clavicle to the mastoid process. Innervated by CN XI and C2-C3. Divides neck into anterior/posterior triangles. Unilaterally: laterally flexes to opposite side, rotates face to same side. Bilaterally: flexes neck, assists forced inspiration.

### **Stickler Syndrome**

An autosomal dominant connective tissue disorder caused by mutations in collagen genes (COL2A1 most common, also COL11A1, COL11A2,

---

COL9A1).

### **Stimulant Use Disorder**

A problematic pattern of stimulant use (cocaine, amphetamines, methamphetamine, MDMA) leading to significant impairment. Stimulants increase dopamine and norepinephrine activity. Withdrawal is characterized by fatigue, depression, increased appetite, hypersomnia, psychomotor retardation, and vivid unpleasant dreams.

### **Stippling (Tattooing)**

Patterned dermal abrasions and punctate hemorrhages surrounding a firearm entrance wound, caused by unburned and partially burned gunpowder grains striking the skin at close range (15–75 cm).

#### **Synonyms:**

Tattooing

### **Stochastic Effects**

Random radiation effects with no threshold. Cancer, genetic effects. Probability increases with dose.

### **Stoma Complications**

Complications related to intestinal or urinary stomas.

### **Stomach Cancer**

Malignant cancer arising in the stomach, most often an adenocarcinoma. Risk factors include *Helicobacter pylori* infection, smoking, certain dietary exposures, chronic gastric inflammation, and inherited syndromes. Symptoms, stage, and tumor type guide treatment.

#### **Synonyms:**

Cancer, Gastric Cancer, Stomach

### **Stomach Ulcer**

An open sore in the lining of the stomach, commonly associated with *Helicobacter pylori* infection or medicines such as NSAIDs.

### **STOPP/START**

Screening Tool of Older Person's Prescriptions

(STOPP) and Potential Older Person's Prescriptions (START). Identifies inappropriate prescribing.

### **Storage Diseases**

A group of inherited metabolic disorders characterized by accumulation of substrates within cells due to specific enzyme deficiencies. Lysosomal storage diseases result from defects in lysosomal hydrolytic enzymes, leading to accumulation of undigested macromolecules within lysosomes.

### **Strain Imaging**

Echocardiographic or magnetic-resonance imaging that measures deformation of the myocardium during contraction and relaxation. It can detect abnormalities in myocardial function that may not be apparent from ejection fraction alone.

### **Strength Testing**

Manual muscle testing, dynamometry, isokinetic testing. Quantifies weakness, tracks progress.

### **Streptococcal Cellulitis With Lymphangitis**

Streptococcal infection of the skin and subcutaneous tissue with inflammation of the draining lymphatic vessels.

### **Streptococcal Infection**

Infections caused by *Streptococcus pyogenes* (Group A Strep, GAS). Common presentations: pharyngitis (strep throat), scarlet fever (pharyngitis with erythematous rash), impetigo, cellulitis, and necrotizing fasciitis.

### **Streptococcal Pharyngitis**

Sore throat caused by infection with group A *Streptococcus*, often accompanied by fever and swollen cervical lymph nodes.

### **Streptococcus Agalactiae**

A gram-positive, beta-hemolytic streptococcus (Group B *Streptococcus*) that is a leading cause of neonatal sepsis, meningitis, and pneumonia. The organism colonises the gastrointestinal and geni-

---

tal tracts. Transmission occurs during birth. Risk factors include prematurity, prolonged rupture of membranes, and maternal colonisation.

### **Streptococcus Pneumoniae**

A gram-positive, encapsulated diplococcus that causes pneumonia, otitis media, sinusitis, meningitis, and sepsis.

### **Streptococcus Pyogenes**

A gram-positive, beta-hemolytic streptococcus (Group A Streptococcus) that causes pharyngitis, skin infections, and post-infectious complications including rheumatic fever and glomerulonephritis. The organism produces streptolysins, erythrogenic toxin, and streptokinase.

### **Stress Cardiomyopathy**

A temporary weakening of the heart muscle, often following intense emotional or physical stress, with symptoms that can resemble acute coronary syndrome.

### **Stress Echocardiography**

Echocardiography during exercise or pharmacological stress. Detects coronary artery disease by identifying wall motion abnormalities.

### **Stress Fracture**

A bone injury caused by repetitive submaximal loading that exceeds the rate of remodeling and repair. It often presents with gradually increasing, localized activity-related pain and may progress to a complete fracture if loading continues.

### **Stress Shielding**

Reduction in physiologic loading of adjacent bone caused by an implant that carries a disproportionate share of mechanical force. Chronic stress shielding may lead to bone resorption and compromise fixation.

### **Stress Ulcer Prophylaxis**

Prevention of stress-related mucosal disease in critically ill patients. Risk factors: mechanical ven-

tilation >48 hours, coagulopathy, trauma, burns, sepsis. Agents: H2 blockers, proton pump inhibitors. Duration: while risk factors present.

### **Stress Urinary Incontinence**

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

### **Stretch Reflex**

A monosynaptic spinal reflex in which stretching a muscle (e.g., a tap on the patellar tendon) excites muscle spindles, generating an afferent signal (Ia fibers) that directly excites the alpha motor neurons of the same muscle, causing contraction and resistance to stretch.

### **Striae Gravidarum**

Stretch marks that develop during pregnancy, commonly on the abdomen, breasts, thighs, or buttocks. They may begin as red or purple lines and gradually fade to lighter bands.

### **Stripping Of Membranes (Membrane Sweep)**

A procedure performed during a cervical exam where the examiner inserts a finger through the internal os and sweeps the membranes circumferentially, separating them from the lower uterine segment. Releases endogenous prostaglandins, promoting cervical ripening and potentially initiating labor.

#### **Synonyms:**

Membrane Sweep

### **Stroke Volume**

The volume of blood ejected by the left ventricle with each heartbeat, normally 60-100 mL. It is determined by three factors: preload, afterload, and myocardial contractility. Stroke volume equals end-diastolic volume minus end-systolic volume. Reduced stroke volume occurs in heart failure, hypovolemia, and cardiogenic shock.

### **Strongyloides Stercoralis**

A soil-transmitted nematode that can infect the

---

human intestine and cause strongyloidiasis.

### Structured Reporting

Reporting using standardized templates. Improves consistency, completeness.

### Struvite Stones

Infection stones composed of magnesium ammonium phosphate. Form in alkaline urine with urease-producing organisms including *Proteus* and *Klebsiella*. Staghorn calculi fill renal pelvis almost exclusively from *Proteus*. Treatment requires complete stone removal with antibiotics and urinary acidification. High recurrence if infection persists.

### Sturge-Weber Syndrome

A neurocutaneous syndrome (phakomatosis) characterized by a facial capillary malformation (port-wine stain) in the V1 distribution of the trigeminal nerve (forehead and upper eyelid) and ipsilateral leptomeningeal angiomas (venous malformations of the pia mater). Caused by a somatic activating mutation in *GNAQ*.

### Subacute Rehabilitation

Less intensive than acute rehab. For patients needing continued therapy but not as intensive. Skilled nursing facility setting.

### Subacute Thyroiditis

Inflammatory condition of the thyroid most likely viral in etiology presenting with painful tender thyroid enlargement, fever, and malaise. Associated with elevated erythrocyte sedimentation rate and C-reactive protein.

### Subarachnoid

Situated beneath the arachnoid membrane surrounding the brain and spinal cord.

### Subarachnoid Hemorrhage

Bleeding into the subarachnoid space, the area between the arachnoid membrane and the pia mater surrounding the brain, most commonly caused by rupture of a cerebral (berry) aneurysm.

### Subclavian Artery

The artery supplying the upper limb, arising on the right from the brachiocephalic trunk and on the left directly from the aortic arch, passing over the first rib and becoming the axillary artery. Branches: vertebral, internal thoracic, thyrocervical trunk, costocervical trunk.

### Subclavian Vein

The continuation of the axillary vein beyond the lateral border of the first rib. It joins the internal jugular vein behind the sternoclavicular joint to form the brachiocephalic vein.

### Subclavian Vein Thrombosis

Formation of a blood clot in the subclavian vein, often associated with central venous catheterization, thoracic outlet syndrome, or Paget-Schroetter syndrome (effort-related thrombosis in young, active individuals). Presents with arm swelling, pain, and cyanosis.

### Subcorneal Pustular Dermatitis

A chronic relapsing skin disorder characterized by superficial sterile pustules beneath the stratum corneum, often on the trunk and flexural areas. It may be associated with IgA or other monoclonal gammopathies and can resemble pustular psoriasis.

### Subculture

The transfer of microorganisms from one culture to fresh culture medium, used to maintain pure cultures, isolate colonies, increase viability, prepare standardized inocula, and perform identification/susceptibility testing. On solid media, subculture aims to obtain isolated single colonies from a mixed or stock culture.

### Subcutaneous Emphysema

Air in the subcutaneous tissues, often from pneumothorax, pneumomediastinum, or chest trauma. It causes a characteristic crepitus on palpation. It is usually benign and resolves when the underlying air leak is treated. Severe cases may cause skin necrosis and compartment syndrome.

---

### Subcutaneous Tissue

Subcutaneous tissue (hypodermis, superficial fascia) lies beneath the dermis and connects skin to underlying structures. It contains adipose tissue (fat), blood vessels, nerves, and the superficial muscular aponeurotic system (SMAS). Subcutaneous fat provides insulation, cushioning, and energy storage.

### Subdural Hematoma

A collection of blood between the dura mater and the arachnoid mater, caused by tearing of bridging veins that traverse the subdural space.

### Subgaleal Hemorrhage

A potentially life-threatening accumulation of blood in the space beneath the scalp's epicranial aponeurosis. It can expand rapidly in a newborn, particularly after vacuum-assisted delivery, and requires urgent recognition and treatment.

### Sublingual Epidermoid Cyst

A benign cyst lined by stratified squamous epithelium beneath the tongue mucosa, presenting as a slow-growing midline swelling that may require surgical excision if symptomatic.

### Sublingual Gland

One of the paired major salivary glands, located beneath the tongue. It produces mainly mucous saliva that enters the mouth through several small ducts and helps lubricate the oral cavity.

### Submandibular Gland

One of the three paired major salivary glands, located in the submandibular triangle beneath the mandible. Mixed gland (predominantly serous) secreting saliva via Wharton's duct opening at the sublingual caruncle (floor of mouth). Saliva contains amylase, mucins, lysozyme, IgA.

### Subscapular Artery

An artery arising from the axillary artery that supplies the scapular region and adjacent muscles.

### Substance Abuse

An older, nonspecific term for harmful or problematic substance use. Current clinical language generally uses substance-use disorder.

### Substance Abuse Psychiatry

The subspecialty focused on the evaluation and treatment of substance use disorders and co-occurring psychiatric conditions. Dual diagnosis patients require integrated treatment addressing both disorders simultaneously.

### Substance Dependence

A state in which repeated substance use produces physiologic adaptation, so that reducing or stopping the substance may cause withdrawal. It is distinct from, but may occur with, substance-use disorder.

### Substance Intoxication

A reversible substance-specific syndrome caused by recent use that produces clinically significant behavioral or physiologic changes. Diagnosis requires assessing timing, dose or exposure, expected pharmacology, co-ingestants, and medical complications.

### Substance Use

The consumption of alcohol, drugs, or other chemical substances, which can lead to health, social, and psychological issues if used excessively.

### Substance Use Disorder

A problematic pattern of substance use leading to clinically significant impairment or distress, manifested by at least two of eleven criteria within a twelve-month period.

### Substance Use In Pregnancy

Use of alcohol, tobacco, cannabis, opioids, cocaine, or other substances during pregnancy. Effects depend on the substance, dose, timing, and other factors and may include maternal complications, impaired fetal growth, preterm birth, or neonatal withdrawal. Evaluation and treatment should be individualized.

---

## Substance Withdrawal

A substance-specific syndrome occurring after reduction or cessation of heavy or prolonged use. Withdrawal can range from discomfort to life-threatening complications such as seizures, delirium tremens, severe autonomic instability, or respiratory depression depending on the substance.

## Substernal Goiter

Extension of thyroid tissue into the mediastinum, typically arising from the thyroid gland in the neck and growing downward through the thoracic inlet. It may cause compressive symptoms including dyspnea, dysphagia, and superior vena cava syndrome. Most are multinodular goiters. Diagnosis is by CT or MRI.

## Succenturiat Lobe

An accessory lobe of the placenta, connected to the main placenta by blood vessels that traverse the membranes. If undetected after delivery, the succenturiat lobe may be retained in the uterus, causing postpartum hemorrhage or infection. Diagnosis: careful inspection of the placenta and membranes after delivery.

## Succinate Dehydrogenase

Complex II of electron transport chain. Also TCA cycle enzyme. Produces FADH<sub>2</sub>.

## Succinylcholine

A depolarizing neuromuscular-blocking drug that produces rapid, brief skeletal-muscle paralysis by activating nicotinic acetylcholine receptors at the neuromuscular junction. It can cause hyperkalemia, bradycardia, myalgia, masseter spasm, prolonged apnea in pseudocholinesterase deficiency, and malignant hyperthermia.

## Sucking Reflex

A primitive reflex present from birth, elicited by placing an object in the infant's mouth. The infant rhythmically sucks on the object. Coordinated sucking and swallowing typically develop by 34-36 weeks gestational age. Premature infants may lack coordinated suck-swallow, requiring gavage feeding.

## Sucrose Lysis Test

A historical screening test for paroxysmal nocturnal haemoglobinuria in which patient red blood cells are exposed to serum in a low-ionic-strength sucrose solution, allowing complement-mediated lysis to be detected.

## Suction (Vascular)

A suction device used during a vascular procedure to remove blood or other fluid from the operative field.

### Synonyms:

Vascular

## Suction Device

Creates negative pressure for fluid removal. Components: canister, tubing, suction catheter. Used for airway clearance, surgical field, wound drainage.

## Suction Tip

The end attachment of a suction device used to remove blood, fluid, secretions, or debris. Common types include the Yankauer tip for oropharyngeal suction and surgical suction tips such as the Frink tip.

## Sudden Cardiac Death

Unexpected death from a cardiac cause, usually occurring rapidly after symptom onset or without witnessed symptoms. Causes include coronary disease, cardiomyopathy, inherited arrhythmia syndromes, and bradyarrhythmia; prevention depends on the underlying risk.

### Synonyms:

Arrest Cardiac (Sudden Cardiac Death) Death Sudden Cardiac (Sudden Cardiac Death)

## Sudden Infant Death Syndrome

SIDS: the sudden, unexplained death of an infant <1 year (peak 2-4 months) that remains unexplained after a thorough investigation (autopsy, scene examination, and review of clinical history). Risk factors: prone sleep, bed-sharing, soft bedding, overheating, maternal smoking, prematurity/low birth weight, and co-sleeping.

---

### Sudden Sensorineural Hearing Loss

Rapid sensorineural hearing loss, conventionally at least 30 dB over three contiguous frequencies within 72 hours. It requires urgent audiologic and otologic assessment because early treatment may improve recovery in selected patients.

### Sudden Unexpected Infant Death

The sudden and unexpected death of an infant younger than 1 year, whether or not the cause is known before investigation. Sudden infant death syndrome is the unexplained subtype after complete scene, history, and autopsy evaluation.

### Sugammadex

A selective relaxant binding agent that reverses aminosteroid neuromuscular blockers (rocuronium and vecuronium) by encapsulating them in a cyclodextrin molecule, forming a 1:1 complex that is renally excreted. Onset of action is within 2 to 3 minutes.

### Suicidal Ideation

Thoughts about killing oneself, ranging from passive (wish to be dead, wishes to fall asleep and not wake) to active (thoughts of killing oneself with varying degrees of intent, plan, and means). The C-SSRS grades severity from 1 (wish to be dead) to 5 (active suicidal ideation with specific plan and intent).

### Suicide Risk Assessment

A clinical evaluation of suicidal thoughts, intent, plan, access to means, past attempts, self-harm, psychiatric and medical illness, substance use, protective factors, and immediate safety. It informs but does not replace ongoing clinical judgment and safety planning.

### Sulfa Drugs

A class of bacteriostatic antibiotics that competitively inhibit dihydropteroate synthase, an enzyme essential for folic acid synthesis in bacteria. See sulfonamides.

### Sulfatide

A sulfated glycolipid found particularly in myelin

and nervous tissue.

### Sulfonamide

A class of antibiotics (sulfamethoxazole, sulfadiazine, sulfasalazine) that inhibit bacterial dihydropteroate synthase, blocking folate synthesis—bacteriostatic. Often combined with trimethoprim (co-trimoxazole: TMP-SMX). Used for UTIs, PCP (pneumocystis pneumonia), toxoplasmosis, *Nocardia*, and MRSA.

### Sulfonylureas

Oral antidiabetic agents that stimulate insulin secretion from pancreatic beta cells by blocking ATP-sensitive potassium channels on the beta cell membrane. This causes membrane depolarization, opening of voltage-gated calcium channels, calcium influx, and exocytosis of insulin-containing granules.

### Sulfur Colloid Scan

Nuclear medicine imaging using Tc-99m sulfur colloid. Evaluates liver, spleen, bone marrow, lymph nodes.

### Sulphonamides

A class of antimicrobial agents containing the sulfonamide group ( $\text{SO}_2\text{NH}_2$ ). Sulphonamides were the first effective systemic antibacterial agents (Prontosil, 1935—Gerhard Domagk). Mechanism: competitive inhibition of dihydropteroate synthase, blocking folate synthesis (para-aminobenzoic acid analogue)—bacteriostatic.

### Sun Protection (Photoprotection)

Sun protection involves measures taken to reduce exposure to ultraviolet radiation from the sun, which is the primary environmental risk factor for skin cancer and photoaging.

#### Synonyms:

Photoprotection

### Superantigen

A protein that bypasses antigen processing and non-specifically activates large T-cell populations by binding MHC class II and the T-cell receptor V region, triggering massive cytokine release. Staphylococcal TSST-1 and enterotoxins, and streptococcal

---

pyrogenic exotoxins, cause toxic shock and scarlet fever.

### **Superficial Fascia**

A layer of loose connective tissue beneath the dermis, also called subcutaneous tissue or the hypodermis.

#### **Synonyms:**

subcutaneous tissue.

### **Superficial Thrombophlebitis**

Superficial thrombophlebitis is inflammation and clotting in a vein near the skin, causing a tender red cord; extension into deep veins must be assessed.

### **Superimposed Preeclampsia**

Preeclampsia developing in a person who already has chronic hypertension. It may present with new or worsening proteinuria, thrombocytopenia, abnormal liver or kidney tests, neurologic symptoms, or other features of maternal organ dysfunction.

### **Superinfection**

A new infection that develops during or after treatment of a previous infection, often involving an antimicrobial-resistant organism or an organism not susceptible to the original therapy, such as *Clostridioides difficile* after antibiotic exposure.

### **Superior**

Positioned higher or closer to the head.

### **Superior Mesenteric Artery**

Second major abdominal aortic branch at L1, the midgut artery. Supplies distal duodenum through proximal two-thirds of transverse colon. Branches: inferior pancreaticoduodenal, jejunal, ileal, ileocolic, right colic, middle colic. Arises anterior to the pancreatic uncinate process, crosses the third duodenal part.

### **Superior Mesenteric Artery Syndrome**

Compression of the duodenum between the aorta and the superior mesenteric artery, causing proximal duodenal obstruction. Presents with postprandial nausea, vomiting, and epigastric pain, often after

significant weight loss that narrows the SMA-aortic angle. Treatment includes nutritional rehabilitation and surgical duodenal mobilization.

### **Superior Semicircular Canal Dehiscence**

A defect or marked thinning of the bony covering of the superior semicircular canal that can produce sound- or pressure-induced vertigo, autophony, and conductive-appearing hearing findings. Diagnosis combines characteristic symptoms, physiologic testing, and high-resolution temporal-bone CT.

### **Superior Vena Cava**

Formed by brachiocephalic vein junction at the first right costal cartilage, returning upper body deoxygenated blood to the right atrium. Approximately 7 cm, valveless. Related to right lung/pleura, right phrenic nerve, and azygos vein.

### **Superior Vena Cava Syndrome**

Obstruction of SVC by tumor. Facial swelling, dyspnea, dilated neck veins. Emergency: radiation, stenting.

#### **Synonyms:**

SVCS (Superior Vena Cava Syndrome)

### **Superior Vena Caval Obstruction**

Compression or thrombosis of the superior vena cava impairing venous return from the head, neck, and upper extremities. Most commonly caused by malignancy (lung cancer, lymphoma) or indwelling central venous devices. Presents with facial swelling, plethora, distended neck veins, and upper extremity edema.

### **Supernumerary Rib**

An extra rib beyond the typical twelve pairs, most commonly a cervical rib above the first thoracic rib, which may compress the brachial plexus or subclavian vessel causing thoracic outlet syndrome.

### **Supernumerary Teeth**

Extra teeth beyond normal complement. Most common: mesiodens between maxillary centrals. May cause impaction or malocclusion.

---

### **Supervised Exercise Therapy**

A structured, monitored exercise program used to improve walking ability and reduce claudication symptoms in people with peripheral artery disease. The exercise plan is adjusted to the person's symptoms and functional capacity.

### **Supine Hypotensive Syndrome**

Compression of the inferior vena cava by the gravid uterus when the pregnant woman lies flat on her back after 20 weeks gestation. Results in decreased venous return, reduced cardiac output, and maternal hypotension, dizziness, pallor, and syncope.

### **Supplemental Oxygen Therapy**

Administration of oxygen at a concentration above that of room air to treat or prevent clinically important hypoxemia. Delivery method and oxygen target depend on the illness, baseline oxygenation, risk of carbon-dioxide retention, and monitoring results; excessive oxygen can also cause harm.

### **Supplementation**

Use of a vitamin, mineral, protein, fiber, or other nutrient preparation to correct a deficiency or meet a clinically identified increased requirement. The indication, dose, interactions, product quality, and risk of toxicity should be assessed before use.

### **Supportive Care**

Treatment that maintains essential body functions, relieves symptoms, prevents complications, and supports recovery while the underlying cause is treated.

### **Supraglottic Airway Device**

An airway device positioned above the glottis to maintain oxygenation and ventilation without passing through the vocal cords. It is used for selected anesthetized or unconscious patients and is not a definitive substitute for a cuffed tracheal tube when aspiration protection is required.

### **Suprascapular Nerve**

A branch of the brachial plexus that supplies the supraspinatus and infraspinatus muscles.

### **Surgical Drain**

A device placed to remove blood, pus, bile, urine, lymph, or other fluid from a surgical site or body cavity. Indications, output characteristics, duration, and removal criteria should be documented because drains can also cause infection, bleeding, or tissue injury.

### **Surgical Hemostasis**

Control of bleeding during an operation using pressure, ligation, sutures, clips, electrosurgery, topical agents, vessel sealing, or other techniques. Effective hemostasis requires identification of the bleeding source and correction of coagulopathy when present.

### **Surgical Instruments**

Instruments for surgery. Categories: cutting (scalpel, scissors), grasping (forceps, clamps), retraction, hemostasis (hemostat, electrocautery).

### **Surgical Margin**

The edge of tissue removed during an excision or resection, assessed microscopically for residual disease. A negative margin has no tumor at the examined edge; a positive margin indicates tumor extends to the inked or designated margin.

### **Surgical Repair**

An operation that restores or reconstructs damaged tissue, an organ, or an anatomic function.

### **Surgical Risk Stratification**

Estimation of the likelihood of perioperative complications using patient factors, urgency, procedure risk, functional capacity, and disease-specific assessment. It informs optimization, monitoring level, shared decisions, and postoperative planning but cannot eliminate uncertainty.

### **Surgical Safety Checklist**

A structured checklist used at defined points before anesthesia, before incision, and before leaving the operating room to verify patient identity, procedure, site, consent, equipment, specimens, and team communication.

---

## **Surgical Site Infection**

Infection involving the incision, organ, or operative space within the surveillance period after surgery. It may be superficial incisional, deep incisional, or organ-space and requires appropriate culture, antimicrobial therapy, drainage, debridement, or reoperation when indicated.

## **Surgical Time-Out**

A deliberate team pause immediately before incision to verify patient identity, procedure, site, consent, allergies, antibiotics, imaging, implants, equipment, and anticipated critical events. It is a core surgical-safety intervention.

## **Surgical Wound Classification**

Categorization of an operative wound as clean, clean-contaminated, contaminated, or dirty/infected according to the degree of microbial exposure and existing infection. The class helps estimate surgical-site infection risk and guide prophylaxis.

## **Surrogate Decision-Maker**

A person authorized to make healthcare decisions for someone who lacks decision-making capacity, guided by the person's known values and preferences.

## **Surveillance**

Systematic collection, analysis, interpretation of health data. Types: passive (reporting), active (proactive case finding), sentinel (selected sites).

## **Surveillance Imaging**

Repeat imaging to detect recurrence. Protocol varies by cancer type, stage, treatment.

## **Survival Rate**

Percentage of patients surviving for specified time after diagnosis. 5-year survival commonly used.

## **Survivorship**

Care for cancer survivors. Addresses late effects, surveillance, quality of life.

## **Survivorship Care Plan**

Document summarizing treatment, follow-up, late effects. Provided to cancer survivors.

## **Susac Syndrome**

An autoimmune microangiopathy affecting the brain, retina, and inner ear. The characteristic triad is encephalopathy, branch retinal-artery occlusions, and sensorineural hearing loss, though all features may not be present initially.

## **Susceptibility Testing**

Laboratory tests determining the sensitivity of a bacterial isolate to antimicrobials to guide therapy. Methods: disk diffusion (Kirby-Bauer—zone sizes), broth dilution (MIC—minimum inhibitory concentration, MBC—minimum bactericidal concentration), E-test (gradient strips), and automated systems (VITEK).

## **Suspected Cause**

A condition or factor believed to explain a disease or symptom but not yet confirmed.

## **Suspension**

A pharmaceutical formulation in which fine solid drug particles are dispersed (not dissolved) in a liquid vehicle, often with suspending agents and stabilizers. Suspensions are used when a drug is poorly soluble, for oral (antibiotic suspensions, antacids), topical, ophthalmic, and parenteral (depot) administration.

## **Suture (Perineal)**

A thread or strand of material used to approximate tissues (bring wound edges together) and hold them in place until healing occurs. See Suture.

### **Synonyms:**

Perineal

## **Suture Anchor**

A small implant that secures a tendon, ligament, or other soft tissue to bone. It may be made from metal, polymer, or bioabsorbable material and can fail through pullout, breakage, migration, or inflam-

---

matory reaction.

### **SUV**

Standardized uptake value, a semiquantitative measure of radiotracer concentration used mainly in PET imaging.

### **SVC Syndrome**

Obstruction of the superior vena cava causing facial swelling, plethora, and distended neck veins. Commonly from lung cancer (SCLC, squamous) and lymphoma. Oncologic emergency.

### **Swallow Study**

X-ray imaging of swallowing using barium. Evaluates dysphagia, aspiration, structural abnormalities.

### **Swallowing**

Difficulty swallowing, classified as oropharyngeal (difficulty initiating a swallow, choking, coughing, nasal regurgitation) or esophageal (sensation of food sticking retrosternally). See dysphagia.

#### **Synonyms:**

Difficulty Swallowing (Swallowing)

### **Swallowing Assessment**

Clinical and, when indicated, instrumental evaluation of oral, pharyngeal, and esophageal swallowing to identify dysphagia, aspiration, and appropriate food or liquid consistency. Videofluoroscopic or endoscopic studies may be required when bedside assessment is insufficient.

### **Swallowing Therapy**

Assessment and treatment to improve the safety and efficiency of swallowing and reduce aspiration risk.

### **Sweat Chloride Test**

A test that measures chloride concentration in sweat after pilocarpine stimulation. It is an important diagnostic test for cystic fibrosis, but results must be interpreted with the clinical findings and, when needed, genetic or other testing. Some illnesses and technical factors can produce misleading results.

### **Sweat Gland**

A skin gland that produces sweat, which contributes mainly to temperature regulation and skin surface function.

### **Sweating**

Production of sweat by eccrine and apocrine glands for heat regulation and other responses; excessive, absent, or asymmetric sweating can indicate medication, autonomic, endocrine, or neurologic disease.

### **Sweet Syndrome**

An inflammatory skin disorder characterized by sudden fever and tender red or violaceous plaques or nodules containing many neutrophils. It may be associated with infection, medicines, inflammatory disease, or cancer.

### **Sweet's Syndrome**

Acute febrile neutrophilic dermatosis, characterized by fever, neutrophilia, and painful, erythematous plaques or nodules on the skin, histologically showing dense neutrophilic infiltration of the dermis. It may be idiopathic, drug-induced, or associated with malignancy, particularly hematological cancers.

### **Swine Flu**

A contagious respiratory illness caused by influenza A or B viruses, characterized by sudden onset of fever, myalgia, headache, malaise, nonproductive cough, sore throat, and nasal congestion. See Influenza.

### **Swollen Ankles And Swollen Feet**

Enlargement of the ankles or feet caused by injury, venous insufficiency, lymphatic disease, medication, pregnancy, or systemic fluid retention from heart, kidney, or liver disease. Sudden one-sided swelling with pain, redness, warmth, or breathlessness may indicate thrombosis or infection and requires urgent assessment.

#### **Synonyms:**

Ankle Swollen (Swollen Ankles And Swollen Feet)

---

## Symblepharon

Adhesion of the palpebral conjunctiva (inner eyelid) to the bulbar conjunctiva or cornea, most commonly resulting from chemical burns, Stevens-Johnson syndrome, ocular cicatricial pemphigoid, or repeated surgical intervention. It restricts eye movement and may require surgical lysis with amniotic membrane or mucous membrane grafting.

## Sympatholytic

An agent that blocks the sympathetic nervous system, used to treat hypertension, sympathetic overactivity, and catecholamine excess. Classes: beta-blockers (propranolol, metoprolol), alpha-blockers (prazosin, doxazosin, phenoxybenzamine), centrally acting agents (clonidine, methyldopa), and neuron blockers (reserpine, guanethidine).

## Synaptic Plasticity

Activity-dependent change in the strength or structure of synaptic transmission. Long-term potentiation and long-term depression are important cellular mechanisms underlying learning, memory, adaptation, and some forms of chronic pain.

## Synaptic Transmission

The fundamental process by which neurons communicate with each other through specialized junctions called synapses.

## Syncope (Fainting)

A transient loss of consciousness and postural tone caused by temporary global cerebral hypoperfusion, followed by spontaneous recovery. Reflex, orthostatic, and cardiac causes are common; prolonged confusion suggests a different diagnosis. See Fainting.

### Synonyms:

Fainting

## Syndrome Of Inappropriate ADH Secretion

Excessive antidiuretic hormone activity causing eu-volemic hyponatremia with inappropriately concentrated urine and elevated urinary sodium.

## Syndrome Surveillance

The public health monitoring of pre-diagnostic clinical indicators (symptoms, syndromes—fever, rash, GI illness, influenza-like illness) in real time to detect outbreaks, bioterrorism, or emerging infections earlier than laboratory confirmation.

## Syndromic Surveillance

Monitoring of symptoms, clinical encounters, laboratory requests, or other near-real-time signals before definitive diagnoses are available. It supports early detection of outbreaks and public-health threats but may have lower specificity.

## Synovial Chondromatosis

A benign, metaplastic condition characterized by the formation of multiple cartilaginous loose bodies within joint synovium, bursae, or tendon sheaths. It presents with joint pain, swelling, locking, and restricted range of motion, most commonly affecting the knee, hip, and elbow.

## Synovial Fluid Analysis

Laboratory examination of aspirated joint fluid for appearance, viscosity, leukocyte count and differential, crystals under polarized light, Gram stain, and culture. It helps distinguish noninflammatory, inflammatory, crystal-associated, and septic arthritis.

## Synovial Sarcoma

A soft tissue sarcoma typically arising near joints of the extremities in young adults, characterized by the t(X;18) chromosomal translocation.

## Synovography

Contrast imaging of joint cavity. Evaluates synovial pathology.

## Synthesis Module

Automated system for radiopharmaceutical preparation. PET tracer synthesis: FDG, Florbetapir. Quality control: radiochemical purity, pH, sterility.

## Syphilitic Alopecia

Non-scarring hair loss occurring as a manifestation

---

of secondary syphilis, presenting with diffuse thinning or patchy, moth-eaten alopecia of the scalp, eyebrows, or beard. It is thought to result from direct spirochaetal invasion of hair follicles during the spirochaetaemic phase.

### Syphilitic Gumma

A destructive, granulomatous lesion occurring in tertiary syphilis, characterized by a center of necrotic tissue surrounded by plasma cells, lymphocytes, and fibroblasts. Gummas may affect any organ, most commonly the skin, bones, liver, and central nervous system. They present as painless, firm nodules that may ulcerate.

### Syrinx

A syrinx is a fluid-filled cavity within the spinal cord, typically containing cerebrospinal fluid or a similar fluid, that develops as a result of abnormal CSF flow dynamics within the spinal cord. Syringomyelia: a syrinx in the central spinal cord. Hydromyelia: dilation of the central canal.

### Systematic Review

Comprehensive summary of research on specific question. Uses explicit methods to minimize bias. Cochrane reviews example.

### Systemic Antifungals

Antifungal medicines taken orally or given intravenously for infections that are extensive, invasive, refractory, or unsuitable for topical treatment. Choice and duration depend on the organism, site, severity, drug interactions, organ function, and local resistance patterns.

### Systemic Effects

Whole-body effects of toxins. Cardiac, neurological, renal, hepatic, hematological.

### Systemic Inflammatory Response Syndrome

A systemic inflammatory response that may occur with infection, trauma, burns, pancreatitis, surgery, or other insults. It can involve abnormal temperature, heart rate, respiratory rate, or white-cell count.

Modern sepsis assessment uses broader clinical criteria rather than SIRS alone.

### Systemic Juvenile Idiopathic Arthritis

A subtype of juvenile idiopathic arthritis with prominent systemic inflammation—daily spiking fevers, evanescent salmon-pink rash, arthritis, lymphadenopathy, hepatosplenomegaly, and elevated inflammatory markers (ferritin).

### Systemic Lupus Erythematosus

Multisystem autoimmune disease, more common in women. Features: malar rash, photosensitivity, oral ulcers, arthritis, serositis, renal disorder, neurologic disorder, hematologic disorder, immunologic disorder. Diagnosis: ANA positive plus clinical/immunologic criteria.

### Systemic Sclerosis

Systemic sclerosis, also known as scleroderma, is a chronic autoimmune disease characterized by progressive fibrosis of the skin and internal organs, vasculopathy, and immune dysfunction.

#### Synonyms:

scleroderma, is a chronic autoimmune disease.

### Systemic Therapy

Treatment that reaches the whole body, including chemotherapy, endocrine therapy, targeted therapy, and immunotherapy, as opposed to local therapies such as surgery and radiation.

### Systemic Vascular Resistance

The resistance to blood flow offered by the systemic circulation, determined mainly by arteriolar tone. It is calculated from the pressure gradient across the systemic circulation and cardiac output and is a major determinant of arterial pressure.

### Systolic Murmurs

Murmurs occurring between S1 and S2. Ejection systolic murmurs (crescendo-decrescendo) are caused by flow across semilunar valves (aortic stenosis, pulmonary stenosis) or increased flow across normal valves.

---

### Sézary Syndrome

The leukemic variant of cutaneous T-cell lymphoma, characterized by erythroderma, lymphadenopathy, pruritus, and circulating atypical lymphocytes (Sézary cells).

### Sclerosing Peritonitis

Thickening and scarring of the peritoneum that can restrict movement of the intestines.

### Sjogren's Syndrome

An autoimmune disease that commonly causes dry eyes and dry mouth by damaging tear- and saliva-producing glands.

#### Synonyms:

Arthritis Sjogrens Syndrome (Sjogren's Syndrome)

### Staghorn Calculi

Large branching kidney stones that fill part or all of the renal collecting system.

### Sunstroke

A life-threatening form of heat illness in which body temperature rises dangerously high and the nervous system is impaired.

### Systemic Mastocytosis

A disorder in which excessive mast cells accumulate in one or more organs and release inflammatory chemicals.

### Semi-Fowler Position

A semiupright position in which the head and upper body are elevated about 30 to 45 degrees.

### Sitting Position

An upright or semiupright position in which the patient's torso is elevated and the hips and knees are flexed; it is used for selected shoulder and neurosurgical procedures.

### Supine Position

A position in which the patient lies on the back with the face upward; it is the most commonly used surgical position.

### Sacral Dimple

A small indentation in the skin over the lower spine that is present at birth.

#### Synonyms:

Pilonidal Dimple

### Salmonella Infection

An intestinal infection caused by Salmonella bacteria, usually acquired through contaminated food or water.

### Schwannomatosis

A disorder in which multiple schwannomas, tumors of nerve-sheath cells, develop.

#### Synonyms:

Neurinomatosis

### Sclerosing Mesenteritis

A rare inflammatory and fibrotic disorder affecting the mesentery, the tissue supporting the intestines.

### Scorpion Sting

A venomous injury caused by a scorpion, producing local pain and sometimes systemic toxicity.

#### Synonyms:

Stings, Scorpion

### Scrotal Masses

Abnormal lumps or swellings in the tissues of the scrotum.

### Sebaceous Carcinoma

An uncommon skin cancer arising from oil-producing sebaceous glands.

### Secondary Hypertension

High blood pressure caused by another medical condition or by a medication.

### Selective IgA Deficiency

An immune disorder characterized by very low or absent immunoglobulin A levels.

---

### **Sex Headaches**

Headaches triggered by sexual activity, including orgasm.

### **Sexually Transmitted Diseases**

Infections transmitted primarily through sexual contact; also called sexually transmitted infections.

#### **Synonyms:**

sexually transmitted infections.

### **Sezary Syndrome**

An uncommon form of cutaneous T-cell lymphoma involving widespread red skin and abnormal lymphocytes in the blood.

#### **Synonyms:**

Sezary Disease

### **Sinus Rhythm**

The normal heart rhythm generated by electrical impulses from the sinoatrial node.

### **Surgical Drill**

A powered instrument used to cut, shape, or bore bone during surgery.

### **Surgical Stapler**

A device that places metal or absorbable staples to close skin, tissue, or a hollow organ.

### **Schwann Cells**

Glial cells of the peripheral nervous system that form myelin around many axons and support the repair and maintenance of peripheral nerves.

### **Scintigraphy**

Nuclear medicine imaging in which a radiotracer is administered and its distribution is recorded to evaluate the structure or function of an organ.

### **Senile Lentigines**

Flat, sharply defined brown or tan spots caused by chronic ultraviolet exposure, commonly appearing on sun-exposed skin with age.

### **Sensory Neuron**

A nerve cell that carries information from sensory receptors toward the central nervous system.

### **Sensory Receptors**

Specialized cells or nerve endings that detect stimuli such as touch, temperature, pain, light, sound, or chemical changes.

### **Sentinel Node Biopsy**

Removal and examination of the first lymph node or nodes to which a tumor is likely to spread, used to assess regional metastasis.

### **Semilunar Valves**

The aortic and pulmonary valves, which open during ventricular contraction and close during ventricular relaxation to prevent backflow into the ventricles.

### **Single-Photon Emission Computed Tomography**

A nuclear medicine imaging technique that detects gamma rays from an injected radiotracer to create cross-sectional images of organ function and blood flow.

### **Simmonds Disease**

An uncommon form of hypopituitarism caused by inadequate pituitary hormone production, often resulting in fatigue, weight loss, low blood pressure, and impaired endocrine function.

### **Skin Turgor**

The skin's ability to return to its normal position after being gently pinched. Reduced turgor may occur with dehydration, although it is less reliable in older adults.

### **Slit-Lamp Biomicroscope**

An instrument that provides a magnified, illuminated view of the eye, especially the cornea, anterior chamber, iris, lens, and conjunctiva.

### **Somatotropin**

Growth hormone, a pituitary hormone that pro-

---

motes growth and influences protein, fat, and carbohydrate metabolism.

### **Sphincter Of Oddi**

A muscular valve controlling the flow of bile and pancreatic secretions into the duodenum.

### **Spinal Cavity**

The posterior body cavity formed by the vertebral column that contains and protects the spinal cord.

### **Spiral Organ**

The organ of Corti, a sensory structure in the cochlea containing hair cells that convert sound vibrations into nerve signals.

### **Spirogram**

A graphical record of air volumes and flow during pulmonary function testing.

### **Splenic Flexure**

The bend of the colon where the transverse colon becomes the descending colon, near the spleen.

### **Split-Thickness Skin Graft**

A graft containing the epidermis and part of the dermis, used to cover wounds or burns and allowing the donor site to heal from remaining skin structures.

### **Spondee**

A two-syllable test word with equal emphasis on both syllables, used in speech audiometry.

### **Spondylolysis**

A stress fracture or defect in the pars interarticularis of a vertebral arch, most often in the lower lumbar spine.

### **Staging**

Assessment of the extent of cancer, including the size of the primary tumor, lymph-node involvement, and distant metastases.

### **Stapedius**

A small middle-ear muscle that helps limit move-

ment of the stapes and may protect the inner ear from loud sounds.

### **Stapling**

Closure or joining of tissue with surgical staples.

### **Steroid Hormones**

Lipid-soluble hormones derived from cholesterol, including cortisol, aldosterone, estrogen, progesterone, and testosterone.

### **Stimulants**

Stimulants increase activity in the central nervous system or sympathetic system and may improve alertness but can cause insomnia, anxiety, dependence, or cardiovascular effects.

### **Stress Incontinence**

Involuntary leakage of urine during activities that increase intra-abdominal pressure, such as coughing, sneezing, lifting, or exercise.

### **Stress Injuries**

Tissue injuries caused by repeated loading or overuse without sufficient recovery. Examples include stress fractures, tendinopathy, and muscle strain.

### **Stress Tests**

Diagnostic tests that assess organ function under controlled physical, pharmacologic, or physiologic stress, commonly evaluating the heart for inducible ischemia or abnormal rhythm.

### **Striae Atrophicae**

Linear bands of thin, wrinkled skin caused by stretching and disruption of dermal connective tissue; commonly called stretch marks.

#### **Synonyms:**

stretch marks.

### **Student's Elbow**

Olecranon bursitis, an inflammation of the bursa over the point of the elbow, often related to repeated pressure or trauma.

---

### **Subacute Bacterial Endocarditis**

A slowly progressive infection of the endocardium or heart valves, usually caused by less-virulent bacteria and often involving previously abnormal valves.

### **Subcutaneous Layer**

The layer of tissue beneath the dermis, composed mainly of fat and connective tissue. It insulates the body, stores energy, and contains larger vessels and nerves.

### **Surgical Fixation**

Stabilization of a bone, joint, or other structure with devices such as plates, screws, rods, wires, or external frames.

### **Sympathectomy**

Surgical interruption or destruction of sympathetic nerves to reduce abnormal vasoconstriction, sweating, or pain in selected conditions.

### **Symphysis Pubis**

The fibrocartilaginous joint connecting the left and right pubic bones at the front of the pelvis.

### **Synechia**

An abnormal adhesion between adjacent tissues, especially between parts of the iris or between the iris and the lens or cornea.

### **Synovial Fluid**

A viscous fluid within a synovial joint that lubricates articular surfaces and helps nourish cartilage.

### **Synovial Joint**

A freely movable joint in which the articulating bones are separated by a fluid-filled joint cavity enclosed by a capsule.

### **Systemic Circuit**

The circulation that carries oxygenated blood from the left ventricle through the body and returns deoxygenated blood to the right atrium.

### **Salter-Harris Fracture**

A fracture involving the growth plate of a child or adolescent. Types I through V describe progressively different patterns and risks to bone growth.

### **Sternotomy**

Surgical division of the sternum, usually along the midline, to provide access to the heart or mediastinal structures.

### **Serrated Polyposis Syndrome**

A disorder characterized by multiple serrated lesions or polyps in the colon and an increased risk of colorectal cancer, requiring colonoscopic surveillance and removal of significant lesions.

### **Staphylococcal Scalded Skin Syndrome**

A toxin-mediated skin disorder caused by *Staphylococcus aureus*, usually affecting infants or young children and producing widespread superficial blistering and peeling of the skin.

### **Stent Restenosis**

Re-narrowing of a blood vessel within or adjacent to a previously placed stent, usually caused by tissue growth, recurrent atherosclerosis, or thrombosis.

### **Status Migrainosus**

A severe migraine attack that persists for more than 72 hours and may require urgent medical treatment, especially when dehydration, vomiting, or medication overuse is present.

### **Subclinical Hypothyroidism**

A condition with an elevated thyroid-stimulating hormone level and normal circulating free thyroid-hormone levels, often without symptoms or with only mild nonspecific symptoms.

### **Syndrome Of Inappropriate Antidiuretic Hormone**

Excessive release or effect of antidiuretic hormone causing impaired free-water excretion, low serum sodium, and inappropriately concentrated urine in the absence of an appropriate physiologic stimulus.

---

## Sclerotherapy

A treatment in which an irritating or closing agent is injected into a blood vessel or body cavity to make it scar and seal, commonly used for varicose veins and selected vascular lesions.

## Sleep Apnoea

Repeated pauses or reductions in breathing during sleep, most commonly because of upper-airway obstruction or less commonly inadequate respiratory drive.

## Strangulated Hernia

A hernia in which the blood supply to the trapped tissue is cut off, causing ischaemia and possible tissue death; it is a surgical emergency.

## Subdural Haematoma

Accumulation of blood between the dura mater and arachnoid membrane, usually caused by tearing of bridging veins after head injury and sometimes developing gradually.

## S Phase

S phase is the part of the cell cycle during which DNA is replicated so each daughter cell can receive a complete genome.

## Sabarubicin

Sabarubicin is an investigational anthracycline-like antineoplastic drug studied for cytotoxic effects against cancer cells.

## Saccade

A saccade is a rapid, conjugate eye movement that shifts gaze from one target to another.

## Saccharomyces Cerevisiae

*Saccharomyces cerevisiae* is a budding yeast used in baking, brewing, biotechnology, and some probiotic products; it can rarely cause invasive fungemia or other infection in vulnerable patients.

## Saccular Aneurysm

A rounded pouch protruding from one side of an

artery because of focal wall weakness, with rupture and clot formation risks determined by location, size, and growth.

## Sacral Fistula

A sacral fistula is an abnormal tract near the sacrum that may connect skin with deeper tissue and can reflect congenital disease, infection, or pilonidal disease.

## Sacral Region

The lower back and posterior pelvic region overlying the sacrum, a fused triangular bone that connects the lumbar spine with the pelvis.

## Sacral Vertebra

One of the fused vertebrae forming the sacrum, which supports the spine, joins the pelvic bones, and transmits trunk weight to the lower limbs.

## Sacroccygeal Teratoma

A congenital tumor arising at the base of the spine and containing tissues from multiple germ layers; large fetal lesions can cause high-output heart failure or hydrops.

## Sad Mood

Sad mood is a feeling of unhappiness or low mood that may be a normal response or a symptom of depression, grief, illness, or another condition.

## S-Adenosylmethionine

SAMe, a methyl-group donor involved in neurotransmitter, phospholipid, DNA, and other biochemical reactions and studied as a supplement for selected mood, liver, or pain conditions.

## Safety

Safety is protection from preventable harm and includes identifying hazards, reducing risk, using equipment correctly, and responding promptly to danger.

## Safety Study

A diagnostic or laboratory method used to inves-

---

tigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### **Safflower Oil**

Safflower oil is a vegetable oil rich in unsaturated fatty acids, used as food or in products; its health effect depends on amount and dietary substitution.

### **Safingol**

A medicine or pharmacologic agent called safingol. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Safrole**

Safrole is a natural aromatic compound found in some plants and oils; high or prolonged exposure is toxic and has carcinogenic concern.

### **Sagopilone**

A medical term referring to sagopilone. Its clinical meaning depends on the context in which it is used.

### **Salivary Gland Neoplasm**

A neoplasm involving salivary gland neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Salmonella Arizonae**

salmonella arizonae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Choleraesuis**

salmonella choleraesuis is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Enterica**

salmonella enterica is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Gallinarum**

salmonella gallinarum is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Pullorum**

salmonella pullorum is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Typhi**

salmonella typhi is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Typhimurium**

salmonella typhimurium is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Typhisuis**

salmonella typhisuis is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salmonella Vaccines**

salmonella vaccines is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### **Salt Gland**

A specialized gland in some marine animals and birds that excretes concentrated salt to maintain fluid and electrolyte balance; humans do not possess a comparable salt gland.

### **Sample Fixation**

Preservation of a tissue or cell sample with a chemical or physical method, such as formalin fixation, to

---

prevent decay and maintain microscopic structure for processing and staining.

### **Sample Size**

Sample size is the number of observations or participants in a study or test and affects precision, statistical power, and generalizability.

### **Sanitation**

Public-health measures that safely manage human waste, water, food, hygiene, and environmental contamination to prevent infection and disease transmission.

### **Sapovirus**

sapovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Sapporo Virus**

sapporo virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Sapropterin**

A medicine or pharmacologic agent called sapropterin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Saquinavir**

A medicine or pharmacologic agent called saquinavir. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Saquinavir Mesylate**

A medicine or pharmacologic agent called saquinavir mesylate. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Saracatinib**

A medical term referring to saracatinib. Its clinical

meaning depends on the context in which it is used.

### **Saralasin**

Saralasin is an investigational angiotensin-receptor antagonist formerly used to study renin–angiotensin physiology and blood-pressure regulation.

### **Sarcocystis**

A biological or biochemical term involving sarcocystis. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcocystis Hominis**

A biological or biochemical term involving sarcocystis hominis. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcocystis Suihominis**

A biological or biochemical term involving sarcocystis sui hominis. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcocystosis**

Parasitic infection by Sarcocystis species, acquired from undercooked meat or contaminated food and sometimes causing muscle pain, fever, diarrhea, or no symptoms.

### **Sarcoglycan Complex**

A biological or biochemical term involving sarcoglycan complex. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcomere**

A biological or biochemical term involving sarcomere. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcoplasm**

A biological or biochemical term involving sarcoplasm. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcoplasmic Reticulum**

A biological or biochemical term involving sarcoplas-

---

mic reticulum. Its role depends on the relevant cells, molecules, and physiological process.

### **Sarcosine**

Sarcosine is a naturally occurring amino-acid derivative involved in one-carbon metabolism and studied in neurologic and psychiatric research.

### **Sarcosinemia**

An uncommon metabolic finding with elevated sarcosine in blood or urine, usually due to altered glycine metabolism and often without major clinical symptoms.

### **Sardomozide**

Sardomozide is an investigational compound studied for anticancer activity through effects on cellular growth and survival.

### **Sargramostim**

A medicine or pharmacologic agent called sargramostim. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **SARS Virus**

SARS virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Satellite DNA**

A biological or biochemical term involving satellite dna. Its role depends on the relevant cells, molecules, and physiological process.

### **Satellite Virus**

satellite virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Satiation**

The feeling of fullness that terminates a meal, produced by gastrointestinal stretch, nutrients, hor-

mones, and brain signals regulating food intake.

### **Satisfaction**

A person's evaluation of how well an experience, service, treatment, or outcome met expectations; in healthcare it is one quality measure but does not replace clinical outcomes or safety.

### **Satraplatin**

A medicine or pharmacologic agent called satraplatin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Saturated Phytosterol**

A biological or biochemical term involving saturated phytosterol. Its role depends on the relevant cells, molecules, and physiological process.

### **Saxitoxin**

An infectious process or toxic exposure involving saxitoxin; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Scaffold Seeding**

A biological or biochemical term involving scaffold seeding. Its role depends on the relevant cells, molecules, and physiological process.

### **Scan Gallium**

A nuclear-medicine scan using radiolabeled gallium to identify areas of inflammation, infection, or some tumors; uptake is interpreted with anatomy and clinical context.

### **Scanning**

Systematic examination of a body region or specimen using imaging, microscopy, or another detection method to locate, characterize, or monitor abnormalities.

### **Scanning Electron Microscopy**

Microscopy that scans a focused electron beam across a specimen surface to produce a high-resolution image of its three-dimensional topography

---

and composition.

### **Scaphoid Abdomen**

A scaphoid abdomen is an unusually hollowed abdominal contour, classically seen with severe diaphragmatic hernia in a newborn but also possible with marked wasting.

### **Scaphoid Bone**

The largest proximal-row carpal bone on the thumb side of the wrist; its waist is vulnerable to fracture and avascular necrosis because of its blood supply.

### **Scaphycephaly**

Scaphycephaly is a long, narrow skull shape caused by premature fusion of the sagittal suture and may require evaluation for craniosynostosis.

### **Scavenger Receptor**

A cell-surface or intracellular receptor that binds and removes modified lipids, debris, microbes, or dying cells and contributes to innate immunity and atherosclerosis.

### **Scedosporium**

A medical term referring to scedosporium. Its clinical meaning depends on the context in which it is used.

### **Scedosporium Apiospermum**

A medical term referring to scedosporium apiospermum. Its clinical meaning depends on the context in which it is used.

### **Scedosporium Prolifican**

A medical term referring to scedosporium prolifican. Its clinical meaning depends on the context in which it is used.

### **Schaalia Radingae**

A medical term referring to schaalia radingae. Its clinical meaning depends on the context in which it is used.

### **Schaalia Turicensis**

A medical term referring to schaalia turicensis. Its clinical meaning depends on the context in which it is used.

### **Scheduled Notification**

A planned alert or message delivered at a specified time to remind a person about an appointment, medicine, monitoring task, or health-related action.

### **Schiff Base**

A medical term referring to schiff base. Its clinical meaning depends on the context in which it is used.

### **Schiller Test**

A cervical examination using iodine solution; glycogen-rich normal squamous epithelium stains dark, while iodine-negative areas require clinical correlation and sometimes biopsy.

### **Schistocyte Count**

Measurement of fragmented red blood cells on a blood smear, supporting evaluation of microangiopathic hemolysis, mechanical valve damage, disseminated intravascular coagulation, or severe burns.

### **Schistosoma**

A medical term referring to schistosoma. Its clinical meaning depends on the context in which it is used.

### **Schistosoma Intercalatum**

A medical term referring to schistosoma intercalatum. Its clinical meaning depends on the context in which it is used.

### **Scolecobasidium Terreum**

A medical term referring to scolecobasidium terreum. Its clinical meaning depends on the context in which it is used.

### **Scopolamine**

Scopolamine is a muscarinic antagonist used mainly to prevent motion sickness and postoperative nausea; dry mouth, blurred vision, urinary retention, confusion, and other anticholinergic effects may oc-

---

cur.

### Scopolamine Hydrobromide

A biological or biochemical term involving scopolamine hydrobromide. Its role depends on the relevant cells, molecules, and physiological process.

### Scopoletin

A medical term referring to scopoletin. Its clinical meaning depends on the context in which it is used.

### Scopulariopsis

Scopulariopsis is a mold genus that rarely causes opportunistic infection, especially in people with immune suppression or implanted devices.

### Scrapie

Scrapie is a fatal prion disease of sheep and goats causing progressive neurologic dysfunction; it is not considered a usual human infection.

### Screening Procedure

A test or examination offered to people without symptoms to detect disease or risk early enough for effective prevention or treatment; eligibility and intervals depend on evidence and risk.

### Screening Study

A planned investigation of an asymptomatic population to identify early disease, precursor lesions, or risk factors using a validated test and follow-up pathway.

### Sea-Blue Histiocyte

A sea-blue histiocyte is a macrophage containing blue-green lipid or ceroid pigment on staining, seen in some storage, hematologic, or metabolic disorders.

### Sebaceous Adenoma

A sebaceous adenoma is a usually benign tumor of sebaceous glands that can appear as a yellowish skin nodule and may be associated with Muir-Torre syndrome.

### Sebaceous Gland Carcinoma

A neoplasm involving sebaceous gland carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Secondary Amenorrhea

Absence of menstruation for at least three months in someone with previously regular cycles or six months with previously irregular cycles, caused by pregnancy, endocrine, ovarian, uterine, or systemic factors.

### Secondary Hypothyroidism

Low thyroid hormone production caused by inadequate pituitary TSH stimulation, usually from pituitary or hypothalamic disease; TSH may be low, normal, or inappropriately mildly high.

### Secondary Metabolism

Biochemical pathways that produce specialized compounds not required for basic growth but important for defense, signaling, pigmentation, or interactions with the environment.

### Second-Look Surgery

second-look surgery is used in relation to second-look surgery during assessment, diagnosis, treatment, monitoring, or patient support.

### Sign Language

Sign language is a complete visual language using hand shape, movement, position, facial expression, and body movement rather than spoken sound.

### Signal Peptide

signal peptide is a defined chemical or biologic substance involved in signal peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### Silent Mutation

A DNA sequence change that does not alter the encoded amino acid, usually because of genetic-code redundancy, although it can sometimes affect splicing, RNA stability, or translation.

---

### Silicate

A medical term referring to silicate. Its clinical meaning depends on the context in which it is used.

### Silicon Dioxide

Silicon dioxide is a mineral found in dust and industrial materials; inhalation of crystalline forms can cause silicosis and increase lung-cancer risk.

### Silicone

A medical term referring to silicone. Its clinical meaning depends on the context in which it is used.

### Silicone Elastomer

A medical term referring to silicone elastomer. Its clinical meaning depends on the context in which it is used.

### Silk

Silk is a protein fiber used in textiles and some medical sutures or biomaterials; reactions and tissue response depend on the product and processing.

### Siltuximab

A medical term referring to siltuximab. Its clinical meaning depends on the context in which it is used.

### Silver

A medical term referring to silver. Its clinical meaning depends on the context in which it is used.

### Silver Nitrate

A medical term referring to silver nitrate. Its clinical meaning depends on the context in which it is used.

### Silver Sulfadiazine

A medical term referring to silver sulfadiazine. Its clinical meaning depends on the context in which it is used.

### Silymarin

A medical term referring to silymarin. Its clinical meaning depends on the context in which it is used.

### Simeprevir

A medicine or pharmacologic agent called simeprevir. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### Simethicone

Simethicone is a non-absorbed antifoaming agent that coalesces gas bubbles in the gastrointestinal tract and is used for symptomatic relief of bloating; it does not treat the underlying cause of pain.

### Simian Virus 40

simian virus 40 is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Simple Mastectomy

simple mastectomy is used in relation to simple mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### Simplexvirus

simplexvirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Simuliidae

A medical term referring to simuliidae. Its clinical meaning depends on the context in which it is used.

### Simultanagnosia

Simultanagnosia is inability to perceive more than one object or the overall visual scene at a time, usually from dysfunction of visual-association regions.

### Sincalide

A medical term referring to sincalide. Its clinical meaning depends on the context in which it is used.

### Sindbis Virus

sindbis virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission,

---

tissue tropism, and ability to cause disease.

### **Sinecatechins**

A medical term referring to sinecatechins. Its clinical meaning depends on the context in which it is used.

### **Singlet Oxygen**

A medical term referring to singlet oxygen. Its clinical meaning depends on the context in which it is used.

### **Sinuatrial Node**

A medical term referring to sinuatrial node. Its clinical meaning depends on the context in which it is used.

### **Sinus Arrhythmia**

Sinus arrhythmia is normal variation in sinus-heart rate, commonly speeding during inhalation and slowing during exhalation, especially in young people.

### **Sinus Bradycardia**

Sinus bradycardia is a sinus rhythm slower than the expected rate; it can be normal during sleep or athletic conditioning but may also reflect drugs or disease.

### **Sinus Histiocytosis**

Expansion of lymph-node sinuses by histiocytes, often a reactive response to drainage of inflammation, infection, tumor, or tissue breakdown; interpretation depends on associated findings.

### **Siplizumab**

A medical term referring to siplizumab. Its clinical meaning depends on the context in which it is used.

### **Sipuleucel-T**

A medical term referring to sipuleucel-t. Its clinical meaning depends on the context in which it is used.

### **Sirolimus**

Sirolimus is an mTOR inhibitor used for immunosuppression after transplantation and selected vas-

cular or lymphatic disorders; mouth ulcers, hyperlipidaemia, cytopenias, infection, impaired wound healing, and pneumonitis can occur.

### **Sisomicin**

A medical term referring to sisomicin. Its clinical meaning depends on the context in which it is used.

### **Sitagliptin Phosphate**

Sitagliptin phosphate is a DPP-4 inhibitor that prolongs incretin activity and improves glucose-dependent insulin secretion in type 2 diabetes; dose adjustment in kidney disease and rare pancreatitis or severe joint pain are important considerations.

### **Site-Directed Mutagenesis**

A laboratory method that introduces a planned nucleotide change at a selected DNA site to study gene function, protein structure, regulation, or disease variants.

### **Sitosterols**

Sitosterols are plant sterols that resemble cholesterol and reduce intestinal cholesterol absorption; rare inherited storage disorders cause excessive accumulation.

### **Situs Ambiguus**

Situs ambiguus is abnormal, inconsistent arrangement of internal organs along the left-right body axis and is often associated with congenital heart and splenic abnormalities.

### **Size Perception**

The sensory judgment of an object's dimensions, influenced by visual context, distance, depth cues, touch, and brain processing; neurologic or visual disease can distort it.

### **Sizofiran**

Sizofiran is an investigational beta-glucan immunomodulator studied as an adjunct to cancer treatment.

---

## Skeletal Development

Skeletal development is formation, growth, remodeling, and maturation of bones and cartilage from embryonic life through adulthood.

## Skeletal Dysplasia

A skeletal dysplasia is an inherited disorder of bone or cartilage growth causing disproportionate short stature, abnormal limbs, spine disease, or other skeletal features.

## Skeletal Muscle Tissue

Voluntary striated muscle attached to bones or other structures, composed of contractile fibers that generate movement, posture, heat, and joint stability.

## Skeletal Myocytes

Skeletal myocytes are striated muscle cells responsible for voluntary movement, posture, heat production, and stabilization of joints.

## Skeletal System

The skeletal system consists of bones, cartilage, joints, and supporting ligaments that provide structure, protect organs, enable movement, and store minerals.

## Skin Carcinoma

A neoplasm involving skin carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

## Skin Care

Measures that protect and maintain the skin, including gentle cleansing, moisturization, sun protection, wound care, avoidance of irritants, and treatment of identified disease.

## Skin Erosion

A shallow loss of the epidermis that leaves a moist or crusted surface but does not extend deeply into the dermis, often caused by friction, scratching, blister rupture, or inflammation.

## Skin Examination

Systematic inspection and palpation of the skin, hair, nails, and mucous membranes to assess color, lesions, texture, distribution, vascular signs, infection, and cancer warning features.

## Skin Induration

Abnormal hardening or firmness of skin or underlying tissue caused by fibrosis, inflammation, edema, infiltrative disease, infection, or tumor.

## Skin Mastocytoma

A localized collection of mast cells in the skin, usually a yellow-brown or reddish plaque or nodule in a child that may swell, itch, or redden when rubbed.

## Skin Necrosis

Death of skin tissue from ischemia, infection, pressure, toxins, trauma, vasculitis, or severe inflammation, producing discoloration, blisters, ulcers, or black eschar.

## Skin Neoplasm

A neoplasm involving skin neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

## Spinal Artery

An artery supplying the spinal cord and its coverings, including the anterior spinal artery and paired posterior spinal arteries; blockage can cause characteristic neurologic deficits.

## Spinal Block

A spinal block is injection of local anesthetic into cerebrospinal fluid in the lower back, producing temporary numbness and weakness for surgery or pain control.

## Spinal Canal

The spinal canal is the bony passage through the vertebral column containing the spinal cord, its coverings, nerve roots, and blood vessels.

---

### Spinal Cord Disease

A clinical condition or finding involving spinal cord disease. Its features, causes, evaluation, and management depend on the clinical context.

### Spinal Cord Neoplasms

A neoplasm involving spinal cord neoplasms. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Spinal Disease

A clinical condition or finding involving spinal disease. Its features, causes, evaluation, and management depend on the clinical context.

### Spinal Fracture

A clinical condition or finding involving spinal fracture. Its features, causes, evaluation, and management depend on the clinical context.

### Spinal Ganglion

A cluster of sensory neuron cell bodies, especially a dorsal-root ganglion, carrying signals from skin, muscles, and joints toward the spinal cord.

### Spinal Neoplasms

A neoplasm involving spinal neoplasms. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### Spindle Pole

A spindle pole is one end of the mitotic spindle from which microtubules extend to separate duplicated chromosomes during cell division.

### Spindle Pole Body

The spindle pole body is the microtubule-organizing structure in fungi that functions like a centrosome during nuclear division.

### Spine Injury

A clinical condition or finding involving spine injury. Its features, causes, evaluation, and management depend on the clinical context.

### Spinocerebellar Ataxia

Spinocerebellar ataxias are inherited neurodegenerative disorders causing progressive incoordination, gait problems, dysarthria, abnormal eye movements, and sometimes other neurologic signs.

### Spiral Colon

A spiral arrangement of the proximal colon described in some animals, especially ruminants, that increases transit length and absorptive surface; it is not a normal human colonic segment.

### Spirillum Minus

Spirillum minus is a spiral Gram-negative bacterium that causes rat-bite fever, characterized by fever, rash, and migratory joint pain after rodent exposure; culture is difficult and diagnosis may be clinical or molecular.

### Spiritual Support

A medical term referring to spiritual support. Its clinical meaning depends on the context in which it is used.

### Spirochaetaceae

spirochaetaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### Spirochaetales Infection

spirochaetales infection is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### Spitting

Spitting is forceful expulsion of saliva or other material from the mouth; new excessive spitting may reflect oral disease, reflux, nausea, swallowing difficulty, or behavior.

### Splanchnic Nerve

A visceral autonomic nerve carrying sympathetic or parasympathetic fibers from the thorax or abdomen

---

to prevertebral ganglia and internal organs.

### **Spleen Development**

Spleen development is the embryonic formation and postnatal maturation of the organ that filters blood, supports immune responses, and removes aged blood cells.

### **Spleen Disorder**

A clinical condition or finding involving spleen disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Spleen Hemangioma**

A spleen hemangioma is a usually benign blood-vessel tumor of the spleen, often incidental but occasionally associated with enlargement, anemia, or rupture risk.

### **Splenic Abscess**

A localized collection of pus in the spleen, usually from bloodstream infection, trauma, infarction, or spread from nearby disease and potentially causing fever, left-upper-quadrant pain, and sepsis.

### **Splenic Infection**

An infectious process or toxic exposure involving splenic infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Splenic Neoplasm**

A neoplasm involving splenic neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Spliceosome**

The spliceosome is a nuclear RNA-protein complex that removes introns from pre-messenger RNA and joins exons to form mature RNA.

### **Split Brain**

A state after surgical or pathological disruption of the corpus callosum in which information transfer between cerebral hemispheres is reduced, producing

characteristic disconnection findings.

### **Spondylarthritis**

A family of inflammatory rheumatic diseases affecting the spine, sacroiliac joints, entheses, peripheral joints, skin, eyes, or bowel, including ankylosing spondylitis and psoriatic arthritis.

### **Sponge**

A sponge is a porous material used to absorb fluid, clean or dress wounds, or deliver a product; retained surgical sponges are a preventable complication.

### **Spontaneous Abortion**

Pregnancy loss before fetal viability that occurs without intentional intervention, commonly caused by chromosomal abnormalities but also by uterine, endocrine, immune, infectious, or other factors.

### **Spontaneous Perforation**

Unexpected rupture of a hollow organ without a clear external injury, allowing contents to escape and potentially causing peritonitis, mediastinitis, sepsis, or hemorrhage.

### **Sporothrix**

A medical term referring to sporothrix. Its clinical meaning depends on the context in which it is used.

### **Sporothrix Schenckii**

A medical term referring to sporothrix schenckii. Its clinical meaning depends on the context in which it is used.

### **Spousal Abuse**

Spousal abuse is physical, sexual, emotional, financial, or coercive harm by an intimate partner; immediate safety planning and confidential support may be needed.

### **Spouse**

A spouse is a person's legally or socially recognized partner; involving a spouse in healthcare requires the patient's consent unless law provides otherwise.

---

### Spray Drying

Spray drying converts a liquid mixture into a dry powder by atomizing it into a heated gas stream, often used in pharmaceutical and food manufacturing.

### Spumavirus

spumavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### Squalamine Lactate

A biological or biochemical term involving squalamine lactate. Its role depends on the relevant cells, molecules, and physiological process.

### Squalene

A medical term referring to squalene. Its clinical meaning depends on the context in which it is used.

### Square Foot

A square foot is a unit of area equal to a square measuring one foot on each side, used to describe surfaces, rooms, wounds, or treatment areas.

### Square Inch

A square inch is a unit of area equal to a square measuring one inch on each side, used for small surfaces or wound measurements.

### Square Metres

Square metres are units of area equal to the surface of a one-metre square, used in clinical, environmental, and dosage calculations.

### Sscp Analysis

Single-strand conformation polymorphism analysis, a laboratory method that detects some DNA sequence variants by differences in the migration of single-stranded fragments through a gel.

### Symbolism

A medical term referring to symbolism. Its clinical meaning depends on the context in which it is used.

### Sympathetic Ganglion

A cluster of sympathetic autonomic neuron cell bodies, located in paravertebral or prevertebral chains, that relays signals controlling vessels, sweat glands, viscera, and other targets.

### Symptomatic

A medical term referring to symptomatic. Its clinical meaning depends on the context in which it is used.

### Synapse Assembly

A medical term referring to synapse assembly. Its clinical meaning depends on the context in which it is used.

### Synapsins

A medical term referring to synapsins. Its clinical meaning depends on the context in which it is used.

### Synaptic Cleft

A medical term referring to synaptic cleft. Its clinical meaning depends on the context in which it is used.

### Synaptic Membrane

The specialized membrane at a neuronal junction, including the neurotransmitter-releasing presynaptic membrane and receptor-containing postsynaptic membrane.

### Synaptic Vesicle

A medical term referring to synaptic vesicle. Its clinical meaning depends on the context in which it is used.

### Synaptonemal Complex

A medical term referring to synaptonemal complex. Its clinical meaning depends on the context in which it is used.

### Synaptophysin

A medical term referring to synaptophysin. Its clinical meaning depends on the context in which it is used.

---

### Synaptosome

A medical term referring to synaptosome. Its clinical meaning depends on the context in which it is used.

### Synaptotagmin

A medical term referring to synaptotagmin. Its clinical meaning depends on the context in which it is used.

### Synarthrosis

A joint with little or no movement, such as a skull suture or tooth anchored in its socket, in which bones are joined by fibrous tissue or cartilage.

### Syncephalastrum

A medical term referring to syncephalastrum. Its clinical meaning depends on the context in which it is used.

### Synchrotron

A synchrotron is a particle accelerator that produces intense beams of charged particles or radiation used in research, imaging, and materials analysis.

### Syndecan

A medical term referring to syndecan. Its clinical meaning depends on the context in which it is used.

### Synesthesia

Synesthesia is a stable perceptual phenomenon in which stimulation of one sensory pathway automatically produces an experience in another, such as seeing colors with sounds.

### Syngeneic

Genetically identical or nearly identical within the same species, as in tissues or cells exchanged between identical twins or inbred laboratory animals.

### Synovial Bursa

A synovial bursa is a small fluid-filled sac that reduces friction between moving tissues near joints, such as tendons, skin, muscles, and bone.

### Synovial Cyst

A synovial cyst is a fluid-filled sac arising from or near a joint or tendon sheath, sometimes compressing nearby nerves and causing pain or weakness.

### Synoviocytes

Synoviocytes are cells lining the joint synovium that produce lubricating fluid and inflammatory mediators and help maintain or damage joint tissue.

### Syntax

Syntax is the arrangement of words, symbols, or genetic sequence elements according to rules that determine meaning and valid structure.

### Synthesis

Synthesis is the biological or chemical production of a complex molecule or structure from simpler components, such as protein synthesis from amino acids or DNA synthesis from nucleotides.

### Synthetic Androgen

A synthetic androgen is a manufactured compound that activates androgen receptors and may mimic testosterone; therapeutic and anabolic use can suppress gonadal function and cause acne, mood effects, infertility, liver injury, or cardiovascular harm.

### Syringoma

A syringoma is a benign tumor of sweat-duct cells, usually appearing as small skin-colored or yellowish papules around the eyelids or elsewhere.

### Syrup

A syrup is a viscous liquid preparation, often sweetened, used as a medicine vehicle or oral dosage form; concentration and ingredients determine safe dosing.

### Systemic Chemotherapy

systemic chemotherapy is used in relation to systemic chemotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### Systemic Disease

A clinical condition or finding involving systemic

---

disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Systemic Scleroderma**

Systemic sclerosis, an autoimmune connective-tissue disease causing vascular dysfunction and fibrosis of skin and internal organs, commonly affecting the esophagus, lungs, kidneys, and heart.

### **Systemic Venous**

Systemic venous refers to veins returning deoxygenated blood from the body to the right side of the heart, excluding the pulmonary circulation.

### **Sarcoma, Bone Cancer**

Alternate index label; see *Bone cancer*.

### **Sarcoma, Soft Tissue**

Alternate index label; see *Soft tissue sarcoma*.

### **SBBO**

Alternate index label; see *Small intestinal bacterial overgrowth (SIBO)*.

### **SCAD**

Alternate index label; see *Spontaneous coronary artery dissection (SCAD)*.

### **Scalded Mouth Syndrome**

Alternate index label; see *Burning mouth syndrome*.

### **Schizophrenia, Adolescent**

Alternate index label; see *Childhood schizophrenia*.

### **Schizophrenia, Childhood**

Alternate index label; see *Childhood schizophrenia*.

### **Schizophrenia, Juvenile**

Alternate index label; see *Childhood schizophrenia*.

### **SCI**

Alternate index label; see *Spinal cord injury*.

### **Sclerosing Cholangitis**

Sclerosing cholangitis is inflammation and scarring that narrows bile ducts, causing cholestasis and sometimes cirrhosis; primary and secondary causes require different evaluation.

### **Sclerosis, Multiple**

Alternate index label; see *Multiple sclerosis*.

### **Sclerosis, Systemic**

Alternate index label; see *Scleroderma*.

### **Seasonal Allergy**

Alternate index label; see *Hay fever*.

### **Sebaceous Cysts**

Alternate index label; see *Epidermoid cysts*.

### **Secondary Brain Cancer**

Alternate index label; see *Brain metastases*.

### **SEID**

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

### **Seizure Disorder**

Alternate index label; see *Epilepsy*.

### **Seizure, Absence**

Alternate index label; see *Absence seizure*.

### **Seizure, Febrile**

Alternate index label; see *Febrile seizure*.

### **Seizure, Grand Mal**

Alternate index label; see *Tonic-clonic (grand mal) seizure*.

### **Seizure, Petit Mal**

Alternate index label; see *Absence seizure*.

### **Seizure, Temporal Lobe**

Alternate index label; see *Temporal lobe seizure*.

---

**Self Harming**

Alternate index label; see *Self-injury/cutting*.

**Septal Defect, Atrioventricular**

Alternate index label; see *Atrioventricular canal defect*.

**Septal Defect, Ventricular**

Alternate index label; see *Ventricular septal defect (VSD)*.

**Severe Brain Injury, Coma**

Alternate index label; see *Coma*.

**Sexual Dysfunction, Female**

Alternate index label; see *Female sexual dysfunction*.

**Sexual Obsession**

Alternate index label; see *Compulsive sexual behavior*.

**Sezary Disease**

Alternate index label; see *Sezary syndrome*.

**Shy-Drager Syndrome**

Alternate index label; see *Multiple system atrophy*.

**SIBO**

Alternate index label; see *Small intestinal bacterial overgrowth (SIBO)*.

**Sin Nombre Virus Infection**

Alternate index label; see *Hantavirus pulmonary syndrome*.

**Sinusitis, Acute**

Alternate index label; see *Acute sinusitis*.

**Sinusitis, Chronic**

Alternate index label; see *Chronic sinusitis*.

**SJS**

Alternate index label; see *Stevens-Johnson syndrome*.

**Skin Cancer, Melanoma**

Alternate index label; see *Melanoma*.

**Skin Writing**

Alternate index label; see *Dermatographia (Dermatographism)*.

**Skin, Itchy**

Alternate index label; see *Itchy skin (pruritus)*.

**Skipped Heartbeats**

Alternate index label; see *Heart palpitations*.

**Slapped Cheek Disease**

Alternate index label; see *Parvovirus infection*.

**Sleep Apnea In Children, Obstructive**

Alternate index label; see *Pediatric obstructive sleep apnea*.

**Sleep Apnea, Central**

Alternate index label; see *Central sleep apnea*.

**Sleep Apnea, Obstructive**

Alternate index label; see *Obstructive sleep apnea*.

**Sleepiness, Daytime**

Alternate index label; see *Narcolepsy*.

**Sleeplessness**

Alternate index label; see *Insomnia*.

**SLL**

Alternate index label; see *Small lymphocytic lymphoma*.

**Slow Heartbeat**

Alternate index label; see *Bradycardia*.

**Small Bowel Bacterial Overgrowth**

Small bowel bacterial overgrowth examines small bowel bacterial overgrowth; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Small Bowel Prolapse**

Alternate index label; see *Small bowel prolapse (enterocele)*.

### **Small Intestine Prolapse**

Alternate index label; see *Small bowel prolapse (enterocele)*.

### **Solar Keratosis**

Alternate index label; see *Actinic keratosis*.

### **Solar Lentigines**

Alternate index label; see *Age spots (liver spots)*.

### **Specific Reading Disability**

Alternate index label; see *Dyslexia*.

### **Spinal Curvature**

Alternate index label; see *Scoliosis*.

### **Spinal Fluid Leak**

Alternate index label; see *CSF leak (Cerebrospinal fluid leak)*.

### **Spondylosis, Cervical**

Alternate index label; see *Cervical spondylosis*.

### **Stage 4 Prostate Cancer**

Alternate index label; see *Metastatic (stage 4) prostate cancer*.

### **STDs**

Alternate index label; see *Sexually transmitted diseases (STDs)*.

### **Steele-Richardson-Olszewski Syndrome**

Alternate index label; see *Progressive supranuclear palsy*.

### **Stein-Leventhal Syndrome**

Alternate index label; see *Polyendocrine metabolic ovarian syndrome (PMOS)*.

### **Stenosing Tenosynovitis**

Alternate index label; see *Trigger finger*.

### **Stenosis, Aortic Valve**

Alternate index label; see *Aortic valve stenosis*.

### **Stenosis, Mitral Valve**

Alternate index label; see *Mitral valve stenosis*.

### **Stenosis, Pulmonary Valve**

Alternate index label; see *Pulmonary valve stenosis*.

### **Stenosis, Pyloric**

Alternate index label; see *Pyloric stenosis*.

### **Stenosis, Spinal**

Alternate index label; see *Spinal stenosis*.

### **Stings, Bee**

Alternate index label; see *Bee sting*.

### **Stings, Jellyfish**

Alternate index label; see *Jellyfish stings*.

### **Stings, Scorpion**

Alternate index label; see *Scorpion sting*.

### **Stomach Flu**

Alternate index label; see *Viral gastroenteritis (stomach flu)*.

### **Stomatodynia**

Alternate index label; see *Burning mouth syndrome*.

### **Stool Holding**

Alternate index label; see *Encopresis*.

### **Strawberry Hemangioma**

Alternate index label; see *Hemangioma*.

### **Stump Pain**

Alternate index label; see *Residual limb pain*.

---

## Subfertility

Alternate index label; see *Infertility*.

## Substance Abuse Disorder

Alternate index label; see *Drug addiction (substance use disorder)*.

## Sun Poisoning

Alternate index label; see *Polymorphous light eruption*.

## Sunken Chest

Alternate index label; see *Pectus excavatum*.

## Supranuclear Palsy

Alternate index label; see *Progressive supranuclear palsy*.

## SVT

Alternate index label; see *Supraventricular tachycardia*.

## Sweating, Abnormally Excessive

Alternate index label; see *Hyperhidrosis*.

## Swelling

Abnormal enlargement caused by fluid accumulation, inflammation, bleeding, infection, tumor, or tissue injury; location, onset, pain, and associated symptoms identify the likely cause.

## Syndrome X

Alternate index label; see *Metabolic syndrome*.

## Systemic Exertional Intolerance Disease

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

## Sachet Poisoning

Sachet poisoning involves toxic or environmental exposure to sachet poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## Sacroiliac Joint Pain - Aftercare

A medical procedure, treatment, device, or care topic related to sacroiliac joint pain - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Safe Driving For Teens

Safe driving for teens addresses care related to safe driving for teens, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Safe Eating During Cancer Treatment

Safe eating during cancer treatment addresses care related to safe eating during cancer treatment, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Safe Sex

Safe sex addresses care related to safe sex, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Salads And Nutrients

Salads can provide fiber, vitamins, minerals, and beneficial plant compounds, but nutritional value depends on ingredients, portions, dressings, and overall dietary pattern.

## Saline Nasal Washes

A medical term referring to saline nasal washes. Its clinical meaning depends on the context in which it is used.

## Salivary Duct Stones

Salivary duct stones examines salivary duct stones; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Salivary Gland Biopsy

Salivary gland biopsy examines salivary gland biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

## Salivary Gland Infections

Salivary gland infections examines salivary gland infections; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Salmonella Enterocolitis

Salmonella enterocolitis is intestinal infection causing diarrhea, fever, abdominal cramps, and sometimes bacteremia after contaminated food, water, or animal exposure.

## Sassafras Oil Overdose

Sassafras oil overdose involves toxic or environmental exposure to sassafras oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## Satiety - Early

Satiety - early concerns satiety - early, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## Savings Account For Health Care Costs

Savings account for health care costs examines savings account for health care costs; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Scalded Skin Syndrome

A clinical condition involving scalded Skin Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

## Scales

Scales are flakes or plates of shed skin on the surface, occurring with dryness, eczema, psoriasis, fungal infection, or other dermatologic conditions.

## Scar Revision

A procedure that improves the appearance, contour, flexibility, or symptoms of a scar through excision, rearrangement, grafting, laser, injection, or other selected techniques.

## Schirmer Test

Schirmer test examines schirmer test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## School Age Test Or Procedure Preparation

School age test or procedure preparation examines school age test or procedure preparation; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## School-Age Children Development

School-age development includes advances in growth, coordination, language, learning, independence, social relationships, and emotional regulation, with broad normal variation.

## Scleredema Diabeticorum

A clinical finding or condition involving scleredema Diabeticorum; evaluation depends on its characteristic features, causes, severity, and complications.

## Scleroderma - Resources

Scleroderma - resources addresses care related to scleroderma - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Scleroma

Scleroma is chronic granulomatous infection, usually of the upper airway, caused by *Klebsiella rhinoscleromatis* and potentially producing scarring and obstruction.

## Scoliosis - Resources

Scoliosis - resources addresses care related to scoliosis - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Scoliosis Surgery In Children

A medical procedure, treatment, device, or care topic related to scoliosis surgery in children; indications, benefits, risks, and follow-up depend on the

---

specific intervention and patient.

### **Scorpion Fish Sting**

Scorpion fish sting involves toxic or environmental exposure to scorpion fish sting; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Scorpions**

Scorpions involves toxic or environmental exposure to scorpions; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Scrape**

A scrape is a superficial abrasion in which friction removes part of the skin surface; cleaning, protection, and monitoring for infection support healing.

### **Screen Time And Children**

Time children spend using televisions, computers, phones, tablets, or game devices; excessive or poorly timed use can affect sleep, activity, learning, mood, and family routines.

### **Screening And Diagnosis For HIV**

Screening and diagnosis for HIV examines screening and diagnosis for hiv; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Scrotal Swelling**

Enlargement of the scrotum caused by fluid, inflammation, infection, hernia, varicocele, hydrocele, tumor, trauma, or testicular torsion; sudden pain is an emergency.

### **Scrotal Ultrasound**

Scrotal ultrasound examines scrotal ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Secobarbital Overdose**

Secobarbital overdose involves toxic or environmental exposure to secobarbital overdose; dose, route,

timing, symptoms, and organ involvement determine urgency and treatment.

### **Secondary Infections**

Secondary infections examines secondary infections; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Secondary Parkinsonism**

Secondary parkinsonism is slowed movement, rigidity, tremor, or postural instability caused by another condition, medicine, toxin, vascular injury, or structural brain disease.

### **Secondary Systemic Amyloidosis**

Secondary systemic amyloidosis results when chronic inflammation or infection drives production of serum amyloid A, which deposits in organs such as the kidneys, liver, and spleen.

### **Secretin Stimulation Test**

Secretin stimulation test examines secretin stimulation test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Seizures**

Seizures are transient episodes of abnormal excessive brain electrical activity causing changes in awareness, movement, sensation, behavior, or autonomic function.

### **Selective Deficiency Of IgA**

Selective deficiency of IgA examines selective deficiency of iga; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Selective Mutism - Resources**

Selective mutism - resources examines selective mutism - resources; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

## **Selenium In Diet**

Selenium in diet addresses care related to selenium in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Self Catheterization - Female**

Intermittent insertion and removal of a catheter through the female urethra to empty the bladder when normal urination is inadequate, reducing retention and protecting kidney function.

## **Self Catheterization - Male**

Intermittent insertion and removal of a catheter through the male urethra to drain the bladder when neurologic, obstructive, or other conditions prevent adequate emptying.

## **Self-Testing For COVID-19**

Self-testing for COVID-19 involves toxic or environmental exposure to self-testing for covid-19; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Sensitivity Analysis**

Sensitivity analysis examines sensitivity analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Sensorimotor Polyneuropathy**

Sensorimotor polyneuropathy affects multiple peripheral nerves and causes combinations of numbness, pain, weakness, impaired reflexes, and distal muscle wasting.

## **Sensorineural Deafness**

Sensorineural deafness is hearing loss from dysfunction of the inner ear, auditory nerve, or central pathways rather than blockage of sound conduction.

## **Separation Anxiety In Children**

Developmentally excessive distress when separated from an attachment figure, with worry, refusal, physical symptoms, nightmares, or school avoidance that

impairs daily life.

## **Septoplasty - Discharge**

A medical procedure, treatment, device, or care topic related to septoplasty - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Serology For Brucellosis**

Serology for brucellosis examines serology for brucellosis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Serosanguineous**

Serosanguineous describes thin wound or body fluid containing both clear serum and a small amount of blood, often appearing pink or pale red.

## **Serotonin Blood Test**

Serotonin blood test examines serotonin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Sertoli-Leydig Cell Tumor**

Sertoli-Leydig cell tumor refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

## **Serum Free Hemoglobin Test**

Serum free hemoglobin test examines serum free hemoglobin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Serum Herpes Simplex Antibodies**

Serum herpes simplex antibodies is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

## **Serum Iron Test**

Serum iron test examines serum iron test; interpre-

---

tation depends on the specimen or body region, test method, reference range, and clinical question.

### **Serum Phenylalanine Screening**

Serum phenylalanine screening examines serum phenylalanine screening; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Serum Progesterone**

Serum progesterone is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

### **Severe COVID-19 - Discharge**

A medical procedure, treatment, device, or care topic related to severe covid-19 - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Sex-Linked Dominant**

Sex-linked dominant inheritance occurs when a disease-causing variant on a sex chromosome can produce the trait with one altered copy, with transmission patterns differing by sex.

### **Sex-Linked Recessive**

Sex-linked recessive inheritance usually involves a variant on the X chromosome, affecting males more often while females may be carriers or variably affected.

### **Sexual Abuse In Children - What To Know**

Child sexual abuse is any sexual activity, exploitation, or exposure imposed on a child; safety, supportive medical assessment, and safeguarding response are urgent priorities.

### **Sexual Assault - Prevention**

Sexual assault - prevention addresses care related to sexual assault - prevention, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Sexual Violence**

Sexual violence is any sexual act, attempt, contact, or coercion without freely given consent and can cause physical injury, infection, pregnancy, trauma, and long-term health effects.

### **Shampoo - Swallowing**

A medical term referring to shampoo - swallowing. Its clinical meaning depends on the context in which it is used.

### **Shaving Cream Poisoning**

Shaving cream poisoning involves toxic or environmental exposure to shaving cream poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Shellac Poisoning**

Shellac poisoning involves toxic or environmental exposure to shellac poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Shin Splints - Self-Care**

A medical procedure, treatment, device, or care topic related to shin splints - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Shingles - Aftercare**

A medical procedure, treatment, device, or care topic related to shingles - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Short Bones**

Short bones concerns short bones, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Short Philtrum**

A short philtrum is reduced distance between the nose and upper lip and may be an isolated feature or part of a genetic, developmental, or prenatal-exposure syndrome.

---

## Shoulder Arthroscopy

A medical term referring to shoulder arthroscopy. Its clinical meaning depends on the context in which it is used.

## Shoulder CT Scan

Shoulder CT scan examines shoulder ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Shoulder MRI Scan

Shoulder MRI scan examines shoulder mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Shoulder Replacement

A medical procedure, treatment, device, or care topic related to shoulder replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Shoulder Replacement - Discharge

A medical procedure, treatment, device, or care topic related to shoulder replacement - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Shoulder Separation - Aftercare

A medical procedure, treatment, device, or care topic related to shoulder separation - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Shoulder Surgery - Discharge

A medical procedure, treatment, device, or care topic related to shoulder surgery - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Sialogram

Sialogram examines sialogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## Sickle Cell Anemia - Resources

Sickle cell anemia - resources addresses care related to sickle cell anemia - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Sickle Cell Test

Sickle cell test examines sickle cell test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## SIDS - Resources

SIDS - resources addresses care related to sids - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## Signs Of An Asthma Attack

An asthma attack may cause worsening wheeze, cough, chest tightness, breathlessness, rapid breathing, difficulty speaking, or reduced peak flow; severe symptoms need emergency care.

## Silent Thyroiditis

Silent thyroiditis is painless autoimmune inflammation of the thyroid that may briefly release excess hormone before causing temporary hypothyroidism and eventual recovery.

## Silver-Russell Syndrome

A clinical condition involving silver-Russell Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

## Simple Goiter

A simple goiter is noncancerous enlargement of the thyroid without obvious thyroid-hormone excess or deficiency, caused by iodine imbalance, stimulation, or other factors.

## Simple Prostatectomy

Simple prostatectomy examines simple prostatectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Simple Pulmonary Eosinophilia**

A biomedical term referring to simple pulmonary eosinophilia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Simple, Heart-Smart Substitutions**

Simple, heart-smart substitutions concerns simple, heart-smart substitutions, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Single Palmar Crease**

A single transverse palmar crease is one crease crossing the palm instead of the usual two; it can be a normal variant or a feature of genetic syndromes.

### **Sinus CT Scan**

Sinus CT scan examines sinus ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sinus MRI Scan**

Sinus MRI scan examines sinus mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sinus X-Ray**

Sinus x-ray examines sinus x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sinusitis In Adults - Aftercare**

A medical procedure, treatment, device, or care topic related to sinusitis in adults - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Sitz Bath**

A medical term referring to sitz bath. Its clinical meaning depends on the context in which it is used.

### **Skeletal Limb Abnormalities**

Skeletal limb abnormalities are differences in the formation, length, alignment, or structure of an arm

or leg caused by genetic, developmental, vascular, injury, or other factors.

### **Skier's Thumb - Aftercare**

A medical procedure, treatment, device, or care topic related to skier's thumb - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Skilled Nursing Facilities After Joint Replacement**

A medical procedure, treatment, device, or care topic related to skilled nursing facilities after joint replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Skilled Nursing Or Rehabilitation Facilities**

Skilled nursing or rehabilitation facilities addresses care related to skilled nursing or rehabilitation facilities, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Skin - Clammy**

Skin - clammy concerns skin - clammy, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Skin Abscess**

Skin abscess concerns skin abscess, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Skin And Hair Changes During Pregnancy**

Pregnancy can alter pigmentation, hair growth or shedding, acne, stretch marks, and vascular features through hormonal and circulatory changes; concerning lesions need assessment.

### **Skin Blushing/Flushing**

Skin blushing/flushing concerns skin blushing/flushing, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

---

## **Skin Care And Incontinence**

Skin care and incontinence addresses care related to skin care and incontinence, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Skin Findings In Newborns**

Skin findings in newborns concerns skin findings in newborns, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Skin Flaps And Grafts - Self-Care**

Care after reconstructive skin surgery that protects the flap or graft, keeps dressings clean, avoids pressure and smoking, monitors color and temperature, and reports infection or loss of blood supply.

## **Skin Lesion Aspiration**

Skin lesion aspiration concerns skin lesion aspiration, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Skin Lesion Biopsy**

Skin lesion biopsy examines skin lesion biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Skin Lesion KOH Exam**

Skin lesion KOH exam examines skin lesion koh exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Skin Lesion Of Blastomycosis**

A blastomycosis skin lesion results from dissemination of Blastomyces fungal infection and may appear as verrucous or ulcerated lesions with raised borders.

## **Skin Lesion Removal**

A medical procedure, treatment, device, or care topic related to skin lesion removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Skin Lesion Removal - Aftercare**

A medical procedure, treatment, device, or care topic related to skin lesion removal - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Skin Lumps**

Skin lumps are localized bumps or masses caused by cysts, lipomas, inflamed follicles, infections, benign tumors, or less commonly cancer; persistence or change warrants assessment.

## **Skin Nodules**

Skin nodules concerns skin nodules, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Skin Or Nail Culture**

Skin or nail culture examines skin or nail culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Skin Sagging Treatment - Underarms**

Skin sagging treatment - underarms concerns skin sagging treatment - underarms, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Skin Self-Exam**

Skin self-exam examines skin self-exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Skull X-Ray**

Skull x-ray examines skull x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Sleep And Your Health**

Sleep and your health addresses care related to sleep and your health, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

---

## **Sleep Disorders**

Conditions affecting quality, timing, and amount of sleep; includes insomnia, sleep apnea, narcolepsy, restless legs syndrome, and parasomnias.

## **Sleep Disorders In Older Adults**

Sleep disorders in older adults addresses care related to sleep disorders in older adults, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Sleepwalking And Children**

Sleepwalking and children addresses care related to sleepwalking and children, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Slipping Rib Syndrome**

A clinical condition involving slipping Rib Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

## **Slit-Lamp Exam**

Slit-lamp exam examines slit-lamp exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Slow Heart Rate - Bradycardia**

Slow heart rate - bradycardia concerns slow heart rate - bradycardia, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Small Bowel Resection**

Small bowel resection examines small bowel resection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Small Bowel Resection - Discharge**

Small bowel resection - discharge examines small bowel resection - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Small Bowel Tissue Smear/Biopsy**

Small bowel tissue smear/biopsy examines small bowel tissue smear/biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Small For Gestational Age (SGA)**

Birth weight or size below the expected range for gestational age, caused by constitutional small size, placental insufficiency, infection, genetic disease, or maternal factors.

## **Small Intestinal Ischemia And Infarction**

Small intestinal ischemia and infarction examines small intestinal ischemia and infarction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Small Intestine Aspirate And Culture**

Small intestine aspirate and culture examines small intestine aspirate and culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Smallpox/Monkeypox Vaccine (JYNNEOS) - What You Need To Know**

A medical term referring to smallpox/monkeypox vaccine (jynneos) - what you need to know. Its clinical meaning depends on the context in which it is used.

## **Smashed Fingers**

A smashed finger may injure skin, nail, bone, tendon, or nerve; deformity, severe pain, numbness, impaired movement, or blood under the nail may require urgent evaluation.

## **Smear Of Duodenal Fluid Aspirate**

Smear of duodenal fluid aspirate examines smear of duodenal fluid aspirate; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Smell - Impaired**

Reduced or absent ability to detect odors, called

---

hyposmia or anosmia, caused by nasal obstruction, viral injury, head trauma, neurodegeneration, medications, or other disease.

### **Smoking And Asthma**

Smoking irritates and inflames airways, worsens asthma control, increases attacks, and reduces treatment response; stopping smoking and avoiding secondhand smoke improve outcomes.

### **Smoking And COPD**

Smoking is the major preventable cause of COPD and accelerates lung-function loss; quitting reduces progression and exacerbations even after COPD is established.

### **Smoking And Surgery**

A medical procedure, treatment, device, or care topic related to smoking and surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Smoking Cessation Medications**

Medicines that reduce nicotine withdrawal and cravings, including nicotine replacement, bupropion, and varenicline, used with behavioral support and individualized for health risks and preferences.

### **Snacking When You Have Diabetes**

Planning snacks for diabetes by considering hunger, glucose pattern, activity, carbohydrate amount, medicine timing, and hypoglycemia risk rather than relying on unrestricted grazing.

### **Snacks And Sweetened Drinks - Children**

Frequent sugary snacks and drinks increase children's risk of tooth decay and excess weight; water, nutritious foods, portions, and regular meals are healthier defaults.

### **Snacks For Adults**

Healthy adult snacks emphasize nutrient-dense foods such as fruit, vegetables, legumes, nuts, yogurt, or whole grains while limiting excess sugar, salt, and highly processed calories.

### **Snake Bites**

Snake bites involves toxic or environmental exposure to snake bites; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Snoring - Adults**

Noisy breathing during sleep caused by vibration of relaxed tissues in the nose, mouth, or throat; loud habitual snoring with witnessed pauses or daytime sleepiness may indicate obstructive sleep apnea.

### **Sodium Bisulfate Poisoning**

Sodium bisulfate poisoning involves toxic or environmental exposure to sodium bisulfate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Sodium Blood Test**

Sodium blood test examines sodium blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sodium Carbonate Poisoning**

Sodium carbonate poisoning involves toxic or environmental exposure to sodium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Sodium Hydroxide Poisoning**

Sodium hydroxide poisoning involves toxic or environmental exposure to sodium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Sodium Hypochlorite Poisoning**

Sodium hypochlorite poisoning involves toxic or environmental exposure to sodium hypochlorite poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Sodium In Diet**

Sodium in diet addresses care related to sodium in diet, including practical measures, warning signs,

---

follow-up, and decisions to discuss with a clinician.

### **Sodium Urine Test**

Sodium urine test examines sodium urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Solder Poisoning**

Solder poisoning involves toxic or environmental exposure to solder poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Solitary Fibrous Tumor**

A neoplastic condition involving solitary Fibrous Tumor; diagnosis establishes the tumor type, extent, and appropriate management.

### **Soluble Vs. Insoluble Fiber**

Soluble fiber dissolves or gels in water and can affect glucose, cholesterol, and stool consistency, while insoluble fiber adds bulk and supports bowel movement; foods often contain both.

### **Soy**

Soy is a legume providing protein and isoflavones; it is nutritious for many people but can cause allergy and may interact with some medicines or thyroid treatment timing.

### **Spasmodic Dysphonia**

Spasmodic dysphonia is a focal laryngeal dystonia causing involuntary voice-box spasms and strained, breathy, or interrupted speech.

### **Spasmus Nutans**

An uncommon early-childhood syndrome of rapid shimmering eye movements, head nodding, and torticollis that usually resolves but requires evaluation to exclude neurologic or ocular disease.

### **Speech Disorders - Children**

A clinical finding or condition involving speech Disorders - Children; evaluation depends on its characteristic features, causes, severity, and complications.

### **Speech Impairment In Adults**

Difficulty producing or understanding speech caused by aphasia, dysarthria, apraxia, hearing loss, neurologic disease, structural problems, or cognitive disorder; sudden onset requires stroke assessment.

### **Spina Bifida - Resources**

Spina bifida - resources addresses care related to spina bifida - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Spinal And Epidural Anesthesia**

Spinal and epidural anesthesia deliver local anesthetic near spinal nerves to numb the lower body; spinal is a single injection, while epidural uses a catheter for adjustable dosing.

### **Spinal Cord Abscess**

A spinal cord or epidural abscess is a collection of infection near the spinal cord that can compress neural tissue and cause pain, fever, weakness, paralysis, or bladder problems.

### **Spinal Cord Stimulation**

An implanted treatment that delivers electrical impulses to the epidural space to alter pain signaling, used for selected chronic neuropathic or ischemic pain after careful assessment.

### **Spinal Cord Trauma**

Spinal cord trauma is injury to the cord from force such as fracture, dislocation, or penetrating damage, potentially causing weakness, sensory loss, autonomic dysfunction, or paralysis.

### **Spinal Injury**

A clinical condition involving spinal Injury; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Spinal Injury - Resources**

Spinal injury - resources addresses care related to spinal injury - resources, including practical measures, warning signs, follow-up, and decisions to

---

discuss with a clinician.

### **Spinal Tumor**

A neoplastic condition involving spinal Tumor; diagnosis establishes the tumor type, extent, and appropriate management.

### **Spine Surgery - Discharge**

A medical procedure, treatment, device, or care topic related to spine surgery - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Spitting Up - Self-Care**

A medical procedure, treatment, device, or care topic related to spitting up - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Spleen Removal**

A medical procedure, treatment, device, or care topic related to spleen removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Spleen Removal - Child - Discharge**

A medical procedure, treatment, device, or care topic related to spleen removal - child - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Splinter Removal**

A medical procedure, treatment, device, or care topic related to splinter removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Spores**

A medical term referring to spores. Its clinical meaning depends on the context in which it is used.

### **Sports Cream Overdose**

Sports cream overdose involves toxic or environmental exposure to sports cream overdose; dose, route, timing, symptoms, and organ involvement

determine urgency and treatment.

### **Sports Physical**

Sports physical addresses care related to sports physical, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Sputum Culture**

Sputum culture examines sputum culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sputum Direct Fluorescent Antibody (DFA) Test**

Sputum direct fluorescent antibody (DFA) test examines sputum direct fluorescent antibody (dfa) test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sputum Fungal Smear**

Sputum fungal smear examines sputum fungal smear; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sputum Gram Stain**

Sputum Gram stain examines sputum gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sputum Stain For Mycobacteria**

Sputum stain for mycobacteria examines sputum stain for mycobacteria; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Squamous Cell Skin Cancer**

Squamous cell skin cancer is a malignant keratinocyte tumor often arising on sun-exposed skin and capable of local invasion or metastasis, especially when high risk.

---

### **Standard Eye Exam**

Standard eye exam examines standard eye exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Staph Infections - Self-Care At Home**

Staph infections - self-care at home examines staph infections - self-care at home; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Staph Infections In The Hospital**

Staph infections in the hospital examines staph infections in the hospital; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Staphylococcal Meningitis**

Staphylococcal meningitis is infection and inflammation of the meninges caused by Staphylococcus bacteria, often after surgery, trauma, bloodstream infection, or an invasive device.

### **Starch Poisoning**

Starch poisoning involves toxic or environmental exposure to starch poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Stasis Dermatitis And Ulcers**

Stasis dermatitis and ulcers result from chronic venous hypertension in the lower legs, causing swelling, brown skin change, inflammation, itching, and slow-healing wounds.

### **Stay Active And Exercise When You Have Arthritis**

Stay active and exercise when you have arthritis examines stay active and exercise when you have arthritis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stay Away From Asthma Triggers**

Avoiding asthma triggers such as smoke, allergens, infections, fumes, and cold air can reduce symptoms and attacks, alongside prescribed controller and reliever treatment.

### **Staying Safe At Home**

Staying safe at home addresses care related to staying safe at home, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Steam Iron Cleaner Poisoning**

Steam iron cleaner poisoning involves toxic or environmental exposure to steam iron cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Steps To Take Before You Get Pregnant**

Preconception care includes reviewing health conditions and medicines, folic acid, vaccinations, dental and genetic considerations, substance avoidance, and planning prenatal care.

### **Stereotactic Radiosurgery - CyberKnife**

Stereotactic radiosurgery - CyberKnife examines stereotactic radiosurgery - cyberknife; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stereotactic Radiosurgery - Discharge**

Stereotactic radiosurgery - discharge examines stereotactic radiosurgery - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stereotactic Radiosurgery - Gamma Knife**

Stereotactic radiosurgery - Gamma Knife examines stereotactic radiosurgery - gamma knife; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stereotypic Movement Disorder**

A clinical condition involving stereotypic Movement

---

Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Sterile Technique**

A medical term referring to sterile technique. Its clinical meaning depends on the context in which it is used.

### **Sterilization Surgery - Making A Decision**

A medical procedure, treatment, device, or care topic related to sterilization surgery - making a decision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Sternal Exploration Or Closure**

Surgical reopening or repair of the breastbone after median sternotomy, performed to treat infection, bleeding, instability, dehiscence, or other postoperative chest complications.

### **Steroid Injections - Tendon, Bursa, Joint**

Steroid injections - tendon, bursa, joint examines steroid injections - tendon, bursa, joint; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stimulus**

A stimulus is a physical, chemical, sensory, or social change that evokes a response from a cell, tissue, organism, or person.

### **Stingray**

Stingray involves toxic or environmental exposure to stingray; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Stoddard Solvent Poisoning**

Stoddard solvent poisoning involves toxic or environmental exposure to stoddard solvent poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Stonefish Sting**

Stonefish sting involves toxic or environmental exposure to stonefish sting; dose, route, timing, symp-

toms, and organ involvement determine urgency and treatment.

### **Stool C Difficile Toxin**

Stool C difficile toxin is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

### **Stool Gram Stain**

Stool Gram stain examines stool gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stool Guaiac Test**

Stool guaiac test examines stool guaiac test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stool Ova And Parasites Exam**

Stool ova and parasites exam examines stool ova and parasites exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stools – Floating**

Feces that remain on the water surface, often from trapped gas or diet but sometimes from excess fat in malabsorption; persistent greasy, pale, foul-smelling stool needs evaluation.

### **Stools - Foul Smelling**

Strongly odorous feces that may result from diet, infection, bleeding, malabsorption, altered gut bacteria, or rapid transit; persistent change with weight loss or diarrhea warrants review.

### **Stools - Pale Or Clay-Colored**

Light-colored stool caused by reduced bile pigment reaching the intestine, potentially indicating bile-duct obstruction, gallbladder disease, liver disease, or certain transient conditions.

### **Stop Smoking Support Programs**

Stop smoking support programs addresses care re-

---

lated to stop smoking support programs, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Storing Your Medicines**

Medicines should be stored in their labeled containers at the specified temperature, protected from moisture and children, and checked for expiry or disposal instructions.

### **Stork Bite**

A stork bite is a common harmless pink birthmark, usually a nevus simplex on the forehead, eyelids, nose, or neck, that often fades during childhood.

### **Strains**

A strain is overstretching or tearing of a muscle or tendon, causing pain, tenderness, swelling, weakness, or reduced function after force or overuse.

### **Strategies For Getting Through Labor**

A medical term referring to strategies for getting through labor. Its clinical meaning depends on the context in which it is used.

### **Streptococcal Screen**

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### **Stress And Your Health**

Stress and your health addresses care related to stress and your health, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Stress And Your Heart**

Stress and your heart addresses care related to stress and your heart, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Stress In Childhood**

Stress in childhood addresses care related to stress

in childhood, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Stretch Marks**

Linear bands of atrophic skin, also called striae, caused by stretching and hormonal or corticosteroid effects; they commonly occur during pregnancy, growth, weight change, or steroid exposure.

### **String Test For Intestinal Parasites**

String test for intestinal parasites examines string test for intestinal parasites; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stroke - Discharge**

A medical procedure, treatment, device, or care topic related to stroke - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Stroke Risk Factors**

Stroke risk factors examines stroke risk factors; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Stuffy Or Runny Nose – Adult**

A stuffy or runny nose in an adult commonly results from viral infection, allergy, irritants, or sinus disease; persistent, severe, bloody, or one-sided symptoms need review.

### **Stuffy Or Runny Nose - Children**

A stuffy or runny nose in a child is usually caused by a viral infection or allergy; breathing difficulty, dehydration, prolonged fever, or symptoms in an infant need prompt assessment.

### **Subacute Combined Degeneration**

Subacute combined degeneration concerns subacute combined degeneration, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

---

### **Subareolar Abscess**

A pus-filled infection beneath the areola, often associated with periductal inflammation and smoking, causing a painful lump, redness, drainage, or recurrent fistula.

### **Subconjunctival Hemorrhage**

Subconjunctival hemorrhage examines subconjunctival hemorrhage; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Subcutaneous (SQ) Injections**

Subcutaneous (SQ) injections examines subcutaneous (sq) injections; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Subcutaneous Implantable Cardioverter-Defibrillator**

A medical procedure, treatment, device, or care topic related to subcutaneous implantable cardioverter-defibrillator; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Subdural Effusion**

Accumulation of usually clear fluid in the subdural space, often after trauma, surgery, infection, or cerebrospinal-fluid disturbance and sometimes causing headache or pressure effects.

### **Substance Use - Amphetamines**

Amphetamine use can cause dependence, insomnia, anxiety, psychosis, high blood pressure, arrhythmias, overheating, and overdose; urgent symptoms require emergency care.

### **Substance Use - Cocaine**

A medical term referring to substance use - cocaine. Its clinical meaning depends on the context in which it is used.

### **Substance Use - Inhalants**

Inhalant misuse involves breathing fumes or gases

from household or industrial products and can cause sudden cardiac arrest, brain injury, organ damage, dependence, or death.

### **Substance Use - LSD**

LSD is a potent hallucinogen that alters perception, mood, and thought and can cause panic, accidents, persistent perceptual symptoms, or psychosis in susceptible people.

### **Substance Use - Marijuana**

Marijuana or cannabis can impair attention, memory, coordination, and driving and may cause dependence, anxiety, psychosis, or respiratory harm when smoked.

### **Substance Use - Phencyclidine (PCP)**

Phencyclidine is a dissociative drug that can cause agitation, hallucinations, loss of coordination, high blood pressure, seizures, dangerous behavior, or coma.

### **Substance Use - Prescription Drugs**

A medicine or pharmacologic agent called substance use - prescription drugs. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Substance Use Recovery And Diet**

Substance use recovery and diet addresses care related to substance use recovery and diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Sugar-Water Hemolysis Test**

Sugar-water hemolysis test examines sugar-water hemolysis test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Suicide And Suicidal Behavior**

Thoughts, plans, attempts, or acts intended to cause one's own death; any current intent, plan, access to means, or inability to stay safe requires immediate emergency support.

---

## **Sulfuric Acid Poisoning**

Sulfuric acid poisoning involves toxic or environmental exposure to sulfuric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Sulindac Overdose**

Sulindac overdose involves toxic or environmental exposure to sulindac overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **Sun Protection**

Sun protection examines sun protection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Supernumerary Nipples**

Supernumerary nipples are extra nipples along the embryonic milk line, usually harmless but occasionally associated with underlying breast or urinary-tract developmental anomalies.

## **Supporting Your Child With Weight Loss**

Supporting your child with weight loss addresses care related to supporting your child with weight loss, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Supranuclear Ophthalmoplegia**

Supranuclear ophthalmoplegia concerns supranuclear ophthalmoplegia, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

## **Suprapubic Catheter Care**

A medical procedure, treatment, device, or care topic related to suprapubic catheter care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Surgery For Pancreatic Cancer**

A medical procedure, treatment, device, or care topic related to surgery for pancreatic cancer; indications, benefits, risks, and follow-up depend on

the specific intervention and patient.

## **Surgery For Pancreatic Cancer - Discharge**

A medical procedure, treatment, device, or care topic related to surgery for pancreatic cancer - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Surgery For Pilonidal Cyst**

A medical procedure, treatment, device, or care topic related to surgery for pilonidal cyst; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Surgical Excision**

A medical procedure, treatment, device, or care topic related to surgical excision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## **Surgical Wound Care - Closed**

Surgical wound care - closed addresses care related to surgical wound care - closed, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Surgical Wound Care - Open**

Surgical wound care - open addresses care related to surgical wound care - open, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

## **Surgical Wound Infection - Treatment**

Surgical wound infection - treatment examines surgical wound infection - treatment; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Sutures - Ridged**

Ridged cranial sutures are raised skull seams in an infant and may reflect normal molding or premature suture fusion, which requires assessment for craniosynostosis.

---

### **Sutures - Separated**

Separated cranial sutures in an infant can reflect normal growth or increased intracranial pressure, hydrocephalus, prematurity, or other illness and require clinical assessment.

### **SVC Obstruction**

SVC obstruction examines svc obstruction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Swallowing Chalk**

A medical term referring to swallowing chalk. Its clinical meaning depends on the context in which it is used.

### **Swallowing Difficulty**

A medical term referring to swallowing difficulty. Its clinical meaning depends on the context in which it is used.

### **Swallowing Problems**

A medical term referring to swallowing problems. Its clinical meaning depends on the context in which it is used.

### **Swallowing Soap**

A medical term referring to swallowing soap. Its clinical meaning depends on the context in which it is used.

### **Swallowing Sunscreen**

Ingestion of sunscreen, usually causing mild gastrointestinal upset but potentially causing choking or aspiration depending on amount and product; breathing difficulty or persistent vomiting requires urgent help.

### **Swan-Ganz - Right Heart Catheterization**

Insertion of a pulmonary-artery catheter through the right heart to measure central venous, pulmonary-artery, and wedge pressures and cardiac output in selected critically ill patients.

### **Sweat Electrolytes Test**

Sweat electrolytes test examines sweat electrolytes test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Sweetened Beverages**

Sweetened beverages contain added sugars and can increase calorie intake, dental caries, obesity, and diabetes risk when consumed frequently.

### **Sweeteners - Sugar Substitutes**

Sugar substitutes provide sweetness with little or no sugar; types differ in energy, digestion, after-taste, and effects on glucose and gastrointestinal symptoms.

### **Sweeteners - Sugars**

Sugars are simple carbohydrates that provide energy but can raise blood glucose and contribute to dental decay or excess calories when consumed in excess.

### **Swimmer's Ear**

Swimmer's ear concerns swimmer's ear, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

#### **Synonyms:**

Ear Infection, Outer Ear Outer Ear Infection

### **Swimming Pool Cleaner Poisoning**

Swimming pool cleaner poisoning involves toxic or environmental exposure to swimming pool cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Swimming Pool Granuloma**

Swimming-pool granuloma is a skin infection caused by *Mycobacterium marinum* after exposure to contaminated water, producing persistent nodules along lymphatic channels.

### **Swollen Lymph Nodes**

Swollen lymph nodes are enlarged immune glands, commonly from infection but sometimes from in-

---

flammation, medication, or cancer; persistent, hard, or generalized nodes need evaluation.

**Synonyms:**

Lymph Nodes, Swollen Lymph Swollen Glands (Swollen Lymph Nodes) Lymph Swollen Nodes (Swollen Lymph Nodes)

**Sydenham Chorea**

A delayed neurologic complication of group A streptococcal infection causing involuntary jerky movements, hypotonia, emotional lability, and coordination problems, usually in children.

**Syndrome Of Inappropriate Antidiuretic Hormone Secretion**

A clinical condition involving syndrome Of Inappropriate Antidiuretic Hormone Secretion; its causes, manifestations, severity, and complications guide diagnosis and management.

**Synovial Biopsy**

Synovial biopsy examines synovial biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

**Syphilitic Aseptic Meningitis**

Syphilitic aseptic meningitis is inflammation of the meninges caused by *Treponema pallidum*, producing headache, neck stiffness, cranial-nerve symptoms, or other neurologic findings.

**Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)**

Alternate index label for Sacroiliac Joint Pain.

**Sacroiliac Joint Pain**

Sacroiliac-joint pain arises near the junction of the lower spine and pelvis and may follow injury, pregnancy, arthritis, leg-length or gait changes, or inflammation. Pain can radiate to the buttock or thigh; examination distinguishes it from hip or spine disease.

**Synonyms:**

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

**SAD (Seasonal Affective Disorder (SAD))**

Alternate index label for Seasonal Affective Disorder (SAD).

**Salmonella Contagious (Is Salmonella Contagious)**

Alternate index label for Is Salmonella Contagious.

**Salmonella Food Poisoning (Salmonellosis)**

Alternate index label for Salmonellosis.

**Sarcoptic Mange (Scabies)**

Alternate index label for Scabies.

**Scabies Contagious (Is Scabies Contagious)**

Alternate index label for Is Scabies Contagious.

**Scalp And Body (Ringworm)**

Alternate index label for Ringworm.

**Scar Excessive (Keloid)**

Alternate index label for Keloid.

**Scarlatina (Scarlet Fever (Scarlatina))**

Alternate index label for Scarlet Fever (Scarlatina).

**Scarlet Fever (Scarlatina)**

Alternate index label for Scarletina.

**Scarlet Fever Contagious (Is Scarlet Fever Contagious)**

Alternate index label for Is Scarlet Fever Contagious.

**Scars**

A scar is fibrous tissue formed during healing after injury, surgery, inflammation, or burns. Scars may be flat, depressed, raised, or contractured and can itch, hurt, restrict movement, or affect appearance; treatment depends on maturity and type.

---

### **School Sores (Impetigo)**

Alternate index label for Impetigo.

### **Sciatic Neuritis (Sciatica)**

Alternate index label for Sciatica.

### **Sciatica: Causes, Treatment, And Symptoms**

Sciatica is radiating pain, tingling, numbness, or weakness along the sciatic-nerve distribution, commonly from lumbar disc herniation or spinal narrowing. Most cases improve with conservative care, but saddle numbness, bowel or bladder dysfunction, or progressive weakness is urgent.

### **Seasonal Affective Disorder (SAD)**

Alternate index label for SAD.

### **Seasonal Allergies (Hay Fever)**

Alternate index label for Hay Fever.

### **Seborrhea**

Seborrhea is excessive or altered oil production that contributes to greasy scale and inflammation, commonly in seborrheic dermatitis of the scalp, face, or chest. Gentle cleansing, medicated shampoos, and topical anti-inflammatory or antifungal treatment may help.

### **SEID (Chronic Fatigue Syndrome)**

Alternate index label for Chronic Fatigue Syndrome.

### **Seizure Febrile (Febrile Seizures)**

Alternate index label for Febrile Seizures.

### **Seizure Fever Induced (Febrile Seizures)**

Alternate index label for Febrile Seizures.

### **Seizures Symptoms And Types**

Seizures are episodes of abnormal electrical brain activity that may cause staring, altered awareness, unusual sensations, stiffening, rhythmic movements, loss of tone, or post-event confusion. First seizure, prolonged seizure, injury, pregnancy, or repeated events requires urgent care.

### **Self Gratification Sexual (Masturbation)**

Alternate index label for Masturbation.

### **Self-Diagnosing Body Dysmorphic Disorder (BDD)**

Alternate index label for BDD.

### **Semaglutide**

Semaglutide is a glucagon-like peptide-1 receptor agonist used for selected patients with type 2 diabetes or chronic weight management. It slows gastric emptying and reduces appetite and glucose levels; nausea, gallbladder disease, pancreatitis risk, and contraindications require review.

### **Semen Blood (Blood In Semen)**

Alternate index label for Blood In Semen.

### **Sensitivity, Gluten (Nonceliac Gluten Sensitivity (Intolerance))**

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

### **Sentinel Lymph Node Biopsy For Melanoma**

Sentinel lymph-node biopsy identifies and removes the first draining lymph node or nodes from a melanoma site to detect microscopic spread. The result helps stage disease and guide further treatment; it does not remove all regional nodes routinely.

### **Separation Anxiety**

Separation anxiety is developmentally excessive fear or distress when apart from an attachment figure, causing avoidance, physical complaints, sleep problems, or impairment. Treatment may include gradual exposure, family-based support, cognitive behavioral therapy, and selected medication.

#### **Synonyms:**

Children Separation Anxiety (Separation Anxiety)

### **SepsContagious (Is Sepsis Contagious)**

Alternate index label for Is Sepsis Contagious.

---

## **Septicemia (Sepsis)**

Alternate index label for Sepsis.

## **Septum Deviated (Deviated Septum)**

Alternate index label for Deviated Septum.

## **Serious Diseases And Health Problems (Symptoms Of Serious Diseases And Health Problems)**

Alternate index label for Symptoms of Serious Diseases and Health Problems.

## **Serous Cyst Adenomas Pancreas (Pancreatic Cysts)**

Alternate index label for Pancreatic Cysts.

## **Severe Acute Respiratory Syndrome (Severe Acute Respiratory Syndrome (SARS))**

Alternate index label for Severe Acute Respiratory Syndrome (SARS).

## **Severe Condition (Sever Condition)**

Alternate index label for Sever Condition.

## **Sexual (Sex) Problems In Men**

Alternate index label for Sex) Problems in Me.

## **Sexual Addiction**

Compulsive sexual behavior involves persistent difficulty controlling sexual thoughts or behaviors despite distress or harm. It is not simply a high sex drive; assessment considers mood disorders, trauma, substance use, relationships, consent, and evidence-based behavioral treatment.

### **Synonyms:**

Addiction Sexual (Sexual Addiction)

## **Sexual Health Overview**

Sexual health includes physical, emotional, mental, and social well-being in relation to sexuality and relationships. It includes consent, contraception, sexually transmitted infection prevention and testing, fertility, sexual function, safety, and respectful communication.

## **Sexually Transmitted Disease (STD) Treatments**

Alternate index label for STD) Treatment.

## **Sexually Transmitted Diseases (STDs In Women)**

Alternate index label for STDs In Women.

## **Sexually Transmitted Diseases And Pregnancy (STDs)**

Alternate index label for STDs.

## **Shaken Baby Syndrome (Abusive Head Trauma)**

Alternate index label for Abusive Head Trauma.

## **Sharp Pains In Your Stomach During Pregnancy**

Sharp abdominal pain in pregnancy may result from ligament stretching, gas, constipation, uterine contractions, urinary disease, ectopic pregnancy, placental complications, or other causes. Severe or persistent pain, bleeding, fever, faintness, vomiting, or reduced fetal movement needs urgent obstetric assessment.

## **Shingles (Herpes Zoster)**

Alternate index label for Herpes Zoster.

## **Shingles And Pregnancy**

Shingles is reactivation of varicella-zoster virus and usually causes a painful one-sided blistering rash. It is not the same as primary chickenpox exposure, but pregnancy requires prompt clinical advice about treatment, pain, and contact with people at risk.

## **Shoulder Bursitis**

Shoulder bursitis is inflammation of a fluid-filled sac around the shoulder, often associated with rotator-cuff disease or repetitive overhead activity. Pain with elevation and lying on the affected side is common; activity modification, therapy, medicines, injection, or treatment of the underlying cause may help.

### **Synonyms:**

---

Bursitis Shoulder (Shoulder Bursitis)

### **Shulmans Syndrome (Eosinophilic Fasciitis)**

Alternate index label for Eosinophilic Fasciitis.

### **Sick Building Syndrome**

Sick building syndrome describes nonspecific symptoms such as headache, fatigue, eye or throat irritation, cough, dizziness, or nausea associated with time in a building and improving away from it. Ventilation, humidity, pollutants, mold, and other environmental factors should be assessed.

### **Sickle Cell**

Sickle-cell disease is an inherited hemoglobin disorder causing red cells to become rigid and sickle-shaped, leading to anemia, painful vaso-occlusive episodes, infection risk, stroke, acute chest syndrome, and organ damage. Comprehensive preventive and disease-modifying care is needed.

#### **Synonyms:**

Sickle Cell Anemia (Sickle Cell)

### **Sickle Cell Anemia (Sickle Cell)**

Alternate index label for Sickle Cell.

### **Sickness Motion (Motion Sickness (Sea Sickness, Car Sickness))**

Alternate index label for Motion Sickness (Sea Sickness, Car Sickness).

### **Silent Sinus Syndrome**

Silent sinus syndrome is painless inward collapse of the maxillary sinus and floor of the orbit, often causing facial asymmetry, enophthalmos, or a sunken eye. Imaging confirms the diagnosis, and endoscopic treatment restores sinus ventilation when indicated.

### **Silk Road Disease (Behcet's Syndrome)**

Alternate index label for Behcet's Syndrome.

### **Sinus Headache**

Pain attributed to a sinus headache is often migraine, but sinus inflammation can cause facial pressure,

congestion, reduced smell, and pain that worsens with bending. Fever, purulent discharge, persistent symptoms, or eye or neurologic signs guide evaluation.

### **Sixth Disease (Roseola)**

Alternate index label for Roseola.

### **Skin Anatomy Picture Definition Function**

Skin consists of epidermis, dermis, and subcutaneous tissue with appendages such as hair, nails, glands, nerves, vessels, and immune cells. It forms a barrier, regulates temperature, senses the environment, prevents fluid loss, and participates in immunity and vitamin D production.

### **Skin Cancer Overview**

Skin cancer includes basal-cell carcinoma, squamous-cell carcinoma, melanoma, and less common tumors. Ultraviolet exposure, immune suppression, genetic susceptibility, and certain lesions increase risk; a changing, bleeding, nonhealing, or unusual lesion needs examination.

#### **Synonyms:**

Melanoma (Skin Cancer Overview)

### **Skin Rashes Contagious (Are Skin Rashes Contagious)**

Alternate index label for Are Skin Rashes Contagious.

### **Skin Tag**

A skin tag is a benign soft growth of connective tissue, commonly in body folds and associated with friction, age, pregnancy, obesity, or insulin resistance. Removal may be performed for irritation or appearance, but a changing or atypical lesion should be diagnosed first.

#### **Synonyms:**

Acrochordon (Skin Tag)

### **SLE (Systemic Lupus)**

Alternate index label for Systemic Lupus.

---

## **Sleep And Sleep Disorders In Children And Teens**

Children and teens need age-appropriate sleep, and disorders may involve insomnia, circadian delay, sleep apnea, parasomnias, restless legs, or insufficient opportunity. Snoring, pauses in breathing, unusual daytime sleepiness, mood change, or poor school performance warrants evaluation.

### **Synonyms:**

Children Sleep (Sleep And Sleep Disorders In Children And Teens) Disorders Sleep In Children (Sleep And Sleep Disorders In Children And Teens) Disorders Sleep In Teenagers (Sleep And Sleep Disorders In Children And Teens) Infants Sleep (Sleep And Sleep Disorders In Children And Teens) Toddlers Sleep (Sleep And Sleep Disorders In Children And Teens) Tweens Sleep (Sleep And Sleep Disorders In Children And Teens) Younger Children Sleep (Sleep And Sleep Disorders In Children And Teens)

## **Sleep Disorder Periodic Limb Movement (Periodic Limb Movement Disorder)**

Alternate index label for Periodic Limb Movement Disorder.

## **Sleep Related Breathing Disorders**

Sleep-related breathing disorders cause abnormal ventilation or oxygenation during sleep, including obstructive and central sleep apnea and sleep-related hypoventilation. Snoring, witnessed pauses, gasping, morning headache, or daytime sleepiness may prompt sleep testing and treatment.

### **Synonyms:**

Breathing Disorders Sleep Related (Sleep Related Breathing Disorders)

## **Small Intestinal Bacterial Overgrowth (SIBO)**

Alternate index label for SIBO.

## **Small Intestinal Bacterial Overgrowth (Small Intestinal Bacterial Overgrowth (SIBO))**

Alternate index label for Small Intestinal Bacterial Overgrowth (SIBO).

## **Smoke Secondhand (Secondhand Smoke)**

Alternate index label for Secondhand Smoke.

## **Smokeless Tobacco**

Smokeless tobacco delivers nicotine and causes dependence, oral lesions, gum recession, tooth loss, cardiovascular risk, and cancers of the mouth, throat, and pancreas. Quitting reduces harm, and counseling plus approved medicines improve cessation success.

### **Synonyms:**

Tobacco Chewing (Smokeless Tobacco)

## **Smokers Keratosis (Leukoplakia)**

Alternate index label for Leukoplakia.

## **Smokers Lung (Smoker's Lung: Pathology Photo Essay)**

Alternate index label for Smoker's Lung: Pathology Photo Essay.

## **Snake Bite**

Snake bites can cause puncture wounds, tissue injury, bleeding, paralysis, or venom-related effects on clotting, nerves, muscles, kidneys, or the heart. Call emergency services, keep the person still, and do not cut, suck, ice, or tourniquet the wound.

### **Synonyms:**

Bite Snake (Snake Bite)

## **Snoring How To Stop (How To Stop Snoring)**

Alternate index label for How to Stop Snoring.

## **Social And Psychological Causes Of Alcoholism**

Alcohol-use disorder reflects interactions among genetics, brain reward pathways, stress, trauma, mental illness, social environment, and alcohol availability—not a moral failure. Treatment may include withdrawal care, counseling, peer support, and medicines that reduce drinking or relapse.

## **Sodium Low Levels In The Blood**

---

### **(Hyponatremia)**

Alternate index label for Hyponatremia.

### **Solar Keratosis (Actinic Keratosis)**

Alternate index label for Actinic Keratosis.

### **Sole Sweating Excessive (Hyperhidrosis)**

Alternate index label for Hyperhidrosis.

### **Sore Throat (Pharyngitis)**

Alternate index label for Pharyngitis.

### **Sore Throat Contagious (Is Sore Throat Pharyngitis Contagious)**

Alternate index label for Is Sore Throat Pharyngitis Contagious.

### **Sores Canker (Canker Sores)**

Alternate index label for Canker Sores.

### **Sores Canker Contagious (Are Canker Sores Contagious)**

Alternate index label for Are Canker Sores Contagious.

### **Spastic Colon (Irritable Bowel Syndrome (IBS))**

Alternate index label for Irritable Bowel Syndrome (IBS).

### **Spherocytos (Spherocytosis (Hereditary, HS))**

Alternate index label for Spherocytosis (Hereditary, HS).

### **Spherocytosis (Hereditary, HS)**

Alternate index label for Hereditary, HS.

### **Spider Bites (Black Widow And Brown Recluse)**

Alternate index label for Black Widow and Brown Recluse.

### **Spinal Cord Injury: Treatments And**

### **Rehabilitation**

Spinal-cord injury can cause temporary or permanent weakness, sensory loss, autonomic dysfunction, and bowel or bladder problems. Acute care protects the spine and treats complications; rehabilitation addresses mobility, skin, breathing, function, equipment, sexuality, and community participation.

### **Spleen Enlarged (Enlarged Spleen)**

Alternate index label for Enlarged Spleen.

### **Splenomegaly Gaucher (Gaucher Disease)**

Alternate index label for Gaucher Disease.

### **Sprain Neck (Whiplash)**

Alternate index label for Whiplash.

### **Sprained Ankle**

An ankle sprain is stretching or tearing of ligaments, usually after rolling the ankle inward. Pain, swelling, bruising, and instability occur; protection, relative rest, compression, elevation, and progressive rehabilitation help, while inability to bear weight may require imaging.

#### **Synonyms:**

Strains (Sprained Ankle)

### **Spring Fever (Henoch-Schonlein Purpura)**

Alternate index label for Henoch-Schonlein Purpura.

### **Spur Heel (Heel Spurs)**

Alternate index label for Heel Spurs.

### **Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)**

Alternate index label for Cervical Dysplasia.

### **Staph Infection Contagious (Is A Staph Infection Contagious)**

Alternate index label for Is a Staph Infection Contagious.

### **Staphylococcus Infection (Staph**

---

### **Infection)**

Alternate index label for Staph Infection.

### **STD (Sexually Transmitted Diseases (STDs In Women))**

Alternate index label for Sexually Transmitted Diseases (STDs In Women).

### **STD (Syphilis In Women Overview)**

Alternate index label for Syphilis in Women Overview.

### **Stenosis Lumbar (Lumbar Stenosis)**

Alternate index label for Lumbar Stenosis.

### **Stenosis Spinal (Lumbar Stenosis)**

Alternate index label for Lumbar Stenosis.

### **Stomach Ulcer (Peptic Ulcer)**

Alternate index label for Peptic Ulcer.

### **Strain Neck (Whiplash)**

Alternate index label for Whiplash.

### **Strains (Sprained Ankle)**

Alternate index label for Sprained Ankle.

### **Strep Throat (GAS)**

Alternate index label for GAS.

### **Streptococcal Infections**

Streptococcal bacteria can cause throat infection, scarlet fever, skin infection, pneumonia, invasive bloodstream disease, and post-infectious complications. Diagnosis and antibiotic choice depend on site and testing; severe pain, rapid spread, sepsis signs, or breathing difficulty is urgent.

### **Streptococcal Pharyngitis (Strep Throat (GAS))**

Alternate index label for Strep Throat (GAS).

### **Stress Breast Cancer (Breast Cancer And**

### **Coping With Stress)**

Alternate index label for Breast Cancer and Coping With Stress.

### **Strictures Esophagus (Schatzki Ring)**

Alternate index label for Schatzki Ring.

### **Stroke Heat (Heat Stroke)**

Alternate index label for Heat Stroke.

### **Stroke Symptoms And Treatment**

Stroke is brain injury from blocked blood flow or bleeding. Sudden facial droop, arm weakness, speech trouble, vision change, imbalance, or severe headache requires emergency activation; treatment may include clot-busting medicine, thrombectomy, bleeding control, and rehabilitation.

#### **Synonyms:**

Cerebrovascular Accident (Stroke Symptoms And Treatment) CVA (Stroke Symptoms And Treatment)

### **Sty (Stye)**

Alternate index label for Stye.

### **Stye (Sty (Stye))**

Alternate index label for Sty (Stye).

### **Sun-Sensitive Drugs (Photosensitivity To Drugs)**

Alternate index label for Photosensitivity to Drugs.

### **Sun-Sensitive Drugs (Sun-Sensitive Drugs (Photosensitivity To Drugs))**

Alternate index label for Sun-Sensitive Drugs (Photosensitivity to Drugs).

### **Supraventricular Tachycardia Paroxysmal (Paroxysmal Supraventricular Tachycardia (PSVT))**

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

### **SVCS (Superior Vena Cava Syndrome)**

Alternate index label for Superior Vena Cava Syn-

---

drome.

### **Swimmers Ear (Otitis Externa)**

Alternate index label for Otitis Externa.

### **Swine Flu Contagious (Is Swine Flu (H1N1) Contagious)**

Alternate index label for Is Swine Flu (H1N1) Contagious.

### **Syndrome Asperger (Asperger Syndrome)**

Alternate index label for Asperger Syndrome.

### **Syndrome Cauda Equina (Cauda Equina Syndrome)**

Alternate index label for Cauda Equina Syndrome.

### **Syndrome Compartment (Compartment Syndrome)**

Alternate index label for Compartment Syndrome.

### **Syndrome Cyclic Vomiting (Cyclic Vomiting Syndrome (CVS))**

Alternate index label for Cyclic Vomiting Syndrome (CVS).

### **Syndrome Loeys-Dietz (Loeys-Dietz Syndrome)**

Alternate index label for Loeys-Dietz Syndrome.

### **Syndrome Pfeiffer (Pfeiffer Syndrome)**

Alternate index label for Pfeiffer Syndrome.

### **Syndrome Restless Legs (Restless Leg Syndrome)**

Alternate index label for Restless Leg Syndrome.

### **Syphilis In Women Overview**

Syphilis is a sexually transmitted infection caused by *Treponema pallidum* and progresses through stages that may include painless sores, rash, neurologic or cardiovascular disease, or no symptoms. Penicillin treatment cures infection and is essential in pregnancy to prevent congenital disease.

### **Synonyms:**

STD (Syphilis In Women Overview)

### **Systemic Lupus**

Systemic lupus erythematosus is an autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, lungs, and heart. Symptoms fluctuate, and treatment is tailored to organ involvement with sun protection, monitoring, and immunomodulatory medicines.

### **Synonyms:**

Arthritis SLE (Systemic Lupus) Lupus (Systemic Lupus) SLE (Systemic Lupus)

### **S1-S5 (Sacral Vertebrae)**

The five sacral vertebrae that fuse to form the sacrum, connect the spine to the pelvis, and provide foramina for sacral nerve roots.

### **SA Node**

The sinoatrial node is the heart's normal pacemaker, generating electrical impulses that initiate each sinus heartbeat.

### **SAA**

SAA commonly means serum amyloid A, an acute-phase protein that rises with inflammation and can contribute to secondary amyloidosis when persistently elevated.

### **Sabin, Florence R.**

Florence R. Sabin was an American physician and scientist whose research advanced understanding of lymphatic anatomy, tuberculosis, and immune-cell biology.

### **Sacral**

Sacral means relating to the sacrum, the triangular bone at the base of the spine that connects with the pelvis.

### **Sacroccocygeal**

Sacroccocygeal means relating to the sacrum and coccyx at the lower end of the vertebral column.

---

### **Sacroiliac Joint Dysfunction (SI Joint Pain)**

A clinical condition involving sacroiliac Joint Dysfunction (SI Joint Pain); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Sagittal**

Sagittal means oriented from front to back and dividing the body or a structure into right and left portions.

### **Salabrasion**

A dermabrasion method using salt or an abrasive salt preparation to remove superficial skin layers; it carries risks of pain, infection, pigment change, and scarring.

### **Salient**

Salient means prominent or especially relevant; a salient clinical finding is one that stands out and may influence diagnosis or management.

### **Sanguine**

Sanguine means blood-related or blood-red; in older usage it can also describe a temperament or complexion.

### **Sapphism**

Sapphism is an historical term for sexual or romantic relationships between women; respectful modern language generally uses lesbian or same-sex relationships.

### **Scaling**

Scaling is flaking or shedding of the outer skin layer and may occur with dryness, eczema, psoriasis, fungal infection, or other skin disease.

### **Scan**

Scan is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Scarification**

Intentional scratching, cutting, or abrasion of skin, historically used in some inoculation or cultural practices and medically used in limited procedures; it can cause infection and scarring.

### **Scler-**

The term Scler- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Sclero-**

The term Sclero- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Sclerosis**

Abnormal hardening or scarring of tissue, often from excess connective tissue, chronic inflammation, degeneration, or neurologic plaques; the affected organ determines the specific disease.

### **Script**

A script is a written set of instructions or a prescription; in healthcare, a prescription specifies the medicine, dose, route, timing, and duration.

### **Scrofulous**

Scrofulous is an old term for tuberculous infection of lymph nodes, especially in the neck, which can cause chronic swelling and draining sinuses.

### **Scrub**

A scrub is vigorous cleaning or a garment worn in healthcare; clinical scrubbing reduces contamination when performed with the appropriate method and duration.

### **Scrub In**

To scrub in is to perform surgical hand antisepsis and put on sterile clothing and gloves before participating in a sterile procedure.

### **Scrub Up**

To scrub up means to clean and antiseptically pre-

---

pare the hands and forearms before a sterile procedure.

### Scrubs

Scrubs are protective work garments commonly worn by healthcare staff; they reduce clothing contamination but do not replace hand hygiene or other precautions.

### Section

A defined part or subdivision of an organ, document, study, or procedure; in anatomy and imaging, the term identifies a specific slice or region examined.

### Section, Cesarean

Cesarean section, an operation delivering a baby through incisions in the abdomen and uterus when vaginal birth is unsafe, impossible, or not advisable.

### Seizure Disorders

Conditions characterized by recurrent unprovoked seizures or an enduring predisposition to them, classified by seizure type and cause and treated according to epilepsy syndrome and risk.

### Selective Serotonin Reuptake Inhibitor

A medicine, biologic, or pharmacologic term related to selective serotonin reuptake inhibitor; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

### Semen DNA Analysis

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### Sense

A sense is a capacity to detect and interpret stimuli such as touch, temperature, pain, sound, light, smell, taste, position, or internal body signals.

### Septic

Relating to infection or contamination by pathogenic microorganisms; in “septic shock” it

refers to life-threatening circulatory and metabolic dysfunction caused by an abnormal response to infection.

### Septum, Heart

The wall separating the right and left chambers of the heart, consisting of atrial and ventricular portions and preventing normal mixing of oxygenated and deoxygenated blood.

### Sequela

A lasting consequence or condition that remains after an earlier disease, injury, infection, or treatment has ended, such as paralysis after stroke or scarring after infection.

### Sequester

To sequester means to isolate or set apart; in medicine, sequestered tissue or material is separated from its normal circulation or surroundings.

### Ser

Ser is the standard abbreviation for serine, an amino acid incorporated into proteins and involved in metabolism and cell signaling.

### Serendipity

Serendipity is an unexpected beneficial discovery; in research, it describes useful findings that arise while investigating another question.

### Serine

Serine is a nonessential amino acid used in protein synthesis, one-carbon metabolism, membrane formation, and signaling.

### Serositis

Inflammation of a serous membrane, such as the pleura, pericardium, or peritoneum, causing pain with breathing or movement and sometimes an inflammatory effusion.

### Serration

A row of small tooth-like projections or notches along an edge, used to describe anatomy, cells, in-

---

struments, or imaging appearances.

### **Serum Glutamic Oxaloacetic Transaminase (SGOT)**

SGOT, now called AST, is an enzyme released by injured liver, heart, skeletal muscle, or other cells; its level must be interpreted with other findings.

### **Serum Glutamic Pyruvic Transaminase (SGPT)**

SGPT, now called ALT, is an enzyme concentrated in liver cells and commonly measured as a marker of hepatocellular injury.

### **Serving Size**

Serving size is the standardized amount used to describe the nutrients or calories in food and may differ from the amount a person actually eats.

### **Sesquipedalian**

Sesquipedalian means characterized by very long words; clear healthcare communication favors language that patients can understand.

### **Sexual Sadism**

Sexual sadism involves recurrent arousal from another person's suffering or humiliation; acts without consent are abuse, and safety-focused clinical care is required.

### **SGOT**

SGOT is the former abbreviation for AST, an enzyme measured in blood that can rise with injury to liver, heart, muscle, or other tissues.

### **SGPT**

SGPT is the former abbreviation for ALT, a liver-associated enzyme that rises in many forms of hepatocellular injury.

### **Shark Attack**

A shark attack can cause severe lacerations, bleeding, tissue loss, drowning, and shock; emergency rescue, hemorrhage control, and trauma care are critical.

### **Shin Bone Fever**

Shin bone fever refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Shin Spot**

A shin spot is a nonspecific mark or lesion on the lower leg; its significance depends on appearance, duration, symptoms, injury, and associated disease.

### **Ship Fever**

An historical term for epidemic typhus, a louse-borne infection caused by *Rickettsia prowazekii* and associated with crowding, fever, rash, and severe systemic illness.

### **Shock, Secondary**

Circulatory failure occurring as a consequence of another condition, such as infection, trauma, bleeding, heart failure, allergy, or endocrine crisis, with inadequate tissue perfusion.

### **Short Arm Of A Chromosome**

The p arm, or shorter arm, of a chromosome, named from the French *petit*; cytogenetic bands on this arm locate genes and chromosomal abnormalities.

### **Shotty**

Shotty describes small, firm, discrete lymph nodes, often reactive after infection; persistent, enlarging, hard, or generalized nodes require evaluation.

### **SHP**

SHP is a context-dependent abbreviation that may refer to a healthcare professional, a gene or protein, or another clinical term; the full meaning should be specified.

### **Siddha Medicine**

Siddha medicine is a traditional South Asian healing system using dietary, herbal, mineral, and other practices; products may have contamination, toxicity, or interaction risks.

---

## Side Effects

Side effects are unintended effects of a medicine or treatment, ranging from mild symptoms to serious toxicity; risk depends on the product, dose, and patient.

## Sigmoid

Sigmoid means S-shaped; the sigmoid colon is the curved section of large intestine between the descending colon and rectum.

## Signature

A signature is a person's identifying mark or electronic confirmation of approval, consent, authorship, or verification.

## Silver Bullet

A medical term referring to silver bullet. Its clinical meaning depends on the context in which it is used.

## Silver Poisoning

Silver poisoning, or argyria, follows excessive silver exposure and can cause permanent blue-gray skin discoloration and, rarely, organ or neurologic effects.

## Simian Crease

A simian crease is a single transverse crease across the palm, which may be a normal variant or occur with some chromosomal or developmental conditions.

## Situational Syncope

A reflex faint triggered by a specific situation such as coughing, urination, defecation, swallowing, laughter, or prolonged standing, caused by transient reduced cerebral perfusion.

## Six Fingers Or Toes

Six fingers or toes is polydactyly, a congenital extra-digit difference that may occur alone or as part of a genetic syndrome.

## Skeleton, Bones Of The

The body's framework of bones and cartilage, providing support, protection, leverage for movement,

mineral storage, and marrow-based blood-cell production.

## Skin Color

Skin color refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

## Skin Graft, Pedicle

Skin graft, pedicle refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

## Slanted Ear

Slanted ear refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

## SLE (Systemic Lupus Erythematosus)

Systemic lupus erythematosus is an autoimmune disease that can inflame skin, joints, kidneys, blood cells, nervous system, heart, or other organs.

## Sleep Drug

A medicine, biologic, or pharmacologic term related to sleep drug; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

## Sliding Hiatal Hernia

A sliding hiatal hernia occurs when the stomach and gastroesophageal junction move upward through the diaphragm, often contributing to reflux.

## SLS (Sjogren-Larsson Syndrome)

A clinical condition involving sLS (Sjogren-Larsson Syndrome); its causes, manifestations, severity, and complications guide diagnosis and management.

## SLV

SLV is a context-dependent abbreviation that may mean single-lung ventilation, serum lithium value, or another term; the full meaning should be specified.

---

### **Small Calorie (Calorie)**

A small calorie is a unit of heat energy; food labels usually use a kilocalorie, written Calorie with a capital C, equal to 1,000 small calories.

### **Small Eye**

Small eye refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Small Round Blue Cell Tumor**

Small round blue cell tumor refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Snort**

A snort is a forceful nasal or respiratory sound; it may occur with congestion, sleep-disordered breathing, irritation, or inhalation of a substance.

### **Snot**

Snot is an informal term for nasal mucus, which traps particles and helps protect the respiratory lining; its appearance changes with infection, allergy, and irritation.

### **Snuff**

Snuff is finely ground tobacco inhaled through the nose or placed in the mouth and can cause nicotine dependence, oral disease, and cardiovascular harm.

### **Sociophobia**

An older term for social anxiety disorder, involving excessive fear of scrutiny, embarrassment, humiliation, or negative evaluation in social or performance situations.

### **Somnolence**

Abnormal sleepiness or a tendency to fall asleep during wakeful periods, caused by insufficient sleep, medicines, sleep disorders, metabolic disease, or neurologic illness.

### **Somnolent**

Somnolent means unusually sleepy or drowsy, which may result from sleep deprivation, medicines, intoxication, metabolic illness, or neurologic disease.

### **Speculum, Ear**

Speculum, ear refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Speech-Language Pathologist**

A clinician who evaluates and treats disorders of speech, language, voice, communication, cognition, and swallowing across childhood, adulthood, and older age.

### **Speed**

Speed is an informal term for methamphetamine, a stimulant that can cause dependence, cardiovascular toxicity, psychosis, overheating, and other serious harms.

### **Spit**

Spit is saliva expelled from the mouth; increased saliva or repeated spitting may reflect oral irritation, nausea, reflux, swallowing difficulty, or behavior.

### **Spots In Front Of The Eyes**

Floaters or visual spots caused by shadows from vitreous opacities, inflammation, bleeding, retinal tears, migraine, or other eye or neurologic conditions; sudden flashes or a curtain-like loss are urgent.

### **Sprue, Nontropical**

A clinical finding or condition involving sprue, Nontropical; evaluation depends on its characteristic features, causes, severity, and complications.

### **Squamous Cells**

Flat epithelial cells with scale-like appearance that line surfaces such as skin, mouth, cervix, and esophagus; abnormal numbers or forms can reflect irritation, infection, dysplasia, or cancer.

---

## SSRI

An SSRI is a selective serotonin-reuptake inhibitor antidepressant used for depression and several anxiety-related disorders; effects and withdrawal symptoms require monitoring.

## St. Anthony's Fire

St. Anthony's fire is an historical name for ergot poisoning or, in some usage, erysipelas; modern diagnosis should identify the specific disease.

## Stasis Ulcer

A stasis ulcer is a chronic lower-leg wound caused by venous hypertension and poor return of blood, commonly near the ankle and associated with edema and skin changes.

## Stenotic

Stenotic means narrowed, as in a stenotic heart valve, blood vessel, airway, intestine, or other passage.

## Stereotactic

Stereotactic describes a technique using three-dimensional coordinates to target a precise location in the brain or another body structure.

## Sternutation

Sneezing, a reflex forceful expulsion of air through the nose and mouth triggered by irritation of nasal or upper-airway sensory receptors.

## Steroid Abuse

Steroid misuse is non-prescribed or excessive use of corticosteroids or anabolic-androgenic steroids, which can cause endocrine suppression, psychiatric effects, infection, metabolic disease, liver injury, cardiovascular harm, or tissue damage.

## STI

An STI is a sexually transmitted infection spread through sexual contact, including infections caused by bacteria, viruses, parasites, or fungi.

## Stiff Baby Syndrome

A clinical condition involving stiff Baby Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

## Stomach Cramps

Intermittent gripping or spasmodic upper-abdominal pain caused by gas, infection, indigestion, ulcer disease, gallbladder or pancreatic disease, obstruction, or other causes.

## Stomach Fat (Belly Fat, Abdominal Fat)

Adipose tissue stored beneath the skin or around abdominal organs; excess visceral fat is metabolically active and associated with insulin resistance, fatty liver, and cardiovascular risk.

## Stomach Paralysis

Stomach paralysis, or gastroparesis, is delayed emptying of stomach contents without obstruction, causing early fullness, nausea, vomiting, and bloating.

## Stool

Fecal material expelled from the bowel, composed of water, undigested residue, bacteria, cells, mucus, and bile pigments; color, form, frequency, and blood can provide clinical clues.

## Stool Occult Blood Test

Stool occult blood test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

## Streptococcus Pneumoniae (Pneumococcus)

Streptococcus pneumoniae (pneumococcus) is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

## Stroke Index

Stroke index is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation

---

depends on the method and clinical context.

### **STS**

STS is a context-dependent abbreviation that may mean soft-tissue sarcoma, sodium thiosulfate, or another clinical term; the full term should be stated.

### **Study Population**

The defined group of people included in a research study, selected according to eligibility criteria and used to estimate effects, associations, or outcomes.

### **Stuffy Nose**

Stuffy nose refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Subaortic Stenosis**

Narrowing of the left-ventricular outflow tract just below the aortic valve, often caused by a fibrous ridge or tunnel and producing a pressure gradient, murmur, and possible aortic-valve injury.

### **Subclinical Disease**

A clinical condition involving subclinical Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Subcu**

Subcu is an abbreviation for subcutaneous, meaning beneath the skin; clear clinical instructions should spell out the route.

### **Subjacent**

Subjacent means lying directly beneath or below another structure.

### **Sublingual**

Sublingual means beneath the tongue; medicines given this way can be absorbed through oral mucosa and may bypass much first-pass liver metabolism.

### **Subq**

Subq is an abbreviation for subcutaneous, referring to tissue beneath the skin and the route used for

some injections.

### **Substance**

A substance is a material with defined or variable chemical composition; medical effects depend on identity, dose, route, duration, and host factors.

### **Subway Diet**

A commercial weight-loss approach emphasizing low-calorie meals from a restaurant chain; healthfulness depends on total nutrients, sodium, portion size, sustainability, and individual medical needs.

### **Succenturiate Placenta**

A succenturiate placenta has one or more accessory lobes separate from the main placenta, which can increase risk of retained tissue or fetal-vessel injury.

### **Succumb**

To succumb means to die from or be overcome by a disease, injury, exposure, or other serious process.

### **Sulfite Sensitivity**

Sulfite sensitivity is an adverse reaction to sulfite preservatives, sometimes causing wheeze, flushing, headache, or other symptoms, especially in people with asthma.

### **Sulfonamides**

Sulfonamides are drugs containing a sulfonamide group, including antibacterial agents that inhibit bacterial folate synthesis; allergic reactions, severe skin reactions, cytopenias, renal effects, and crystal-luria are possible.

### **Sulfonylurea**

A sulfonylurea is an oral diabetes medicine that closes pancreatic beta-cell ATP-sensitive potassium channels and stimulates insulin release; hypoglycaemia and weight gain are the main class risks.

### **Sundowning**

Late-day or evening worsening of confusion, agitation, wandering, or behavioral symptoms in some people with dementia or delirium, influenced by

---

fatigue, light, routines, and unmet needs.

### **Sunflower Syndrome**

A clinical condition involving sunflower Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Superaspirin**

Superaspirin is an informal term for selective COX-2 inhibitors or other anti-inflammatory drugs developed to reduce gastrointestinal effects; cardiovascular risks remain relevant.

### **Superbug**

A superbug is an informal term for a microorganism resistant to multiple antimicrobial drugs, making infection harder to treat and prevent from spreading.

### **Surrogacy**

Surrogacy is an arrangement in which a person carries a pregnancy for intended parent or parents; medical, legal, ethical, and psychosocial requirements vary by jurisdiction.

### **Swallowing Syncope**

A medical term referring to swallowing syncope. Its clinical meaning depends on the context in which it is used.

### **Sweat Gland Tumor**

A biomedical term referring to sweat gland tumor; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Sweating, Gustatory**

Sweating triggered by eating or smelling food, usually over the cheek or temple after parotid-nerve injury or surgery and known as Frey syndrome.

### **Swollen Tongue**

Swollen tongue refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Symptomatic Treatment**

Symptomatic treatment is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Syncope, Coughing**

A brief faint caused by coughing, which raises chest pressure, reduces venous return and cardiac output, and transiently lowers cerebral blood flow.

### **Syndemic**

A syndemic is the interaction of two or more diseases with social or environmental conditions that together worsen health outcomes.

### **Syndrome, Nervous Colon**

A clinical condition involving syndrome, Nervous Colon; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Syndrome, Post-Polio (PPS)**

A clinical condition involving syndrome, Post-Polio (PPS); its causes, manifestations, severity, and complications guide diagnosis and management.

### **Syndrome, TAR**

A clinical condition involving syndrome, TAR; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Synesthete**

A synesthete is a person who experiences synesthesia, in which stimulation of one sense or cognitive pathway automatically evokes another perception.

### **Systolic**

Systolic means relating to contraction of the heart, especially the pressure in arteries when the ventricles eject blood.

### **Sz**

Sz is an informal abbreviation for seizure; clinical documentation should identify the seizure type and relevant features clearly.

---

### **Spontaneous Abortion (Miscarriage)**

Unintentional loss of a pregnancy before fetal viability. Causes include chromosomal abnormalities, uterine or cervical problems, infection, and maternal medical conditions.

#### **Synonyms:**

Miscarriage

### **Shellfish Allergy**

An immune reaction to proteins in crustaceans or mollusks that can cause hives, digestive or respiratory symptoms, or anaphylaxis.

### **Social Anxiety Disorder (Social Phobia)**

Intense fear and avoidance of social or performance situations because of concern about embarrassment, judgment, or scrutiny.

#### **Synonyms:**

Phobia, Social

### **Squamous Cell Carcinoma Of The Skin**

A skin cancer arising from squamous cells, often appearing as a scaly, crusted, wart-like, or ulcerated growth.

#### **Synonyms:**

Cancer, Squamous Cell

### **Sudden Cardiac Arrest**

An abrupt loss of effective heart activity, causing unresponsiveness and absent or abnormal breathing; it is a medical emergency.

#### **Synonyms:**

Cardiac Arrest, Sudden

### **Swimmer's Itch**

An itchy rash caused by an allergic reaction to microscopic parasites released by infected snails in freshwater or saltwater.

#### **Synonyms:**

Cercarial Dermatitis Dermatitis, Cercarial

### **Small Vessel Disease**

Disease affecting small blood vessels, which can impair blood flow and contribute to brain, heart, kidney, or other organ problems.

#### **Synonyms:**

Coronary Microvascular Disease

### **Sudden Infant Death Syndrome (SIDS)**

The unexplained sudden death of an apparently healthy infant, usually during sleep and before one year of age.

#### **Synonyms:**

Crib Death

### **Self-Injury/Cutting**

Deliberate injury to one's own body, often used to cope with overwhelming emotions and requiring compassionate assessment of safety and mental health.

#### **Synonyms:**

Self Harming

### **Sweating And Body Odor**

Excess perspiration or noticeable odor produced when skin bacteria break down sweat; it may be influenced by hygiene, diet, medicines, hormones, or disease.

#### **Synonyms:**

Body Odor And Sweating

### **Subconjunctival Hemorrhage (Broken Blood Vessel In Eye)**

A small blood vessel broken beneath the clear surface of the eye, causing a sharply demarcated red patch that usually resolves without treatment.

#### **Synonyms:**

Broken Blood Vessel In Eye

### **Seborrheic Keratosis**

A common benign, usually pigmented, raised skin growth with a waxy or stuck-on appearance.

### **Subchorionic Hemorrhage**

Bleeding between the chorion and the uterine wall caused by partial separation of the gestational sac membranes. It may produce vaginal bleeding in early or mid-pregnancy and is assessed according to bleeding, gestational age, and ultrasound findings.

---

## Sensory Processing Disorder

Difficulty detecting, interpreting, or responding to sensory input such as sound, touch, movement, light, or body position. It may affect behavior, learning, coordination, or daily activities and can occur with other neurodevelopmental conditions. Assessment and occupational-therapy strategies are individualized.

## Stasis Dermatitis

Inflammation of the lower-leg skin caused by chronic venous hypertension and edema. It may cause itching, redness, scaling, brown discoloration, weeping, or ulcers around the ankles. Management focuses on treating venous disease, compression when safe, skin care, and evaluation for infection or arterial insufficiency.

## Spontaneous Coronary Artery Dissection (SCAD)

A non-traumatic, non-iatrogenic separation within the wall of a coronary artery, usually caused by an intramural hematoma or an intimal tear. It can obstruct coronary blood flow and cause acute coronary syndrome, especially in younger or peripartum women; diagnosis and management require specialist cardiovascular assessment.

### Synonyms:

SCAD

## Cardiac Cachexia

A severe wasting syndrome associated with advanced heart failure or other serious cardiac disease, characterized by involuntary weight loss, skeletal-muscle loss, weakness, and reduced functional capacity. It reflects neurohormonal, inflammatory, metabolic, and nutritional abnormalities and is associated with poor prognosis.

## Scale

Visible flakes or plates of stratum corneum shed from the skin surface, commonly caused by abnormal keratinization, inflammation, infection, or dryness.

## Seborrheic

Relating to increased or altered activity of sebaceous glands or to areas rich in these glands, such as the scalp, face, chest, and upper back.

## Serologic Test

A blood test that detects antibodies, antigens, or other immune markers to help diagnose infection, assess immunity, or monitor response to treatment.

## Subclinical Infection

An infection that produces no noticeable symptoms or signs but may still be detectable by testing and may sometimes be transmissible.

## Sjögren's Disease

Alternate index label; see *Sjögren's Syndrome*.

## Shift Work Sleep Disorder

A circadian rhythm sleep-wake disorder caused by work schedules that overlap the usual sleep period, producing insomnia, excessive sleepiness, or both.

## Sleep Debt

The accumulated difference between the amount of sleep a person needs and the amount obtained over time; it may impair alertness, mood, cognition, and performance.

## Sleep Diary

A daily record of sleep and wake times, awakenings, naps, medicines, caffeine, and related factors used to assess sleep patterns and treatment response.

## Sleep Efficiency

The percentage of time spent asleep while in bed, calculated as total sleep time divided by time in bed and multiplied by 100.

## Sleep Fragmentation

Repeated brief awakenings or arousals that interrupt otherwise continuous sleep and may reduce restorative sleep.

---

### **Sleep Onset Latency**

The time required to fall asleep after attempting to sleep; prolonged latency may occur with insomnia, anxiety, circadian misalignment, stimulants, or another sleep disorder.

### **Sleep-Related Hypoxemia**

Abnormally low blood oxygen during sleep that may occur with sleep-disordered breathing, lung disease, neuromuscular weakness, hypoventilation, or other medical conditions.

### **Sedative-Hypnotic Toxicodrome**

A poisoning pattern caused by central nervous system depressants, producing drowsiness, slurred speech, impaired coordination, reduced reflexes, respiratory depression, coma, or loss of airway protection.

### **Sympathomimetic Toxicodrome**

A poisoning pattern caused by excessive adrenergic stimulation, producing agitation, sweating, dilated pupils, rapid heart rate, high blood pressure, elevated temperature, tremor, or seizures.

### **Silicone Implants**

Medical implants containing silicone gel or elastomer used for breast reconstruction or augmentation; complications may include rupture, capsular contracture, infection, malposition, or need for revision.

### **Soft Tissue Augmentation**

Restoration or enhancement of volume and contour in skin or underlying soft tissue using fillers, fat transfer, implants, or other reconstructive techniques.

### **Sebaceous Hyperplasia**

A benign enlargement of sebaceous glands, presenting as small yellowish papules with central umbilication, usually on the face of adults.

### **Spiradenoma**

A usually benign painful sweat-gland tumor present-

ing as a dermal nodule; multiple spiradenomas may occur in Brooke-Spiegler syndrome.

### **Spiradenocarcinoma**

A rare malignant sweat-gland tumor that may arise in a long-standing spiradenoma, presenting as a rapidly enlarging, painful, or ulcerated nodule.

### **Spitz Nevus**

A benign melanocytic nevus, often a pink or pigmented papule in children or young adults, that may resemble melanoma clinically or histologically.

### **Superficial Spreading Melanoma**

The most common cutaneous melanoma subtype, characterized initially by radial growth across the epidermis and an irregularly pigmented patch or plaque before invasion develops.

### **Syringocystadenoma Papilliferum**

A benign adnexal tumor with apocrine or eccrine differentiation, often presenting as a papule or plaque on the scalp or face and sometimes arising within a nevus sebaceus.

### **Sister Mary Joseph Nodule**

A metastatic tumor deposit in or around the umbilicus, usually from an intra-abdominal or pelvic malignancy.

### **Silicone Mastitis**

A granulomatous inflammatory reaction to silicone released from a breast implant or injected silicone. It may cause nodules, pain, lymphadenopathy, or imaging findings that mimic malignancy.

### **Sebaceous Epithelioma**

A benign sebaceous neoplasm, often presenting as a yellowish papule or nodule. Multiple or unusual lesions may warrant assessment for a DNA mismatch-repair syndrome such as Muir-Torre syndrome.

### **Small Bowel Adenocarcinoma**

A malignant gland-forming epithelial tumor of the small intestine. It is uncommon and may cause

---

occult bleeding, obstruction, abdominal pain, or weight loss; risk is increased in selected inherited and inflammatory disorders.

### **Subependymal Giant Cell Astrocytoma**

A usually low-grade astrocytic tumor arising near the foramen of Monro, strongly associated with tuberous sclerosis complex. It may obstruct cerebrospinal-fluid flow and cause hydrocephalus.

### **Subependymoma**

A rare, usually benign slow-growing ependymal tumor, commonly arising in the ventricular system of adults. Symptoms result from obstruction of cerebrospinal-fluid pathways or incidental detection.

### **Subungual Exostosis**

A benign osteocartilaginous outgrowth arising beneath the nail, usually of a toe or finger. It causes a painful firm subungual mass and nail deformity and is treated by excision when symptomatic.

### **Synovial Reaction To Implanted Prostheses**

Inflammation and tissue response around an orthopedic implant caused by wear particles, loosening, corrosion, infection, or hypersensitivity. Evaluation distinguishes aseptic failure from periprosthetic infection.

### **Scheuermann Disease**

A juvenile osteochondrosis of the spine in which vertebral end plates develop irregularities and anterior wedging during skeletal growth. It commonly produces a rigid thoracic kyphosis, although the thoracolumbar or lumbar spine may also be involved. Symptoms can include back pain, fatigue, limited spinal motion, and postural deformity that becomes more apparent during adolescence. Diagnosis is based on clinical examination and characteristic radiographs; management depends on deformity severity, skeletal maturity, pain, and progression.

### **Subdural Hemorrhage**

Accumulation of blood between the dura mater and arachnoid membrane, usually caused by tearing of

bridging veins after head trauma. Acute hemorrhage may produce rapid neurological deterioration, whereas chronic hemorrhage can develop gradually, particularly in older adults or patients with cerebral atrophy. Clinical features include headache, confusion, drowsiness, focal neurological deficits, seizures, or loss of consciousness. Diagnosis is established with neuroimaging, usually computed tomography, and treatment ranges from observation to surgical evacuation according to size, symptoms, and mass effect.

## T

### Term

The end of pregnancy at 37 completed weeks of gestation; births before this are classified as preterm.

### Tabes

An older term for tabes dorsalis, a late neurologic complication of untreated syphilis.

### TAB Vaccine

An older combined vaccine against typhoid and paratyphoid A and B.

### Tacalcitol

A vitamin-D analogue used topically for psoriasis and selected disorders of keratinization.

### Tacrolimus

An immunosuppressant that inhibits calcineurin; used systemically after transplantation and topically for eczema.

### Tactile

Relating to touch or the sense of touch.

### Taenia

A genus of tapeworms, including *T. solium* and *T. saginata*.

### Taeniasis

Intestinal infection caused by adult *Taenia* tapeworms.

### Talc

A soft mineral; inhalation of talc dust can cause talcosis, and contaminated injected talc can injure

vessels and lungs.

### Talipes

A congenital or acquired deformity of the foot and ankle, including clubfoot.

### Tamoxifen

A selective estrogen-receptor modulator used mainly to treat or prevent selected breast cancers.

### Tampon

A material inserted into the vagina to absorb menstrual blood; prolonged use can rarely lead to toxic shock syndrome.

### Tamponade

Compression of an organ or vessel by accumulated fluid, blood, or gas; cardiac tamponade impairs cardiac filling.

### Tantulum

A misspelling of tantalum, a metal used in selected implants and medical devices.

### Tapotement

A massage technique involving rhythmic tapping or percussion.

### Tapping

Repeated light striking or percussion used in examination, therapy, or testing.

### Target Cell

A cell specifically affected by or responding to a hormone, drug, toxin, antigen, or other signal; target

---

cells may also describe abnormal erythrocytes.

### **Target Organ**

An organ particularly affected by a disease, hormone, toxin, drug, or other exposure.

### **Tars**

A viscous black material derived from organic matter; tobacco tar contains harmful chemicals.

### **Tarsal**

Relating to the tarsus or ankle and hindfoot bones.

### **Tarsus**

The group of seven bones forming the hindfoot and midfoot.

### **Tartar**

A hard deposit of mineralized dental plaque, also called calculus.

### **Tattooing**

Insertion of pigment into the skin; complications include infection, allergy, scarring, and difficulty interpreting lesions.

### **Taxanes**

A class of chemotherapy medicines, including paclitaxel and docetaxel, that stabilize microtubules.

### **Taxis**

Directed movement toward or away from a stimulus; in surgery it may also mean orderly repositioning.

### **Tazarotene**

A topical retinoid used for acne, psoriasis, and photoaging.

### **T-Cell Lymphoma**

A lymphoma arising from T lymphocytes, with multiple biologically distinct subtypes.

### **Tears**

Fluid secreted by the lacrimal glands that lubricates,

nourishes, and protects the ocular surface.

### **Technetium-99**

A radioactive isotope related to technetium-99m; technetium isotopes are used in nuclear medicine and radioactive decay studies.

### **Teeth, Disorders Of**

Conditions affecting teeth, including caries, developmental defects, infection, trauma, malocclusion, and tumors.

### **Teeth-Grinding**

Bruxism, repetitive clenching or grinding of teeth, often during sleep and capable of causing tooth wear and jaw pain.

### **Teichopsia**

A visual disturbance involving shimmering or fortification spectra, commonly occurring as a migraine aura.

### **Teicoplanin**

A glycopeptide antibiotic used for selected serious gram-positive infections.

### **Telangiectasis**

Dilation of small superficial blood vessels, producing visible red or purple lines or patches.

### **Temazepam**

A benzodiazepine hypnotic used short term for insomnia; sedation, dependence, and respiratory depression are risks.

### **Temperature Scales**

Systems for expressing temperature, including Celsius, Fahrenheit, and Kelvin.

### **Temple**

The region of the skull at the side of the head between the forehead and ear.

### **Temporal**

Relating to time or to the side of the skull and

---

temporal lobe.

### **Temporal Artery**

An artery on the side of the scalp, especially the superficial temporal artery.

### **Tenderness**

Pain or discomfort produced by pressing a body part.

### **Teno-**

A combining form relating to a tendon.

### **Tenotomy**

Surgical cutting or division of a tendon.

### **Tenovaginitis**

Inflammation of a tendon and its surrounding sheath, also called tenosynovitis.

### **TENS**

Transcutaneous electrical nerve stimulation, using skin electrodes to deliver electrical pulses for pain modulation.

### **Tentorium**

A fold of dura mater separating the cerebellum from the occipital lobes.

### **Teratogenesis**

The production of congenital abnormalities by genetic, environmental, infectious, nutritional, or drug-related influences.

### **Terbutaline**

A beta-2 agonist used as a bronchodilator; it has limited and specialist use as a tocolytic.

### **Tertian Fever**

A fever pattern recurring approximately every 48 hours, classically associated with *Plasmodium vivax* or *P. falciparum* malaria.

### **Testicle**

A male gonad that produces sperm and testosterone.

### **Testicle, Diseases Of**

Disorders of the testis, including torsion, infection, trauma, tumors, vascular disease, and developmental abnormalities.

### **Test Meal**

A standardized meal given before measuring a physiologic response, such as gastric acid or glucose handling.

### **Test-Tube**

A laboratory glass or plastic vessel used to contain, mix, or test small samples.

### **Test-Tube Baby**

A lay term for a baby conceived through in-vitro fertilization.

### **Tetrabenazine**

A vesicular monoamine transporter 2 inhibitor used for selected hyperkinetic movement disorders.

### **Tetralogy Of Fallot (TOF)**

A congenital heart defect comprising ventricular septal defect, right-ventricular outflow obstruction, overriding aorta, and right-ventricular hypertrophy.

### **Tetraplegia**

Paralysis or severe weakness of all four limbs, usually from cervical spinal-cord disease or injury.

### **Thalassaemia**

The British spelling of thalassemia, inherited reduced production of alpha- or beta-globin chains causing anemia.

### **Thalidomide**

An immunomodulatory medicine used for selected cancers and inflammatory disorders; it is strongly teratogenic.

---

**Theca**

A connective-tissue sheath, especially the theca surrounding an ovarian follicle.

**Thenar Eminence**

The fleshy muscular prominence at the base of the thumb.

**Theophylline**

A methylxanthine bronchodilator with a narrow therapeutic index and substantial interaction and toxicity risk.

**Thermo-**

A combining form relating to heat or temperature.

**Thermography**

Imaging or recording of heat patterns from the body surface.

**Thermoluminescent Dosimeter**

A radiation-monitoring device that measures accumulated exposure by light released from an irradiated crystal when heated.

**Thermometer Scales**

Temperature measurement systems such as Celsius, Fahrenheit, and Kelvin.

**Thermoreceptor**

A sensory receptor detecting warmth or cold.

**Thiabendazole**

An anthelmintic used for selected worm infections and, historically, some fungal infections.

**Thiazides**

Diuretics that inhibit sodium-chloride reabsorption in the distal convoluted tubule.

**Thiazolidinedione Drugs**

Insulin-sensitizing medicines that activate PPAR- $\gamma$ , including pioglitazone.

**Thigh**

The part of the lower limb between the hip and knee.

**Thiopentone Sodium**

A short-acting barbiturate anesthetic used for induction in selected settings.

**Thioridazine**

An older phenothiazine antipsychotic with important cardiac and neurologic toxicity.

**Thiotepa**

An alkylating chemotherapy medicine used in selected cancers and conditioning regimens.

**Thirst**

The conscious desire to drink, regulated largely by osmolality and circulating volume.

**Thought Disorders**

Disturbances of the form, flow, or content of thinking, occurring in psychosis and other conditions.

**Threadworm**

An intestinal infection or the worm *Enterobius vermicularis*, also called pinworm.

**Threonine**

An essential amino acid incorporated into proteins.

**Threshold**

The minimum stimulus or level required to produce a detectable response or effect.

**Thrill**

A palpable vibration over the chest or a blood vessel caused by turbulent blood flow.

**Throat**

The pharynx and adjacent structures behind the mouth and nose.

---

### **Throbbing**

A pulsating or beating quality of pain or sensation.

### **Thrombin**

A coagulation enzyme that converts fibrinogen to fibrin and activates platelets.

### **Thromboangiitis Obliterans**

Buerger disease, an inflammatory tobacco-associated disease of small and medium arteries and veins.

### **Thrombocyte**

Another name for a platelet.

### **Thrombocytopenia**

A misspelling of thrombocytopenia, an abnormally low platelet count.

### **Thrombocytopenic**

Characterized by a reduced number of circulating platelets.

### **Thrombolytic Agents**

Medicines that dissolve blood clots by converting plasminogen to plasmin.

### **Thromboxane**

A lipid mediator produced by platelets that promotes platelet aggregation and vasoconstriction.

### **Thrombus**

A blood clot formed within a blood vessel or heart during life.

### **Thumb-Sucking**

A common childhood habit of sucking the thumb; persistent habit can affect dental and facial development.

### **Thymocyte**

An immature T lymphocyte developing in the thymus.

### **Thymus Gland**

A lymphoid organ in the chest where T lymphocytes mature.

### **Thyroid Gland, Diseases Of**

Disorders of the thyroid, including hypothyroidism, hyperthyroidism, inflammation, nodules, and cancer.

### **Thyroidectomy**

Surgical removal of part or all of the thyroid gland.

### **Thyrotoxicosis**

The clinical state caused by excessive circulating thyroid hormone, regardless of source.

### **Thyrotrophin-Releasing Hormone (TRH)**

A hypothalamic hormone that stimulates pituitary release of TSH and prolactin.

### **Thyrotrophin-Stimulating Hormone (TSH)**

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid hormone production.

### **Tic**

A sudden, rapid, recurrent, nonrhythmic movement or vocalization.

### **Ticks**

Small arachnids that attach to skin and may transmit infections or cause tick paralysis.

### **Synonyms:**

Ticks Bite (Ticks)

### **Timolol Maleate**

The maleate salt of timolol, a beta blocker used in glaucoma and selected cardiovascular conditions.

### **Tissue Plasminogen Activator (TPA, TPA)**

An enzyme or recombinant medicine that converts plasminogen to plasmin and dissolves clots.

---

## **Tissues Of The Body**

Groups of similar cells and extracellular material performing a common function: epithelial, connective, muscle, and nervous tissue.

## **Tidy Wound**

A clean, sharply incised wound with minimal contamination, crushing, or tissue devitalization and clearly defined viable edges. After appropriate assessment and cleaning, it may often be closed primarily.

## **Tissue Typing**

Testing tissue antigens, especially HLA, to assess compatibility for transplantation.

## **Titration**

Gradual adjustment of a medicine dose or measurement of a substance using a reagent of known concentration.

## **Titre**

The concentration or level of an antibody or other substance measured by serial dilution.

## **Titubation**

A rhythmic nodding or tremulous movement, especially of the head or trunk, often associated with cerebellar disease.

## **Tizanidine**

A centrally acting alpha-2 agonist used to reduce painful muscle spasm and spasticity.

## **T-Lymphocyte**

A lymphocyte that matures in the thymus and mediates cellular immune responses.

## **TNM Classification**

A cancer-staging system describing primary tumor size or extent, regional nodes, and distant metastasis.

## **Tobacco**

The plant and its products containing nicotine and

many toxic chemicals; use causes addiction and major disease risk.

## **Tobramycin**

An aminoglycoside antibiotic used for selected bacterial infections, including some gram-negative infections.

## **Toes**

The digits of the foot.

## **Tolazomide**

An older sulfonylurea medicine used to lower blood glucose in type 2 diabetes.

## **Tolbutamide**

An older first-generation sulfonylurea used for type 2 diabetes.

## **Tolerance**

Reduced response to a drug or exposure after repeated use, requiring greater exposure for the same effect.

## **Tomography**

Imaging that produces sectional views through the body.

## **-Tomy**

A suffix meaning incision or cutting into.

## **Tongue**

A muscular organ involved in taste, speech, chewing, and swallowing.

## **Tongue, Disorders Of**

Conditions affecting the tongue, including infection, inflammation, trauma, tumors, and developmental abnormalities.

## **Tonics**

Preparations traditionally claimed to invigorate or strengthen; their contents and evidence vary.

---

**Tonsil**

A mass of lymphoid tissue at the entrance to the pharynx.

**Tonsillitis**

Inflammation or infection of the tonsils, commonly viral or streptococcal.

**Tooth**

A mineralized structure in the jaw used for cutting, tearing, and grinding food.

**Tooth, Supernumerary**

An extra tooth beyond the normal number, which may cause crowding or impaction.

**Toothache**

Pain arising from a tooth or its supporting tissues.

**Tophus**

A deposit of monosodium urate crystals in gout, often around joints or in soft tissues.

**Torpor**

A state of reduced activity, alertness, or responsiveness.

**Torsion**

Twisting of a structure around its axis, potentially cutting off blood supply.

**Torticollis**

Abnormal contraction or posture of the neck causing the head to tilt or rotate.

**Touch**

The sensory perception of contact, pressure, texture, or vibration.

**Tourette's Syndrome**

A neurodevelopmental disorder involving multiple motor tics and at least one vocal tic persisting for more than one year.

**Tourniquet**

A device or band used to compress a limb and temporarily reduce blood flow.

**Toxaemia**

An older term for toxins in the blood or systemic illness; in pregnancy it was historically used for pre-eclampsia.

**Toxbase**

A clinical toxicology information service used to support assessment and management of poisoning.

**Toxicology**

The study of poisons, toxic exposures, their effects, prevention, and treatment.

**Toxic Shock Syndrome**

A severe toxin-mediated illness, usually caused by *Staphylococcus aureus* or *Streptococcus pyogenes*, with fever, rash, hypotension, and organ dysfunction.

**Toxins**

Poisonous substances produced by living organisms.

**Toxocariasis**

A zoonotic infection caused by *Toxocara* larvae, potentially affecting viscera or the eye.

**Toxoid**

A toxin rendered non-toxic but still antigenic, used in vaccines such as tetanus and diphtheria toxoids.

**Toxoplasmosis**

Infection by *Toxoplasma gondii*, usually mild but potentially severe in pregnancy or immunosuppression.

**Synonyms:**

Chorioretinitis *Toxoplasma* (Toxoplasmosis) Meningoencephalitis *Toxoplasma* (Toxoplasmosis)

**TPA/TPA**

Abbreviation for tissue plasminogen activator.

---

### **Trabecula**

A small beam, strut, or partition of tissue, especially in cancellous bone.

### **Trace Elements**

Minerals required in very small amounts, including iron, zinc, copper, iodine, and selenium.

### **Tracer**

A labeled substance used to follow a biological, chemical, or physical process.

### **Trachea**

The windpipe connecting the larynx with the main bronchi.

### **Tracheitis**

Inflammation or infection of the trachea.

### **Tracheostomy**

A surgically created opening through the neck into the trachea, usually with insertion of a tube.

### **Trachoma**

A chronic eye infection caused by Chlamydia trachomatis that can scar the conjunctiva and cornea.

### **Traction**

A pulling force used to align, immobilize, or relieve pressure on tissue or a fracture.

### **Tractotomy**

Surgical interruption of a nerve tract, usually to reduce severe pain or other neurologic symptoms.

### **Training**

Structured acquisition of knowledge, skills, or physical capacity.

### **Trance**

An altered state of awareness; clinical interpretation depends on cause and context.

### **Tranexamic Acid**

An antifibrinolytic medicine that reduces bleeding by inhibiting plasminogen activation.

### **Tranquillisers**

An older term for medicines that reduce anxiety or agitation, including benzodiazepines and some antipsychotics.

### **Transcervical Resection Of Endometrium (TCRE)**

An endoscopic procedure that removes or ablates the endometrium to reduce heavy menstrual bleeding.

### **Transcutaneous Electrical Nerve Stimulation (TENS)**

Electrical stimulation delivered through skin electrodes to modulate pain.

### **Transient Ischaemic Attacks Or Episodes (TIA, TIE)**

Brief focal neurologic episodes caused by temporary ischemia without persistent infarction.

### **Translocation**

Movement of a chromosome segment, cell, organ, or substance to a different position.

### **Trans-Sexualism**

An obsolete term historically used for transgender identity or transition; current respectful terminology is preferred.

### **Transudation**

Passage of low-protein fluid through a membrane because of pressure or osmotic imbalance.

### **Transurethral Resection**

Removal of tissue through an instrument passed along the urethra, commonly for prostate or bladder disease.

### **Transverse**

Running across or perpendicular to the long axis or midline.

---

### **Transvestitism**

An obsolete term for cross-dressing; clothing expression alone is not a mental disorder.

### **Tranylecypromine**

A monoamine oxidase inhibitor antidepressant requiring careful interaction and dietary management.

### **Trapezium**

A carpal bone at the base of the thumb.

### **Trauma**

Physical injury caused by external force, or the psychological response to a distressing event.

### **Traumatology**

The study and treatment of physical injury and its consequences.

### **Travel Medicine**

Medical care concerned with prevention and treatment of health problems related to travel.

### **Travel Sickness**

Motion sickness caused by travel.

### **Tremor**

Involuntary rhythmic oscillation of a body part.

### **Trench Fever**

A louse-borne infection caused by *Bartonella quintana*, producing recurring fever and bone pain.

### **Trench Foot**

Cold and wet injury to the feet causing numbness, swelling, pain, and tissue damage.

### **Trendelenberg Position**

A position in which the patient lies supine with the feet higher than the head; clinical uses and risks depend on context.

### **Trepanning**

Drilling or cutting a circular opening in bone, espe-

cially the skull.

### **Trephining**

Another term for trepanning, creating a circular opening in bone.

### **Treponema**

A genus of spiral bacteria including *T. pallidum*, the cause of syphilis.

### **Triage**

Sorting patients by urgency and resource needs so those at greatest risk receive timely care.

### **Triamcinolone**

A synthetic glucocorticoid used topically, by injection, or in other formulations for inflammation.

### **Triceps**

A three-headed muscle, especially the triceps brachii that extends the elbow.

### **Trichiasis**

Inward misdirection of eyelashes so they rub against the eye.

### **Trichiniasis**

An infection caused by *Trichinella* larvae, acquired from undercooked meat.

### **Trichinosis**

Another name for trichiniasis, caused by *Trichinella* infection.

### **Tricho-**

A combining form relating to hair.

### **Trichoepithelioma**

A rare benign follicular adnexal tumor that usually presents as a skin-coloured papule or nodule on the face or scalp; it can resemble basal-cell carcinoma and may require histopathologic confirmation.

---

### Trichomonas Vaginalis

A flagellated protozoan that causes trichomoniasis, a sexually transmitted infection.

### Trichomoniasis

A sexually transmitted infection caused by *Trichomonas vaginalis*.

### Trichophyton

A genus of dermatophyte fungi causing infections of skin, hair, and nails.

### Trichotillomania

Recurrent compulsive pulling out of one's hair, causing hair loss and distress or impairment.

### Trichuriasis

Intestinal infection caused by the whipworm *Trichuris trichiura*.

### Tricuspid Incompetence

Failure of the tricuspid valve to close completely, causing regurgitation into the right atrium.

### Tricuspid Stenosis

Narrowing of the tricuspid valve opening, obstructing flow from right atrium to right ventricle.

### Tricuspid Valve

The right atrioventricular heart valve between the right atrium and right ventricle.

### Tricyclic Antidepressant Drugs

Antidepressants that inhibit norepinephrine and serotonin reuptake and can cause anticholinergic, cardiac, and toxic effects.

### Trifluoperazine

A phenothiazine antipsychotic used for selected psychotic disorders.

### Trigeminal Nerve

Cranial nerve V, carrying facial sensation and motor supply to muscles of mastication.

### Trigeminal Neuralgia

Brief, severe, electric-shock-like facial pain in one or more trigeminal-nerve divisions.

#### Synonyms:

Neuralgia, Trigeminal Tic Douloureux (Trigeminal Neuralgia)

### Trigger Finger

Stenosing tenosynovitis causing painful catching or locking of a finger during movement.

#### Synonyms:

Stenosing Tenosynovitis Trigger Thumb (Trigger Finger)

### Trigger Thumb

Stenosing tenosynovitis causing painful catching or locking of the thumb.

### Triglyceride

A lipid composed of glycerol and three fatty acids, transported in blood and stored in adipose tissue.

### Trigone

A triangular area, especially the smooth region at the base of the urinary bladder.

### Tri-Iodothyronine

A misspelling of triiodothyronine, the thyroid hormone T3.

### Trimester

One of the three approximately three-month periods of pregnancy.

### Trimethoprim

An antibacterial medicine that inhibits bacterial folate metabolism, often combined with sulfamethoxazole.

### Trimipramine

A tricyclic antidepressant with sedative properties.

### Trinitrin

Another name for glyceryl trinitrate or nitroglycerin,

---

a nitrate vasodilator.

### **Trinitrophenol**

Picric acid, a corrosive and explosive chemical historically used in medicine and industry.

### **Triples**

Three offspring born from the same pregnancy or three infants born in a multiple birth.

### **Trismus**

Restricted ability to open the mouth, commonly caused by tetanus, dental infection, or muscle spasm.

### **Trocar**

A pointed instrument in a cannula used to enter a body cavity or tissue.

### **Trochanter**

A bony prominence on the femur, especially the greater or lesser trochanter.

### **Trochlear Nerve**

Cranial nerve IV, supplying the superior oblique eye muscle.

### **Trophic**

Relating to nutrition, growth, or maintenance of tissue.

### **Trophoblast**

The outer layer of the early embryo that contributes to implantation and placenta formation.

### **Trophozoite**

The active, feeding, and multiplying stage of a protozoan parasite.

### **Tropical Diseases**

Diseases more common in tropical or subtropical regions, including malaria, dengue, and schistosomiasis.

### **Tropical Medicine**

The specialty concerned with diseases prevalent in tropical and subtropical regions and travel-related illness.

### **Tropical Ulcer**

A chronic ulcer occurring in tropical regions, often associated with infection, trauma, or poor wound healing.

### **Trunk**

The central part of the body excluding the head and limbs, or a major nerve or vessel trunk.

### **Truss**

A supportive appliance used historically for a hernia; definitive management depends on the type and complications.

### **Trypanosoma**

A genus of protozoan parasites causing African and American trypanosomiasis.

### **Trypanosomiasis**

Disease caused by Trypanosoma parasites, including African sleeping sickness and Chagas disease.

### **Trypsin**

A pancreatic protease secreted as trypsinogen and activated in the small intestine.

### **Tryptophan**

An essential amino acid and precursor of serotonin, melatonin, and niacin.

### **Tsetse Fly**

A biting fly of the Glossina genus that transmits African trypanosomes.

### **Tsutsugamushi Fever**

Scrub typhus, a mite-borne infection caused by Orientia tsutsugamushi.

---

### **Tubal Pregnancy**

An ectopic pregnancy implanted in a fallopian tube.

### **Tubercle**

A small rounded projection or nodule; it may refer to bone anatomy or a tuberculous lesion.

### **Tuberculide**

A hypersensitivity skin eruption associated with underlying tuberculosis, usually without organisms in the lesions.

### **Tuberculin**

Protein material from *Mycobacterium tuberculosis* used in skin testing for immune sensitization.

### **Tuberculosis**

An infectious disease caused by *Mycobacterium tuberculosis*, most often affecting the lungs.

#### **Synonyms:**

TB

### **Tuberous Sclerosis**

A genetic disorder causing benign tumors or hamartomas in multiple organs, including brain, skin, kidneys, and heart.

### **Tubocurarine**

A historical neuromuscular-blocking alkaloid derived from curare.

### **Tubule**

A small tube or tubular structure, such as a renal tubule.

### **Tularaemia**

A zoonotic infection caused by *Francisella tularensis*, acquired from animals, ticks, contaminated water, or aerosols.

### **Tulle Gras**

A paraffin-impregnated gauze dressing used to cover wounds and burns.

### **Tumescence**

Swelling or enlargement caused by engorgement with blood, fluid, or tissue growth.

### **Tumour**

A mass produced by abnormal cell growth; it may be benign or malignant.

### **Turgor**

The firmness of tissue produced by fluid pressure within cells; skin turgor can help assess dehydration.

### **Turner's Syndrome**

A chromosomal condition, usually involving complete or partial monosomy X, that typically affects phenotypic females. Common features include short stature, ovarian insufficiency with delayed or absent puberty and infertility, webbed neck, broad chest, congenital heart defects such as bicuspid aortic valve or coarctation of the aorta, and increased risk of autoimmune thyroid disease.

### **Twins**

Two offspring from the same pregnancy, either monozygotic or dizygotic.

### **Tympanic Membrane**

The eardrum, a thin membrane separating the external ear canal from the middle ear.

### **Tympanites**

Abdominal distension caused by gas in the intestine.

### **Tympanum**

The middle-ear cavity or, in some contexts, the tympanic membrane.

### **Typhoid Fever**

A systemic infection caused by *Salmonella Typhi*, transmitted through contaminated food or water.

#### **Synonyms:**

Enteric Fever (Typhoid Fever)

### **Typhus Fever**

A group of infections caused by *Rickettsia* species

---

and transmitted mainly by lice or fleas.

### **Tyramine**

A naturally occurring amine in aged or fermented foods that can interact dangerously with monoamine oxidase inhibitors.

### **Tyrosine**

An amino acid used to make proteins, thyroid hormones, melanin, and catecholamines.

#### **Synonyms:**

Full term

### **Thoracic Surgeon**

Surgeon specializing in operations on the chest, including lungs, heart, esophagus, and mediastinum.

### **Thyroid-Stimulating Hormone**

A pituitary hormone that stimulates the thyroid to produce thyroid hormones.

#### **Synonyms:**

TSH

### **Thyroxine**

The main thyroid hormone containing four iodine atoms.

#### **Synonyms:**

T4

### **TIA**

A transient ischemic attack, a temporary episode of neurological dysfunction from reduced brain blood flow.

#### **Synonyms:**

Transient ischemic attack; mini-stroke

### **Ticlopidine**

An antiplatelet medicine that reduces platelet aggregation and clot formation.

### **Tolerable Upper Intake Level**

The highest usual daily nutrient intake unlikely to cause harm in nearly all healthy people.

#### **Synonyms:**

UL

### **Toll-Like Receptors**

Innate-immune receptors that detect characteristic microbial or tissue-danger signals.

#### **Synonyms:**

TLRs

### **Tonic**

A substance or preparation traditionally believed to invigorate or strengthen the body.

### **Tonometry**

Tonometry examines tonometry; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tooth Decay**

Destruction of tooth structure caused by acids produced by bacteria.

#### **Synonyms:**

Dental caries; cavities

### **Topical**

Applied directly to a body surface, usually the skin or a mucous membrane.

### **Toxic**

Poisonous or capable of causing injury to living tissue.

### **Toxic Nodular Goiter**

An enlarged thyroid with nodules that produce excessive thyroid hormone.

### **Toxin**

A poisonous substance produced by a living organism.

#### **Synonyms:**

Biological poison

### **TPA**

Tissue plasminogen activator, a clot-dissolving enzyme or medicine.

---

**Synonyms:**

Tissue plasminogen activator

**Trabecular Bone**

Porous, lattice-like bone tissue found inside bones and near many joints.

**Synonyms:**

Spongy bone; cancellous bone

**Trabecular Meshwork**

A porous tissue in the eye through which aqueous humor drains.

**Trabeculoplasty**

Laser treatment that improves aqueous-humor drainage through the trabecular meshwork.

**Trace Mineral**

A mineral required by the body in very small amounts.

**Trans Fatty Acid**

An unsaturated fatty acid with trans configuration, often formed during industrial oil processing.

**Synonyms:**

Trans fat

**Transcranial Doppler Scanning**

Ultrasound measurement of blood flow through major arteries at the base of the brain.

**Synonyms:**

Transcranial Doppler; TCD

**Transcutaneous Electrical Nerve Stimulation**

Low-voltage electrical stimulation delivered through skin electrodes to reduce pain.

**Synonyms:**

TENS

**Transferrin Saturation**

The percentage of transferrin iron-binding sites occupied by iron.

**Synonyms:**

TSAT

**Transfusion**

Administration of donated blood or blood components into a person's circulation.

**Transient Pain**

Pain that is brief and resolves rather than persisting.

**Transmural Infarction**

A heart attack involving the full thickness of part of the heart wall.

**Transplantation**

Transfer of an organ, tissue, or cells from a donor to a recipient.

**Synonyms:**

Transplant

**Transrectal Ultrasonography**

Ultrasound imaging of the prostate or nearby structures using a rectal probe.

**Synonyms:**

TRUS

**Transurethral Incision Of The Prostate**

An operation using small prostate incisions to relieve obstruction of urine flow.

**Synonyms:**

TUIP

**Transurethral Microwave Thermotherapy**

Heat treatment using microwaves to destroy prostate tissue obstructing urine flow.

**Synonyms:**

TUMT

**Transurethral Needle Ablation**

Treatment using radiofrequency heat delivered by needles to destroy obstructing prostate tissue.

**Synonyms:**

TUNA

---

## **T Wave**

The electrocardiographic deflection representing ventricular repolarization. Its shape and direction vary by lead and clinical context. Abnormal T waves may occur with ischemia, electrolyte disorders, ventricular strain, or other conditions.

## **T-Cell Lymphomas**

Lymphomas arising from mature or immature T lymphocytes. They include several biologically distinct diseases that may involve lymph nodes, skin, blood, or other organs; behavior and treatment depend on the subtype.

## **T-Cell Receptor**

A clonally distributed receptor on T lymphocytes that recognizes a peptide antigen presented by a major histocompatibility complex molecule. TCR signaling requires accessory and co-stimulatory signals for effective T-cell activation.

## **T-Cells (T-Lymphocytes)**

A type of lymphocyte that matures in the thymus and is the central effector of cell-mediated immunity. T-cells express the T-cell receptor (TCR) on their surface, which recognises peptide antigens presented by major histocompatibility complex (MHC) molecules on antigen-presenting cells.

### **Synonyms:**

T-Lymphocytes

## **T3**

Triiodothyronine, the most biologically active thyroid hormone, produced by deiodination of T4 in peripheral tissues (liver, kidney) and secreted by the thyroid. Regulates metabolism (BMR), protein/carbohydrate/lipid metabolism, growth, and development.

## **T4**

Thyroxine, the main hormone secreted by the thyroid gland (thyroxine, 80-90 percent of secretion), converted to the active T3 in tissues. Bound largely to thyroxine-binding globulin (TBG); free T4 is the active unbound fraction. Regulates metabolism, growth, and development.

## **Tabes Dorsalis**

A late manifestation of untreated syphilis in which degeneration of dorsal spinal-cord columns and roots causes sensory ataxia, lightning pains, loss of position sense, areflexia, and bladder or sexual dysfunction.

## **Tablet**

A solid dosage form of compressed drug plus excipients (binders, fillers, disintegrants, lubricants, coatings). Types: immediate-release, enteric-coated (resistant to gastric acid), sustained/controlled-release, sublingual, buccal, effervescent, chewable, and orally disintegrating.

## **Tachyarrhythmia**

An abnormally fast heart rhythm, which may arise from the atria, ventricles, or the heart's conduction system. Symptoms can include palpitations, dizziness, chest discomfort, shortness of breath, or fainting; fainting or severe symptoms require urgent assessment.

## **Tachycardia**

A faster-than-expected heart rate that may be a normal response or a sign of disease. See Fast Heart Rate.

### **Synonyms:**

Rapid Heartbeat

## **Tachyphylaxis**

A rapid, acute decrease in response to a drug after repeated administration over a short period, distinct from tolerance which develops more gradually. Tachyphylaxis results from rapid depletion of neurotransmitter stores, receptor desensitization, or receptor downregulation.

## **Tachypnea**

Abnormally rapid respiratory rate (adult >20 breaths/min). Physiologic (exercise, anxiety) or pathologic: hypoxia, fever, sepsis, metabolic acidosis (Kussmaul), pulmonary embolism, pneumonia, heart failure, pain, and compensation for metabolic derangement.

---

## Tachypnoea

Abnormally rapid breathing, defined as a respiratory rate >20 breaths per minute in adults (age-dependent: >60 in neonates, >40 in 1–12 months, >30 in 1–5 years, >20 in >5 years). Tachypnoea is a non-specific sign of respiratory or metabolic distress.

## Tachysystole (Uterine Hyperstimulation)

More than 5 contractions in 10 minutes averaged over 30 minutes, or contractions lasting  $\geq 2$  minutes. Tachysystole with fetal heart rate changes (late decelerations, prolonged deceleration, loss of variability) is more concerning. Causes: oxytocin (most common), prostaglandins (misoprostol > dinoprostone), and cocaine.

### Synonyms:

Uterine Hyperstimulation

## TACO

Transfusion-Associated Circulatory Overload, a complication of blood transfusion due to volume overload causing pulmonary edema. Risk factors: pre-existing cardiac or renal disease, extremes of age, large transfusion volume, rapid infusion rate.

## Tactile Fremitus

Vibrations transmitted through the lung to the chest wall, felt during palpation. It is increased in consolidation (pneumonia) due to better sound transmission through solid tissue. It is decreased in pleural effusion, pneumothorax, and atelectasis due to impaired transmission.

## Taeniasis (Tapeworm Infection)

Intestinal infection caused by adult *Taenia* tapeworms, usually acquired by eating undercooked meat containing larval cysts. *Taenia solium* and *Taenia saginata* are important species; *Taenia solium* eggs can also cause cysticercosis in tissues.

### Synonyms:

Tapeworm Infection

## Takayasu Arteritis

A chronic granulomatous vasculitis primarily affecting the aorta and its major branches, most com-

monly diagnosed in women under 50 years of age, particularly in Asian populations.

## Takayasu Disease

A large-vessel vasculitis that primarily affects the aorta and its major branches. It may cause limb claudication, weak or unequal pulses, blood-pressure differences, bruits, fever, fatigue, or arterial narrowing and aneurysms. Imaging and inflammatory assessment guide immunosuppressive and vascular treatment.

## Takayasu's Arteritis

A chronic granulomatous vasculitis of the aorta and its major branches, predominantly affecting young women of Asian descent. Causes arterial stenosis, occlusion, or aneurysm formation. Presents with limb claudication, absent pulses, bruit, hypertension, and constitutional symptoms. Treatment: corticosteroids and immunosuppressives.

## Takotsubo Cardiomyopathy

Transient left ventricular apical ballooning resembling a Japanese octopus trap (takotsubo), typically triggered by emotional or physical stress. ECG may show ST elevation mimicking STEMI. Coronary angiography shows no obstructive disease. Most patients recover normal ventricular function within weeks.

## Talcosis

Pneumoconiosis from talc dust inhalation or IV injection of crushed oral medications. Causes upper lobe nodular fibrosis. HRCT may show "galaxy sign" of calcified nodules.

## Talus

Second largest tarsal bone articulating with tibia/fibula proximally at the ankle. Approximately 60 percent of its surface is articular cartilage with no muscular attachments. Transmits entire body weight to the calcaneus. Talar neck fractures may disrupt blood supply causing avascular necrosis in up to 50 percent.

---

## Tangier Disease

An autosomal-recessive disorder of HDL metabolism caused by ABCA1 dysfunction. It produces very low HDL cholesterol, enlarged yellow-orange tonsils, hepatosplenomegaly, peripheral neuropathy, thrombocytopenia, and premature atherosclerosis in some patients.

## Tanner Staging

A scale for assessing sexual maturity during puberty. Stage 1: prepubertal. Stage 2: breast buds (girls), testicular enlargement (boys). Stage 3: breast enlargement, pubic hair. Stage 4: areolar development, more pubic hair.

## Thelarche

The onset of breast development, usually the first visible sign of female puberty. It commonly begins between ages 8 and 13, with substantial normal variation.

## Tapeworm

A parasitic flatworm with a segmented body that may live in the intestine or form larval cysts in tissues. People acquire different species by eating infected meat or fish or by ingesting eggs from contaminated sources. Symptoms and complications depend on the species and site.

## Tapeworm Infection

Infection caused by parasitic tapeworms. *Taenia* species may live as adult worms in the intestine, while some tapeworm larvae can form cysts in tissues.

## Tardive Dyskinesia

Involuntary, repetitive, purposeless movements caused by prolonged use of antipsychotic medications, typically developing after months to years of exposure. Movements include choreoathetoid movements of the tongue, face, and extremities (lip smacking, tongue protrusion, grimacing, choreiform movements of limbs).

## Target-Controlled Infusion

A computerized infusion pump system that main-

tains a predetermined drug concentration in plasma or effect site using pharmacokinetic modeling. TCI systems use three-compartment pharmacokinetic models to calculate infusion rates that achieve and maintain target concentration.

## Targeted Temperature Management

Controlled therapeutic hypothermia for comatose survivors of cardiac arrest. Target: 32-36 degrees C for 24-72 hours followed by gradual rewarming. Mechanism: reduces metabolic demand, limits reperfusion injury, and reduces free radical generation. TTM2 trial showed 33 degrees C was not superior to 36 degrees C.

## Targeted Therapy

Drugs targeting specific molecular abnormalities in cancer. Examples: imatinib (BCR-ABL), trastuzumab (HER2), rituximab (CD20), tyrosine kinase inhibitors. Requires molecular testing.

## Tarlov Cyst

A cerebrospinal-fluid-filled perineural cyst, usually located near the dorsal root ganglia in the sacral spine. Many are incidental, but larger or symptomatic cysts can cause sacral pain, radiculopathy, sensory change, bowel or bladder dysfunction, or sexual dysfunction.

## Tarsal Coalition

An abnormal connection between two bones in the rear or middle foot, usually present from birth. It can cause a stiff, painful flatfoot, recurrent ankle sprains, and limited foot motion, often becoming more noticeable during adolescence.

## Tarsal Tunnel Syndrome

Tibial nerve compression at ankle. Symptoms: burning pain, tingling in foot sole. Tinel sign at ankle. Treatment: orthotics, corticosteroid injection, surgical decompression.

## Taste

The sensation produced by the interaction of chemical substances with taste receptor cells (TRCs) on the tongue, palate, pharynx, epiglottis, and upper

---

esophagus. Taste is one of the five primary senses (gustation).

### **Tau PET**

Tracers: Flortaucipir, MK-6240. Detect tau tangles in neurodegenerative diseases.

### **Taurodontism**

Enlarged pulp chamber, short roots. Molars most affected. Associated with genetic conditions.

### **Tay-Sachs Disease**

Autosomal recessive lysosomal storage disorder (HEXA gene, hexosaminidase A). Accumulation of GM2 ganglioside in neurons. Ashkenazi Jewish prevalence higher. Symptoms: developmental regression, cherry-red spot on macula, seizures, paralysis, death by age 4. No cure.

### **TCA Cycle**

The tricarboxylic acid (Krebs) cycle occurs in the mitochondrial matrix, completing the oxidation of acetyl-CoA (from carbohydrates, fats, and proteins) to CO<sub>2</sub> while generating reducing equivalents (NADH, FADH<sub>2</sub>) for the electron transport chain.

### **TCAs**

Tricyclic antidepressants are a class of drugs that inhibit the reuptake of serotonin and norepinephrine, similar to SNRIs, but also block histamine H<sub>1</sub> receptors, muscarinic acetylcholine receptors, and alpha-1 adrenergic receptors, producing numerous side effects.

### **TCAs (Tricyclic Antidepressants)**

Antidepressants that block reuptake of serotonin and norepinephrine, with additional anticholinergic, antihistaminic, and alpha-adrenergic blocking effects. Examples include amitriptyline, nortriptyline, imipramine, and desipramine. They are effective for depression, neuropathic pain, and migraine prophylaxis.

#### **Synonyms:**

Tricyclic Antidepressants

### **Tdap Vaccination In Pregnancy**

Administration of tetanus, diphtheria, and acellular pertussis (Tdap) vaccine during each pregnancy, optimally at 27-36 weeks. The goal: boost maternal antibodies to protect the newborn from pertussis (whooping cough) before the infant can be vaccinated at 2 months.

### **Tdap Vaccine**

Tetanus, Diphtheria, and acellular Pertussis booster given at 11-12 years and during each pregnancy (27-36 weeks gestation). Replaces one dose of Td. Important for pertussis protection, particularly for protecting newborns through maternal antibody transfer. Also given to adolescents and adults to maintain tetanus and diphtheria immunity.

### **Technetium-99M**

Most widely used radionuclide in nuclear medicine. Half-life: 6 hours. Emits 140 keV gamma rays. Produced from molybdenum-99/technetium-99m generator. Used with various ligands: MDP (bone), sestamibi (myocardium), DTPA (renal), nanocolloid (lymphatic), HMPAO (brain perfusion).

### **Technique**

The method, equipment, and protocol used to perform a medical examination, procedure, or imaging study.

### **Tedizolid Pharmacokinetics**

The study of how tedizolid is absorbed, distributed, metabolized, and eliminated. Tedizolid is available orally and intravenously and has pharmacokinetic properties that support once-daily treatment; its clinical use depends on the infection and patient factors.

### **Teenage Pregnancy**

Pregnancy in adolescents (usually 10-19 years), associated with higher maternal and fetal risks: preterm birth, low birth weight, preeclampsia, anemia, and increased neonatal mortality; also socioeconomic and educational consequences. Causes: unprotected intercourse, lack of contraception/education, poverty, and peer/family factors.

---

## Teeth

Hard, mineralized structures in the mouth used for cutting, tearing, and grinding food.

## Teething

Teething is eruption of an infant's primary teeth through the gums and may cause gum discomfort, drooling, and chewing; high fever or severe illness suggests another cause.

## Tele Radiology

Remote interpretation of imaging studies.

## Tele-Rehabilitation

Remote rehabilitation via technology. Video consultations, remote monitoring, home exercise programs. Increases access, especially rural.

## Telemedicine

Remote delivery of healthcare using technology. Examples: video visits, remote monitoring, store-and-forward. Increases access.

## Telogen Effluvium

Diffuse hair shedding caused by premature entry of hair follicles into the telogen (resting) phase. Triggers include severe illness, surgery, childbirth, rapid weight loss, emotional stress, medications (beta-blockers, retinoids, anticoagulants), and nutritional deficiencies (iron, zinc, vitamin D).

## Telomere

Protective DNA sequence at chromosome ends. Shortens with cell division. Associated with aging.

## Temperature

A measurement of body heat. The result varies with the measurement site, time, activity, age, and illness.

## Temperature (Body Temperature)

The balance between heat production (metabolism, muscle activity) and heat loss (radiation, conduction, convection, evaporation). Normal core body temperature: 36.5–37.5°C (97.7–99.5°F), regulated

by the hypothalamus (preoptic anterior hypothalamus—thermoregulatory center).

### Synonyms:

Body Temperature

## Temple Syndrome

A genomic-imprinting disorder involving chromosome 14q32 that causes prenatal and postnatal growth restriction, hypotonia, developmental delay, feeding difficulty, short stature, and abnormal pubertal development.

## Temporal Arteritis

A vasculitic disorder affecting medium and large arteries, particularly the temporal artery, predominantly occurring in adults over 50 years of age.

## Temporal Bones

Paired bones forming the cranial floor and lateral wall, with squamous, petrous, mastoid, tympanic, and styloid parts. Contain the external auditory canal, middle and inner ear, and foramina: carotid canal (internal carotid), jugular foramen (CN IX–XI, IJV), and foramen lacerum.

## Temporal Lobe

One of the four major lobes of the cerebral hemisphere, located beneath the lateral fissure (Sylvian fissure) on the lateral surface of the brain, extending medially to the parahippocampal gyrus. The temporal lobe is involved in auditory processing, language comprehension, memory, and emotion.

## Temporal Lobe Epilepsy

The most common form of focal (partial) epilepsy, arising from the medial temporal lobe structures (hippocampus, amygdala, parahippocampal gyrus).

## Temporomandibular Joint

Synovial ginglymoarthrodial joint between mandibular condyle and temporal bone's mandibular fossa, separated by an articular disc. Only bilateral body joint, allowing hinge and sliding movements. Disc divides into superior/inferior compartments. Temporomandibular disorders cause pain, clicking, limited movement, common with bruxism.

---

## Temporomandibular Joint Disorder

Pain and dysfunction of TMJ and masticatory muscles. Symptoms: jaw pain, clicking, limited opening, headache, ear pain. Etiology: multifactorial (bruxism, stress, trauma, occlusion). Treatment: conservative (reassurance, self-care, splint, NSAIDs), physical therapy, rare surgery.

## Temporomandibular Joint Replacement

Total joint replacement for severe TMJ pathology. Indications: ankylosis, severe degenerative disease, failed previous surgery.

## Temporomandibular Joint Syndrome

Pain or dysfunction involving the jaw joint and chewing muscles, often causing jaw pain, clicking, restricted opening, headache, or tooth-related symptoms. Causes include clenching, trauma, arthritis, and stress-related muscle tension. Persistent locking, severe pain, or inability to eat requires dental or medical evaluation.

## Tendinitis

Tendinitis is painful inflammation or degeneration of a tendon, often from repetitive loading, causing localized tenderness and pain with movement.

## Tendon

Dense regular connective tissue connecting muscle to bone, composed primarily of type I collagen fibers arranged in parallel bundles. Transmits muscle force to bone to produce movement. Poor vascularity (slower healing). Enclosed in tendon sheath (synovial) at friction points.

## Tendon Transfer

Surgical relocation of a functioning tendon to restore movement or balance when the original muscle-tendon unit is absent, paralyzed, or irreparable. Successful transfer requires an adequate donor, appropriate excursion, and a stable recipient joint.

## Tendonitis

Tendinopathy: inflammation or degeneration of a tendon from overuse, repetitive strain, or trauma, causing localized pain, swelling, and tenderness with

activity. Common sites: rotator cuff (supraspinatus), lateral elbow (tennis elbow), medial elbow (golfer's elbow), Achilles, patellar (jumper's knee), biceps, and De Quervain.

## Tenecteplase

A modified tissue plasminogen activator (TNK-tPA) thrombolytic with longer half-life, higher fibrin specificity, and resistance to PAI-1. Used for acute ischemic stroke and STEMI. Given as a single IV bolus (weight-based), simplifying administration. Adverse effects: hemorrhage (intracranial—major concern), allergic reactions.

## Tenesmus

A distressing sensation of needing to empty the bowel or bladder despite little output, commonly caused by rectal inflammation, infection, tumor, constipation, or urinary irritation.

## Tennis Elbow

Lateral epicondylitis, a tendinopathy of the common extensor tendon at the lateral epicondyle (extensor carpi radialis brevis). Caused by repetitive wrist extension and overuse, not limited to tennis. Presents with lateral elbow pain worsened by wrist extension and grip. Tenderness over the lateral epicondyle.

### Synonyms:

Epicondylitis, Lateral Elbow Tendinopathy, Lateral Epicondylitis, Lateral Epicondylosis

## Tenosynovitis

Tenosynovitis is inflammation of the sheath surrounding a tendon, producing pain, swelling, and restricted gliding, commonly in the hand or wrist.

## Tension Headache

The most common headache type, characterized by bilateral, pressing/tightening head pain of mild-moderate intensity (like a band around the head), lasting 30 min to days, without nausea or vomiting; photophobia or phonophobia may be present but not both.

## Tension Pneumothorax

Life-threatening pneumothorax with mediastinal

---

shift. Emergency needle decompression (2nd intercostal space, midclavicular line) followed by chest tube. Signs: respiratory distress, hypotension, tracheal deviation, distended neck veins, unilateral absent breath sounds.

### **Teratogen**

Substance causing birth defects. Examples: thalidomide, isotretinoin, alcohol, warfarin, valproate, ACE inhibitors. Prenatal exposure critical.

### **Teratogenicity**

The ability of a drug, chemical, or infectious agent to cause birth defects or developmental abnormalities when exposure occurs during pregnancy. The risk of teratogenic effects depends on the timing of exposure, with the embryonic period from 3 to 8 weeks after fertilization being the most critical for organogenesis.

### **Teratoma**

A type of germ cell tumor composed of tissues derived from two or three germ layers (ectoderm, endoderm, mesoderm), reflecting pluripotent differentiation.

### **Terbinafine**

An allylamine antifungal agent that inhibits squalene epoxidase, an early enzyme in the ergosterol biosynthesis pathway, causing accumulation of squalene and depletion of ergosterol in the fungal cell membrane. The accumulation of squalene is fungicidal, while ergosterol depletion disrupts membrane function.

### **Teriparatide For Osteoporosis**

Recombinant human parathyroid hormone fragments one through thirty-four that stimulate osteoblast-mediated bone formation. Indicated for severe osteoporosis with fractures or very low T-scores and for patients who have failed or are intolerant to bisphosphonates. Daily subcutaneous injection for up to two years.

### **Terminal Delirium**

Delirium occurring near the end of life, often

caused by advanced organ failure, medication effects, metabolic disturbance, infection, or reduced cerebral perfusion. Management prioritizes comfort, reversible contributors when consistent with goals, and support for the patient and family.

### **Terminal Illness**

An advanced disease that is expected to lead to death, although the timing and response to available treatment may vary.

### **Tertiary Prevention**

Reducing complications from established disease. Examples: rehabilitation, chronic disease management, palliative care.

### **Test Strips**

Reagents for diagnostic testing. Types: urine dipstick, blood glucose, ketone.

### **Testicular Cancer**

Most common solid malignancy in young men 15-35 years. Types: germ cell tumors (seminoma, non-seminoma), sex cord-stromal tumors. Presentation: painless testicular mass, heaviness, ache. Diagnosis: scrotal ultrasound, tumor markers (AFP, beta-hCG, LDH).

#### **Synonyms:**

Cancer, Testicular

### **Testicular Disorders**

Conditions affecting the testes or surrounding structures, including torsion, infection, inflammation, trauma, tumors, and hormonal disorders. Symptoms may include pain, swelling, a mass, infertility, or changes in sexual development and require appropriate evaluation.

#### **Synonyms:**

Infection Testicle (Testicular Disorders) Pain Scrotum (Testicular Disorders) Torsion Testicle (Testicular Disorders) Tumor Testicle (Testicular Disorders)

### **Testicular Microlithiasis**

Multiple tiny calcifications within the testicular tissue seen on ultrasound. The finding alone does not

---

establish cancer, and follow-up depends on other risk factors and clinical findings.

### **Testicular Torsion**

Surgical emergency caused by twisting of the spermatic cord around its longitudinal axis, cutting off venous return and leading to arterial occlusion, ischemia, and infarction of the testicle.

#### **Synonyms:**

Torsion, Testicular

### **Testicular Torsion Emergency**

Rotation of the spermatic cord that compromises testicular blood flow, causing sudden unilateral scrotal pain, nausea, a high-riding testis, and an abnormal cremasteric reflex. Immediate surgical exploration and detorsion are required; imaging must not delay treatment when suspicion is high.

### **Testis**

The male reproductive gland that produces spermatozoa in seminiferous tubules and secretes testosterone from interstitial Leydig cells. It is normally located in the scrotum.

### **Testis (Testicle)**

The male gonad, a paired ovoid organ (4–5 cm × 2–3 cm, weight 15–20 g) located in the scrotum, responsible for sperm production (spermatogenesis) and testosterone secretion. Each testis is covered by the tunica vaginalis (peritoneal remnant) and tunica albuginea (dense fibrous capsule).

#### **Synonyms:**

Testicle

### **Testosterone**

Testosterone examines testosterone; interpretation depends on the specimen or body region, test method, reference range, and clinical question. essential for the development of male reproductive tissues, secondary sexual characteristics, and overall health.

### **Tetanus**

Tetanus is toxin-mediated neurologic disease caused

by *Clostridium tetani* entering a wound, producing painful muscle rigidity, spasms, autonomic instability, and respiratory failure. introduced through wounds. Characterized by generalized rigidity and painful muscle spasms (trismus/lockjaw, risus sardonicus, opisthotonos). Autonomic instability can occur in severe cases. Diagnosis: clinical.

#### **Synonyms:**

Lockjaw

### **Tetany**

A clinical syndrome of neuromuscular hyperexcitability caused by hypocalcaemia (most common—total calcium <2.1 mmol/L, ionised calcium <1.1 mmol/L), but also caused by hypomagnesaemia, hypokalaemia, and alkalosis (respiratory or metabolic).

### **Tethered Cord Syndrome**

A congenital or acquired condition where the spinal cord is abnormally attached (tethered) to surrounding tissues, restricting its normal upward movement within the spinal canal. Caused by a thickened filum terminale, lipomeningomyelocele, diastematomyelia, or previous myelomeningocele repair.

### **Tetracycline Stain**

Intrinsic discoloration from tetracycline antibiotics during tooth development. Gray or brown bands. Treatment: bleaching, veneers, crowns.

### **Tetracyclines**

A class of bacteriostatic antibiotics that bind reversibly to the 30S ribosomal subunit and block the attachment of aminoacyl-tRNA to the acceptor site, inhibiting protein synthesis. They include tetracycline, doxycycline, and minocycline.

### **Tetralogy Of Fallot**

Tetralogy of Fallot is a congenital heart defect combining ventricular septal defect, right-ventricular outflow obstruction, overriding aorta, and right-ventricular hypertrophy.

### **Th1/Th2/Th17/Tfh/Treg Balance**

CD4+ T helper subsets defined by master tran-

---

scription factors and signature cytokines: Th1 (T-bet, IFN-gamma, IL-12, STAT4): intracellular pathogens, autoimmunity (RA, MS, type 1 diabetes). Th2 (GATA3, IL-4/5/13, IL-4/STAT6): helminths, allergy, asthma.

### Thalamus

Bilateral ovoid gray matter structure forming the third ventricle's lateral walls, the brain's relay station for nearly all sensory (except olfaction), motor, and limbic information to the cortex. Numerous nuclei: VPL (spinothalamic, dorsal column), VPM (trigeminal), LGN (visual), MGN (auditory), VL/VA (motor).

### Thalassemia

A group of inherited hemoglobin disorders caused by reduced or absent synthesis of one or more globin chains, leading to microcytic hypochromic anemia.

#### Synonyms:

Cooley's Anemia Mediterranean Anemia

### Thalassemia Major

Beta-thalassemia, an autosomal recessive hemoglobin disorder with absent or minimal beta-globin chain production. Presents in infancy with severe anemia, failure to thrive, hepatosplenomegaly, and skeletal deformities. Diagnosis by hemoglobin electrophoresis showing absent HbA and elevated HbF and HbA2.

### Thallium Scan

Nuclear medicine imaging using Tl-201. Myocardial perfusion, tumor detection. Largely replaced by Tc-99m agents.

### Thallium-201

SPECT radionuclide, half-life 73 hours. Used for myocardial perfusion imaging. Mechanism: K<sup>+</sup> analog, taken up by Na<sup>+</sup>/K<sup>+</sup> ATPase.

### Thanatology

The scientific study of death, dying, postmortem changes, and the psychological, social, and ethical aspects of bereavement. In forensic medicine, it also examines the circumstances and evidence surround-

ing death.

### Thanatophoric Dysplasia

A severe skeletal dysplasia, usually caused by an FGFR3 variant, with markedly shortened limbs, narrow thorax, macrocephaly, and characteristic skull and vertebral abnormalities. The severe thoracic restriction commonly causes neonatal respiratory failure.

### Theranostic Pair

Combined therapy and diagnostics using matched radiopharmaceutical pairs. See theranostics.

### Theranostics

Combined therapy and diagnostics using matched radiopharmaceutical pairs. Diagnostic isotope (e.g., Ga-68) identifies target, therapeutic isotope (e.g., Lu-177) delivers treatment. Examples: Ga-68/Lu-177 DOTATATE (neuroendocrine tumors), PSMA theranostics (prostate cancer).

### Therapeutic Alliance

The collaborative, trusting relationship between therapist and patient that is foundational to effective psychotherapy. It includes agreement on goals, tasks, and the bond between therapist and patient. It is the strongest predictor of psychotherapy outcome across all therapeutic modalities.

### Therapeutic Drug Monitoring

The clinical practice of measuring specific drug concentrations in blood or plasma to individualize drug dosing and ensure therapeutic effectiveness while minimizing toxicity. TDM is particularly important for drugs with narrow therapeutic indices, where small changes in concentration can lead to therapeutic failure or toxicity.

### Therapeutic Exercise

Exercise prescribed to improve function, reduce pain, prevent disability. Types: stretching, strengthening, aerobic, balance, functional. Progression: low to high intensity.

---

## Therapeutic Hypothermia

Controlled cooling of the body temperature used in psychiatric practice for severe catatonia and neuroleptic malignant syndrome. In NMS, cooling is a key treatment alongside discontinuation of the offending agent and dantrolene administration.

## Therapeutic Index

The therapeutic index is a quantitative measure of the relative safety of a drug, defined as the ratio of the dose that produces toxicity in 50 percent of the population to the dose that produces the desired therapeutic effect in 50 percent of the population.

## Therapeutic Window

The range of plasma drug concentrations between the minimum effective concentration (producing a therapeutic effect) and the minimum toxic concentration (producing toxicity), in which efficacy is achieved with acceptable toxicity.

## Therapeutics

The branch of medicine concerned with the treatment of disease, encompassing all interventions used to prevent, manage, or cure illness.

## Therapy

Treatment intended to prevent, relieve, or cure disease or to improve function and quality of life.

## Therapy Monitoring

Repeated clinical assessment, laboratory testing, or imaging used to evaluate response, adverse effects, and ongoing need for treatment.

## Thermal Injury

Tissue damage caused by heat, flame, hot liquid, steam, or cold. Burn severity depends on depth, total body surface area, location, inhalation injury, associated trauma, and patient factors; assessment should include airway and circulatory complications.

## Thermal Injury (Burns)

Tissue damage caused by heat. Initial care includes stopping the exposure, removing loose constricting

material, cooling briefly with clean water, covering the injury, and assessing depth and extent. Larger or deeper burns require specialized evaluation, fluid management, pain control, wound care, and tetanus assessment.

### Synonyms:

Burns

## Thermal Therapy

Treatment using heat or cold to influence pain, swelling, muscle tension, or tissue temperature. Effects and safety depend on the condition and method used.

## Thermogenesis

Heat production from food digestion, muscle activity, brown fat. Diet-induced thermogenesis 10% of TDEE.

## Thermometer

Device measuring body temperature. Types: mercury (phased out), digital, tympanic, temporal artery, infrared. Normal oral: 36.5-37.5°C.

## Thermoneutral Zone

The range of ambient temperatures over which body temperature is maintained by basal metabolic heat production alone, without additional thermoregulatory responses such as shivering or sweating. In humans the zone is approximately 27-32 degrees C for a resting nude adult. Within the zone, vasomotor tone adjusts heat loss.

## Thermoplasty

A bronchoscopic procedure that uses radiofrequency energy to ablate smooth muscle in the airways, reducing bronchospasm. It is approved for severe, persistent asthma in adults not controlled with ICS/LABA. It reduces exacerbations and emergency department visits but does not improve lung function.

## Thermoregulation

The physiological maintenance of core body temperature near the set point ( 37 degrees C) via a balance of heat production and heat loss, controlled

---

by the preoptic area of the hypothalamus.

### **Thiamine**

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

### **Thiamine (Vitamin B1)**

A water-soluble vitamin whose active coenzyme form, thiamine pyrophosphate, is required by pyruvate dehydrogenase, alpha-ketoglutarate dehydrogenase, transketolase, and branched-chain ketoacid dehydrogenase. Deficiency causes beriberi and Wernicke encephalopathy.

#### **Synonyms:**

Vitamin B1

### **Thiazide Diuretics**

Thiazide diuretics act on the distal convoluted tubule by inhibiting the sodium-chloride cotransporter, reducing sodium and chloride reabsorption and producing natriuresis and diuresis. They are less potent than loop diuretics but have a longer duration of action, typically 6 to 12 hours.

### **Thiazolidinediones**

Insulin sensitizers activating peroxisome proliferator-activated receptors primarily in adipose tissue and skeletal muscle. Agents include pioglitazone and rosiglitazone. Mechanisms include enhanced insulin-mediated glucose uptake, altered adipokine secretion, and reduced hepatic glucose output.

### **Thiopental Sodium**

An ultra-short-acting barbiturate, used for induction of general anesthesia (IV, onset 30–60 seconds, duration 5–10 minutes) and as a third-line agent for raised intracranial pressure (cerebroprotective effect: reduces cerebral metabolism, cerebral blood flow, and intracranial pressure).

### **Third Stage Of Labor**

From delivery of the baby to delivery of the placenta. The placenta separates from the uterine wall and is expelled spontaneously or with gentle cord traction.

Normal duration: 5-30 minutes.

### **Third Trimester**

The period from 28 weeks to delivery. Rapid fetal weight gain occurs, lungs mature with surfactant production. Fetal movements become regular and countable. Braxton Hicks contractions begin. Group B Streptococcus screening at 36 weeks.

### **Third-Degree AV Block**

Complete heart block with no conduction between atria and ventricles. Atria and ventricles beat independently (AV dissociation). Ventricular escape rhythm: junctional (40-60, narrow QRS) or ventricular (20-40, wide QRS).

### **Third-Degree Burn**

A full-thickness burn that destroys the epidermis and dermis and may extend into subcutaneous tissue. The skin may appear white, brown, or charred and sensation may be reduced. Assessment includes burn depth, extent, inhalation injury, and associated trauma; deep or extensive burns require specialist treatment and may need grafting.

### **Thoracentesis**

A medical term referring to thoracentesis. Its clinical meaning depends on the context in which it is used.

### **Thoracic Aortic Aneurysm**

Aneurysm of thoracic aorta. Associated with hypertension, Marfan syndrome, bicuspid aortic valve.

### **Thoracic Cage**

The bony and cartilaginous framework formed by the thoracic vertebrae, ribs, costal cartilages, and sternum. It protects thoracic organs and assists respiratory movements.

### **Thoracic Cavity**

The chest cavity, enclosed by the ribs and chest muscles, containing the lungs, heart, esophagus, and trachea.

---

## Thoracic Duct

Body's largest lymphatic vessel, approximately 40 cm long, draining lymph from the entire body below the diaphragm and left side above it (approximately 75 percent of total lymph).

## Thoracic Endometriosis

Endometrial tissue within the thoracic cavity causing catamenial pneumothorax, hemothorax, or lung nodules, recurring cyclically with menstruation and often requiring hormonal suppression.

## Thoracic Outlet Syndrome

Compression of neurovascular bundle at thoracic outlet. Types: neurogenic (most common), venous, arterial. Symptoms: neck/shoulder/arm pain, paresthesia, weakness, vascular symptoms. Diagnosis: clinical, imaging, nerve conduction. Treatment: physical therapy, surgical decompression.

### Synonyms:

TOS (Thoracic Outlet Syndrome)

## Thoracic Vertebrae

Have costal facets on bodies and transverse processes for rib articulation. Heart-shaped bodies, long downward spinous processes, coronally-oriented facets allowing rotation and lateral flexion but limiting flexion/extension. Small circular vertebral foramen.

## Thoracolumbar Spine Trauma

Injury to the thoracic or lumbar spine. Assessment includes fracture morphology, posterior ligamentous complex integrity, and neurologic status. Classification systems such as AO Spine and TLICS help guide management, which depends on stability and the clinical context.

## Thoracotomy

A surgical incision into the chest wall to access the thoracic cavity (pleural space, lungs, heart, great vessels, esophagus, diaphragm, mediastinum).

## Thought Blocking

An abrupt interruption in the train of thought before

it is completed, as if the thought was removed or pushed out of the patient's mind. The patient may pause mid-sentence, appear confused, and report that the thought was "taken out" or "blocked." It is a formal thought disorder seen in schizophrenia.

## Threadworm (Enterobiasis)

An intestinal parasitic infection caused by *Enterobius vermicularis*, also called pinworm. Infection spreads when eggs are swallowed, often after contact with contaminated hands, bedding, food, or surfaces.

### Synonyms:

Enterobiasis

## Three-Dimensional Ultrasound

Ultrasound creating 3D images. Used in obstetrics, gynecology.

## Throat Cancer

Cancer arising in the pharynx or nearby structures of the throat. Persistent hoarseness, difficulty or pain with swallowing, a neck lump, unexplained weight loss, or persistent sore throat requires medical evaluation, especially in people who use tobacco or alcohol.

### Synonyms:

Cancer, Throat

## Thrombectomy

A surgical or interventional radiology procedure to remove a blood clot (thrombus) from a blood vessel, restoring blood flow. Types: (1) Endovascular thrombectomy (mechanical thrombectomy)—for acute ischemic stroke due to large vessel occlusion (LVO—internal carotid artery, middle cerebral artery M1 segment).

## Thrombectomy (Vascular)

Removal of a blood clot from a blood vessel, using an open surgical or catheter-based procedure.

### Synonyms:

Vascular

## Thromboangiitis Obliterans (Buerger

---

## **Disease)**

An inflammatory disease of small and medium blood vessels, strongly associated with tobacco use. It can cause pain, color changes, ulcers, or gangrene in the hands or feet. Complete tobacco cessation is essential; further treatment depends on ischemia, tissue loss, and other complications.

### **Synonyms:**

Buerger Disease

## **Thrombocytes**

Small, anucleate, disc-shaped cell fragments (2–4  $\mu\text{m}$  diameter) derived from megakaryocytes in the bone marrow, circulating at  $150\text{--}400 \times 10^9/\text{L}$ . See Platelets (Thrombocytes).

## **Thrombocytopathy**

A disorder of platelet function that impairs primary hemostasis despite a normal or near-normal platelet count. It may be inherited or acquired and can cause mucocutaneous bleeding, easy bruising, prolonged bleeding after procedures, or menorrhagia.

## **Thrombocytopenia**

Thrombocytopenia is a low platelet count caused by reduced production, increased destruction or consumption, sequestration, or dilution and may increase bleeding risk.

### **Synonyms:**

Low Platelet Count

## **Thrombocytosis**

An elevated platelet count ( $>450,000/\mu\text{L}$ ). Reactive (secondary): infection, inflammation, iron deficiency, malignancy, post-splenectomy, hemorrhage, exercise—usually mild, no thrombotic risk.

## **Thromboelastography**

A viscoelastic whole-blood assay that measures the initiation, formation, strength, and breakdown of a clot. It provides a functional overview of coagulation and fibrinolysis and may guide targeted blood-component therapy in major bleeding.

## **Thromboembolism**

Obstruction of a blood vessel by a clot that formed elsewhere and traveled through the circulation.

## **Thrombolysis**

The dissolution of a blood clot using a medicine such as a fibrinolytic agent. It is used only in selected conditions because it can cause serious bleeding.

## **Thrombolysis For PE**

Systemic thrombolytics (alteplase) for massive PE with hemodynamic instability. Rapid clot dissolution but significant bleeding risk.

## **Thrombolysis For Stroke**

Thrombolysis with intravenous alteplase (tPA) is the primary acute treatment for ischemic stroke when administered within the time window of symptom onset. Alteplase is a recombinant tissue plasminogen activator that converts plasminogen to plasmin, which degrades fibrin in the thrombus, restoring blood flow to the ischemic brain.

## **Thrombolytic**

A drug that dissolves blood clots by activating plasminogen to plasmin, which degrades fibrin. Agents: alteplase (tPA), tenecteplase (TNK-tPA), reteplase, streptokinase, urokinase. Indications: acute ischemic stroke (within 4.5 hours), STEMI, massive pulmonary embolism, and acute limb ischemia.

## **Thrombophilia**

A tendency to develop venous thromboembolism (VTE) due to inherited or acquired hypercoagulable states. Inherited: factor V Leiden, prothrombin G20210A mutation, antithrombin deficiency, protein C deficiency, protein S deficiency.

## **Thrombophilia Testing**

Thrombophilia testing evaluates for inherited and acquired hypercoagulable states in patients with venous thromboembolism, recurrent pregnancy loss, or strong family history of VTE.

---

## Thrombophlebitis

Thrombophlebitis is inflammation of a vein associated with a blood clot and may be superficial or involve deep veins with risk of pulmonary embolism.

## Thrombopoiesis

The production of platelets from megakaryocytes in the bone marrow. It is regulated principally by thrombopoietin and involves megakaryocyte maturation, proplatelet formation, and release of circulating platelets.

## Thrombosed Intracranial Aneurysm

An intracranial arterial aneurysm that has undergone partial or complete thrombosis of its lumen, which may reduce rupture risk but can cause mass effect on adjacent brain structures. Presents with headache, cranial nerve palsies, or seizures depending on location. Diagnosis: CT, MRI, or conventional angiography.

## Thrombosis

The formation of a blood clot within the cardiovascular system during life, potentially obstructing blood flow and causing tissue ischemia or infarction. Arterial thrombi typically form on ruptured atherosclerotic plaques, are composed primarily of platelets and fibrin, and appear pale and grossly attached to the vessel wall.

## Thrombosis Of The Inferior Vena Cava

Formation of a blood clot within the inferior vena cava, which may occur in the setting of IVC filters, malignancy, hypercoagulable states, or extension from iliofemoral deep vein thrombosis. May cause bilateral lower extremity edema, abdominal pain, and hepatic or renal dysfunction. Requires anticoagulation and possible thrombectomy.

## Thrombotic Microangiopathy

Endothelial damage with platelet-rich microthrombi causing MAHA with schistocytes, thrombocytopenia, and organ ischemia. TTP from ADAMTS13 deficiency treated with plasmapheresis. HUS from Shiga toxin managed supportively. Atypical HUS from complement dysregulation responds to

eculizumab.

## Thrombotic Thrombocytopenic Purpura

A life-threatening thrombotic microangiopathy usually caused by acquired or inherited deficiency of ADAMTS13, the enzyme that cleaves large von Willebrand factor multimers. It causes platelet consumption, red-cell fragmentation, and possible organ ischemia.

## Thrombotic Vasculopathy

A spectrum of disorders characterized by thrombus formation within blood vessels of various sizes, often associated with antiphospholipid syndrome, disseminated intravascular coagulation, thrombotic thrombocytopenic purpura, or malignancy.

## Thrombus Organization

The process by which a thrombus is gradually replaced by granulation tissue and eventually fibrous scar tissue. The process begins when inflammatory cells, particularly macrophages, infiltrate the thrombus and begin digesting the fibrin and dead cells through fibrinolysis.

## Thrush

A common vaginal infection caused by the yeast *Candida albicans* (also called candidiasis, vaginal thrush, or candida vulvovaginitis). Symptoms: itching, soreness, white discharge (like cottage cheese), dyspareunia, and external dysuria. Risk factors: pregnancy, antibiotic use, diabetes, immunosuppression, and high estrogen states.

### Synonyms:

candidiasis, vaginal thrush, or candida vulvovaginitis). Yeast Oral (Thrush)

## Thumb CMC Arthritis

Thumb carpometacarpal (CMC) arthritis: Eaton-Littler classification: I (normal), II (slight narrowing, osteophytes <2mm), III (narrowing, osteophytes >2mm, subluxation), IV (pantrapezial arthritis). Clinical: base of thumb pain, pinch weakness, thenar wasting, squaring (subluxation).

---

## Thymoma

A tumor of thymic epithelial cells, associated with myasthenia gravis, pure red cell aplasia, and hypogammaglobulinemia. Malignant behavior is determined by capsular invasion and stage.

### Synonyms:

Neoplasm Thymomic (Thymoma)

## Thymus

Primary lymphoid organ in the anterior mediastinum, largest in childhood, involutes with age. Site of T-cell maturation (thymopoiesis): thymocytes undergo positive and negative selection to produce self-tolerant, MHC-restricted T cells. Epithelial cells produce thymic hormones (thymosin, thymopoietin).

## Thyroglobulin Surveillance

Thyroglobulin produced only by thyroid follicular cells serves as a tumor marker after total thyroidectomy for differentiated thyroid carcinoma. In patients who have undergone complete thyroidectomy and radioactive iodine ablation thyroglobulin should be undetectable.

## Thyroglossal Duct Cyst

Congenital midline neck mass resulting from persistence of the thyroglossal duct the embryological tract of thyroid descent. Most common congenital neck mass presenting in childhood. Located at or near the hyoid bone and moves with swallowing and tongue protrusion. Diagnosis is by ultrasound demonstrating a cystic midline neck mass.

## Thyroid Cancer

A malignant tumor of the thyroid. Major types include papillary, follicular, medullary, and anaplastic carcinoma, which differ in behavior and treatment.

### Synonyms:

Cancer, Thyroid

## Thyroid Cancer Staging

American Joint Committee on Cancer TNM staging for differentiated thyroid carcinoma incorporates tumor size, extent of invasion, lymph node metastases, and distant metastases. Age is a critical prognos-

tic factor with patients under fifty having more favorable outcomes. Stage I is any tumor without metastases in patients under fifty.

## Thyroid Cartilage

The largest cartilage of the larynx, formed by two plates that meet in front and create the laryngeal prominence. It protects the vocal folds and provides attachment for muscles and ligaments.

## Thyroid Disorders

Conditions affecting the thyroid gland, a butterfly-shaped endocrine organ in the neck that produces hormones regulating metabolism, growth, and development.

## Thyroid Eye Disease

Autoimmune inflammatory disorder of the orbital tissues associated with Graves disease characterized by expansion of extraocular muscles and orbital fat. Pathogenesis involves orbital fibroblasts expressing the TSH receptor targeted by the same thyroid-stimulating immunoglobulins affecting the thyroid.

## Thyroid Fine-Needle Aspiration

Image-guided sampling of thyroid-nodule cells for cytologic classification. Results are commonly reported using the Bethesda system and guide surveillance, molecular testing, surgery, or other management.

## Thyroid Follicular Carcinoma

approximately 10 to 15 percent of thyroid cancers and is the second most common differentiated thyroid malignancy. Unlike papillary carcinoma, follicular carcinoma typically spreads hematogenously to distant sites including bone, lung, and liver, rather than to regional lymph nodes.

## Thyroid Function Tests

Laboratory assessment of the hypothalamic-pituitary-thyroid axis. TSH is the most sensitive screening test with elevated levels indicating primary hypothyroidism and suppressed levels indicating hyperthyroidism. Free T4 measures the biologically active unbound thyroxine.

---

## Thyroid Gland

An endocrine gland located in the anterior neck, consisting of two lobes (right and left) connected by an isthmus, lying anterior to the trachea between the cricoid cartilage and the suprasternal notch.

## Thyroid Hormone

T3 and T4. Increase basal metabolic rate. Required for normal development.

## Thyroid Nodule

A discrete lump within the thyroid gland that may be solid, cystic, benign, or malignant. Most are benign, but evaluation uses clinical assessment, thyroid testing, ultrasound, and biopsy when indicated.

## Thyroid Nodule Evaluation

Systematic approach to evaluation of thyroid nodules detected by physical examination or imaging. Thyroid ultrasound characterizes nodule features including size, composition, echogenicity, margins, calcifications, and shape. TI-RADS classification stratifies malignancy risk and guides biopsy decisions.

## Thyroid Papillary Carcinoma

The most common differentiated thyroid cancer, arising from thyroid follicular cells. It often grows slowly and has a favorable prognosis, although outcome depends on tumor features, spread, age, and response to treatment.

## Thyroid Peroxidase Antibody

An autoantibody against thyroid peroxidase, an enzyme required for thyroid-hormone synthesis. It supports autoimmune thyroid disease, especially Hashimoto thyroiditis, but may be present in some euthyroid individuals.

## Thyroid Scan

Nuclear medicine imaging using I-123 or Tc-99m. Evaluates thyroid function and nodules. Hot nodules rarely malignant. Cold nodules require further evaluation.

## Thyroid Scintigraphy

Thyroid imaging using I-123, I-131, or Tc-99m pertechnetate. Assesses function, nodules, ectopic tissue. Hot nodules (functioning) rarely malignant; cold nodules require ultrasound/FNA.

## Thyroid Stimulating Hormone

TSH (thyrotropin): the anterior pituitary hormone that stimulates the thyroid to produce and release T4 and T3, controlled by TRH (hypothalamus) and negative feedback from thyroid hormones.

## Thyroid Storm

Life-threatening exacerbation of thyrotoxicosis presenting with hyperpyrexia, tachycardia, heart failure, altered mental status, and multi-organ dysfunction. Precipitated by infection, surgery, trauma, or iodine load in patients with untreated hyperthyroidism. Mortality rates range from twenty to thirty percent.

## Thyroid Surgery

Operations that remove part or all of the thyroid gland. They may be performed for selected cancers, enlarging or compressive nodules, goiter, hyperthyroidism, or diagnostic uncertainty; the procedure depends on the disease and its extent.

## Thyroid Ultrasound

High-frequency sonographic imaging used to evaluate thyroid size, nodules, cysts, cervical lymph nodes, and structural features associated with malignancy. Suspicious nodules may require ultrasound-guided fine-needle aspiration.

## Thyroiditis

Inflammation of the thyroid gland with various etiologies. Hashimoto thyroiditis: autoimmune, most common cause of hypothyroidism in iodine-sufficient areas. Subacute (De Quervain) thyroiditis: post-viral, presents with painful thyroid and transient hyperthyroidism followed by hypothyroidism.

## Thyroiditis Classification

Inflammatory conditions of the thyroid classified by clinical presentation and etiology. Hashimoto thy-

---

roiditis is chronic autoimmune with hypothyroidism. Graves disease is autoimmune with hyperthyroidism. Subacute thyroiditis is painful and likely viral.

### **Thyrotoxic Periodic Paralysis**

Recurrent episodes of transient flaccid weakness associated with thyrotoxicosis, usually accompanied by hypokalemia caused by intracellular potassium shift. Attacks often affect the proximal limbs and are triggered by rest after exercise or carbohydrate-rich meals.

### **TI-RADS**

The Thyroid Imaging Reporting and Data System is an ultrasound-based system that assigns a risk category to thyroid nodules using features such as composition, echogenicity, shape, margins, and calcification. It helps guide follow-up and biopsy decisions.

### **Tibia**

The tibia is the larger medial bone of the lower leg, extending from the knee to the ankle; it bears much of the body's weight and forms parts of both joints. Proximal: tibial plateau (medial/lateral condyles) and tibial tuberosity (patellar ligament insertion). Shaft: sharp subcutaneous anterior border. Distal: medial malleolus articulating with the talus at the ankle.

### **Tibial Nerve**

Sciatic division (L4-S3) continuing from posterior thigh through the popliteal fossa into the deep posterior leg, innervating gastrocnemius, soleus, tibialis posterior, flexor digitorum longus, and flexor hallucis longus. Passes behind the medial malleolus as the tarsal tunnel, dividing into medial/lateral plantar nerves for the foot.

### **Tibial Shaft Fractures**

Tibial shaft fractures: most common long bone fracture. AO/OTA: 42-A (simple), 42-B (wedge), 42-C (complex). Soft tissue critical: Gustilo for open.

### **Tibialis Anterior Muscle**

Superficial anterior leg muscle from lateral tibial condyle and shaft to medial cuneiform and first metatarsal base. Innervated by deep peroneal nerve (L4-L5). Primary dorsiflexor for foot clearance during gait swing phase; inverts foot. Weakness causes foot drop with steppage gait.

### **Tibialis Posterior Muscle**

Deepest posterior leg muscle from posterior tibia, fibula, and interosseous membrane to navicular tuberosity, medial cuneiform, and sustentaculum tali. Innervated by tibial nerve (L4-L5). Plantarflexes and inverts foot; primary dynamic medial longitudinal arch stabilizer.

### **Tic Douloureux**

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). See Trigeminal Neuralgia.

### **Tick Paralysis**

Acute, progressive flaccid paralysis caused by neurotoxin released by an attached tick. Weakness usually begins in the legs and ascends; respiratory failure can occur and symptoms improve after prompt tick removal.

### **Tickborne Relapsing Fever**

A vector-borne illness caused by *Borrelia hermsii* and related species, transmitted by *Ornithodoros* ticks. It presents with recurrent episodes of fever, headache, myalgia, and arthralgia, separated by afebrile intervals. The relapsing pattern results from antigenic variation of the spirochete's surface lipoproteins.

### **Tics**

Sudden, rapid, recurrent, nonrhythmic stereotyped movements (motor tics) or vocalizations (vocal tics) that are usually brief and suppressible. Transient tics (most common in childhood) vs. chronic tic disorder; Tourette syndrome: multiple motor + at least one vocal tic for >1 year beginning before age 18.

---

## Tidal Volume

The volume of air inspired or expired during each normal breath, approximately 500 mL (6-8 mL/kg) in a resting adult. Tidal volume is measured by spirometry. Minute ventilation = tidal volume x respiratory rate ( 6 L/min). Only a portion reaches the alveoli (alveolar ventilation) after subtracting dead space ( 150 mL).

## Tilt Table Test

Evaluation of unexplained syncope by reproducing orthostatic stress. Patient is strapped to a motorized table tilted from supine to 60-80 degrees for 20-45 minutes. Positive: reproduction of symptoms with hypotension and/or bradycardia (vasovagal syncope, delayed orthostatic hypotension).

## Tilt Table Testing

A supervised test in which a patient is moved from a lying to an upright or head-up tilt position while blood pressure, heart rate, and symptoms are monitored. It may help evaluate reflex syncope, orthostatic hypotension, or selected autonomic disorders when the diagnosis remains uncertain; it does not replace assessment for cardiac or neurologic causes.

## Time In Range

Percentage of time that continuous glucose monitoring readings remain within the target glucose range of seventy to one hundred eighty milligrams per deciliter for most adults with diabetes. General target is greater than seventy percent corresponding to approximately seventeen hours per day.

## Time Of Death

The moment or estimated time at which biological death occurred, a key medicolegal question. Estimated from postmortem changes: body cooling (algor mortis), rigor mortis, lividity (livor mortis), decomposition/putrefaction, insect colonization, and chemical changes (vitreal potassium, vitreal glucose, body temperature).

## Time-Of-Flight PET

A PET acquisition and reconstruction technique that uses the measured arrival-time difference of

coincident annihilation photons to improve localization of the annihilation event. It can improve signal-to-noise performance, especially in larger patients.

## Timed Up-And-Go Test

A functional mobility test measuring the time required to stand from a chair, walk a short distance, turn, return, and sit. Prolonged performance suggests impaired mobility and increased fall risk but must be interpreted with gait, vision, cognition, and environment.

## Timothy Syndrome

A rare multisystem disorder caused by pathogenic variants in CACNA1C, characterized by marked QT prolongation and congenital heart disease with syndactyly. Developmental, neurological, immune, and facial features may also occur.

## Tincture

Alcohol extract of plant or chemical substance. Common concentration: 10-40% alcohol. Examples: tincture of iodine (antiseptic), tincture of benzoin (skin protector). Also used for liquid medications.

## Tinea

Dermatophytosis: superficial fungal infection of keratinized tissue (skin, hair, nails) by dermatophytes (Trichophyton, Microsporum, Epidermophyton).

## Tinea (Dermatophytosis)

Superficial fungal infection by dermatophytes. Tinea corporis (ringworm): annular, scaly, erythematous plaque with central clearing. Tinea pedis (athlete's foot): interdigital scaling, maceration, and fissuring. Tinea cruris (jock itch): erythematous, pruritic rash in groin with raised border.

### Synonyms:

Dermatophytosis

## Tinea Barbae

Dermatophyte infection of the beard and mustache area, presenting with erythematous, scaly, follicular papulopustules or deep inflammatory nodules, often acquired from contact with infected animals or

---

through grooming. It may be inflammatory (kerion-like) or superficial, and differential diagnosis includes bacterial folliculitis and acne.

### **Tinea Capitis**

A dermatophyte infection of the scalp and hair shafts, most common in children. It may cause scaling, alopecia, broken hairs, black dots, or an inflammatory kerion.

### **Tinea Circinata**

An older term for tinea corporis (ringworm) of the body, presenting as annular, erythematous, scaly plaques with active, raised borders and central clearing. It is caused by dermatophyte fungi and may be acquired through direct contact with infected humans, animals, or fomites.

### **Tinea Corporis**

A dermatophyte infection of glabrous skin, presenting as annular, erythematous, scaly plaques with raised, active borders and central clearing. It is contagious through direct contact with infected persons, animals, or contaminated objects. Diagnosis is by KOH preparation showing branching septate hyphae.

### **Tinea Faciei**

Dermatophyte infection of the facial skin, often presenting with erythematous, scaly, annular or ill-defined plaques that may mimic eczema or rosacea, leading to frequent misdiagnosis. It is commonly caused by *Trichophyton* or *Microsporum* species and may be acquired from pets, other humans, or self-inoculation from other body sites.

### **Tinea Imbricata**

A chronic dermatophyte infection caused by *Trichophyton concentricum*, endemic in the South Pacific and Southeast Asia, characterised by widespread, concentric, overlapping, polycyclic scaly rings producing a "wood-grain" pattern on the trunk and limbs.

### **Tinea Incognito**

A dermatophyte infection whose clinical appearance

has been altered by inappropriate topical corticosteroid or immunosuppressive treatment. It may become less scaly and more extensive or atypical; fungal testing is often needed before directed therapy.

### **Tinea Nigra**

A superficial fungal infection of the stratum corneum caused by *Hortaea werneckii*, presenting as a painless, brown to black, non-scaly macule or patch, most commonly on the palms or soles. It is acquired in tropical and subtropical regions and is often confused with acral melanoma.

### **Tinea Pedis**

A dermatophyte infection of the feet presenting in interdigital, moccasin, vesicobullous, or ulcerative patterns. It may coexist with tinea unguium. Diagnosis is clinical or mycologic when uncertain; treatment uses topical antifungals for limited disease and oral therapy for extensive, refractory, or nail-associated infection.

### **Tinea Versicolor**

A superficial fungal infection caused by *Malassezia* species, presenting as hypo- or hyperpigmented macules with fine scale on the trunk and proximal extremities. It is more noticeable after sun exposure due to unaffected tanning of surrounding skin.

#### **Synonyms:**

Pityriasis Versicolor

### **Tinel Sign**

Tapping over nerve produces tingling in distribution. Indicates nerve irritation/regeneration. Used for carpal tunnel, cubital tunnel, tarsal tunnel.

### **Tinnitus**

Tinnitus is perception of sound without an external source, often related to hearing loss, noise exposure, ear disease, medications, vascular causes, or neurologic factors.

#### **Synonyms:**

Ringling In The Ear

---

## Tiotropium Bromide

A long-acting muscarinic antagonist (LAMA) bronchodilator used for maintenance therapy in COPD. Once-daily dosing provides sustained bronchodilation. It reduces exacerbations and improves lung function. It is often combined with a LABA for additive bronchodilation.

## TIPS (Transjugular Intrahepatic Portosystemic Shunt)

A radiologically placed shunt connecting the portal vein to a hepatic vein within the liver, creating a portosystemic shunt to reduce portal pressure. Indications: variceal bleeding (refractory or recurrent), refractory ascites, and hepatic hydrothorax.

### Synonyms:

Transjugular Intrahepatic Portosystemic Shunt

## Tissue

A group of similar cells and their surrounding materials that work together to perform a specific function.

## Tissue Distribution

Reversible movement of a chemical from blood into tissues and organs. Distribution is influenced by perfusion, lipid solubility, protein binding, tissue affinity, barriers, body composition, and time after exposure.

## Tissue Expander

Balloon implanted under skin/muscle, gradually filled with saline to expand tissue. Used for breast reconstruction, scalp reconstruction, burn coverage. Removed after expansion, replaced with permanent implant or flap.

## Tissue Fixation

Preservation of tissue morphology and molecular components by chemical or physical methods before processing. Neutral buffered formalin is commonly used for routine histopathology, while fixation choice affects antigen detection, nucleic-acid testing, and tissue architecture.

## Tissue Plasminogen Activator-Associated

## Angioedema

Angioedema occurring as a complication of tissue plasminogen activator therapy for acute ischemic stroke or myocardial infarction, affecting approximately 1 to 5 percent of patients. It typically involves the face, tongue, and upper airway and may be life-threatening.

## Titanium

Biocompatible metal for implants and frameworks. Osseointegration capability.

## Titer

Titer examines titer; interpretation depends on the specimen or body region, test method, reference range, and clinical question. expressed as the highest dilution that still produces a detectable reaction (e.g., 1:128).

## TLC

Thin-layer chromatography for radiochemical purity.

## TNF Alpha

Tumor necrosis factor alpha is a potent pro-inflammatory cytokine produced primarily by activated macrophages, as well as by T cells, NK cells, mast cells, and endothelial cells. TNF-alpha exists as a 26-kilodalton transmembrane protein that is cleaved by the metalloprotease TACE to release a soluble 17-kilodalton active form.

## TNM Staging

A cancer-staging system describing the primary tumor, regional lymph nodes, and distant metastases to estimate disease extent and prognosis.

## Tocolysis

The use of medication to delay preterm birth for a limited time, often to allow corticosteroid treatment or transfer to a facility with appropriate neonatal care. The drug, gestational-age range, and contraindications depend on local guidance and the clinical situation.

---

## **Tocolytic Therapy**

Medications used to inhibit uterine contractions temporarily to prolong pregnancy, allowing time for corticosteroid administration and transport to a tertiary care center. Indications: preterm labor with intact membranes, 24-34 weeks.

## **Tocolytics**

Medications used to suppress preterm labor (contractions before 37 weeks gestation), to delay delivery for corticosteroid administration (fetal lung maturity) and in utero transport to a tertiary care center.

## **Toe Pressure**

Pressure in toe digits. Useful when ankle pressures non-compressible (diabetes, renal disease).

## **Toe-Brachial Index**

The ratio of systolic toe pressure to brachial systolic pressure. It can support diagnosis of peripheral arterial disease when ankle arteries are noncompressible because of medial arterial calcification.

## **Toll-Like Receptor**

A class of single-pass membrane-spanning pattern recognition receptors (PRRs) expressed on innate immune cells (macrophages, dendritic cells). Recognize evolutionary conserved microbial structures (PAMPs).

## **Tonic Neck Reflex**

A primitive reflex present from birth to 6 months, also called fencer's pose. When the head is turned to one side, the arm on that side extends while the opposite arm flexes. Present in both directions. Asymmetry may indicate neurologic injury. Disappears as voluntary head control develops.

### **Synonyms:**

fencer's pose.

## **Tonic-Clonic Seizure**

A generalized seizure with a tonic stiffening phase followed by rhythmic clonic jerking, impaired consciousness, and a postictal state.

## **Tonsillar Cancer**

A malignancy arising from the palatine tonsils, most commonly squamous cell carcinoma associated with HPV infection. It often presents with throat pain, otalgia, and cervical lymphadenopathy.

## **Tonsillectomy**

Tonsillectomy examines tonsillectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question. apnea, or other selected conditions after assessment of potential benefits and risks.

## **Tonsils**

Aggregated lymphoid tissue forming Waldeyer's ring at the pharyngeal entrance. Pharyngeal tonsils (adenoids) in the nasopharynx, palatine tonsils at the oropharyngeal pillars, lingual tonsils at the tongue base, and tubal tonsils near the Eustachian tube orifices. They are the first line of defense against inhaled or ingested pathogens.

## **Tooth Eruption**

Process by which tooth moves from intraosseous position to functional occlusion. Primary (deciduous) dentition: 20 teeth, eruption 6-30 months. Permanent dentition: 32 teeth (including third molars), eruption 6-21 years. Delayed eruption may indicate systemic conditions, local obstruction, or normal variant.

## **Tooth Infection**

Infection of the tooth, its pulp, or surrounding tissues, commonly caused by untreated decay, cracks, or gum disease. It may cause toothache, sensitivity, swelling, fever, or drainage. Facial swelling, difficulty swallowing or breathing, or spreading infection requires emergency assessment.

## **Tooth Luxation**

Traumatic displacement of a tooth without complete avulsion. Concussion and subluxation involve periodontal injury with little or no displacement, whereas extrusive, lateral, and intrusive luxation involve increasingly marked displacement and require prompt dental evaluation.

---

## **Tooth Replantation**

Replacement of an accidentally displaced or avulsed tooth into its socket, followed by stabilization and dental follow-up.

## **Tooth Sensibility Testing**

Clinical testing of a tooth's response to thermal, electric, or dentin stimulation. It assesses neural response rather than directly measuring pulp blood flow, so results must be interpreted with history, examination, and imaging.

## **Tooth Sensitivity**

Pain in response to thermal, sweet, acidic, or tactile stimulus. Caused by dentin exposure (recession, erosion, abrasion, abfraction). Management: desensitizing toothpaste, fluoride varnish, restorative coverage, gum graft for recession.

## **Tophaceous Gout**

Chronic tophaceous gout represents advanced gout with deposition of large, visible tophi consisting of monosodium urate crystals surrounded by granulomatous inflammation. Tophi typically develop after years of inadequately treated gout and occur on the ears, fingers, toes, and olecranon bursa.

## **Topical Antibiotics**

Antibiotics applied to the skin to treat selected superficial bacterial infections. The choice and duration depend on the organism, site, extent of infection, resistance patterns, and local guidance. Unnecessary or prolonged use can cause irritation and antimicrobial resistance.

## **Topical Antifungals**

Topical antifungals treat superficial fungal infections. Allylamines (terbinafine, naftifine) inhibit squalene epoxidase, fungicidal. Azoles (clotrimazole, miconazole, ketoconazole, econazole) inhibit ergosterol synthesis, fungistatic. Ciclopirox has broad-spectrum activity. Tolnaftate is effective against dermatophytes.

## **Topical Calcineurin Inhibitors**

Non-steroidal anti-inflammatory agents used for

atopic dermatitis and facial eczema. They inhibit T-cell activation by blocking calcineurin, preventing cytokine production. Advantages over corticosteroids: no skin atrophy, safe for face and intertriginous areas. Side effects include transient burning and itching at application site.

## **Topical Corticosteroid Potency**

Topical corticosteroids are classified into seven potency groups. Group 1 (ultra-high): clobetasol propionate 0.05 percent. Group 2 (high): betamethasone dipropionate 0.05 percent. Group 3 to 4 (medium): triamcinolone acetonide 0.1 percent. Group 5 to 6 (low): hydrocortisone 1 percent.

## **Topical Retinoids**

Vitamin A derivatives used for acne, photoaging, and hyperpigmentation. Tretinoin (all-trans retinoic acid) is the most studied. Adapalene is more stable and less irritating. Tazarotene is the most potent. Mechanism: normalizes follicular keratinization, increases cell turnover, and stimulates collagen production.

## **TORCH Panel**

Serologic screening for congenital infections: Toxoplasma, Rubella, CMV, Herpes simplex (and others: syphilis, parvovirus B19, VZV, Zika). IgM: indicates recent/active infection (maternal or fetal). IgG: past infection or passive immunity. Paired maternal and neonatal testing.

## **Torsades De Pointes**

A specific form of polymorphic ventricular tachycardia with QRS complexes that twist around the baseline, occurring in the setting of QT prolongation. It may degenerate to ventricular fibrillation.

## **Torticollis (Wryneck)**

A condition in which the head is tilted to one side (ear toward the shoulder) and rotated to the opposite side (chin toward opposite shoulder), due to contraction or shortening of the sternocleidomastoid muscle.

### **Synonyms:**

Wryneck

---

### **Torus Mandibularis**

A bony outgrowth arising from the lingual surface of the mandible, typically bilateral and located in the premolar region above the mylohyoid ridge. It is a common, asymptomatic developmental anomaly, more prevalent in women and certain ethnic populations.

### **Torus Palatinus**

A bony exostosis arising from the midline of the hard palate, typically presenting as a slow-growing, asymptomatic, hard, bony protuberance discovered incidentally. It is more common in women and certain ethnic groups.

### **Total Anomalous Pulmonary Venous Return**

A congenital heart defect in which the pulmonary veins drain into the systemic venous circulation instead of the left atrium. The clinical effects depend on the anatomic type, the degree of obstruction, and associated defects; affected newborns require specialist cardiac evaluation.

### **Total Body Surface Area**

The percentage of body surface involved by a burn or other extensive skin process. It is estimated using methods such as the rule of nines, Lund-Browder chart, or the patient's palm and is used to guide burn severity assessment and resuscitation.

### **Total Breech Extraction**

A maneuver where the operator grasps the fetal feet and delivers the entire baby in breech presentation. The most common indication is delivery of the second twin (malpresentation). Contraindicated for term singleton breech due to high risk of head entrapment, nuchal arms, and birth trauma.

### **Total Daily Energy Expenditure**

Total calories burned in 24 hours: BMR + thermic effect of food + physical activity. Estimation guides dietary recommendations. Activity factor multiplies BMR.

### **Total Haemolytic Complement Test**

A functional assay of the classical complement pathway, commonly reported as CH50.

### **Total Hip Arthroplasty**

Replacement of the hip joint with prosthetic components. Acetabular component: metal shell + polyethylene liner. Femoral component: metal stem + femoral head (cobalt-chrome or ceramic). Fixation: cemented (PMMA, for elderly, osteoporotic bone), cementless (porous-coated, for younger patients, biologic fixation), and hybrid.

### **Total Intravenous Anesthesia**

Total intravenous anesthesia (TIVA) uses intravenous agents exclusively for induction and maintenance of anesthesia, avoiding volatile inhalation agents. The most common TIVA regimen combines propofol infusion (50 to 200 mcg/kg/min) with remifentanyl infusion (0.1 to 0.5 mcg/kg/min).

### **Total Iron Binding Capacity**

TIBC: a measure of the maximum iron-binding capacity of transferrin in serum, reflecting total iron-transport capacity. Calculated from transferrin or measured directly.

### **Total Knee Arthroplasty**

Replacement of the knee joint with prosthetic components. Femoral component (cobalt-chrome), tibial component (titanium tray + polyethylene insert), and patellar component (polyethylene, optional). Fixation: cement (PMMA) most common in older adults; cementless in younger.

### **Total Lesion Glycolysis**

Product of metabolic tumor volume and mean SUV. Prognostic marker.

### **Total Lung Capacity**

The total volume of air in the lungs after maximal inspiration. It is measured by lung-volume testing, such as body plethysmography, and may be increased in hyperinflation or decreased in restrictive lung disease.

---

## Total Parenteral Nutrition

Intravenous administration of nutrients sufficient to meet essentially all nutritional requirements when the gastrointestinal tract cannot be used adequately.

## Tourette Disorder

A neurodevelopmental disorder characterized by multiple motor tics and one or more vocal tics lasting >1 year, with onset before age 18. Motor tics: eye blinking, head jerking, shoulder shrugging, facial grimacing. Vocal tics: throat clearing, sniffing, grunting, barking, coprolalia (obscene words, occurs in <10%).

## Tourette Syndrome

A neurodevelopmental disorder characterized by multiple motor tics and at least one vocal tic occurring over at least one year. Tics are sudden, rapid, recurrent, stereotyped movements or vocalizations. They are often preceded by premonitory urges. Tics typically worsen in adolescence and may improve in adulthood.

### Synonyms:

Tourette's

## Townes Syndrome

A congenital disorder caused by pathogenic variants in *SALL1*, classically involving anal atresia and characteristic thumb abnormalities. Renal, cardiac, hearing, foot, and genital anomalies are common and variable.

## Toxic Dose

Dose causing toxicity. Varies by substance, individual, route, duration.

## Toxic Encephalopathy

Brain dysfunction caused by exposure to a toxic substance or medicine. Symptoms may include confusion, altered behavior, seizures, or reduced consciousness.

## Toxic Epidermal Necrolysis

A severe, potentially fatal mucocutaneous reaction, usually to a medication, causing extensive epidermal

necrosis and skin detachment. It is on the severe end of the Stevens–Johnson syndrome and toxic epidermal necrolysis spectrum and requires urgent specialist care.

### Synonyms:

TEN

## Toxic Megacolon

Acute life-threatening dilation of the colon associated with systemic toxicity, representing one of the most serious complications of inflammatory bowel disease, particularly ulcerative colitis. It can also occur in infectious colitis caused by *Clostridioides difficile* and cytomegalovirus.

## Toxicokinetics

The study of absorption, distribution, metabolism, and excretion of a toxic substance and its relationship to concentration over time. Toxicokinetics helps estimate exposure, timing, accumulation, and expected duration of toxicity.

## Toxicology Specimen Preservation

Collection, labeling, storage, and transport of biological specimens to preserve analytes and prevent contamination or degradation. Appropriate specimens may include peripheral blood, urine, vitreous humor, bile, liver, hair, or gastric contents depending on the suspected exposure and timing.

## Toxidrome

A recognizable pattern of signs and symptoms produced by a class of toxins. Important patterns include opioid, sympathomimetic, anticholinergic, cholinergic, sedative-hypnotic, and serotonin toxidromes; treatment combines supportive care, targeted antidotes when available, and decontamination decisions.

## Toxoid Vaccines

Vaccines that protect against harmful bacterial toxins. These vaccines contain toxins that have been detoxified and rendered inactive.

## Toxoplasma Gondii

An obligate intracellular protozoan parasite that

---

causes toxoplasmosis. The definitive host is the cat (family Felidae), which sheds environmentally resistant oocysts in feces.

### **TPMT Polymorphism**

Thiopurine S-methyltransferase is an enzyme that metabolizes thiopurine drugs including azathioprine, 6-mercaptopurine, and thioguanine, which are used in the treatment of leukemia, inflammatory bowel disease, and autoimmune conditions.

### **Trabeculectomy**

A conventional glaucoma filtration surgery that creates a new drainage pathway for aqueous humor by removing a small piece of the trabecular meshwork and creating a partial-thickness scleral flap under which aqueous humor filters from the anterior chamber into the subconjunctival space, forming a filtering bleb.

### **Tracer Principle**

Administered in amounts too small to produce pharmacological effect. Dose optimized for imaging, not therapeutic.

### **Tracheal Agenesis With Bronchoesophageal Fistula**

Congenital malformation characterized by absent or severely hypoplastic trachea with an abnormal communication between the bronchus and esophagus, a rare and typically fatal condition presenting in neonates with respiratory distress, cyanosis, and inability to intubate.

### **Tracheal Foreign Body**

A foreign object lodged in the trachea, causing severe respiratory distress, stridor, and complete airway obstruction. It is a medical emergency requiring immediate bronchoscopic removal. In complete obstruction, emergency cricothyrotomy may be needed.

### **Tracheal Stenosis**

Narrowing of the trachea, often a complication of prolonged endotracheal intubation or tracheostomy. It presents with progressive dyspnea, stridor, and

wheezing that may be mistaken for asthma. Diagnosis is by bronchoscopy or CT. Treatment is balloon dilation, stenting, or surgical resection.

### **Tracheobronchomalacia**

Abnormal softening of the trachea and/or bronchi causing excessive airway collapse during breathing. It may be congenital or acquired. Symptoms include chronic cough, recurrent infections, and expiratory airflow obstruction. Diagnosis is by dynamic CT or bronchoscopy. Treatment includes CPAP, stenting, or surgical reconstruction.

### **Tracheobronchomegaly**

Abnormal enlargement of the trachea and main bronchi, usually associated with connective-tissue weakness. It may cause recurrent lower-respiratory infection, bronchiectasis, ineffective cough, dyspnea, and difficulty clearing airway secretions.

### **Tracheoesophageal Fistula**

An abnormal connection between the trachea and esophagus, often associated with esophageal atresia. Presents with recurrent aspiration, coughing with feedings, and cyanosis during meals. The H-type fistula may present later in infancy with chronic aspiration and failure to thrive. Diagnosis by esophagram or bronchoscopy.

### **Tracheomalacia**

Softening of the tracheal cartilage causing excessive collapse of the trachea during expiration. It may be congenital or acquired (prolonged intubation, relapsing polychondritis). Symptoms include expiratory stridor and difficulty clearing secretions. Diagnosis is by dynamic CT or bronchoscopy.

### **Tracheostomy Tube**

A tube inserted through a tracheostomy opening to maintain access to the airway and permit breathing, suction, or mechanical ventilation.

### **Tracheotomy**

An operation that creates an opening through the neck into the trachea. The opening is called a tracheostomy.

---

### **Tractional Retinal Detachment**

Separation of the neurosensory retina caused by contraction of fibrovascular membranes, commonly associated with proliferative diabetic retinopathy.

### **Train-Of-Four Monitoring**

Train-of-four monitoring assesses neuromuscular blockade by delivering four supramaximal electrical stimuli at 2 Hz to a peripheral nerve, commonly the ulnar nerve at the wrist. The ratio of the fourth twitch height to the first twitch height estimates recovery from non-depolarizing blockade.

### **Trained Immunity**

Innate immune memory: epigenetic/metabolic reprogramming of monocytes/macrophages/NK cells after initial stimulus (BCG, beta-glucan, Candida, oxidized LDL) -> enhanced response to secondary challenge (heterologous protection).

### **Trajectory**

The path a projectile follows in flight and, in wound ballistics, the course it traverses through tissue from entrance to exit or rest. Internal trajectory is reconstructed from entrance and exit defects, the organ track, recovered fragments, and clothing damage; angles disclose shooter position and victim posture.

### **TRALI**

Transfusion-Related Acute Lung Injury, a life-threatening complication of blood transfusion characterized by acute hypoxemia and bilateral pulmonary edema within 6 hours of transfusion, without evidence of volume overload.

### **Tram-Track Appearance**

Histological finding on silver stain of MPGN representing GBM duplication. Results from mesangial cell interposition into capillary wall with new basement membrane formation. Creates double-contour pattern on Jones methenamine silver stain.

### **Trans Fat**

A type of unsaturated fat with at least one trans double bond. Industrial trans fats are associated with increased cardiovascular risk and have been

restricted in many jurisdictions.

### **Transabdominal Scan**

An ultrasound scan performed with the transducer placed on the maternal abdomen. A full bladder improves visualization of pelvic structures. Used in early pregnancy to confirm viability and gestational age, and throughout pregnancy to assess fetal growth, anatomy, amniotic fluid volume, and placental location.

### **Transarterial Chemoembolization**

A procedure in which chemotherapy and embolizing particles are infused selectively into tumor-feeding hepatic arteries, combining regional chemotherapy with ischemic tumor necrosis; used for unresectable hepatocellular carcinoma.

### **Transbronchial Biopsy**

Bronchoscopic biopsy of lung parenchyma obtained through the bronchial wall. It is used to diagnose interstitial lung diseases (sarcoidosis, HP), reject lung transplant rejection, and sample peripheral lung lesions. It carries a higher risk of pneumothorax than endobronchial biopsy.

### **Transcervical Foley Catheter For Cervical Ripening**

A mechanical method for cervical ripening: a Foley catheter (16-30 Fr) is inserted through the cervix, the balloon is inflated with 30-60 mL of saline, and traction is applied (or the catheter is taped to the thigh with gentle tension). The balloon applies direct pressure to the internal os, stimulating endogenous prostaglandin release.

### **Transcranial Doppler**

Ultrasound measuring blood flow velocity in cerebral arteries. Used for vasospasm detection, stroke risk assessment.

### **Transcription**

Synthesis of RNA from DNA template by RNA polymerase. Eukaryotic: RNA Pol II transcribes mRNA, rRNA, snRNA; RNA Pol I transcribes rRNA; RNA Pol III transcribes tRNA, 5S rRNA. Steps: initia-

---

tion (promoter recognition, transcription factors), elongation (5' to 3'), termination. Promoter elements: TATA box, CAAT box, GC box.

### **Transcription Factor**

Protein binding to specific DNA sequences, regulating transcription. Activators enhance transcription; repressors inhibit. Examples: p53, NF-kB, steroid hormone receptors.

### **Transdermal**

A route of drug administration delivering drug through intact skin into the systemic circulation via a patch or gel, bypassing first-pass metabolism and providing steady plasma concentrations over hours to days. Examples: nitroglycerin, fentanyl, nicotine, estrogen, clonidine, rotigotine.

### **Transfer Training**

Teaching safe transfer techniques: bed to chair, chair to toilet, floor to standing. Use of transfer boards, lift equipment.

### **Transferase**

An enzyme that transfers a functional group from one molecule to another.

### **Transference**

A psychoanalytic concept in which feelings, attitudes, and expectations originally directed toward a significant figure from childhood are unconsciously redirected onto the therapist. In psychodynamic therapy, transference is a therapeutic tool for understanding the patient's relational patterns and resolving conflicts.

### **Transferrin**

An iron transport protein synthesized by the liver, carrying iron in plasma (2 iron-binding sites). In iron deficiency: transferrin is elevated with low ferritin, giving high TIBC and low transferrin saturation; in iron overload/inflammation/chronic disease: transferrin is low (acute phase).

### **Transfusion Medicine**

Blood components: PRBCs (leukoreduced, irradiated for at-risk), FFP (coagulation factors), platelets (apheresis pooled, leukoreduced), cryoprecipitate (fibrinogen, vWF, factor VIII, XIII). ABO/Rh compatibility.

### **Transfusion Of Neonate**

Administration of a blood product to a newborn for clinically significant anemia, bleeding, or another specific indication. The decision, product characteristics, volume, and rate depend on the infant's symptoms, laboratory results, gestational age, and local transfusion protocol.

### **Transfusion Reaction**

An adverse reaction to transfusion of blood products. Acute hemolytic transfusion reaction: ABO incompatibility, immediate fever/chills, hypotension, back pain, DIC, renal failure; management: STOP transfusion, maintain BP/urine output, supportive care.

### **Transient Ischemic Attack**

A transient ischemic attack (TIA) is a temporary episode of neurological dysfunction caused by focal brain, spinal cord, or retinal ischemia without acute infarction.

### **Transient Tachypnea Of The Newborn**

Temporary rapid breathing after birth, usually caused by delayed clearance of fetal lung fluid. It is more common after caesarean birth and typically improves within one to three days with supportive care.

### **Transition To Adulthood**

Support for youth with disabilities transitioning to adult services.

### **Transitional Care**

Coordinated care provided when a person moves between healthcare settings or levels of care, such as from hospital to home.

---

## Translation

Decoding of mRNA sequence into polypeptide chain by ribosomes. Occurs in cytoplasm. tRNAs carry specific amino acids and recognize codons via anti-codons. Steps: initiation, elongation, termination. Energy: GTP hydrolysis.

## Transplacental

Passing through or occurring across the placenta.

## Transplant Immunology

Hyperacute rejection: preformed anti-donor antibodies (ABO, HLA) -> immediate graft failure (minutes-hours); prevented by crossmatch.

## Transplant Rejection

Immune-mediated destruction of a transplanted organ or tissue, classified by timing and mechanism. Hyperacute: preformed donor-specific antibodies, minutes to hours post-transplant, immediate graft thrombosis, irreversible; prevention by cross-matching.

## Transplant Surgery

Transplant surgery involves replacing a failing organ with a healthy donor organ. Kidney transplant: living donors (laparoscopic nephrectomy, left kidney preferred) or deceased donors (standard criteria, expanded criteria, DCD).

## Transport

Regulations for shipping radioactive materials. Package types: excepted, A, B.

## Transposition Of The Great Arteries

A congenital heart defect in which the aorta arises from the right ventricle and the pulmonary artery from the left ventricle. This creates parallel circulations, so survival after birth depends on adequate mixing through an associated opening or ductus until definitive treatment is provided.

### Synonyms:

Transposition Of Great Vessels

## Transposons

Mobile genetic elements that can move between different locations within the bacterial genome or between the chromosome and plasmids. Transposons carry genes including antibiotic resistance genes and can facilitate the spread of resistance.

## Transudate

A transudate is a type of edema fluid with low protein content and few cells, resulting from imbalances in hydrostatic and oncotic pressures across capillary walls rather than from inflammation or increased vascular permeability.

## Transudative Pleural Effusion

From systemic factors altering hydrostatic/oncotic pressures. Most commonly from heart failure. Low protein, low LDH. Treatment addresses the underlying cause.

## Transurethral Resection Of The Prostate

An endoscopic operation that removes obstructing prostate tissue to improve urine flow in selected people with benign prostatic enlargement. Alternatives and indications depend on symptoms, prostate size, complications, and patient preference.

## Transverse Colon

Longest, most mobile colonic segment from hepatic to splenic flexure, approximately 45 cm, with complete mesentery (transverse mesocolon). Crosses anterior to duodenum, pancreas, and major vessels. Splenic flexure is the highest colon point and common gas trapping site. Most common diverticular disease site along with the sigmoid.

## Transverse Lie

A fetal lie where the long axis of the fetus is perpendicular to the long axis of the mother. The presenting part is a shoulder or arm. Occurs in approximately 1% of term pregnancies. Risk of cord prolapse and obstructed labor. Cesarean delivery required as vaginal delivery is not possible.

## Transverse Myelitis

An inflammatory disorder of the spinal cord causing

---

acute or subacute motor, sensory, and autonomic dysfunction.

### **Transverse Plane**

A horizontal plane that divides the body or an organ into upper (superior) and lower (inferior) portions.

### **Transversus Abdominis Muscle**

Deepest flat abdominal muscle with horizontal fibers, from inguinal ligament, iliac crest, thoracolumbar fascia, and inner lower six costal cartilages. Innervated by T7-T12 and L1. Compresses abdomen without trunk movement, providing core stability and increased intra-abdominal pressure during coughing, lifting, Valsalva.

### **Transvestic Disorder**

A paraphilic disorder involving recurrent sexual arousal from cross-dressing that causes marked distress, impairment, or harm, or is acted on without consent. It is distinct from gender dysphoria, which concerns gender identity rather than sexual arousal.

### **TRAP Sequence**

Twin Reversed Arterial Perfusion sequence, a complication of monochorionic twin gestations where one twin (the pump twin) perfuses the other (the acardiac twin) via arterioarterial anastomoses.

### **Trapezius Muscle**

Large triangular muscle from occipital bone and C7-T12 spinous processes to clavicle, acromion, and scapular spine. Innervated by CN XI and C3-C4. Upper fibers elevate scapula, middle fibers retract, lower fibers depress. Essential for shoulder stability and scapulothoracic motion.

### **Trapezoid**

Smallest distal row carpal bone between trapezium and capitate, articulating with the second metacarpal. Wedge shape provides stability for the firmly fixed second metacarpal. Fractures rare (less than 1 percent of carpal fractures). Contributes to the radial column wrist stability.

### **Trauma (Vascular)**

Injury to a blood vessel caused by blunt force, penetrating injury, fracture, medical procedures, or other mechanisms.

#### **Synonyms:**

Vascular

### **Trauma Center**

Hospital designated to provide comprehensive care for injured patients. Levels: Level I (complete care, research, prevention), Level II (similar but limited resources), Level III (stabilization, transfer), Level IV (advanced trauma life support, transfer). Transfer criteria: need for higher level of care, specific injuries.

### **Trauma Surgery**

Trauma surgery encompasses the acute care of injured patients, guided by ATLS (ABCDE) principles: Airway maintenance with cervical spine protection, Breathing and ventilation, Circulation with hemorrhage control, Disability/neurologic assessment, and Exposure/environmental control.

### **Traumatic Bleb**

A filtering bleb formed after glaucoma filtration surgery (trabeculectomy) that develops complications from trauma, or a thin-walled, elevated bleb that leaks or is at risk of rupture. Traumatic bleb failure or overfiltering can lead to hypotony, choroidal detachment, and endophthalmitis risk.

### **Traumatic Brain Injury**

Disruption of brain function caused by an external mechanical force. Severity: mild (GCS 13-15, concussion), moderate (GCS 9-12), severe (GCS 3-8). Primary injury: direct damage at moment of impact (contusion, diffuse axonal injury, intracranial hemorrhage).

#### **Synonyms:**

TBI

### **Traumatic Spondylolisthesis Of The Axis (Hangman's Fracture)**

A bilateral fracture of the pars interarticularis of the C2 vertebra (axis), typically caused by hyper-

---

extension of the head. Classically associated with judicial hanging but also occurs in motor vehicle accidents and falls. May present with neck pain, torticollis, or neurological deficits if the spinal cord is compressed.

**Synonyms:**

hangman's fracture

**Treacher Collins Syndrome**

An autosomal dominant craniofacial disorder caused by mutations in TCOF1 (most common), POLR1C, or POLR1D genes, encoding ribosomal RNA transcription factors.

**Treat-To-Target Strategy**

A management approach in which treatment is adjusted at regular intervals toward a predefined goal such as remission or low disease activity. It requires validated disease-activity measures, shared decisions, monitoring, and timely escalation or modification.

**Treatment**

Medical intervention for disease. Includes pharmacological, surgical, lifestyle, supportive.

**Treatment-Resistant Depression**

Depression that does not improve adequately after appropriate trials of standard treatments. It requires reassessment of diagnosis, adherence, comorbidity, and treatment options.

**Trephining (Trepanation)**

A surgical procedure in which a hole is drilled or scraped into the skull (cranium), exposing the dura mater. Historically, trephining dates back to Neolithic times (10,000 BCE) and was performed for ritual, therapeutic (releasing 'evil spirits'), and post-traumatic indications.

**Synonyms:**

Trepanation

**Treponema Pallidum**

A spirochete that causes syphilis, a sexually transmitted infection. The organism is transmitted

through sexual contact or transplacentally (congenital syphilis). Primary syphilis presents with a painless genital ulcer (chancre). Secondary syphilis presents with rash, mucous patches, and condylomata lata.

**Treponema Pallidum Infection**

Infection with the bacterium *Treponema pallidum*, which causes syphilis and can affect the skin, nervous system, cardiovascular system, and other organs.

**Trepopnea**

Dyspnea that occurs in one lateral decubitus position but not the other. It is typically worse when lying on the side of the affected lung. It may be caused by unilateral lung disease, pleural effusion, or mediastinal mass.

**Trial Of Labor After Cesarean**

An attempt to give birth vaginally after a previous cesarean delivery. Whether it is appropriate depends on the prior uterine incision, obstetric history, current pregnancy, facility resources, and the person's preferences. Counseling includes the possibility of successful VBAC, repeat cesarean delivery, and uterine rupture.

**Triceps Brachii Muscle**

Three-headed posterior arm muscle. Long head from infraglenoid tubercle, lateral head from posterior humerus above radial groove, medial head below. All insert on the olecranon. Innervated by radial nerve (C7-C8). Primary elbow extensor; assists shoulder extension/adduction.

**Trichobezoar**

A gastrointestinal mass composed mainly of swallowed hair, usually located in the stomach.

**Trichomonas**

A flagellated protozoan, *Trichomonas vaginalis*, that infects the urogenital tract and causes trichomoniasis. It is transmitted mainly through sexual contact and may cause discharge, irritation, or no symptoms.

---

### Trichothiodystrophy Syndrome

A group of inherited disorders characterized by brittle sulfur-deficient hair with a distinctive banded appearance, often accompanied by photosensitivity, ichthyosis, developmental delay, short stature, or recurrent infection.

### Tricuspid Atresia

Absence of the tricuspid valve, resulting in no direct communication between the right atrium and right ventricle. Blood flow depends on an atrial septal defect and ventricular septal defect for mixing. Presents with cyanosis.

### Tricuspid Regurgitation

Incomplete closure of the tricuspid valve allowing blood to flow backward from the right ventricle to the right atrium during systole. Causes include right ventricular dilation (from pulmonary hypertension or left heart failure), endocarditis, rheumatic disease, and carcinoid syndrome.

### Tricyclic Antidepressant Overdose

Anticholinergic effects, cardiac toxicity (QRS prolongation, arrhythmias), seizures, hypotension. Treatment: sodium bicarbonate (QRS >100 ms), seizure control, supportive care.

### Tricyclic Antidepressants

Older antidepressants that non-selectively inhibit the reuptake of serotonin and norepinephrine. They include amitriptyline, nortriptyline, imipramine, clomipramine, and desipramine.

### Trimethoprim-Sulfamethoxazole

A fixed-dose combination of trimethoprim and sulfamethoxazole that synergistically inhibits folate synthesis. TMP-SMX is indicated for urinary tract infections, *Pneumocystis jirovecii* pneumonia, and community-acquired pneumonia. The combination is bactericidal against many gram-positive and gram-negative organisms.

### Trimethylaminuria

A metabolic disorder in which impaired oxidation of trimethylamine causes a characteristic fish-like

body odor in sweat, urine, and breath. It may be inherited or acquired and can cause substantial psychosocial distress despite limited physical illness.

### Trinucleotide Repeat

Expansion of three-nucleotide sequences causes diseases: Huntington (CAG), Fragile X (CGG), myotonic dystrophy (CTG), Friedreich ataxia (GAA). Anticipation common.

### Tripe Palms

Diffuse, velvety, thickened hyperkeratosis of the palmar skin with a cerebriform, corrugated appearance resembling the lining of a cow's stomach (tripe), which is strongly associated with underlying malignancy, most commonly gastric adenocarcinoma. It may occur alone or in conjunction with acanthosis nigricans.

### Triple-Negative Breast Cancer

Breast cancer lacking ER, PR, HER2. Aggressive, limited treatment options.

### Triploidy Syndrome

A chromosomal condition in which cells contain three complete haploid chromosome sets. It causes severe fetal growth restriction and multiple congenital anomalies and is usually incompatible with prolonged survival; partial or mosaic forms vary.

### Triptan

A class of medications used for acute migraine treatment, acting as 5-HT<sub>1B</sub>/1D receptor agonists. 5-HT<sub>1B</sub> receptors are located on cranial blood vessels; activation causes vasoconstriction of dilated meningeal arteries.

### Triquetrum

Pyramidal proximal row carpal bone on the ulnar side, articulating with lunate, hamate, pisiform, and TFCC. Second most commonly fractured carpal bone. Contributes to proximal carpal row and ulnar wrist stability. Pisiform articulates with its volar surface.

---

## Trisomy

Presence of three copies of a chromosome instead of two. Trisomy 21 (Down syndrome): intellectual disability, characteristic facies, heart defects. Trisomy 18 (Edwards): severe intellectual disability, multiple anomalies. Trisomy 13 (Patau): severe intellectual disability, holoprosencephaly, cleft lip/palate.

## Trisomy 21

Down syndrome: the most common chromosomal disorder, caused by an extra chromosome 21 (trisomy 21; 95 percent meiotic nondisjunction, mosaicism, translocation).

## Trophoderm

The outer cellular layer of a blastocyst that contributes to formation of the placenta.

## Tropical Sprue

Chronic diarrhea and malabsorption syndrome of uncertain etiology occurring predominantly in tropical and subtropical regions. The condition is characterized by villous atrophy of the small intestinal mucosa leading to malabsorption of nutrients including folate, iron, and vitamin B12.

## Troponin

Cardiac-specific troponin I and T, the preferred biomarkers for myocardial injury (MI). Highly sensitive and specific. Rise 2-4 hours after symptom onset, peak at 12-24 hours, remain elevated for 7-10 days. High-sensitivity troponin (hs-cTn) allows earlier detection (1-2 hours).

## Trousseau Sign Of Latent Tetany

A sensitive and specific clinical sign of hypocalcemia. Elicited by inflating a blood pressure cuff on the upper arm to a pressure greater than systemic systolic blood pressure for 3 minutes.

## Trousseau Syndrome

Recurrent or migratory venous thrombosis associated with active malignancy, particularly mucin-producing adenocarcinoma. It reflects tumor-associated activation of coagulation and is distinct from Trousseau sign of latent tetany.

## True Ribs

Ribs 1-7 articulating directly with the sternum via their own costal cartilages. Each has a head, neck, tubercle, and shaft. The first two are short and strongly curved for neck/shoulder muscle attachment. Costal cartilages provide thoracic cage elasticity for respiratory expansion.

## Truncus Arteriosus

A congenital heart defect where a single large vessel arises from both ventricles, receiving a mixed blood supply. Associated with a large ventricular septal defect and abnormal semilunar valve. Presents with cyanosis and heart failure early in life.

## Trypanosoma Brucei

A protozoan parasite transmitted by tsetse flies that causes African trypanosomiasis, or sleeping sickness. The human-infecting subspecies differ in geographic distribution and typical disease course; infection can progress from fever and lymph-node enlargement to neurologic involvement.

## TSH-Receptor Antibody

An antibody that binds the thyrotropin receptor. Stimulating antibodies cause Graves disease, while blocking antibodies can cause hypothyroidism; measurement supports diagnosis and can help assess fetal or neonatal risk in pregnancy.

## Tubal Ligation

Surgical sterilization by occluding the fallopian tubes, preventing the ovum from reaching the uterus. Postpartum tubal ligation: after vaginal or cesarean delivery (Pomeroy technique, Parkland). Interval: laparoscopic (bands, clips, bipolar cautery) or mini-laparotomy (Hulka or Filshie clip).

## Tuberculin Skin Test

Intradermal injection of purified protein derivative (PPD) to test for Mycobacterium tuberculosis infection. Read at 48-72 hours measuring induration (not erythema). Positive: greater than 5 mm in HIV or close contacts; greater than 10 mm in high-risk groups; greater than 15 mm in low-risk populations.

---

### **Tuberculoid Leprosy**

The paucibacillary pole of the leprosy spectrum characterized by strong cell-mediated immunity to *Mycobacterium leprae*, resulting in well-formed granulomas and few or no organisms in tissue.

### **Tuberculosis In Children**

Infection with *Mycobacterium tuberculosis*, often from household contacts. Latent TB infection (LTBI) positive tuberculin skin test or interferon-gamma release assay with no symptoms or radiographic findings. Active TB presents with cough, fever, weight loss, and lymphadenopathy. Diagnosis by PPD, chest X-ray, and sputum culture.

### **Tuberous Sclerosis Complex**

An autosomal dominant genetic disorder caused by mutations in TSC1 (hamartin) or TSC2 (tuberin) genes, leading to mTOR pathway activation. Features: cortical tubers, subependymal nodules, cardiac rhabdomyomas, angiomyolipomas, facial angiofibromas, and seizures (often infantile spasms).

### **Tubography**

Contrast imaging of fallopian tubes. Evaluates patency.

### **Tubular Reabsorption**

The process by which the renal tubules return filtered water and solutes from the tubular lumen to the blood, reclaiming 99 percent of the glomerular filtrate. Proximal tubule: reabsorbs 65 percent of sodium, most glucose, amino acids, water, bicarbonate, phosphate, and urate.

### **Tubular Secretion**

The transport of substances from the peritubular capillary blood into the tubular lumen, a second mechanism (besides filtration) by which the kidney eliminates waste and regulates ions.

### **Tubuloglomerular Feedback**

A feedback mechanism at the juxtaglomerular apparatus (JGA) that adjusts GFR based on tubular fluid NaCl concentration. The macula densa cells (specialized tubular epithelial cells in the thick

ascending limb) sense NaCl concentration via the NKCC2 cotransporter.

### **Tularemia**

Tularemia is infection with *Francisella tularensis* acquired from ticks, animals, contaminated water, or aerosols and causing ulcer-glandular, pulmonary, or other disease.

### **Tumor**

A neoplastic condition involving tumor; diagnosis establishes the tumor type, extent, and appropriate management.

### **Tumor Board**

A multidisciplinary conference of oncologists, surgeons, radiologists, and pathologists who review individual cancer cases to coordinate diagnosis and treatment planning.

### **Tumor Burden**

The total amount of cancer in the body, estimated from the number, size, and extent of tumor deposits; higher burden is generally associated with worse prognosis.

### **Tumor Differentiation**

The degree to which neoplastic cells morphologically and functionally resemble their normal counterparts of origin.

### **Tumor Embolism**

Tumor embolism occurs when malignant cells, tumor fragments, or tumor thrombi enter the venous circulation and travel to distant sites. The pulmonary vasculature is the most common site of embolization, as venous blood from most organs drains to the lungs through the pulmonary arteries.

### **Tumor Grade**

A histologic measure of how much tumor cells resemble normal tissue; low-grade (well-differentiated) tumors behave less aggressively than high-grade (poorly differentiated) tumors. Grading is a prognostic, not staging, feature.

---

## Tumor Grading

A description of a tumor based on how abnormal the cancer cells look under a microscope compared to normal cells; a lower grade indicates slower-growing cancer.

## Tumor Heterogeneity

The presence of genetically, epigenetically, or phenotypically distinct subpopulations within the same tumor or between primary and metastatic sites. Heterogeneity can influence prognosis, sampling, treatment response, and resistance.

## Tumor Lysis Syndrome

Metabolic emergency from rapid cell death. Hyperuricemia, hyperkalemia, hyperphosphatemia, hypocalcemia. Prevention: hydration, allopurinol, rasburicase.

## Tumor Marker

Substance produced by cancer or body in response to cancer. Used for diagnosis, monitoring, prognosis. Examples: PSA (prostate), CA-125 (ovarian), CEA (colon), AFP (liver), CA 19-9 (pancreas).

## Tumor Microenvironment

Surrounding tissue influencing tumor growth. Includes immune cells, blood vessels, fibroblasts, signaling molecules.

## Tumor Mutational Burden

The number of somatic mutations per unit of coding DNA in a tumor specimen. TMB may correlate with production of neoantigens and response to some immune checkpoint inhibitors, but interpretation requires a validated assay and disease-specific context.

## Tumor Necrosis Factor

A proinflammatory cytokine (TNF-alpha) produced mainly by macrophages, acting on TNFR1/TNFR2 receptors. Functions: activation of endothelium and leukocytes, fever, cachexia, apoptosis, and coordination of inflammation and the acute-phase response.

## Tumor Necrosis Factor Inhibitor

TNF inhibitor (biologic): monoclonal antibodies/fusion proteins blocking TNF-alpha—infliximab, adalimumab (monoclonals), etanercept (soluble receptor), certolizumab, golimumab. Used in rheumatoid arthritis (after methotrexate failure), ankylosing spondylitis, psoriatic arthritis, psoriasis, IBD (Crohn, UC).

## Tumor Staging

A system of describing the size of a cancer and how far it has spread throughout the body from its original location (e.g., using the TNM system).

## Tumor Suppressor

A gene or protein that helps limit cell growth, repair DNA damage, or promote removal of abnormal cells. Loss of its function can contribute to cancer.

## Tumor Suppressor Gene

Gene that prevents uncontrolled cell growth. Examples: TP53, RB1, BRCA1, BRCA2, APC. Loss of function contributes to cancer.

## Tumor-Suppressor Gene

A gene whose normal product restrains cell proliferation, promotes DNA repair, induces apoptosis, or maintains genomic stability. Loss or inactivation of both functional copies is common in the development of many cancers, although mechanisms vary by gene.

## Tungiasis

A skin infestation caused by the sand flea *Tunga* penetrans, producing an itchy or painful lesion, usually on the feet.

## Tunica Adventitia

The outer connective-tissue layer of a blood-vessel wall. It contains collagen and elastic fibers that provide structural support, along with nerves and, in larger vessels, small vessels called vasa vasorum that supply the outer wall. It is relatively prominent in veins and helps anchor vessels to surrounding tissues.

---

## **Tunica Media**

The middle layer of a blood-vessel wall, located between the tunica intima and tunica adventitia. It consists primarily of smooth muscle and elastic fibers; its contraction or relaxation changes vascular diameter, regulating blood pressure and tissue perfusion. It is thickest in arteries and thinner in veins.

## **Turbinates**

Curved bony shelves on the lateral walls of the nasal cavity, covered by vascular mucosa. They increase surface area and help warm, humidify, and filter inhaled air.

## **Turbinates Hypertrophy**

Chronic enlargement of the nasal turbinates, most commonly the inferior turbinates, resulting in nasal airway obstruction, which can be caused by chronic inflammation from allergic rhinitis, non-allergic rhinitis, chronic sinusitis, hormonal changes, or vasomotor dysfunction.

## **Turner Hypoplasia**

Enamel defect on permanent tooth from infection of overlying primary tooth. Localized hypoplasia.

## **Turner Syndrome**

A chromosomal condition, most commonly with a 45,X karyotype but also with mosaic or structurally abnormal X chromosomes. It typically causes short stature and gonadal dysgenesis with ovarian insufficiency; associated findings include webbed neck, broad chest, bicuspid aortic valve, coarctation of the aorta, renal anomalies, hearing problems, and autoimmune thyroid disease.

## **Twin-To-Twin Transfusion Syndrome**

A complication of monochorionic twin pregnancy in which shared placental vessels cause unequal blood flow between the twins.

## **Twin-Twin Transfusion Syndrome**

A complication of monochorionic diamniotic twin pregnancies where placental vascular anastomoses (arteriovenous connections) cause unbalanced blood

flow from one twin (the donor) to the other (the recipient). The donor twin becomes hypovolemic, anemic, and growth-restricted with oligohydramnios ("stuck twin").

## **Tympanic Cavity**

The air-filled space of the middle ear containing the malleus, incus, and stapes.

## **Tympanic Hyperectasis**

Abnormal outward bulging or retraction of the tympanic membrane from chronic middle ear pressure changes, potentially causing conductive hearing loss and requiring tympanostomy tube placement.

## **Tympanometry**

Tympanometry examines tympanometry; interpretation depends on the specimen or body region, test method, reference range, and clinical question. membrane and the pressure within the middle ear as a function of air pressure in the external auditory canal, providing information about middle ear function that supplements otoscopic examination.

## **Tympanosclerosis**

Scarring and calcification of the tympanic membrane or middle-ear lining, often following recurrent infection or previous inflammation. It may be asymptomatic or cause conductive hearing loss when the ossicles are affected.

### **Synonyms:**

Tympanic-membrane sclerosis; myringosclerosis when limited to the tympanic membrane.

## **Tympanostomy Tubes**

Small tubes inserted through the tympanic membrane to ventilate the middle ear and prevent fluid accumulation. Indicated for recurrent acute otitis media (3 episodes in 6 months or 4 in 12 months) or persistent otitis media with effusion greater than 3 months with hearing loss. Performed as outpatient procedure under general anesthesia.

## **Type 1 Diabetes Mellitus**

Type 1 diabetes is an autoimmune disease in which the immune system attacks and destroys the insulin-

---

producing beta cells of the pancreas, resulting in absolute insulin deficiency.

### **Type 2 Diabetes Mellitus**

Type 2 diabetes is a chronic metabolic disorder characterized by insulin resistance and progressive pancreatic beta-cell dysfunction, leading to hyperglycemia.

### **Type I Hypersensitivity**

An immediate (anaphylactic) hypersensitivity reaction mediated by allergen-specific IgE bound to mast cells and basophils; re-exposure cross-links IgE, triggering degranulation and release of histamine and mediators within minutes. Manifestations: allergic rhinitis, asthma, urticaria, food allergy, and anaphylaxis.

### **Type II Hypersensitivity**

An antibody-mediated (cytotoxic) hypersensitivity reaction in which IgG or IgM binds to cell-surface or matrix antigens, causing cell destruction by complement activation (MAC), opsonization/phagocytosis, or antibody-dependent cellular cytotoxicity.

### **Type III Hypersensitivity**

An immune complex-mediated hypersensitivity reaction in which circulating antigen-antibody complexes deposit in tissues and vessels, activating complement and attracting neutrophils, causing inflammation and tissue damage. Local forms: Arthus reaction, serum sickness.

### **Type III Hypersensitivity Reaction**

Tissue injury caused by deposition of antigen-antibody complexes, activating complement and inflammation.

### **Type IV Hypersensitivity**

A delayed-type hypersensitivity (cell-mediated) reaction mediated by sensitized T cells (not antibody), occurring 24-72 hours after antigen exposure.

### **Typhlitis**

Inflammation of the cecum in immunocompromised

patients particularly those with neutropenia from chemotherapy. Also known as neutropenic enterocolitis. Presents with right lower quadrant pain, fever, and diarrhea. Diagnosis is by CT showing cecal wall thickening.

#### **Synonyms:**

neutropenic enterocolitis.

### **Typhoid**

A systemic infection caused by *Salmonella enterica* serovar Typhi, usually acquired through contaminated food or water and characterized by prolonged fever and gastrointestinal or systemic symptoms.

### **Typhus**

Typhus refers to several rickettsial infections transmitted by lice, fleas, or mites and characterized by fever, headache, rash, and variable systemic complications. arthropod vectors. Three main forms: (1) Epidemic (louse-borne) typhus—*Rickettsia prowazekii*, transmitted by the human body louse (*Pediculus humanus corporis*). Associated with overcrowding, poverty, cold climate, and refugees ('war typhus').

### **Typical Antipsychotics**

Typical antipsychotics, also known as first-generation antipsychotics, primarily block dopamine D2 receptors in the mesolimbic pathway, reducing positive symptoms of schizophrenia including hallucinations, delusions, and disorganized thinking.

#### **Synonyms:**

first-generation antipsychotics, primarily block.

### **Tyrosine Kinase Inhibitor**

A class of targeted cancer therapy drugs that inhibit tyrosine kinases, enzymes that phosphorylate tyrosine residues on proteins and activate signaling pathways involved in cell growth, proliferation, differentiation, and survival. Tyrosine kinase mutations or overexpression drive many cancers.

### **Tyrosinemia**

An inherited disorder of tyrosine metabolism that causes accumulation of tyrosine or its metabolites. Type I can cause severe liver and kidney disease and

---

is associated with fumarylacetoacetate hydrolase deficiency.

### **Tonic Seizures**

Seizures that cause sustained stiffening of muscles, usually lasting seconds to minutes.

### **Traumatic Shock**

A life-threatening state in which severe injury causes inadequate blood flow and oxygen delivery to tissues.

### **Trendelenburg Position**

A supine position in which the head and upper body are lower than the feet.

### **Teen Depression**

A depressive disorder in an adolescent that causes persistent low mood or loss of interest and impairs daily functioning.

#### **Synonyms:**

Depression, Teen

### **Temporal Lobe Seizure**

A seizure that begins in the temporal lobe of the brain and may cause altered awareness, unusual sensations, or repetitive movements.

#### **Synonyms:**

Seizure, Temporal Lobe

### **Tendinopathy**

A disorder involving tendon pain and impaired tendon structure, usually related to overuse or degeneration.

### **Tuberculin Test**

A skin test that assesses whether the immune system has reacted to tuberculosis proteins.

### **Towel Clamp**

A clamp used to secure surgical drapes or hold them in position.

### **Tactile Sense**

The ability to perceive touch, pressure, vibration,

texture, and related mechanical stimuli through receptors in the skin and deeper tissues.

### **Target Tissue**

A tissue containing receptors or other molecular targets on which a hormone, drug, toxin, or signaling molecule acts.

### **Tarsorrhaphy**

A procedure that partially or completely closes the eyelids to protect the cornea or reduce exposure in conditions such as severe dry eye or facial nerve palsy.

### **Testes**

Testes examines testes; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Thyroxine-Binding Globulin**

The principal transport protein for thyroid hormones in the blood, binding most circulating thyroxine and triiodothyronine.

### **Tissue Plasminogen Activator**

An enzyme that converts plasminogen to plasmin, helping dissolve fibrin in blood clots. Recombinant forms are used as thrombolytic medicines in selected emergencies.

### **Tomosynthesis**

An imaging technique that acquires multiple low-dose X-ray projections and reconstructs thin section images, commonly used for three-dimensional breast imaging.

### **Tonometer**

An instrument used to measure intraocular pressure, an important part of glaucoma assessment.

### **Tonus**

The normal resting partial contraction of a muscle or the baseline tension of a tissue.

---

## **Tussis**

Cough; a forceful reflex expiration that helps clear secretions, irritants, or foreign material from the airways.

## **Tenodesis**

Surgical fixation of a tendon to bone or another tendon to restore function, stabilize a joint, or treat tendon imbalance.

## **Tibial Fracture**

A break in the tibia, the major weight-bearing bone of the lower leg, often caused by high-energy trauma, twisting injury, or repetitive stress.

## **Transaminitis**

Elevation of blood levels of aminotransferase enzymes, usually alanine aminotransferase and aspartate aminotransferase, indicating possible liver-cell injury but not identifying its cause.

## **Travelers' Diarrhea**

Acute diarrhea occurring during or shortly after travel, usually caused by contaminated food or water and commonly involving bacterial, viral, or parasitic infection.

## **Tubular Adenoma**

A benign glandular polyp, most often in the colon, that can develop dysplastic changes and is considered a precursor lesion for some colorectal cancers.

## **Tympanoplasty**

Surgical repair or reconstruction of the tympanic membrane and, when necessary, the middle-ear ossicles to close a perforation or improve hearing.

## **Tympanic Membrane Perforation**

A tear or hole in the eardrum caused by infection, trauma, pressure changes, or instrumentation, potentially producing pain, drainage, or conductive hearing loss.

## **Tachycardia-Induced Cardiomyopathy**

Weakening and dilation of the heart muscle caused

by a persistent or frequently recurring rapid heart rhythm, often improving when the arrhythmia is controlled.

## **Toxic Metabolic Encephalopathy**

Diffuse brain dysfunction caused by systemic metabolic or toxic disturbances, producing confusion, altered alertness, agitation, seizures, or coma.

## **Tensile Strength**

The ability of a tissue or material to resist being pulled apart; it is important in wound healing and the integrity of sutures, tendons, and other connective tissues.

## **Terminal Care**

Care focused on comfort, symptom relief, dignity, and support for a person with an advanced illness who is approaching the end of life.

## **Terry's Nails**

A nail change in which most of the nail plate appears white with a narrow pink or brown distal band; it may be associated with liver disease, heart failure, diabetes, or ageing.

## **Tetraplegia (Quadriplegia)**

Paralysis or severe weakness affecting all four limbs and usually the trunk, commonly caused by cervical spinal-cord injury or disease.

### **Synonyms:**

Quadriplegia

## **Thoracoscopy**

A minimally invasive procedure using a camera inserted through the chest wall to examine or treat the pleura, lungs, or mediastinum.

## **Threadworms (Pinworms)**

Small intestinal worms, *Enterobius vermicularis*, whose females lay eggs around the anus and commonly cause nocturnal itching.

### **Synonyms:**

Pinworms

---

### **Transient Ischaemic Attack (TIA)**

A brief episode of neurological dysfunction caused by temporary focal brain, spinal-cord, or retinal ischaemia without persistent tissue infarction.

#### **Synonyms:**

TIA

### **Tick-Borne Encephalitis**

A viral infection transmitted mainly by ticks that can cause fever, meningitis, encephalitis, or lasting neurological complications.

### **Tiredness (Fatigue)**

A subjective lack of energy or exhaustion that may result from inadequate sleep, illness, psychological stress, anaemia, or many other causes.

#### **Synonyms:**

Fatigue

### **Tongue-Tie (Ankyloglossia)**

Restricted movement of the tongue caused by an unusually short or tight lingual frenulum, sometimes affecting feeding, speech, or oral hygiene.

#### **Synonyms:**

Ankyloglossia

### **Tropical Chronic Pancreatitis**

A historically recognized form of chronic pancreatitis reported mainly in tropical and subtropical regions, often beginning at a younger age and associated with recurrent abdominal pain, pancreatic duct stones, and diabetes. Its causes are multifactorial and may include genetic susceptibility, nutritional factors, and environmental exposures; the term should not be applied solely because a patient lives in a tropical region.

### **Tumour (Neoplasm)**

An abnormal mass of tissue produced by uncontrolled or inappropriate cell growth; it may be benign or malignant.

#### **Synonyms:**

Neoplasm

### **Tzanck Smear**

A microscopic examination of cells from the base of a skin blister or erosion, historically used to support diagnoses such as herpesvirus infection or pemphigus.

### **Twin Pregnancy**

A pregnancy involving two fetuses. Clinical risk depends on chorionicity and amnionicity, with increased risks including preterm birth, fetal growth problems, and hypertensive disorders.

### **TAC Regimen**

A medical term referring to tac regimen. Its clinical meaning depends on the context in which it is used.

### **Tacedinaline**

Tacedinaline is an investigational histone-deacetylase inhibitor studied for effects on gene expression and cancer-cell growth.

### **Tachykinin**

A biological or biochemical term involving tachykinin. Its role depends on the relevant cells, molecules, and physiological process.

### **Tachyphrenia**

Tachyphrenia is rapid flow of thoughts or accelerated mental activity, often described in association with mania, stimulants, or other psychiatric states.

### **Tacrine**

A medicine or pharmacologic agent called tacrine. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Tactile Agnosia**

Tactile agnosia is inability to recognize a familiar object by touch despite intact primary sensation, usually from parietal-cortex dysfunction.

### **Tadalafil**

Tadalafil is a phosphodiesterase-5 inhibitor used for erectile dysfunction, benign prostatic hyperplasia, and pulmonary hypertension; headache, flushing,

---

hypotension, priapism, and dangerous nitrate interactions are important risks.

### **Taenia Saginata**

*Taenia saginata* is the beef tapeworm acquired from undercooked infected beef; intestinal infection may cause abdominal symptoms or passage of motile segments but does not usually cause human cysticercosis.

### **Taenia Solium**

*Taenia solium* is the pork tapeworm; eating undercooked pork causes intestinal taeniasis, while ingesting eggs can cause cysticercosis, including potentially serious neurocysticercosis.

### **Talabostat**

Talabostat is an investigational inhibitor of fibroblast activation protein and related enzymes studied for immune and anticancer effects.

### **Talactoferrin Alfa**

Talactoferrin alfa is a recombinant lactoferrin-related immunomodulatory protein studied as a treatment or adjunct in cancer and infectious disease.

### **Talaporfin Sodium**

Talaporfin sodium is a photosensitizer used or studied in photodynamic therapy, where light activation produces local cytotoxic effects.

### **Talipes Calcaneovalgus**

A foot deformity in which the heel is turned outward and the ankle is dorsiflexed so the foot points upward; flexible newborn cases often improve, while rigid cases need evaluation.

### **Tall Stature**

Tall stature means height substantially above the expected range for age and sex and may be familial, endocrine, genetic, or associated with another condition.

### **Talotrexin**

Talotrexin is an investigational antifolate antineoplastic drug designed to inhibit folate-dependent cellular metabolism.

### **Tamoxifen Citrate**

A medicine or pharmacologic agent called tamoxifen citrate. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Tamsulosin**

Tamsulosin is a selective alpha-1A blocker that relaxes prostate and bladder-neck smooth muscle to improve urinary symptoms of benign prostatic hyperplasia; dizziness, postural hypotension, and ejaculatory dysfunction may occur.

### **Tamsulosin Hydrochloride**

A medicine or pharmacologic agent called tamsulosin hydrochloride. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Tandutinib**

A medical term referring to tandutinib. Its clinical meaning depends on the context in which it is used.

### **Tanespimycin**

A medicine or pharmacologic agent called tanespimycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Tannic Acid**

A plant-derived polyphenol with astringent and protein-binding properties, used in some industrial or historical preparations; concentrated ingestion can irritate the gastrointestinal tract and affect absorption.

### **Tanomastat**

Tanomastat is an investigational matrix-metalloproteinase inhibitor studied for reducing tumor invasion and tissue remodeling.

---

### **Tantalum**

A biological or biochemical term involving tantalum. Its role depends on the relevant cells, molecules, and physiological process.

### **Tapentadol**

Tapentadol is a centrally acting analgesic with mu-opioid agonist and norepinephrine-reuptake-inhibitory effects, used for moderate-to-severe pain; respiratory depression, dependence, seizures, and serotonin or sedative interactions are possible.

### **Taq Polymerase**

A biological or biochemical term involving taq polymerase. Its role depends on the relevant cells, molecules, and physiological process.

### **Tarenflurbil**

Tarenflurbil is an investigational derivative of flurbiprofen studied for effects on amyloid processing and Alzheimer disease.

### **Tariquidar**

Tariquidar is an investigational inhibitor of the P-glycoprotein drug transporter studied to reverse multidrug resistance and alter medicine distribution.

### **Tarsal Bones**

The seven bones of the hindfoot and midfoot that connect the ankle to the metatarsals and form the arches and load-bearing framework of the foot.

### **Tarsal Joints**

The articulations among the tarsal bones and between the tarsals and metatarsals, providing stability and controlled movement for walking and adapting the foot to surfaces.

### **Taste Bud**

A taste bud is a cluster of specialized sensory cells in papillae of the tongue and some oral tissues that detects sweet, sour, salty, bitter, and umami stimuli and transmits signals through cranial nerves.

### **Taste Disorder**

A clinical condition or finding involving taste disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Tenascin**

A biological or biochemical term involving tenascin. Its role depends on the relevant cells, molecules, and physiological process.

### **Tendon Injury**

A clinical condition or finding involving tendon injury. Its features, causes, evaluation, and management depend on the clinical context.

### **Tendon Sheath**

A medical term referring to tendon sheath. Its clinical meaning depends on the context in which it is used.

### **Tenericutes**

A biological or biochemical term involving tenericutes. Its role depends on the relevant cells, molecules, and physiological process.

### **Teniposide**

Teniposide is a podophyllotoxin-derived antineoplastic drug that inhibits topoisomerase II and is used in selected leukemia or lymphoma regimens.

### **Tenofovir**

Tenofovir is a nucleotide reverse-transcriptase inhibitor used with other medicines for HIV and as treatment or prevention for hepatitis B; renal and bone toxicity and formulation-specific monitoring are important.

### **Tension-Type Headache**

A usually bilateral, pressing or tightening headache of mild-to-moderate intensity without prominent nausea, often associated with stress, muscle tenderness, or poor sleep.

### **Tenuazonic Acid**

A mycotoxin produced by some fungi that contami-

---

nates certain plants and foods and can inhibit protein synthesis; toxicity depends on exposure and the producing organism.

### **Teprotumumab**

A medical term referring to teprotumumab. Its clinical meaning depends on the context in which it is used.

### **Terameprocol**

Terameprocol is an investigational anticancer compound that affects transcription factors and cell-survival pathways.

### **Teratocarcinoma**

A neoplasm involving teratocarcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Teratozoospermia**

Teratozoospermia is a high proportion of abnormally shaped sperm and may contribute to reduced fertility, though semen results must be interpreted as a whole.

### **Terazosin**

A medicine or pharmacologic agent called terazosin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Terazosin Hydrochloride**

A medicine or pharmacologic agent called terazosin hydrochloride. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Terbufos**

Terbufos is a highly toxic organophosphate pesticide that inhibits acetylcholinesterase and can cause severe cholinergic poisoning.

### **Terfenadine**

A medicine or pharmacologic agent called terfenadine. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and

patient.

### **Terlipressin**

Terlipressin is a vasopressin analogue that constricts splanchnic vessels and is used in selected cases of variceal bleeding or hepatorenal syndrome.

### **Term Birth**

Term birth occurs at or after 37 completed weeks of pregnancy; early term, full term, and late or post-term categories describe more specific gestational ranges.

### **Terminal Insomnia**

Waking too early and being unable to return to sleep, a pattern that can occur in depression, circadian-rhythm disorders, aging, or other insomnia conditions.

### **Terpene**

A terpene is a hydrocarbon built from isoprene units and found in plant oils, fragrances, medicines, and other natural products.

### **Tertiary Hyperparathyroidism**

Autonomous overproduction of parathyroid hormone after long-standing secondary hyperparathyroidism, usually in chronic kidney disease, causing high calcium and high PTH.

### **Tertiary Protein**

The three-dimensional folding of a single protein chain, created by interactions among amino-acid side chains and determining the protein's functional shape.

### **Tesetaxel**

Tesetaxel is an investigational oral taxane that disrupts microtubules and has been studied as an anti-cancer treatment.

### **Testicular Atrophy**

Shrinkage and loss of functional tissue in a testicle caused by undescended testis, infection, torsion, trauma, varicocele, hormones, aging, or other injury.

---

### **Testicular Feminization**

An older term for complete or partial androgen-insensitivity syndrome, in which a person with XY chromosomes has reduced cellular response to androgens and typically female external development.

### **Testicular Gonadoblastoma**

A rare mixed germ-cell and sex-cord tumor arising in a dysgenetic or undescended gonad, often associated with Y-chromosome material and risk of another germ-cell tumor.

### **Testicular Hydrocele**

A collection of clear fluid around a testicle within the tunica vaginalis, causing painless scrotal enlargement that transilluminates; it may be congenital, reactive, or secondary to disease.

### **Testicular Mass**

A lump or enlargement within or around a testicle caused by tumor, infection, inflammation, cyst, hematoma, or torsion; a solid intratesticular mass requires urgent ultrasound and specialist assessment.

### **Testis Disorder**

A condition affecting a testicle, including torsion, infection, tumor, trauma, infertility-related damage, hormonal dysfunction, or abnormal development.

### **Testis Neoplasm**

A tumor arising in testicular tissue, most commonly a germ-cell tumor in younger adults; painless enlargement, heaviness, or a solid mass requires prompt ultrasound and evaluation.

### **Testolactone**

An aromatase inhibitor formerly used to reduce estrogen production in selected endocrine conditions; current use is limited by availability and newer alternatives.

### **Testosterone Propionate**

A short-acting injectable testosterone ester used in selected hormone-replacement or androgen-deficiency settings; risks include erythrocytosis, in-

fertility, acne, mood effects, and prostate-related monitoring needs.

### **Tetanus Toxin**

An infectious process or toxic exposure involving tetanus toxin; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Tetracaine**

Tetracaine is a potent ester local anaesthetic used topically or for spinal anaesthesia; excessive dose can cause seizures, cardiovascular toxicity, and methemoglobinaemia.

### **Tetrachloroethylene**

Tetrachloroethylene, or perchloroethylene, is an industrial solvent used in dry cleaning; substantial exposure can affect the nervous system, liver, and kidneys.

### **Tetrachlorvinphos**

Tetrachlorvinphos is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

### **Thyrotroph Adenoma**

A neoplasm involving thyrotroph adenoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Thyrotropin**

A medical term referring to thyrotropin. Its clinical meaning depends on the context in which it is used.

### **Thyrotropin Alfa**

A medical term referring to thyrotropin alfa. Its clinical meaning depends on the context in which it is used.

### **Tiazofurin**

Tiazofurin is an investigational nucleoside analogue that interferes with NAD synthesis and has been studied as an antineoplastic agent.

---

### **Tibia Vara**

Tibia vara is inward angulation of the upper shin-bone causing bowing of the leg, classically associated with Blount disease or other growth disorders.

### **Tibial Artery**

An artery of the lower leg, chiefly the anterior and posterior tibial arteries, supplying the leg, ankle, and foot and contributing to pedal pulses.

### **Tibialcrural Artery**

A lower-leg arterial vessel or branching region supplying the ankle and foot, usually discussed in relation to tibial and fibular arterial anatomy.

### **Tibialis Cranialis**

The animal-anatomy term corresponding broadly to the tibialis anterior muscle, which dorsiflexes the ankle and helps invert the foot.

### **Tic Disorder**

A clinical condition or finding involving tic disorder. Its features, causes, evaluation, and management depend on the clinical context.

### **Ticarcillin**

A medical term referring to ticarcillin. Its clinical meaning depends on the context in which it is used.

### **Tick**

A medical term referring to tick. Its clinical meaning depends on the context in which it is used.

### **Tigecycline**

Tigecycline is a glycylcycline antibiotic that binds the bacterial 30S ribosomal subunit and inhibits protein synthesis; it treats selected complicated infections but commonly causes nausea and has a warning for increased mortality in some severe infections.

### **Tight Junction**

A cell-to-cell junction that seals the space between epithelial cells and controls paracellular movement while helping maintain distinct apical and basal cell

surfaces.

### **Tilorone**

Tilorone is a synthetic antiviral and immune-modulating compound used or studied in some countries; evidence and indications vary by setting.

### **Timolol**

Timolol is a non-selective beta blocker used in glaucoma eye drops and for selected cardiovascular conditions; topical ocular use can still cause bradycardia, hypotension, bronchospasm, or fatigue.

### **Tinea Favosa**

A medical term referring to tinea favosa. Its clinical meaning depends on the context in which it is used.

### **Tinidazole**

Tinidazole is a nitroimidazole antimicrobial effective against anaerobic bacteria and protozoa such as *Giardia* and *Trichomonas*; metallic taste, gastrointestinal effects, neuropathy, and an alcohol interaction may occur.

### **Tinzaparin**

A medical term referring to tinzaparin. Its clinical meaning depends on the context in which it is used.

### **Tinzaparin Sodium**

A medical term referring to tinzaparin sodium. Its clinical meaning depends on the context in which it is used.

### **Tiopronin**

A medical term referring to tiopronin. Its clinical meaning depends on the context in which it is used.

### **Tipifarnib**

A medical term referring to tipifarnib. Its clinical meaning depends on the context in which it is used.

### **Tirapazamine**

Tirapazamine is an investigational prodrug activated in low-oxygen tissue and studied to target hypoxic tumor cells.

---

### **Tirbanibulin**

A medical term referring to tirbanibulin. Its clinical meaning depends on the context in which it is used.

### **Tirofiban**

A medical term referring to tirofiban. Its clinical meaning depends on the context in which it is used.

### **Tissierella**

A medical term referring to tissierella. Its clinical meaning depends on the context in which it is used.

### **Tissierella Praeacuta**

A medical term referring to tissierella praeacuta. Its clinical meaning depends on the context in which it is used.

### **Tissue Adhesions**

Bands of fibrous scar tissue that abnormally connect surfaces or organs, often after surgery, inflammation, infection, or bleeding and potentially causing pain, infertility, or obstruction.

### **Tissue Banks**

Facilities that recover, screen, process, preserve, store, and distribute donated human tissue for transplantation, research, or reconstructive treatment under safety and traceability standards.

### **Tissue Congestion**

Accumulation of blood or fluid within tissue because of impaired venous drainage, inflammation, obstruction, or increased vascular flow, producing swelling, redness, or impaired function.

### **Tissue Culture**

Growth of cells or tissue outside the body in a controlled nutrient medium for research, diagnosis, vaccine production, regenerative medicine, or drug testing.

### **Tissue Elastance**

The change in pressure required to produce a given change in tissue or organ volume, the inverse of compliance and important in lung and chest-wall

mechanics.

### **Tissue Engineering**

Application of biology and engineering to create biological substitutes that restore, maintain, or improve tissue function; used in regenerative medicine. Its significance is established from its characteristic features, causes, and clinical context.

### **Tissue Kallikrein**

A serine protease that cleaves kininogen to release kinins such as bradykinin, influencing local blood flow, vascular permeability, pain, and inflammation.

### **Tissue Membrane**

A thin sheet or boundary of tissue that separates compartments, covers surfaces, or surrounds structures, with composition and function varying by epithelial, connective, muscle, or biologic membrane type.

### **Tissue Processor**

A laboratory instrument that moves tissue through fixation, dehydration, clearing, and paraffin infiltration before embedding and microscopic sectioning.

### **Tissue Scaffold**

A natural or engineered three-dimensional framework that supports cell attachment, growth, organization, and tissue repair in regenerative medicine.

### **Tissue Transglutaminase (tTG)**

An enzyme that cross-links proteins and serves as the principal autoantigen in celiac disease; IgA antibodies against tissue transglutaminase are commonly used in celiac disease evaluation.

### **Tmax**

A medical term referring to tmax. Its clinical meaning depends on the context in which it is used.

### **Tobacco Use**

Tobacco use exposes the body to nicotine and toxic combustion or aerosol chemicals, causing addiction and increased risks of cancer, vascular disease, and

---

lung disease.

### **Tocolytic Agents**

Tocolytic agents suppress uterine contractions temporarily to delay preterm birth, often allowing time for corticosteroids or transfer to specialist care.

### **Tocopherol**

A medical term referring to tocopherol. Its clinical meaning depends on the context in which it is used.

### **Tocotrienols**

A medical term referring to tocotrienols. Its clinical meaning depends on the context in which it is used.

### **Togaviridae**

togaviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Togaviridae Infections**

togaviridae infections is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Tolazamide**

A medical term referring to tolazamide. Its clinical meaning depends on the context in which it is used.

### **Tolcapone**

A medical term referring to tolcapone. Its clinical meaning depends on the context in which it is used.

### **Tolmetin**

A medical term referring to tolmetin. Its clinical meaning depends on the context in which it is used.

### **Tolnaftate**

A medical term referring to tolnaftate. Its clinical meaning depends on the context in which it is used.

### **Tolonium Chloride**

Tolonium chloride, or toluidine blue, is a dye used in laboratory and selected clinical procedures to highlight cells or tissue changes.

### **Tolterodine Tartrate**

Tolterodine tartrate is an antimuscarinic medicine used for overactive bladder and urinary urgency; dry mouth, constipation, and urinary retention can occur.

### **Toluene**

Toluene is a volatile solvent that can irritate tissues and, with substantial inhalation or ingestion, injure the nervous system, liver, kidneys, or heart.

### **Tolvaptan**

A medical term referring to tolvaptan. Its clinical meaning depends on the context in which it is used.

### **Tomotherapy**

tomotherapy is used in relation to tomotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Tongue Carcinoma**

A neoplasm involving tongue carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Tongue Disease**

A clinical condition or finding involving tongue disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Tongue Neoplasm**

A neoplasm involving tongue neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Tonic Pupil**

A tonic pupil is a pupil with poor light response but a slow constriction to near focus, often caused by injury to postganglionic parasympathetic fibers.

---

### **Tonsillar Neoplasm**

A neoplasm involving tonsillar neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Tooth Abrasion**

Loss of tooth substance caused by external mechanical friction, such as aggressive brushing, abrasive products, or habits, producing grooves, notches, or sensitivity.

### **Tooth Ankylosis**

Fusion of a tooth root to alveolar bone through loss of the periodontal ligament, preventing normal eruption and making the tooth appear infraoccluded as neighboring teeth grow.

### **Tooth Attrition**

Wear of tooth surfaces caused by tooth-to-tooth contact, commonly from chewing, bruxism, or malocclusion, producing flattened cusps and possible sensitivity.

### **Tooth Calcification**

Deposition of mineral that forms and hardens enamel, dentin, cementum, and other tooth structures during development; abnormal timing or amount can affect tooth strength and appearance.

### **Tooth Component**

Tooth components include enamel, dentin, cementum, pulp, and supporting tissues, each contributing to tooth strength, sensation, nutrition, and attachment.

### **Tooth Crowding**

Tooth crowding occurs when teeth lack enough space to align normally, often from tooth size, jaw size, eruption pattern, or retained primary teeth.

### **Tooth Crown**

The tooth crown is the visible portion above the gum, covered mainly by hard enamel and containing underlying dentin and pulp.

### **Tooth Discoloration**

Change in tooth color caused by surface stains, dental decay, trauma, medications, fluorosis, aging, or changes within enamel or dentin.

### **Tooth Disease**

A clinical condition or finding involving tooth disease. Its features, causes, evaluation, and management depend on the clinical context.

### **Tooth Enamel**

Tooth enamel is the highly mineralized outer covering of the crown that protects dentin and pulp from wear, acid, and bacteria.

### **Tooth Extraction**

Removal of a tooth from its socket because of severe decay, infection, periodontal disease, fracture, impaction, orthodontic planning, or another clinical indication.

### **Tooth Fracture**

A clinical condition or finding involving tooth fracture. Its features, causes, evaluation, and management depend on the clinical context.

### **Tooth Loss**

Tooth loss is absence of a tooth due to decay, gum disease, trauma, developmental absence, or extraction and can affect chewing, speech, and oral health.

### **Tooth Resorption**

Loss of dental hard tissue caused by odontoclast activity, occurring internally or on the root surface and associated with trauma, infection, orthodontics, or idiopathic disease.

### **Tooth Root**

The tooth root anchors a tooth in its socket and contains dentin, cementum, pulp, nerves, and blood vessels beneath the gum.

### **Topiramate**

Topiramate is an antiseizure medicine also used to prevent migraine; cognitive slowing, paresthesias,

---

weight loss, kidney stones, metabolic acidosis, and fetal oral-cleft risk are important considerations.

### **Topoisomerase II**

A medical term referring to topoisomerase ii. Its clinical meaning depends on the context in which it is used.

### **Topoisomerase Inhibitors**

A medical term referring to topoisomerase inhibitors. Its clinical meaning depends on the context in which it is used.

### **Topotecan**

A medical term referring to topotecan. Its clinical meaning depends on the context in which it is used.

### **Topotecan Hydrochloride**

A medical term referring to topotecan hydrochloride. Its clinical meaning depends on the context in which it is used.

### **Toremifene**

A medical term referring to toremifene. Its clinical meaning depends on the context in which it is used.

### **Torsade De Pointes**

Torsade de pointes is a potentially fatal polymorphic ventricular tachycardia associated with prolonged QT, electrolyte disturbance, medicines, or inherited channel disorders.

### **Torsemide**

Torsemide is a loop diuretic that inhibits sodium-potassium-chloride reabsorption in the thick ascending limb and treats oedema from heart, kidney, or liver disease; dehydration and electrolyte loss may occur.

### **Torsion Dystonia**

A movement disorder causing sustained or repetitive muscle contractions that twist the body or limbs into abnormal postures; it may be inherited, acquired, focal, or generalized.

### **Torulaspora**

A medical term referring to torulaspora. Its clinical meaning depends on the context in which it is used.

### **Torulaspora Delbrueckii**

A medical term referring to torulaspora delbrueckii. Its clinical meaning depends on the context in which it is used.

### **Tositumomab**

A medical term referring to tositumomab. Its clinical meaning depends on the context in which it is used.

### **Total Laryngectomy**

total laryngectomy is used in relation to total laryngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Total Pancreatectomy**

total pancreatectomy is used in relation to total pancreatectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Toxaphene**

An infectious process or toxic exposure involving toxaphene; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxic Effect**

An infectious process or toxic exposure involving toxic effect; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxicity Grade**

An infectious process or toxic exposure involving toxicity grade; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxicity Test**

toxicity test refers to harmful exposure to the named substance or condition; severity depends on dose, route, timing, symptoms, and patient factors, and

---

urgent professional assessment may be required.

### **Toxicogenomics**

An infectious process or toxic exposure involving toxicogenomics; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxicokinetic Description**

An infectious process or toxic exposure involving toxicokinetic description; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxocara**

An infectious process or toxic exposure involving toxocara; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxocara Canis**

An infectious process or toxic exposure involving toxocara canis; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxocara Cati**

An infectious process or toxic exposure involving toxocara cati; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Toxoplasma**

An infectious process or toxic exposure involving toxoplasma; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Tra Gene**

A gene involved in sex determination and sexual differentiation in some organisms, especially insects; its function and sequence vary by species.

### **Trabectedin**

Trabectedin is an antineoplastic drug that binds DNA and alters transcription and repair, used for

selected advanced soft-tissue sarcomas and ovarian cancer.

### **Trabulsiella**

A medical term referring to trabulsiella. Its clinical meaning depends on the context in which it is used.

### **Trabulsiella Guamensis**

A medical term referring to trabulsiella guamensis. Its clinical meaning depends on the context in which it is used.

### **Transitional Epithelium**

Specialized stretchable epithelium lining the renal pelvis, ureters, bladder, and proximal urethra, allowing urinary organs to expand while maintaining a protective barrier.

### **Translation Initiation**

The first stage of protein synthesis, when a ribosome recognizes messenger RNA, selects the start codon, and assembles the initiator transfer RNA and ribosomal subunits.

### **Transmembrane Transport**

Movement of ions, nutrients, drugs, or other molecules across a cell membrane through channels, carriers, pumps, or vesicles, sometimes requiring energy.

### **Transmission**

Passage of an infection, signal, genetic trait, force, or substance from one source to another; in infectious disease, route, dose, and host susceptibility determine risk.

### **Transplant**

A medical procedure, treatment, device, or care topic related to transplant; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Transplantation Conditioning**

A medical procedure, treatment, device, or care topic related to transplantation conditioning; indi-

---

cations, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Transplantation Immunology**

A medical procedure, treatment, device, or care topic related to transplantation immunology; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Transport Protein**

A membrane or soluble protein that carries a molecule or ion across a membrane or through body fluids, often determining absorption, distribution, and cellular concentration.

### **Transport Vesicle**

A transport vesicle is a membrane-bound carrier that moves proteins, lipids, or other cargo between cellular compartments.

### **Transtracheal**

Transtracheal means passing through or relating to the trachea, such as a catheter, oxygen delivery route, or diagnostic procedure.

### **Transtympanic**

Transtympanic means passing through the tympanic membrane, such as medicine delivered into the middle ear or a procedure crossing the eardrum.

### **Trapezoid Bone**

A small distal-row carpal bone between the trapezium and capitate that articulates mainly with the index metacarpal and helps stabilize the radial side of the hand.

### **Trastuzumab**

Trastuzumab is a monoclonal antibody targeting HER2 used for HER2-positive breast, gastric, and other cancers; infusion reactions and potentially reversible cardiomyopathy require cardiac monitoring.

### **Traumatic Injury**

A clinical condition or finding involving traumatic injury. Its features, causes, evaluation, and manage-

ment depend on the clinical context.

### **Traumeel S**

Traumeel S is a multi-ingredient complementary product marketed for pain and inflammation; evidence, formulation, and safety depend on the product and it should not replace needed care.

### **Travoprost**

Travoprost is a prostaglandin analogue eye drop that increases uveoscleral outflow and lowers intraocular pressure in glaucoma or ocular hypertension; iris pigmentation and eyelash changes may occur.

### **Trazodone**

Trazodone is a serotonin antagonist and reuptake inhibitor used for depression and sometimes insomnia; sedation, orthostatic hypotension, serotonin syndrome, and rare priapism are important adverse effects.

### **Trb Gene**

A gene involved in biological processes that vary by species; its precise identity and function must be interpreted from the organism and gene nomenclature used.

### **Trd Gene**

The gene encoding the delta chain of the T-cell receptor in humans, contributing to gamma-delta T-cell antigen recognition.

### **Treatment Epoch**

treatment epoch is used in relation to treatment epoch during assessment, diagnosis, treatment, monitoring, or patient support.

### **Trematoda**

A medical term referring to trematoda. Its clinical meaning depends on the context in which it is used.

### **Trematosphaeria Grisea**

A medical term referring to trematosphaeria grisea. Its clinical meaning depends on the context in which it is used.

---

### **Tremelimumab**

A medical term referring to tremelimumab. Its clinical meaning depends on the context in which it is used.

### **Trendelenburg**

Trendelenburg position places the body supine with the feet higher than the head; its use is procedure-specific and may affect breathing, pressure, and circulation.

### **Treosulfan**

A medical term referring to treosulfan. Its clinical meaning depends on the context in which it is used.

### **Trephine**

A medical term referring to trephine. Its clinical meaning depends on the context in which it is used.

### **Treponemal Infections**

An infectious process or toxic exposure involving treponemal infections; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

### **Tretinoin**

Tretinoin is all-trans retinoic acid used topically for acne and photoaging and orally with arsenic or chemotherapy for acute promyelocytic leukaemia; skin irritation and systemic differentiation syndrome are important risks.

### **TRG Gene**

A gene encoding the gamma chain of the T-cell receptor, contributing to gamma-delta T-cell development and antigen recognition.

### **Trial Indication**

The disease, condition, symptom, or clinical purpose for which an investigational intervention is being studied in a clinical trial.

### **Trial Screening**

The process of checking potential participants against a clinical trial's eligibility criteria, including

medical history, examination, laboratory tests, and informed consent.

### **Triamcinolone Acetonide**

A medical term referring to triamcinolone acetonide. Its clinical meaning depends on the context in which it is used.

### **Triamterene**

Triamterene is a potassium-sparing diuretic that blocks epithelial sodium channels in the collecting duct and is used for hypertension or oedema; hyperkalaemia and kidney stones are important risks.

### **Triazenes**

A medical term referring to triazenes. Its clinical meaning depends on the context in which it is used.

### **Triazine**

A medical term referring to triazine. Its clinical meaning depends on the context in which it is used.

### **Triaziquone**

A medical term referring to triaziquone. Its clinical meaning depends on the context in which it is used.

### **Triazolam**

Triazolam is a short-acting benzodiazepine hypnotic for short-term insomnia; amnesia, falls, dependence, respiratory depression, and dangerous interactions with opioids or other sedatives can occur.

### **Triazole**

A medicine or pharmacologic agent called triazole. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Triazophos**

A medical term referring to triazophos. Its clinical meaning depends on the context in which it is used.

### **Tributylin**

A medical term referring to tributyrin. Its clinical meaning depends on the context in which it is used.

---

### **T-Wave Alternans**

T-wave alternans is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Tympanic Bulla**

The tympanic bulla is a hollow or expanded bony chamber surrounding the middle ear, especially prominent in many mammals.

### **Tyrosinase Peptide**

tyrosinase peptide is a defined chemical or biologic substance involved in tyrosinase peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

### **TAPVR**

Alternate index label; see *Total anomalous pulmonary venous return (TAPVR)*.

### **TB**

Alternate index label; see *Tuberculosis*.

### **TBI**

Alternate index label; see *Traumatic brain injury*.

### **Tears, Decreased Production**

Alternate index label; see *Dry eyes*.

### **Teeth Grinding**

Alternate index label; see *Teeth grinding (bruxism)*.

### **Temporomandibular Disorders**

Alternate index label; see *TMJ disorders*.

### **Temporomandibular Joint Disorders**

Alternate index label; see *TMJ disorders*.

### **TEN**

Alternate index label; see *Toxic epidermal necrolysis*.

### **Tendinitis, Achilles**

Alternate index label; see *Achilles tendinitis*.

### **Tendinitis, Patellar**

Alternate index label; see *Patellar tendinitis*.

### **Tenosynovitis, De Quervain's**

Alternate index label; see *De Quervain tenosynovitis*.

### **Testicle, Retractable**

Alternate index label; see *Retractable testicle*.

### **Testicle, Undescended**

Alternate index label; see *Undescended testicle*.

### **Testosterone Deficiency**

Alternate index label; see *Male hypogonadism*.

### **TGA**

Alternate index label; see *Transient global amnesia*.

### **Three-Day Measles**

Alternate index label; see *Rubella*.

### **Thrush, Oral**

Alternate index label; see *Oral thrush*.

### **Thyroid Gland Enlargement**

Alternate index label; see *Goiter*.

### **Thyroid, Overactive**

Alternate index label; see *Hyperthyroidism (overactive thyroid)*.

### **Thyroiditis, Chronic Lymphocytic**

Alternate index label; see *Hashimoto's disease*.

### **Tinea Cruris**

Alternate index label; see *Jock itch*.

### **TMD**

Alternate index label; see *TMJ disorders*.

---

### **TNBC**

Alternate index label; see *Triple-negative breast cancer (TNBC)*.

### **Toenail Fungus**

Alternate index label; see *Nail fungus*.

### **Tongue Tie**

Tongue tie concerns tongue tie, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Torsion, Testicular**

Alternate index label; see *Testicular torsion*.

### **Torticollis, Spasmodic**

Alternate index label; see *Cervical dystonia*.

### **Total Anomalous Pulmonary Venous Connection**

Alternate index label; see *Total anomalous pulmonary venous return (TAPVR)*.

### **Tourette's**

Alternate index label; see *Tourette syndrome*.

### **Transposition Of Great Vessels**

Alternate index label; see *Transposition of the great arteries*.

### **Traumatic Grief**

Alternate index label; see *Complicated grief*.

### **Trisomy 21 Syndrome**

Alternate index label; see *Down syndrome*.

### **Trisomy X**

Alternate index label; see *Triple X syndrome*.

### **Trouble Swallowing**

Alternate index label; see *Dysphagia*.

### **Trypanosomiasis, American**

Alternate index label; see *Chagas disease*.

### **Tumor, Salivary Gland**

Alternate index label; see *Salivary gland tumors*.

### **Tumor, Spinal**

Alternate index label; see *Spinal tumor and spinal mass*.

### **T-Cell Count**

T-cell count examines t-cell count; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **T3 Test**

T3 test examines t3 test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **T3RU Test**

T3RU test examines t3ru test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tailbone Trauma**

A biomedical term referring to tailbone trauma; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

### **Tailbone Trauma - Aftercare**

A medical procedure, treatment, device, or care topic related to tailbone trauma - aftercare; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Talcum Powder Poisoning**

Talcum powder poisoning involves toxic or environmental exposure to talcum powder poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tapeworm Infection - Beef Or Pork**

Tapeworm infection - beef or pork examines tapeworm infection - beef or pork; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Tapeworm Infection - Hymenolepis**

Tapeworm infection - hymenolepis examines tapeworm infection - hymenolepis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tar Remover Poisoning**

Tar remover poisoning involves toxic or environmental exposure to tar remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tarantula Spider Bite**

Tarantula spider bite involves toxic or environmental exposure to tarantula spider bite; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Targeted Therapies For Cancer**

Targeted therapies for cancer involves toxic or environmental exposure to targeted therapies for cancer; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Targeted Therapy: Questions To Ask Your Doctor**

Targeted therapy: questions to ask your doctor involves toxic or environmental exposure to targeted therapy: questions to ask your doctor; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Taste - Impaired**

Taste - impaired is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Tay-Sachs - Resources**

Tay-Sachs - resources addresses care related to tay-sachs - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **TBG Blood Test**

TBG blood test examines tbg blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Td (Tetanus, Diphtheria) Vaccine - What You Need To Know**

A medical term referring to td (tetanus, diphtheria) vaccine - what you need to know. Its clinical meaning depends on the context in which it is used.

### **Tdap (Tetanus, Diphtheria And Pertussis) Vaccine - What You Need To Know**

A medical term referring to tdap (tetanus, diphtheria and pertussis) vaccine - what you need to know. Its clinical meaning depends on the context in which it is used.

### **Teenagers And Drugs**

A medicine or pharmacologic agent called teenagers and drugs. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Teenagers And Sleep**

Teenagers commonly need about eight to ten hours of sleep, but schedules, screens, caffeine, mood, school demands, and sleep disorders can reduce sleep quality.

### **Telangiectasia**

Telangiectasia examines telangiectasia; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Telehealth**

Delivery of healthcare through secure electronic communication or remote monitoring, including video visits, telephone care, messaging, and transmission of clinical data.

### **Temperature Measurement**

Measurement of body or environmental temperature using a thermometer or sensor at a specified site, interpreted with method, age, timing, and clinical

---

context.

### **Tendon Repair**

A medical procedure, treatment, device, or care topic related to tendon repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tennis Elbow Surgery**

A medical procedure, treatment, device, or care topic related to tennis elbow surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tennis Elbow Surgery - Discharge**

A medical procedure, treatment, device, or care topic related to tennis elbow surgery - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tensilon Test**

Tensilon test examines tensilon test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Testicle Lump**

Testicle lump examines testicle lump; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Testicle Pain**

Testicle pain examines testicle pain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Testicular Biopsy**

Testicular biopsy examines testicular biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Testicular Self-Exam**

Testicular self-exam examines testicular self-exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Testicular Torsion Repair**

Testicular torsion repair examines testicular torsion repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tests And Visits Before Surgery**

Tests and visits before surgery examines tests and visits before surgery; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tests For H Pylori**

Tests for H pylori examines tests for h pylori; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tetrahydrozoline Poisoning**

Tetrahydrozoline poisoning involves toxic or environmental exposure to tetrahydrozoline poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **The Day Of Surgery For Your Child**

A medical procedure, treatment, device, or care topic related to the day of surgery for your child; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **The Day Of Your Surgery - Adult**

A medical procedure, treatment, device, or care topic related to the day of your surgery - adult; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **The Night Before Your Surgery**

A medical procedure, treatment, device, or care topic related to the night before your surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **The Night Before Your Surgery - Children**

A medical procedure, treatment, device, or care topic related to the night before your surgery - chil-

---

dren; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Therapeutic Drug Levels**

A medicine or pharmacologic agent called therapeutic drug levels. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Thiamin**

A medical term referring to thiamin. Its clinical meaning depends on the context in which it is used.

### **Thiazide Overdose**

Thiazide overdose involves toxic or environmental exposure to thiazide overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Thioridazine Overdose**

Thioridazine overdose involves toxic or environmental exposure to thioridazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Thirst - Absent**

Reduced or absent desire to drink despite a potential need for fluids, which can occur with hypothalamic disease, aging, altered consciousness, medications, or severe illness.

### **Thirst - Excessive**

Polydipsia, an abnormally strong or persistent desire to drink, commonly associated with dehydration, diabetes mellitus, diabetes insipidus, medicines, or psychiatric conditions.

### **Thoracic Spine CT Scan**

Thoracic spine CT scan examines thoracic spine ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Thoracic Spine X-Ray**

Thoracic spine x-ray examines thoracic spine x-ray;

interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Throat Or Larynx Cancer**

A neoplastic condition involving throat Or Larynx Cancer; diagnosis establishes the tumor type, extent, and appropriate management.

### **Throat Swab Culture**

Throat swab culture examines throat swab culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Thrombolytic Drugs For Heart Attack**

A pharmacologic agent associated with thrombolytic Drugs For Heart Attack; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

### **Thrombolytic Therapy**

A medical procedure, treatment, device, or care topic related to thrombolytic therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Thrush - Children And Adults**

Oral candidiasis caused by Candida overgrowth, producing removable white plaques, soreness, redness, altered taste, or cracks at the mouth corners; risk rises with antibiotics, inhaled steroids, diabetes, or immune suppression.

### **Thrush In Newborns**

Oral Candida infection in an infant, causing white plaques on the tongue or mouth lining that may interfere with feeding and can be passed between infant and breastfeeding parent.

### **Thyroid Cancer - Medullary Carcinoma**

A neoplastic condition involving thyroid Cancer - Medullary Carcinoma; diagnosis establishes the tumor type, extent, and appropriate management.

---

### **Thyroid Cancer - Papillary Carcinoma**

A neoplastic condition involving thyroid Cancer - Papillary Carcinoma; diagnosis establishes the tumor type, extent, and appropriate management.

### **Thyroid Gland Removal**

A medical procedure, treatment, device, or care topic related to thyroid gland removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Thyroid Gland Removal - Discharge**

A medical procedure, treatment, device, or care topic related to thyroid gland removal - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Thyroid Preparation Overdose**

Thyroid preparation overdose involves toxic or environmental exposure to thyroid preparation overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tick Bite**

Tick bite involves toxic or environmental exposure to tick bite; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tick Removal**

A medical procedure, treatment, device, or care topic related to tick removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Timing Of Breastfeeding**

The timing and frequency of breastfeeds, usually guided by early hunger cues and effective milk transfer rather than a rigid clock schedule, with special considerations for newborns and preterm infants.

### **TMJ Disorders**

A clinical finding or condition involving tMJ Disorders; evaluation depends on its characteristic features, causes, severity, and complications.

**Synonyms:**

Temporomandibular Disorders Temporomandibular Joint Disorders TMD

### **Toddler Test Or Procedure Preparation**

Toddler test or procedure preparation examines toddler test or procedure preparation; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Toilet Bowl Cleaners And Deodorizers Poisoning**

Toilet bowl cleaners and deodorizers poisoning involves toxic or environmental exposure to toilet bowl cleaners and deodorizers poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tolmetin Overdose**

Tolmetin overdose involves toxic or environmental exposure to tolmetin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Toluene And Xylene Poisoning**

Toluene and xylene poisoning involves toxic or environmental exposure to toluene and xylene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Tongue Biopsy**

Tongue biopsy examines tongue biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tongue Problems**

Tongue problems concerns tongue problems, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Tonsil And Adenoid Removal - Discharge**

A medical procedure, treatment, device, or care topic related to tonsil and adenoid removal - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

---

## **Tonsil Removal - What To Ask Your Doctor**

Tonsil removal - what to ask your doctor examines tonsil removal - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Tonsillectomies And Children**

Tonsillectomies and children examines tonsillectomies and children; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Tooth - Abnormal Colors**

Abnormal tooth color can result from plaque, decay, trauma, fluorosis, medicines, enamel defects, or staining, and the cause determines treatment.

## **Tooth - Abnormal Shape**

Abnormal tooth shape may result from developmental defects, genetic conditions, trauma, wear, or tumors and can affect function, appearance, and eruption.

## **Tooth Abscess**

A tooth abscess is a localized collection of pus from bacterial infection of the tooth or surrounding tissues, causing pain, swelling, and possible spreading infection.

## **Tooth Anatomy**

Tooth anatomy includes enamel, dentin, pulp, cementum, root, crown, periodontal ligament, and supporting bone and gums.

## **Tooth Decay - Early Childhood**

Early-childhood tooth decay is bacterial acid destruction of primary teeth, promoted by frequent sugars, poor brushing, enamel defects, and prolonged bottle or nursing exposure.

## **Tooth Formation - Delayed Or Absent**

Delayed or absent tooth formation means teeth develop or erupt later than expected or fail to form, due to local, genetic, endocrine, nutritional, or sys-

temic causes.

## **Toothaches**

Toothache is pain arising from decay, pulp inflammation, abscess, gum disease, trauma, cracking, or referred facial pain and requires dental assessment if persistent.

## **Toothpaste Overdose**

Toothpaste overdose involves toxic or environmental exposure to toothpaste overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

## **TORCH Screen**

Testing for selected congenital infections—classically Toxoplasma, Other infections, Rubella, Cytomegalovirus, and Herpes—when fetal or newborn findings suggest an in-utero infection; broad panels require careful interpretation.

## **Total Abdominal Colectomy**

Total abdominal colectomy examines total abdominal colectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Total Cholesterol**

Total cholesterol is the combined cholesterol carried in major blood lipoproteins; cardiovascular risk is assessed with HDL, LDL, triglycerides, and other factors.

## **Total Colectomy Or Proctocolectomy - Discharge**

Total colectomy or proctocolectomy - discharge examines total colectomy or proctocolectomy - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## **Total Hip Joint Replacement - Revision**

A medical procedure, treatment, device, or care topic related to total hip joint replacement - revision; indications, benefits, risks, and follow-up depend on

---

the specific intervention and patient.

### **Total Knee Joint Replacement - Revision**

A medical procedure, treatment, device, or care topic related to total knee joint replacement - revision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Total Parenteral Nutrition - Infants**

Total parenteral nutrition - infants addresses care related to total parenteral nutrition - infants, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Total Proctocolectomy And Ileal-Anal Pouch**

Total proctocolectomy and ileal-anal pouch examines total proctocolectomy and ileal-anal pouch; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Total Proctocolectomy With Ileostomy**

Total proctocolectomy with ileostomy examines total proctocolectomy with ileostomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Total Protein**

Total protein concerns total protein, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

### **Toxic Synovitis**

Toxic synovitis involves toxic or environmental exposure to toxic synovitis; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Toxicology Screen**

Toxicology screen involves toxic or environmental exposure to toxicology screen; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Toxoplasma Blood Test**

Toxoplasma blood test examines toxoplasma blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tracheal Rupture**

Tracheal rupture is a tear in the windpipe caused by trauma, instrumentation, surgery, or pressure and can produce air leakage, breathing difficulty, and life-threatening complications.

### **Tracheoesophageal Fistula And Esophageal Atresia Repair**

A medical procedure, treatment, device, or care topic related to tracheoesophageal fistula and esophageal atresia repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tracheomalacia - Acquired**

Acquired tracheomalacia is weakening of the tracheal wall after injury, inflammation, compression, or prolonged ventilation, causing airway collapse and breathing symptoms.

### **Tracheomalacia - Congenital**

Congenital tracheomalacia is weakness of the infant tracheal cartilage causing dynamic airway collapse, noisy breathing, cough, or recurrent respiratory symptoms.

### **Tracheostomy Care**

A medical procedure, treatment, device, or care topic related to tracheostomy care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tracheostomy Tube - Eating**

A medical term referring to tracheostomy tube - eating. Its clinical meaning depends on the context in which it is used.

### **Tracheostomy Tube - Speaking**

A medical term referring to tracheostomy tube -

---

speaking. Its clinical meaning depends on the context in which it is used.

### **Transcatheter Aortic Valve Replacement**

A medical procedure, treatment, device, or care topic related to transcatheter aortic valve replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Transcranial Doppler Ultrasound**

Transcranial Doppler ultrasound examines transcranial doppler ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Transient Familial Hyperbilirubinemia**

Transient familial hyperbilirubinemia is inherited temporary elevation of bilirubin, often from reduced conjugation, causing episodic jaundice without major liver injury.

### **Transient Tachypnea - Newborn**

Temporary rapid breathing in a newborn caused by delayed clearance of fetal lung fluid, usually beginning soon after birth and improving within one to three days with supportive care.

### **Transillumination**

Transillumination examines transillumination; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Transjugular Intrahepatic Portosystemic Shunt (TIPS)**

Transjugular intrahepatic portosystemic shunt (TIPS) addresses care related to transjugular intrahepatic portosystemic shunt (tips), including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Transplant Services**

A medical procedure, treatment, device, or care topic related to transplant services; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Transurethral Resection Of The Prostate - Discharge**

Transurethral resection of the prostate - discharge examines transurethral resection of the prostate - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Transvaginal Ultrasound**

Transvaginal ultrasound examines transvaginal ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Traumatic Amputation**

Traumatic amputation is loss of a body part from injury and requires hemorrhage control, preservation of the amputated part when possible, urgent surgery, rehabilitation, and psychological support.

### **Traumatic Events And Children**

Traumatic events can affect children's safety, behavior, sleep, learning, and emotions; supportive caregivers, stable routines, and professional assessment help identify persistent trauma responses.

### **Traumatic Injury Of The Bladder And Urethra**

A clinical condition involving traumatic Injury Of The Bladder And Urethra; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Traveler's Diarrhea Diet**

Traveler's diarrhea diet addresses care related to traveler's diarrhea diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Traveler's Guide To Avoiding Infectious Diseases**

Traveler's guide to avoiding infectious diseases examines traveler's guide to avoiding infectious diseases; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Trazodone Overdose**

Trazodone overdose involves toxic or environmental exposure to trazodone overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Treatment For Childhood Cancer - Long-Term Risks**

A neoplastic condition involving treatment For Childhood Cancer - Long-Term Risks; diagnosis establishes the tumor type, extent, and appropriate management.

### **Tremor - Self-Care**

A medical procedure, treatment, device, or care topic related to tremor - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Trench Mouth**

Trench mouth is acute necrotizing ulcerative gingivitis causing painful bleeding gums, foul breath, and ulceration, often associated with plaque, smoking, stress, or poor nutrition.

### **Trichorrhexis Nodosa**

A hair-shaft defect in which weakened points split into brush-like ends, caused by inherited disease, trauma, chemicals, heat, or nutritional or metabolic disorders.

### **Triglyceride Level**

Triglyceride level is a defined medical, biological, or research term; it describes the named process, measurement, structure, or finding and is interpreted with the surrounding clinical information.

### **Trisodium Phosphate Poisoning**

Trisodium phosphate poisoning involves toxic or environmental exposure to trisodium phosphate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Trisomy 13**

Patau syndrome, a chromosomal disorder caused by

an extra chromosome 13 and associated with severe developmental, brain, facial, heart, kidney, and limb abnormalities.

### **Trisomy 18**

Edwards syndrome, a chromosomal disorder caused by an extra chromosome 18 and associated with growth restriction, characteristic craniofacial and limb findings, heart disease, and severe developmental impairment.

### **Troponin Test**

Troponin test examines troponin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Trypsin And Chymotrypsin In Stool**

Trypsin and chymotrypsin in stool examines trypsin and chymotrypsin in stool; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Trypsinogen Test**

Trypsinogen test examines trypsinogen test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **TSH Test**

TSH test examines tsh test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **TSI Test**

TSI test examines tsi test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Tubal Ligation - Discharge**

A medical procedure, treatment, device, or care topic related to tubal ligation - discharge; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Tubal Ligation Reversal**

Microsurgical reconnection of previously divided or

---

blocked fallopian-tube segments to restore a possible path for sperm and egg; success depends on remaining tube length, age, scarring, and original method.

### **Tularemia Blood Test**

Tularemia blood test examines tularemia blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Turbinate Surgery**

A medical procedure, treatment, device, or care topic related to turbinate surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Turning Patients Over In Bed**

Repositioning a patient at planned intervals to protect skin, improve comfort and breathing, prevent pressure injuries and contractures, and reduce complications of immobility.

### **Turpentine Oil Poisoning**

Turpentine oil poisoning involves toxic or environmental exposure to turpentine oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### **Type 1 Diabetes**

Type 1 diabetes is autoimmune destruction of pancreatic beta cells causing absolute insulin deficiency, hyperglycemia, and risk of diabetic ketoacidosis without insulin replacement.

#### **Synonyms:**

Diabetes, Type 1 Diabetes Type 1 (Type 1 Diabetes)

### **Type 1 Diabetes - Self-Care**

A medical procedure, treatment, device, or care topic related to type 1 diabetes - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Type 2 Diabetes**

Type 2 diabetes is chronic hyperglycemia caused by

insulin resistance and progressive beta-cell dysfunction, with risks to the eyes, kidneys, nerves, heart, and blood vessels.

#### **Synonyms:**

Diabetes, Type 2 Diabetes Type 2 (Type 2 Diabetes)

### **Type 2 Diabetes - Oral Medicines**

Oral medicines for type 2 diabetes lower glucose through effects on insulin, liver glucose production, kidney reabsorption, or intestinal absorption; choice depends on health and treatment goals.

### **Type 2 Diabetes - Self-Care**

A medical procedure, treatment, device, or care topic related to type 2 diabetes - self-care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Type 2 Diabetes - What To Ask Your Doctor**

Type 2 diabetes - what to ask your doctor examines type 2 diabetes - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Type V Glycogen Storage Disease**

A clinical condition involving type V Glycogen Storage Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Types Of Chemotherapy**

A medical procedure, treatment, device, or care topic related to types of chemotherapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Types Of Health Care Providers**

Types of health care providers addresses care related to types of health care providers, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Types Of Hormone Therapy**

A medical procedure, treatment, device, or care topic related to types of hormone therapy; indica-

---

tions, benefits, risks, and follow-up depend on the specific intervention and patient.

### **Types Of Ileostomy**

Types of ileostomy include end, loop, and continent procedures, which divert stool through an opening in the abdominal wall when the colon or rectum cannot be used normally.

### **Tachycardia Paroxysmal Atrial (Paroxysmal Supraventricular Tachycardia (PSVT))**

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

### **Tachycardia Paroxysmal Supraventricular (Paroxysmal Supraventricular Tachycardia (PSVT))**

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

### **TB (Tuberculosis (TB) Facts)**

Alternate index label for Tuberculosis (TB) Facts.

### **Teeth Grinding (Bruxism)**

Alternate index label for Bruxism.

### **Temporomandibular Joint Syndrome (TMJ)**

Alternate index label for TMJ.

### **Tendinitis Rotator Cuff (Rotator Cuff)**

Alternate index label for Rotator Cuff.

### **Tennis Elbow (Lateral Epicondylitis)**

Alternate index label for Lateral Epicondylitis.

### **Terms Medical Abbreviations (Common Medical Abbreviations And Terms)**

Alternate index label for Common Medical Abbreviations and Terms.

### **Testosterone Low (Low Testosterone (Low T))**

Alternate index label for Low Testosterone (Low

T).

### **Thallium**

Thallium is a toxic heavy metal that can cause gastrointestinal illness followed by painful peripheral neuropathy, hair loss, skin changes, kidney or liver injury, seizures, and cardiovascular or neurologic toxicity. Suspected exposure requires immediate poison-control or emergency guidance.

#### **Synonyms:**

Poisoning Thallium (Thallium)

### **Throat Cancer (Larynx Cancer)**

Alternate index label for Larynx Cancer.

### **Thrombocytopenia (Low Platelet Count)**

Alternate index label for Low Platelet Count.

### **Thrush And Other Yeast Infections In Children**

Thrush is Candida overgrowth in the mouth, producing white plaques, soreness, or feeding difficulty; Candida can also affect skin folds or diaper areas. Persistent, recurrent, severe, or immune-associated infection needs pediatric evaluation and appropriate antifungal treatment.

#### **Synonyms:**

Candida Infection Children (Thrush And Other Yeast Infections In Children) Monilia Infection Children (Thrush And Other Yeast Infections In Children) Oral Candidiasis Children (Thrush And Other Yeast Infections In Children) Oral Moniliasis Children (Thrush And Other Yeast Infections In Children)

### **Thrush Contagious (Is Thrush Contagious)**

Alternate index label for Is Thrush Contagious.

### **Thymic Hyperplasia**

Thymic hyperplasia is enlargement of the thymus from increased lymphoid tissue or rebound growth and may be incidental. It can be associated with autoimmune disease, infection, endocrine conditions, or stress; imaging and clinical context distinguish it

---

from a mass.

### **Thyroid Disease Symptoms And Signs**

Thyroid disease can cause symptoms of underactivity, overactivity, inflammation, nodules, or hormone excess, including fatigue, weight change, heat or cold intolerance, palpitations, bowel change, tremor, neck swelling, or menstrual disturbance. Blood testing guides evaluation.

### **Thyroid Nodules**

A thyroid nodule is a discrete growth within the thyroid and is often benign. Ultrasound, thyroid-function testing, and selected needle biopsy assess cancer risk; rapid growth, hoarseness, swallowing difficulty, or breathing problems needs prompt review.

#### **Synonyms:**

Nodule Thyroid (Thyroid Nodules)

### **TIA (Transient Ischemic Attack (TIA, Mini-Stroke))**

Alternate index label for Transient Ischemic Attack (TIA, Mini-Stroke).

### **Tic Douloureux (Trigeminal Neuralgia)**

Alternate index label for Trigeminal Neuralgia.

### **Ticks Bite (Ticks)**

Alternate index label for Ticks.

### **Tietze Syndrome (Costochondritis And Tietze Syndrome)**

Alternate index label for Costochondritis and Tietze Syndrome.

### **Tinea Pedis (Athlete's Foot)**

Alternate index label for Athlete's Foot.

### **Tinnitus (Ringing In The Ears)**

Alternate index label for Ringing in the Ears.

### **TMJ (Temporomandibular Joint Syndrome (TMJ))**

Alternate index label for Temporomandibular Joint

Syndrome (TMJ).

### **Tobacco Chewing (Smokeless Tobacco)**

Alternate index label for Smokeless Tobacco.

### **Toddlers Sleep (Sleep And Sleep Disorders In Children And Teens)**

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

### **Toe Broken (Broken Toe)**

Alternate index label for Broken Toe.

### **Tonsil Inflammation (Adenoids And Tonsils)**

Alternate index label for Adenoids and Tonsils.

### **Tonsil Stones**

Tonsil stones are calcified collections of debris and bacteria in tonsil crypts, causing bad breath, throat irritation, or a foreign-body sensation. Gargling and oral hygiene may help; recurrent symptoms, bleeding, or one-sided enlargement requires examination.

### **Tooth Infected (Abscessed Tooth Guide)**

Alternate index label for Abscessed Tooth Guide.

### **Toothache Overview**

Toothache usually reflects decay, pulp inflammation, fracture, gum disease, abscess, trauma, or referred pain. Dental treatment is needed to correct the cause; facial swelling, fever, difficulty swallowing, or breathing difficulty requires urgent care.

#### **Synonyms:**

Pain Tooth (Toothache Overview)

### **Torn ACL**

A torn anterior cruciate ligament is a knee injury commonly caused by sudden pivoting, landing, or contact, producing a pop, swelling, instability, and difficulty changing direction. Rehabilitation, bracing, or reconstruction is selected according to activity, associated injury, and goals.

---

### **Torn Meniscus**

A torn meniscus is a split in the knee's shock-absorbing cartilage caused by twisting or degeneration. Pain, swelling, catching, or locking may occur; physical therapy or arthroscopic treatment depends on tear pattern, symptoms, age, and associated disease.

#### **Synonyms:**

Meniscus Tear

### **Torsion Testicle (Testicular Disorders)**

Alternate index label for Testicular Disorders.

### **TOS (Thoracic Outlet Syndrome)**

Alternate index label for Thoracic Outlet Syndrome.

### **Toxic Shock Syndrome (TSS)**

Alternate index label for TSS.

### **Toxin Ciguatera (Ciguatera Poisoning)**

Alternate index label for Ciguatera Poisoning.

### **Transient Ischemic Attack (TIA, Mini-Stroke)**

Alternate index label for TIA, Mini-Stroke.

### **Trigger Thumb (Trigger Finger)**

Alternate index label for Trigger Finger.

### **Triggers IBS (Irritable Bowel Syndrome (IBS) Triggers, Prevention)**

Alternate index label for Irritable Bowel Syndrome (IBS) Triggers, Prevention.

### **Trisomy 18 (Edwards Syndrome)**

Alternate index label for Edwards Syndrome.

### **Trisomy 21 (Down Syndrome Overview)**

Alternate index label for Down Syndrome Overview.

### **Trochanteric Bursitis (Hip Bursitis)**

Alternate index label for Hip Bursitis.

### **TSS (Toxic Shock Syndrome (TSS))**

Alternate index label for Toxic Shock Syndrome (TSS).

### **Tuberculos Contagious (Is Tuberculosis (TB) Contagious)**

Alternate index label for Is Tuberculosis (TB) Contagious.

### **Tuberculosis (TB) Facts**

Alternate index label for TB) Fact.

### **Tubes Ear Problems (Eustachian Tube Problems)**

Alternate index label for Eustachian Tube Problems.

### **Tumor Adrenal Gland (Pheochromocytoma)**

Alternate index label for Pheochromocytoma.

### **Tumor Brain Cancer (Brain Cancer)**

Alternate index label for Brain Cancer.

### **Tumor Testicle (Testicular Disorders)**

Alternate index label for Testicular Disorders.

### **Tumors Uterine (Uterine Fibroids)**

Alternate index label for Uterine Fibroids.

### **Tweens Sleep (Sleep And Sleep Disorders In Children And Teens)**

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

### **T Cell**

Abbreviation for T lymphocyte, a type of white blood cell that is produced in the bone marrow and is part of the body's immune system.

### **T.I.D. (On Prescription)**

T.I.D. means three times daily on a prescription; clear instructions should specify timing and should avoid ambiguous abbreviations when possible.

---

### **T1-T12 (Thoracic Vertebrae)**

The twelve vertebrae of the chest region, each articulating with ribs and protecting the thoracic spinal cord while supporting the trunk and rib cage.

### **Tablet Splitting**

A medical term referring to tablet splitting. Its clinical meaning depends on the context in which it is used.

### **Tache Noire**

Tache noire is a black eschar at the site of a tick bite, classically associated with Mediterranean spotted fever and related rickettsial infections.

### **Taint**

A taint is contamination or an undesirable influence; in medicine or laboratory work it may refer to contamination that affects a specimen, product, or result.

### **Talipes Equinovarus**

Clubfoot, a congenital deformity combining ankle equinus, hindfoot varus, forefoot adduction, and cavus; early serial casting and bracing are standard initial treatment.

### **Tamoxifen (Nolvadex)**

A medicine, biologic, or pharmacologic term related to tamoxifen (nolvadex); its mechanism, indication, interactions, and adverse effects depend on the specific agent.

### **Tap, Joint (Aspiration)**

Tap, joint (aspiration) refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

### **Taphephobia**

An excessive fear of being buried alive, classified as a specific phobia when it causes persistent distress, avoidance, or functional impairment.

### **Tarantism**

Tarantism is a historical term for a dancing or be-

havioral syndrome once attributed to spider bite and now understood as a cultural or neurologic phenomenon rather than a specific disease.

### **Targeted Radiation Therapy**

Targeted radiation therapy is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Tassinari Syndrome**

A clinical condition involving tassinari Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Tattoos & Permanent Makeup**

Tattoos and permanent makeup place pigment into the skin; risks include infection, allergy, scarring, blood-borne disease, and difficulty removing or changing the result.

### **TB Test**

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### **Td**

Td is a vaccine protecting against tetanus and diphtheria, generally used as a booster in adolescents and adults according to local schedules.

### **Td Immunization**

Vaccination against tetanus and reduced-dose diphtheria, used for routine boosters, catch-up immunization, and wound-related protection according to age and vaccination history.

### **Tear**

A split or rupture in tissue, such as a muscle, tendon, ligament, meniscus, skin, or organ, caused by trauma, overuse, degeneration, or pressure.

### **TEE**

TEE, or transesophageal echocardiography, uses an

---

ultrasound probe in the esophagus to obtain detailed images of heart valves, chambers, clots, and nearby vessels.

### **Temporary Loss Of Consciousness**

Temporary loss of consciousness is a brief episode of unresponsiveness with loss of postural tone, commonly from syncope but sometimes from seizure or another disorder.

### **Tenia**

Tenia is an older or variant spelling related to Taenia, a genus of tapeworms that can infect humans or animals.

### **Tension**

A pulling force or state of being stretched; in medicine it may describe tissue tension, blood-vessel wall tension, muscle tightness, or psychological strain depending on context.

### **Ter In Die (On Prescription)**

Ter in die means three times a day on a prescription; explicit plain-language timing is safer than relying on Latin abbreviations.

### **Teratogenic**

Capable of causing congenital malformations, growth impairment, functional deficits, or pregnancy loss when an embryo or fetus is exposed during a vulnerable developmental period.

### **Teratogenic Drugs**

A medicine or pharmacologic agent called teratogenic drugs. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Teratophobia**

An excessive fear of giving birth to a child with a congenital abnormality, classified as a specific phobia when persistent fear causes avoidance or impairment.

### **Terminal Ileitis**

Inflammation of the distal ileum, commonly associated with Crohn disease but also caused by infection, ischemia, medication, or other inflammatory conditions and producing pain, diarrhea, or bleeding.

### **Testicles**

The paired male reproductive glands in the scrotum that produce sperm and testosterone; pain, enlargement, a new lump, or sudden change requires examination.

### **Testicular Feminization Syndrome**

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### **Tetracycline**

A medicine, biologic, or pharmacologic term related to tetracycline; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

### **Therapeutic**

Therapeutic means intended to treat, relieve, or manage a disease, symptom, impairment, or other health problem.

### **Therapeutic Cloning**

A medical term referring to therapeutic cloning. Its clinical meaning depends on the context in which it is used.

### **Thermophobia**

An excessive or persistent fear of heat or high temperatures that causes avoidance, distress, or functional impairment.

### **Thermostat**

A thermostat regulates temperature by sensing heat and controlling a heating or cooling system; accurate environmental temperature can matter for patients, specimens, and medicines.

---

### ThinPrep Pap Test

ThinPrep Pap test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### Thoracic

Thoracic means relating to the chest, the thoracic spine, or structures within the thorax such as the heart and lungs.

### Thorax

The thorax is the chest region between the neck and abdomen, enclosed by ribs and containing the heart, lungs, major vessels, and mediastinal structures.

### Thrombotic Thrombocytopenic Purpura (TTP)

TTP is a life-threatening disorder in which severe ADAMTS13 deficiency causes platelet-rich microclots, low platelets, hemolytic anemia, neurologic or kidney injury, and fever.

### Thyrocalcitonin

A medical term referring to thyrocalcitonin. Its clinical meaning depends on the context in which it is used.

### Thyroid

A medical term referring to thyroid. Its clinical meaning depends on the context in which it is used.

### Thyroid Hormones

Thyroxine (T4) and triiodothyronine (T3), hormones that regulate metabolic rate, growth, brain development, heat production, and cardiovascular and gastrointestinal activity.

### Thyroid Peroxidase Test

Thyroid peroxidase test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### Tick Typhus

A medical term referring to tick typhus. Its clinical meaning depends on the context in which it is used.

### Tilted Disc Syndrome

A clinical condition involving tilted Disc Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

### Tinea Unguium

A medical term referring to tinea unguium. Its clinical meaning depends on the context in which it is used.

### TIPS

TIPS, or transjugular intrahepatic portosystemic shunt, connects portal and hepatic veins to reduce portal hypertension, often for variceal bleeding or refractory ascites.

### Tired

Feeling a lack of energy or physical or mental stamina, which may result from sleep loss, exertion, infection, anemia, endocrine disease, medication, depression, or other illness.

### Tiredness

Fatigue or reduced energy and endurance that can be physical, mental, or both; persistent unexplained fatigue warrants assessment for sleep, mood, systemic, medication, and metabolic causes.

### TMR

TMR is a context-dependent abbreviation, including targeted muscle reinnervation, a surgical technique used to improve control of a prosthesis and reduce amputation pain.

### Toc- (Prefix)

Toc- is a prefix used in some medical terms and often relates to childbirth or labor, as in tocolysis; the complete word determines its meaning.

### Toco-

The term Toco- is a medical word element or pre-

---

fix whose precise meaning depends on the word or clinical context in which it is used.

### **Toddler**

A toddler is a young child, usually about one to three years old, developing rapidly in movement, language, behavior, feeding, and independence.

### **Toenail**

A toenail is the hard keratin plate covering the end of a toe and protecting its underlying tissue; injury, fungus, and ingrowth can cause disease.

### **Toilet**

A medical term referring to toilet. Its clinical meaning depends on the context in which it is used.

### **Toko- (Prefix)**

Toko- is a prefix relating to childbirth or labor, derived from Greek terms for birth.

### **Tom-**

The term Tom- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Tomo-**

The term Tomo- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Tomogram**

A tomogram is an image of a selected cross-sectional layer of the body or another object, produced by tomography such as CT or MRI.

### **Topoisomerase**

A medical term referring to topoisomerase. Its clinical meaning depends on the context in which it is used.

### **Total Knee Replacement**

A medical procedure, treatment, device, or care topic related to total knee replacement; indications, benefits, risks, and follow-up depend on the specific

intervention and patient.

### **Toxic Epidermal Necrolysis (TEN)**

Toxic epidermal necrolysis is a life-threatening severe skin reaction, usually to a medicine, causing widespread epidermal death and skin detachment with mucosal injury.

### **Toxicity**

Toxicity refers to harmful exposure to the named substance or condition; severity depends on dose, route, timing, symptoms, and patient factors, and urgent professional assessment may be required.

### **Toxoplasmosis (Toxo)**

A medical term referring to toxoplasmosis (toxoplasma). Its clinical meaning depends on the context in which it is used.

### **TPN**

TPN, or total parenteral nutrition, supplies nutrients intravenously when the gastrointestinal tract cannot be used adequately.

### **Trachelectomy**

Trachelectomy is surgical removal of the cervix, sometimes with nearby tissue, used in selected cervical cancers or other conditions.

### **Trait**

A trait is a measurable characteristic of an organism influenced by genes, environment, development, or their interaction.

### **Trans- (Prefix)**

The term Trans- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

### **Transaminase, Serum Glutamic Pyruvic (SGPT)**

SGPT, now called ALT, is a liver-associated enzyme measured in blood and often elevated when liver cells are injured.

---

## Transplantation Genetics

A medical procedure, treatment, device, or care topic related to transplantation genetics; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

## Treacle

Treacle is a thick sugar syrup; in older medical usage, related terms referred to antidotes or mixtures, so context matters.

## Trich- (Prefix)

The term Trich- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

## Tricho- (Prefix)

The term Tricho- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

## Trigger

A trigger is an event, exposure, stimulus, or condition that initiates or worsens a symptom, disease episode, behavior, or physiologic response.

## Triglycerides

Triglycerides are blood fats made of glycerol and three fatty acids; elevated levels contribute to cardiovascular risk and, when very high, pancreatitis risk.

## Trip

A trip is a journey or an accidental stumble; in drug-related language it can also mean an episode of altered perception after a hallucinogen.

## Triptans (Triptan)

Triptans are serotonin-receptor agonists used to abort migraine attacks by constricting cranial vessels and reducing trigeminal signaling.

## Troche

A troche is a small medicated lozenge that dissolves slowly in the mouth or throat for local or systemic

drug delivery.

## Tropical Oil

A clinical finding or condition involving tropical Oil; evaluation depends on its characteristic features, causes, severity, and complications.

## Trp

Trp is the standard abbreviation for tryptophan, an essential amino acid used in protein synthesis and serotonin and niacin pathways.

## Truncation

A shortened or incomplete form caused by removal of part of a sequence, structure, chromosome, protein, or process; the effect depends on what was lost and where.

## Trypophobia

An aversion or intense discomfort triggered by clustered holes or repetitive small patterns; it is clinically relevant only when persistent distress or avoidance causes impairment.

## TSD

TSD is a context-dependent abbreviation that may mean total sleep deprivation, traumatic stress disorder, or another clinical term; the full term should be specified.

## TSE

TSE is a context-dependent abbreviation, including transmissible spongiform encephalopathy, the prion-disease group that includes Creutzfeldt-Jakob disease.

## TTP (Thrombotic Thrombocytopenic Purpura)

TTP is a medical emergency caused by platelet-rich microthrombi, usually from severe ADAMTS13 deficiency, producing low platelets, hemolytic anemia, and organ injury.

## Tubal Occlusion Procedure, Selective

---

## **(STOP)**

Selective tubal occlusion blocks a fallopian tube to prevent sperm and egg from meeting and is a permanent contraceptive procedure.

## **Tube**

A medical term referring to tube. Its clinical meaning depends on the context in which it is used.

## **Tuber**

A medical term referring to tuber. Its clinical meaning depends on the context in which it is used.

## **Tuberculosis, MDR**

A clinical finding or condition involving tuberculosis, MDR; evaluation depends on its characteristic features, causes, severity, and complications.

## **Tubes**

A medical term referring to tubes. Its clinical meaning depends on the context in which it is used.

## **Tumor Marker, CEA**

A neoplastic condition involving tumor Marker, CEA; diagnosis establishes the tumor type, extent, and appropriate management.

## **Tumor Marker, NSE**

A neoplastic condition involving tumor Marker, NSE; diagnosis establishes the tumor type, extent, and appropriate management.

## **Tunnel Vision**

Loss of peripheral visual field leaving a narrowed central field, caused by glaucoma, retinal disease, optic-nerve or brain lesions, severe hypoxia, or other conditions.

## **Turmeric**

Turmeric is a plant spice containing curcuminoids and used in foods and supplements; evidence varies by condition and interactions or liver injury are possible.

## **TVS**

TVS commonly means transvaginal sonography, an ultrasound examination using a probe in the vagina to assess pelvic organs and early pregnancy.

## **Twilight Sleep**

Twilight sleep is an older term for a sedated, partly conscious state used during procedures; modern analgesia and anesthesia specify the medicines and monitoring used.

## **Twin**

A twin is one of two offspring from the same pregnancy, either identical from one fertilized egg or fraternal from two eggs and two sperm.

## **Twitch**

A brief involuntary muscle contraction or movement, which may be benign, medication-related, stress-related, or a sign of nerve, muscle, or brain disease.

## **Twitching**

Repeated involuntary muscle contractions or fasciculations, commonly caused by fatigue, stimulants, electrolyte disturbance, nerve irritation, medicines, or neurologic disease.

## **Tympanic**

Tympanic means relating to the eardrum or middle ear, or resembling a drum in shape or sound.

## **Tympano-**

The term Tympano- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used.

## **Tympany**

Tympany is a drumlike sound on percussion, often produced by gas in a hollow organ such as the stomach or intestine.

## **Type 3B Diabetes**

Type 3b diabetes is a form of diabetes caused by disease or removal of the pancreas, which can impair both insulin and digestive-enzyme production.

---

## Therapeutic Abortion

Intentional termination of a pregnancy because of medical, fetal, or other legally recognized indications, according to applicable law and clinical guidance.

## Transient Global Amnesia

A temporary episode of sudden inability to form new memories, with repetitive questioning, that usually resolves within 24 hours.

### Synonyms:

TGA

## Thumb Arthritis

Degeneration or inflammation of a thumb joint, especially the joint at the base of the thumb, causing pain, stiffness, and reduced grip.

### Synonyms:

Basal Joint Arthritis

## Type 1 Diabetes In Children

Type 1 diabetes diagnosed during childhood, causing high blood sugar and requiring insulin, monitoring, nutrition planning, and education.

### Synonyms:

Diabetes, Type 1 In Children

## Type 2 Diabetes In Children

Type 2 diabetes beginning during childhood or adolescence, often involving insulin resistance and requiring lifestyle and medical management.

### Synonyms:

Diabetes, Type 2 In Children

## Threatened Miscarriage

Vaginal bleeding during early pregnancy with a closed cervix and no passage of pregnancy tissue; the pregnancy may remain viable. Evaluation commonly includes clinical assessment, serial human chorionic gonadotropin testing when indicated, and ultrasound.

### Synonyms:

Threatened abortion.

## Toe Joint

Any joint connecting the bones of a toe. Toe joints include the metatarsophalangeal and interphalangeal joints; they permit toe movement and may be affected by arthritis, gout, injury, or deformity.

### Synonyms:

toe articulation.

## Tail

A tapering appendage extending from the end of an animal's body. In human anatomy, the term may refer to a tail-like congenital structure or the embryologic caudal end; evaluation depends on the specific finding.

## Target Population

The defined group of people for whom a medical intervention, screening program, or research study is intended. It is characterized by criteria such as age, diagnosis, risk, or other relevant features.

## Total Artificial Heart

A mechanical device that replaces the pumping function of both ventricles and is used in selected patients with severe biventricular heart failure, usually as a bridge to transplantation. It requires specialized center-based management and carries risks including bleeding, infection, thrombosis, and device malfunction.

## Tender

Painful or sensitive when touched or pressed, a finding that may indicate inflammation, infection, trauma, ischemia, or another underlying process.

## TSH

Thyroid-stimulating hormone, a pituitary hormone that stimulates the thyroid gland to produce and release thyroid hormones. TSH is commonly measured with free T4 to evaluate thyroid function and monitor thyroid treatment.

## Tumor Necrosis Factor Receptor-Associated Periodic Syndrome

A rare inherited autoinflammatory disorder caused

---

by variants in the TNFRSF1A gene, producing recurrent prolonged fever, muscle pain, abdominal pain, rash, and inflammation; it is also called TRAPS.

### **Total Sleep Time**

The total amount of time spent asleep during a defined sleep period or sleep study, excluding periods of wakefulness.

### **Tissue Expansion**

Gradual stretching of skin or soft tissue with an implanted or external expander so additional tissue can be created for reconstruction; it usually requires staged treatment and monitoring for infection, pain, or device problems.

### **Trichoblastoma**

A rare benign follicular tumor of the scalp or face, usually presenting as a solitary dermal or subcutaneous nodule; it can resemble basal-cell carcinoma and is diagnosed histologically.

### **Trichilemmoma**

A benign follicular tumor with outer-root-sheath differentiation, usually presenting as a small facial papule; multiple lesions may be associated with Cowden syndrome.

### **Trichilemmal Carcinoma**

A rare malignant follicular tumor showing outer-root-sheath differentiation, usually occurring on sun-damaged skin of older adults as a papule or nodule; complete excision is generally required.

### **Tubo-Ovarian Abscess**

A complex infected mass involving the fallopian tube and ovary, usually arising as a complication of pelvic inflammatory disease. It may cause pelvic pain, fever, and sepsis and requires prompt antimicrobial and sometimes drainage treatment.

### **Twin Placenta**

Placental anatomy in a twin pregnancy, classified by chorionicity and amnionicity; these features de-

termine risks such as twin-to-twin transfusion and guide antenatal monitoring.

### **Epithelioid Trophoblastic Tumor**

A rare gestational trophoblastic neoplasm composed of chorionic-type intermediate trophoblast, often arising months or years after a pregnancy and requiring specialist oncologic management.

## U

### Urinary

Relating to urine or to the organs and processes involved in producing and eliminating urine.

### Urine

The liquid waste produced by the kidneys, containing water and dissolved substances eliminated from the blood.

### U Wave

A small deflection following the T wave, best seen in precordial leads V2-V3. U waves are thought to represent repolarization of the Purkinje fibers or papillary muscles. Prominent U waves are associated with hypokalemia, bradycardia, and certain drugs (digitalis, quinidine).

### Unopposed Estrogen

Estrogen therapy given without a progestogen in a person with a uterus.

### Unresolved Losses

Significant losses that have not been fully acknowledged or emotionally processed.

### Upper Airway Resistance Syndrome

Increased effort to breathe through a narrowed upper airway, often causing sleep disruption and daytime sleepiness.

#### Synonyms:

UARS

### Upper Esophageal Sphincter

A muscular valve at the top of the esophagus that opens during swallowing.

#### Synonyms:

UES

### Urethral Hypermobility

Excessive movement of the urethra during increased abdominal pressure, contributing to stress incontinence.

### Urinary Tract

The kidneys, ureters, bladder, and urethra, which produce, transport, store, and excrete urine.

### Urologist

A physician specializing in urinary-tract disorders and the male reproductive system.

### Uvulopalatopharyngoplasty

Surgery that removes or reshapes the uvula, tonsils, and soft-palate tissue to treat obstructive sleep apnea.

#### Synonyms:

UPPP

### Ulcer, Aphthous

Alternate index label; see *Canker sore*.

### Ulcer, Peptic

Alternate index label; see *Peptic ulcer*.

### Ulcer, Rectal

Alternate index label; see *Solitary rectal ulcer syndrome*.

### Ulnar-Sided Wrist Pain

Alternate index label; see *Ulnar wrist pain*.

---

## Ubiquinone

A lipid-soluble electron carrier in the mitochondrial membrane. See Coenzyme Q.

## Uhl Anomaly

A rare congenital absence or severe deficiency of right-ventricular myocardium, leaving a thin-walled right ventricle. It may cause right-sided heart failure, arrhythmia, cyanosis, or sudden deterioration in infancy or childhood.

## Ulcer

Full-thickness loss of epidermis extending into the dermis or deeper tissue, often healing with a scar. Causes include vascular disease, pressure, infection, neuropathy, inflammatory disease, trauma, and malignancy.

## Ulcer (Vascular)

A persistent break in the skin caused or maintained by inadequate blood flow, venous hypertension, neuropathy, or related vascular disease.

### Synonyms:

Vascular

## Ulcerative Colitis

A chronic inflammatory disease of the colon and rectum, usually causing continuous mucosal inflammation that begins in the rectum and extends proximally. Symptoms may include bloody diarrhea, urgency, abdominal pain, and extraintestinal manifestations.

### Synonyms:

Colitis, Ulcerative Colitis Ulcerative (Ulcerative Colitis)

## Ulna

Medial forearm bone, longer than the radius. Proximal end: trochlear notch, olecranon, coronoid process. Shaft. Distal end: head, styloid process. The trochlear notch articulates with the trochlea forming the primary elbow hinge.

## Ulnar

Relating to the ulna bone of the forearm or the

ulnar side (medial side) of the hand. Ulnar nerve compression causes paresthesia in medial one and a half fingers.

## Ulnar Artery

The larger terminal branch of the brachial artery at the cubital fossa, running medially down the forearm to the wrist (palpable medial to the pisiform) and hand. Supplies the medial forearm and ulnar side of the hand; forms the superficial palmar arch. Provides the common interosseous artery.

## Ulnar Hypoplasia

Underdevelopment or partial absence of the ulna, usually presenting as a congenital forearm and hand anomaly. It may cause forearm shortening, radial deviation of the hand, limited elbow or wrist movement, and associated digital or systemic abnormalities.

## Ulnar Nerve

From medial cord (C8-T1), passing behind the medial epicondyle (cubital tunnel), into the forearm innervating flexor carpi ulnaris and medial FDP half. In the hand innervates hypothenar muscles, interossei, medial two lumbricals, and adductor pollicis. Sensation to medial 1.5 digits.

## Ulnar Nerve Dysfunction

Impairment of the ulnar nerve, commonly caused by compression at the elbow (cubital tunnel) or wrist (Guyon canal). Symptoms include numbness or tingling in the little and ring fingers, weakened grip, and hand-muscle wasting; severe lesions may produce an ulnar claw.

## Ultrasonography

Imaging that uses high-frequency sound waves to produce pictures of tissues and organs.

## Ultrasound

Ultrasound uses high-frequency sound waves to create images of organs, vessels, tissues, or a developing fetus without ionizing radiation. quadrant (RUQ): gallbladder (gallstones, cholecystitis), liver (steatosis, cysts), kidneys, and pancreas. Pelvic:

---

uterus, ovaries, adnexa. Renal: hydronephrosis, stones, cysts, tumors. Scrotal: testicular torsion, epididymitis, varicocele, hydrocele.

### **Ultrasound Contrast**

A substance administered during ultrasound to increase the visibility of blood flow or selected tissues.

### **Ultrasound Therapy**

Therapeutic ultrasound for tissue healing, pain, scar tissue.

### **Ultrasound Transducer**

A device that emits and receives high-frequency sound waves to generate diagnostic images or guide procedures. Linear, curvilinear, phased-array, and endocavitary transducers are selected according to depth and anatomic application.

### **Umbilical Artery Doppler**

Ultrasound assessment of blood flow in the umbilical arteries to evaluate placental resistance. Normal flow shows a pulsatility index decreasing throughout pregnancy with forward diastolic flow. Absent or reversed end-diastolic flow indicates severe placental dysfunction and is associated with increased perinatal morbidity and mortality.

### **Umbilical Cord**

The connection between the fetus and the placenta, containing two umbilical arteries (carrying deoxygenated blood from the fetus to the placenta) and one umbilical vein (carrying oxygenated blood from the placenta to the fetus). The vessels are embedded in Wharton jelly, a mucopolysaccharide matrix that prevents compression.

### **Umbilical Cord Blood Gas**

Analysis of arterial and venous cord blood collected after delivery. The umbilical artery best reflects fetal acid-base status, while the umbilical vein reflects placental blood. Results are interpreted using gestational age, delivery circumstances, pH, carbon dioxide, and base deficit or excess.

### **Umbilical Cord Prolapse**

Descent of the umbilical cord through the cervix alongside or past the presenting fetal part, occurring when the membranes rupture. Risk factors: malpresentation (transverse lie, breech), preterm/low birth weight, polyhydramnios, multiparity, and artificial ROM with high presenting part.

### **Umbilical Hernia**

A hernia through the umbilical ring, common in infants (most umbilical hernias close spontaneously by age 4-5) and adults (risk factors: obesity, pregnancy, ascites, cirrhosis). Presents as a reducible bulge at the umbilicus, worse with increased intra-abdominal pressure. In adults: risk of incarceration and strangulation is higher.

### **Umbilical Region**

Central region around the umbilicus containing small intestine, transverse colon, and great vessels. The umbilicus is a landmark for assessing ascites, caput medusae in portal hypertension, and umbilical hernias. Percussion and auscultation here are essential components of the abdominal examination.

### **Umbilication**

Formation of a central depression or navel-like indentation in a lesion or structure.

### **Umbilicus (Navel)**

The scar on the anterior abdominal wall marking the site of attachment of the umbilical cord in fetal life, located at the level of the L3-L4 intervertebral disc, approximately midway between the xiphoid process and the pubic symphysis.

#### **Synonyms:**

Navel

### **Uncompetitive Inhibition**

A type of enzyme inhibition where the inhibitor binds only to the enzyme-substrate (ES) complex at a site distinct from the active site, forming an inactive ESI complex. The inhibitor cannot bind to the free enzyme.

---

## Unconsciousness

Loss of awareness and responsiveness, ranging from brief fainting to prolonged coma.

## Underweight

BMI < 18.5 kg/m<sup>2</sup>. Associated with osteoporosis, infertility, anemia, weakened immunity, surgical complications. Causes: hypermetabolism, malabsorption, eating disorders, malignancy, chronic infection.

## Undescended Testis

Failure of one or both testes to descend into the scrotum. Some descend during early infancy, but persistent cryptorchidism can impair fertility and increase the risk of torsion, hernia, or testicular cancer.

## Undescended Testis (Cryptorchidism)

Congenital failure of one or both testes to descend along the normal path into the scrotum. Persistent cases require evaluation because they may affect fertility and increase the risk of torsion, hernia, or testicular cancer.

### Synonyms:

Cryptorchidism

## Undulant Fever

A zoonotic infectious disease caused by gram-negative coccobacilli of the genus *Brucella*, transmitted to humans through contact with infected animals (cattle, goats, pigs, sheep) or consumption of unpasteurized dairy products. See Brucellosis.

## Unguentum

A semisolid, greasy preparation intended for application to the skin or, when formulated for that purpose, to mucous membranes or the eyes.

## Uniparental Disomy

Inheritance of both copies of a chromosome or chromosome segment from one parent and none from the other. It can cause disease through abnormal genomic imprinting, homozygosity for a recessive variant, or chromosomal dosage effects.

## Unresponsive Coma

A state of profound unresponsiveness in which the person cannot be awakened or follow commands.

## Unstable Angina

Myocardial ischemia at rest, new-onset severe angina, or a crescendo pattern (more frequent, longer, lower-threshold) without evidence of myocardial necrosis (normal troponin). Pathophysiology: acute plaque rupture with thrombosis causing transient severe coronary obstruction.

## Upper Airway Obstruction

Narrowing of the airway above the carina, causing inspiratory stridor, dyspnea, and characteristic changes on flow-volume loops (flattening of the inspiratory limb). Causes include tumors, stenosis, goiter, and vocal cord dysfunction. It is a medical emergency when severe.

## Upper Endoscopy

Upper endoscopy: flexible endoscopic examination of the esophagus, stomach, and duodenum. See Esophagogastroduodenoscopy (EGD).

## Upper Extremity Venous Doppler

An ultrasound examination of the arm and related veins that assesses compressibility and blood flow, commonly to evaluate suspected venous thrombosis.

## Upper Gastrointestinal Bleeding

Bleeding from esophagus, stomach, or duodenum. Causes: peptic ulcer, varices, Mallory-Weiss tear, gastritis. Presentation: hematemesis, melena, hematochezia. Management: ABCs, IV access, type and crossmatch, PPI infusion, endoscopy within 24 hours. Variceal bleeding: octreotide, antibiotics, band ligation.

## Upper GI Series

Fluoroscopic examination of the esophagus, stomach, and duodenum after oral barium contrast. Single-contrast: looks for gross abnormalities (obstruction, masses). Double-contrast (barium + gas): better mucosal detail for ulcers, erosions, and early malignancies.

---

## Upper Motor Neuron Syndrome

A pattern caused by injury to corticospinal pathways above the anterior horn cell or cranial motor nucleus. Findings may include weakness with spasticity, hyperreflexia, clonus, and an extensor plantar response, although acute lesions can initially produce flaccidity.

## Upright Labor Positions

Maternal positions during labor, such as walking, standing, squatting, kneeling, or sitting upright. They may improve comfort and mobility and can be used when safe and acceptable to the laboring person and clinical team.

## Uptake

Cellular accumulation of radiotracer. Depends on blood flow, membrane transport, metabolism, binding.

## Urachal Cyst

A cystic remnant of the embryonic urachus between the bladder and umbilicus. It may be asymptomatic or become infected, causing lower-abdominal pain, fever, umbilical discharge, or urinary symptoms.

## Urachal Mucinous Cystic Tumor

A rare tumor arising from the urachal remnant between the bladder dome and umbilicus. It may be benign or malignant, with mucinous histology, and requires surgical excision.

## Uraemia

The clinical syndrome resulting from accumulation of urea and other nitrogenous waste products in the blood in advanced chronic kidney disease (CKD stage 4-5) and acute kidney injury.

## Urate-Lowering Therapy

Long-term treatment that reduces serum urate to dissolve monosodium urate deposits and prevent gout flares and structural damage. Xanthine oxidase inhibitors and uricosuric medicines are selected according to renal function, comorbidity, and treatment goals.

## Urea Cycle

A metabolic pathway occurring in both the mitochondria and cytoplasm of hepatocytes that converts toxic ammonia ( $\text{NH}_3$ ), derived from amino acid catabolism, into nontoxic, water-soluble urea for excretion by the kidneys.

## Urea Cycle Disorder

A group of inherited disorders caused by deficiency of an enzyme or transporter in the urea cycle, leading to impaired ammonia clearance. Ornithine transcarbamylase deficiency is an X-linked form; presentation and severity vary by the gene and residual enzyme activity.

## Uremia

A clinical syndrome caused by advanced kidney failure and accumulation of waste products and other biologically active substances. Symptoms may include nausea, itching, fatigue, confusion, bleeding, or pericarditis; laboratory values and symptoms must be interpreted together.

## Uremic Encephalopathy

Neurological syndrome in severe renal failure. Confusion, asterixis, seizures, coma. Results from uremic toxin accumulation. Diagnosis is clinical in context of advanced renal failure. Emergent dialysis indicated with rapid neurological improvement typically.

## Uremic Frost

Urea crystallization on skin in severe untreated uremia. Rare finding indicating extremely advanced uremia. White crystalline deposits on skin. Indicates immediate need for dialysis. Extremely rare in developed countries due to early detection.

## Uremic Pericarditis

Pericardial inflammation in advanced uremia. Pleuritic chest pain, friction rub, diffuse ST elevation. Indicates need for emergent dialysis. Does not respond to anti-inflammatory therapy. Complications include tamponade.

---

## Uremic Platelet Dysfunction

Impaired platelet adhesion and aggregation in uremia causing bleeding tendency. Easy bruising, epistaxis, GI bleeding. Improves with dialysis and desmopressin. Cryoprecipitate provides temporary benefit before procedures.

## Uremic Stomatitis

Oral mucosal inflammation occurring in advanced kidney failure, presenting as white plaques, ulceration, or bleeding of the gums and tongue due to accumulation of uremic toxins.

## Ureter

The paired muscular tubes (25-30 cm) conveying urine from the renal pelvis to the urinary bladder, crossing the pelvic brim at the pelvic inlet. Three anatomical narrowings (pelviureteric junction, pelvic brim, vesicoureteric junction) are common sites of ureteric stone impaction.

## Ureter Duplex

A congenital duplication of the ureter, complete or partial, draining one kidney. It may be asymptomatic or associated with vesicoureteral reflux, ureterocele, obstruction, recurrent urinary infection, or impaired renal drainage.

## Ureteral Obstruction

Blockage of urine flow causing proximal dilation and increased pressure. Acute causes renal colic with flank pain. Chronic leads to hydronephrosis and CKD. Emergent decompression with stent or nephrostomy for infected obstructed kidney. Diagnosis by CT or ultrasound showing hydronephrosis.

### Synonyms:

Blocked Ureter

## Ureteral Perforation

A tear or hole in the ureter, sometimes caused by a stone, trauma, surgery, or an endoscopic procedure. Urine may leak into surrounding tissues, causing pain, infection, or inflammation; prompt imaging and urologic assessment are required.

## Ureteral Stent

Double-J stent maintaining ureteral patency. Indications: obstruction (stone, stricture, malignancy), post-ureteroscopy. Materials: silicone, polyurethane. Sizes: 4.7-7 Fr, lengths 24-30 cm. Complications: irritation, hematuria, encrustation, migration.

## Ureteral Stent (Double-J Stent)

A tube placed in the ureter from the renal pelvis to the bladder to maintain patency, with pigtail coils at both ends (hence double-J). Indications: ureteral obstruction (stones, stricture, malignancy), after ureteroscopy (prevent post-op obstruction), and as a pre-treatment for complex ureteral stones.

### Synonyms:

Double-J Stent

## Ureteral Stricture

Narrowing of the ureter caused by fibrosis, surgery, instrumentation, radiation, infection, malignancy, or congenital disease. It can produce upstream hydronephrosis, pain, infection, and declining renal function.

## Ureteritis

Inflammation of the ureter, usually related to infection, obstruction, stone passage, instrumentation, or adjacent inflammatory disease. It may cause flank or abdominal pain, urinary symptoms, hematuria, and fever.

## Ureterocele

A ureterocele is a balloon-like dilation of the lower ureter as it enters the bladder, usually congenital; it can obstruct urine flow and cause infection, hydronephrosis, reflux, stones, or impaired renal function. can obstruct urine flow and cause urinary infection, hydronephrosis, reflux, stone formation, or impaired renal function.

## Ureterolithiasis

The presence of kidney stones (calculi) within the ureter, causing ureteral obstruction and renal colic. Stones form from calcium oxalate/phosphate (most), uric acid, struvite (infection), and cystine.

---

## Ureteropelvic Junction Obstruction

Impaired drainage from the renal pelvis into the proximal ureter, caused by intrinsic narrowing, aberrant vessels, scarring, or functional peristaltic abnormality. It may cause hydronephrosis, flank pain, infection, stones, or loss of renal function.

## Ureteroscopy

Ureteroscopy uses a small endoscope passed through the urinary tract to inspect, biopsy, or treat ureteral or kidney stones and other lesions. the urethra, bladder, and into the ureter or renal collecting system. Used primarily for the diagnostic evaluation and therapeutic management of ureteral and renal calculi, ureteral strictures, and upper tract urothelial carcinoma (UTUC).

## Urethra

The tube conveying urine from the bladder to the exterior. Male urethra (18-20 cm): prostatic, membranous, and spongy (penile) parts; carries urine and semen; longer and more tortuous than female. Female urethra (3-4 cm): short, straight, predisposing to ascending urinary tract infections.

## Urethracele

A herniation or prolapse of the urethra into the anterior vaginal wall, often occurring together with a cystocele (bladder prolapse). Urethracele is caused by weakening of the pubocervical fascia, often from childbirth, aging, or increased intra-abdominal pressure.

## Urethral Diverticulum

A periurethral outpouching that communicates with the urethral lumen, usually arising from infected or obstructed periurethral glands. It may cause dysuria, post-void dribbling, recurrent urinary infection, dyspareunia, or a palpable anterior-vaginal-wall mass.

## Urethral Infection

Infection involving the urethra, commonly caused by bacteria, including sexually transmitted organisms. Symptoms may include burning urination, discharge, frequency, or pelvic discomfort; testing

and appropriate treatment help prevent complications and transmission.

## Urethral Meatus

External opening of urethra. Position abnormal in hypospadias, epispadias.

## Urethral Pressure Profile

Measurement of urethral closure pressure along urethra. Used in incontinence evaluation.

## Urethral Pressures

Measurements of pressure within or along the urethra used to assess urethral closure and urinary continence.

## Urethral Sling

Synthetic or fascial tape supporting urethra for stress incontinence. Mid-urethral sling (TVT, TOT) standard. Minimally invasive. Complications: erosion, urgency, retention.

## Urethral Stricture

Narrowing of the urethra caused by scar tissue. It may produce a weak urinary stream, spraying, straining, incomplete emptying, infections, or urinary retention and can result from injury, instrumentation, infection, or inflammatory disease.

## Urethritis

Urethritis is inflammation of the urethra, commonly from sexually transmitted infection, causing dysuria, irritation, or discharge and requiring evaluation of partners and complications. (Chlamydia trachomatis, Neisseria gonorrhoeae) or non-infectious causes. Presents with dysuria, urethral discharge, and meatal itching. Diagnosis: urine nucleic acid amplification testing (NAAT).

## Urethrography

Contrast imaging of urethra. Evaluates urethral strictures, trauma, anomalies.

## Urge Urinary Incontinence

Involuntary leakage of urine, significantly affecting

---

psychological, social, and physical well-being. See urinary incontinence.

### **Urgency**

A sudden, compelling desire to urinate that is difficult to defer—a lower urinary tract symptom. Causes: overactive bladder (detrusor overactivity, often idiopathic), urinary tract infection (urgency + dysuria), bladder outlet obstruction (BPH), neurogenic bladder, interstitial cystitis, and pelvic floor disorders.

### **Uric Acid Nephropathy**

Acute kidney injury from uric acid crystal precipitation in tubules. Occurs in tumor lysis syndrome and severe hyperuricemia. Prevent with hydration and rasburicase. Alkalinization of urine may be harmful as uric acid precipitates at alkaline pH unlike other stone types.

### **Uric Acid Stones**

Kidney stones composed primarily of uric acid. They form more readily in acidic urine and are associated with hyperuricemia, gout, high purine intake, or chronic diarrhea. Some can dissolve when urine is alkalinized.

### **Urinal**

Male bedside container.

### **Urinalysis**

Urinalysis examines urine appearance, chemistry, and sediment for evidence of infection, kidney disease, bleeding, diabetes, dehydration, or other systemic conditions. (bacteria), protein, glucose, ketones, bilirubin, urobilinogen, blood, and hemoglobin.

### **Urinary Bladder**

A hollow, distensible muscular organ located in the pelvic cavity posterior to the pubic symphysis, serving as a reservoir for urine.

### **Urinary Incontinence**

Involuntary leakage of urine, significantly affecting

psychological, social, and physical well-being.

#### **Synonyms:**

Bladder Control, Loss Of Incontinence, Urinary Loss Of Bladder Control

### **Urinary Retention**

Inability to completely empty the bladder, which can be acute (sudden, painful, inability to void) or chronic (gradual, often painless, with overflow incontinence). Causes: benign prostatic hyperplasia, urethral stricture, neurogenic bladder, medications (anticholinergics), and pelvic organ prolapse.

### **Urinary Retraining**

Scheduled voiding and behavioral techniques used to improve bladder control and reduce urgency or incontinence.

### **Urinary Tract Infection**

Infection of the urinary tract, classified as lower infection such as cystitis or urethritis, or upper infection such as pyelonephritis. Symptoms vary; dysuria, frequency, urgency, fever, flank pain, or nausea may occur. *Escherichia coli* is a common cause, but organisms vary by setting and patient factors.

#### **Synonyms:**

Bladder Infection (Urinary Tract Infection)

### **Urinary Tract Infection In Pregnancy**

A urinary infection or asymptomatic bacterial growth occurring during pregnancy. Pregnancy increases the risk of upper urinary infection, so screening and treatment follow pregnancy-specific clinical guidance.

### **Urinary Urgency**

A sudden, difficult-to-delay need to urinate. It may occur with urinary infection, bladder irritation, overactive bladder, stones, neurologic disease, or other conditions. Urgency with fever, flank pain, blood in the urine, or inability to urinate requires medical assessment.

---

## Urination

The biological process of releasing urine from the bladder through the urethra out of the body; also known as micturition.

**Synonyms:**  
micturition.

## Urine Albuminuria

Abnormal urinary loss of albumin resulting from increased glomerular permeability or impaired tubular reclamation. Persistent albuminuria is independently associated with CKD progression and cardiovascular risk, even when eGFR is preserved.

## Urine Analysis

Laboratory examination of urine for cells, blood, proteins, glucose, microorganisms, and other substances.

## Urine Drug Screen

Immunoassay-based screening for common drugs of abuse in urine. Detects: amphetamines, benzodiazepines, cocaine (benzoylecgonine), opiates (morphine, codeine, heroin), oxycodone, methadone, fentanyl, barbiturates, PCP, THC (cannabinoids), and alcohol. Pros: rapid (minutes at POC), inexpensive.

## Urine Formation

The process by which the kidney produces urine through three steps: glomerular filtration (formation of 180 L/day ultrafiltrate), tubular reabsorption (return of 99 percent of water and most solutes), and tubular secretion (active addition of waste and ions).

## Urine HCG (Pregnancy Test)

Rapid point-of-care test detecting human chorionic gonadotropin in urine. Sensitivity: detects as low as 25 mIU/mL. Positive as early as 12-14 days after conception (before missed period). Results in 3-5 minutes. False negative: dilute urine, very early pregnancy, ectopic pregnancy.

**Synonyms:**  
Pregnancy Test

## Urine Osmolality

Concentration of urine relative to plasma normally 50 to 1200 mOsm/kg. High greater than 500 in prerenal states reflecting intact concentrating ability. Low less than 350 indicates impaired concentrating ability in diabetes insipidus, chronic kidney disease, and excessive fluid intake. More precise than specific gravity.

## Urine Sediment

Microscopic examination of centrifuged urine providing diagnostic information about renal pathology. Normal findings include few RBCs, WBCs, and hyaline casts.

## Urine Sodium

Concentration of sodium in urine measured in mEq/L. Low less than 20 in prerenal states reflecting avid tubular reabsorption. High greater than 40 in intrinsic renal disease, diuretic use, and salt-wasting nephropathies. Should be interpreted in context of volume status, medications, and concurrent therapies.

## Urine Toxicology

Laboratory analysis of urine for medicines, drugs, or their metabolites. Results require interpretation because detection does not always establish impairment or the timing of exposure.

## Urodynamic Testing

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases.

## Urodynamics

A set of tests that assess the function of the lower urinary tract (bladder and urethra).

## Uroflow

Measurement of the rate and pattern of urine flow during voiding.

---

## **Uroflowmetry**

Uroflowmetry examines uroflowmetry; interpretation depends on the specimen or body region, test method, reference range, and clinical question. and testing conditions; a low or abnormal flow may reflect obstruction, weak bladder contraction, or inadequate effort and requires clinical correlation.

## **Urolithiasis**

Formation of stones in the urinary tract, including the kidneys, ureters, bladder, or urethra. Stone composition varies by population and may include calcium oxalate, calcium phosphate, uric acid, struvite, or cystine.

## **Urologic Diagnostic Yield**

The proportion of urologic diagnostic procedures or tests that provide a definitive and clinically useful result.

## **Urology**

Surgical and medical specialty concerned with the study, diagnosis, and management of diseases affecting the male and female urinary tract (kidneys, ureters, urinary bladder, urethra) and the male reproductive system (prostate, testes, epididymis, seminal vesicles, penis).

## **Urothelial Carcinoma**

Urothelial carcinoma, previously called transitional cell carcinoma, is the most common malignancy of the urinary tract, arising from the urothelium that lines the renal pelvis, ureters, bladder, and proximal urethra.

## **Urothelium**

The specialized transitional epithelium lining the renal pelvis, ureters, bladder, and part of the urethra.

## **Urticaria**

A skin reaction causing transient, itchy raised welts that change location and usually resolve within 24 hours. It may occur with angioedema, which is deeper swelling often affecting the lips, eyelids, tongue, or extremities.

## **Urticaria Multiforme**

A hypersensitivity reaction in children, often triggered by infections or medications, characterised by widespread, annular or polycyclic erythematous plaques with dusky, ecchymotic, or targetoid centres and pseudovesication, differing from true urticaria by the presence of dusky discolouration and prolonged lesion duration.

## **Urticaria Pigmentosa**

A cutaneous form of mastocytosis in which excessive mast cells accumulate in the skin, producing tan or brown macules or papules that may swell and itch when rubbed. Flushing, abdominal symptoms, or systemic involvement can occur.

## **Usher Syndrome**

An inherited disorder combining sensorineural hearing loss with retinitis pigmentosa, the most common cause of combined deaf-blindness. Three types are distinguished by severity and age of onset; management requires coordinated audiological, ophthalmological, and genetic care.

## **Usual Interstitial Pneumonia**

The histopathological pattern in IPF with temporal heterogeneity, fibroblast foci, and honeycombing. HRCT shows basal-predominant, subpleural reticular opacities with traction bronchiectasis.

## **Uterine Atony**

Failure of the uterus to contract adequately after delivery, resulting in postpartum hemorrhage. The most common cause of PPH. Risk factors include prolonged labor, multiple gestation, macrosomia, oxytocin augmentation, and uterine fibroids. Diagnosis is clinical: boggy, soft uterus with excessive bleeding.

## **Uterine Balloon Tamponade**

A minimally invasive technique for managing postpartum hemorrhage due to uterine atony when uterotonics fail. A balloon (Bakri Postpartum Balloon, 500-1000 mL capacity) is inserted transvaginally into the uterine cavity and inflated with saline until bleeding stops. The balloon provides mechani-

---

cal compression against the uterine wall.

### **Uterine Cancer**

Cancer arising in the uterus, most commonly from the endometrium. Abnormal vaginal bleeding, bleeding after menopause, pelvic pain, or unusual discharge requires evaluation; early diagnosis often permits effective treatment.

### **Uterine Fibroid (Leiomyoma)**

A benign tumor arising from the smooth muscle of the uterus. Fibroids may be submucosal, intramural, or subserosal and may cause heavy menstrual bleeding, pelvic pressure, pain, urinary symptoms, or reproductive problems.

#### **Synonyms:**

Leiomyoma

### **Uterine Fibroids**

Benign tumors of uterine smooth muscle, also called leiomyomas. They may cause heavy menstrual bleeding, pelvic pressure, pain, infertility, or no symptoms.

#### **Synonyms:**

leiomyomas. Polyps Uterus (Uterine Fibroids) Tumors Uterine (Uterine Fibroids) Womb Growths (Uterine Fibroids)

### **Uterine Hemorrhage**

Heavy or abnormal bleeding from the uterus, occurring during pregnancy, after childbirth, or at other times. Causes include pregnancy complications, fibroids, hormonal disorders, and malignancy; severe bleeding with dizziness or weakness is an emergency.

### **Uterine Inversion**

A rare but life-threatening obstetric emergency where the uterus turns inside out, protruding through the cervix or vaginal introitus. Occurs in 1:2000-1:20,000 deliveries. Causes: fundal pressure, excessive cord traction (especially with fundal placenta), uterine atony, and fundal fibroids.

### **Uterine Perforation**

A full-thickness breach of the uterine wall, most

commonly occurring during instrumentation such as dilation and curettage or hysteroscopy, potentially causing hemorrhage and requiring surgical repair.

### **Uterine Prolapse**

Descent of the uterus toward or through the vaginal opening because the supporting pelvic floor and ligaments have weakened. Risk factors include childbirth, aging, obesity, and conditions that increase chronic pressure in the abdomen.

#### **Synonyms:**

Pelvic Support Problems, Uterine Prolapse Proapsed Uterus

### **Uterine Rupture**

A full-thickness tear through the uterine wall, potentially life-threatening to both mother and fetus. Risk factors include prior caesarean section (especially classical incision), oxytocin augmentation, and operative vaginal delivery. Presents with sudden abdominal pain, loss of fetal heart rate, and maternal hemorrhage.

### **Uterine Tachysystole**

More than five uterine contractions in 10 minutes averaged over 30 minutes, whether or not accompanied by fetal heart-rate abnormalities. It can reduce uteroplacental perfusion, particularly when caused by oxytocin or prostaglandins.

### **Uterotonic**

A medication that stimulates uterine contraction, used for induction/augmentation of labor, prevention and treatment of postpartum hemorrhage, and medical termination of pregnancy.

### **Uterus**

Hollow muscular organ in the pelvis between the bladder and rectum, approximately 7.5 cm long in adult females, responsible for menstruation, implantation, and fetal development during pregnancy.

**Common name:** Womb

### **UTI**

Infection of the urinary tract, classified as lower

---

(cystitis, urethritis) or upper (pyelonephritis). See Urinary Tract Infection.

### **UV Light**

Ultraviolet radiation, an invisible part of sunlight or artificial light that can affect the skin and eyes and may cause sunburn, aging, or skin cancer.

### **Uvea**

The uvea is the vascular middle layer of the eye, comprising the iris, ciliary body, and choroid; it regulates light entry, supports the lens, and supplies the outer retina. focus, and blood supply to the eye.

### **Uveal Melanoma**

The most common primary intraocular malignancy in adults, arising from melanocytes within the uveal tract (choroid, ciliary body, or iris), presenting with visual symptoms, a pigmented intraocular mass, or incidental finding on examination.

### **Uveitis**

Uveitis is inflammation of the uveal tract and adjacent eye structures, causing pain, redness, light sensitivity, floaters, or impaired vision from infectious, autoimmune, traumatic, or other causes. or reduced vision; causes include infection, autoimmune disease, and other inflammatory conditions.

#### **Synonyms:**

Chorioretinitis (Uveitis)

### **Uveoparotid Fever**

A manifestation of sarcoidosis characterized by the triad of bilateral parotid gland enlargement, anterior uveitis, and fever, sometimes associated with facial nerve palsy. It reflects granulomatous inflammation and is treated with systemic corticosteroids and potentially disease-modifying agents.

### **Uvula**

A small, fleshy flap of tissue that hangs from the back of the throat over the root of the tongue.

### **Uvulitis**

Uvulitis is inflammation and swelling of the uvula from infection, trauma, allergy, dehydration, or irritation and may interfere with swallowing or airway protection. dehydration, or irritation. It may cause throat pain, difficulty swallowing, gagging, or a foreign-body sensation; marked swelling with breathing difficulty requires urgent assessment.

### **Ureteral Calculi**

Stones that form in or pass through a ureter, the tube carrying urine from a kidney to the bladder.

### **Urea**

The principal nitrogen-containing waste product of protein metabolism, formed in the liver and excreted mainly by the kidneys.

### **Urinary Frequency**

The need to urinate more often than usual, which may result from infection, bladder irritation, increased urine production, or other urinary disorders.

### **Urinary Lithiasis**

The formation or presence of stones anywhere in the urinary tract, including the kidneys, ureters, bladder, or urethra.

### **Urinary Stasis**

Slowing or stopping of normal urine flow, which can promote urinary infection, stone formation, or obstruction-related kidney injury.

### **Urinometer**

A hydrometer used to measure the specific gravity of urine.

### **Urogenital Tract**

The combined urinary and reproductive organs and passages, which develop from related embryologic structures.

### **Uterine Fibroid Embolization**

A minimally invasive procedure that blocks the arteries supplying uterine fibroids, causing them to

---

shrink.

### **Uterine Tube**

A paired muscular tube that transports the oocyte from the ovary toward the uterus and is the usual site of fertilization.

### **Ulnar Wrist Pain**

Pain on the side of the wrist nearest the little finger, often involving the ulna or nearby tendons and ligaments.

#### **Synonyms:**

Ulnar-Sided Wrist Pain

### **Undescended Testicle**

A testicle that has not moved into the scrotum before birth.

#### **Synonyms:**

Testicle, Undescended

### **Undifferentiated Pleomorphic Sarcoma**

An uncommon aggressive cancer of soft tissue or bone whose cells have no clearly identifiable line of differentiation.

#### **Synonyms:**

Malignant Fibrous Histiocytoma

### **Urinary Catheter**

A hollow, flexible tube inserted through the urethra into the bladder to drain urine; it may be used intermittently or left in place.

### **Upper Respiratory Infection**

An infection of the nose, sinuses, pharynx, or larynx, most often caused by a virus and producing symptoms such as congestion, sore throat, cough, or runny nose.

### **Ulnar Nerve Entrapment**

Compression or irritation of the ulnar nerve, commonly at the elbow or wrist, causing numbness or tingling in the ring and little fingers and sometimes weakness of the hand.

### **Ulcerative Proctitis**

Inflammation and ulceration limited to the lining of the rectum, often causing rectal bleeding, urgency, tenesmus, mucus, and diarrhea.

### **Ulcerative Keratitis**

An ulcerative infection or inflammatory defect of the cornea that can cause pain, redness, photophobia, and impaired vision and may threaten sight if untreated.

### **Urticarial Vasculitis**

Inflammation of small blood vessels associated with hive-like lesions that often last longer than ordinary urticaria and may burn, bruise, or leave residual discoloration.

### **Ulnar Paradox**

The clinical observation that a lesion of the ulnar nerve at the wrist may cause more clawing of the fingers than a lesion higher in the forearm, because the ulnar-innervated finger flexors remain intact.

### **Uraemic Syndrome**

The collection of symptoms and biochemical abnormalities caused by severe accumulation of uraemic waste products in advanced kidney failure.

### **Urethral Syndrome**

Urinary frequency, urgency, dysuria, or discomfort without a clear bacterial urinary-tract infection; causes may include irritation, pelvic-floor dysfunction, or inflammation.

### **Urethroplasty**

Surgical reconstruction or widening of the urethra, most commonly to treat a urethral stricture.

### **Urethroscopy**

Endoscopic examination of the urethra using a urethroscope, sometimes combined with treatment of a stricture or other lesion.

### **Urinary Casts**

Cylindrical structures formed in renal tubules and

---

passed in urine; their type can help identify kidney disease, such as glomerular inflammation or tubular injury.

### **Urobilinogen**

A colourless product formed in the intestine from bilirubin and partly reabsorbed and excreted in urine; abnormal levels may provide clues to liver disease or haemolysis.

### **Utricle**

One of the otolith organs of the inner ear, detecting horizontal linear acceleration and head position relative to gravity.

### **Uvulopalatopharyngoplasty (UPPP)**

A surgical procedure that removes or reshapes selected tissue of the soft palate, uvula, and pharynx to enlarge the upper airway. It may be used in selected patients with obstructive sleep apnea, but effectiveness and risks depend on airway anatomy and other treatments.

### **Ubidecarenone**

Coenzyme Q10, a lipid-soluble molecule involved in mitochondrial electron transport and cellular energy production; it is sold as a supplement and studied in selected cardiovascular and neuromuscular conditions.

### **Ubiquitin**

A small regulatory protein that is covalently attached to other proteins to label them for degradation by the proteasome or to alter their cellular trafficking and signaling.

### **Ubiquitination**

Ubiquitination is attachment of ubiquitin to a target protein through an E1–E2–E3 enzyme cascade, marking it for proteasomal degradation or altering its localization, activity, or signaling.

### **Ulocladium**

A genus of dematiaceous filamentous fungi found in soil and plant material. It is an uncommon oppor-

tunistic pathogen that can cause keratitis, sinusitis, or invasive infection in susceptible people.

### **Ultracentrifugation**

Ultracentrifugation separates particles or macromolecules at very high centrifugal force according to size, shape, and density; it is used to study viruses, organelles, lipoproteins, and protein complexes.

### **Ultradian Rhythm**

A biological rhythm that repeats more than once in 24 hours, such as pulsatile hormone secretion, sleep-stage cycling, or periodic changes in heart and breathing patterns.

### **Ultrafiltration**

Pressure-driven movement of water and small solutes across a semipermeable membrane while retaining larger molecules or particles. It contributes to glomerular filtration and is used in dialysis and laboratory processing.

### **Ultralente Insulin**

Ultralente insulin is a prolonged-acting zinc insulin suspension formerly used for basal insulin replacement; it has largely been replaced by newer long-acting analogues and can cause hypoglycaemia and dosing variability.

### **Ultrasonic Therapy**

ultrasonic therapy is used in relation to ultrasonic therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Ultrasound Biomicroscopy**

High-frequency ultrasound imaging used to visualize the anterior segment of the eye, including the cornea, iris, ciliary body, lens, and angle when ordinary examination or imaging is insufficient.

### **Ultraviolet Microscopy**

Microscopy that uses ultraviolet wavelengths to produce images or fluorescence from structures and substances that absorb or emit ultraviolet light. It has specialized laboratory and research applications.

---

### **Ultraviolet Rays**

Invisible electromagnetic radiation with wavelengths shorter than visible violet light. Excess exposure can cause sunburn, photoaging, eye injury, and skin cancers; controlled ultraviolet exposure has selected therapeutic uses.

### **Ultraviolet Therapy**

ultraviolet therapy is used in relation to ultraviolet therapy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Umbilical Vein**

The umbilical vein carries oxygen- and nutrient-rich blood from the placenta to the fetus during pregnancy.

### **Undifferentiated Carcinoma**

A neoplasm involving undifferentiated carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Undulate Ribs**

Ribs with a wavy or irregular contour, a descriptive anatomic finding that may reflect a developmental variation, deformity, prior injury, or underlying bone disease.

### **Unilaminar Epithelium**

An epithelium consisting of a single layer of cells. Its structure is adapted for functions such as diffusion, absorption, secretion, or filtration depending on the organ.

### **Unilateral**

Affecting, occurring on, or involving one side of the body or one paired organ, such as unilateral weakness or unilateral eye disease.

### **Unilateral Microphthalmos**

A congenital condition in which one eye is abnormally small. It may be associated with other ocular malformations and can cause substantial visual impairment.

### **Uninodular Goiter**

A goiter containing one dominant thyroid nodule. Evaluation generally includes thyroid-function testing and imaging, with further assessment to determine whether the nodule is benign or malignant.

### **Unipolar Neuron**

A neuron with a single process extending from its cell body. True unipolar neurons occur in some invertebrates; many sensory neurons in humans are more accurately described as pseudounipolar.

### **Unresectable**

Describing a tumor or lesion that cannot be completely removed safely by surgery because of its location, extent, invasion of vital structures, or the patient's operative risk.

### **Unsaturated Phytosterol**

A plant sterol containing one or more carbon-carbon double bonds. Phytosterols can reduce intestinal cholesterol absorption, although clinical effects depend on intake, formulation, and patient context.

### **Untranslated Region**

A molecular or cellular process involving untranslated region. Its role depends on the relevant genes, molecules, cells, and physiological context.

### **Upamostat**

An investigational small-molecule serine-protease inhibitor studied for inflammatory and infectious diseases. It is not an established routine treatment, and its clinical role depends on trial evidence and regulatory approval.

### **Upper Extremity**

The anatomic region extending from the shoulder through the arm, forearm, wrist, and hand. Disorders may involve its bones, joints, muscles, nerves, vessels, or skin.

### **Urachus**

An embryologic connection between the fetal bladder and umbilicus that normally becomes the me-

---

dian umbilical ligament after birth. Persistent urachal remnants can form cysts, sinuses, or other complications.

### Uracil

A pyrimidine nitrogenous base found principally in RNA. It pairs with adenine and is also a component of several metabolic intermediates and nucleotide medicines.

### Uracil Mustard

An older nitrogen-mustard alkylating compound related to uracil and studied or used historically as an antineoplastic drug. Its clinical use is limited by toxicity and the availability of newer treatments.

### Uracil Nucleotides

Nucleotides containing uracil, including UMP, UDP, and UTP. They participate in RNA synthesis, carbohydrate metabolism, and activation of sugars for glycoconjugate production.

### Uranium

A naturally occurring radioactive heavy metal. Internal exposure can damage the kidneys, while inhaled or retained radioactive material can also expose tissues to ionizing radiation.

### Ureaplasma

A genus of very small bacteria without a cell wall that can colonize the genital or urinary tract and is sometimes associated with urethritis or pregnancy complications.

### Ureaplasma Urealyticum

ureaplasma urealyticum is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

### Ureter Fissus

A congenital longitudinal splitting or duplication anomaly of the ureter. Its clinical importance depends on the anatomy and whether it causes reflux, obstruction, infection, or impaired drainage.

### Ureter Obstruction

Blockage of urine flow from a kidney to the bladder, commonly caused by a stone, stricture, tumor, or external compression and potentially leading to hydronephrosis, infection, or kidney injury.

### Ureteral Catheters

Thin tubes passed into the ureter to drain urine, inject contrast, measure pressure, or guide procedures. Complications include infection, bleeding, perforation, migration, and obstruction.

### Ureteral Polyp

Usually a benign fibroepithelial growth arising from the ureter. It may cause hematuria, flank pain, or obstruction and must be distinguished from urothelial malignancy when evaluated.

### Ureteral Stenosis

Narrowing of the ureter caused by scar tissue, prior surgery, radiation, stones, inflammation, or congenital disease, impairing urine drainage and possibly causing hydronephrosis or recurrent infection.

### Ureteric Perforation

A clinical condition or process involving ureteric perforation. Its features, causes, evaluation, and management depend on the clinical context.

### Ureteroscopes

Small endoscopes used to inspect the ureter and renal collecting system and to perform procedures such as stone removal, biopsy, or stent placement.

### Ureterostomy Procedure

Surgery that creates an opening from a ureter to the skin or another urinary conduit to divert urine when normal drainage to the bladder is impossible or must be bypassed.

### Urethan

An older name for ethyl carbamate, a chemical compound with carcinogenic potential in experimental and exposure settings. It is not a routine therapeutic medicine.

---

## Urethra Disorder

A condition affecting the urethra, such as infection, inflammation, stricture, trauma, congenital abnormality, or tumor, that may cause pain, discharge, weak stream, or retention.

## Urethral Carcinoma

A neoplasm involving urethral carcinoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

## Urethral Catheter

A tube inserted through the urethra into the bladder to drain urine, obtain a specimen, instill medication, or monitor output. Urinary infection and urethral trauma are important risks.

## Urethral Fistula

An abnormal channel between the urethra and another epithelial surface, often the vagina or skin. It can cause continuous urine leakage, recurrent infection, and local irritation.

## Urethral Obstruction

Partial or complete blockage of urine leaving the bladder, often from stricture, stone, prostate disease, tumor, or a congenital valve; acute retention requires prompt treatment.

## Urethral Sphincter

The muscular mechanism that helps maintain urinary continence by compressing the urethra. It includes smooth and striated muscle components controlled by autonomic and voluntary pathways.

## Urethral Stenosis

Scar-related narrowing of the urethral channel that restricts urinary flow and can cause spraying, weak stream, recurrent infection, retention, or bladder damage.

## Uric Acid

The end product of purine breakdown in humans, eliminated mainly in urine. Increased levels can contribute to gout or uric-acid kidney stones.

## Uricosuric Agent

A medicine that increases renal excretion of uric acid, lowering serum urate in selected patients with gout. Adequate kidney function and hydration are important, and urinary uric-acid stones may be a concern.

## Uridine

A nucleoside composed of uracil linked to ribose. It is a building block of RNA and a precursor of uridine nucleotides involved in carbohydrate and membrane metabolism.

## Uridine Diphosphate

A nucleotide consisting of uridine and two phosphate groups. UDP participates in glycogen metabolism and transfers activated sugars during glycosylation reactions.

## Uridine Monophosphate

A nucleotide consisting of uridine and one phosphate group. UMP is a component of RNA and an intermediate in pyrimidine-nucleotide metabolism.

## Uridine Triacetate

An oral prodrug that supplies uridine and is used as an emergency antidote for severe or life-threatening toxicity from fluorouracil or related fluoropyrimidines, under specialist direction.

## Uridine Triphosphate

A high-energy uridine nucleotide used in RNA synthesis and in the formation of activated sugar donors for glycogen and glycoprotein production.

## Urinary Bladder Disorder

A disease affecting bladder storage or emptying, including infection, overactivity, pain syndrome, stones, tumor, neurologic dysfunction, or outlet obstruction.

## Urinary Calculi

Stones formed from crystallized minerals in the urinary tract. They may cause colicky pain, hematuria, obstruction, infection, or kidney injury depending

---

on their size and location.

### **Urinary Catheterization**

A clinical condition or process involving urinary catheterization. Its features, causes, evaluation, and management depend on the clinical context.

### **Urinary Diversion**

Surgical or catheter-based rerouting of urine when the normal passage from the kidneys to the urethra cannot be used, often to a stoma or bowel reservoir.

### **Urinary Fistula**

An abnormal connection between part of the urinary tract and another organ or the skin, allowing urine to leak outside its normal pathway. Causes include surgery, childbirth injury, inflammation, and cancer.

### **Urinary Hesitation**

A clinical condition or process involving urinary hesitation. Its features, causes, evaluation, and management depend on the clinical context.

### **Urinary System**

The kidneys, ureters, bladder, and urethra, which produce, transport, store, and eliminate urine while regulating fluid, electrolytes, acid–base balance, and blood pressure.

### **Urinary Tract Disorder**

Any disease of the kidneys, ureters, bladder, or urethra, including infection, stones, obstruction, congenital abnormalities, cancer, and functional or neurologic disorders.

### **Urinary Tract Neoplasm**

A neoplasm involving urinary tract neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Urination Disorder**

Abnormal storage or emptying of urine causing frequency, urgency, dysuria, incontinence, hesitancy, weak stream, retention, or excessive or reduced urine output.

### **Urine Conductivity**

Urine conductivity measures how readily urine carries electrical current and reflects its dissolved electrolyte and solute concentration.

### **Urine Cytology**

Microscopic examination of cells shed into urine, mainly used to help detect high-grade urothelial carcinoma and some other abnormalities. A negative result does not exclude all urinary-tract cancers.

### **Urochordata**

A subphylum of chordates, also called tunicates, whose members include sea squirts. They are primarily biological research organisms rather than human pathogens.

### **Urogenital Fistula**

An abnormal connection between the urinary and genital tracts, such as a vesicovaginal or ureterovaginal fistula. It commonly causes continuous urinary leakage and requires specialist evaluation.

### **Urogenital System**

The related urinary and reproductive organs and their associated ducts, vessels, and supporting tissues. The systems share developmental origins and anatomic relationships.

### **Urostomy Leak**

Escape of urine beneath or around a urostomy appliance or from a surgical connection. Persistent leakage can irritate the skin and may signal poor appliance fit, obstruction, infection, or a surgical complication.

### **Urostomy Procedure**

Surgery that diverts urine through a stoma into an external pouch or conduit, commonly after bladder removal or when the lower urinary tract cannot safely transport urine.

### **Urostomy Prolapse**

Protrusion of a segment of bowel used as a urostomy stoma beyond its usual level. It may cause bleed-

---

ing, swelling, appliance problems, or impaired urine drainage and should be assessed clinically.

### **Urostomy Stenosis**

Narrowing of a urinary stoma or conduit that impedes drainage, causing reduced urine output, leakage, infection, or kidney-pressure changes and sometimes requiring revision.

### **Ursodeoxycholic Acid**

A hydrophilic bile acid used for primary biliary cholangitis and selected cholestatic liver diseases; it may also dissolve certain small cholesterol gallstones when bile flow is preserved.

### **Ustekinumab**

Ustekinumab is a monoclonal antibody blocking interleukin-12 and interleukin-23 signaling, used for psoriasis, psoriatic arthritis, inflammatory bowel disease, and other approved conditions; infection risk and hypersensitivity require monitoring.

### **Ustilago**

A genus of smut fungi that infect plants, especially grasses and cereals. Human infection is rare and generally occurs as an opportunistic infection in people with impaired immunity.

### **Uterine Adnexae**

The uterine adnexa are structures beside the uterus, chiefly the fallopian tubes, ovaries, and supporting tissues.

### **Uterine Cavity**

The uterine cavity is the internal space of the uterus lined by endometrium and is where implantation and pregnancy occur.

### **Uterine Fistula**

A uterine fistula is an abnormal passage connecting the uterus with another organ or the skin, often after surgery, childbirth injury, infection, or cancer.

### **Uterine Gland**

uterine gland refers to a defined body structure, tis-

sue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Uterine Leiomyosarcoma**

A neoplasm involving uterine leiomyosarcoma. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Uterine Monitoring**

Assessment of uterine contractions and, in pregnancy, their frequency, duration, and strength to evaluate labor progress, induction response, or excessive uterine activity.

### **Uterine Myomectomy**

uterine myomectomy is used in relation to uterine myomectomy during assessment, diagnosis, treatment, monitoring, or patient support.

### **Uterine Obstruction**

Blockage that prevents normal passage through the uterus or cervix, which may cause menstrual outflow obstruction, infertility, pregnancy complications, or retained blood or tissue.

### **Uterus Disorder**

A condition affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, congenital anomalies, prolapse, and cancer.

### **Uterus Neoplasm**

A neoplasm involving uterus neoplasm. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Uveal Disease**

A disorder of the iris, ciliary body, or choroid, including uveitis, tumors, vascular disease, and inflammation that may cause eye pain, photophobia, floaters, or visual loss.

### **Uveal Neoplasm**

A neoplasm involving uveal neoplasm. Diagnosis

---

establishes the tumour type, extent, biological behaviour, and appropriate management.

### **Umbilical Catheters**

Umbilical catheters provide vascular access through a newborn's umbilical vessels for fluids, medicines, monitoring, or blood sampling while complications are monitored.

### **Undescended Testicle Repair**

Undescended testicle repair examines undescended testicle repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Upper Airway Biopsy**

Upper airway biopsy examines upper airway biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Upper GI And Small Bowel Series**

Upper GI and small bowel series examines upper gi and small bowel series; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urea Nitrogen Urine Test**

Urea nitrogen urine test examines urea nitrogen urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Ureteral Retrograde Brush Biopsy**

Ureteral retrograde brush biopsy examines ureteral retrograde brush biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urethral Discharge Culture**

Urethral discharge culture examines urethral discharge culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Uric Acid - Blood**

Uric acid - blood is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

### **Uric Acid Urine Test**

Uric acid urine test examines uric acid urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urinary Catheters**

Urinary catheters drain the bladder when a person cannot empty it normally or accurate urine measurement is needed, with risks including infection, trauma, blockage, and discomfort.

### **Urinary Incontinence Products**

Urinary-incontinence products such as pads, protective underwear, catheters, and mattress covers manage leakage but do not treat its underlying cause.

### **Urine 24-Hour Volume**

Twenty-four-hour urine volume is the total urine produced in a day and helps assess hydration, kidney function, endocrine disease, or abnormal urine production.

### **Urine Chemistry**

Urine chemistry examines urine chemistry; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Concentration Test**

Urine concentration test examines urine concentration test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Culture**

Urine culture examines urine culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

---

### **Urine Culture - Catheterized Specimen**

Urine culture - catheterized specimen examines urine culture - catheterized specimen; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Drainage Bags**

Urine drainage bags collect urine from a catheter or urinary diversion and require correct positioning, emptying, hygiene, and monitoring for blockage or infection.

### **Urine PH Test**

Urine pH test examines urine pH test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Protein Dipstick Test**

Urine protein dipstick test examines urine protein dipstick test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Protein Electrophoresis Test**

Urine protein electrophoresis test examines urine protein electrophoresis test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Urine Specific Gravity Test**

Urine specific gravity test examines urine specific gravity test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Uterine Sarcoma**

Uterine sarcoma is a rare malignant tumor arising from uterine muscle, connective tissue, or related cells and may cause bleeding, pain, or an enlarging mass.

### **Uterine Growths**

Uterine growths may include fibroids, polyps, adenomyosis, or rarely cancer. They can cause heavy or irregular bleeding, pelvic pressure, pain, infer-

tility, or no symptoms; examination and imaging determine the type and treatment.

### **UA**

UA commonly means urinalysis, laboratory examination of urine for blood, protein, cells, glucose, infection, and other findings.

### **Ubiquitous**

Present or found everywhere. In medical writing, the term is descriptive rather than a diagnosis and may refer to a substance, organism, or process that is widely distributed.

### **UBT**

UBT commonly means urea breath test, which detects active *Helicobacter pylori* infection by measuring labeled carbon dioxide after ingested urea.

### **UDP-Glucuronosyltransferase**

UDP-glucuronosyltransferase is an enzyme family that attaches glucuronic acid to bilirubin, medicines, hormones, and other compounds for elimination.

### **UL**

UL is a context-dependent abbreviation that may mean upper limit, ulnar or ulna-related, or another clinical term; the full meaning should be specified.

### **Ulceration**

A clinical condition or process involving ulceration. Its features, causes, evaluation, and management depend on the clinical context.

### **Umbilicus**

The navel, a scar on the anterior abdominal wall marking the former attachment of the umbilical cord. It can be affected by hernia, infection, discharge, or metastatic disease.

### **Unconscious**

Not awake and not responsive to ordinary external stimuli. Unconsciousness may result from syncope, seizure, trauma, intoxication, metabolic disease, stroke, or other emergencies.

---

### Unconsciousness, Temporary

A brief episode of loss of awareness and responsiveness, often caused by syncope but also possible with seizure, concussion, hypoglycemia, or other conditions requiring assessment.

### Underventilation

A clinical condition or process involving underventilation. Its features, causes, evaluation, and management depend on the clinical context.

### Undifferentiated Cancer

A neoplastic condition involving undifferentiated Cancer; diagnosis establishes the tumor type, extent, and appropriate management.

### Undulate

To move or have a wave-like contour. In a clinical description, it may refer to a palpable fluid wave, a wavy tissue margin, or a rhythmic motion.

### United States Pharmacopeia

A nonprofit scientific organization that publishes quality standards for medicines, dosage forms, ingredients, dietary supplements, and related healthcare products. USP standards support identity, strength, purity, and performance testing.

### Unsteadiness

Impaired balance or gait stability, which may result from vestibular disease, neurologic disorders, weakness, medication effects, visual impairment, or musculoskeletal problems.

### Unwell

A general description of feeling ill or having reduced health, without identifying a specific disease. Persistent or severe symptoms require assessment for an underlying cause.

### Upper Leg

The portion of the lower limb between the hip and knee, containing the femur and the thigh muscles, nerves, and blood vessels.

### Upper Motor Neuron

A neuron in the brain or spinal cord that influences lower motor neurons controlling skeletal muscle. Damage can cause weakness, spasticity, increased reflexes, and pathologic reflexes.

### Upregulation

A molecular or cellular process involving upregulation. Its role depends on the relevant genes, molecules, cells, and physiological context.

### Urate

The ionized form of uric acid, the end product of purine metabolism in humans. Excess serum urate can promote monosodium urate crystal deposition and gout.

### Urea Breath Test (UBT)

A diagnostic or laboratory method used to investigate the named clinical question; interpretation depends on the specimen, technique, reference range, and patient context.

### Urethral Meatus, Female

The external opening of the female urethra, located in the vestibule anterior to the vaginal opening. Its position and appearance may be relevant in urinary symptoms, congenital variation, or examination.

### URG

URG is a context-dependent abbreviation that may refer to urinary urgency or an urgent clinical priority; documentation should state the full term.

### URI

URI usually means upper respiratory infection, commonly a viral infection of the nose, throat, or upper airways causing congestion, cough, and sore throat.

### Urination, Difficulty

A clinical condition or process involving urination, difficulty. Its features, causes, evaluation, and management depend on the clinical context.

---

## Urine Hemoglobin

Hemoglobin detected in urine, which may reflect intravascular hemolysis or contamination with intact red blood cells. Interpretation requires comparison with urine microscopy and clinical findings.

## Urine PH

A measurement of urine acidity or alkalinity. It varies with diet, metabolism, medications, infection, and kidney function and can influence the formation of some urinary stones.

## Urogenital

Relating to the urinary and reproductive systems or to structures that involve both systems.

## USFDA

The U.S. Food and Drug Administration regulates medicines, biologics, devices, food, and other products for safety, effectiveness, quality, and labeling.

## Ut Dict.

An abbreviation of the Latin phrase “ut dictum,” meaning “as stated” or “as directed.” In medical notes it refers the reader to information already given or to an instruction previously specified.

## Uterine Bleeding

Uterine bleeding is bleeding from the uterus and may result from menstruation, pregnancy complications, fibroids, polyps, hormonal disorders, cancer, or medicines.

## Uterine Contraction

A clinical condition or process involving uterine contraction. Its features, causes, evaluation, and management depend on the clinical context.

## Uterine Fornix

The uterine or vaginal fornix is a recess around the cervix where the upper vagina surrounds the projecting lower uterus.

## Uterine (Fallopian) Tubes

Paired muscular tubes extending from the uterus

toward the ovaries. They transport the oocyte and are the usual site of fertilization; blockage can contribute to infertility or ectopic pregnancy.

### Synonyms:

fallopian tubes; uterine tubes

## Uterine Polyps

Growths arising from the inner lining of the uterus that may cause irregular bleeding, heavy periods, or fertility problems.

### Synonyms:

Polyps, Endometrial Polyps, Uterine

## Uncertainty

Lack of complete certainty about a diagnosis, prognosis, measurement, or treatment effect. Clinical uncertainty is managed by combining available evidence with follow-up, additional testing, and shared decision-making.

## Undetermined

Not established or not able to be classified with the available clinical information. An undetermined result may require repeat assessment or additional testing.

## Undifferentiated

Lacking recognizable specialized features. In pathology, an undifferentiated tumor has cells that cannot be assigned readily to a specific tissue of origin based on their appearance.

## Unencoded Data

Health information that has not been converted into a defined coding system or standardized data format. It may require interpretation or data transformation before analysis or exchange.

## Unequivocal

Clear and not open to more than one reasonable interpretation. An unequivocal clinical finding or test result provides strong evidence for the stated interpretation when considered in context.

---

## Unerupted Tooth

A tooth that has not emerged into the oral cavity at the expected time. It may be normally developing, delayed, impacted, or prevented from erupting by obstruction or abnormal position.

## Unevaluable

Unable to be assessed or interpreted reliably because of inadequate data, poor test quality, an unavailable endpoint, or another limiting circumstance.

## Unknown

Not known or not determined from the information currently available. In a medical record, an unknown value should be distinguished from a negative or normal result.

## Upper Arm

The portion of the upper limb between the shoulder and elbow, containing the humerus and muscles, nerves, and vessels that serve the arm.

## Ulcer Healing Drugs

Medicines used to promote healing of gastrointestinal ulcers, usually by suppressing acid secretion or protecting the mucosa; treatment also addresses causes such as *H. pylori* infection or NSAID use.

## Ultraviolet Rays (UVR)

Electromagnetic radiation beyond visible violet light. Excessive exposure can cause sunburn, photoaging, eye injury, and skin cancer.

## Uncinate Fit

A nonstandard or unclear historical label in the source dictionary; its intended clinical meaning should be verified against the original reference.

## Ungual

Relating to a nail or the nail apparatus.

## Unit

A standardized quantity used to express measurement, dosage, concentration, or a healthcare service.

## Upper Limb Disorders

Conditions affecting the shoulder, arm, elbow, forearm, wrist, or hand, including musculoskeletal, nerve, vascular, and work-related disorders.

## Urates

Salts or ions of uric acid. Monosodium urate crystals can accumulate in joints in gout, and urate crystals may contribute to urinary stones.

## Uretereroenterostomy

A urinary diversion procedure connecting a ureter to a segment of intestine; this spelling is a source variant of *ureteroenterostomy*.

## Ureteroscope

A slender endoscope used to inspect and treat the ureter and, when advanced, the renal pelvis.

## Urethra, Diseases Of And Injury To

Disorders or trauma affecting the urethra, including infection, stricture, diverticulum, obstruction, and laceration.

## Urethrocele

Prolapse or herniation of the urethra, usually into the anterior vaginal wall.

## Uricosuric Drug

A medicine that increases renal excretion of uric acid, such as probenecid, used in selected patients with gout.

## Urinary Bladder, Diseases Of

Disorders of the bladder, including infection, stones, tumors, neurogenic dysfunction, inflammation, obstruction, and impaired emptying.

## Urine Retention

Inability to empty the urinary bladder completely or at all. Acute retention can cause severe pain and requires prompt medical assessment.

## Urocele

An uncommon term for a cystic dilation or protru-

---

sion involving a urinary-tract structure; the precise meaning depends on the anatomical context.

### **Urography**

Imaging of the urinary tract, traditionally using radiography after administration of a contrast medium.

### **Urokinase**

A plasminogen activator produced by the body and also used as a thrombolytic medicine to help dissolve blood clots.

### **URTI**

Abbreviation for upper respiratory tract infection, commonly involving the nose, sinuses, pharynx, or larynx and often caused by viruses.

### **Uterus, Diseases Of**

Disorders affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, prolapse, and cancer.

### **Untidy Wound**

An irregular or contaminated wound with crushing, devitalized tissue, tissue loss, foreign material, or associated injury to vessels, nerves, tendons, or bone. It has increased infection risk and may require exploration, irrigation, debridement, and delayed or staged closure.

### **Umbilical**

Relating to the umbilicus or navel, including structures, lesions, discharge, or abnormalities located at or connected with it.

### **Urine Alkalinization**

Deliberate increase of urine pH, usually with intravenous sodium bicarbonate, to enhance elimination of selected weak acids such as salicylate; it requires monitoring of pH, potassium, fluid status, and acid-base balance.

### **Unilateral Gynecomastia**

Enlargement of breast glandular tissue affecting

one breast in a male patient; a new, firm, fixed, painful, or nipple-associated mass requires clinical assessment.

### **Adenomyoma**

A benign uterine lesion composed of endometrial glands and stroma within a proliferation of smooth muscle; it may cause abnormal uterine bleeding or mimic other uterine tumors.

### **Arias-Stella Reaction**

A hormonally induced atypical change in endometrial or endocervical glands during pregnancy or exposure to progestins; it is benign and can mimic glandular neoplasia histologically.

### **Atypical Endometrial Hyperplasia**

A premalignant proliferation of endometrial glands with cytologic atypia, now commonly classified as endometrial intraepithelial neoplasia; it carries a risk of concurrent or subsequent endometrial carcinoma.

### **Endometrial Stromal Nodule**

A benign, well-circumscribed proliferation of endometrial stromal cells within the uterus, distinguished from endometrial stromal sarcoma by its lack of infiltrative margins or vascular invasion.

### **High-Grade Endometrial Stromal Sarcoma**

An aggressive malignant uterine stromal tumor with high-grade cytology and characteristic molecular alterations in some cases; it may invade the myometrium, vessels, or distant sites.

### **Low-Grade Endometrial Stromal Sarcoma**

A malignant uterine stromal tumor resembling proliferative-phase endometrial stroma, characterized by infiltrative myometrial or vascular growth and often driven by characteristic gene fusions.

### **Placental Site Nodule**

A benign, usually incidental remnant of intermediate trophoblast at a prior implantation site, composed of small nests of chorionic-type or extravillous

---

trophoblast.

### **Urachal Carcinoma**

A rare malignant epithelial tumor arising from remnants of the embryonic urachus, usually located at the bladder dome or along the urachal tract. Most tumors are adenocarcinomas and may produce mucin, with local invasion and metastatic spread occurring in advanced disease. Clinical features can include hematuria, mucousuria, urinary symptoms, pelvic pain, or an incidental mass detected on imaging. Diagnosis requires cystoscopic and histopathologic evaluation with staging; treatment is based on resectability, local extension, and metastatic status.

### **Urosepsis**

Sepsis caused by infection of the urinary tract or urinary system, often associated with pyelonephritis, obstruction, catheterization, or an infected urinary calculus. The infection may progress from a localized urinary source to bacteremia, systemic inflammation, organ dysfunction, and septic shock. Clinical findings may include fever or hypothermia, flank pain, dysuria, hypotension, altered mental status, oliguria, or elevated lactate. Diagnosis combines clinical assessment with urine and blood cultures, laboratory testing, and imaging when obstruction or a complicated source is suspected.

## V

### **Vacuum Erection Devices**

Pumps that draw blood into the penis to produce an erection.

#### **Synonyms:**

Vacuum erection pump

### **Valvular Insufficiency**

Incomplete closure of a heart valve allowing retrograde blood flow (regurgitation); affects mitral, aortic, tricuspid, or pulmonic valves.

### **Variant Angina Pectoris**

Chest pain caused by temporary coronary-artery spasm, often occurring at rest.

#### **Synonyms:**

Prinzmetal angina; vasospastic angina

### **Vascular**

Relating to blood vessels.

### **Vascular Surgery**

Surgery that repairs or reroutes blood vessels to improve circulation.

### **Vasoconstrictor**

A substance that narrows blood vessels.

### **Vasodilator**

A substance that widens blood vessels.

### **Vasospasm**

Sudden involuntary narrowing caused by contraction of a blood vessel.

### **Venous**

Relating to veins.

### **Venous Leak**

Inadequate retention of blood in the penis during erection because blood escapes through veins.

#### **Synonyms:**

Veno-occlusive dysfunction

### **Ventricular Myocardium**

Heart muscle forming the walls of the ventricles.

### **Ventricular Rupture**

A tear in a ventricular wall, often a life-threatening complication of myocardial infarction.

### **Venules**

Very small veins that collect blood from capillaries.

### **Vertebral Artery**

An artery ascending through the neck that supplies blood to the brainstem and posterior brain.

### **Very Low-Calorie Diet**

A medically supervised diet providing about 800 or fewer calories per day.

#### **Synonyms:**

VLCD

### **Very-Low-Density Lipoprotein**

A lipoprotein that transports liver-produced triglycerides and can become LDL.

#### **Synonyms:**

VLDL

---

## **Vestibular System**

Inner-ear and brain structures responsible for balance and spatial orientation.

## **Viral**

Caused by or relating to a virus.

## **Virulent**

Highly harmful, severe, or capable of causing serious disease.

## **Visualized Laser-Assisted Prostatectomy**

Laser prostate surgery performed with direct visualization to remove obstructing tissue.

### **Synonyms:**

VLAP

## **Vitamin D**

Vitamin D supports calcium and phosphate balance, bone mineralization, muscle function, and immune processes; deficiency causes rickets in children and osteomalacia or bone loss in adults.

## **VO2 Max**

The maximum rate at which the body can use oxygen during intense exercise.

### **Synonyms:**

Maximal oxygen consumption

## **Volatile Oils**

Plant oils containing compounds that evaporate readily at room temperature.

### **Synonyms:**

Essential oils

## **VSD**

Ventricular septal defect, a hole in the wall separating the heart's ventricles.

### **Synonyms:**

Ventricular septal defect

## **Vulnerable**

A substance traditionally believed to promote wound healing.

## **Vaccination**

Administration of a vaccine to stimulate immune response and provide protection against infectious disease. Types: live attenuated, inactivated, subunit, mRNA, viral vector. Schedule varies by country. Herd immunity achieved when sufficient proportion immune.

## **Vaccination Schedule**

A time-based plan for administering vaccines according to age, previous doses, medical conditions, exposure risks, and public-health guidance. Schedules vary by country and are updated as recommendations change.

## **Vaccine**

A biological preparation that stimulates an immune response to a pathogen or its components. Vaccines are used mainly to prevent infection or reduce disease severity; a limited number are used in therapeutic settings.

## **Vaccine Immunology**

The study of how vaccines stimulate innate and adaptive immune responses. Vaccine types include live attenuated, inactivated, subunit, conjugate, toxoid, viral-vector, and nucleic-acid vaccines; their immune responses, precautions, and schedules vary.

## **VACTERL Association**

A pattern of congenital abnormalities involving vertebral, anal, cardiac, tracheoesophageal, renal, and limb development. The diagnosis is considered when several component abnormalities occur together and other syndromes have been excluded.

## **Vacuum Delivery**

Assisted vaginal delivery using a vacuum extractor (cup applied to the fetal scalp with negative pressure) to expedite delivery for prolonged second stage, fetal distress, or maternal indications.

## **Vacuum-Assisted Delivery**

Operative vaginal delivery using a vacuum extractor applied to the fetal scalp. Types: soft cup (Kiwi OmniCup, Mityvac, for outlet and low deliveries)

---

and rigid cup (metal Kiwi, for posterior positions and midpelvic deliveries).

## **Vagina**

The vagina is a muscular canal connecting the cervix to the external genital tract and serving roles in menstruation, sexual function, and childbirth. cm long in adult females. Functions include receiving the penis during intercourse, serving as the birth canal, and channeling menstrual flow.

## **Vaginal Atresia**

Congenital absence or complete obstruction of the vaginal canal. It may cause absent menstrual flow, cyclic pelvic pain, or difficulty with sexual activity and requires specialist evaluation.

## **Vaginal Cancer**

A rare gynecologic malignancy, most commonly squamous cell carcinoma linked to human papillomavirus. Treatment depends on stage and includes surgery, radiation, and chemotherapy.

### **Synonyms:**

Cancer, Vagina

## **Vaginal Delivery (Spontaneous)**

The spontaneous passage of the fetus through the birth canal without the use of operative instruments (vacuum or forceps). Typically occurs in the second stage of labor with maternal pushing.

### **Synonyms:**

Spontaneous

## **Vaginal Dryness**

Reduced vaginal lubrication, commonly associated with menopause, breastfeeding, hormonal changes, medications, or irritation. It may cause discomfort, itching, painful intercourse, or minor bleeding.

## **Vaginal Dryness And Atrophy (Genitourinary Syndrome Of Menopause)**

Vaginal dryness and atrophy, collectively termed genitourinary syndrome of menopause, result from declining estrogen levels that cause thinning, drying, and loss of elasticity of the vaginal tissues. Symp-

toms include vaginal dryness, irritation, burning, dyspareunia, and urinary symptoms such as frequency and recurrent infections.

### **Synonyms:**

Genitourinary Syndrome of Menopause

## **Vaginal Foreign Body**

An object retained in the vagina, most often a tampon or other inserted material. It may cause discharge, odor, bleeding, pain, or infection and should be removed safely with examination when necessary.

## **Vaginal Intercourse**

The insertion of the penis into the vagina for sexual pleasure or reproduction. The most common form of sexual intercourse. Vaginal intercourse can lead to pregnancy if sperm are deposited in the vagina.

## **Vaginal Bleeding During Early Pregnancy**

Bleeding from the vagina during the first part of pregnancy, caused by cervical changes, implantation, miscarriage, ectopic pregnancy, infection, or other conditions. Heavy bleeding, severe or one-sided pain, shoulder pain, dizziness, or fainting requires emergency assessment.

## **Vaginal Bleeding During Late Pregnancy**

Bleeding from the vagina later in pregnancy, which may be caused by placenta previa, placental abruption, labor, cervical disease, or other complications. Any significant late-pregnancy bleeding requires immediate obstetric assessment.

## **Vaginal Itching And Discharge**

Itching with abnormal vaginal discharge, commonly caused by candidiasis, bacterial vaginosis, sexually transmitted infection, dermatitis, hormonal change, or a retained foreign body. Odor, pelvic pain, fever, bleeding, pregnancy, or recurrent symptoms requires clinical evaluation and testing.

## **Vaginal Itching**

Itching or irritation of the vulva or vagina caused by candidiasis, bacterial vaginosis, sexually transmitted infections, dermatitis, hormonal changes, or other conditions. It may occur with discharge, odor,

---

soreness, or burning; recurrent or unexplained symptoms require examination and appropriate testing rather than self-diagnosis.

### **Vaginal Microbiome**

The community of microorganisms living in the vagina, commonly dominated by *Lactobacillus* species that help maintain an acidic environment. Changes in this community may contribute to bacterial vaginosis, candidiasis, or other symptoms.

### **Vaginal Stenosis**

Narrowing or shortening of the vaginal canal, which may result from surgery, radiation, scarring, inflammation, trauma, or congenital development. It can cause pain, difficult examination, or difficulty with penetration.

### **Vaginal Trauma**

Injury to the vaginal tissues caused by childbirth, sexual activity, foreign objects, procedures, or blunt or penetrating trauma. Bleeding, pain, swelling, or urinary symptoms require assessment; severe bleeding or suspected deep injury is urgent.

### **Vaginal Hemorrhage**

Heavy or clinically significant bleeding from the vagina. Causes include childbirth, pregnancy complications, trauma, infection, structural disease, hormonal disorders, and gynecologic malignancy; severe or pregnancy-related bleeding requires urgent evaluation.

### **Vaginismus**

Involuntary tightening of the muscles around the vaginal opening that can make penetration painful or impossible. It may be associated with pelvic-floor dysfunction, fear, prior pain, or other factors and is treatable with a tailored multidisciplinary approach.

### **Vaginitis**

Inflammation of the vaginal mucosa, one of the most common gynecologic complaints.

### **Vaginospasm**

Involuntary contraction of the pelvic-floor muscles surrounding the vagina, causing pain or difficulty with vaginal penetration. It may be associated with fear of pain, prior trauma, pelvic-floor dysfunction, infection, hormonal factors, or other genitopelvic pain conditions.

### **Vagus Nerve (Cranial Nerve X)**

The tenth cranial nerve (CN X), the longest and most widely distributed cranial nerve in the body. It contains sensory, motor, and parasympathetic fibers, exiting the skull via the jugular foramen.

#### **Synonyms:**

Cranial Nerve X

### **Vagus Nerve Stimulation**

A neuromodulation treatment involving electrical stimulation of the left vagus nerve via an implanted device. It is FDA-approved for treatment-resistant depression and epilepsy. It requires surgical implantation and delivers intermittent stimulation. Improvement may take months to develop.

### **Valinemia**

A rare inherited disorder of branched-chain amino-acid metabolism causing elevated plasma valine. It may present with developmental delay, feeding difficulty, hypotonia, or neurological symptoms, although some individuals are minimally affected.

### **Valley Fever**

The common name for coccidioidomycosis, a fungal infection caused by *Coccidioides* species and acquired by inhaling airborne spores from soil. It usually causes a mild respiratory illness but can disseminate to skin, bone, joints, or meninges, especially in people at higher risk.

### **Valproate (Sodium Valproate)**

Valproate is a broad-spectrum antiseizure medicine used for several generalized and focal seizure disorders and for selected mood disorders. Choice requires consideration of age, pregnancy potential, liver disease, interactions, and other safety risks.

#### **Synonyms:**

---

Sodium Valproate

### **Valsalva's Manoeuvre**

Forced expiratory effort against a closed airway (glottis closed or mouth and nose pinched shut), typically performed by bearing down as if straining during a bowel movement. The manoeuvre has four phases: Phase I (onset of straining): increased intrathoracic pressure compresses the aorta, causing a transient rise in blood pressure.

#### **Synonyms:**

Valsalva Maneuver

### **Valvular Heart Disease**

Valvular heart disease involves dysfunction of one or more heart valves, leading to stenosis, regurgitation, or a combination of both. The most common causes are degenerative calcification of aortic and mitral valves, rheumatic heart disease, infective endocarditis, and ischemic papillary muscle dysfunction.

### **Vancomycin-Resistant Enterococcus**

Enterococcus bacteria that are resistant to vancomycin, usually because of altered cell-wall precursors. VRE can cause healthcare-associated urinary, bloodstream, wound, or other infections and may require susceptibility-guided treatment.

### **Variable Decelerations**

Abrupt decreases in fetal heart rate that vary in timing, shape, and duration, commonly caused by umbilical-cord compression. Their significance depends on frequency, duration, associated baseline changes, variability, and the clinical setting.

### **Variceal Hemorrhage**

Life-threatening complication of portal hypertension involving rupture of dilated esophageal or gastric varices. The risk is determined by variceal size, red color signs, liver disease severity, and portal hypertension degree.

### **Varicella**

A primary infection with varicella-zoster virus that causes fever and a generalized itchy rash. See Chickenpox.

#### **Synonyms:**

Chickenpox (Varicella)

### **Varicella Vaccine**

A live attenuated vaccine that prevents or reduces the severity of chickenpox. The number and timing of doses depend on age, vaccination history, immune status, pregnancy, and local recommendations. It is generally avoided during pregnancy and in people with certain immune deficiencies.

### **Varicella-Zoster Virus**

A herpesvirus that causes chickenpox (varicella) and shingles (herpes zoster). VZV establishes latent infections in dorsal root ganglia and can reactivate decades later. Chickenpox is highly contagious and typically occurs in childhood. Reactivation as shingles causes painful dermatomal vesicular rash.

### **Varicocele**

A varicocele is enlargement of veins in the scrotum, often on the left, that may cause aching, testicular growth differences, infertility, or no symptoms. cord, resulting from incompetent or absent venous valves.

### **Varicose Ulcer**

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

### **Varicose Veins**

Dilated, tortuous superficial veins, most commonly in the lower extremities. Caused by venous valve incompetence leading to venous reflux. Risk factors: family history, prolonged standing, obesity, pregnancy, and older age. Symptoms: leg heaviness, swelling, aching. Complications: skin changes, ulceration, thrombophlebitis.

### **Variegate Porphyrria**

An inherited hepatic porphyria caused by reduced protoporphyrinogen oxidase activity. It can cause acute neurovisceral attacks with abdominal pain and neuropathy and/or photosensitive blistering skin disease.

---

## Variola

A highly contagious and deadly disease caused by variola virus, eradicated globally by 1980 through vaccination. See Smallpox.

## Vas Deferens

Muscular duct (approximately 45 cm long) transporting sperm from the epididymal tail to the ejaculatory duct. It ascends through the spermatic cord, passes through the inguinal canal, enters the pelvis, crosses over the ureter, and joins the seminal vesicle duct to form the ejaculatory duct (in the prostate).

## Vasa Previa

Fetal blood vessels traverse the membranes over or near the internal cervical os without protection from placental tissue or the umbilical cord. Rupture of membranes can cause rapid fetal exsanguination, so antenatal diagnosis and planned cesarean delivery are important.

## Vascular Access

A route into the bloodstream for treatment or monitoring. Hemodialysis access may be an arteriovenous fistula, arteriovenous graft, or central venous catheter; the choice depends on vascular anatomy, urgency, expected duration, and individual risks.

## Vascular Access For Hemodialysis

A surgically created or catheter-based route that permits high-flow blood removal and return during hemodialysis. Arteriovenous fistulae are generally preferred when feasible, followed by grafts; central venous catheters have higher infection and thrombosis risks.

## Vascular Dementia

Cognitive impairment caused by cerebrovascular disease, such as strokes or chronic small-vessel injury. Symptoms may develop suddenly or gradually and can include problems with attention, executive function, memory, or walking. Management addresses the underlying vascular risks and functional needs.

### Synonyms:

Dementia, Vascular

## Vascular Diagnostic Yield

The proportion of vascular diagnostic procedures or tests that provide a clinically useful result.

## Vascular Graft

Synthetic or biologic conduit for vascular reconstruction. PTFE, Dacron, saphenous vein.

## Vascular Graft Patency

Continued openness and functional blood flow through a vascular graft or bypass. Patency is monitored clinically and with duplex or other imaging because thrombosis, stenosis, infection, intimal hyperplasia, and anastomotic problems can cause failure.

## Vascular Imaging

Techniques for visualizing blood vessels: duplex ultrasound, CT angiography, MR angiography, conventional angiography.

## Vascular Malformation

Abnormal blood vessel development. Arteriovenous malformation, venous malformation, lymphatic malformation.

## Vascular Ring

A congenital abnormality of the aortic arch or its branches that encircles and may compress the trachea, esophagus, or both. Symptoms include stridor, wheezing, recurrent respiratory infection, dysphagia, feeding difficulty, or respiratory distress.

## Vascular Trauma

Injury to an artery or vein from blunt, penetrating, iatrogenic, or crush mechanisms. Assessment prioritizes hemorrhage control, distal perfusion, ischemia, expanding hematoma, bruit, thrill, and associated nerve or bone injury.

## Vascularity

The amount and distribution of blood vessels supplying a tissue or lesion.

---

## Vasculitis

Inflammation of blood vessels causing tissue ischemia and necrosis. Classification by vessel size. Large vessel: giant cell arteritis, Takayasu arteritis. Medium vessel: polyarteritis nodosa (PAN), Kawasaki disease.

### Synonyms:

Angiitis (Vasculitis)

## Vasculitis (Systemic)

Inflammation of blood vessels that may involve large, medium, or small vessels and impair blood flow or cause tissue injury. Examples include ANCA-associated vasculitis and IgA vasculitis.

### Synonyms:

Systemic

## Vasodilation

The widening of blood vessels during inflammation, resulting in increased blood flow to the affected area. This process is mediated primarily by histamine released from mast cell granules acting on H1 receptors, nitric oxide produced by endothelial nitric oxide synthase, and prostaglandins particularly PGE2.

## Vasomotor Rhinitis

Nonallergic inflammation of the nasal lining causing congestion, runny nose, or sneezing, often triggered by odors, temperature changes, or irritants.

## Vasopressin (Antidiuretic Hormone, ADH)

A hormone that increases water reabsorption in the kidney and can constrict blood vessels. It is released from the posterior pituitary.

### Synonyms:

Antidiuretic Hormone, ADH

## Vasopressors In Anesthesia

Medicines that increase vascular tone or cardiac output to support blood pressure during anesthesia or critical illness. The choice and dose depend on the cause of hypotension, heart rate, cardiac function, and local protocol; monitoring is required.

## Vasovagal Syncope

Reflex syncope mediated by increased vagal tone and withdrawal of sympathetic activity, causing bradycardia and/or vasodilation resulting in transient cerebral hypoperfusion. Triggers: prolonged standing, heat, pain, emotional stress. Preceded by prodrome (lightheadedness, nausea, diaphoresis, visual tunneling).

### Synonyms:

Neurocardiogenic Syncope

## Vaughan Williams Classification

The Vaughan Williams classification categorizes antiarrhythmic drugs into four classes based on their primary mechanism of action.

## VEAL CHOP Mnemonic

A memory aid for interpreting fetal heart rate patterns. VEAL: Variable decelerations Cord compression, Early decelerations Head compression, Accelerations OK (fetal well-being), Late decelerations Placental insufficiency.

## Vector

A living carrier, commonly an arthropod, that transmits an infectious agent between hosts. Biological vectors support replication or development of the agent; mechanical vectors transfer it without such biologic change.

## Vector Control

Reduction of vector populations. Examples: insecticides, larvicides, environmental modification, personal protection.

## Vector-Borne Disease

Disease transmitted by vector (insect, tick). Examples: malaria, dengue, Lyme disease.

## Vector-Borne Diseases

Diseases transmitted by arthropod vectors including mosquitoes, ticks, fleas, and sandflies. Major vector-borne diseases include malaria, dengue, Zika, chikungunya, Lyme disease, and leishmaniasis. Prevention through vector control, personal protection,

---

and chemoprophylaxis is essential.

### **Vegetation**

A vegetation is a mass composed of platelets, fibrin, and microorganisms that forms on a heart valve or endocardial surface in the setting of infective endocarditis. The vegetation typically attaches to the valve leaflet on the low-pressure side and may progressively destroy the underlying valve tissue, causing valvular regurgitation.

### **Vein**

A blood vessel that carries deoxygenated blood toward the heart (except pulmonary veins, which carry oxygenated blood). Veins have thinner walls and larger lumens than arteries, with less smooth muscle and elastic tissue.

### **Vein-Graft Aneurysms**

Focal dilation of a venous bypass graft, most commonly a saphenous vein graft used in coronary artery bypass surgery. Rare but may cause graft thrombosis, distal embolization, compression of adjacent structures, or rupture. Diagnosis: coronary angiography or CT angiography. Treatment: re-intervention or medical management.

### **Vena Cava**

The two largest systemic veins returning deoxygenated blood to the right atrium. Superior Vena Cava (SVC): formed by brachiocephalic veins, drains head, neck, upper limbs, thorax (no valves). Inferior Vena Cava (IVC): formed by common iliac veins at L5, drains abdomen, pelvis, lower limbs (receives hepatic, renal, gonadal, lumbar veins).

### **Venereal Diseases**

Sexually transmitted infections are infections passed from one person to another through sexual contact, including vaginal, anal, and oral sex. See Sexually Transmitted Infections (STIs).

### **Venesection (Phlebotomy)**

The controlled removal of blood from a vein for therapeutic or diagnostic purposes.

**Synonyms:**

Phlebotomy

### **Venography**

Imaging of veins, usually after contrast material is administered, to assess venous anatomy, obstruction, thrombosis, or malformation.

### **Venom**

A biological poison produced by a microorganism, plant, or animal that damages host tissues at low concentrations. See toxin.

### **Venomous Bite**

A bite that injects venom from an animal such as a snake, spider, or arthropod. Effects range from local pain and swelling to bleeding, paralysis, or systemic toxicity.

### **Venous Insufficiency**

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

### **Venous Stasis Ulcer**

A chronic leg wound caused by venous hypertension and chronic venous insufficiency. It often occurs near the ankle and may be accompanied by edema, varicose veins, skin darkening, and lipodermatosclerosis.

### **Venous Thromboembolism In Pregnancy**

Pregnancy increases the risk of VTE (DVT and PE) by 5-10 fold due to a hypercoagulable state (increased fibrinogen, factors VII-XII, vWF, decreased protein S, and venous stasis from the gravid uterus).

### **Venous Thromboembolism Prophylaxis**

Measures used to reduce perioperative deep-vein thrombosis and pulmonary embolism, including early mobilization, mechanical compression, and pharmacologic anticoagulation when bleeding risk permits.

### **Venous Thrombosis**

The formation of a blood clot (thrombus) within a

---

vein, most commonly in the deep veins of the lower extremities (deep vein thrombosis, DVT).

### **Venous Ulcer**

A chronic wound caused by impaired venous drainage, usually occurring near the ankle in a limb with chronic venous insufficiency.

### **Ventilation-Perfusion Scan**

Lung imaging assessing ventilation and perfusion. Mismatch indicates pulmonary embolism. Alternative to CTPA in renal impairment or contrast allergy.

### **Ventilation-Perfusion Mismatch**

Unequal matching of air reaching the alveoli and blood reaching the pulmonary capillaries. Low or high regional ratios can impair oxygen exchange and occur in conditions such as COPD, pneumonia, or pulmonary embolism.

### **Ventilation-Perfusion Ratio**

The relationship between alveolar ventilation and pulmonary capillary perfusion. Regional mismatch is a major cause of impaired oxygenation; low V/Q produces venous admixture, while high V/Q reflects wasted ventilation.

### **Ventilation/Perfusion Scan**

Pulmonary embolism diagnosis. Ventilation: inhaled Tc-99m DTPA aerosol. Perfusion: injected Tc-99m MAA. Mismatch (perfusion defect with preserved ventilation) suggests PE. High single-photon emission computed tomography (SPECT) sensitivity.

### **Ventilator**

Mechanical device providing ventilatory support. Modes: assist-control, SIMV, CPAP, PRVC. Parameters: tidal volume, respiratory rate, FiO<sub>2</sub>, PEEP.

### **Ventilator-Associated Pneumonia**

Pneumonia developing after at least 48 hours of mechanical ventilation. Diagnosis is based on clinical findings and respiratory evaluation; cultures may

help identify the organism but are not interpreted in isolation.

### **Ventilator-Induced Lung Injury**

Lung injury caused or amplified by mechanical ventilation, including volutrauma, barotrauma, atelectrauma, and biotrauma. Lung-protective ventilation limits tidal volume and excessive airway pressures while maintaining appropriate oxygenation and carbon-dioxide targets.

### **Ventral**

Relating to the belly or front side of the body; synonym for anterior in human anatomy.

### **Ventricle**

One of the two lower, thicker-walled chambers of the heart that pump blood out of the heart. The right ventricle pumps deoxygenated blood into the pulmonary artery (low-pressure system); the left ventricle pumps oxygenated blood into the aorta (high-pressure system, generating systemic blood pressure).

### **Ventricle (Brain)**

The interconnected system of fluid-filled cavities within the brain producing and containing cerebrospinal fluid: two lateral ventricles (cerebrum), third ventricle (diencephalon), and fourth ventricle (pons/medulla, continuous with the central canal).

#### **Synonyms:**

Brain

### **Ventricular Arrhythmia**

An abnormal heart rhythm arising from the ventricles. It may cause palpitations, dizziness, fainting, chest discomfort, or sudden cardiac arrest; fainting or severe symptoms require emergency care.

### **Ventricular Assist Device**

A mechanical pump supporting circulation in advanced heart failure. Types include left-, right-, and biventricular devices. Uses may include temporary support, a bridge to transplantation, or long-term therapy; complications include bleeding, infection, stroke, and pump thrombosis.

---

### **Ventricular Fibrillation**

Chaotic electrical activity in ventricles, causing no cardiac output. Immediate defibrillation is treatment. Causes: coronary artery disease, cardiomyopathy, electrolyte disturbances, drug toxicity. Post-resuscitation care: targeted temperature management, coronary angiography, ICU admission.

#### **Synonyms:**

V-Fib

### **Ventricular Septal Defect**

An opening in the wall between the ventricles that can allow blood to flow from the left ventricle to the right. The effects depend on the size and location of the defect and may range from no symptoms to heart failure or pulmonary vascular disease.

### **Ventricular Tachycardia**

A wide-complex tachycardia (QRS >0.12 s) originating from the ventricles, with a rate of 100-250 bpm. Monomorphic VT has uniform QRS complexes; polymorphic VT has varying QRS morphology. VT is life-threatening and may degenerate to ventricular fibrillation.

### **Ventriculoatrial**

Relating to or connecting a ventricle of the brain or heart with an atrium; often describing a cerebrospinal-fluid shunt to the right atrium.

### **Ventriculography**

Imaging ventricular function. Radionuclide ventriculography (MUGA scan) accurately measures ejection fraction. Cardiac MRI also accurate.

### **Ventriculoperitoneal Shunt**

A surgically implanted system that drains cerebrospinal fluid from a brain ventricle into the abdominal cavity, where the fluid can be absorbed.

### **Venturi Mask**

Precise FiO<sub>2</sub> delivery. Color-coded adapters.

### **Venule**

A small vessel that drains blood from capillary beds

into veins. Postcapillary venules are important sites for leukocyte migration and inflammatory fluid exchange.

### **Vernal Keratoconjunctivitis**

A recurrent allergic inflammation of the conjunctiva and cornea, usually affecting children or adolescents and causing itching, redness, and light sensitivity.

### **Verruciform Xanthoma**

A rare benign lesion characterized by a verrucous epithelial surface with lipid-laden macrophages in the underlying connective tissue. It most often occurs in oral or genital mucosa and may resemble a wart or malignant lesion clinically.

### **Verrucous Carcinoma**

A low-grade, well-differentiated variant of squamous cell carcinoma with a warty, exophytic appearance. It is locally invasive but rarely metastasizes, commonly affecting the oral cavity, skin, or genitalia.

### **Vertebra**

The individual bone of the vertebral column (33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 sacral fused, 4 coccygeal). Parts: vertebral body, vertebral arch (pedicles, laminae), spinous and transverse processes, articular processes/facets, and vertebral foramen (spinal canal).

### **Vertebral Canal**

The bony canal formed by the vertebrae that encloses and protects the spinal cord.

### **Vertebral Column**

33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 fused sacral, 4 fused coccygeal. Protects the spinal cord, supports the head/trunk, provides muscle/rib attachment. Each typical vertebra has a body, vertebral arch, and 7 processes. Intervertebral discs (nucleus pulposus/annulus fibrosus) provide cushioning.

### **Vertebrobasilar Insufficiency**

A condition of reduced blood flow through the ver-

---

tebral arteries or basilar artery to the posterior circulation of the brain, including the brainstem, cerebellum, occipital lobes, and thalami.

### **Vertical Talus**

A congenital rigid flatfoot deformity in which the talus is positioned vertically and the midfoot is dorsiflexed. It may be isolated or associated with neuromuscular or genetic syndromes and usually requires early orthopedic assessment and treatment.

### **Vertigo**

A false sensation of rotational or linear movement of the self or the environment, and it is a symptom rather than a disease, requiring differentiation from dizziness, disequilibrium, and presyncope.

### **Vesical**

Relating to bladder. Vesical carcinoma, vesical diverticulum, vesical neck.

### **Vesicovaginal Fistula**

An abnormal connection between the bladder and vagina that causes continuous or frequent leakage of urine through the vagina. It may follow childbirth injury, pelvic surgery, radiation, or advanced infection and usually requires specialist repair.

### **Vesicle**

A small (<1 cm) fluid-filled blister within the epidermis, containing clear fluid (serum) or, if infected, pus. Causes: viral (herpes simplex, herpes zoster, varicella, hand-foot-mouth disease), dermatitis (contact, dyshidrotic eczema), autoimmune (pemphigus, bullous pemphigoid early), and friction burns.

### **Vesicoureteral Reflux**

Retrograde flow of urine from the bladder into the ureters and potentially the kidneys, most commonly due to incompetent ureterovesical valve. Predisposes to pyelonephritis and renal scarring. More common in children, presenting with recurrent febrile UTIs. Diagnosis: voiding cystourethrogram (VCUG). Grading I-V.

#### **Synonyms:**

Reflux, Vesicoureteral

### **Vestibular Migraine**

Episodic vestibular symptoms associated with migraine biology, with or without simultaneous headache. Episodes may include vertigo, motion sensitivity, visual aura, or sound sensitivity; diagnosis is clinical after exclusion of other vestibular and neurologic causes.

### **Vestibular Neuritis**

Acute vestibular dysfunction due to inflammation of the vestibular nerve, typically viral in origin. Presents with acute onset of vertigo, nausea, vomiting, and nystagmus lasting days. Hearing is normal (unlike labyrinthitis). Diagnosis: clinical, HINTS exam (Head Impulse, Nystagmus, Test of Skew) to differentiate from central causes.

### **Vestibular Papillomatosis**

A normal anatomical variant of the female vulva characterised by multiple, soft, finger-like or filiform papules on the labia minora and vestibule, often mistaken for genital warts (condylomata acuminata).

### **Vestibular Rehabilitation**

Exercise-based therapy that improves balance, gaze stability, and adaptation in people with vestibular disorders or dizziness.

### **Vestibular Schwannoma**

A benign, slow-growing tumor of the vestibular portion of the eighth cranial nerve. See Acoustic Neuroma.

### **Vestibule**

Central bony labyrinth between cochlea and semi-circular canals, containing utricle (horizontal linear acceleration and head tilt detection) and saccule (vertical linear acceleration detection). Each has a macula with hair cells covered by gelatinous membrane embedded with otoconia (calcium carbonate crystals).

### **VEXAS Syndrome**

VEXAS (Vacuoles, E1 ubiquitin-activating enzyme, X-linked, Autoinflammatory, Somatic) syndrome is an adult-onset autoinflammatory disorder caused

---

by somatic UBA1 mutations in hematopoietic stem cells, affecting men >50.

### **Vibrio Cholerae**

A gram-negative, curved rod that causes cholera, a severe diarrhoeal illness. The organism produces cholera toxin, which causes profuse watery diarrhea (rice-water stools). Transmission occurs through contaminated water and food. The infectious dose varies depending on stomach acidity.

### **Vibrio Vulnificus Infections**

Infections caused by *Vibrio vulnificus*, a gram-negative bacterium found in warm seawater and raw seafood. It can cause wound infection, bloodstream infection, or gastroenteritis, with particularly severe disease in people with chronic liver disease or other risk factors.

### **Video Laryngoscope**

An airway device with a camera near the blade tip that displays the laryngeal view on a monitor. It may improve visualization during tracheal intubation, particularly when direct laryngoscopy is difficult, but does not eliminate aspiration or airway-trauma risk.

### **Video Laryngoscopy**

Video laryngoscopy uses a camera-equipped blade to display an indirect view of the glottis on a screen.

### **Videofluoroscopic Swallow Study**

Real-time X-ray imaging of swallowing. Detailed assessment of oropharyngeal phase.

### **Videostroboscopy**

A diagnostic technique that uses synchronized stroboscopic light to create a slow-motion view of vocal-fold vibration. It assesses the mucosal wave, amplitude, symmetry, and glottic closure.

### **Villous Atrophy**

Flattening and loss of the normal small-intestinal villi, reducing absorptive surface area and occurring in conditions such as coeliac disease.

### **Viral Assembly**

The process of packaging newly synthesised viral genomes and proteins into complete virions. Assembly typically occurs in the nucleus or cytoplasm, depending on the virus type. The process involves self-assembly of capsid proteins around the viral genome.

### **Viral Attachment**

The initial step in viral infection where viral surface proteins bind to specific receptors on host cells. Attachment determines viral tropism and host range. The viral attachment protein is called the ligand, and the host cell receptor is typically a protein or glycan.

### **Viral Conjunctivitis**

The most common form of infectious conjunctivitis, caused predominantly by adenoviruses (serotypes 3, 4, 7, 8, 19, and 37), and it is highly contagious, spreading through direct contact with infected ocular secretions or contaminated surfaces.

### **Viral Culture**

Growth of a virus in susceptible cell cultures to identify an infectious agent. It can be useful for selected viruses, but molecular and antigen-based tests are often faster or more sensitive; the appropriate method depends on the suspected infection and specimen.

### **Viral Cytopathic Effects**

Observable changes in host cells caused by viral infection. CPE include cell rounding, detachment, syncytia formation (fusion of infected cells), inclusion bodies, and cell lysis. CPE are used in viral diagnosis and can be observed by light microscopy.

### **Viral Entry**

The process by which viruses cross the host cell membrane to deliver their genome into the cytoplasm. Entry occurs through membrane fusion (enveloped viruses) or endocytosis (enveloped and non-enveloped viruses). For membrane fusion, viral fusion proteins mediate merger of the viral envelope with the host cell membrane.

---

## **Viral Gastroenteritis**

Inflammation of the stomach or intestines caused by a virus. Common symptoms include watery diarrhea, vomiting, abdominal cramps, and fever. Diagnosis is usually clinical; stool testing is reserved for selected situations. Treatment focuses on fluid replacement and symptom control.

## **Viral Hepatitis**

Inflammation of the liver caused by viral infections. The major hepatitis viruses include A, B, C, D, and E. Hepatitis A and E are transmitted through the fecal-oral route and cause acute, self-limited infections.

### **Synonyms:**

Infectious Hepatitis

## **Viral Immune Evasion**

Mechanisms by which viruses evade host immune responses. Strategies include antigenic variation, inhibition of interferon signalling, downregulation of MHC molecules, and encoding viral homologues of cytokines. Understanding viral immune evasion is essential for developing effective vaccines and antiviral therapies.

## **Viral Infections**

Illnesses caused by viruses, which are intracellular pathogens that hijack host cellular machinery to replicate. They range from self-limited conditions such as the common cold and gastroenteritis to serious diseases including influenza, hepatitis, HIV, and COVID-19.

## **Viral Latency**

A state in which viral genomes persist in host cells without producing infectious particles. Latent viruses can reactivate under certain conditions including immunosuppression. Herpesviruses establish latent infections in specific cell types (HSV in neurons, EBV in B cells, CMV in myeloid cells).

## **Viral Latency Mechanisms**

The strategies by which viruses establish and maintain latent infections. Herpesviruses maintain their genomes as episomes in the nucleus. HIV integrates

into the host genome as a provirus. Latent viruses express minimal proteins to avoid immune detection. Reactivation can be triggered by immunosuppression, stress, or other stimuli.

## **Viral Load (HIV RNA)**

The amount of HIV RNA in plasma, measured by a laboratory assay. It is used to assess viral replication and response to antiretroviral therapy. An undetectable result indicates that the amount is below the assay's reporting limit; testing intervals and treatment decisions follow current clinical guidance.

### **Synonyms:**

HIV RNA

## **Viral Meningitis**

Inflammation of the meninges caused by viruses, usually Enteroviruses. Presents similarly to bacterial meningitis but generally less severe. CSF shows lymphocytic pleocytosis, normal glucose, and mildly elevated protein. Self-limited in most cases; supportive treatment.

## **Viral Pathogenesis**

The mechanisms by which viruses cause disease. Pathogenesis involves attachment, entry, replication, and spread within the host. Viral damage can be direct (cytopathic effects) or indirect (immune-mediated). Direct effects include cell death, altered cell function, and cell transformation.

## **Viral Pneumonia**

Infection and inflammation of lung tissue caused by a virus, producing cough, fever, chills, breathlessness, chest discomfort, fatigue, and variable impairment of oxygenation. Severe disease can cause respiratory failure or secondary bacterial infection.

## **Viral Release**

The process by which newly assembled virions exit the host cell to infect other cells. Release occurs through budding (enveloped viruses) or cell lysis (non-enveloped viruses). Budding allows the virus to acquire an envelope from host cell membranes without killing the cell.

---

## **Viral Replication**

The process of synthesising new viral genomes and proteins within host cells. The mechanism varies by virus type. DNA viruses typically replicate in the nucleus using host cell DNA polymerases (except poxviruses). RNA viruses typically replicate in the cytoplasm using viral RNA-dependent RNA polymerase.

## **Viral Replication Cycle**

The series of steps by which viruses reproduce within host cells.

## **Viral Structure**

The basic components of viral particles (virions). Viruses consist of a nucleic acid genome (DNA or RNA) surrounded by a protein coat called a capsid. Some viruses have an outer lipid envelope derived from host cell membranes. The capsid is composed of structural units called capsomeres.

## **Viral Uncoating**

The process by which the viral capsid is disassembled to release the viral genome into the host cell cytoplasm. Uncoating occurs after entry and before replication. The mechanism varies by virus type and can involve pH-dependent conformational changes, proteolytic cleavage, or disassembly of capsid proteins.

## **Virchow's Triad**

Virchow's triad describes three broad categories of factors that contribute to thrombosis: endothelial injury or dysfunction, stasis or turbulent blood flow, and hypercoagulability. Endothelial injury exposes subendothelial collagen and tissue factor, initiating platelet adhesion and the coagulation cascade.

## **Viremia**

The presence of virus in the bloodstream. Viremia may be transient or persistent and can enable dissemination to target organs; it may be detected by culture, antigen testing, or nucleic-acid amplification.

## **Virilisation**

The development of male secondary sexual characteristics in females, resulting from excessive androgen production or exposure.

## **Virilism Foetal**

Prenatal or neonatal masculinization of a genetically female fetus or infant due to excess androgen exposure. Causes include congenital adrenal hyperplasia, maternal androgen-producing disease, or placental and fetal steroidogenic disorders.

## **Virology**

The branch of microbiology concerned with viruses: structure, classification (DNA/RNA, enveloped/nonenveloped, Baltimore scheme), replication, pathogenesis, epidemiology, diagnosis, treatment, and prevention. Diagnostic methods: cell culture, antigen detection, nucleic acid amplification (PCR), and serology (IgM/IgG).

## **Virulence**

The relative capacity of a microorganism to cause disease or tissue injury in a host. It depends on microbial factors such as toxins, adhesins, invasiveness, and immune evasion, together with host susceptibility.

## **Virulence Factor**

A microbial product or characteristic that helps an organism colonize, evade host defenses, injure tissue, or otherwise cause disease. Examples include adhesins, toxins, capsules, enzymes, and mechanisms that alter immune recognition.

## **Viscera**

The internal organs of the body, particularly those within the thoracic and abdominal cavities. The thoracic viscera include the heart, lungs, esophagus, trachea, and thymus.

## **Vision**

The sensory ability to perceive light and interpret visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. Normal vision depends on the proper func-

---

tion of the cornea, lens, retina, and optic nerve, as well as intact neural pathways to the visual cortex.

### **Vision And Hearing**

The two primary sensory modalities through which humans perceive and interact with their environment. Age-related declines in both senses are common, with presbyopia and cataracts affecting vision and presbycusis affecting hearing, often beginning as early as the fourth decade of life.

### **Vision Impairment**

Reduced visual acuity or visual-field function that affects daily activities. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease. Evaluation and treatment depend on the cause; rehabilitation and visual aids may improve function.

### **Vision, Blurred**

Reduced sharpness or clarity of vision that may result from refractive error, dry eye, cataract, retinal or optic-nerve disease, neurologic disease, medication, or other causes. Sudden, painful, one-sided, or progressive blurring requires prompt evaluation.

### **Vision Loss, Acute**

Sudden reduction or loss of vision in one or both eyes caused by retinal vascular occlusion, retinal detachment, optic-nerve disease, stroke, acute glaucoma, inflammation, trauma, or other emergency. It requires immediate medical or ophthalmic assessment.

### **Vision Loss**

A decrease in the ability to see that cannot be fully corrected with eyeglasses, contact lenses, or medical treatment. It ranges from partial impairment to complete blindness and can result from conditions such as macular degeneration, glaucoma, diabetic retinopathy, cataracts, and traumatic injury.

### **Vision Problems**

Changes in visual acuity, field, color, or clarity caused by refractive error, eye disease, neurologic disease, or systemic illness. Sudden vision loss is an

emergency.

### **Vision Screening**

Screening for visual problems in children: newborn—red reflex examination (cataract, retinoblastoma); 3-5 years—visual acuity, strabismus screening (cover test, photostrengthening), and amblyopia risk factors.

### **Visual Acuity**

The resolving power of the eye, defined as the ability to distinguish two points as distinct, and the most common clinical measure of visual function.

### **Visual Agnosia**

Inability to recognize or identify visually presented objects, faces, or symbols despite adequate vision and attention. It results from dysfunction of higher-order visual association cortex and may follow stroke, trauma, neurodegenerative disease, or other brain injury.

### **Visual Field Defect**

Loss or alteration of a portion of the normally perceived visual field caused by dysfunction of the retina, optic nerve, chiasm, optic tract, radiations, or visual cortex. The pattern can help localize the lesion.

### **Visual Field Perimetry**

A systematic method of measuring the sensitivity of the retina across the entire visual field using standardized light stimuli, providing a quantitative map of visual function that can detect, characterize, and monitor visual field loss caused by diseases of the retina, optic nerve, and visual pathways.

### **Visual Impairment**

Reduced vision that cannot be fully corrected by ordinary glasses or contact lenses. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease; new or sudden loss of vision requires urgent assessment.

---

## Vital Signs

Basic measurements of physiologic status, commonly including temperature, pulse, respiratory rate, blood pressure, and oxygen saturation. Values vary with age, activity, illness, and measurement conditions; trends and clinical context are important.

## Vitamin A Deficiency

A nutritional disorder resulting from inadequate intake or absorption of retinol, causing xerophthalmia, night blindness, follicular hyperkeratosis, and impaired immunity. Severe deficiency leads to corneal ulceration and blindness, and is a leading cause of preventable childhood blindness worldwide.

## Vitamin A: Retinal

Vitamin A (retinol) is a fat-soluble vitamin essential for vision, immune function, cell differentiation, and reproduction. In the eye, retinol is oxidized to retinal (retinaldehyde), which binds to opsin in the photoreceptor outer segments forming rhodopsin (in rods) and photopsins (in cones).

## Vitamin B Complex

A group of eight water-soluble vitamins that support energy metabolism, blood-cell production, nervous-system function, and other biochemical processes. The group includes vitamins B1 through B7 and B9, as well as vitamin B12.

## Vitamin B1 (Thiamine)

Water-soluble vitamin, coenzyme in carbohydrate metabolism. Deficiency: beriberi (wet, dry), Wernicke-Korsakoff. Risk: alcoholism, bariatric surgery, dialysis. Treatment: supplementation.

### Synonyms:

Thiamine

## Vitamin B12 (Cobalamin)

Required for nerve function, red blood cell formation, DNA synthesis. Deficiency: megaloblastic anemia, neurological damage. Risk: vegans, elderly, pernicious anemia, metformin use, bariatric surgery. Requires intrinsic factor for absorption.

### Synonyms:

Cobalamin

## Vitamin B12 Deficiency

Megaloblastic anemia, neurological symptoms. Pernicious anemia, vegan diet. Treated with B12 supplementation.

## Vitamin B12 Deficiency In Older Adults

Deficiency caused by inadequate intake, malabsorption, autoimmune intrinsic-factor deficiency, gastric surgery, or medications. It may cause megaloblastic anemia, neuropathy, cognitive changes, gait impairment, and glossitis; neurologic injury can occur without anemia.

## Vitamin B12: Cobalamin

A water-soluble vitamin needed for red-blood-cell formation, DNA synthesis, and normal nerve function. Deficiency can cause megaloblastic anemia and neurologic abnormalities.

## Vitamin B1: Thiamine

A water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke-Korsakoff syndrome.

## Vitamin B2 (Riboflavin)

Precursor for FAD and FMN. Deficiency: cheilosis, glossitis, seborrheic dermatitis. Common with B-complex deficiency.

### Synonyms:

Riboflavin

## Vitamin B3 (Niacin)

Precursor for NAD<sup>+</sup> and NADP<sup>+</sup>. Deficiency: pellagra (diarrhea, dermatitis, dementia). Sources: meat, fish, poultry, grains.

### Synonyms:

Niacin

## Vitamin B3: Niacin

A water-soluble vitamin that forms the coenzymes NAD and NADP, which participate in many oxidation-reduction and energy-producing reactions.

---

Severe deficiency causes pellagra.

### **Vitamin B5 (Pantothenic Acid)**

Component of coenzyme A. Deficiency rare. Involved in fatty acid metabolism.

#### **Synonyms:**

Pantothenic Acid

### **Vitamin B6 (Pyridoxine)**

Coenzyme in amino acid metabolism. Deficiency: seizures, anemia, dermatitis. Risk: isoniazid therapy, alcoholism.

#### **Synonyms:**

Pyridoxine

### **Vitamin B6: Pyridoxine**

Pyridoxine (pyridoxal phosphate, PLP, the active form) is a water-soluble B vitamin essential as a co-factor for over 100 enzymatic reactions, particularly in amino acid metabolism.

### **Vitamin B7 (Biotin)**

Coenzyme for carboxylation reactions. Deficiency rare, may occur with raw egg consumption (avidin binds biotin).

#### **Synonyms:**

Biotin

### **Vitamin B9 (Folate)**

Essential for DNA synthesis, red blood cell formation. Deficiency: megaloblastic anemia, neural tube defects in pregnancy. Sources: leafy greens, legumes, fortified grains. Supplementation recommended before and during pregnancy.

#### **Synonyms:**

Folate

### **Vitamin B9: Folate**

Folate (folic acid, tetrahydrofolate/THF) is a water-soluble B vitamin essential for one-carbon transfer reactions in nucleotide synthesis (thymidylate synthesis for DNA, purine synthesis), amino acid metabolism (methionine synthesis from homocysteine), and methylation reactions.

### **Vitamin C (Ascorbic Acid)**

A water-soluble vitamin and a powerful antioxidant, essential for collagen synthesis (required for proline and lysine hydroxylation in collagen triple helix formation), carnitine synthesis, neurotransmitter synthesis (dopamine to norepinephrine), and iron absorption (reduces ferric to ferrous iron in the gut).

#### **Synonyms:**

Ascorbic Acid

### **Vitamin D Deficiency**

Inadequate vitamin-D status causing impaired calcium and phosphate homeostasis and, in severe cases, defective bone mineralization. It may result from low exposure or intake, malabsorption, liver or kidney disease, or altered metabolism.

### **Vitamin D: Calcitriol**

Vitamin D is a fat-soluble vitamin (actually a pro-hormone) essential for calcium and phosphorus homeostasis and bone health. Cholecalciferol (D3) is synthesized in the skin from 7-dehydrocholesterol by UVB radiation, or obtained from diet (ergocalciferol/D2 from plants, D3 from animal sources).

### **Vitamin E: Tocopherol**

Vitamin E (alpha-tocopherol) is a fat-soluble vitamin and the body's primary lipid-soluble antioxidant, protecting polyunsaturated fatty acids in cell membranes from lipid peroxidation by free radicals (reactive oxygen species). It donates a hydrogen atom to lipid peroxyl radicals, breaking the chain reaction of lipid peroxidation.

### **Vitamin K Deficiency**

Coagulopathy, bleeding. Newborns receive prophylaxis. Antibiotics can cause deficiency.

### **Vitamin K Prophylaxis**

Administration of vitamin K to a newborn soon after birth to prevent vitamin K deficiency

### **Vaccinia**

The orthopoxvirus used in the smallpox vaccine; infection is uncommon and may cause a localized

---

or disseminated lesion, especially in people with impaired immunity.

### **Vacuole**

A membrane-bound compartment within a cell containing fluid, solutes, or cellular material. Vacuoles have specialized roles in storage, transport, and degradation and may enlarge or accumulate material during disease.

### **Vacuum Extractor**

A cup-shaped device applied to the fetal scalp to assist vaginal delivery when specific maternal or fetal indications are present.

### **Vagus**

Relating to the vagus nerve, the tenth cranial nerve, which carries parasympathetic, sensory, and motor fibers between the brainstem and thoracic and abdominal organs.

### **Valgus**

A deformity in which the distal part of a limb deviates away from the body's midline; examples include hallux valgus and genu valgum.

### **Validity**

The extent to which a test or measurement accurately assesses what it is intended to assess.

### **Valine**

An essential branched-chain amino acid required for protein synthesis and metabolism.

### **Valves**

Flap-like structures that permit fluid or blood to move preferentially in one direction, including cardiac and venous valves.

### **Valvotomy**

Surgical or catheter-based division of narrowed valve tissue to improve blood flow, most often performed for selected stenotic heart valves.

### **Valvular Disease**

Disease affecting one or more heart valves, causing stenosis, regurgitation, or both and potentially leading to heart failure or arrhythmia.

### **Vancomycin**

A glycopeptide antibiotic that inhibits Gram-positive bacterial cell-wall synthesis. It is given intravenously for serious resistant infections and orally for *C. difficile* colitis; infusion reactions, nephrotoxicity, and ototoxicity require caution.

### **Van Den Bergh Test**

A historical test measuring the reaction of serum bilirubin with a diazo reagent to help distinguish conjugated from unconjugated hyperbilirubinemia.

### **Vaporiser**

A device that converts a liquid medicine or volatile substance into a vapor for inhalation or controlled delivery, such as in anesthesia.

### **Variance**

A statistical measure of dispersion equal to the average squared deviation from the mean.

### **Varix**

An abnormally dilated, tortuous vein; multiple varices commonly occur in portal hypertension or chronic venous disease.

### **Varus**

A deformity in which the distal part of a limb deviates toward the body's midline; examples include genu varum and talipes equinovarus.

### **Vas**

A duct or vessel; in reproductive anatomy, the vas deferens transports sperm from the epididymis toward the ejaculatory duct.

### **Vasa Efferentia**

Small ducts carrying sperm from the rete testis to the epididymal duct.

---

### **Vasoconstriction**

Source spelling variant of *vasoconstriction*, the narrowing of a blood vessel caused by contraction of its muscular wall.

### **Vasoconstrictors**

Substances or medicines that narrow blood vessels and usually increase vascular resistance and blood pressure.

### **Vasomotor Centre**

Brainstem networks, chiefly in the medulla, that regulate vascular tone and contribute to control of blood pressure.

### **Vasomotor Nerves**

Autonomic nerves that alter blood-vessel diameter by causing vascular smooth-muscle contraction or relaxation.

### **Vasopressin**

Antidiuretic hormone, also called arginine vasopressin, which promotes renal water reabsorption and can constrict blood vessels.

### **Vasovagal Attack**

A transient reflex episode caused by reduced sympathetic tone and increased vagal activity, producing hypotension and often bradycardia with fainting or near-fainting. Common triggers include prolonged standing, pain, fear, heat, dehydration, or emotional stress.

### **VD**

Abbreviation for venereal disease, an older term for a sexually transmitted infection.

### **Veganism**

A dietary or lifestyle pattern that excludes animal-derived foods; nutritional adequacy requires attention to nutrients such as vitamin B12, iron, calcium, iodine, and omega-3 fatty acids.

### **Vegetarianism**

A dietary pattern that excludes meat, with inclusion

or exclusion of eggs and dairy depending on the subtype; nutritional planning may be needed.

### **Vegetations**

Abnormal masses, often composed of fibrin, platelets, and microorganisms, that form on heart valves in infective endocarditis; sterile vegetations can occur in other conditions.

### **Vehicle**

A substance or medium that carries an active medicine, microorganism, or toxic agent; in pharmacology it may be the inactive base in which a drug is formulated.

### **Veins**

Blood vessels that return blood toward the heart. Most carry deoxygenated blood, while pulmonary and umbilical veins carry oxygenated blood.

### **Veins, Diseases Of**

Disorders including thrombosis, varicose veins, chronic venous insufficiency, venous ulcers, inflammation, and congenital venous malformations.

### **Venepuncture**

Puncture of a vein with a needle to obtain blood or establish intravenous access.

### **Venesection**

The controlled removal of blood from a vein, used diagnostically or therapeutically, for example in selected cases of hemochromatosis or polycythemia.

### **Ventilation, Artificial**

Mechanical movement of air into and out of the lungs using a device when spontaneous breathing is inadequate or absent.

### **Ventouse**

A vacuum extractor used for selected assisted vaginal deliveries.

### **Ventricular Hypertrophy**

Thickening of a heart-ventricle wall, usually from

---

chronic pressure or volume overload, inherited cardiomyopathy, or athletic adaptation. It may cause diastolic dysfunction, arrhythmia, ischemia, or heart failure.

### **Ventrosuspension**

Surgical fixation of a displaced or prolapsed uterus to the anterior abdominal wall or nearby supporting tissues.

### **Verapamil**

A non-dihydropyridine calcium-channel blocker used for selected hypertension, angina, and supraventricular tachyarrhythmias; it can cause bradycardia and constipation.

### **Vermicides**

Medicines or chemical agents that kill parasitic worms; the appropriate agent depends on the parasite and site of infection.

### **Vernix**

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

### **Verrucose**

Having a rough, wart-like, or papillated surface.

### **Vertebrobasilar Insufficiency**

Source spelling variant of *vertebrobasilar insufficiency*, reduced blood flow in the vertebral or basilar circulation supplying the brainstem, cerebellum, and posterior brain.

### **Vesicants**

Substances that cause blistering and tissue injury on contact; examples include certain chemotherapy agents and chemical-warfare agents.

### **Vesico-Ureteric Reflux**

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of recurrent urinary infection and renal scarring.

### **Vesicular Breathing**

The normal soft, rustling breath sound heard over most peripheral lung fields during auscultation.

### **Vestibulo-Ocular Reflex**

A reflex that moves the eyes opposite to head movement, stabilizing visual fixation during motion through signals from the vestibular system.

### **Vestigial**

Describing a structure or feature that has become greatly reduced through evolution and has little or no apparent original function.

### **Vibrator**

A device that produces mechanical vibration and may be used for sexual stimulation, therapeutic massage, or selected rehabilitation purposes.

### **Vibrio**

A genus of curved, Gram-negative bacteria; species include *V. cholerae*, which causes cholera, and *V. vulnificus*, which can cause severe wound or bloodstream infection.

### **Villus**

A small finger-like projection, especially one of the intestinal mucosa that increases absorptive surface area; chorionic villi mediate exchange between placenta and fetus.

### **Vinca Alkaloids**

Anticancer medicines, including vincristine and vinblastine, that inhibit microtubule formation and cell division.

### **Vincent's Angina**

Acute necrotizing ulcerative gingivitis or tonsillitis associated with fusiform bacteria and spirochetes, causing painful ulcers, bleeding, and fetid breath.

### **Vinorelbine**

A semisynthetic vinca-alkaloid chemotherapy medicine used primarily for selected lung and breast cancers; myelosuppression is a major adverse effect.

---

## **Viraemia**

The presence of viruses in the bloodstream, which may be transient or persistent and may permit spread to distant tissues.

## **Viral Haemorrhagic Fever**

A severe illness caused by certain viruses that may produce fever, vascular injury, thrombocytopenia, and bleeding; severity and transmission vary by virus.

## **Virilism**

Development of masculinizing features in a female, usually from excess androgen exposure or production, such as hirsutism, deep voice, acne, and menstrual disturbance.

## **Virus**

An infectious agent consisting of genetic material enclosed in a protein coat, sometimes with a lipid envelope, that replicates only inside living host cells. Newborns have limited vitamin K stores, so the recommended route and dose are chosen according to local guidance and the infant's clinical circumstances.

## **Vitamin K: Phylloquinone**

Vitamin K is a fat-soluble vitamin essential for the post-translational gamma-carboxylation of glutamate residues to gamma-carboxyglutamate (Gla) in specific clotting factors (II, VII, IX, X, protein C, protein S) and anticoagulant proteins (protein C, protein S, protein Z).

## **Vitamins**

A biological substance or process involving vitamins; its medical significance depends on its function, location, amount, and clinical context.

## **Vitrectomy**

Surgical removal of the vitreous gel, typically via the pars plana approach, using a cutting probe under microscopic visualization. Indications include vitreous hemorrhage, complicated retinal detachment, macular holes, epiretinal membranes, intraocular foreign bodies, and endophthalmitis.

## **Vitreous Chemistry**

Analysis of the fluid from the eye after death for substances such as electrolytes, glucose, urea, creatinine, and ethanol. It may support assessment of postmortem interval or metabolic disturbance but is not independently diagnostic of cause or time of death.

## **Vitreous Hemorrhage**

Bleeding into the vitreous cavity that causes sudden painless floaters, cobwebs, haze, or loss of vision. Common causes include proliferative diabetic retinopathy, retinal tear or detachment, trauma, and posterior vitreous separation.

## **Vitreous Humor**

The clear gel that fills the space between the lens and retina. It helps maintain the shape of the eye and transmits light to the retina.

## **VLDL**

Very low-density lipoprotein. Transports endogenous triglycerides.

## **Vocal Cord Nodules**

Benign, usually paired thickened areas of the vocal folds caused by repeated voice strain or overuse. They can cause hoarseness, vocal fatigue, and a rough or breathy voice.

## **Vocal Cord Paralysis**

Immobility of one or both vocal cords due to disruption of the recurrent laryngeal nerve (RLN). Unilateral vocal cord paralysis: hoarseness, breathy voice, aspiration, and ineffective cough.

### **Synonyms:**

Vocal Fold Paralysis

## **Vocal Cord Paresis**

Partial paralysis or weakness of one or both vocal cords due to impaired function of the recurrent laryngeal nerve (RLN) or the vagus nerve. Unilateral paresis is more common and presents with hoarseness, breathy dysphonia, vocal fatigue, and sometimes aspiration.

---

### Vocal Cord Polyp

Vocal cord polyps are benign, unilateral, sessile or pedunculated lesions that arise from the vocal cord mucosa, typically as a result of a single traumatic vocal event such as shouting, screaming, or coughing, causing hemorrhage and edema in the superficial lamina propria (Reinke space).

### Vocal Folds

Paired mucosal folds within the larynx that vibrate as air passes between them to produce sound. They also close to protect the airway and assist in raising intrathoracic pressure.

### Vocal Resonance

The transmission of vocal sounds to the chest wall, assessed by having the patient speak while auscultating. It is increased in consolidation and decreased in pleural effusion or pneumothorax. It correlates with bronchophony and whispered pectoriloquy.

### Vocal-Cord Dysfunction

Episodic inappropriate adduction of the vocal folds, especially during inspiration, causing throat tightness, noisy breathing, and apparent asthma-like attacks. Diagnosis is supported by laryngoscopy during symptoms; speech therapy and trigger management are central treatments.

### Voice And Speech

The products of complex coordinated activity of the respiratory, laryngeal, and articulatory systems.

### Voiding Cystourethrogram

Fluoroscopic imaging of the bladder and urethra during voiding, after filling the bladder with contrast via a catheter. Indications: evaluation of vesicoureteral reflux (VUR) in children with recurrent UTIs, posterior urethral valves in males, and post-surgical assessment of the bladder/urethra.

### Volatile Anesthetics

Halogenated inhaled anesthetic agents, including sevoflurane, desflurane, and isoflurane, that reversibly depress central nervous system function. They provide dose-dependent hypnosis and immo-

bility but may cause hypotension, respiratory depression, postoperative nausea, and malignant hyperthermia in susceptible individuals.

### Volume Of Distribution

A theoretical pharmacokinetic parameter that relates the total amount of drug in the body to the plasma concentration, calculated as  $V_d$  equals amount of drug in the body divided by plasma concentration. It represents the apparent volume into which a drug distributes and is not a true anatomical volume.

### Volutrauma

Lung injury caused by excessive mechanical stretch, usually from an inappropriately large tidal volume during ventilation. Risk is reduced by lung-protective ventilation tailored to the patient's predicted body weight, lung mechanics, and clinical condition.

### Volvulus

Twisting of a loop of intestine around its mesenteric attachment point causing luminal obstruction and compromise of the mesenteric blood supply which can rapidly progress to bowel ischemia.

### Vomiting

Reflex expulsion of gastric contents. Causes: GI, neurological, metabolic, toxic, psychological. Treatment: antiemetics, identify cause, prevent aspiration.

### Von Hippel-Lindau Disease

Autosomal dominant syndrome caused by mutations in the VHL tumor suppressor gene on chromosome three predisposing to hemangioblastomas of the central nervous system and retina, clear cell renal cell carcinoma, pheochromocytoma, pancreatic cysts and neuroendocrine tumors, and endolymphatic sac tumors.

### Von Willebrand Disease

An inherited or acquired bleeding disorder caused by deficient or abnormal von Willebrand factor, which helps platelets adhere and carries factor VIII. It

---

commonly causes nosebleeds, easy bruising, heavy menstrual bleeding, or prolonged bleeding after procedures.

### **Voriconazole**

A triazole antifungal agent used in the treatment of invasive aspergillosis, candidemia, and other serious fungal infections. Voriconazole inhibits the fungal cytochrome P450 enzyme lanosterol 14-alpha demethylase, preventing ergosterol synthesis and disrupting fungal cell membrane integrity.

### **Voyeuristic Disorder**

A paraphilic disorder involving recurrent, intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration  $\geq 6$  months. Most common in males with onset in adolescence.

### **VRE**

Enterococcus bacteria that are resistant to vancomycin, often because of acquired changes in cell-wall precursors. VRE can cause urinary, bloodstream, wound, or other healthcare-associated infections. Treatment requires susceptibility-guided selection of an effective antimicrobial and source control when needed.

### **Vulvitis**

Inflammation of the vulva (external female genitalia), often presenting with pruritus, burning, irritation, erythema, edema, and discharge. Vulvitis is rarely isolated and is most commonly part of vulvovaginitis (inflammation of both vulva and vagina).

### **Vulvodynia**

Vulvodynia is chronic vulvar pain without an identifiable specific cause, often described as burning or rawness and triggered by touch, pressure, or occurring spontaneously.

#### **Synonyms:**

Chronic Vulvar Pain

### **Vulvovaginal Candidiasis**

Symptomatic infection of the vulva and vagina, usually caused by *Candida albicans*. Pruritus, soreness, erythema, and thick discharge are common; diagnosis is clinical with microscopy or culture when recurrent, severe, atypical, or treatment-resistant.

### **Vagal Paraganglioma**

A usually slow-growing tumor arising from paraganglion cells near the vagus nerve in the neck.

### **Vaginal Agenesis**

A condition in which the vagina is absent or incompletely developed.

### **Vaginal Atrophy**

Thinning, drying, and inflammation of vaginal tissues caused by reduced estrogen.

### **Vaginal Fistula**

An abnormal opening connecting the vagina to another organ, such as the bladder or rectum.

### **Vertebral Tumor**

A tumor arising in or near a vertebra of the spinal column.

### **Vagotomy**

Surgical cutting of selected vagus-nerve branches, historically used to reduce stomach acid secretion.

### **Vascular System**

The network of arteries, veins, and capillaries that transports blood through the body.

### **Vaginal Speculum**

An instrument inserted into the vagina to separate its walls and permit examination of the vagina and cervix or collection of specimens.

### **Vernix Caseosa**

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

---

### **Vestibulocochlear Nerve**

The eighth cranial nerve, carrying information for hearing and balance from the inner ear to the brain.

### **Vibrios**

Comma-shaped bacteria, usually Gram-negative, that include species capable of causing cholera and wound or gastrointestinal infections.

### **Villi**

Finger-like projections that increase the absorptive surface of the small-intestinal lining; similar structures occur in the placenta and other tissues.

### **Vincent Disease**

Acute necrotizing ulcerative gingivitis associated with fusospirochetal bacteria, causing painful bleeding gums, ulceration, and foul breath.

### **Vision Receptors**

Photoreceptors in the retina, mainly rods and cones, that convert light into neural signals.

### **Vaginal Hematoma**

A collection of blood within the vaginal wall or surrounding tissues, usually caused by childbirth, trauma, or surgery and potentially producing severe pain, swelling, or blood loss.

### **Vertebral Compression Fracture**

Collapse of a vertebral body, often caused by osteoporosis, trauma, or malignancy, producing back pain, loss of height, or progressive kyphosis.

### **Veno-Occlusive Disease**

Obstruction of small veins, particularly in the liver after certain chemotherapy or hematopoietic stem-cell transplantation, causing painful hepatomegaly, fluid retention, jaundice, and weight gain.

### **Vaginal Intraepithelial Neoplasia**

Precancerous abnormal growth of squamous cells in the vaginal epithelium, usually associated with human papillomavirus and graded according to the severity of dysplasia.

### **Vitreous Detachment**

Separation of the vitreous gel from the retina, usually related to aging and often causing new floaters or flashes. Sudden symptoms require assessment for retinal tears or detachment.

### **Viral Exanthem**

A widespread skin eruption caused by a viral infection, often accompanied by fever or other systemic symptoms.

### **Valvuloplasty**

A procedure used to widen or repair a narrowed or abnormal heart valve, by balloon catheter or open surgery depending on the valve and condition.

### **Valvulotomy**

Surgical incision of a stenosed heart valve to improve the opening through which blood flows.

### **Varices**

Abnormally dilated and tortuous veins, commonly occurring in the legs or in the oesophagus and stomach as a result of portal hypertension.

### **Vasodilatation**

Widening of blood vessels caused by relaxation of vascular smooth muscle, increasing blood flow and potentially lowering blood pressure.

### **Vasomotor**

Relating to the control of blood-vessel diameter by nerves, hormones, and local chemical factors.

### **Vasopressor**

An agent or physiological signal that raises blood pressure mainly by constricting blood vessels and sometimes by increasing cardiac activity.

### **Venous Pressure**

The pressure within the venous circulation, influenced by blood volume, venous tone, and the function of the right side of the heart.

---

## Ventilation

Movement of air into and out of the lungs; effective ventilation brings oxygen to the alveoli and removes carbon dioxide.

## Vesicoureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of urinary infection and renal scarring.

## Visual Fields

The total area that can be seen while the eyes are fixed in one position; defects may indicate retinal, optic-nerve, or brain disease.

## Vital Capacity

The largest volume of air that can be exhaled after a maximal inhalation, equal to inspiratory reserve volume plus tidal volume plus expiratory reserve volume.

## Voice

Sound produced by vibration of the vocal folds as air passes through the larynx, then shaped by the throat, mouth, and nose for speech.

## Vulvectomy

Surgical removal of part or all of the vulva, performed for selected cancers, precancerous lesions, or severe persistent disease.

## Vaccine Adjuvant

A substance added to some vaccines to enhance and prolong the immune response to the antigen. Examples include aluminum salts and newer adjuvant systems.

## Vaccine Development

The research and testing process used to create a vaccine, including antigen selection, laboratory studies, clinical trials, manufacturing, safety monitoring, and regulatory review.

## Vaccine Therapy

vaccine therapy is used in relation to vaccine therapy

during assessment, diagnosis, treatment, monitoring, or patient support.

## Vaccinia Virus

vaccinia virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

## Vacuum Curettage

A procedure that removes tissue from the uterus using suction, commonly for uterine evacuation or endometrial sampling. Risks include bleeding, infection, retained tissue, and rarely uterine injury.

## Vadimezan

An investigational vascular-disrupting and tumor-necrosis-factor-inducing compound studied as an anticancer agent. It is not an established routine treatment and has no general clinical indication.

## Vagina Carcinoma

A malignant neoplasm arising from the vaginal epithelium; it may present with abnormal bleeding, discharge, or a visible lesion and requires evaluation for local and regional spread.

## Vagina Neoplasm

A tumor arising in the vagina; diagnosis determines whether it is benign or malignant, its tissue type, extent, and appropriate management.

## Vaginectomy

vaginectomy is used in relation to vaginectomy during assessment, diagnosis, treatment, monitoring, or patient support.

## Valacyclovir

Valacyclovir is the oral prodrug of acyclovir that inhibits herpesvirus DNA polymerase after activation; it treats herpes simplex and shingles, with renal dosing and neurotoxicity risk in accumulation.

## Valganciclovir

Valganciclovir is the oral prodrug of ganciclovir used

---

mainly to treat or prevent cytomegalovirus infection after transplantation; myelosuppression, renal toxicity, infertility, and teratogenicity are important risks.

### **Valinomycin**

A medicine or pharmacologic agent called valinomycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Valproic Acid**

valproic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

### **Valrubicin**

An anthracycline antineoplastic drug administered into the bladder for selected cases of carcinoma in situ that have not responded adequately to intravesical bacillus Calmette–Guérin. It can irritate the bladder and may cause systemic toxicity.

### **Valsartan**

Valsartan is an angiotensin-II receptor blocker used for hypertension, heart failure, and selected cardiovascular indications; hyperkalaemia, renal-function changes, hypotension, and fetal toxicity are important risks.

### **Vandetanib**

Vandetanib is a tyrosine-kinase inhibitor targeting RET, VEGFR, and EGFR, used for selected medullary thyroid cancers; diarrhoea, hypertension, skin effects, and QT prolongation require monitoring.

### **Varibaculum**

A genus of bacteria in the family Lachnospiraceae, identified mainly in microbiologic and genomic research. Its clinical significance depends on the species and clinical specimen.

### **Varibaculum Cambriense**

A bacterial species in the genus *Varibaculum* re-

ported from human clinical specimens. Its role may be opportunistic and requires identification with the clinical context and susceptibility data.

### **Varicellovirus**

varicellovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Vasculostatin**

Vasculostatin is an experimental anti-angiogenic fragment related to angiostatin that has been studied for inhibition of new blood-vessel growth; it is not an established routine clinical medicine.

### **Vasopressin Receptor**

vasopressin receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

### **Vatalanib**

A medicine or pharmacologic agent called vatalanib. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **VeIP Regimen**

A combination chemotherapy regimen of vinblastine, ifosfamide, and cisplatin, used in selected germ-cell tumors and other oncology settings. Treatment requires specialist monitoring for marrow, kidney, nerve, and bladder toxicity.

### **Velafermin**

A recombinant fibroblast-growth-factor analog studied to promote epithelial repair, including in ocular-surface and mucosal disease. It remains investigational in many settings.

### **Veliparib**

An investigational inhibitor of poly(ADP-ribose) polymerase studied in combination cancer treatment, particularly for tumors with impaired DNA

---

repair. Its role depends on clinical-trial evidence and regulatory approval.

### **Veltuzumab**

A medicine or pharmacologic agent called veltuzumab. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Vemurafenib**

Vemurafenib is a BRAF V600 kinase inhibitor used for selected BRAF-mutated melanoma and other cancers; arthralgia, photosensitivity, QT prolongation, new skin tumors, and resistance are important concerns.

### **Ventral Hernia**

Protrusion of abdominal tissue through a weakness in the front abdominal wall, including incisional and umbilical hernias. It may cause a bulge or pain and requires urgent assessment if incarceration or strangulation is suspected.

### **Vero Cell**

vero cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

### **Vesiculobullous Dermatoses**

A group of skin disorders characterized by vesicles or bullae caused by autoimmune, genetic, infectious, inflammatory, drug-related, or traumatic processes. Diagnosis depends on lesion morphology, distribution, biopsy, and immunofluorescence when indicated.

### **Vesiculovirus**

vesiculovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Vibration Problem**

A physiological or clinical process involving vibra-

tion problem. Its features, causes, and clinical significance depend on the relevant body system and context.

### **Vildagliptin**

An oral dipeptidyl-peptidase-4 inhibitor used in some countries for type 2 diabetes, alone or with other medicines. It improves glucose-dependent insulin secretion; liver function and pancreatitis symptoms may require attention.

### **Viomycin**

A medicine or pharmacologic agent called viomycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Viral Antibody**

An immunoglobulin produced after infection or vaccination that recognizes a viral antigen; viral-antibody tests help assess previous exposure, immune response, or selected active infections, depending on the assay and timing.

### **Viral Carcinogenesis**

Viral carcinogenesis is cancer development driven or promoted by viral infection through oncogenic proteins, altered cell signaling, immune suppression, or chronic inflammation; examples include HPV, EBV, HBV, HCV, and HTLV-1.

### **Virginiamycin**

A medicine or pharmacologic agent called virginiamycin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

### **Viridans Streptococci**

viridans streptococci is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Virus Activation**

virus activation is a virus or viral group classified

---

by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Assembly**

virus assembly is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Diseases**

virus diseases is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Integration**

virus integration is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Protein**

virus protein is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Receptor**

virus receptor is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Replication**

virus replication is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Virus Uncoating**

virus uncoating is a virus or viral group classified by its genetic and biologic features. Clinical impor-

tance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Vision Test**

An examination that measures visual acuity, fields, color, alignment, or eye structures to detect refractive error, retinal disease, optic-nerve dysfunction, glaucoma, or other causes of visual impairment.

### **Vaginal Bleeding**

Bleeding from the vagina outside an expected menstrual period or after menopause; causes include hormonal changes, infection, pregnancy-related conditions, structural lesions, or cancer.

### **Vaginal Odor**

An unusual or unpleasant odor from vaginal discharge that may result from bacterial vaginosis, infection, retained material, hormonal changes, or other conditions.

### **Vomiting Blood**

The passage of blood or coffee-ground material in vomit, usually indicating upper gastrointestinal bleeding. It is a potentially serious symptom requiring prompt medical evaluation.

### **Vaginal Candidiasis**

Alternate index label; see *Yeast infection (vaginal)*.

### **Vaginal Prolapse, Posterior**

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

### **Variant CJD**

Alternate index label; see *Creutzfeldt-Jakob disease*.

### **Varices, Esophageal**

Alternate index label; see *Esophageal varices*.

### **Vascular Claudication**

Alternate index label; see *Claudication*.

### **VCJD**

Alternate index label; see *Creutzfeldt-Jakob disease*.

---

## Velocardiofacial Syndrome

Alternate index label; see *DiGeorge syndrome (22q11.2 deletion syndrome)*.

## Venereal Warts

Alternate index label; see *Genital warts*.

## Ventricular Premature Contraction

Alternate index label; see *Premature ventricular contractions (PVCs)*.

## Vertebral Hemangioma

Alternate index label; see *Spinal hemangioma*.

## V-Fib

Alternate index label; see *Ventricular fibrillation*.

## Vocal Fold Paralysis

Alternate index label; see *Vocal cord paralysis*.

## Von Recklinghausen's Disease

Alternate index label; see *Neurofibromatosis type 1*.

## Von Recklinghausen's Neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*.

## Von Recklinghausen's Phakomatosis

Alternate index label; see *Neurofibromatosis type 1*.

## VPCs

Alternate index label; see *Premature ventricular contractions (PVCs)*.

## Vaccines - Immunizations

Vaccines train the immune system to recognize specific pathogens or toxins and reduce the risk of infection, severe disease, complications, and transmission.

## Vaginal Bleeding Between Periods

Bleeding between menstrual periods may result from contraception, infection, pregnancy, polyps, fibroids, hormonal changes, or cancer and requires evaluation if persistent or heavy.

## Vaginal Bleeding In Early Pregnancy

Early-pregnancy bleeding can occur with implantation, cervical change, miscarriage, ectopic pregnancy, or other causes; severe pain, faintness, or heavy bleeding is urgent.

## Vaginal Bleeding In Late Pregnancy

Late-pregnancy bleeding may reflect placenta previa, placental abruption, labor, cervical disease, or another emergency and requires immediate obstetric assessment.

## Vaginal Bleeding In Pregnancy

Vaginal bleeding during pregnancy has causes ranging from benign cervical changes to miscarriage, ectopic pregnancy, placenta problems, or labor and should be assessed clinically.

## Vaginal Cysts

Vaginal cysts are fluid-filled or tissue-lined sacs in or beside the vaginal wall, commonly benign but sometimes causing pain, pressure, infection, or obstruction.

## Vaginal Yeast Infection

A vaginal yeast infection is usually *Candida* overgrowth causing itching, burning, soreness, and thick discharge without the odor typical of many bacterial infections.

## Vancomycin-Resistant Enterococci - Hospital

Vancomycin-resistant enterococci are enterococcal bacteria resistant to vancomycin and capable of causing healthcare-associated urinary, bloodstream, wound, or other infections.

## Vasoactive Intestinal Peptide Test

Vasoactive intestinal peptide test examines vasoactive intestinal peptide test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

## VDRL Test

VDRL test examines vdr test; interpretation de-

---

depends on the specimen or body region, test method, reference range, and clinical question.

### **Venogram**

Venogram examines venogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Venogram - Leg**

Venogram - leg examines venogram - leg; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Vertebrobasilar Circulatory Disorders**

A clinical finding or condition involving vertebrobasilar Circulatory Disorders; evaluation depends on its characteristic features, causes, severity, and complications.

### **Vertigo-Associated Disorders**

Vertigo-associated disorders cause an illusion of movement from vestibular, neurologic, visual, medication-related, or systemic dysfunction and may be accompanied by imbalance, nausea, or hearing symptoms.

### **Vesicles**

Small, elevated, fluid-filled blisters on the skin or mucous membrane, generally less than 1 cm in diameter. Causes include viral infection, dermatitis, burns, and autoimmune blistering disease.

### **Viral Arthritis**

Viral arthritis is joint inflammation caused by or associated with a viral infection and may be acute, symmetric, and self-limited or part of a broader illness.

### **Viral Gastroenteritis (Stomach Flu)**

Viral gastroenteritis is infection of the stomach and intestines causing vomiting, watery diarrhea, cramps, and fever, with dehydration as the main acute risk.

**Synonyms:**  
Stomach Flu

### **Virilization**

Virilization is development of typically male secondary sexual features, such as hirsutism, deep voice, acne, increased muscle mass, or clitoromegaly, from androgen excess or androgen exposure.

### **Virtual Colonoscopy**

Virtual colonoscopy is CT colonography, which uses bowel preparation and gas or carbon-dioxide insufflation to create images of the colon; it can detect polyps and masses but cannot remove lesions or biopsy them.

### **Visceral Larva Migrans**

A syndrome caused by migration of animal nematode larvae through human tissues, most often from *Toxocara* species. It may produce fever, eosinophilia, liver lesions, or ocular and neurologic disease.

### **Visceromegaly**

Abnormal enlargement of one or more internal organs, such as the liver, spleen, or kidneys. It is a physical finding with causes that include infection, congestion, storage disease, inflammation, and cancer.

### **Vision - Night Blindness**

Difficulty seeing in dim light or adapting from bright to dark conditions, also called nyctalopia; causes include vitamin-A deficiency, retinal disease, cataract, and some inherited disorders.

### **Visual Acuity Test**

Visual acuity test examines visual acuity test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Vitamin A Blood Test**

Vitamin A blood test examines vitamin a blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Vitamin B12 Deficiency Anemia**

Vitamin B12 deficiency anemia is megaloblastic ane-

---

mia from inadequate B12, impaired absorption, or medication effects and may cause irreversible neurologic injury if prolonged.

### **Vitamin B12 Level**

A biological substance or process involving vitamin B12 Level; its medical significance depends on its function, location, amount, and clinical context.

### **Vitamin C**

A biological substance or process involving vitamin C; its medical significance depends on its function, location, amount, and clinical context.

### **Vitamin K Deficiency Bleeding Of The Newborn**

A biological substance or process involving vitamin K Deficiency Bleeding Of The Newborn; its medical significance depends on its function, location, amount, and clinical context.

### **VLDL Test**

VLDL test examines vldl test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **Volvulus - Childhood**

Twisting of a loop of intestine around its mesentery, causing obstruction and potentially loss of blood supply. In children it is often related to intestinal malrotation and is a surgical emergency when acute.

### **Von Gierke Disease**

A clinical condition involving von Gierke Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Vascular Disease**

Vascular disease affects arteries, veins, or lymphatic vessels and includes atherosclerosis, aneurysm, peripheral artery disease, venous thrombosis, varicose disease, and inflammatory disorders. Symptoms and treatment depend on the vessel and may involve risk-factor control, medicines, procedures, or surgery.

### **Vertigo Overview**

Vertigo is the false sensation of movement, often caused by inner-ear disorders such as benign positional vertigo, vestibular neuritis, or Ménière disease, but sometimes by migraine or brain disease. New neurologic deficits, severe headache, or inability to walk is urgent.

### **VOR Reflex**

The vestibulo-ocular reflex stabilizes gaze by moving the eyes opposite to head movement through inner-ear, brainstem, and eye-muscle pathways. Damage can cause oscillopsia, vertigo, imbalance, and abnormal head-impulse testing.

### **Vaccines**

Biological preparations that stimulate active adaptive immunity against specific infectious agents or their toxins. They reduce the risk of infection, severe disease, complications, and transmission.

### **Vaginal Discharge**

Fluid released from the vagina that may be normal cervical or vaginal secretion or may reflect candidiasis, bacterial vaginosis, trichomoniasis, cervicitis, a retained foreign body, or another condition; odor, color, itching, pain, and bleeding guide evaluation.

### **Vaginal Fornix**

One of the recesses surrounding the cervix where the vagina meets the cervix. The posterior fornix is adjacent to the peritoneal cul-de-sac and is relevant in pelvic examination and some procedures.

### **Vaginal Hysterectomy**

Surgical removal of the uterus through the vagina. It may be used for selected benign uterine conditions and usually avoids an abdominal incision, although suitability depends on anatomy and disease.

### **Vaginal Introitus**

The entrance to the vaginal canal, located in the vestibule of the vulva. Its appearance and tenderness may be relevant in examinations for infection, trauma, pain, or pelvic-floor disorders.

---

## Vaginal Membrane

A thin mucosal or connective-tissue fold associated with the vaginal canal; the term may refer to the hymen at the vaginal opening or to an abnormal obstructing membrane, so the intended anatomical meaning should be specified.

## Vaginal Opening

The external entrance to the vagina. It is part of the vulvar vestibule and may be affected by infection, inflammation, trauma, scarring, or congenital variation.

## Vaginal Vestibule

The area of the vulva enclosed by the labia minora that contains the openings of the urethra and vagina and the ducts of several glands.

## Vagus Nerve

The tenth cranial nerve, carrying parasympathetic, sensory, and motor fibres between the brainstem and the heart, lungs, gastrointestinal tract, pharynx, and larynx.

## Valsalva

Forced expiration against a closed glottis, which raises intrathoracic pressure. The maneuver affects venous return and heart rate and is used in selected examinations and treatments, but may be unsafe in some conditions.

## Valsalva Maneuver

Alternate index label; see *Valsalva's Manoeuvre* and *Valsalva*.

## Vampire Children

A nonmedical or colloquial expression, not a recognized diagnosis. A child with pallor, photosensitivity, anemia, or unusual dietary behavior requires assessment for an underlying medical condition rather than this label.

## Varicella (Chickenpox)

Varicella (chickenpox) refers to a defined body structure, tissue, or physiologic process; its normal loca-

tion and function provide the basis for interpreting related disease or injury.

## Vascular Bed

The network of blood vessels supplying a tissue or organ. Regional vascular beds regulate perfusion through vessel diameter, pressure, resistance, and local metabolic demands.

## Vasectomy

A permanent contraceptive procedure in which the vas deferens are divided or occluded to prevent sperm from entering the ejaculate. It does not immediately provide sterility and does not protect against sexually transmitted infections.

## Vasoconstriction

A physiological or clinical process involving vasoconstriction. Its features, causes, and clinical significance depend on the relevant body system and context.

## Vasodepressor Syncope

Fainting caused predominantly by a sudden reduction in vascular tone and blood pressure, often as part of a vasovagal reflex. Warning symptoms may include nausea, sweating, warmth, and lightheadedness.

## Vasodilators

Medicines or substances that relax vascular smooth muscle and widen blood vessels. They are used for conditions such as hypertension, angina, heart failure, or pulmonary hypertension depending on the agent.

## Vasovagal Reaction

A physiological or clinical process involving vasovagal reaction. Its features, causes, and clinical significance depend on the relevant body system and context.

## Veisalgia

The medical term for a hangover: the cluster of headache, thirst, nausea, fatigue, poor concentra-

---

tion, and malaise that can follow alcohol use as blood alcohol falls.

### **Venereal**

Relating to sexual intercourse or to infection transmitted through sexual contact. The term is largely historical; sexually transmitted infection is the preferred modern expression.

### **Venereal Disease**

A clinical condition involving venereal Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

### **Venereal Disease Research Laboratory Test**

Venereal Disease Research Laboratory test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

### **Venin**

A toxic secretion injected by an animal through a bite, sting, or other specialized apparatus. Its effects depend on the species, dose, route, and toxins involved.

### **Venipuncture**

Puncture of a vein with a needle to obtain blood, administer fluids or medicines, or establish intravenous access. Bruising, infection, bleeding, and nerve or artery injury are uncommon complications.

### **Venomous**

Describing an animal that actively delivers toxins through a bite, sting, spine, or similar mechanism. This differs from poisonous, which generally refers to toxicity after ingestion or contact.

### **Venous Aneurysm**

A localized abnormal dilatation of a vein. It may be asymptomatic or present as a soft mass, pain, thrombosis, embolism, or bleeding depending on its location and size.

### **Ventricular**

Relating to a ventricle, especially one of the heart or the brain. The meaning depends on the organ, such as ventricular tachycardia or a cerebral ventricular system.

### **Ventricular Arrhythmias**

Abnormal heart rhythms arising from the ventricles. They range from premature ventricular contractions to ventricular tachycardia and fibrillation, which can cause sudden cardiac arrest.

### **Verruca**

A benign epidermal growth caused by infection with a human papillomavirus. Common warts, plantar warts, and flat warts are clinical types; treatment depends on site, symptoms, and immune status.

### **Version**

A term describing a change in the position or presentation of a body structure, especially the fetus during pregnancy; its meaning depends on the clinical context.

### **Vertebrae**

Vertebrae are the bones of the spinal column that protect the spinal cord, support the body, allow movement, and provide attachment for muscles and ligaments.

### **Vertical**

Oriented from superior to inferior or perpendicular to a horizontal plane. In medicine, it may describe position, transmission from parent to child, or a body-oriented imaging or movement axis.

### **Vertical Transmission**

A physiological or clinical process involving vertical transmission. Its features, causes, and clinical significance depend on the relevant body system and context.

### **Vesicant**

A substance that causes blistering and tissue injury on contact. In oncology, vesicant drugs can cause

---

severe extravasation injury if they escape from a vein into surrounding tissue.

### **Vesicular**

Characterized by or containing vesicles. The term commonly describes a vesicular rash or a vesicle-related structure in cell biology and pathology.

### **Vessel**

A vessel is a tube carrying blood, lymph, air, urine, bile, or another fluid through the body, depending on context.

### **Vestibular**

Relating to the vestibular system of the inner ear and brain, which detects head motion and position and helps maintain balance and gaze stability.

### **Vestibule, Vaginal**

The space of the vulva between the labia minora that contains the external openings of the urethra and vagina and the ducts of the greater and lesser vestibular glands.

### **Viable**

Capable of surviving or developing under suitable conditions. In clinical contexts it may describe a viable pregnancy, tissue, organism, cell, or treatment option.

### **Vincent Angina**

An acute necrotizing infection of the gums and oropharynx associated with fusobacteria and spirochetes. It causes painful ulceration, bleeding, foul breath, and gingival necrosis and requires dental or medical treatment.

### **Vincent Infection**

Vincent infection is acute necrotizing ulcerative gingivitis caused by mixed oral bacteria, producing painful bleeding gums, ulcers, and foul breath.

### **Vincent Stomatitis**

A painful necrotizing infection of the gums caused by mixed anaerobic bacteria, producing foul breath,

bleeding, ulceration, and gray necrotic tissue; it is also called acute necrotizing ulcerative gingivitis.

### **Viral Infection**

A viral infection occurs when a virus enters and replicates in host cells, causing symptoms that vary with the virus, tissue, immune response, and host.

### **Virginal Membrane**

A historical term usually referring to the hymen, a variable rim or fold of mucosal tissue at the vaginal opening; its appearance cannot reliably establish sexual history.

### **Virilize**

To virilize is to develop or cause typically male physical changes from androgen excess or treatment, including facial hair, voice deepening, acne, muscle change, or genital enlargement.

### **Viruses**

Viruses are infectious particles containing DNA or RNA within a protein coat, sometimes with a lipid envelope; they replicate only inside host cells and cause disease through direct injury or immune responses.

### **Visceral**

Relating to the internal organs, especially those within the thorax or abdomen, rather than the body wall or limbs.

### **Viscus**

An internal organ, particularly an organ in the thoracic or abdominal cavity; the plural is viscera.

### **Visual Field**

The entire area that can be seen while the eyes remain fixed in one position. Visual-field loss may result from retinal, optic-nerve, or brain lesions and is assessed by perimetry.

### **Vital**

Essential for life or relating to vital physiologic functions. Vital signs commonly include temperature,

---

pulse, respiratory rate, blood pressure, and oxygen saturation.

### **Vitamin A**

A biological substance or process involving vitamin A; its medical significance depends on its function, location, amount, and clinical context.

### **Vitamin B1**

A vitamin or nutritional compound called vitamin b1. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

### **Vitamin B12**

A vitamin or nutritional compound called vitamin b12. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

### **Vitamin B2**

A vitamin or nutritional compound called vitamin b2. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

### **Vitamin B6**

A vitamin or nutritional compound called vitamin b6. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

### **Vitamin D3**

A vitamin or nutritional compound called vitamin d3. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

### **Vitamin K**

A biological substance or process involving vitamin K; its medical significance depends on its function, location, amount, and clinical context.

### **Vitreous**

Relating to the transparent gel filling most of the space between the lens and retina, or describing a glass-like appearance. Vitreous disorders can cause floaters, hemorrhage, detachment, or retinal traction.

### **Voice Box**

The larynx, an organ in the neck containing the vocal folds and forming part of the airway. It produces voice and helps protect the lower respiratory tract during swallowing.

### **Void**

To empty the urinary bladder by urinating; in other medical contexts, void may mean an empty space or absence of a substance.

### **Volar**

Relating to the palm of the hand or sole of the foot, especially the surface opposite the dorsum.

### **Voluntary**

Under conscious control or performed by choice, such as voluntary movement. Voluntary action is distinguished from reflex, autonomic, or involuntary activity.

### **Vomit**

To eject stomach or upper gastrointestinal contents through the mouth; the expelled material may also be called vomitus. Persistent vomiting can cause dehydration and electrolyte abnormalities.

### **Vomitus**

Material expelled from the stomach or upper gastrointestinal tract during vomiting. Its color and contents can provide clues but do not by themselves establish a diagnosis.

### **Voyeurism**

A paraphilic disorder involving recurrent intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity, when it causes distress, impairment, or involves nonconsenting behavior.

### **Vulvar**

Relating to the vulva, the external female genital structures including the labia, clitoris, vestibule, and associated glands.

---

### **Vulvitis, Yeast**

Inflammation of the vulva associated with vulvovaginal candidiasis, usually caused by *Candida* species. It may cause itching, burning, redness, swelling, and soreness and should be distinguished from other causes of vulvar symptoms.

### **Venae Cavae**

The superior and inferior venae cavae are the major veins returning systemic blood to the right atrium. The superior vena cava drains the head, neck, chest, and upper limbs; the inferior vena cava drains the abdomen, pelvis, and lower limbs.

#### **Synonyms:**

venae cava; vena cava

### **Vasa Deferentia**

The paired muscular ducts that transport mature sperm from the epididymides toward the ejaculatory ducts during ejaculation.

#### **Synonyms:**

vas deferens; ductus deferentes

### **Vulva**

The external female genital structures, including the mons pubis, labia, clitoris, and vestibule. It protects the openings of the urinary and reproductive tracts and contains specialized sensory and glandular tissue.

#### **Synonyms:**

female external genitalia

### **Vitreous Body**

The transparent gel filling the large space between the lens and retina. It helps maintain the shape of the eye and transmits light; age-related liquefaction can cause floaters or contribute to retinal traction.

#### **Synonyms:**

vitreous humor; vitreous

### **Vitamin Deficiency Anemia**

Anemia caused by inadequate vitamin B-12, folate, or other nutrients needed for normal red blood cell production.

### **Viral Hemorrhagic Fevers**

Severe viral infections that can cause fever, vascular injury, bleeding, shock, and organ failure.

#### **Synonyms:**

Bunyaviruses

### **Vaginal Bleeding After Sex**

Bleeding after vaginal intercourse; causes include cervical ectropion, infection, polyps, trauma, vaginal dryness, pregnancy-related conditions, or cancer. Persistent or recurrent bleeding needs evaluation.

### **Voice Disorders**

Conditions affecting voice quality, pitch, loudness, or ease of speaking because of problems involving the vocal folds, airway, nerves, or voice use.

#### **Synonyms:**

Difficulty Speaking

### **Vibrio Infection**

Infection caused by *Vibrio* bacteria, acquired through contaminated seafood or exposure of wounds to warm seawater. It may cause watery diarrhea, wound infection, or rapidly progressive sepsis, especially in people with liver disease or impaired immunity. Severe wound pain, blistering, fever, or shock requires emergency treatment.

#### **Synonyms:**

vibriosis.

### **Volume Overload**

Excess total body sodium and water, causing peripheral or pulmonary oedema; common causes include heart failure, kidney failure, liver disease, and excessive intravenous fluid, and treatment depends on the cause and severity.

### **Verrucous**

Having a rough, thickened, papillated, or wart-like surface.

### **Venous Thromboembolism**

Formation of a venous blood clot, usually deep-vein thrombosis, with or without embolization to the pulmonary arteries; pulmonary embolism is the

---

major acute complication.

### **Viral Load**

The amount of virus or viral genetic material in a body fluid or tissue, measured by a laboratory assay; trends can help assess disease activity or response to antiviral treatment.

### **Variant Classification**

The process of assigning a genetic variant to categories such as benign, likely benign, uncertain significance, likely pathogenic, or pathogenic using evidence from population data, laboratories, family studies, functional studies, and clinical correlation.

### **Vulvar Intraepithelial Neoplasia**

A premalignant or potentially premalignant squamous lesion of the vulva. Most usual-type lesions are related to high-risk HPV, whereas differentiated lesions are commonly associated with lichen sclerosus and have a higher risk of invasive carcinoma.

### **Vulvar Squamous Cell Carcinoma**

The most common invasive vulvar malignancy, arising through HPV-related or HPV-independent pathways. It usually presents as a persistent mass, ulcer, plaque, or wart-like lesion and requires biopsy for diagnosis.

### **Viral Encephalitis**

Inflammation of the brain caused by a viral infection, resulting in dysfunction of neuronal tissue and surrounding inflammatory responses. Important causes include herpes simplex virus, varicella-zoster virus, enteroviruses, arboviruses, and other regionally prevalent pathogens. Clinical manifestations may include fever, headache, altered mental status, seizures, focal neurological deficits, or behavioral changes. Diagnosis requires urgent clinical assessment, cerebrospinal-fluid analysis, neuroimaging, and targeted microbiologic testing; treatment depends on the suspected virus and severity.

### **Vulvar Melanoma**

A malignant melanocytic neoplasm arising in vulvar skin or mucosa, most often affecting the labia

in older adults. It may present as a pigmented or amelanotic mass, plaque, ulcer, bleeding lesion, or persistent area of altered pigmentation. Diagnosis requires biopsy with assessment of tumor thickness, ulceration, mitotic activity, and regional or distant spread. Management is based on stage and resectability and may involve local excision, evaluation of regional lymph nodes, and systemic treatment for advanced disease.

### **Volkmann Contracture**

A permanent flexion deformity of the hand, wrist, and fingers caused by ischemic injury and fibrosis of forearm muscles. It most often follows untreated or inadequately treated compartment syndrome after fracture, crush injury, vascular compromise, or severe swelling. The degree of functional loss depends on the muscles and nerves affected and may include pain, weakness, sensory impairment, and restricted finger extension. Prevention requires urgent recognition of limb ischemia and compartment pressure; established contractures require reconstructive assessment and may need surgical release or tendon procedures.

## W

### Waardenburg Syndrome

A group of inherited disorders characterized by sensorineural hearing loss and pigmentary abnormalities of the eyes, hair, or skin. Dystopia canthorum, limb abnormalities, or intestinal aganglionosis may occur in particular genetic forms.

### Wait List

Registry of patients awaiting organ transplantation, maintained by national transplant organizations, prioritized by medical urgency and compatibility.

### Wall Stress

Force exerted on a heart chamber wall by pressure inside the chamber.

### Warfarin

An anticoagulant that reduces blood clot formation by inhibiting vitamin-K-dependent clotting factors.

### Wart

A benign skin growth caused by infection with human papillomavirus.

#### Synonyms:

Verruca

### Water Brash

A sudden increase in salty saliva associated with acid reflux.

### Wernicke's Area

A brain region important for understanding spoken and written language.

#### Synonyms:

Wernicke area

### White-Coat Hypertension

High blood pressure in a medical setting with normal readings outside it.

#### Synonyms:

White-coat effect

### Withdrawal

Physical or psychological symptoms that occur when a person who has developed dependence reduces or stops using a medicine or psychoactive substance. Symptoms vary by substance and may include anxiety, agitation, sweating, tremor, nausea, pain, insomnia, cravings, or seizures; some forms require urgent medical care.

#### Synonyms:

Withdrawal syndrome

### Womb

Common name for the uterus; the muscular organ where a fetus develops during pregnancy.

#### Synonyms:

Uterus

### Working Memory

The short-term holding and manipulation of information during a task.

### WAGR Syndrome

A contiguous-gene deletion syndrome involving Wilms tumor predisposition, aniridia, genitourinary anomalies, and variable developmental delay. It usually involves chromosome 11p13 and requires tumor surveillance and multidisciplinary care.

### Waist Circumference

A measure of abdominal adiposity taken at a stan-

---

dardized site. Larger measurements are associated with increased cardiometabolic risk, but clinically used thresholds vary by sex, ancestry, and guideline; it complements, rather than replaces, body-mass index and other assessment.

### **Waldenstrom Macroglobulinemia**

A rare B-cell lymphoplasmacytic lymphoma characterized by bone marrow infiltration by lymphoplasmacytic cells and production of monoclonal IgM paraprotein. It accounts for less than 2 percent of hematologic malignancies and typically affects older adults (median age 63-65 years).

#### **Synonyms:**

Lymphoplasmacytic Lymphoma

### **Waldenstrom's Macroglobulinemia**

A lymphoplasmacytic cancer of the bone marrow that produces excess IgM and may cause anemia, enlarged lymph nodes, or hyperviscosity symptoms.

### **Waldenström's Macroglobulinemia**

An indolent B-cell lymphoplasmacytic lymphoma characterized by the production of a monoclonal IgM paraprotein, causing hyperviscosity syndrome with visual disturbances, bleeding, and neurological symptoms. It typically affects elderly patients and involves the bone marrow, lymph nodes, spleen, and liver.

### **Wallerian Degeneration**

The breakdown of the portion of a nerve fiber separated from its cell body after nerve injury.

### **Walking Speed**

The rate at which a person walks, often measured over a defined distance. It can provide information about mobility and function, but no single speed determines disability in every person.

### **Wandering Spleen**

Abnormal mobility of the spleen caused by laxity or absence of its supporting ligaments. It may be asymptomatic or cause abdominal pain, splenic enlargement, torsion, infarction, or acute abdomen.

### **Warthin Tumor**

A benign salivary-gland neoplasm composed of oncocytic epithelial and lymphoid tissue, usually arising in the parotid gland. It is strongly associated with tobacco exposure, may be multifocal or bilateral, and is generally managed according to symptoms, diagnosis, and growth.

### **Warts**

Warts are benign epidermal growths caused by human papillomavirus, spreading by contact and varying in appearance by site and viral type.

### **Warty Dyskeratoma**

A benign follicular keratinizing tumor presenting as a solitary umbilicated papule or nodule, often on the head or neck. Histology shows a cup-shaped invagination filled with keratin and acantholytic dyskeratotic cells.

### **Watchful Waiting**

Planned observation without immediate active treatment, with clinical review and treatment if symptoms develop or the condition progresses. It may be used for selected cancers and other slowly progressive conditions.

### **Water Birth (Underwater Delivery)**

Delivery of a baby while the birthing person remains in a tub or pool of warm water. It may reduce perceived labor pain for some people, but evidence about delivery-related benefits and risks is limited. Eligibility, monitoring, and facility policies determine whether it is offered.

#### **Synonyms:**

Underwater Delivery

### **Water Intoxication**

A potentially life-threatening dilutional hyponatremia caused by excessive water intake or retention relative to the body's ability to excrete free water. Severe cases can cause headache, confusion, seizures, or coma.

---

### Water Soluble Toxins

Toxic substances that dissolve readily in water. Their elimination depends on the substance, kidney function, metabolism, protein binding, and other properties; some may be removed by dialysis.

### Water-Borne Disease

Disease transmitted via contaminated water. Examples: cholera, typhoid, hepatitis A.

### Water-Deprivation Test

A supervised dynamic test assessing the kidney's ability to concentrate urine when free-water intake is withheld, followed when appropriate by desmopressin. It helps distinguish central diabetes insipidus, nephrogenic diabetes insipidus, and primary polydipsia but requires careful monitoring for hypernatremia and dehydration.

### Watery Eyes

Excessive tearing caused by irritation, allergy, infection, dry-eye reflex tearing, or blockage of the tear-drainage system. Persistent unilateral tearing or pain requires ocular assessment.

### Waxy Casts

Broad refractile cylindrical structures with smooth appearance indicating severe chronic kidney disease. Form from degeneration of granular casts in dilated tubules. Broad diameter reflects formation in dilated collecting ducts. Relatively specific for advanced CKD with significant tubular atrophy.

### Weakness, Generalized

Reduced strength affecting multiple body regions, caused by systemic illness, metabolic or electrolyte disturbance, medication, infection, muscle disease, nerve disease, neuromuscular-junction disease, or brain or spinal-cord disease. Sudden or progressive weakness, especially with speech, facial, breathing, or walking difficulty, requires urgent assessment.

### Weakness

Weakness is reduced force generation that may reflect muscle, nerve, neuromuscular-junction, brain, spinal cord, metabolic, systemic, or functional dis-

ease. limited to one body region. Causes include nerve or muscle disease, stroke, spinal disorders, metabolic abnormalities, infection, and deconditioning; sudden one-sided weakness is an emergency.

### Wear Debris

Particles generated by mechanical abrasion or degradation of implant materials. Macrophage-mediated inflammation around debris can produce osteolysis, implant loosening, and failure of an arthroplasty.

### Weaver Syndrome

A congenital overgrowth and neurodevelopmental disorder associated with pathogenic variants in *EZH2*. It may cause prenatal overgrowth, advanced bone age, characteristic facial features, hypotonia, developmental delay, and variable intellectual disability.

### Weber Test

The Weber test is a screening test for lateralization of hearing that uses a vibrating tuning fork (typically 512 Hz) placed on the midline of the skull (vertex or forehead) to determine whether the sound is heard equally in both ears or louder in one ear, providing information about the type and side of hearing loss.

### Wedge Resection

Surgical removal of a wedge-shaped piece of tissue, typically lung or breast. Used for diagnosis or treatment of localized lesions. Less extensive than lobectomy.

### Wegener's Granulomatosis

Wegener's granulomatosis, now called granulomatosis with polyangiitis, is a systemic vasculitis characterized by necrotizing granulomatous inflammation of the upper and lower respiratory tracts and pauci-immune necrotizing glomerulonephritis.

### Weight Gain In Pregnancy

Recommended gestational weight gain according to the Institute of Medicine (IOM) guidelines, based on prepregnancy BMI. Underweight (BMI <18.5): 28-40 lbs (12.5-18 kg). Normal weight (BMI 18.5-

---

24.9): 25-35 lbs (11.5-16 kg). Overweight (BMI 25-29.9): 15-25 lbs (7-11.5 kg). Obese (BMI  $\geq$  30): 11-20 lbs (5-9 kg).

### Weight Loss

The intentional reduction of body weight, typically through a combination of dietary modification, increased physical activity, and behavioral changes. Achieving sustainable weight loss requires creating a consistent calorie deficit while preserving lean muscle mass through adequate protein intake and strength training.

#### Synonyms:

Obesity (Weight Loss)

### Weight Loss And Management

Weight loss and management encompasses the ongoing process of achieving and maintaining a healthy body weight through sustainable lifestyle modifications.

### Weight Loss Medications

Pharmacologic agents approved for the treatment of obesity when used in conjunction with lifestyle modifications.

### Weil's Disease

A zoonotic bacterial infection caused by spirochaetes of the genus *Leptospira*, transmitted through contact with water or soil contaminated with the urine of infected animals (rodents, cattle, dogs). See *Leptospirosis*.

### Wen (Epidermoid Cyst)

A common benign cyst beneath the skin that is lined by squamous epithelium and contains keratin debris.

#### Synonyms:

Epidermoid Cyst

### Werner Syndrome

An autosomal-recessive progeroid disorder caused most often by pathogenic variants in the *WRN* gene. It typically presents after puberty with premature ageing, short stature, bilateral cataracts,

scleroderma-like skin changes, thin limbs, diabetes, osteoporosis, vascular disease, and increased risk of malignancy.

### Wernicke's Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically involving confusion, eye-movement abnormalities, and gait or coordination impairment. It requires prompt thiamine treatment.

### Wernicke-Korsakoff Syndrome

A neurologic disorder caused by thiamine deficiency, combining acute or previous Wernicke encephalopathy with persistent memory impairment and confabulation in some patients. Causes include alcohol-use disorder, malnutrition, and prolonged vomiting.

### West Nile Encephalitis

Inflammation of the brain caused by neuroinvasive West Nile virus, transmitted mainly by mosquitoes. It may cause fever, headache, confusion, tremor, weakness, seizures, or coma. There is no specific routine antiviral treatment; severe illness requires hospital-based supportive care.

### West Nile Virus

A mosquito-borne flavivirus that can cause asymptomatic infection, a febrile illness, or neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis. Risk of severe disease is higher in older adults and people with certain medical conditions.

### West Syndrome

An infantile epileptic encephalopathy characterized by epileptic spasms, hypsarrhythmia on electroencephalography, and developmental regression or arrest. Causes include structural brain disease, genetic disorders, metabolic disease, or acquired brain injury.

### Westermark Sign

A focal area of decreased pulmonary vascularity distal to an occluded pulmonary artery segment on a chest radiograph. It may occur with pulmonary embolism but is neither sensitive nor specific.

---

### Wharton Jelly

A gelatinous substance (mucopolysaccharide matrix) surrounding the umbilical cord vessels, composed primarily of hyaluronic acid and chondroitin sulfate. It protects the umbilical vessels from compression and kinking during fetal movement and uterine contractions.

### Wheal

Raised, itchy swelling of skin (urticaria/hives). Caused by mast cell degranulation and histamine release. Examples: insect bite, allergic reaction, dermatographism.

### Wheezing

Wheezing is a musical sound from narrowed lower airways, commonly caused by asthma, infection, chronic lung disease, allergy, or an inhaled foreign body. airflow through narrowed or compressed lower airways during expiration (and occasionally inspiration). Pathophysiology: bronchospasm, mucosal edema, airway inflammation, or intraluminal secretions.

### Whiplash Injury

An acceleration-deceleration injury to the cervical spine, most commonly resulting from rear-end motor vehicle collisions. Mechanism: sudden hyperextension followed by hyperflexion of the neck causes stretching or tearing of cervical muscles, ligaments, facet joint capsules, and annulus fibrosus of intervertebral discs.

### Whipple Disease

A rare systemic bacterial infection caused by *Tropheryma whipplei*, affecting the small intestine and multiple organ systems. Presents with arthralgias (prodromal, years before GI symptoms), weight loss, chronic diarrhea, steatorrhea, and abdominal pain.

### Whipple Procedure

Pancreaticoduodenectomy for cancers of the pancreatic head, distal bile duct, or ampulla. Involves removal of the pancreatic head, duodenum, distal bile duct, and gallbladder with three anastomoses: hepaticojejunostomy, pancreaticojejunostomy, and

gastrojejunostomy. The pylorus-preserving variant maintains the entire stomach.

### Whipple Triad

A clinical framework supporting the diagnosis of symptomatic hypoglycemia: symptoms consistent with hypoglycemia, a documented low blood-glucose concentration, and improvement after the glucose level is raised. It is used when evaluating possible hypoglycemia, including suspected insulinoma.

### Whipworm (Trichuriasis)

Intestinal infection caused by the soil-transmitted helminth *Trichuris trichiura* (whipworm), endemic in tropical and subtropical regions with poor sanitation. Humans acquire infection by ingesting embryonated eggs from contaminated soil, food, or water.

#### Synonyms:

Trichuriasis

### Whispered Pectoriloquy

The ability to hear whispered words clearly through the stethoscope over consolidated lung tissue. It is a sign of pulmonary consolidation. Normally, whispered words are barely audible over the lung fields. It is one of the classic signs of pneumonia on physical examination.

### White Blood Cell Count

WBC count: the total number of leukocytes per unit volume (normal  $4.0\text{--}11.0 \times 10^9/\text{L}$ ), part of the CBC with differential (neutrophils, lymphocytes, monocytes, eosinophils, basophils). Leukocytosis: infection (neutrophilia), inflammation, stress, steroids, leukemia (marked), corticosteroids.

### White Blood Cell Labeling

Nuclear medicine technique labeling WBCs with Tc-99m. Used for infection localization.

### White Cell

The cells of the immune system that defend the body against infection and foreign substances. Produced in the bone marrow from hematopoietic stem cells.

---

### White Cell Count

A laboratory measurement of the number of white blood cells (leukocytes) in a given volume of blood, part of the complete blood count (CBC). Normal range: 4,000-11,000 cells/ $\mu$ L ( $4-11 \times 10^9$ /L). Differential white cell count measures the proportion of each leukocyte type: neutrophils, lymphocytes, monocytes, eosinophils, basophils.

### White Infarction

White infarction, also known as anemic infarction, occurs in solid organs with end-arterial circulation where collateral blood supply is limited, resulting in pale, well-demarcated areas of coagulative necrosis.

#### Synonyms:

anemic infarction, occurs in solid organs with.

### White Matter

Regions of the brain and spinal cord composed primarily of myelinated nerve fibers, responsible for transmitting signals between brain regions.

### Whites (Leucorrhoea)

A non-bloody, physiological or pathological vaginal discharge. Physiological leucorrhoea: normal, clear to whitish, odourless discharge that varies with the menstrual cycle (increased at ovulation, pre-menstrually, during pregnancy, sexual arousal, and with oral contraceptive use).

#### Synonyms:

Leucorrhoea

### Whole Exome Sequencing

Sequencing the protein-coding regions of the genome, which make up a small fraction of total DNA. It can identify variants associated with disease but does not detect all genetic causes; its yield depends on the disorder, test quality, and interpretation.

### Whole Genome Sequencing

Determining complete DNA sequence of an individual's genome. Cost decreasing, clinical applications expanding. Identifies coding and non-coding variants.

### Whole-Body Scan

Acquisition of images covering entire body. Used for oncology staging, infection localization. PET/CT typically neck-to-mid-thigh or full body.

### Whole-Brain Radiation Therapy

Radiation directed at the entire brain, used for multiple brain metastases, leptomeningeal disease, and prophylactic cranial irradiation in small cell lung cancer and acute lymphoblastic leukemia.

### Whole-Genome Sequencing

Sequencing of nearly the complete nuclear genome, including coding and noncoding regions, together with mitochondrial DNA when covered by the assay. It can detect a broad range of variants but generates substantial interpretation and incidental-finding challenges.

### Whooping Cough

A highly contagious bacterial infection caused by *Bordetella pertussis*, producing characteristic paroxysmal cough with whooping inspiratory sound. See Pertussis.

### Williams Syndrome

A microdeletion syndrome involving the elastin gene on chromosome 7q11.23. Features: elfin facies, supralvalvular aortic stenosis, hypercalcemia, intellectual disability with strong verbal skills, and overly friendly personality. Often associated with connective tissue abnormalities.

### Wilms Tumor

A malignant embryonal tumor of the kidney in children. It may present as an abdominal mass, pain, hematuria, or an incidental finding and may be associated with syndromes such as WAGR or Beckwith-Wiedemann syndrome. Treatment and prognosis depend on stage and tumor biology.

#### Synonyms:

Cancer, Wilms' Tumor

### Wilms' Tumor (Nephroblastoma)

An embryonal malignant tumor of the kidney that

---

usually occurs in young children. It may be associated with congenital syndromes, and treatment and prognosis depend on tumor stage, histology, and molecular features.

**Synonyms:**

Nephroblastoma

**Wilson Disease**

Autosomal recessive copper metabolism disorder (ATP7B gene). Copper accumulation in liver, brain, cornea. Kayser-Fleischer rings, hepatopathy, movement disorder, psychiatric symptoms. Treatment: chelation (penicillamine, trientine), zinc, liver transplant.

**Wilson's Disease**

An autosomal recessive disorder of copper metabolism caused by mutations in the ATP7B gene, leading to impaired biliary copper excretion and toxic copper accumulation in the liver, brain, cornea, and other organs.

**Windowing**

Adjusting CT image brightness and contrast to optimize visualization of specific tissues. Bone window: wide window width, high level. Soft tissue window: narrow width, mid level. Lung window: wide width, low level.

**Windpipe**

The windpipe, a 10-12 cm fibrocartilaginous tube from the larynx (C6) to the carina (T4/T5) where it bifurcates into main bronchi. See Trachea.

**Wireless Motility Capsule**

Ingestible capsule that measures pH, pressure, and temperature throughout the gastrointestinal tract. Provides regional transit times through the stomach, small bowel, and colon in a single test. The pH sensor identifies transition points between segments based on characteristic pH changes.

**Wiskott-Aldrich Syndrome**

X-linked recessive disorder (WAS gene mutation, encodes WASP protein, regulates actin polymerization in hematopoietic cells). Triad: microthrom-

bocytopenia (small platelets, <70 fl), eczema, recurrent infections (encapsulated bacteria, viruses). Combined immunodeficiency with progressive T-cell lymphopenia.

**Withdrawal Reflex**

A protective polysynaptic spinal reflex in which a painful stimulus causes flexion (withdrawal) of the stimulated limb, removing it from the source of injury, with reciprocal extension of the contralateral limb (crossed extensor reflex) to maintain posture.

**Withdrawal Symptoms**

Physical or psychological symptoms that occur when a person stops or reduces a substance or medicine after the body has adapted to it. The symptoms depend on the substance, duration of use, and the person's health.

**Withdrawal Syndrome**

A predictable set of signs and symptoms that occur when a drug is discontinued or the dose is reduced after chronic use, reflecting the physiological rebound from drug adaptation.

**Wolff-Parkinson-White Syndrome**

A pre-excitation syndrome caused by an accessory pathway (bundle of Kent) connecting atria and ventricles, bypassing the AV node. ECG shows short PR interval (<0.12 s), delta wave (slurred upstroke of QRS), and widened QRS.

**Synonyms:**

Wolff Parkinson White Syndrome (Wolff-Parkinson-White Syndrome)

**Wolfram Syndrome**

Autosomal recessive disorder caused by mutations in the WFS1 gene encoding wolframin. Classic triad of diabetes mellitus, optic atrophy, and diabetes insipidus. Additional features include sensorineural deafness, neurodegeneration, and psychiatric illness. Onset of diabetes typically in the first decade.

**Wolman's Disease**

A severe lysosomal acid-lipase deficiency presenting in infancy with hepatosplenomegaly, adrenal cal-

---

cification, malabsorption, vomiting, diarrhea, and failure to thrive. It is a severe form of lysosomal acid-lipase deficiency and can be fatal early without treatment.

### **Wood Lamp Examination**

Inspection of skin under long-wave ultraviolet A light in a darkened room. It can accentuate pigimentary differences and produce characteristic fluorescence in selected infections, but findings are not independently diagnostic.

### **Woods Corkscrew Maneuver**

An internal rotation maneuver for shoulder dystocia where the operator inserts a hand and rotates the fetal shoulders 180 degrees by applying pressure to the posterior aspect of the anterior shoulder. This disimpacts the shoulder from behind the symphysis pubis. Can be repeated if the shoulder re-impacts in the new position.

### **Woods Screw Maneuver**

A rotational maneuver used during shoulder dystocia to rotate the fetal shoulders and assist delivery.

### **Word Recognition Scoring**

An audiologic test measuring how accurately a person repeats or identifies spoken words at a comfortable listening level.

### **Word Salad**

Severe disorganized speech consisting of a jumble of words and phrases that lack meaning or logical connection. It is a hallmark of formal thought disorder in schizophrenia and represents the most severe form of disorganized speech. It reflects profound disruption of language processing.

### **Wound**

An injury in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes. Wounds may be open or closed and vary in depth, contamination, and effect on nearby structures.

### **Wound Care**

Management of traumatic wounds: irrigation, debridement, closure (sutures, staples, glue), dressing. Tetanus prophylaxis based on vaccination history and wound type. Antibiotics for contaminated wounds, animal/human bites, or signs of infection. Healing: primary, secondary, tertiary intention.

### **Wound Complication**

A problem that develops during healing, such as infection, separation of wound edges, bleeding, fluid collection, tissue death, or excessive scarring. Increasing pain, redness, swelling, drainage, fever, or wound opening should be assessed promptly.

### **Wound Dehiscence**

Separation of the layers of a surgical wound after closure, most commonly occurring within 3-14 days postoperatively.

### **Wound Healing**

Complex process of tissue repair. Phases: hemostasis, inflammation, proliferation, remodeling. Implant integration depends on healing.

### **Wound Healing Phases**

Wound healing involves overlapping stages of hemostasis, inflammation, tissue formation, epithelial coverage, and remodeling. The duration and result depend on the wound, blood supply, infection, nutrition, and overall health.

### **Wound Infection**

Infection of a wound by microorganisms, causing findings such as increasing pain, redness, warmth, swelling, pus, fever, or delayed healing.

### **Wound VAC**

Vacuum-assisted closure for wound healing. Foam dressing connected to vacuum pump. Removes exudate, reduces edema, promotes granulation. Used for complex wounds, surgical sites, pressure ulcers.

### **Wrisberg Ganglion**

A sensory ganglion associated with the intermediate

---

nerve of the facial nerve.

### **Wrist Drop**

Inability to extend the wrist and fingers, usually caused by radial nerve dysfunction.

### **Wrist Joint**

Condylloid synovial joint between distal radius and articular disc proximally and scaphoid/lunate/triquetrum distally. Allows flexion, extension, radial/ulnar deviation, circumduction. The triangular fibrocartilage complex absorbs ulnar side load.

### **Wrist Pain**

Pain in or around the wrist, commonly caused by sprain, fracture, tendinitis, arthritis, or nerve compression such as carpal tunnel syndrome. Persistent pain, deformity, numbness, or weakness requires assessment.

#### **Synonyms:**

Pain, Wrist

### **Wuchereria**

A genus of filarial nematodes that includes *Wuchereria bancrofti*, a major cause of lymphatic filariasis. Infection is transmitted by mosquitoes and may cause lymphangitis, chronic lymphedema, hydrocele, and elephantiasis.

### **Wheat Allergy**

An immune reaction to proteins in wheat that may cause skin, digestive, or breathing symptoms.

### **Whiplash**

A neck injury caused by a rapid back-and-forth movement of the head.

#### **Synonyms:**

Pain Whiplash (Whiplash) Sprain Neck (Whiplash) Strain Neck (Whiplash)

### **Whipple's Disease**

A rare bacterial infection that can impair intestinal absorption and affect multiple organs.

#### **Synonyms:**

Intestinal Lipodystrophy Lipodystrophy, Intestinal

### **Wheeze**

A high-pitched whistling sound produced by narrowed airways during breathing.

### **Wright Stain**

A blood-cell stain used to identify and classify cells in a blood smear.

### **White Blood Cells**

Leukocytes, immune cells that circulate in blood and protect the body against infection, foreign substances, and abnormal cells.

### **Wolman Disease**

A rare autosomal-recessive lysosomal storage disorder caused by lysosomal acid lipase deficiency, leading to accumulation of cholesteryl esters and triglycerides, adrenal calcification, hepatosplenomegaly, diarrhea, and severe early-onset disease.

### **Wernicke Encephalopathy**

An acute neurologic disorder caused by thiamine deficiency, classically producing confusion, impaired coordination, and abnormal eye movements. It is a medical emergency requiring prompt thiamine treatment.

### **Wrist Fracture**

A break in one or more bones near the wrist, most commonly the distal radius or ulna, usually caused by a fall, direct trauma, or weakened bone.

### **Wrist Sprain**

Stretching or tearing of one or more ligaments supporting the wrist, causing pain, swelling, bruising, and reduced movement after injury.

### **Wet Macular Degeneration**

The neovascular form of age-related macular degeneration in which abnormal blood vessels grow beneath or within the retina and leak fluid or blood, causing rapid central-vision loss.

#### **Synonyms:**

---

Macular Degeneration, Wet Wet Age-Related Macular Degeneration Wet AMD

### **Wound Evisceration**

Separation of a surgical wound with protrusion of internal organs or tissue through the opening. It is a surgical emergency requiring protection of the exposed tissue and urgent medical evaluation.

### **Wassermann Reaction**

A historical complement-fixation blood test for syphilis. It has largely been replaced by modern treponemal and nontreponemal serologic tests.

### **Wasp Sting**

A venomous insect sting that may cause localized pain, redness, and swelling; severe reactions can include anaphylaxis or, rarely, systemic envenomation.

### **Water-Hammer Pulse (Corrigan Pulse)**

A pulse with a rapid upstroke and collapse, classically associated with significant aortic regurgitation and other states of increased pulse pressure.

#### **Synonyms:**

Corrigan Pulse

### **Weaning**

Gradual reduction and eventual discontinuation of breastfeeding, bottle-feeding, or a medicine or other treatment, according to the relevant clinical context.

### **Wenckebach Phenomenon (Mobitz Type I AV Block)**

Progressive prolongation of the PR interval followed by a nonconducted atrial impulse and a dropped QRS complex. It reflects intermittent impairment of atrioventricular conduction.

#### **Synonyms:**

Mobitz Type I AV Block

### **White Finger**

Episodic pallor or whitening of the fingers caused by vasospasm, commonly associated with Raynaud phenomenon or hand-arm vibration syndrome.

### **White Leg (Phlegmasia Alba Dolens)**

Painful, marked swelling and pallor of a limb caused by extensive deep venous thrombosis, usually involving major venous outflow. It requires urgent assessment.

#### **Synonyms:**

Phlegmasia Alba Dolens

### **Whitlow (Paronychia)**

Acute or chronic infection and inflammation of the tissues around a fingernail or toenail, usually caused by bacteria, fungi, or repeated moisture and trauma.

#### **Synonyms:**

Paronychia

### **Widal Reaction**

An agglutination test historically used to detect antibodies associated with *Salmonella Typhi* and paratyphoid infection. Its diagnostic accuracy is limited, and results require clinical interpretation.

### **Wisdom Tooth (Third Molar)**

The last molar in each dental quadrant, usually erupting in late adolescence or early adulthood. Impaction may cause pain, infection, or damage to adjacent teeth.

#### **Synonyms:**

Third Molar

### **Witch's Milk (Neonatal Galactorrhea)**

A temporary milk-like breast secretion in a newborn caused by exposure to maternal hormones. It usually resolves without treatment; the breasts should not be squeezed.

#### **Synonyms:**

Neonatal Galactorrhea

### **Wool-Sorter's Disease (Anthrax)**

An occupational form of inhalational anthrax caused by inhalation of spores of *Bacillus anthracis*, historically associated with handling contaminated wool or animal products.

#### **Synonyms:**

Anthrax

---

### **Word Blindness (Alexia)**

An acquired neurological disorder in which a person loses or markedly impairs the ability to read despite adequate vision and previously acquired language skills.

#### **Synonyms:**

Alexia

### **Word Deafness (Auditory Verbal Agnosia)**

An acquired inability to understand spoken words despite adequate hearing, often caused by dysfunction of auditory-language pathways.

#### **Synonyms:**

Auditory Verbal Agnosia

### **Worm Infestation (Helminthiasis)**

Infection by parasitic worms, including nematodes, cestodes, and trematodes. Manifestations depend on the species and the organs involved.

#### **Synonyms:**

Helminthiasis

### **Writer's Cramp**

A task-specific focal dystonia causing involuntary muscle contractions and abnormal postures during writing or closely related fine-motor activities.

### **Wryneck (Torticollis)**

Abnormal tilting or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles. It may be congenital, acquired, painful, or neurological.

### **Wafer**

Thin, flat disc used in pharmaceutical formulations for controlled drug delivery, particularly in intravitreal implants for retinal conditions.

### **Waist-Hip Ratio**

Anthropometric measure calculated by dividing waist circumference by hip circumference; used to assess central obesity and cardiovascular risk.

### **Wakefulness**

State of being conscious and alert; regulated by the reticular activating system and neurotransmitters including orexin, histamine, and acetylcholine.

### **Ward's Triangle**

Radiological landmark formed by the intersection of the iliopectineal line, ilioischial line, and teardrop line on pelvic radiographs; used to assess acetabular coverage.

### **Warfarin Syndrome**

A pattern of fetal abnormalities caused by warfarin exposure during pregnancy, including nasal and skeletal abnormalities, eye or neurologic defects, and fetal or neonatal bleeding.

### **Warm Ischemia**

Tissue oxygen deprivation at body temperature due to interrupted blood supply; occurs during organ procurement for transplantation and causes more cellular damage than cold ischemia.

### **Washout Period**

Interval between discontinuation of a drug or treatment and the start of a subsequent treatment phase; allows clearance of prior agents to avoid confounding effects in clinical studies.

### **Water**

Essential solvent for physiological processes; involved in hydration, thermoregulation, nutrient transport, and waste elimination. Deficiency leads to dehydration; excess causes water intoxication.

### **Water Channel**

Aquaporin membrane proteins that facilitate rapid transcellular water transport; found in renal collecting ducts, red blood cells, and other tissues involved in fluid homeostasis.

### **Water Consumption**

Fluid intake requirement for maintaining hydration; approximately 2-3 liters daily for adults, varying with climate, activity level, and individual physio-

---

logical needs.

### **Water Pollution**

Contamination of water bodies with pathogens, chemicals, or heavy metals; associated with gastrointestinal illness, developmental disorders, and chronic disease.

### **Water Supply**

Infrastructure for delivering potable water to populations; public health measures include chlorination, filtration, and monitoring for contamination.

### **Water-Soluble Vitamin**

Vitamin class dissolving in water and not stored in significant amounts; includes B-complex vitamins and vitamin C, requiring regular dietary intake.

### **Webbed Neck**

Lateral cervical skin folds extending from the mastoid process to the acromion; characteristic of Turner syndrome and Noonan syndrome.

### **Weber**

Unit of measurement for the frequency of bone conduction; used in audiology testing (Weber test) to lateralize hearing loss.

### **Wedge Excision**

Surgical removal of a triangular or wedge-shaped portion of tissue; commonly performed for breast biopsies, cervical lesions, and skin tumors.

### **Weeksella**

Genus of Gram-negative bacteria in the family Neisseriaceae; occasionally isolated from clinical specimens.

### **Weeksella Virosa**

Species of Gram-negative, oxidase-positive bacteria; opportunistic pathogen rarely associated with human infection.

### **Weight Gain**

Increase in body weight; may be intentional (muscle

building, pregnancy) or unintentional (fluid retention, endocrine disorders, medication effects).

### **Werner's Syndrome**

An autosomal-recessive premature-aging disorder caused by WRN gene defects, characterized after childhood by short stature, cataracts, scleroderma-like skin, diabetes, atherosclerosis, and increased cancer risk.

### **Wernicke Area**

Region of the left dominant cerebral hemisphere (Brodmann area 22) involved in language comprehension; damage causes Wernicke aphasia with fluent but nonsensical speech.

### **Western Blotting**

Laboratory technique for detecting specific proteins in tissue samples using gel electrophoresis, membrane transfer, and antibody-based detection; used in HIV diagnosis and research.

### **Wheeled Stretcher**

Mobile patient transport device with wheels; used in hospitals and emergency services for moving patients who cannot walk.

### **Whirlpool Bath**

Hydrotherapy device providing agitated water for therapeutic bathing; used in wound care, physical therapy, and rehabilitation.

### **Whole-Body Irradiation**

Radiotherapy technique delivering radiation to the entire body; used as conditioning before bone marrow transplantation or for treatment of systemic hematologic malignancies.

### **Wickerhamiella Pararugosa**

Species of basidiommatous yeast; rarely isolated from clinical specimens, generally considered a contaminant.

### **Wolinella**

Genus of anaerobic, Gram-negative bacteria found

---

in the oral cavity and gastrointestinal tract; associated with periodontal disease.

### **Wolinella Succinogenes**

wolinella succinogenes is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

### **Women's Health**

Medical specialty focusing on conditions unique to or more prevalent in females, including reproductive health, pregnancy, menopause, and gender-specific disease patterns.

#### **Synonyms:**

Womens Health (Women's Health)

### **Wortmannin**

Fungal metabolite and potent inhibitor of phosphatidylinositol 3-kinase (PI3K); used extensively in cell biology research.

### **Wrist**

Complex joint connecting the hand to the forearm; composed of eight carpal bones, ligaments, and tendons allowing flexion, extension, abduction, and adduction.

### **Wrist Injury**

Damage to the bones, ligaments, tendons, nerves, or vessels of the wrist from a fall, twist, impact, or overuse; fracture, instability, severe swelling, or neurovascular symptoms require assessment.

### **Written Documentation**

Formal recording of patient information, clinical decisions, and treatment plans; essential for continuity of care and medicolegal purposes.

#### **Synonyms:**

Torticollis

### **White Tongue**

A white coating or patches on the tongue caused by debris, dry mouth, irritation, infection, inflammation, or other oral conditions.

### **Warts, Common**

Alternate index label; see *Common warts*.

### **Warts, Genital**

Alternate index label; see *Genital warts*.

### **Warts, Plantar**

Alternate index label; see *Plantar warts*.

### **Warts, Venereal**

Alternate index label; see *Genital warts*.

### **Water On The Knee**

Alternate index label; see *Swollen knee*.

### **Wermer Syndrome**

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

### **Wermer's Syndrome**

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

### **Wet Age-Related Macular Degeneration**

Alternate index label; see *Wet macular degeneration*.

### **Wet AMD**

Alternate index label; see *Wet macular degeneration*.

### **White Blood Cell Disorders In Children**

Alternate index label; see *Pediatric white blood cell disorders*.

### **Wax**

A water-resistant substance produced by ceruminous glands in the ear canal; earwax protects the canal and usually clears naturally.

### **Webbed Fingers**

Partial or complete joining of adjacent fingers by skin or soft tissue, known as syndactyly; it may be congenital or acquired.

---

### Weever Fish

A venomous marine fish whose dorsal spines can cause a painful sting, local swelling, and occasionally systemic symptoms.

### Weight-Reducing Diets

Dietary plans intended to create a sustained energy deficit and reduce excess body weight, ideally individualized with attention to nutrition, health conditions, and long-term adherence.

### Wens

Common benign cysts beneath the skin, usually epidermoid cysts containing keratin; they may become inflamed or infected.

### Wertheim's Hysterectomy

Radical hysterectomy involving removal of the uterus, cervix, surrounding tissues, and commonly the upper vagina and pelvic lymph nodes, historically used for cervical cancer.

### Wet Dream

Involuntary ejaculation during sleep, usually occurring in adolescence or adulthood and generally a normal physiological event.

### Whiplash Injuries

Neck injuries caused by rapid acceleration and deceleration, producing strain of cervical muscles, ligaments, joints, or other soft tissues.

### White Blood Cell

A leukocyte made mainly in bone marrow and found in blood and lymphatic tissues that helps defend against infection and other abnormal or foreign material. Major types are neutrophils, lymphocytes, monocytes, eosinophils, and basophils; abnormal numbers or function may indicate infection, inflammation, immune disease, or marrow disorders.

### White Of The Eye

The sclera, the tough, opaque outer coat of the eye surrounding the cornea and helping maintain the shape of the globe.

### Whitlow

An infection or inflammation of the tissues around a finger or toenail, often involving the nail fold; it may be bacterial, fungal, or herpetic.

### Whooping-Cough

A highly contagious respiratory infection caused by *Bordetella pertussis*, characterized by bouts of coughing that may be followed by a whooping inspiration.

### Widal Test

An agglutination test historically used to detect antibodies associated with typhoid and paratyphoid fever; its limited accuracy means results require clinical interpretation.

### Wilm's Tumour

Source spelling variant of *Wilms tumor*, a malignant embryonal kidney tumor occurring mainly in young children.

### Winter Vomiting Disease

An acute gastroenteritis, usually caused by norovirus, characterized by sudden vomiting, diarrhea, and abdominal cramps.

### Wolffian Ducts

Embryonic mesonephric ducts that form parts of the male reproductive tract, including the epididymal duct, vas deferens, and ejaculatory ducts; most regress in typical female development.

### Wood Naphtha

A historical term for methanol-containing wood distillate; ingestion or inhalation can cause severe metabolic acidosis, visual loss, and death.

### Wood's Light

Long-wave ultraviolet-A light used in a darkened room to enhance certain skin-color changes and aid assessment of selected dermatological conditions.

### Wood Spirit

An old name for methanol, a toxic alcohol whose

---

ingestion can cause metabolic acidosis, blindness, and death.

### Woody Tongue

A rare chronic infection, usually caused by *Actinomyces*, producing a hard, swollen tongue and surrounding tissue inflammation.

### Wool-Sorters' Disease

An occupational form of inhalational anthrax caused by inhaling spores of *Bacillus anthracis* while handling contaminated wool or animal products.

### Word Blindness

An older term for alexia, an acquired inability to read or recognize written words despite adequate vision and previously developed language ability, usually caused by brain dysfunction or injury.

### Wounds

Injuries in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes; wounds may be open or closed and may require cleansing, closure, or debridement.

### Wry-Neck

Torticollis, an abnormal tilt or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles.

### Wuchereria Bancrofti

A filarial nematode transmitted by mosquitoes and the major cause of lymphatic filariasis, which can produce lymphoedema and elephantiasis.

### White Spot Disease

Alternate index label; see *Lichen sclerosus*.

### Whiteheads

Whiteheads are closed comedones formed when oil and dead skin block a hair follicle, producing small pale or skin-colored acne bumps.

### Wisdom Teeth, Impacted

Alternate index label; see *Impacted wisdom teeth*.

### Wolff-Parkinson-White Accessory Pathway-Related Tachycardia

Alternate index label; see *Wolff-Parkinson-White (WPW) syndrome*.

### Wrinkle

Alternate index label; see *Wrinkles*.

### Walking Abnormalities

Walking abnormalities include changes in speed, balance, stride, posture, or coordination caused by pain, weakness, sensory loss, joint disease, or neurologic illness.

### Wart Remover Poisoning

Wart remover poisoning involves toxic or environmental exposure to wart remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### Water In Diet

Water in diet addresses care related to water in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### Waterhouse-Friderichsen Syndrome

Waterhouse-Friderichsen syndrome is adrenal hemorrhage and acute adrenal failure associated with overwhelming sepsis, classically meningococcal infection, causing shock and coagulopathy.

### Wax Poisoning

Wax poisoning involves toxic or environmental exposure to wax poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

### WBC Count

WBC count examines wbc count; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### Webbing Of The Fingers Or Toes

Partial or complete joining of adjacent fingers or toes by skin or other tissue. It is called syndactyly

---

and may be congenital or acquired.

### **Weight Gain – Unintentional**

Weight gain – unintentional addresses care related to weight gain – unintentional, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

### **Weight Loss - Unintentional**

Unintentional weight loss is reduction in body weight without planned dietary or activity change and may result from malignancy, endocrine disease, infection, gastrointestinal disease, medication, or mood disorder.

### **Weight-Loss Medicines**

Medications used, together with nutrition and physical-activity measures, to help reduce or maintain body weight in selected people with overweight or obesity. Choice depends on medical history, benefits, risks, and treatment goals.

### **West Nile Virus Infection**

West Nile virus infection is a mosquito-borne illness ranging from fever and body aches to neuroinvasive meningitis, encephalitis, weakness, or paralysis.

### **Whipworm Infection**

Whipworm infection examines whipworm infection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

### **White Matter Of The Brain**

The brain tissue composed mainly of myelinated axons and supporting glial cells, connecting different brain regions and the brain with the spinal cord; disease or injury can impair cognition, sensation, coordination, or movement.

### **Whole Breast Radiation Therapy**

Whole breast radiation therapy treats remaining breast tissue after breast-conserving surgery to reduce local recurrence risk, with planned dosing and monitoring for skin and tissue effects.

### **Widely Spaced Teeth**

Teeth separated by unusually large gaps, also called diastema when the gap is localized. Causes include normal development, missing teeth, tooth-size differences, habits, or jaw and gum conditions.

### **Wolff-Parkinson-White Syndrome (WPW)**

Wolff-Parkinson-White syndrome is pre-excitation through an extra atrioventricular pathway that can cause episodes of supraventricular tachycardia and rarely dangerous ventricular rhythms.

### **Wrinkles**

Wrinkles are skin folds or lines produced by aging, sun exposure, repeated facial movement, loss of elasticity, smoking, or other factors.

#### **Synonyms:**

Wrinkle

### **Wrist Arthroscopy**

Wrist arthroscopy uses a small camera and instruments through portals to diagnose or treat cartilage, ligament, synovial, or other wrist problems.

### **Wrist Sprain - Aftercare**

Recovery care after stretching or tearing of wrist ligaments, including protection, swelling control, gradual motion and strengthening, and reassessment if pain, instability, or numbness persists.

### **Warts (Common Warts)**

Alternate index label for Common Warts.

### **Warts (Warts (Common Warts))**

Alternate index label for Warts (Common Warts).

### **Warts Genital (Genital Warts In Women)**

Alternate index label for Genital Warts In Women.

### **Weber-Christian Disease**

Weber-Christian disease is an older, nonspecific term historically used for relapsing fever and inflammation of subcutaneous fat, now often classified as panniculitis. Painful subcutaneous nodules and sys-

---

temic symptoms require modern evaluation for infection, autoimmune disease, pancreatic disease, or other causes.

**Synonyms:**

Panniculitis Idiopathic Nodular (Weber-Christian Disease)

**Wegeners Granulomatosis  
(Granulomatosis With Polyangiitis)**

Alternate index label for Granulomatosis With Polyangiitis.

**Weils Disease (Leptospirosis)**

Alternate index label for Leptospirosis.

**Wet Dry Drowning (Drowning)**

Alternate index label for Drowning.

**Wisdom Teeth**

Wisdom teeth are the third molars that commonly emerge in late adolescence or adulthood. Impaction, infection, decay, cysts, gum disease, or crowding can cause pain and swelling; dental examination and imaging determine whether monitoring or removal is appropriate.

**Wolff Parkinson White Syndrome  
(Wolff-Parkinson-White Syndrome)**

Alternate index label for Wolff-Parkinson-White Syndrome.

**Womb Growths (Uterine Fibroids)**

Alternate index label for Uterine Fibroids.

**Women Breast Lumps (Breast Lumps In Women)**

Alternate index label for Breast Lumps In Women.

**Women Disease Prevention (Disease Prevention In Women)**

Alternate index label for Disease Prevention in Women.

**Womens Health (Women's Health)**

Alternate index label for Women's Health.

**Worms Pinworms (Pinworm Infection)**

Alternate index label for Pinworm Infection.

**Wuhan Coronavirus (2019-NCoV)**

Alternate index label for 2019-nCoV.

**Walleye**

Walleye is an informal term for strabismus, in which the eyes are misaligned and do not point at the same target.

**Walleyed**

Walleyed describes eyes that appear misaligned or divergent; clinically, the condition may be strabismus and requires eye assessment when persistent.

**Wasting**

Abnormal loss of body weight, muscle, or other tissue, often associated with chronic disease, inadequate nutrition, inflammation, or cancer. Severe wasting may impair strength, immunity, and recovery.

**Water Blister**

A fluid-filled blister, usually containing clear serum, caused by friction, pressure, burns, or some skin disorders. The blister should be protected from further trauma and assessed if infected or widespread.

**Water On The Brain**

A nontechnical term usually referring to hydrocephalus, an abnormal accumulation or impaired circulation of cerebrospinal fluid that enlarges the ventricles and may increase intracranial pressure.

**Water Retention**

Excess accumulation of fluid in the body's tissues or cavities, commonly causing swelling and sometimes resulting from heart, kidney, liver, venous, hormonal, or medication-related disorders.

**Waterborne Bacterial Disease**

A clinical condition involving waterborne Bacterial Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

---

## WBS

WBS is a context-dependent abbreviation, commonly Williams-Beuren syndrome, a genetic condition with characteristic facial features, developmental differences, and cardiovascular disease.

## WDWN

WDWN is a medical abbreviation for well developed, well nourished, commonly used in physical examination documentation.

## Weaver's Bottom

Inflammation of the ischial bursa over the sitting bone, causing pain in the buttock that may worsen with prolonged sitting. It is also called ischial bursitis.

## Welt

A raised, often itchy area of skin caused by localized swelling, commonly seen in hives or after an insect bite. A welt may fade within hours, but persistent or severe reactions need evaluation.

## WF

WF is a context-dependent abbreviation, including white female in demographic shorthand or waveform in technical settings; clearer wording is preferred.

## Wharton's Jelly

Gelatinous connective tissue within the umbilical cord that surrounds and supports the umbilical blood vessels and helps protect them from compression.

## Whipworm

A parasitic roundworm of the genus *Trichuris*, usually *Trichuris trichiura* in humans. Infection occurs by ingesting embryonated eggs and may cause abdominal pain, diarrhea, anemia, or rectal prolapse when severe.

## WHO (World Health Organization)

The World Health Organization is a United Nations agency that coordinates international health work, standards, surveillance, and emergency response.

## Wing Bone

A bone forming the skeletal framework of a bird or bat wing; it is not a standard human anatomical term, though the bones correspond broadly to the upper limb.

## Witch's Milk

A temporary milky breast discharge in a newborn caused by maternal hormones crossing the placenta; it usually resolves without squeezing or treatment, which can otherwise cause infection.

## WM

WM is a context-dependent abbreviation, commonly white matter or Waldenström macroglobulinemia; the complete term should be specified.

## WNL

WNL is an abbreviation for within normal limits, meaning a finding falls within the reference range or expected clinical appearance.

## Women's Hospital

A biomedical term referring to women's Hospital; its defining features and medical significance depend on the relevant biologic or clinical context.

## World Health Organization

World Health Organization is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

## Wt

A medical abbreviation commonly meaning weight. Its meaning should be confirmed from the surrounding documentation because abbreviations can be ambiguous.

## Wet Gangrene

Tissue death complicated by bacterial infection and tissue swelling, producing moist, discolored, rapidly spreading necrosis. It requires urgent medical assessment.

---

### **Wheal And Flare**

A transient raised area of dermal edema (wheal) surrounded by localized redness (flare), typically produced by histamine release in urticaria or another immediate hypersensitivity reaction.

### **Whole-Bowel Irrigation**

Gastrointestinal decontamination using large volumes of an iso-osmotic polyethylene-glycol solution to flush intestinal contents; it is reserved for selected ingestions and requires airway and clinical assessment.

### **Wound Management**

Assessment and treatment of acute or chronic wounds through cleansing, debridement when indicated, moisture and exudate control, infection management, pressure relief, nutrition, and correction of underlying disease.

# X

## X Chromosome

One of the two human sex chromosomes, carrying genes involved in sex development and many non-sex-specific biological functions. Individuals typically have one or two X chromosomes, and dosage is partly regulated by X-chromosome inactivation.

## XXX Syndrome

Alternate index label; see *Triple X syndrome* (trisomy X), a sex-chromosome variation in which a female has an additional X chromosome.

## X-Inactivation

Process inactivating one X chromosome in female mammals, forming Barr body. Occurs early in development, random in most tissues. Ensures dosage compensation.

## X-Linked Agammaglobulinemia

An inherited immunodeficiency, usually caused by a pathogenic variant in the BTK gene, that prevents normal B-cell maturation. It causes very low immunoglobulin levels and recurrent bacterial or enteroviral infections, usually beginning in infancy or early childhood.

## X-Linked Inheritance

Transmission of a pathogenic variant on the X chromosome. Phenotypes differ by sex, X-inactivation, and variant mechanism; fathers do not transmit an X-linked variant to their sons.

## X-Linked Retinoschisis

An inherited vitreoretinal dystrophy caused by mutations in the RS1 gene, characterized by splitting of the retinal nerve fibre layer producing a spoke-

wheel pattern of cystic spaces at the macula and peripheral retinal schisis.

## X-Ray

An X-ray is an imaging study that passes a small amount of ionizing radiation through the body to create a projection image. Differences in tissue density help show bones, lungs, teeth, and selected soft-tissue abnormalities.

## X-Ray (Plain Radiography)

An imaging method that uses X-rays to create a two-dimensional projection of internal structures. It is used to assess bones, the chest, abdomen, teeth, and other selected body regions.

### Synonyms:

Plain Radiography

## X-Ray (Radiography)

Projectional imaging using ionizing radiation. Dense structures (bone, contrast) appear white; air appears black. Fast, inexpensive, widely available. Two-dimensional projection of three-dimensional structures. Mammography: specialized breast X-ray for screening.

### Synonyms:

Radiography

## X-Ray Attenuation

Reduction in the intensity of an X-ray beam as it passes through tissue or another material.

## X-Ray Shield

Lead apron, thyroid shield for radiation protection during imaging.

---

## X-Rays (Röntgen Rays)

Electromagnetic radiation used in radiography and other imaging techniques to create images by measuring differences in tissue attenuation.

### Synonyms:

Röntgen Rays

## Xanthelasma

Xanthelasma palpebrarum are soft, yellow, lipid-filled papules or plaques on the medial canthus of the eyelids (upper more commonly than lower), the most common form of cutaneous xanthoma. They are composed of foam cells (lipid-laden macrophages) in the superficial dermis.

## Xanthine Oxidase Inhibitor

A class of medications that inhibit xanthine oxidase, the enzyme that catalyzes the final steps of purine metabolism: hypoxanthine to xanthine and xanthine to uric acid. By inhibiting this enzyme, XOIs reduce uric acid production and lower serum uric acid levels, used for management of chronic gout and tumor lysis syndrome.

## Xanthogranulomatous

Chronic destructive renal infection with replacement of parenchyma by lipid-laden macrophages. See xanthogranulomatous pyelonephritis.

## Xanthogranulomatous Pyelonephritis

A chronic destructive kidney infection in which renal tissue is replaced by lipid-laden macrophages. It is often associated with obstruction or stones and may require antibiotics, drainage, surgery, or nephrectomy depending on the extent of damage.

## Xanthoma

A xanthoma is a yellowish deposit of lipid-laden macrophages in the skin, subcutaneous tissue, or tendons. It may occur with hyperlipidemia, diabetes, cholestatic liver disease, or an inherited lipid disorder and warrants assessment of the underlying cause. presenting as yellow-orange papules, nodules, or plaques.

## Xanthomatosis

A disorder in which fatty deposits called xanthomas develop in the skin, tendons, or organs. It may be associated with inherited or acquired lipid disorders and can signal increased cardiovascular or organ-specific risk requiring medical evaluation.

## Xenobiotic

Foreign chemical substance in body. Drugs, pollutants, pesticides, industrial chemicals. Metabolized by liver enzymes.

## Xenograft

Tissue or a biological material transplanted between different species, often used as a temporary graft or tissue substitute.

## Xenograft (Heterograft)

A surgical graft taken from a donor of a different species (xenos = foreign, Greek). Xenografts are used as temporary biological dressings or as tissue replacements.

### Synonyms:

Heterograft

## Xeroderma

Abnormally dry skin that may cause scaling, roughness, itching, or cracking. It can result from environmental exposure, skin disease, age, or medicines.

## Xeroderma Pigmentosum

A rare autosomal recessive disorder of nucleotide-excision DNA repair that causes extreme sun sensitivity and a greatly increased risk of skin and eye damage and cancers. It is caused by pathogenic variants in genes involved in DNA repair.

## Xenophobia

An intense or persistent fear of unfamiliar people, cultures, or situations; when clinically significant, it may be considered a specific phobia.

## Xerophthalmia

Dryness of the conjunctiva and cornea, often caused by vitamin A deficiency. Severe disease can damage

---

the cornea and impair vision.

### **Xerosis**

Abnormally dry skin, common in elderly patients and winter months. It results from decreased sebaceous and sweat gland activity, impaired skin barrier function, and environmental factors. Treatment includes regular emollient application (cream or ointment rather than lotion), gentle cleansing, and humidification.

### **Xerostomia**

The sensation of dry mouth caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can impair speaking, swallowing, taste, and dental health.

### **Xerostomia (Dry Mouth)**

A subjective sensation of oral dryness caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can contribute to difficulty speaking, swallowing, and dental decay.

#### **Synonyms:**

Dry Mouth

### **Xylitol Toxicity**

Poisoning caused by excessive xylitol exposure. It can cause marked hypoglycemia in dogs and may cause gastrointestinal symptoms in people.

### **X-Linked Adrenoleukodystrophy**

An inherited disorder of peroxisomal fatty-acid metabolism, usually affecting boys, that can cause progressive damage to the adrenal glands, nervous system, and myelin.

### **X-Linked Ichthyosis**

An inherited skin disorder caused by deficiency of steroid sulfatase, producing generalized dry, dark, plate-like scaling that often begins in infancy or early childhood.

### **X-Linked Severe Combined**

### **Immunodeficiency**

A severe inherited immune disorder, usually caused by defects affecting the interleukin-2 receptor gamma chain, resulting in profound T-cell dysfunction and vulnerability to serious infections.

### **X-Linked Hypophosphatemia**

An inherited disorder of phosphate regulation, commonly caused by excess fibroblast growth factor 23, leading to renal phosphate wasting, rickets or osteomalacia, bone pain, and growth abnormalities.

### **XYY Syndrome**

A sex-chromosome variation in which a male has an extra Y chromosome. Many affected individuals have few or no obvious symptoms, though some have tall stature, learning difficulties, or developmental differences.

### **Xanthine**

Purine base intermediate in uric acid metabolism; accumulated in xanthinuria due to xanthine oxidase deficiency.

### **Xanthine Dehydrogenase**

Enzyme converting hypoxanthine to xanthine and xanthine to uric acid; deficiency causes xanthinuria type I.

### **Xanthine Oxidase**

Molybdenum-containing enzyme catalyzing oxidation of hypoxanthine to xanthine and xanthine to uric acid; target of allopurinol in gout treatment.

### **Xanthomonadaceae**

Family of Gram-negative, aerobic, rod-shaped bacteria; includes plant pathogens and rare human opportunistic isolates.

### **Xanthomonas**

Genus of Gram-negative, aerobic bacteria in family Xanthomonadaceae; primarily plant pathogens, occasionally isolated from clinical specimens.

---

### **Xenobiotic Metabolism**

Biotransformation of foreign chemical compounds (drugs, toxins, pollutants) primarily by hepatic cytochrome P450 enzymes; Phase I and Phase II reactions.

### **Xenograft Procedure**

Transplantation of tissue between different species; used experimentally and clinically (e.g., porcine heart valves, skin grafts).

### **Xenon**

Noble gas (Xe) with anesthetic properties; used in research imaging and experimental anesthesia.

### **Xenophagy**

Cellular process of degrading engulfed foreign material or pathogens via autophagy machinery.

### **Xipamide**

Thiazide-like diuretic used for hypertension and edema; acts on the distal convoluted tubule.

### **X-Ray Crystallography**

Analytical technique using X-ray diffraction patterns to determine three-dimensional atomic structure of crystals and proteins.

### **X-Ray Therapy**

Use of ionizing radiation from X-ray sources for treatment of malignant and benign conditions; encompasses external beam radiotherapy.

### **Xylose**

Five-carbon monosaccharide used in diagnostic tests for intestinal absorption (D-xylose test) and bacterial metabolism studies.

### **X-Ray - Skeleton**

A skeletal X-ray series uses radiographs of selected bones and joints to evaluate fractures, alignment, bone density patterns, arthritis, infection, tumors, and developmental abnormalities.

### **X, Factor**

Factor X is a vitamin-K-dependent coagulation protein activated in the common pathway to generate thrombin and form fibrin.

### **Xanth- (Prefix)**

Xanth- is a medical word element meaning yellow or yellowish, as in xanthoma, xanthelasma, and xanthopsia.

### **Xanthopsia**

A visual disturbance in which objects appear yellow or yellowish. It can occur with certain eye disorders, medication toxicity such as digoxin toxicity, or other neurologic or retinal conditions and warrants evaluation when new or persistent.

### **Xanthosis**

Yellow discoloration of tissues caused by deposition of carotenoid pigments or other yellow material, distinguished from jaundice by the absence of yellowing in the sclerae.

### **Xen- (Prefix)**

A medical word element meaning foreign, strange, or originating outside the usual organism or system, as in xenograft (a tissue transplanted between different species).

### **Xeno- (Prefix)**

Xeno- is a medical word element meaning foreign, strange, or from another species, as in xenograft and xenotransplantation.

### **Xero-**

Xero- is a medical word element meaning dry or dryness, as in xeroderma, xerophthalmia, and xerostomia.

### **XRT**

XRT is an abbreviation for radiation therapy, the use of ionizing radiation to treat cancer or selected other diseases.

---

## XX

XX is the usual human sex-chromosome complement associated with female development, though sex development has biologic variation.

## XX Male Syndrome

XX male syndrome, also called de la Chapelle syndrome, is a disorder of sex development in which a person with an XX karyotype develops a typically male phenotype, usually from translocation of the SRY gene; infertility is common.

## XXXX Syndrome

XXXX syndrome is a rare sex-chromosome variation in which a female has four X chromosomes; it may cause developmental or learning difficulties, distinctive physical features, and ovarian dysfunction, with severity varying widely.

## Xanthomata

Multiple xanthomas: yellowish deposits of lipid-laden macrophages in the skin, tendons, or other tissues, sometimes associated with lipid disorders or cholestatic disease.

## Xenotransplant

Transplantation of cells, tissues, or organs between different species, such as experimental or clinical use of animal-derived biological material.

## Xiphisternal Plane

The horizontal anatomical plane at the junction of the body of the sternum and the xiphoid process, approximately corresponding to the T9 vertebral level.

## Xiphoid Process

The small inferior projection of the sternum. Its shape varies, and it serves as an attachment site for muscles and ligaments.

## X-Linked

Relating to a gene or condition associated with the X chromosome; inheritance patterns differ between individuals with one or two X chromosomes.

## X-Rays

Penetrating electromagnetic radiation used in radiography and some forms of radiotherapy; ionizing exposure can damage tissue, so clinical use is justified and optimized.

## Xylitol

A sugar alcohol used as a sweetener and in some oral-care products. Large human ingestions may cause gastrointestinal symptoms; it is highly toxic to dogs.

## Xanthogranulomatous Oophoritis

A rare chronic inflammatory lesion of the ovary with lipid-laden macrophages, plasma cells, and fibrosis, often associated with infection or endometriosis and capable of mimicking ovarian malignancy.

## Xenotransplantation

The transplantation of living cells, tissues, or organs between members of different species, most commonly from an animal donor to a human recipient. It is being investigated as a potential source of organs and tissues when human donor supply is insufficient, but substantial immunologic and infectious risks remain. Major concerns include hyperacute or delayed rejection, graft dysfunction, transmission of animal pathogens, and physiologic incompatibility. Clinical use or research requires rigorous immunologic screening, infection surveillance, ethical oversight, and specialized monitoring of recipients.

# Y

## Y Chromosome

The sex chromosome that typically carries the SRY gene and other genes involved in testicular development and male sex differentiation. It is present in most individuals with a typical 46,XY karyotype and is transmitted through the paternal line.

## Yohimbine

A plant-derived alkaloid that has been studied for erectile dysfunction and other uses.

## YAG Capsulotomy

A laser procedure that creates an opening in an opaque posterior lens capsule after cataract surgery. It can improve vision when posterior capsule opacification is causing visual symptoms.

## Yaws

Yaws is a chronic infection caused by *Treponema pallidum* subsp. *pertenue* and spread mainly through close skin contact. It can cause an initial papilloma or ulcer and later destructive lesions of skin, bone, and cartilage; antibiotics can cure the infection.

## Yaws (Frambesia)

A chronic, non-venereal treponematoses caused by *Treponema pallidum* subspecies *pertenue*, closely related to the syphilis spirochete (*T. pallidum pallidum*).

### Synonyms:

Frambesia

## Yeast

Yeasts are unicellular fungi that reproduce mainly by budding or, in some species, fission; medically important examples include *Candida*, *Cryptococcus*,

and *Malassezia*, which may colonize humans or cause opportunistic infection.

## Yeast Infection

Vulvovaginal candidiasis: infection by *Candida albicans* (most common), causing vulvar and vaginal itching, burning, thick white 'cottage cheese' discharge, dyspareunia, and erythema; more common in pregnancy, diabetes, antibiotic use, and immunosuppression. Diagnosis: clinical; wet mount (budding yeast/hyphae), KOH, or culture.

## Yellow Fever

Yellow fever is an acute mosquito-borne infection caused by yellow fever virus. Fever, headache, muscle aches, nausea, and vomiting may be followed by jaundice, bleeding, shock, and organ failure; vaccination is the main preventive measure.

## Yellow-Nail Syndrome

A rare triad of yellow, thickened, slow-growing nails, lymphedema, and chronic respiratory disease including bronchiectasis and pleural effusions. The nail changes result from impaired lymphatic drainage affecting nail growth. It typically affects middle-aged adults.

## Yersinia Enterocolitica

A gram-negative coccobacillus of the family Enterobacteriaceae, a common cause of enterocolitis and mesenteric lymphadenitis, especially in children and young adults in temperate climates.

## Yersinia Infection

Infection caused by *Yersinia* bacteria, commonly producing diarrhea, abdominal pain, fever, or vom-

---

iting. Some cases mimic appendicitis; severe illness, dehydration, bloody diarrhea, or persistent symptoms requires medical assessment.

### **Yersinia Pestis**

A gram-negative rod that causes plague, a severe and potentially fatal infection; see *Plague*. The organism is transmitted by flea bites or direct contact with infected animals. Bubonic plague presents with painful lymphadenopathy (buboes). Pneumonic plague involves the lungs and is transmitted by respiratory droplets.

### **Yolk Sac**

An extraembryonic structure that supports the early embryo before the placenta is fully functional. It contributes to early blood-cell formation and development of the primitive gut and is assessed on early pregnancy ultrasound.

### **Yolk-Sac Tumor**

A malignant germ-cell tumor that commonly occurs in children and produces alpha-fetoprotein.

### **Yttrium-90**

Beta emitter, half-life 64 hours. Used in radioembolization (Y-90 microspheres) for liver cancer. Bremsstrahlung imaging possible.

### **Yips**

Sudden involuntary movements or muscle spasms that interfere with a skilled task, often in athletes or musicians.

### **Yergason Test**

A shoulder examination maneuver used to assess the long head of the biceps tendon and transverse humeral ligament by resisted supination and external rotation.

### **Yersiniosis**

Infection caused by *Yersinia* bacteria, most often *Y. enterocolitica* or *Y. pseudotuberculosis*, producing diarrhea, abdominal pain, fever, or pseudoappendicitis.

### **YAG Laser Capsulotomy**

A laser procedure that creates an opening in a cloudy posterior lens capsule after cataract surgery, restoring the passage of light and improving vision.

### **Yarrowia**

A genus of yeast that can rarely cause opportunistic infection, particularly in people who are immunocompromised or have indwelling medical devices. Identification and treatment depend on species and susceptibility testing.

### **Yarrowia Lipolytica**

A yeast species in the genus *Yarrowia* that is primarily environmental but has rarely been reported as an opportunistic human pathogen, including bloodstream or device-associated infection.

### **Yawn**

An involuntary behavior consisting of a deep inhalation followed by a slower exhalation, often with stretching of the jaw and facial muscles. Yawning is common with fatigue but excessive or unusual yawning can occur with some medications or neurologic conditions.

### **Yeast Present**

A laboratory report indicating that yeast forms were detected in a specimen. The finding may represent colonization, contamination, or infection and must be interpreted with symptoms, specimen type, and organism identification.

### **Yellow Fever Virus**

yellow fever virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

### **Yersinia**

*Yersinia* is a genus of Gram-negative bacteria that includes *Y. pestis*, *Y. enterocolitica*, and *Y. pseudotuberculosis*; human disease ranges from enterocolitis and pseudoappendicitis to plague.

---

### **Yersinia Aldovae**

yersinia aldovae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Bercovieri**

yersinia bercovieri is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Frederiksenii**

yersinia frederiksenii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Intermedia**

yersinia intermedia is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Kristensenii**

yersinia kristensenii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Mollaretii**

yersinia mollaretii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Pseudotuberculosis**

Yersinia pseudotuberculosis is a Gram-negative bacterium acquired mainly from contaminated food or water that causes enterocolitis, fever, and mesenteric

lymphadenitis resembling appendicitis; systemic infection is uncommon.

### **Yersinia Rohdei**

yersinia rohdei is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yersinia Ruckeri**

yersinia ruckeri is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

### **Yoga**

A mind-body practice combining physical postures, breathing techniques, and meditation or relaxation. It may support flexibility, balance, stress reduction, and symptom management, but exercises should be adapted to individual health conditions.

### **Yokenella**

A genus of Gram-negative bacteria in the family Enterobacteriales. Yokenella species are uncommon human pathogens but can cause opportunistic infections, including wound or bloodstream infections.

### **Yokenella Regensburgei**

A Gram-negative bacterium that rarely causes human infection, including wound, urinary, or bloodstream infection, usually in people with underlying illness or impaired immunity. Treatment is guided by culture and antimicrobial susceptibility results.

### **Ytterbium**

A chemical element with the symbol Yb and atomic number 70. Its compounds have specialized industrial and research uses; medical relevance depends on the specific compound and exposure.

### **Yttrium**

A chemical element with the symbol Y and atomic

---

number 39. The radioactive isotope yttrium-90 is used in selected radiation treatments, including some targeted therapies and radiosynovectomy procedures.

### **Yellow Tongue**

Yellow discoloration or coating of the tongue that may result from oral hygiene, smoking, dry mouth, diet, medicines, or an underlying illness.

### **Yawning - Excessive**

Excessive yawning is unusually frequent or difficult-to-control yawning. It may accompany sleep deprivation, excessive daytime sleepiness, medication effects, vasovagal reactions, or less commonly neurologic or cardiopulmonary disease; persistent unexplained episodes merit clinical evaluation.

### **Yew Poisoning**

Yew poisoning follows ingestion of yew plant material, especially leaves or seeds containing taxine compounds. Toxicity can cause nausea, abdominal symptoms, dizziness, seizures, dangerous slowing or disruption of the heart rhythm, cardiovascular collapse, and death.

### **Yoga For Health**

Yoga for health combines physical postures, breathing exercises, and meditation or relaxation. It may improve flexibility, balance, strength, stress, and some chronic symptoms when adapted to the person; instructors should account for injuries, pregnancy, and medical limitations.

### **Your Baby And The Flu**

Infants with influenza can develop fever, cough, poor feeding, vomiting, diarrhea, breathing difficulty, or unusual sleepiness. Care focuses on prompt medical advice, hydration, monitoring for respiratory distress, and age-appropriate antiviral treatment when indicated; influenza vaccination is preventive for eligible family members and children.

### **Your Baby In The Birth Canal**

A baby in the birth canal is progressing through the maternal pelvis during labor. Clinicians assess

fetal position, descent, heart rate, and the progress of cervical dilation to identify normal vaginal-birth progress or complications requiring intervention.

### **Your Cancer Care Team**

A cancer care team is the group of oncology professionals who coordinate diagnosis, treatment, symptom control, rehabilitation, psychosocial support, and follow-up. It may include medical, surgical, and radiation oncologists, nurses, pharmacists, social workers, dietitians, and palliative-care specialists.

### **Your Cancer Diagnosis - Do You Need A Second Opinion?**

A second opinion after a cancer diagnosis is an independent review of pathology, imaging, staging, and treatment options by another qualified clinician or cancer center. It can confirm the diagnosis, identify alternatives, and help the patient make an informed treatment decision without usually delaying urgent care.

### **Your Cancer Survivorship Care Plan**

A cancer survivorship care plan summarizes completed treatment, possible late effects, recommended surveillance, preventive care, rehabilitation, and communication between oncology and primary-care clinicians. It is updated as health needs change after active treatment.

### **Your Child And The Flu**

Children with influenza may have fever, cough, sore throat, fatigue, headache, muscle aches, vomiting, or diarrhea. Supportive care includes fluids and symptom monitoring; urgent assessment is needed for breathing difficulty, dehydration, confusion, severe weakness, or worsening after improvement.

### **Your Child's First Vaccines - What You Need To Know**

A child's first vaccines stimulate protection against serious infections according to the recommended immunization schedule. Clinicians review timing, contraindications, expected local or systemic reactions, catch-up options, and when urgent care is needed for a severe reaction.

---

## **Your Diet After Gastric Bypass Surgery**

Diet after gastric bypass surgery progresses from liquids to pureed, soft, and regular-textured foods in small portions as healing permits. Long-term care emphasizes protein, fluids separated from meals, vitamin and mineral supplements, avoidance of dumping-triggering foods, and monitoring for nutritional deficiencies.

## **Yeast Infection In Women And Men**

Genital yeast infection is usually caused by *Candida* and can cause itching, soreness, redness, and thick discharge in women or irritation and rash on the penis in men. Recurrent, severe, atypical, or treatment-resistant symptoms need confirmation and evaluation for contributing conditions.

### **Synonyms:**

Candidal Vulvovaginitis (Yeast Infection In Women And Men)

## **Yeast Infections: How Do You Know When It Heals**

A yeast infection is generally improving when itching, soreness, redness, and abnormal discharge resolve and do not return after treatment. Persistent symptoms may reflect resistant yeast, another infection, dermatitis, or an incorrect diagnosis and warrant examination rather than repeated empiric treatment.

## **Yeast Oral (Thrush)**

Alternate index label for Thrush.

## **Younger Children Sleep (Sleep And Sleep Disorders In Children And Teens)**

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

## **Y-Linked Inheritance**

Y-linked inheritance involves a gene on the Y chromosome and typically passes from an affected father to his sons, not daughters.

## **YAG Laser Surgery**

YAG laser surgery uses a yttrium-aluminum-garnet

laser to cut, vaporize, or treat tissue, including posterior-capsule clouding after cataract surgery.

## **Yawning**

Repeated involuntary opening of the mouth with a deep inhalation and subsequent exhalation. It is usually associated with sleepiness or boredom; persistent excessive yawning may warrant assessment for medication effects or an underlying disorder.

## **Yd.**

An abbreviation for yard, a unit of length equal to 0.9144 meter. In clinical documentation, the unit should be written clearly to avoid confusion with other abbreviations.

## **Yolk Stalk**

The embryonic connection between the yolk sac and the developing midgut, also called the vitelline duct. Persistence of this structure can result in a Meckel diverticulum or other vitelline duct anomaly.

## **Yeast Infection (Vaginal)**

An overgrowth of *Candida* in the vagina causing itching, irritation, redness, and thick white discharge.

### **Synonyms:**

Candidiasis, Vaginal Vaginal Candidiasis

## **Yellow Nail Syndrome**

A rare disorder characterized by slow-growing yellow dystrophic nails, chronic lymphedema, and respiratory disease. Nail changes may include thickening, excessive curvature, loss of the cuticle, and separation of the nail plate from the nail bed. Respiratory manifestations can include recurrent sinusitis, chronic cough, pleural effusions, or bronchiectasis, although the complete triad is not always present. Diagnosis is clinical and supported by characteristic nail findings and evaluation for lymphatic or pulmonary complications; management is directed at the affected systems.

## Z

### Z-Plasty

A reconstructive surgical technique that uses interconnected triangular skin flaps in a Z-shaped arrangement to lengthen a contracted scar and change its direction. It is used in selected scar contractures and other soft-tissue deformities.

### Zafirlukast

A leukotriene-receptor antagonist used for long-term control and prevention of asthma symptoms. It is taken orally and is not a rescue treatment for an acute asthma attack; liver injury and drug interactions are important safety considerations.

### Zalcitabine

A nucleoside reverse-transcriptase inhibitor formerly used in combination antiretroviral treatment for HIV infection. It is rarely used because of toxicity and the availability of safer alternatives; peripheral neuropathy and pancreatitis are important adverse effects.

### Zollinger-Ellison Syndrome

A disorder caused by one or more gastrin-secreting neuroendocrine tumors, called gastrinomas, that produce marked gastric acid hypersecretion. Excess acid commonly causes recurrent or multiple peptic ulcers, gastroesophageal reflux, abdominal pain, and secretory diarrhea. Gastrinomas may arise in the duodenum or pancreas and can occur as part of multiple endocrine neoplasia type 1. Diagnosis uses fasting serum gastrin with assessment of gastric acidity, followed by localization and staging of the tumor when appropriate.

#### Synonyms:

ddC

### Zanamivir

An inhaled neuraminidase inhibitor used to treat or prevent influenza A and B when started appropriately. It may cause bronchospasm and is used cautiously in people with underlying airway disease.

#### Synonyms:

Relenza

### Zavanelli Maneuver

A rare emergency maneuver for unresolved shoulder dystocia in which the fetal head is flexed and replaced into the birth canal before emergency cesarean delivery. It is performed only by an experienced obstetric team when other measures have failed.

#### Synonyms:

cephalic replacement

### Zebrafish

A small freshwater fish (*Danio rerio*) widely used as a laboratory model in developmental biology, genetics, toxicology, and disease research. Its embryos are transparent and develop rapidly, but findings may not translate directly to humans.

#### Synonyms:

*Danio rerio*

### Zellweger Syndrome

A severe inherited peroxisome-biogenesis disorder, usually caused by pathogenic variants in a PEX gene. It presents in infancy with hypotonia, seizures, feeding difficulty, liver dysfunction, distinctive facial features, and impaired brain development.

#### Synonyms:

Zellweger spectrum disorder

---

### Zenker Diverticulum

A pouch that protrudes through the muscular wall at the upper esophagus, usually between the inferior pharyngeal constrictor and cricopharyngeus muscles. It can cause dysphagia, regurgitation of undigested food, halitosis, cough, and aspiration; barium esophagography is commonly diagnostic.

**Synonyms:**

Zenker's diverticulum

### Ziehl-Neelsen Stain

An acid-fast staining method that helps detect organisms with waxy cell walls, especially mycobacteria. Acid-fast organisms retain carbol fuchsin after acid-alcohol decolorization and appear red against a contrasting background.

**Synonyms:**

acid-fast stain

### Zibotentan

An investigational selective endothelin-A-receptor antagonist studied mainly in oncology. It is not an established routine treatment, and its clinical role depends on evidence from clinical trials and regulatory approval.

### Ziconotide

A synthetic analog of omega-conotoxin used by continuous intrathecal infusion for severe chronic pain when other treatments are inadequate. It can cause dizziness, confusion, hallucinations, and other serious neurologic or psychiatric adverse effects.

**Synonyms:**

Prialt

### Zieve Syndrome

A complication of acute alcohol-associated liver injury characterized by hemolytic anemia, transient hyperlipidemia, and jaundice. Treatment focuses on stopping alcohol use and managing the associated liver disease and complications.

**Synonyms:**

Zieve's syndrome

### Zidovudine

A nucleoside reverse-transcriptase inhibitor used in selected antiretroviral regimens for HIV infection and to reduce perinatal HIV transmission. Bone-marrow suppression, anemia, neutropenia, myopathy, and mitochondrial toxicity are important adverse effects.

**Synonyms:**

azidothymidine; AZT

### Zika

An illness caused by Zika virus, usually producing no symptoms or a mild fever, rash, conjunctivitis, arthralgia, and myalgia. Infection during pregnancy can cause congenital Zika syndrome, and infection has also been associated with Guillain-Barré syndrome.

**Synonyms:**

Zika virus disease

### Zika Virus

A positive-sense RNA flavivirus transmitted mainly by infected *Aedes* mosquitoes and also by sexual contact and other less common routes. Infection is often asymptomatic or mild, but infection during pregnancy can injure the developing fetus.

**Synonyms:**

ZIKV

### Zileuton

A 5-lipoxygenase inhibitor used for prevention and chronic control of asthma. It does not relieve acute bronchospasm; liver-enzyme elevations and interactions with other medicines require monitoring.

**Synonyms:**

Zyflo

### Zinc

An essential trace mineral required for numerous enzymes, gene-regulatory proteins, immune functions, growth, reproduction, and wound healing. Excess supplementation can cause gastrointestinal symptoms and copper deficiency.

**Synonyms:**

Zn

---

### **Zinc Acetate**

An oral zinc salt used to treat zinc deficiency and, in specific formulations, to reduce intestinal copper absorption in Wilson disease. Dose and monitoring depend on the indication; nausea and gastrointestinal irritation may occur.

### **Zinc Deficiency**

A state of inadequate available zinc caused by insufficient intake, malabsorption, excessive losses, or increased requirements. Manifestations may include impaired growth, dermatitis, alopecia, diarrhea, altered taste, delayed wound healing, and increased infection susceptibility.

#### **Synonyms:**

zinc depletion

### **Zinc Oxide**

An insoluble zinc compound used topically as a skin protectant and barrier, including in preparations for diaper dermatitis and minor irritation. It can reduce contact with moisture and irritants but does not treat every cause of a rash.

#### **Synonyms:**

ZnO

### **Zinc Ointment (Zinc Oxide)**

A topical preparation containing zinc oxide that forms a protective barrier over irritated or moist skin. It is commonly used for diaper dermatitis and minor skin irritation.

#### **Synonyms:**

zinc oxide ointment

### **Zinc Sulfate**

An oral or parenteral zinc salt used to prevent or treat zinc deficiency when clinically indicated. Gastrointestinal upset is common with oral therapy, and prolonged excessive use can cause copper deficiency.

### **Zinc Toxicity**

Adverse effects caused by excessive zinc ingestion or exposure. Acute toxicity may cause nausea, vomiting, abdominal pain, and diarrhea; chronic excess can impair copper absorption and lead to anemia

or neurologic and immune abnormalities.

#### **Synonyms:**

zinc poisoning

### **Zingiber Officinale**

The botanical species commonly known as ginger. Rhizome preparations are used as a flavoring and may provide modest relief of nausea in some settings; gastrointestinal irritation and drug interactions, including effects on bleeding risk, are possible.

#### **Synonyms:**

ginger

### **Zinostatin**

An antitumor antibiotic, also called neocarzinostatin, that damages DNA. It has been used or studied in oncology in some countries and settings; availability, indications, and toxicity depend on the specific formulation and regulatory status.

#### **Synonyms:**

neocarzinostatin

### **Zirconia**

A zirconium-oxide ceramic used in dentistry for crowns, bridges, implants, and other restorations. Its strength and tissue compatibility make it useful, although restoration design, surface treatment, and clinical indication affect performance.

#### **Synonyms:**

zirconium dioxide

### **Zirconium**

A metallic element used in some medical and dental materials. Certain zirconium-containing compounds have specialized clinical uses, while exposure to some compounds can irritate tissues or produce systemic toxicity.

#### **Synonyms:**

Zr

### **Zoledronic Acid**

A potent intravenous bisphosphonate used for osteoporosis and certain cancer-related conditions, including hypercalcemia of malignancy and skeletal complications of bone metastases. Renal injury,

---

hypocalcemia, acute-phase reactions, and rare osteonecrosis of the jaw are important risks.

**Synonyms:**

zoledronate; Reclast; Zometa

**Zolpidem**

A nonbenzodiazepine sedative-hypnotic used for short-term treatment of insomnia. It can cause next-day impairment, complex sleep behaviors, dependence, and respiratory or central-nervous-system depression, especially with other sedatives.

**Synonyms:**

Ambien

**Zolpidem Tartrate**

The tartrate salt of zolpidem, formulated as an oral sedative-hypnotic for insomnia. It carries the same risks as zolpidem, including next-day impairment, abnormal sleep behaviors, dependence, and additive sedation.

**Zona Pellucida**

A glycoprotein-rich extracellular layer surrounding the mammalian oocyte. It participates in sperm binding and the acrosome reaction and helps prevent polyspermy after fertilization.

**Synonyms:**

oocyte zona pellucida

**Zonisamide**

An antiseizure medicine used for focal-onset seizures and, in some countries, other seizure indications. It can cause somnolence, cognitive effects, metabolic acidosis, kidney stones, oligohydrosis, and serious hypersensitivity reactions.

**Synonyms:**

Zonegran

**Zonula Adherens**

A belt-like cell junction that links the actin cytoskeletons of adjacent epithelial cells. It contributes to cell adhesion and helps maintain epithelial structure and barrier organization.

**Synonyms:**

adherens junction; zonula adherente

**Zonule**

Fibrous suspensory fibers connecting the ciliary body to the lens capsule. They transmit forces from the ciliary muscle and help alter lens curvature during accommodation.

**Synonyms:**

zonular fibers; ciliary zonule

**Zonules**

The plural of zonule; in ophthalmology, usually the suspensory fibers that support the crystalline lens. Weak or disrupted zonules can contribute to lens subluxation and complicate cataract surgery.

**Synonyms:**

zonular fibers

**Zoon Balanitis**

A chronic benign inflammation of the glans penis, usually seen in uncircumcised men. It commonly appears as a sharply demarcated shiny orange-red or rust-colored patch; diagnosis is clinical, with biopsy used when the diagnosis is uncertain.

**Synonyms:**

plasma cell balanitis; balanitis circumscripta plasmacellularis

**Zoonotic Disease**

An infectious disease that can be naturally transmitted between vertebrate animals and humans. Transmission may occur through direct contact, contaminated food or water, animal products, or arthropod vectors.

**Synonyms:**

zoonosis

**Zoonosis**

An infection naturally transmissible between vertebrate animals and humans. Examples include rabies, brucellosis, leptospirosis, psittacosis, toxoplasmosis, and some influenza infections.

**Synonyms:**

zoonotic disease

**Zoophobia**

A specific phobia involving excessive or persistent

---

fear of animals that causes clinically significant distress or avoidance. Treatment may include cognitive-behavioral therapy with exposure; medication may be considered for selected patients.

**Synonyms:**

animal phobia

**Zoster**

A painful, usually unilateral vesicular eruption caused by reactivation of latent varicella-zoster virus in a sensory nerve ganglion. It may be complicated by postherpetic neuralgia, ocular disease, or neurologic involvement.

**Synonyms:**

shingles; herpes zoster

**Zygoma (Zygomatic Bone)**

A paired facial bone that forms the prominence of the cheek and part of the lateral orbital wall and floor. It articulates with the frontal, sphenoid, temporal, and maxillary bones.

**Synonyms:**

zygomatic bone; cheekbone

**Zygomatic Fracture**

A fracture of the zygomatic bone or zygomaticomaxillary complex, usually caused by facial trauma. It may cause facial flattening, infraorbital numbness, diplopia, trismus, or orbital injury.

**Synonyms:**

zygomaticomaxillary complex fracture

**Zygomatic Gland**

In veterinary anatomy, the zygomatic gland is an orbital gland that contributes to the tear film, especially in dogs and cats; it is distinct from the human lacrimal gland and should be interpreted according to species-specific anatomy.

**Zygomycosis**

An older term for invasive fungal infection caused by organisms formerly grouped as zygomycetes, particularly mucormycetes. Mucormycosis can affect the sinuses, orbit, lungs, skin, or gastrointestinal tract, especially in people with diabetes or impaired

immunity.

**Synonyms:**

mucormycosis; phycomycosis

**Zygote**

The diploid cell formed when a sperm fertilizes an oocyte. It undergoes early cell divisions and develops into an embryo.

**Synonyms:**

fertilized egg

**Zymogen**

An inactive enzyme precursor that is converted into an active enzyme, often by proteolytic cleavage. Examples include pepsinogen and trypsinogen.

**Synonyms:**

proenzyme

## Bibliography and Sources

This is a selected bibliography of standard medical dictionaries and authoritative biomedical terminology resources used to guide terminology, spelling, synonyms, and general definitions in this dictionary. The source material is not mapped term-by-term, so this list should not be read as a claim that every entry was copied from every source. Clinical decisions should be based on current guidelines, specialist references, and primary literature.
